*Exams begin Wednesday at 7:00 p.m.*

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by the Office of Publications and Marketing at Cornell University.
Courses of Study

2006–2007

Change in Course Numbering System

In the near future, the university will be moving from a three-digit to a four-digit course numbering system (e.g., HIST 404 becomes HIST 4041). As part of this transition, this issue of Courses of Study shows both three- and four-digit (in parentheses) course numbers for course listings. For a complete explanation of the course numbering system, see page 12.

Accreditation

Cornell University is accredited by the Middle States Commission on Higher Education.

A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Paul Streeter, director, Office of Institutional Planning and Assessment, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, ps33@cornell.edu.

Courses with names and descriptions enclosed in brackets—[-]—are not offered fall 2006 and spring 2007.
All area codes are 607 unless otherwise specified.
Courses of Study (www.cornell.edu/academic/courses.cfm), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academic/courses.cfm, which also includes the Course and Time Roster and the Course and Room Roster. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu.

The following are offices and sources of information about admission to Cornell University:

Undergraduate Admissions Office. 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Joan and Sanford I. Weill Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 60th Street, New York, NY 10021, 212-746-1087/6565, www.med.cornell.edu/education/admissions.

Medical leaves are granted by the student's college upon recommendation by Gannett: Cornell University Health Services.

Bursar Information

Graduate and Professional Students

Graduate School with chair in a contract college $20,800

Veterinary Medicine $23,000

New York State resident DVM $33,000

Nonresident DVM $33,000

Graduate, Ph.D. $20,800

Student Activities Fee (Tentative)

Undergraduate students $181

Graduate and professional students $68

Summer Session (2006)

per credit** $835

In Absentia Fees

Undergraduate $15 per semester

Graduate and professional $200 per semester

Law and management $75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

* Residency status is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety.

Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from their college, the Office of the Judicial Administrator, Gannett: Cornell University Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or they will be subject to a financial penalty. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes, reside in university-owned residences, or use any other university services. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unauthorized persons.

LEAVES AND WITHDRAWSLALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return. Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.
The deadline for submission of requests for the Fall 2006 semester is June 1, 2006. The deadline for the Spring 2007 semester is November 1, 2006. Further information and an application can be found at www.bursar.cornell.edu.

New contract college undergraduate nonresident students are defined as

- new entering students (i.e., freshmen).
- new transfers from external colleges (excluding transfers from the two-year institutions with which Cornell has transfer agreements).
- new transfers from an endowed Cornell college to a contract college.
- students who have deferred entry of more than one semester.
- returning students who had withdrawn from the university.
- graduates who are returning for additional degrees.
- students who have taken a leave of absence for more than one year.

**Regular session rate.** Special program rates may vary.

Admission application fees and forms may be found at www.cornell.edu/admissions/.

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the “Proration Schedule for Withdrawals and Leaves of Absence” below.

Repayment policy. Students receiving financial aid from the university who withdraw during a semester will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding these policies.

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid before registration. The due date for these semester bills will normally be 5 to 10 working days before registration day. All other charges, credits, and payments will appear on monthly statements mailed before the middle of the month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Changes to billing addresses can be made via Just the Facts. Address changes made at other offices will not change the billing address. The address initially on the student’s record will be the home address as listed on each student’s application for admission.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student’s name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student’s bill by several departments and offices of the university. Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2356; fax 255-6442; bursar@cornell.edu; www.bursar.cornell.edu). Bursar account and Cornellcard information may be viewed real time on Just the Facts.

Student Health Insurance

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage. The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care.

Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midyear may be eligible to purchase a five-month plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, students should contact Cornell University's Office of Student Health Insurance, 409 College Avenue, Suite 211 (tel. 255-6363, sicu@cornell.edu; www.studentinsurance.cornell.edu).

Student Records

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell University Policy 4.5 Access to Student Information, available at www.policy.cornell.edu VOL4_5.cfm. These rights include:

1. The right to inspect and review the student’s education records within 45 days of the day the university receives a request for access.

Students should submit to the registrar, dean, head of the academic department, or other appropriate official, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student’s education records that the student believes is inaccurate.

Students may ask the university to amend the record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.
3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic, (including emeritus faculty) or research, or support service (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a parent of a student with whom the student has contractual arrangements (such as a parent of a Trustee); or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Upon request, the university discloses education records without consent to officials of another school in which a student seeks or intends to enroll.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

5. Cornell University has defined directory information to include the following: name, local address, local telephone listing, e-mail address, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), and any degrees earned and awards. Directory information may be released unless the student informs the Office of the University Registrar otherwise in writing or on Just the Facts. Students who wish to suppress their directory information from the printed telephone directory must inform the Office of the University Registrar in writing or through Just the Facts within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on Just the Facts.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet titled the Code of Academic Integrity and Acknowledging the Work of Others is available from the office of the dean of faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Subjects in Research

The University Committee on Human Subjects is the official review board for all university projects that use humans as research subjects, assuring compliance to federal regulations protecting human subjects in research at universities. A human subject is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human subjects in any category, including those initiated by students, must be submitted to the University Committee on Human Subjects for review before the research projects begin. The guidelines for the use of human subjects in research are available at www.cornell.edu/Compliance/UCHS/homepage/UCHS.htm. Inquiries and communications about the guidelines should be directed to the committee's coordinator (255-5138; UCHS@cornell.edu).

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC). Students should contact the Office of the University Registrar or the College Office of Animal Care and Use Committee approved a series of guidelines recommended to them by the Institutional Animal Care and Use Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in Courses of Study should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object to ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 255-3845 or by e-mail at iacuc-mailbox@cornell.edu.

9. Faculty members should instruct students in the responsible use of animals. For more information, see www.policy.cornell.edu/voll_4.cfm.

Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 8-10.

2. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).

3. A regular course taught at an accredited college to college students and approved
by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

4. GCE Advanced Level and International Baccalaureate Examinations are listed on page 11.

Note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph 1 or 2 above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject, recommends Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of Courses of Study). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one's overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.

Advanced placement examinations. Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar's office (see list below).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 8–10. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

College of Agriculture and Life Sciences
140 Roberts Hall

College of Architecture, Art, and Planning
B1 West Sibley Hall

College of Arts and Sciences
55 Goldwin Smith Hall

College of Engineering
158 Olin Hall

School of Hotel Administration
180 Statler Hall

College of Human Ecology
145 Martha Van Rensselaer Hall

School of Industrial and Labor Relations
101 Ives Hall

CREDIT AND PLACEMENT
The tables below summarize how credit and placement are determined for most subjects. Supplementary information for some subjects follows immediately.

**CEEB's AP Exams**

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.

### International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table below. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

### SUPPLEMENTARY INFORMATION

#### Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 207-208 and 215-216. CHEM 215-216 is the sequence intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in 760A S. T. Olin Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215-216 and should consult the CHEM 215 instructor or department staff.

#### Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take COM S 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination to be given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced signup is not necessary.

#### Mathematics and Statistics

Students entering Cornell before fall 2004 should contact the Department of Mathematics for placement information. The following applies to students in fall 2004 or later.

The calculus courses MATH 111, 112, and 191 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.
### Subject Marks Credit

**International Baccalaureate (IB) Higher-Level Examination** are awarded advanced standing and credit on receipt of the original or a certified copy of the examination results.

<td>4 additional credits for PHYS 213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 116. If students take 116, they do not receive 4 credits for 112. If students take 217, they do not receive credit for 213. Students in the College of Engineering should refer to <a href="http://www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm">www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm</a> for credit and placement information.</td>
</tr>
</tbody>
</table>

The Department of Mathematics offers a placement examination during orientation week. (Separate mathematics placement exams are offered for students in the College of Engineering or the College of Agriculture and Life Sciences.) The Department of Mathematics exam should be taken by:

1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2. students who believe that their placement is incorrect.

The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary.

Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. Students who have been awarded AP credit for statistics (3 academic credits) will forfeit those credits if they take AEM 210, ILRST 210, MATH 171, or PAM 210.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 105 or 111. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 112, 122, or 191 and all 8 credits if they take MATH 106 or 111.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 191, the first course in the sequence.

### Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the College of Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:
1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).

2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 3 credits.

3. For formal language work at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Sometimes an exam score or the CASE is also required.

4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 3 credits for proficiency equivalent to that required in English for a first-year writing seminar.

MUSIC
Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP II or other examinations from outside Cornell, nor on the basis of course work elsewhere. Outstanding performance on the departmental examination will earn students credits and placement directly into MUSIC 152. In rare instances students may place into MUSIC 251, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week and, when necessary, at the beginning of the spring semester. For more information about the examination, see the departmental web site.

PHYSICS
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, students should consult the director of undergraduate studies, 101 Clark Hall (phys130@cornell.edu), or the department chair, 109 Clark Hall.

Physics B—Students earning a score of 5 may receive 8 credits for non-calculus-based PHYS 101 and 102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 112 or 207 instead of 8 credits in PHYS 101 and 102. Those earning a score of 4 may receive 4 credits in PHYS 101. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive 4 credits for PHYS 112 or 207. Placement into PHYS 116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 4 credits for PHYS 213.

Students will not receive credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

PHYS 101, 112, 116, 207
PHYS 102, 208, 213, 217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her advisor or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

AUDITING COURSES
Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES
As the university makes the transition to a new course numbering system, the course levels for three-digit (current) and four-digit (future) course numbers will correspond in the manner shown in the list below. In this issue of Courses of Study, all of the current three-digit course numbers and most of the future four-digit course numbers have been included in the course listings (some four-digit course numbers were not available at press time).

100(1000) level—introductory course, no prerequisites, open to all qualified students
200(2000) level—lower-division course, open to freshmen and sophomores, may have prerequisites
300(3000) level—upper-division course, open to juniors and seniors, prerequisites
400(4000) level—upper-division course, open to seniors and graduate students
500(5000) level—professional level (e.g., management, law, veterinary medicine)
600(6000) level—professional and graduate-level course, open to upper-division students
700(7000) level—graduate-level course
800(8000) level—master's level, thesis, research
900(9000) level—doctoral level, thesis, research
The list of courses that follows is arranged in two broad groups.

**Group 1:** Divisions that offer both undergraduate- and graduate-level courses
- Agriculture and Life Sciences
- Arts and Sciences
- Engineering
- Human Ecology
- Industrial and Labor Relations
- Nutritional Sciences
- Officer Education

**Group 2:** Graduate professional divisions
- Agriculture and Life Sciences
- Animal Physiology
- Biometry and Statistics

All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

### Course Prefixes and Their Meanings
- **AAS:** Asian American Studies
- **AEM:** Applied Economics and Management
- **ALS:** Applied and Engineering Physics
- **AM ST:** American Studies
- **AN SC:** Animal Science
- **ANTHR:** Anthropology
- **ARCH:** Architecture
- **ARKEO:** Archaeology
- **ART:** Art
- **ART H:** History of Art
- **AS:** Asian Studies
- **AS&RC:** Africana Studies and Research Center
- **ASTRO:** Astronomy
- **BEE:** Biological and Environmental Engineering
- **BENG:** Bengali
- **BIOAP:** Animal Physiology
- **BIOBM:** Biochemistry, Molecular and Cell Biology
- **BIOEE:** Ecology and Evolutionary Biology
- **BIOG:** Biology
- **BIOD:** Genetics and Development
- **BIOMI:** Microbiology
- **BIONB:** Neurobiology and Behavior
- **BIOPL:** Plant Biology
- **BIOSM:** Shoals Marine Laboratory
- **BME:** Biomedical Engineering
- **B&SOC:** Biology and Society
- **BTRY:** Biometry and Statistics
- **BURM:** Burmese
- **CAPS:** China and Asia Pacific Studies
- **CATA:** Catalan
- **CEE:** Civil and Environmental Engineering
- **CHEM:** Chemistry
- **CHEME:** Chemical and Biomolecular Engineering
- **CHIN:** Chinese
- **CHLIT:** Literature in Chinese
- **CIS:** Computing and Information Science
- **CLASS:** Classics
- **COGST:** Cognitive Studies
- **COM L:** Comparative Literature
- **COMM:** Communication
- **COM S:** Computer Science
- **CRP:** City and Regional Planning
- **CSS:** Crop and Soil Sciences
- **CZEECh:** Czech
- **DANCE:** Dance
- **DEA:** Design and Environmental Analysis
- **D SOC:** Development Sociology
- **DUTCH:** Dutch
- **EAS:** Earth and Atmospheric Sciences
- **ECE:** Electrical and Computer Engineering
- **ECON:** Economics
- **EDUC:** Education
- **ENGL:** English
- **ENGLF:** English for Academic Purposes
- **ENGR:** Engineering Common Courses
- **ENGRD:** Engineering Distribution Courses
- **ENGGR:** Engineering General Interest
- **ENGRH:** Engineering Introductory Courses
- **ENTM:** Entomology
- **FGSS:** Feminist, Gender, and Sexuality Studies
- **FILM:** Film Studies
- **FD SC:** Food Science
- **FRD:** Freehand Drawing and Scientific Illustration
- **FRLIT:** Literature in French
- **FRROM:** French
- **GERST:** German Studies
- **GREEK:** Greek
- **H ADM:** Hotel Administration
- **HD:** Human Development
- **HE:** Human Ecology
- **HINDI:** Hindi
- **HIST:** History
- **HORT:** Horticulture
- **HUNGR:** Hungarian
- **IARD:** International Agriculture and Rural Development
- **ILRCB:** Collective Bargaining, Labor Law, and Labor History
- **ILRHR:** Human Resources Studies
- **ILRIC:** International and Comparative Labor
- **ILRID:** Interdepartmental
- **ILRLE:** Labor Economics
- **ILROB:** Organizational Behavior
- **ILRST:** Social Statistics
- **INDO:** Indonesian
- **INFO:** Information Science
- **ITALA:** Italian
- **ITALL:** Literature in Italian
- **JAPAN:** Japanese
- **JAVA:** Javanese
- **JPLIT:** Literature in Japanese
- **JWST:** Jewish Studies
- **KHMER:** Khmer (Cambodian)
- **KOREA:** Korean
- **KRLIT:** Korean Literature
- **LA:** Landscape Architecture
- **LAT A:** Latin American Studies
- **LATIN:** Latin
- **LAW:** Law
- **LING:** Linguistics
- **M&AE:** Mechanical and Aerospace Engineering
- **MATH:** Mathematics
- **MEDVL:** Medieval Studies
- **MIL S:** Military Science
- **MNS:** Materials Science and Engineering
- **MUSIC:** Music
- **NAV S:** Naval Science
- **NBA:** Business Administration
- **NEC:** Graduate School of Management
- **NES:** Near Eastern Studies
- **NMI:** Graduate School of Management, Research and Advanced Studies
- **NRE:** Graduate School of Management, Doctoral Seminars
- **NS:** Nutritional Sciences
- **NS&e:** Nuclear Science and Engineering
- **NTR:** Natural Resources
- **OR:** Operations Research and Industrial Engineering
- **PALI:** Pali
- **PAM:** Policy Analysis and Management
- **PHI:** Philosophy
- **PHYS:** Physics
- **PL BR:** Plant Breeding
- **PL PA:** Plant Pathology
- **POLISH:** Polish
- **PORT:** Portuguese
- **PSYCH:** Psychology
- **QUECH:** Quechua
- **RELST:** Religious Studies
- **ROM S:** Romance Studies
- **RUSSA:** Russian

### FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.

### General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the school.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.

5. Papers may be required of students during the study period; if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

1. Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is in the largest of the three- to five-credit divisions and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.

3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note: that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

---

**Grading Guidelines**

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D- F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- B+ = 3.3
- C+ = 2.3
- D+ = 1.3
- A = 4.0
- B = 3.0
- C = 2.0
- D = 1.0
- A- = 3.7
- B- = 2.7
- C- = 1.7
- D- = 0.7
- F = 0.0

This is how a semester average is computed:

\[
\text{Quality} = \frac{\text{Grade Points}}{\text{Credits Product}}
\]

**Course**

| CHEM 103 |
| ENGL 151 |
| DEA 145 |
| PAM 100 |
| DEA 111 |

**Total**

16

42.0

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

**S-U Grades**

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

Resolved, that:

a. the S-U system have symbol equivalents which are uniform within the university: S means C or above; U means D+ D-, or failure.

b. S-U options be chosen by the student during the first three weeks of the semester.

c. the Announcements and or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U.

Any change in grading options must be announced by the instructor within the first two weeks of the semester.

d. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

**Agriculture and Life Sciences**

1. Must have 100 eligible hours with A, B, C, D grades.

2. The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (4) Only one optional S-U course is allowed per semester.

**Architecture, Art, and Planning**

1. All courses specifically required for a degree can be offered on an S-U basis. Various departments may designate specific required courses where S-U will be permitted. (2) In a course designated as S or U the entire class is so graded. The instructor must announce this decision within the first two weeks of class. The option for S or U exists, but both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

**Arts and Sciences**

1. Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission.

2. Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A B degree must be in courses for which the student has received letter grades.

**Engineering**

1. The course in question must be offered with an S-U option.

2. The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S-U basis during their first semester with the exception of courses graded "S-U only" such as physical education, ROTC, supplemental courses, and writing workshops.

3. The proposed S-U course must have a letter grade assigned. A letter grade of D+ or better must be assigned if the student is not allowed to take the course for an S-U grade.

4. Students may elect to enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.) (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a S-U grading option. Note: Courses graded S-U do not count toward eligibility on the Dean's List and may weaken a student's chances for acceptance into graduate school. Questions regarding the S-U grading option should be addressed to Engineering Advising.

**Graduate School**

1. Seminars and thesis research courses are usually graded S-U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as an S-U option.

**Hotel**

1. Maximum of 4 free-elective credit hours per semester. (2) Exceptions are by petition only.

**Human Ecology**

1. Not part of student's major. (2) May be used in the 9 credit hours required outside the major in Human Ecology courses. (3) Not part of hours required in humanities, natural sciences, and social sciences. (4) A clearance form must be submitted.

**S-U courses (not counting physical education) may be counted toward degree requirements during a student's college career.**
Industrial and Labor Relations. (1) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements include a minimum of 105 letter grade (A+ to D-) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student's academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course.

Internal Transfer. (1) S-U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE:
The grade of incomplete is appropriate only when both basic conditions are met:

1. the student has a substantial equity at a passing level in the course with respect to work completed; and
2. the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at transcript.cornell.edu. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two years at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test
The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the courses Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in physical education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division
Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).
Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE
726 University Avenue (255-0832)
web.cornell.edu/Professors-at-Large/

The program has its origins in Cornell’s early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of “contributing to the intellectual and cultural life of the university.” Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2007
Pretty, Jules, sustainable agriculture ecologist
Short, Roger, reproductive physiologist
Goldsworthy, Andy, sculptor
Hölldobler, Bert, zoologist
Subrahmanyan, Sanjay, economic historian

Term Ending in 2008
Behrends, Okko, legal historian
Butler, Judith, cultural theorist
Venter, Craig, geneticist

Term Ending in 2009
Aldous, David, statistician
Leeson, Lynn Hershman, digital artist
Peskin, Charles, mathematician
Sala, Osvaldo, ecologist
Tibi, Bassam, Islamist

Term Ending in 2010
Sims, Lowery Stokes, art curator

Term Ending in 2011
Angier, Natalie, science writer

FRANK H. T. RHODES CLASS OF ’56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of ’56 University Professorship in honor of Cornell’s ninth president (1977–1995). The purpose of the Rhodes Class of ’56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of ’56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of ’56 Professors visit the campus for a minimum of two weeks to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments
Grandin, Temple, associate professor of animal science

CENTER FOR APPLIED MATHEMATICS
657 Frank H. T. Rhodes Hall (255-4335)
The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center’s members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics
MATH 413 Honors Introduction to Analysis
MATH 414 Honors Introduction to Analysis
MATH 433 Honors Linear Algebra
MATH 434 Honors Introduction to Algebra
MATH 611 Real Analysis
MATH 612 Complex Analysis
MATH 615 Mathematical Methods in Physics
MATH 621 Measure Theory and Lebesgue Integration
MATH 622 Applied Functional Analysis
MATH 631-632 Algebra
MATH 633 Noncommutative Algebra
MATH 634 Commutative Algebra
MATH 651 Algebraic Topology
MATH 661 Geometric Topology
T&M 610, 611, 613, 614 Methods of Applied Mathematics

Analysis (and Differential Equations)
MATH 428 Introduction to Partial Differential Equations
MATH 617 Dynamical Systems
MATH 618 Smooth Ergodic Theory
MATH 619-620 Partial Differential Equations
MATH 652-653 Differentiable Manifolds
MATH 662 Riemannian Geometry
MATH 711-712 Seminar in Analysis
MATH 713 Functional Analysis
MATH 715 Fourier Analysis
MATH 722 Topics in Complex Analysis
MATH 728 Seminar in Partial Differential Equations

Logic and Theory of Computing
COM S 671 Introduction to Automated Reasoning

COM S 677 Reasoning about Uncertainty
COM S 682 Theory of Computing
COM S 715 Seminar in Programming

Mathematical Economics
ECON 619 Econometrics I
ECON 620 Econometrics II
ECON 710 Stochastic Economics: Concepts and Techniques
ECON 717-718 Mathematical Economics
ECON 719-720 Advanced Topics in Econometrics

Mechanics and Dynamics
CHM 731 Advanced Fluid Mechanics and Heat Transfer
CHM 751 Mathematical Methods of Chemical Engineering Analysis
GENERAL INFORMATION - 2006-2007

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
M&E 601 Foundations of Fluid Dynamics and Aerodynamics
M&E 602 Fluid Dynamics at High Reynolds Numbers
M&E 733 Stability of Fluid Flow
M&E 734 Analysis of Turbulent Flows
M&E 736 Theory of Computational Aerodynamics
M&E 737 Computational Fluid Mechanics and Heat Transfer
T&AM 570 Intermediate Dynamics
T&AM 578 Nonlinear Dynamics and Chaos
T&AM 671 Hamiltonian Dynamics
T&AM 672 Celestial Mechanics (also ASTRO 579)
T&AM 673 Mechanics of the Solar System (also ASTRO 571)
T&AM 675 Nonlinear Vibrations
T&AM 751 Continuum Mechanics and Thermodynamics
T&AM 752 Nonlinear Elasticity
T&AM 776 Applied Dynamical Systems (also MATH 717)

Probability and Statistics
ECE 562 Fundamental Information Theory
ECE 563 Communication Networks
ECE 566 Wireless Networks
MATH 671-672 Probability Theory
MATH 674 Introduction to Mathematical Statistics
MATH 777-778 Stochastic Processes
OR&IE 561 Queuing Systems: Theory and Applications
OR&IE 563 Applied Time-Series Analysis
OR&IE 650 Applied Stochastic Processes
OR&IE 651 Probability
OR&IE 662 Advanced Stochastic Processes
OR&IE 670 Statistical Principles
OR&IE 671 Intermediate Applied Statistics
BTRY 408 Theory and Probability
BTRY 409 Theory of Statistics

Robotics and Vision
COM S 664 Machine Vision
ECE 547 Computer Vision

Theoretical/Mathematical Physics/Chemistry
CHEM 792 Molecular Collision Theory
CHEM 793 Quantum Mechanics I
CHEM 794 Quantum Mechanics II
CHEM 796 Statistical Mechanics
CHEM 798 Bonding in Molecules
PHYS 553-554 General Relativity (ASTRO 500-510)
PHYS 561 Classical Electrodynamics
PHYS 562 Statistical Physics
PHYS 572 Quantum Mechanics I
PHYS 574 Applications of Quantum Mechanics II
PHYS 651-652 Relativistic Quantum Field Theory

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes five U.S. Department of Education Title VI National Resource Centers and 16 other area, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center's programs with well over 300 graduate students involved directly in its international programs. Undergraduate students may choose concentrations in international relations, Latin American studies, modern European studies, East Asian studies, South Asian studies, or Southeast Asian studies. (See also Africana Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell's international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty members and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry F. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussion of key world events.

The center promotes graduate students' overseas field research through an annual competition for travel grants and assistance with the Fulbright fellowship program and the Fulbright-Hayes awards, both administered by the center. Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system that houses 2,500,000 volumes related to international and comparative studies.

CENTER FOR THE STUDY OF INEQUALITY

363 Uris Hall
254-8874 (tel.)
inequality@cornell.edu
www.inequality.cornell.edu

The Center for the Study of Inequality (CSI) fosters basic and applied research on social and economic inequalities as well as the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about welfare reform, affirmative action, the "glass ceiling," globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality.
Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Studies is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Education, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in Cognitive Studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline represented in an individual department. For further information on the undergraduate program, see the Cognitive Studies Program under College of Arts and Sciences. Contact Julie Simmons-Lynch (255-6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in Cognitive Studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Studies to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information on the graduate field of Cognitive Studies, contact Michael J. Spivey, director of graduate studies (255-9365, spivey@cornell.edu) or Julie Simmons-Lynch, program coordinator, 278G Uris Hall, Office of Cornell Graduate Studies (255-6431 or cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies Program are listed in this catalog in the Cognitive Studies Program section under Arts and Sciences.

CORNELL ABROAD

300 Caldwell Hall 255-6224 (tel.) 255-8700 (fax) cuabroad@cornell.edu www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Recent events have made us aware that those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in a transnational world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Botswana, Cameroon, Ghana, Kenya, Madagascar, Tanzania, Uganda: School for International Training (SIT)

Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE); NYU

Kenya: Wildlife Management (School for Field Studies)

South Africa: Universities of Cape Town and KwaZulu-Natal, Organization for Tropical Studies, School for International Training (SIT)

ASIA

China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester or full year at the Inter-University Program for Chinese Language Study at *Tsinghua University (in Beijing), Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Tokyo; CIEE Tokyo at Sophia University

Japan: *Kyoto Center for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University

Korea: Yonsei University; Ewha University

Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University

Thailand: Khon Kaen University (CIEE)

Vietnam: University of Hanoi (CIEE)

AUSTRALIA AND NEW ZEALAND

Australia: Australian National University; Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training; Sydney Internship (Arcadia, Boston University)

New Zealand: Otago and Lincoln Universities; EcoQuest

EUROPE

Czech Republic: CERGE at Charles University; CET program in Jewish Studies

Denmark: *Denmark's International Study Program (DIS)

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Etudes Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University)
Germany: 'Berlin Consortium for German Studies at the Free University of Berlin, Wayne State University in Munich and Freiburg, Heidelberg University
Greece: College Year in Athens, Arcadia
Hungary: Central European University
Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork
Italy: *Bologna Consortial Studies Program; *Cornell College of Art, Architecture, and Planning Program in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University Program in Padova; IES Milan and Rome; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence
Netherlands: University of Amsterdam, Leiden University
Russia: St. Petersburg University (CIEE), Moscow International University and other universities (American Council of Teachers of Russian), Smolny College, Math in Moscow
Spain: *Cornell-Michigan-Penn program at the University of Seville; various language and culture programs
Sweden: *Swedish Practicum in Childhood, Family, and Social Policy at the University of Göteborg; The Swedish Program at the University of Stockholm
United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York: University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, the University of the Arts (including London College of Fashion), as well as other universities and art schools of choice.
Externally sponsored programs in the UK include the British American Drama Academy, the Arcadia, Boston, and Rochester University internships; and the Hansard Parliamentary Internship Programme
Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown-Penn Centre in London.
LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
Argentina and Chile: various university-based study abroad programs, through the Institute for Study Abroad of Butler University
Belize, Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)
Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology, School for Field Study
Cuba: University of Havana through COPA: School for International Training (currently suspended)
Ecuador and Jamaica: Partnership for Service Learning
Honduras: Escuela Agrícola Panamericana (Zamorano)
Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM), Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; ISFA-Butler program at Universidad Autónoma de Yucatán, Merida
MIDDLE EAST AND NORTH AFRICA
Egypt: American University in Cairo
Israel: Ben-Gurion University; Haifa University, Hebrew University of Jerusalem; Tel Aviv University
Jordan: University of Jordan (CIEE)
Lebanon: American University of Beirut
Morocco: School for International Training
Other Locations
Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.
Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduate students abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.
When Students Study Abroad and for How Long
Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.
Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 300 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for applications to download and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisors in their colleges to discuss how they will meet college degree requirements.
Each applicant completes a written statement of academic goals and outline goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty advisor and the college study abroad advisor. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college, forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.
The application deadline for study abroad in the fall 2007 semester and the 2007–2008 academic year is February 15, 2007, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2007–2008 is November 1, 2006. Many programs and programs admit on a rolling basis and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.
Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distributions. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell American grading system, nor are they averaged into the Cornell grade point average.
Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are
required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

**Housing Arrangements**

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

**Costs**

Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during term (except in U.K. universities), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students may pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2006–2007 the Cornell Abroad tuition for students participating in Cornell-managed programs and in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCO (Emory, Duke, and Cornell in Paris), the Michigan–Cornell–Penn Program in Seville is $19,400.

For Denmark's International Studies Program (DIS), the Cornell Abroad tuition is $19,120 per semester, and for the Kyoto Center for Japanese Studies (KCJS), the tuition is $26,000 per semester. For the Bologna Cooperative Studies Program (BCSP) the tuition is $15,000 per semester for academic-year students and $17,450 for spring-only participants.

Students studying in all other programs in 2006–2007 pay the tuition and other charges by their programs and a Cornell International Program Tuition of $4,440 per semester. The International Program Tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program tuition of $4,800. This higher amount covers the cost of on-site support services provided by Cornell Abroad.

**Financial Aid**

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are typically considered for need-based aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships and there are also external aid sources.

**Security Abroad and Related Issues**

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding rapidly changing situations worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

**Sources of Information and Advice Concerning Study Abroad**

Cornell Abroad (500 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, political and cultural analyses, news, guides, and other relevant material. The library provides information on travel, study, summer, and work abroad. Comprehensive information is provided on the Cornell Abroad web site, which incorporates links to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

**College Study Abroad Advisors**

Agriculture and Life Sciences: Tamara Durham, 140 Roberts Hall; Architecture, Art, and Planning: Jayne LeGro, B-1 West; Sibley Hall: Arts and Sciences: Dean Pat Wasylik, 55 Goldwin Smith Hall; Engineering: Dan Maloney Hahn, 167 Olin Hall; Hotel Administration: Amber Cohen, 180 Statler Hall, Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

**CORNELL IN WASHINGTON PROGRAM**

M014 McGraw Hall 255-4590
ciw.cornell.edu

Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the unique resources and opportunities that the national capital, Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition.

Washington's vast high-technology sector, concentrated in both telecommunications and biotechnology, creates endless opportunities for the study of recent developments and future prospects in those arenas, as well. Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—take one or two elective courses, conduct individual research projects, and choose externships in government agencies, research institutes, non-profit organizations, and private professional firms and businesses.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select two or three seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

**Tuition**

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

**Housing**

Apartments are rented at the Cornell Center. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and to each one-bedroom apartment. Students are discouraged from
The Cornell in Washington program service, is extensive and convenient to the application forms are available from the system, consisting of both bus and subway www.cipa.cornell.edu advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

294 Caldwell Hall 255-8018 (tel.) 255-5240 (fax) cipa@cornell.edu www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. CIPA prepares leaders for government, for nonprofit organizations, and for institutions in the private sector that interact with both. CIPA fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

Faculty Members

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing 25 departments, welcome CIPA fellows into their courses and serve on professional report/thesis committees. About 30 members of this group, known as the program faculty, teach courses taken most frequently by CIPA fellows. Within this group, members of the core faculty provide instruction in the foundation courses. Core faculty members include David B. Lewis, CIPA director, City and Regional Planning; Nancy Chau, Applied Economics and Management; Neema Kudva, City and Regional Planning; (Daniel) Peter Loury, Civil and Environmental Engineering; Theodore J. Lowi, the John L. Senior Professor of American Institutions in the Department of Government; Kathryn S. March, Anthropology, Christine Ranney, Applied Economics and Management; Norman Uphoff, Government; and Jerome Ziegler, Department of Policy Analysis and Management.

M.P.A. Program Flexibility

The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA fellow works closely with a faculty advisor to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

Advising

Upon entering the M.P.A. program, each fellow is assigned a program advisor based on his or her area of interest. These advisors are drawn from the CIPA core faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their courses. Once familiar with the resources available, students are welcome to ask another core faculty member to be their program advisor. Toward the end of their first year, when they select their professional report/thesis topic, CIPA fellows choose a report/thesis advisor from among the more than 100 faculty members in the field of public affairs. The advisor guides the fellow in research and writing.

Foundation Course Work

To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA fellows take three courses in each of the following three subject areas:

- Administration, Politics, and Public Policy
- Economics and Public Finance
- Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA core faculty member.

Concentration Course Work

Concentration course work enables fellows to focus on a specific area of public policy study. Students choose courses of study—domestic or international—from the following options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

Fellows select a concentration during the latter half of the first year of course work.

Internships and/or Off-Campus Study Options

CIPA fellows are expected to engage in public affairs work related to their respective areas of concentration during the summer between their first and second years of study. The objective is to gain pragmatic professional experience that will complement a student's formal academic study. CIPAs assistant director for professional development provides assistance to fellows in finding placements that match their interests, expertise, and professional goals. Appropriate internships are available in public policy- or public affairs-related organizations in both the public and private sector. Examples of placements include the following:

- Deloitte and Touche
- Goldman Sachs
- Government Accountability Office
- the United Nations
- the United States Agency for International Development
- the United States Department of State
- the United States Congress and Senate
- the World Bank
- state, local, and urban municipal governments
- nongovernmental organizations and think tanks worldwide
- private sector consulting firms

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- Rome Program
- Cornell in Washington
- Cornell in Nepal Study Program.

Professional Writing Requirement

As a culmination of studies in the M.P.A. program, each fellow develops and submits either a professional report or thesis. Typically, the report or thesis grows out of a fellow's specific area of concentration and often incorporates work done during the summer internship or an off-campus study program. Both the CIPA professional report and the thesis require the student to synthesize and apply his or her education to formulate a solution to a policy problem. The thesis places a greater emphasis on problem definition and literature review, while the professional report emphasizes feasibility, practitioners' accessibility, and adapting a student's writing to the professional culture and standard practices of the client organization. The level of work expected for the M.P.A. thesis or professional report is equivalent to one or two semester-long courses.

Professional Student Activities

CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities. These provide fellows with opportunities to share work experience with other fellows, and to meet practitioners and distinguished faculty members in the field of public affairs. Fellows participate in one or more of the following activities for at least two semesters. These initiatives include:
Decisions are based on:

- Point of View (POV): The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.

- The Current: CIPA fellows publish a journal of student policy research. Working on The Current offers fellows a firsthand view of the rigors of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

- CIPA Public Service Exchange: A unique service learning partnership with nonprofit and government agencies, providing fellows with the opportunity to engage in the supervised practice of public policy.

Complementary Degrees

CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.A. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master's Program

An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master's Program can earn the equivalent of two semesters in residence during their senior year.

Admission

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective.

Decisions are based on:

- potential for public-policy leadership as evidenced by professional work, community, extracurricular, or other relevant experience
- an evaluation of the applicant's overall academic record
- GRE scores
- letters of recommendation
- an extensive written statement of purpose

Applicants for whom English is a second language will need to achieve a minimal TOEFL score of 250 (computer based) or 600 (paper based).

Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For an application or for more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255-8018; fax: 255-5240; cipa@cornell.edu; www.cipa.cornell.edu).

Financial Aid

CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers.

Decisions on institute funding are determined on a rolling basis following admission decisions.

CORNELL PLANTATIONS

One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

Introduction

Cornell Plantations is Cornell University's arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 50 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We've also made many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women's issues, to nutrition.

Credit Courses

Cornell Plantations offers three for-credit courses: HORT 480 Plantations Fall Lecture Series, HORT 485 Public Garden Management, and HORT 640 New Directions in Public Horticulture. HORT 480 is a 1-credit S-U lecture series offered each fall. HORT 485 is a 3-credit course offered alternate spring semesters. HORT 640 is a 1-credit S-U discussion course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.plantations.cornell.edu or call 255-2400 for more information.

Internships

Cornell Plantations' internship program is just for you, the Cornell University student! Since the 1990s, more than 80 university students have been working side by side with Plantations' knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students' interests in horticulture and the natural world.

Master's Program

Cornell Plantations' master of professional studies program offers fully funded fellowships in public garden leadership. Visit our web site for program details.

Planning a Visit

To discover all that is Cornell Plantations, visit www.plantations.cornell.edu or pick up a visitor's map or a copy of the Cornell Plantations Path Guide at the Garden Gift Shop in the Lewis Education Center just below Tower Road. The Path Guide and accompanying video are also available at the Cornell Store.

PROGRAM ON ETHICS AND PUBLIC LIFE

240 Goldwin Smith Hall
255-8515
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimensions of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that
are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

For information regarding content or availability of EPL core-related courses, contact the academic department listed.

**EPL Core Courses**

PHIL 194/GOVT 294 Global Thinking
PHIL 242 Social and Political Philosophy

**PROGRAM IN REAL ESTATE**

114 West Sibley Hall
255-7110

The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic and industry-related real estate activities on and off campus. The field of real estate is a committee of graduate faculty members selected from several different colleges that is directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with design, development, finance, law, management, marketing, transactions, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration and to fulfill a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, or international real estate concentrations). Students complete real-world, semester-long project workshops during their second and fourth semesters.

**Admissions**

Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation either from faculty members familiar with the applicant's academic work, or if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extensive and relevant work experience will receive favorable consideration. International students for whom English is a second language will need to achieve a minimum TOEFL score of 250 (computer based) or 600 (paper based). There is no work experience required for admission, however, it is strongly preferred that applicants have at least some industry-related work experience, with three to five years' experience typical. Applications are reviewed on a rolling basis. To be considered for financial aid, applications must be received by January 15. Otherwise, please submit complete application by March 1. Wait list applications will be accepted until June 1. For more information, contact the graduate field coordinator at 255-7110, or real_estate@cornell.edu.

**SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR**

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the 21st century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- **Graduate studies leading to the M.S. and/or Ph.D. in earth science subdisciplines (e.g., atmospheric science, geology/geophysics, biogeochemistry, hydrology, oceanography).**
- **Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level such as environmental consulting and science writing.**
- **Graduate degree in environmental law or policy.** These fields value students with an understanding of the science behind legal and policy decisions.
- **Advanced degree in teaching, for example, earth science at the middle or high school level.**
- **Medical school.** The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences and the College of Arts and Sciences. In the College of Engineering, the SES curriculum comprises the Geological Sciences major. The SES major has its home in the Department of Earth and Atmospheric Sciences and includes collaboration with several departments across the university.

**The SES Curriculum**

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. **Basic Math and Sciences**
   - a. MATH 111–112, or MATH 191–192
   - b. PHYS 207–208, or PHYS 112–213
   - c. CHEM 207–208 (or CHEM 211–257)
   - d. BIO G 101/103 and 102/104 (or 105–106) or BIO G 109 and 110

2. **Required introductory course:** EAS 220 The Earth System

3. **Science of Earth Systems Core Courses**

   The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:
DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall  255-8066

Students interested in graduate study in statistics and probability can apply to the graduate field of statistics or to one of the other graduate fields in the arts and related course work. Students in the field of statistics plan their graduate programs with the assistance of their special committee. For detailed information on opportunities for graduate study, please contact the director of graduate studies, 301 Malott Hall.

The department offers an undergraduate major and minor in biometry and statistics through the Department of Biological Statistics and Computational Biology (BSCB) in the College of Agriculture and Life Sciences. It also offers a minor in Engineering Statistics through the Department of Operations Research and Industrial Engineering in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the undergraduate coordinator (301 Malott Hall, 255-8066).

Statistics courses offered by the departments listed below will fill distribution requirements in many of the colleges.

A statistical consulting service is offered by the faculty of the BSCB. There is no charge to members of the Cornell community for using the Statistical Consulting Service. It provides guidance to researchers in a broad variety of fields on designing experiments, collecting and analyzing data, and drawing appropriate conclusions from the results of their studies. Statistical computing consulting is also available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The following core courses include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

Course Designations

The following course identifiers are used to designate the courses offered by the separate units: Biological Statistics and Computational Biology (CAS), STBTRY, Engineering Statistics Unit (ENGR), STENGR. Mathematical Statistics Unit (MATH), Social Statistics Unit (LIR and ARTS), STSOC. To enroll in one of the courses, see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Department of Statistical Science

ST 201(2010) Introductory Statistics

This is an introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, contingency tables, and logistic regression.

ST 501-502(5010-5020) Applied Statistical Analysis

Two-semester core course for students in master of professional studies (MPS) degree program in applied statistics offered in Department of Statistical Science. Prerequisite: enrollment in M.P.S. program. Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.

ST 501(5010) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

ST 502(5020) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

ST 600(6000) Statistics Seminar

Fall and spring. 1 credit. Pre- or corequisite: BTRY 409 or permission of instructor. S/U grades only.

Biological Statistics Unit

STBTRY 301 Biological Statistics I (enroll in BTRY 301)
STBTRY 302 Biological Statistics II (enroll in BTRY 302)
STBTRY 310 Statistical Sampling (enroll in BTRY 310)
STBTRY 382 Introduction to Statistical Genomics and Bioinformatics (enroll in BTRY 382)
STBTRY 408 Theory and Probability (enroll in BTRY 408)
STBTRY 409 Theory of Statistics (enroll in BTRY 409)
STBTRY 482 Statistical Genomics (enroll in BTRY 482)
STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
STBTRY 495 Undergraduate Statistical Consulting (enroll in BTRY 495)
STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
STBTRY 499 Undergraduate Research (enroll in BTRY 499)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers an accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied Economics and Management The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree. Accredited by AACSB International—The Association to Advance Collegiate Schools of Business, AEM's undergraduate business program offers courses that prepare students for careers in finance, marketing, management, and business administration. Students also may participate in AEM's specialized programs focusing on entrepreneurship, agribusiness, and food industry management. Courses reflect the program's analytical, applied economics focus (business.aem.cornell.edu).

Arts and Sciences Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular, majors in economics, mathematics, sociology, and psychology focus on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

Engineering Many of today's business managers hold engineering degrees. Each of the College of Engineering's 15 major fields prepares students for business careers. Operations research and engineering is the most business-oriented engineering field, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any field can take a business-oriented minor in areas such as industrial systems and information science technology, and operations research and management science (www.engineering.cornell.edu).

Hotel Administration The School of Hotel Administration, the world's leading hospitality management program, prepares students for management and entrepreneurial careers in businesses such as hotels, resorts, restaurants, amusement parks, sports arenas, cruise lines, and airlines. The school offers a rigorous business curriculum with courses in finance and real estate; hospitality facilities and operations; marketing, tourism, strategy, and information systems; and organizational management, communication, and law. The school's 190-room conference hotel gives students the opportunity to apply what they learn in real-world business (www.hotelschool.cornell.edu).

Human Ecology The College of Human Ecology offers three business-oriented majors. The textiles and apparel major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in facility planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and consultants. The policy analysis and management major offers concentrations focusing on health, consumers, and family and social welfare, and its graduates pursue careers as nonprofit managers, consumer advocates, and policy researchers (www.human.cornell.edu).

Industrial and Labor Relations The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, labor law, labor economics, history, and statistics. Students can then develop specialized management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public policy, and international labor issues. Most ILR graduates begin careers in areas such as management, consulting, and public policy, but about one-third go directly to law school (www.ilr.cornell.edu).

Related Areas

Entrepreneurship and Personal Enterprise Program This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. A series of almost 50 linked entrepreneurship-related courses are offered by the above six colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (www.bep.cornell.edu).

International Programs Several additional programs allow business students to focus on a particular geographic area. Concentrations are offered in Latin American Studies, Modern European Studies, Asia-Pacific Studies, Asian Studies, Near Eastern Studies, South Asian Studies, and African Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture.

COMBINED DEGREE PROGRAMS

Highly qualified undergraduates may register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to pursue a B.S., M.B.A., and M.Eng. degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they
must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student’s other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.
INTRODUCTION

College Focus
The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- New life sciences

Faculty members challenge students with educational programs that promote problemsolving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban and rural development throughout New York State, the nation, and the world.

Administration

vacant, associate dean for financial affairs
Mary Lou Doyle, assistant dean for human resources
Michael P. Riley, associate dean for alumni affairs, development, and communications
Donald R. Vands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station
Susan J. Riha, director for sponsored research in the senior associate dean's office
Helene R. Dillard, associate dean and director of cooperative extension
Christopher B. Watkins, associate director of cooperative extension
Glenn J. Applebee, associate director of cooperative extension
Daniel J. Decker, director of CALS land grant affairs, senior advisor to the dean
W. Ronnie Coffman, director of international programs
James E. Haldeman, associate director of international programs

Terry W. Tucker, associate director of international programs
Alice Pell, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs
Animal science: Alan W. Bell, 149 Morrison Hall
Applied economics and management: William H. Lesser, 154 Warren Hall
Biological and environmental engineering: Michael F. Walter, 104 Riley-Robb Hall
Biological statistics and computational biology: Martin T. Wells, 435 Warren Hall
Communication: Geri K. Gay, 339 Kennedy Hall
Crop and soil sciences: Stephen D. DeGloria, 232 Emerson Hall
Development sociology: Max Pfeffer, 133A Warren Hall
Earth and atmospheric sciences: Teresa E. Jordan, 2116 Snee Hall; Stephen J. Colucci, co-chair, 1116 Bradﬁeld Hall
Ecology and evolutionary biology: Richard G. Harrison, E345 Corson Hall
Education: Rosemary S. Caffarella, 435 Kennedy Hall
Entomology: Jan P. Nyrop, 2130 Comstock Hall
Food science: Joseph H. Hotchkiss, 119 Stocking Hall
Horticulture: Marvin P. Pritts, 134A Plant Science Building
Landscape architecture: Peter J. Trowbridge, 446 Kennedy Hall
Microbiology: William C. Ghiorse, B75C Wing Hall
Molecular biology and genetics: Charles F. Aquadro, 235 Biotechnology Building
Natural resources: Barbara A. Knuth, 117 Fennew Hall
Neurobiology and behavior: Thomas D. Seeley, W301 S. G. Mudd Hall
Plant breeding and genetics: Mark E. Sorrells, 241 Emerson Hall
Plant pathology: George W. Hudler, 334 Plant Science Building
Statistical sciences: Bruce W. Turnbull, 227 Rhodes Hall

Student Services
Office of Academic Programs
The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office and the Registrar’s Office. Although most of the student services are in the Office of Academic Programs, significant efforts are located across the college in the Office of Undergraduate Biology and in various departments. Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty advisor in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student’s academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college’s central undergraduate advising office, coordinates the college international exchange programs, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college’s honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student’s academic circumstances. The staff is available on a walk-in basis, as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, Tamara Durham.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college’s undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.
Within the university, the Office of Multicultural and Diversity Programs is designed to facilitate college liaison with the central Office of Minority Education Affairs, Learning Strategies Center, and the State Programs Office. Other university connections include the University Career Center and financial aid regarding concerns of the underrepresented student population. The director provides support for the CALS Diversity Committee. The director together with peer advisors carries on the duties of the office. The staff acts as a mentor advocacy group, as well as an information and referral center.

Given the college's policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions which serve the college's entire population. At present, that includes general college diversity activities, serving as the college prehealth advisor and providing ongoing support at all levels for the Office of Counseling and Advising.

The CALS Registrar's Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university and college's policies and procedures and the student. The Registrar's Office maintains student records and reviews degree progress on a semester basis, maintains the Dean's List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/cals/current/registrar/index.cfm.

The CALS Registrar's Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 9:00 to 11:00 A.M. and Wednesdays from 2:00 to 4:00 P.M. in 140 Roberts Hall. No appointment is necessary during these times. Registrar's Office staff: Melanie Holland, Torrey Jacobs, Amy Paolangeli, Elisa Rafferty.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 400 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester and are available on the college's website. The active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, Sheri Mahoney, Sharon Radcliffe, or Jo-Lynn Buchanan in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer, and intra-university transfer student processes. The office hosts on-campus and off-campus information sessions for prospective students, evaluates and makes decisions on more than 4,000 applications each year, and coordinates CALS Days for admitted students each April. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Sheils, Tara Bubble, Jared Rivers, Lorie Fessenden, and Heather Orkin.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college are used to provide supplemental aid for students who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in 140 Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

**Students**

Undergraduate enrollment is approximately 5,100, with about two-thirds in the major division. Each year about 850 students are graduated, while 645 freshmen and 250 new transfer students are enrolled. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

**Admission**

The CALS Admissions Office selects applicants who are academically well prepared and appear most likely to benefit from the college's various curricula.

While most students come from New York State, about 42 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 24 percent are self-identified as members of minority ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions). The office is located in 177 Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

**Transfer Students**

All accepted transfer credit must be from an accredited college or university. Transfer credit is awarded on a case-by-case basis based on review of official transcripts. Additional course information, college, and transfer credits must be transferred. Contact the CALS Registrar's Office for information. A maximum of 60 non-Cornell credits may be transferred.

Approximately 30 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, technical colleges, or four-year institutions. Many of them hold an associate's degree. Detailed information on transfer admission is available from the CALS Admissions Office.

**Intra-University Transfer**

A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program unavailable in their current college. Guidelines are available in the CALS Admissions Office. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and letter of interest.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Freshmen are not admitted—students need to spend two semesters in their home college before applying. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester, the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

**Special Students**

A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell transfer application, a resume of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the CALS Admissions Office.

**Off-Campus Students**

Programs in which students study off campus but enroll for Cornell credit include sea semester, semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, and Carriage House, in Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

**Facilities**

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Agricultural Experiment Station at Geneva.

Robert Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and cooperative extension. Included in the office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of
Multicultural and Diversity Programs, and the Registrar's Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, Riley-Robb Hall, and Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies and the master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an advisor in each major. Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural science: Antonio DiTommaso, 903 Bradfield Hall, ad97@cornell.edu

Agriculture science education: William Camp, 416 Kennedy Hall, wcg@cornell.edu

Animal science: W. Bruce Currie, 434 Morrison Hall, wbc@cornell.edu

Applied economics and management: Dale Grossman, 205 Warren Hall, dag14@cornell.edu

Atmospheric science: Mark Wysocki, 1114 Bradfield Hall, mw3@cornell.edu

Biological engineering: James Bartsch, 514 Riley-Robb Hall, jab55@cornell.edu

Biological sciences: Jeffrey Doyle, 216 Stimson Hall, jld@cornell.edu; Bonnie Cornella, 216 Stimson Hall, bcc3@cornell.edu

Biometry and statistics: Steven Schwager, 424 Warren Hall, sj5@cornell.edu

Communication: Brian Earle, 328 Kennedy Hall, box18@cornell.edu

Crop and soil sciences: Gary Pick, 507 Bradfield Hall, gwf2@cornell.edu

Development sociology: Tom Hirschl, 333 Warren Hall, tah@cornell.edu

Entomology: John Losey, 4126 Comstock Hall, jet27@cornell.edu

Environmental engineering: James Bartsch, 314 Riley-Robb Hall, jdb35@cornell.edu

Food science: Janice Brown, 107 Stocking Hall, jmb14@cornell.edu

Information science: Lindsay Marzano, 303 Upson Hall, lindsayc@cornell.edu

Interdisciplinary studies: Lisa Ryan, 140 Roberts Hall, lari@cornell.edu

International agriculture and rural development: Terry Tucker, 33 Warren Hall, twl2@cornell.edu

Landscape architecture: Peter Trowbridge, 440 Kennedy Hall, pjt@cornell.edu

Natural resources: Tim Fahey, 12 Fernow Hall, tf5@cornell.edu

Nutritional sciences: J. Thomas Brenna, B38 Savage Hall, jtb@cornell.edu

Plant sciences (plant biology; plant genetics and breeding; horticulture; plant pathology and protection): Peter Davies, 255 Plant Sciences Bldg., pdj2@cornell.edu—August-December 2006; Ian Merwin, 118 Plant Sciences Bldg., im13@cornell.edu—January-July 2007

Science of earth systems: Bryan Isacks, 3110 Snee Hall, bh1@cornell.edu

Science of natural and environmental systems: Tim Fahey, 12 Fernow Hall, tf5@cornell.edu

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify the application to (1) graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish. The requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Students outside of CALS can be found on the CALS counseling and advising web site (cals.cornell.edu/cals/couns.html). For minors outside of CALS, please consult with the specific department.

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual-enrollment and to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies.

Agriculture and life sciences (M.P.S. (agr.)): Don Viands, 151 Roberts Hall, drv3@cornell.edu

Agricultural economics: David Lee, 248 Warren Hall, dl5@cornell.edu

Animal breeding: John Poliak, B-17 Morrison Hall, ep6@cornell.edu

Animal science: Richard Quaas, B-17 Morrison Hall, rq1@cornell.edu

Atmospheric sciences: Dan Wilks, 1113 Bradfield Hall, dw5@cornell.edu

Biochemistry, molecular, and cell biology: Volker Vogt, 358 Biotechnology Bldg., vmv1@cornell.edu

Biological and environmental engineering: Dan Anehsansley, 306 Riley-Robb Hall, dja@cornell.edu

Biometry: Marty Wells, 435 Warren Hall, mrt1@cornell.edu

Communication: Bruce Lewenstein, 321 Kennedy Hall, bv1@cornell.edu

Development sociology: fall, Joe Francis, 235 Warren Hall, jdf2@cornell.edu; spring, Perfait Eloundou-Enyegue, 318 Warren Hall, pcmc@cornell.edu

Ecology and evolutionary biology: Harry Greene, E251 Corson Hall, hwg5@cornell.edu

Entomology: Jeffrey Scott, 6134 Comstock Hall, jgs5@cornell.edu

Environmental toxicology: Andrew Yen, 106 Stocking Hall, ayy2@cornell.edu

Food science and technology: Harry Lawless, 100 Stocking Hall, hl1@cornell.edu

Genetics and development: staff. 107 Biotechnology Bldg., dmc18@cornell.edu
Horticulture: Nina Bassuk, 33 Plant Science Building, nlb2@cornell.edu

International agriculture and rural development (M.P.S. aggr.): Steven Kyle, 249 Warren Hall, sck5@cornell.edu

International development: Norman Uphoff, 51 Warren Hall, nru1@cornell.edu

Landscape architecture [M.L.A.]: Dan Kral, 440 Kennedy Hall, dkw5@cornell.edu

M.P.S. agriculture with Peace Corps option (offered by most agriculture fields with M.P.S. programs): Jim Haldeman, 36 Warren Hall, or see director of graduate studies for more information, jeh5@cornell.edu

Microbiology: Stephen Winans, 360A Wing Hall, scw2@cornell.edu

Natural resources: Marianne Krasny, 16 Fernow Hall, mek2@cornell.edu

Neurobiology and behavior: David Deitcher, 715 Mudd Hall, did14@cornell.edu

Nutritional sciences: Christine Olson, 376 MVR Hall, cm03@cornell.edu

Physiology: Mark Roberson, T6-008A Vet Research Tower, mrs14@cornell.edu

Plant biology: Thomas Owens, 217 Plant Science Bldg., tgo2@cornell.edu; Robert Turgeon, 250 Plant Science Bldg., ert2@cornell.edu

Plant breeding: Lisa Earle, 514 Bradfield Hall, ede3@cornell.edu

Plant pathology: Michael Milgroom, 216 Bradfield Hall, mnm5@cornell.edu

Plant protection (M.P.S. agrr.): William Reissig, Barron Laboratory, Geneva Campus, whr1@cornell.edu

Soil and crop sciences: Janice Thies, 719 Bradfield Hall, jet25@cornell.edu

Statistics: Robert Strawderman, 437 Warren Hall, jrt25@cornell.edu

Zoology: John Hermanson, T5002A Vet Research Tower, jwh6@cornell.edu

CALS Career Development Office: www.cals.cornell.edu/cals/current/career/index.cfm

Research Honors Program

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master's thesis or professional journal article in that area of research. Original honors research may be published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research advisor's name to Ann Gartner, amg28@cornell.edu, by the end of the spring semester. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Archives (140 Roberts Hall). This copy is made available in Mann Library. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During the summer of each year, the CALS Research Honors Abstracts is published as a compilation of abstracts of the honors theses. The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the program requirements for the B.S. degree, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area. Research may be done under the appropriate program area: animal sciences, biological sciences, biological anthropology, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area, students' questions may be directed toward the appropriate area program chair.

OPPORTUNITIES IN RESEARCH

Undergraduate Research

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university.

Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members, departmental offices, the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 499-level course (required by some program areas). Faculty mentors are encouraged to make arrangements with a faculty member and undergraduate funding opportunities.

Research Honors Program

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion of this program requires a thesis written in the style of a master's thesis or professional journal article in that area of research. Original honors research may be published in a professional journal. Students are required to send an electronic version of their thesis title, abstract, student's name, and the research advisor's name to Ann Gartner, amg28@cornell.edu, by the end of the spring semester. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Archives (140 Roberts Hall). This copy is made available in Mann Library. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During the summer of each year, the CALS Research Honors Abstracts is published as a compilation of abstracts of the honors theses. The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the program requirements for the B.S. degree, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area. Research may be done under the appropriate program area: animal sciences, biological sciences, biological anthropology, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area, students' questions may be directed toward the appropriate area program chair.

Consult "Undergraduate Research Opportunities" on the web (cals.cornell.edu/CALSUndergraduateResearchOpportunities.cfm) for information on how to explore research opportunities, conferring with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must make written application to the CALS Registrar's Office no later than the end of the sixth week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year (or earlier if required by the program area). Earlier application deadlines to program area committees are noted in the sections below. For most of the program areas, an application form is available from the college registrar in 140 Roberts Hall. The application form also can be printed from the web at www.cals.cornell.edu/cals/current/student-research/honors/index.cfm. Applications for biological sciences students can be picked up at 208 Stimson Hall, and for biology & society students at 300 Rockefeller Hall.

Before the completed application is returned to the college registrar, signatures of approval are required in the following order: faculty research mentor, academic advisor, and the research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each particular program area.

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds (up to $500) to cover some of the costs incurred in doing the research. If approved, the funding will be transferred from an account in the CALS Office of Academic Programs to a departmental account of the student's research advisor to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described at cals.cornell.edu/CALSUndergraduateResearchOpportunities.cfm.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program must be accepted in one of the program areas approved by the faculty. Students are not eligible for distinction in research by participating in a program offered by another college or administrative unit.
The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research."

At or near the completion of their research, students are required to give an oral presentation or poster session during any event. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors/index.cfm.

The following are the honors program areas:

**Animal Sciences**

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavalchin, P. A. Johnson, T. R. Overton

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisors by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

1. Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.

2. Register for AN SC 499 Undergraduate Research.

3. Participate in AN SC 402 Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.

4. Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.

5. Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the administrative office of the Department of Animal Science, 149 Morrison Hall.

**Biological Sciences**

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall.

**Biological & Society**

Faculty committee: D. Pimentel, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis.

Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in B&SOC 499, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 14: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 28: Thesis defense accomplished.
- May 12: One bound copy of completed and defended thesis submitted to director of undergraduate studies.

**Entomology**

Faculty committee: B. Lazarro, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems.

Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for entomology research. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Research honors students have the option of earning academic credit by enrolling in ENTOM 497 Independent Study during any semester while working toward a research honors thesis. Credits and grade option for satisfying requirements of ENTOM 497 should be discussed with the thesis advisor (following page.)

Note: Enrolling in independent study is not a requirement for graduating with distinction in research honors in entomology.

**Sequence of Requirements**

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic advisor or preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.

2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.

3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.

4. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the Entomology Research Honors Committee) no later than the end of the sixth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available and should be submitted to the CALS honors registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).

5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by midterm of the semester in which the student will complete his or her graduation requirements.

6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Jugatae seminar) in the last semester of the senior year.
The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and conduct research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 494) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule:

**Junior Year**
1. File an informal application with the program director. The application includes a project description and advisor information.
2. March 50: Thesis should be close to completion.
3. April 13: Submit two copies of the thesis to the program director for ad hoc reviews.
4. April 29: Pick up ad hoc reviewers' comments from the program director.
5. May 13: Submit two copies of the final thesis: one for the college, one for the program director.
6. Week of May 24: Students are notified.

**Senior Year**
1. Sixth week of fall semester: Submit formal application.
2. March 30: Thesis should be complete.
3. April 13: Submit two copies of the thesis to the program director for ad hoc reviews.
4. April 29: Pick up ad hoc reviewers' comments from the program director.
5. May 13: Submit two copies of the final thesis: one for the college, one for the program director.
6. Week of May 24: Students are notified.

**Natural Resources**

Faculty director: J. B. Yavitt, chair

The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and conduct research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 494) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student’s interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule:

6. Week of May 24: Students are notified.

**Senior Year**
1. Sixth week of fall semester: Submit formal application.
2. March 30: Thesis should be complete.
3. April 13: Submit two copies of the thesis to the program director for ad hoc reviews.
4. April 29: Pick up ad hoc reviewers' comments from the program director.
5. May 13: Submit two copies of the final thesis: one for the college, one for the program director.
6. Week of May 24: Students are notified.
with faculty mentors and other researchers, they develop skills in research methods and data analysis. Students also learn that research projects are labor intensive and that writing research reports, such as the honors thesis, is a vital, but time-consuming, aspect of the research process. This intensive research experience is suitable for all students, and those who wish a less intensive research experience may conduct research with a faculty member under NS 401.

Students interested in the program should take NS 398 as early in their program as possible. Students may review program requirements at the NS 398 web site or contact the program directors. Acceptance into the research honors program occurs when the student (1) is accepted into a faculty member's research program and (2) submits a research proposal abstract that is approved by the directors of the research honors program.

Students interested in the program typically spend the spring sophomore semester and fall junior semester exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although some guidance in this process will be provided in NS 398. By the fall of the junior year, the student is expected to have identified their faculty member and be working with him/her on a proposal abstract, which is due early in the spring junior semester.

Students receive academic credit for work on their honors project under NS 499. The 6 required credits may be taken over several semesters. How much time is spent on the project each semester will be the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually will assign one hour of academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The research honors project is the major component of the research honors program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior semester and fall senior semester. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior semester is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted before spring break to a second faculty member for evaluation. When comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the semester.

Physical Sciences
Faculty committee: A. T. DeGaetano, chair; S. J. Mulvaney, C. D. Bustamante.

The research honors program in physical sciences provides opportunities for students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:
1. Identify a thesis advisor and thesis topic before the end of the junior year.
2. Work with the thesis advisor to prepare a budget and application form (due by the sixth week of senior year).
3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.
5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.
7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which graduation is expected.

There is no required format, but the thesis is usually written in the form of a research journal article or a master's thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

Plant Sciences

Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief background of the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminar, or other meetings). Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Additional guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon/.

Social Sciences
Faculty committee: J. D. Francis, N. Chau, S. C. Piliero.

Research projects in this program area include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are due to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a faculty thesis advisor during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:
1. Research Topic: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.
2. Research Questions/Empirical Hypotheses: Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.
3. Research Methods: Discuss the models to be constructed (if any), sampling
Agriculture and Life Sciences 2006-2007

4. Expected Significance: State what new knowledge or information is likely to be forthcoming and why it is important. State any legislative applications expected as a result of the research.

Faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise who are deemed capable of thesis supervision, but exceptions may be granted pending petition to the Social Science Research Honors Committee. Students should register for honors credit directed by the faculty research honors project advisor.

Distinction in research is awarded upon approval of the research honors thesis by the Social Science Research Honors Committee. The research should deal with a substantive issue in one of the fields in the social sciences. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. We recommend the submission of the thesis draft to the student's research advisor by the beginning of the month two months before graduation, for revision suggestions. Two copies of the thesis must be submitted to the chair of the social science committee no later than the middle of the second-to-last month before graduation (i.e., April or November). A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed and further revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the honors committee.

Off-Campus Opportunities

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States during the semester must petition for a leave of absence; students cannot be enrolled at both another institution and Cornell during the regular academic year. Courses should be selected in consultation with the faculty advisor. Please also see transfer credit policies under non-Cornell credit policies. Information about enrolling at another institution outside of the United States can be found under "Study Abroad."

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program is a component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments. The Adelphi plan is a program of study in consultation with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement. To receive academic credit for the Assembly Intern Program, students enroll in ALS 400. To receive academic credit for the Senate Assistants Program, students enroll in ALS 400.

Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research with faculty members, and work as externs. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, and carry out individual research projects under the supervision of Cornell faculty members. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 21, inquire at M101 McGraw Hall, 255-4090, or visit cwi.cornell.edu.

Marine Biological Laboratory's (MBL) Semester in Environmental Science

The Marine Biological Laboratory's (MBL) Semester in Environmental Science is a semester-long program held each fall in Woods Hole, Massachusetts. This is a multi-university and college program run by the staff of the Ecosystems Center of the MBL. Approximately 15-20 students interact intensively with the world-class research staff of the Ecosystems Center in a mixture of classroom and hands-on research activities. The major foci of the program are on biogeochemistry, ecosystem science, and the impacts of land use and global change on the environment. Students spend about 20 hours each week conducting intensive, hands-on field and lab work in coastal forests, freshwater ponds, and estuaries, and complete an independent research project as part of the curriculum. The MBL is one of the oldest (founded in 1888) and most distinguished biological field stations in North America. Cornell credit for up to 16 credits is offered. More information on the program can be obtained from the Cornell faculty liaison (Prof. Rob Howard, 255-6175) or from the director of the program (Dr. Ken Foreman, MBL Ecosystems Center, 508-289-7777; http://courses.mbl.edu/SES/).

SEA Semester

The SEA Education Association is a nonprofit educational institution offering academic and internship courses in Washington, D.C., and global conflict studies and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA's two sailing vessels: the SSV Robert Seamans or the SSV Cornell Cramer. For more information, contact the Cornell Marine Programs office, G14 Stimson Hall (255-3717) or visit www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shools Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML offers undergraduates and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to a section titled "Marine Science," in the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shools Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experience. The program offers the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for student internships of 6 credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 497-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agriculture and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.

1. Credit will be assigned or accepted only in courses in which a student's work is directly involved in determining both the course content and in evaluating the student's work.
The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.

Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignment, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar’s Office, or departments may have their own.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workload, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in the Registrar’s Office in 140 Roberts Hall.

Study Abroad
Each year about 200 CALS undergraduates spend an academic year or semester studying abroad. Whether attending a large university in Australia, a smaller campus in Sweden, or a technical school in Singapore, CALS students have a variety of international study options available to them. They can choose from:

- a CALS exchange program in Austria, Australia, Brazil, Denmark, Mexico, Netherlands, New Zealand, Singapore, Sweden, Switzerland, or the United Kingdom;
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program designed especially for CALS students.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their enrolled tuition with no additional administrative fees. To learn more about the exchange programs, please visit: www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm or e-mail exchange coordinator Bonnie Shelley, brs9@cornell.edu.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu/.

Whether on a CALS exchange or going through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty advisor and meet with the college study abroad advisor to review the college policies and to receive college approval. College policies can be viewed at: www.cals.cornell.edu/cals/current/abroad-exchange/going-abroad/policies.cfm.

Study abroad advising hours are held in 140 Roberts Hall on Tuesdays and Thursdays, 9:00 A.M. to 12:00 P.M. and Wednesdays 1:00 to 3:00 P.M.

Ithaca College and Wells College Exchange Programs
The Cornell University-Ithaca College Exchange Program is a reciprocal arrangement between Cornell University and Ithaca College that allows matriculated full-time students with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). These students are subject to additional tuition charges on a per-credit basis. This arrangement is available during the fall and spring semesters only, and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, N.Y. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.cse.cornell.edu/exmu/.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Repeated courses increase the number of credits required for graduation. The number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.

   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Repeated courses increase the number of credits required for graduation. These credits do count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Repeated courses increase the number of credits required for graduation. These credits do count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Repeated courses increase the number of credits required for graduation. These credits do count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements
1. Credit requirements
   A. Minimum total credits: 120 academic credits are required for graduation.
   Important Exceptions:
   • Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
   • Repeated courses increase the number of credits required for graduation. These credits do count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CLEP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation.
4. Approval of the student's faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be adjusted accordingly.

5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to be prorated in the spring semester are encouraged to submit the application by December. The final deadline is January. Please be advised that prorated tuition may impact the student's financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements
Minimum cumulative GPA: 2.00 or above

4. Schedule Requirements
A. Students are expected to enroll in at least one CALS course each semester until 55 CALS credits have been earned.
B. Freshmen may not enroll in more than 18 credits, not including physical education.
C. Freshmen are limited to one S/U course per semester.
D. PE does not count toward the 12 credit minimum required for full-time status.

6. Distribution Requirements
The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective in the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Please note: Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be review or supplemental in the discipline, such as MATH 109 and 00-level courses, will not be counted in the distribution areas.

Physical and Life Sciences. 18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.

Socia Sciences and Humanities. Students must complete four courses of 3 or more credits each from the following six categories of courses in the humanities and social sciences.

At least one course must be completed from three different categories.

No more than two courses in the same department will be counted toward the distribution requirement.

Categories:
• Cultural Analysis (CA)
• Historical Analysis (HA)
• Knowledge, Cognition, and Moral Reasoning (KCM)
• Literature and the Arts (LA)
• Social and Behavioral Analysis (SBA)
• Foreign Language (FL)

Detailed descriptions follow.

Social Sciences and Humanities: Category Descriptions

Cultural Analysis (CA)
These courses study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

Historical Analysis (HA)
These courses interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

Knowledge, Cognition, and Moral Reasoning (KCM)
These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Literature and the Arts (LA)
These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of specific artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Social and Behavioral Analysis (SBA)
These courses examine human life in its social context through the use of social scientific methods, often involving the use of social sampling techniques, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict, cooperation).

Foreign Language (FL)
These courses are taught by the following departments: African Studies and Research Center (AS&RC — language only), Asian Studies (BENG, BU RM, CHIN, HINDI, INDO, JAPAN, KHMER, KOREA, SANSK, TAG,
THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only, DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FRROM, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSA, HUNGR, POLSH, SEBCR, and UKRAN).

Diversity (D)

Although not a requirement, the college recommends that students take at least one diversity course.

Written and Oral Expression. 9 credits total, of which at least 6 must be in written expression, selected from the following:

**Oral Expression**
- COMM 201, 203
- EN TOM 335

**Written Expression**
- First-Year Writing Seminars
- Sophomore Seminars
- AEM 200
- COMM 131 (117), 260, 263, 350, 352
- ENGL 280, 281, 288, 289, 382-385, 388, 389
- FD SC 230
- LA 215
- NS 105, 230

**Mathematics Requirement**

Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The following students are exempt from the CALS Math Placement Exam:

(a) internal transfer students who already have passed one mathematics course listed below under Group II, section 1, and (b) entering biological and environmental engineering (BEE) students who take the placement exam in the College of Engineering.

The CALS exam score determines the college math graduation requirement, and provides placement information. Cut-off scores divide students into three groups, each with specific graduation requirements.

**Mathematics requirements and placement suggestions:**

**Group I:** Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score suggests calculus skill level (e.g., MATH 111).

**Group II:** Placement score suggests pre-calculus skill level, and students in this group must satisfy one of the following:

1. Successfully complete an approved mathematics course at Cornell. EDUC 115 is recommended.

   **Approved Courses:**
   - Math: EDUC 115, any mathematics course (except MATH 100, 103 and 109).
   - Statistics: MATH 171; AEM 210; BTRY 301; NTRRES 331; ILRST 211, 310, 311, 312; ENGRD 270; PAM 210. (Also BTRY 100, 101, 102, 201 and 261, and ILRST 210 formerly offered)

2. Successfully complete or have completed an approved calculus course at another college or university with a final grade of B- or better.

3. Receive AP credit for calculus (4 or 5 on Math AB or BC) or statistics.

**Group III:** Students in Group III on the CALS math placement exam must successfully complete an approved non-statistics mathematics course at Cornell.

**Approved Courses:**
- EDUC 115, any mathematics course (except MATH 100, 103, 109 and 171).

   - Transfer and AP math credit (up to 6) will be recorded as general electives. BEE students typically receive fewer AP credits than other CALS students with the same scores. BEE students also may receive AP credits based on the Engineering math placement exam.

Please note: changes to the Mathematics Requirement are pending approval of the Faculty Senate.

**Non-Cornell Credit Policies**

1. Non-Cornell credit includes:
   - advanced placement credit (see p. 7 for further details);
   - credit earned at an accredited college or university;
   - credit earned through the Ithaca College and Wells College Exchange Programs;
   - credit earned through a Cornell Abroad or CALS exchange program.

2. Non-Cornell credit is accepted by CALS when:
   - the credits are earned at an accredited institution;
   - the credits do not duplicate course work already completed at Cornell;
   - the credits are earned before matriculating into CALS or during the summer or winter session or through Cornell Abroad or an approved exchange program;
   - the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
   - the grade earned is "C-" or better; and
   - an official transcript is sent directly to the CALS Registrar's Office from the college/university where the credits were completed.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the course provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 8-10 of this catalog.

3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.
   - If more than 60 non-Cornell credits have been completed, the CALS Registrar's Office will work with the student to determine which credits best fulfill CALS graduation requirements.
   - Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.

4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.

   - Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
   - Non-Cornell courses that are equivalent to Cornell courses which fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.
   - Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the maximum of 55 endowed credit hours.
   - If a course has no comparable course at Cornell, the Registrar staff will determine how the credit should be applied.
   - Faculty advisors determine how non-Cornell credit will be applied toward major requirements; the CALS Registrar's Office determines how non-Cornell credit will be applied toward CALS graduation requirements.

5. Students who have already matriculated into CALS and are planning to take courses at another institution should complete a transfer credit pre-approval form before completing the course work. Pre-approval forms are available in the CALS Registrar's Office. Students are expected to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate early or delay graduation must complete an additional application with the CALS Registrar's Office.

**Graduation Procedures**

1. The progress of each student toward meeting the degree requirements is recorded each semester in the CALS Registrar's Office on a graduation summary form. Students can review their graduation summary online at https://dust.cals.cornell.edu. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are expected to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate early or delay graduation must complete an additional application with the CALS Registrar's Office.
Course Enrollment

Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty advisor, students pre-enroll by computer.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the CALS Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar’s Office to ensure that proper registration will occur.

Repeated Courses

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Incompletes

Students must not enroll again for a course in which they received an incomplete. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Enrollment Changes

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through “Just the Facts” or the official course drop and add form at the Registrar’s Office, 140 Roberts Hall. Approval of the faculty advisor may be required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings. Students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2. Students are guilty of violating the code if they
   • knowingly represent the work of others as their own.
   • use or obtain unauthorized assistance in any academic work.
   • give fraudulent assistance to another student.
   • fabricate data in support of laboratory or field work.
   • forge a signature to certify completion or approval.
   • submit the same work for two different courses without advance permission.
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
   • in any other manner violate the principle of absolute integrity.

3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4. Faculty members fulfill their responsibility to
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
   • make clear the conditions under which examinations are to be given.
   • make clear the consequences of violating any aspects of the code.
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
   • monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s.

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.
The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of the course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

Academic Honors
The college encourages high academic achievement and recognizes outstanding students in several ways:

1. Dean's List. Each semester, students are recognized for academic excellence by inclusion on the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
   a. a minimum course load for the semester of 12 letter-graded credits;
   b. completion of at least one CALS course;
   c. achievement of a semester GPA of at least 3.50; and
   d. achievement of an A grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

2. Bachelor of Science with Honors
   a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate "summa cum laude."
   b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the cumulative Cornell GPA) will graduate "magna cum laude."
   c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the cumulative Cornell GPA) will graduate "cum laude."

3. Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

4. Ho-Nun-De-Kah, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

5. Golden Key is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key’s web site at www.rso.cornell.edu/gkhs/.

Academic Standing
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:
- semester GPA of at least 2.00
- cumulative GPA of at least 2.00
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of major and distribution requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.00) or higher are prima facie evidence of satisfactory progress and good academic standing.

*For those students matriculating 8/01 or later. Requirements are 1.70 for those who matriculated before 8/01.

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee
- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements.
- receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee.
- acts on readmission requests from persons whose previous enrollment was terminated by the committee.
- notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student's faculty advisor, whose signature is required. The advisor's recommendation is helpful to the committee.

The committee reviews the written petition and determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

Leave of Absence
A student taking a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester should submit a written petition for a leave of absence. Such action serves as appropriate notification to university offices and corrects the student's transcript.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Committee on Academic Achievement and Petitions).

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

MAJOR FIELDS OF STUDY
The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of
educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

**Agricultural Science**

Many students wish to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources, such as production and marketing of foods (animals and plants) and ornamental plants, agricultural education in secondary schools, cooperative extension, food systems, and crop consultants. The agricultural science program is designed to allow students to work with their advisor in developing a curriculum that best fits the needs of each individual student. In this program, students can gain a broad exposure to the agricultural courses across the college. The program is very flexible and allows students to develop a general course of study and to select one or two areas of concentration.

All students are required to take the core courses. Concentrations requiring at least 12 credits are available in animal science, applied economics and management, education and communication, and plant sciences/agronomy. Students will gain practical experience through special programs, extracurricular activities, and/or internships. Opportunities are available in research and outreach experiences, and in summer employment, which enrich the practical experience. Students will engage in group activities and will participate in discussions with faculty and other experts in various sectors of the agricultural industry.

**Animal Sciences**

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are introduced in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisors. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat, animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it, may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a select group of students.

Students declaring a minor in animal science will arrange for a formal academic advisor in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of which must be taken at Cornell), the makeup of which will be determined in consultation with the advisor. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor advisor's signature on the petition to graduate.

For information, contact Deloris Bevins in 149 Morrison Hall, dgb1@cornell.edu.

**Applied Economics and Management**

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: business, agribusiness, and applied economics.

AEM is home to Cornell's undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public policy issues.

The six areas of specialization offered in AEM are:

**Business**

One of the largest undergraduate majors at Cornell University, offers students a broad array of courses in the fields of finance, marketing, management, accounting, and entrepreneurship.

**Food industry management** is a specialized business program for students interested in management positions in the retailing, manufacturing, and distribution sectors of the food industry.

**Farm business management and finance** is for students interested in working for firms with ties to farming and agriculture, such as cooperatives, banks, horticultural businesses, and family farms.

**Agribusiness management** students study general business and take courses tailored to agricultural businesses.

**Applied economics** is a broad-based specialization that focuses on such important national and international issues as the economics of policy, markets, production, international trade, and international development.

**Environmental and resource economics** students study the economics of water and air quality, waste management, rural-urban land use, the sustainability of natural resources, energy use, and global climate change.

**Minors**

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in five different subject areas—agribusiness, business, environmental and resource economics, farm management, or food industry management. These minors consist of between 18 and 20 credits of required courses. Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside of CALS.

**Atmospheric Science**

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. Atmospheric science:
   a. EAS 341, 342, 352, 447, 451

2. See tracks listed below for additional required courses

3. Mathematics, statistics, and computer science:
   a. MATH 111, 112, 213, or equivalent
The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Silliman Hall provides student services that are available to students from engineering, art, and liberal studies.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Silliman Hall, 255-1717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.bio.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

**Biological and Environmental Engineering**

The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and environmental engineering. BEE faculty and students address three major challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world’s natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering majors in the Department of Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

The program leading to a bachelor of science degree in biological or environmental engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology, Inc. (ABET). All students in the jointly administered engineering majors enroll in the College of Engineering and pay endowed tuition their last two semesters. BEE students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (solid mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and engineering design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of environmental and energy systems analysis, and waste treatment and disposal. Students further strengthen their programs by completing minors or a second engineering major. Students planning for medical school take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills, and all engineering students complete a capstone design project. Students in the engineering program may pursue minors and options in specialized areas as noted in the engineering section of this publication.

Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu.

The department also offers two technology programs: biological engineering technology and environmental engineering technology. The technology programs emphasize applied and technical aspects of biological, environmental, physical, and life sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology undergraduate students participate in honors programs, undergraduate teaching and research, internships, independent study, design teams, and study abroad. Students in the engineering program are also eligible to participate in the Engineering Cooperative Education Program. Students pursuing majors offered in the BEE department should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities for engineers and technologists cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law. In recent years graduates have pursued careers in environmental consulting, biotechnology, pharmaceutical industries, biomedical engineering, management, sustainable technologies, consulting, and international development.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is educating the next generation of engineers to meet these challenges.

Specific course requirements for the accredited engineering programs are described in the College of Engineering section of this book.

Specific course distribution requirements for the academic programs in biological engineering technology and environmental engineering technology include the following:
1. **Basic Subjects** 
   a. Calculus 8
   b. Chemistry 7
   c. Physics 8
   d. Introductory biological sciences 6-8
   e. Computer programming 4
   f. Statistics or probability 3

Liberal Studies Distribution: Must meet CALS liberal studies requirements.
   - Distribution courses are in the following categories:
     1. Cultural Analysis (CA)
     2. Historical Analysis (HA)
     3. Literature and the Arts (LA)
     4. Knowledge, Cognition, and Moral Reasoning (KCM)
     5. Social Behavior and Analysis (SBA)
     6. Foreign Language (Not Literature Courses) (FL)

2. **Advanced and Applied Subjects**
   a. Five courses in the biological, environmental, or life sciences 15
   b. Five engineering or technology courses at the 300 level or above; including at least 9 credits in biological and environmental engineering 15

3. **Electives**
   - Additional courses to complete College of Agriculture and Life Sciences requirements
   - **Total (minimum)** 120

For further details on the biological and environmental engineering and technology majors, see the BEE Undergraduate Program Handbook, available at 207 Riley-Bobb Hall or at www.bee.cornell.edu. Contact Professor Jim Bartsch at 255-2800, jab35@cornell.edu, or go to www.bee.cornell.edu for more information.

**Biology & Society**

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see “Biology & Society” under the College of Arts and Sciences in this publication or visit www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

**Admissions**

Students in CALS may be admitted provisionally into this field of study when they apply to Cornell. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes:
   1. a one- to two-page statement explaining the student's intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
   2. a selected theme.
   3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
   4. a transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 60 faculty members from each college serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall. For more information, see “Biology & Society” under the College of Arts and Sciences section of this publication.

**Biology & Society requirements:**
   1. Introductory biology (101-104, 105-106, or 107-108, or a 5 in AP biology)
   2. College calculus (one course)
   3. Ethics (one course)
   4. Two social sciences/humanities foundation courses
   5. Three biology foundation courses
   6. One biology depth course
   7. Statistics (one course)
   8. Core course
   9. Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a

**Biometry and Statistics**

Quantitative prediction and interpretation are increasingly essential components of biological and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using formal mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, has increased exponentially providing the means for sophisticated analysis of complex phenomena.

The biometry and statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of mathematical and statistical techniques to the sciences. Biometry applies mathematics and statistics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academia, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. For further details on the biometry and statistics major/minor, please contact the director of undergraduate studies, Professor Steven J. Schwager (424WN) at sj@cornell.edu or go to www.bscb.cornell.edu.

**Requirements for the Major** (beyond the college requirements):

Ten (10) core courses:

- BTRY 301 Biological Statistics I
- or BTRY 601 Statistical Methods
- BTRY 302 Biological Statistics II
- or BTRY 602 Statistical Methods II
- BTRY 408 Theory of Probability
- BTRY 409 Theory of Statistics
- BTRY 495 Statistical Consulting
- MATH 111 and 112 Calculus I and II
- or MATH 121 and 122 Honors Calculus I and II
- or MATH 191 and 192 Calculus I and II for Engineers
- MATH 221 and 222 Linear Algebra and Differential Equations
MATH 223 and 224 Theoretical Linear Algebra and Calculus or
MATH 293 and 294 Engineering Mathematics or
MATH 213 and 251 Calculus III and Linear Algebra with Applications
COM S 100M Introduction to Computer Programming or
BEE 151 Introduction to Computing

Statistics concentration: Students must complete three (3) advanced courses in statistics, computer science, operations research, biology, and/or mathematics courses; below is a sample of such courses (for complete list, go to www.bscb.cornell.edu/ugrads04/):

BTRY 310 Statistical Sampling
BTRY 382 Introduction to Genomics and Bioinformatics
BTRY 604 Applied Experiment Design
ILRST 410 Multivariate Analysis
NTRES 670 Spatial Statistics
COM S 211 Computers and Programming
COM S 426 Computational Biology
OR&IE 361 and 462 Stochastic Processes
OR&IE 473 Empirical Finance
BIOL 440 Phylogenetic Systematics
AN SC 420 Quantitative Animal Genetics
MATH 311 or 413-414 Introduction to Analysis
MATH 420 Differential Equations and Dynamical Systems

Statistical genomics concentration: Students must complete BTRY 382 Introduction to Genomics and Bioinformatics and BIOGD 281 Genetics; in addition, they must complete two (2) courses from the advanced courses previously listed (for complete list go to www.bscb.cornell.edu/ugrads04/), BTRY 482 Statistical Genomics, BTRY 483 Quantitative Genomics and Genetics, and BTRY 484 Computational Genomics are highly recommended.

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student's responsibility to develop this concentration, with advice from the faculty, particularly the student's faculty advisor. It will be helpful to discuss the selection of courses with the director of undergraduate studies or undergraduate advising coordinator of a department closely linked with the chosen concentration.

The Minor
A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 434 Warren Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student's major and a BSCB faculty advisor. Students and advisors in other departments should contact the director of undergraduate studies in the Department of Biological Statistics and Computational Biology if they have questions about biometry and statistics courses or the minor. The director of undergraduate studies or another BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor
BTRY 301 Biological Statistics I or BTRY 601 Statistical Methods I
BTRY 302 Biological Statistics II or BTRY 602 Statistical Methods II
BTRY 408 Theory and Probability
BTRY 409 Theory of Statistics
MATH 111 Calculus I
MATH 112 Calculus II
MATH 213 Calculus III or MATH 221-222 Linear Algebra and Differential Equations

One (1) additional statistics elective:
BTRY 310 Statistical Sampling
BTRY 382 Introduction to Genomics and Bioinformatics
BIOGD 281 Genetics
BTRY 482 Statistical Genomics
BTRY 483 Quantitative Genomics and Genetics
BTRY 484 Computational Genomics
BTRY 495 Statistical Consulting
BTRY 603 Statistical Methods III
BTRY 604 Applied Experiment Design
BTRY 652 Computational Statistical Inference
BTRY 672 Environmental Statistics
ILRST 410 Multivariate Analysis
ILRST 411 Categorical Data Analysis
ILRST 614 Structural Equations
NTRES 670 Spatial Statistics

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C or better will count toward the minor in biometry and statistics.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how
- communication influences attitudes, opinions, and behaviors;
- mass media work in our society;
- to use, evaluate, and design communication technologies;
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses
Fall semester
COMM 101 Cases in Communication
Spring semester
COMM 130 Visual Communication
COMM 131 Writing about Communication

This set of courses provides students with a basic understanding of communication and the communication process.

Required sophomore courses
COMM 201 Oral Communication
COMM 282 Research Methods in Communication Studies

Two of the Four Focus Area Introductory Courses:
COMM 220 Contemporary Mass Communication
COMM 245 Contemporary Mass Communication

COMM 276 Cases in Communication and Social Influence
COMM 285 Communication in the Life Sciences

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication distributed among advanced writing and presentation courses, electives, and focus area requirements. In consultation with their advisers, students concentrate in one of four defined focus areas appropriate to specific educational and career goals.

1. Communication in the Life Sciences (CILS): Students focusing in CILS will investigate how communication influences public understanding of science, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator, outreach specialist, environmental or health-risk communicator, and business, legal and other graduate study.

2. Communication Media Studies (CMS): Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how what we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media, from politics to entertainment to news to the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media industries, in designing the laws and policies regarding media, in business, legal or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.
3. Communication and information technologies (CIT): Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as people's interface and information needs. Possible career paths include information systems designer, research analyst, user interface designers, software designers, usability specialist, technology writer, and business, legal and other graduate study.

4. Communication and social influence (CSI): Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations and selected audiences to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human affairs. This focus area would be appropriate for students interested in using communication to bring about change at the individual and societal level. Possible career paths include public relations, marketing communications, polling, human resources, governmental affairs, and business, legal, and other graduate study.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both.

The minor in communication consists of four required courses: COMM 101, 130, 201 and either 220, 245, 276, or 285. Students also complete three elective courses totaling 9 credit hours, at least two of which must be at the 300-400 level, excluding the advanced writing and presentation courses and COMM 303, 353, 405, 496, and 498.

The minor in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the minors component area (primarily computer science), two courses from the human-centered systems component area (human-computer interaction and cognitive science), one course from the social sciences component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects. A specialization in crop science is a part of the plant science major. A focus on soil science is possible in both plant science and environmental sciences.

The minor in information science is a course from any component area. A list of students should contact the Department of Communication.

Through the Department of Communication, students focusing in information science or both.

A minor in crop management is also available for students with any major at Cornell University. In summary, it requires at least three courses in either crop science (CSS 311, 312, 317, or 314) and plant protection (CSS 315, 444, ENTR 241, or PL PA 301 or 401) plus at least three courses and at least 12 credits in soil science (CSS 200, 372, 421, 422 or 466). Equivalent transferred courses can be included. This minor helps prepare students for the Certified Crop Advisor examination, which provides an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 15 credits in natural resources and agriculture and 3 credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer students to meet the requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these areas of interest change in both domestic and international settings. The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agricultural systems on rural development; community and regional development; environmental sociology; rural industrialization and labor markets; technology and social change; the implications of the genomic revolution for agriculture and communities; the linkages between population dynamics, the environment, and development; the political economy of globalization; women in development; and ethnic competition and stratification. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students are required to complete at least one course from each of five focus areas: research programs. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The Department of Development Sociology is recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

An undergraduate student minor is required to successfully compete three core courses from Group 1: introductory sociology (D SOC 101), international development (D SOC 205), social indicators (D SOC 213), or social stratification (D SOC 370). A student minor is also required to complete at least one course from each of the following five focus areas: research programs. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The Department of Development Sociology is recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

An undergraduate student minor is required to successfully compete three core courses from Group 1: introductory sociology (D SOC 101), international development (D SOC 205), social indicators (D SOC 213), or social stratification (D SOC 370). A student minor is also required to complete at least one course from Group 2: theory (D SOC 301), statistical evidence (D SOC 302), inequality and development (D SOC 305), social movements (D SOC 311), environment and society (D SOC 324), social structures (D SOC 334), or technology and social change (D SOC 336). One additional elective (any D SOC course) must be completed if only one course from Group 2 is selected.
Courses taken with an "S-U" option will not apply.

The department maintains strong ties with technical fields in CALS as well as with programs dealing with a range of issues of importance to international and domestic development. These include the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Center for the Environment, the Poison Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area studies programs including the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also engage in research with faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

Agricultural Science Education

Building on strong academic disciplines and grounding in sociopolitical, psychological, empirical, and theoretical bases of educational practice, the department has two foci to meet societal demands for teachers of mathematics, science, and agriculture, and for leaders in nonformal educational settings: Learning, Teaching, and Policy (LTSP), which includes the Cornell Teacher Education Program (CTE); and Adult and Extension Education (AEE). These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through research, practice, and scholarship. Our undergraduate program leads to provisional certification in agricultural education. For the latest information on program developments, go to http://education.cornell.edu.

Adult and Extension Education (AEE).

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides opportunities for graduate students to investigate participatory educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research, teaching, and extension on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on adult, extension, and international education by connecting action and research. We seek to move beyond prescriptive questions of "how to do it" to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in critical reflection on professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include: professional practice in research, community development, and adult education; public scholarship, university extension, outreach, and community organizing in the United States; international adult and extension, adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

Learning, Teaching, and Social Policy (LTSP). This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life. Drawing on the dynamic nature of teaching and learning, this program challenges students to create and engage in deeply reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning, teaching, and educational policy in a variety of contexts and at multiple governance levels. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, social, and economic dimensions of the design and implementation of curriculum, teaching and learning theory, and social interactions, and are lenses for examining educational practice, theory, and policy. Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigates factors that contribute to scientific and quantitative literacy; curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociocultural analysis of education, action, and reflective thought in schools and communities. Our mission is to contribute to an educated, global society of leaders and citizens who are prepared to respond to emerging social, technological, and scientific issues, with ethical and critically reflective judgment.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agriculture, science, and mathematics. Students in the CTE program develop a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Undergraduates accepted into the CTE program major in a mathematics, agriculture, or science field in any Cornell college and complete a minor in education. With a CTE minor and a bachelor's degree you can complete a MAT in one year. CTE teachers are prepared as scholars of teaching and learning, able to help all their students achieve the scientific and quantitative literacy and ethical decision making skills needed for participation in a democracy.

Effective College Teaching Series. The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty members and graduate students who are either currently teaching or intending to teach. For details, contact the Center for Learning and Teaching, 607-255-6130, or www.clt.cornell.edu.

Current offerings include:

EDUC 548(5480) Effective College Teaching

Spring and one-week summer session. 1-3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 578(5780) ITADP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum

Fall and spring. 2 credits. For international graduate students who have, or will have, teaching assistantships.

EDUC 579(5790) ITADP Further Training for International Teaching Assistants

Fall and spring. Noncredit course for international teaching assistants who have completed EDUC 578 but need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops

Offered early in each fall and spring semester, this daylong series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty members and graduate teaching assistants.

EDUC 620(6200) Internship in Education

Fall and spring. 1 credit. Prerequisite: CALS Graduate Student Professional Development Workshop. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their workshop experience through reflective practice and consultation with an instructional support specialist.

Entomology

The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisors.
The food science program prepares students for careers throughout New York State, the country, and the world. Students in the food science program can choose from one of four specialization options in the major: (1) food science; (2) food operations and management; (3) food biotechnology; or (4) enology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (introductory and organic), biology, microbiology, calculus, physics, first-year seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students.

Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internships programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

**Enology and Viticulture.** Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in Viticulture. For these students, plant sciences will be their "major," and their required courses in enology (offered within the Food Science program) will constitute a "minor" in Food Science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in Enology. Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor program, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

**Information Science**

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.
- **Information Systems.** This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Note: All INFO courses will count as in-college credit.

**Requirements**

Core (11 courses):

1. Introductory (one course):
   - INFO 130 Introductory Design and Programming for the Web
2. Math and Statistics (four courses):
   - MATH 111 Calculus I
   - one course chosen from: MATH 171 Statistical Theory and Application in the Real World; ADM 201 Hospitality Quantitative Analysis; AEM 210 Introductory Statistics; ENGRD 270 Basic Engineering Probability and Statistics; BTRY 301 Statistical Methods I; SOC 301 Evaluating Statistical Evidence; CEE 304 Uncertainty Analysis in Engineering; IURST 312 Applied Regression Methods; ECON 319 Introduction to Statistics and Probability; PSYCH 350 Statistics and Research Design

   - either MATH 231 Linear Algebra with Applications or MATH 221 Linear Algebra
   - INFO 295 Mathematical Methods for Information Science
3. Human-Centered Systems (two courses):
   INFO 214 Cognitive Psychology
   INFO 245 Psychology of Social Computing
4. Information Systems (two courses):
   COM S 211 Computers and Programming
   INFO 230 Intermediate Design and Programming for the Web
5. Social Systems (two courses):
   • either ECON 301 Microeconomics or ECON 315 Intermediate Microeconomic Theory
   • one course chosen from: INFO 292 Inventing an Information Society; INFO 355 Computers: From the 17th Century to the Dot.com Boom; or INFO 356 Computing Cultures

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

Tracks

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track. The Human-Centered Systems and Information Systems tracks can be used as primary or secondary tracks. The Social Systems track can be used only as a secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade.

Additional information on Information Science courses can be found below and in the CIS section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, COM S, and S&TS).

1. Human-Centered Systems
   PSYCH 342 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
   INFO 345 Human–Computer Interaction Design
   PSYCH 347 Psychology of Visual Communications
   PSYCH 380 Social Cognition*
   PSYCH 413 Information Processing: Conscious and Unconscious
   PSYCH 416 Modeling Perception and Cognition
   INFO 440 Advanced Human–Computer Interaction Design
   INFO 445 Seminar in Computer-Mediated Communication
   INFO 450 Language and Technology
   DEA 470 Applied Ergonomic Methods

   *Students who take PSYCH 342 may also count its prerequisite, PSYCH 205, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 380 may also count PSYCH 200 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 205 or 280 can be counted toward the primary/secondary track requirements.

2. Information Systems
   INFO 330 Data-Driven Web Applications
   INFO 372 Explorations in Artificial Intelligence
   COM S 419 Computer Networks
   LING 424 Computational Linguistics
   INFO 430 Information Retrieval
   INFO 431 Web Information Systems
   COM S 432 Introduction to Database Systems
   COM S 465 Computer Graphics I
   COM S 472 Foundations of Artificial Intelligence
   LING 474 Introduction to Natural Language Processing
   OR&IE 474 Statistical Data Mining I
   COM S 478 Machine Learning
   OR&IE 480 Information Technology
   COM S 501 Software Engineering
   COM S 513 System Security
   INFO 530 Architecture of Large-Scale Information Systems
   OR&IE 574 Statistical Data Mining II
   COM S 578 Empirical Methods in Machine Learning and Data Mining

3. Social Systems
   SOC 304 Social Networks and Social Processes
   AEM 322 Technology, Information, and Business Strategy*
   INFO 349 Media Technologies
   INFO 355 Computers: From the 17th Century to the Dot.com Boom
   INFO 356 Computing Cultures
   ECON 368 Game Theory (formerly ECON 467)*
   INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
   LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
   S&TS 411 Knowledge, Technology, and Property
   ECON 419 Economic Decisions Under Uncertainty
   INFO 429 Copyright in a Digital Age
   INFO 435 Seminar on Applications of Information Science
   OR&IE 435 Introduction to Game Theory*
   S&TS 438 Minds, Machines, and Intelligence
   INFO 447 Social and Economic Data
   H ADM 474 Strategic Information Systems*
   ECON 476/477 Decision Theory I and II
   INFO 515 Culture, Law, and Politics of the Internet

   *Only one of OR&IE 435 and ECON 368 may be taken for IS credit. Only one of AEM 322 and H ADM 474 may be taken for IS credit.

The Minor

A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of Courses of Study. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

International Agriculture and Rural Development

International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an advisor to plan a program oriented toward international agriculture. The courses in international agriculture and rural development are designed to acquaint students with the socioeconomic factors in agricultural development, the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist.

Requirements

In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 36 credits toward the major. A minimum of 7 credits in international agriculture and rural development (IARD) are required. The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 422). Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

International Studies Minor

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build “global competencies.” The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements

1. Four courses with significant international content, as recommended by students major departments (two should be from CALS).
2. One semester of IARD 480 Global Seminar.
Landscape Architecture
Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the University promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for professional practice. Design studios deal with varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.).

First Year
Fall Semester Credits
*LA 141 Grounding in Landscape Architecture 4
†Biological sciences elective 3
‡Physical sciences elective 3
§Social sciences or humanities elective 3
¶Written or oral expression elective 3

Spring Semester
*LA 142 Grounding in Landscape Architecture 4
†Biological sciences elective 3
‡Physical sciences elective 3
§Social sciences or humanities elective 3
¶Written or oral expression elective 3

Second Year
Fall Semester
*LA 491 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment 4
*LA 201 Medium of the Landscape 5
†Biological sciences elective 3
‡Social sciences or humanities elective 3
¶Written or oral expression elective 3

Spring Semester
*LA 202 Medium of the Landscape 5
*LA 315 Site Engineering I 3
*LA 492 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment 4
†Written or oral expression elective 3
‡Physical sciences elective 3

Third Year
Fall Semester
*LA 301 Integrating Theory and Practice 5
*LA 316 Site Engineering II (second seven weeks) 2
**Concentration 3
¶Free electives 4

Spring Semester
**Concentration 6
*Historical studies 3
*LA 318 Site Construction 5
Electives 2

Fourth Year
Fall Semester
*LA 401 Advanced Synthesis: Project Design 5
**Concentration 3
†Social sciences or humanities elective 3
(Optional landscape architecture study abroad semester in Denmark or Rome) 11

Spring Semester
*LA 402 Integrating Theory and Practice II 5
**Concentration 3
*LA 412 Professional Practice 1
¶Free electives 2

Summary of credit requirements
*Specialization requirements 58
†Distribution electives 39
‡Free electives 8
**Concentration 15

Master of Landscape Architecture (M.L.A.) License Qualifying Degree
Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.
(Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

First Year
Fall Semester Credits
*LA 505 Graphic Communication I 3
*LA 501 Composition and Theory 5
*Historical studies 3
*LA 491 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment 4

Spring Semester
*LA 502 Composition and Theory 5
*LA 492 Creating the Urban Eden: Woody Plant Selection, Design and Landscape Establishment 4
**Concentration 2
*LA 615 Site Engineering I 3
*Historical studies 3

Second Year
Fall Semester
*LA 301 Integrating Theory and Practice 5
*LA 316 Site Engineering II (second seven weeks) 2
**Concentration 3
†Free electives 4

Third Year
Fall Semester
*LA 301 Integrating Theory and Practice 5
*LA 316 Site Engineering II (second seven weeks) 2
**Concentration 3
‡Free electives 4

Fourth Year
Fall Semester
*LA 401 Advanced Synthesis: Project Design 5
**Concentration 3
†Social sciences or humanities elective 3
(Optional landscape architecture study abroad semester in Denmark or Rome) 11

Spring Semester
*LA 402 Integrating Theory and Practice II 5
**Concentration 3
*LA 412 Professional Practice 1
‡Free electives 2

Summary of credit requirements
*Specialization requirements 58
†Distribution electives 39
‡Free electives 8
**Concentration 15

Third Year
Fall Semester Credits
*LA 301 Integrating Theory and Practice 5
*LA 316 Site Engineering II (second seven weeks) 2
**Concentration 3
‡Free electives 4

Fourth Year
Fall Semester
*LA 401 Advanced Synthesis: Project Design 5
**Concentration 3
†Social sciences or humanities elective 3
(Optional landscape architecture study abroad semester in Denmark or Rome) 11

Spring Semester
*LA 402 Integrating Theory and Practice II 5
**Concentration 3
*LA 412 Professional Practice 1
‡Free electives 2

Summary of credit requirements

Graduate: 120

Graduate: 120

Graduate: 120
Undergraduate Minor for Nonmajors

Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society’s relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits

• LA 140 The Symbols of New York State’s Cultural Landscape (3 credits)
• LA 155 American Indian Cultural Landscapes: Changes in Time (3 credits)
• LA 360 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
• LA 261 Fieldwork in Urban Archaeology (4 credits)
• LA 262 Laboratory in Landscape Archaeology (3 credits)
• LA 263 American Indians, Planners, and Public Policy (3 credits), offered alternate years
• LA 282 Photography and the American Landscape Architecture (3 credits)
• LA 418 Audio Documentary: History/Sound/Landscape (3 credits)
• LA 493 Seminar in Landscape Studies (3 credits)

Third Year

Spring Semester

• LA 800 Master’s Thesis in Landscape Architecture
• or LA 702 Advanced Design Studio
• LA 412 Professional Practice
• Free electives(s) 2 or 6
• Concentration LA 603 1

Summary of credit requirements

• Specialization requirements 64 or 68
• Concentration 16
• Free electives 6 or 10
• Concentration 90

Natural Resources

As the number of humans living on the Earth surpassed six billion at the start of the 21st century, knowing how to conserve and manage well the Earth’s remaining biological resources and natural environments takes on increasing importance and urgency. The field of natural resources sits squarely at the interface of science and policy, applied to these important conservation and environmental challenges. This is a biologically based major that focuses on the interface of nature (species, populations, communities, and ecosystems) with the human institutions involved in environmental conservation and management. The major’s focus on biological resources (e.g., fisheries, wildlife, forests, and wetlands) includes issues of conservation and restoration of scarce species and their habitats, sustainable harvest of species of economic importance, management of invasive species and overabundant species, population dynamics in aquatic and terrestrial environments, ecosystem and watershed management, and mitigating the effects of human-induced changes on the environment.

The mission of the Department of Natural Resources, home of the major, is “to develop knowledge and facilitate learning to improve society’s stewardship of natural resources and the environment.” A commitment to undergraduate education is a vital component of that mission. For more information, see www.dnr.cornell.edu. The curriculum emphasizes the biology and ecology of natural systems, as well as the social science/human aspects of conservation challenges. The major allows students flexibility to pursue a variety of paths to understand the scientific, ethical, and societal basis for management and protection of natural resources and environments through the application of ecological principles and knowledge of societal needs.

The Future for Natural Resources Majors

Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between humans and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as natural resources professionals or as informed citizens.

Career opportunities in natural resources are diverse. The major prepares students for graduate school or entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, national and international conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum

Natural resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college’s distribution requirements for graduation. Freshmen and sophomores complete a series of four foundation courses in the major: Introduction to the Field of Natural Resources, Environmental Conservation, Introductory Field Biology, and People, Values, and Natural Resources. Juniors complete three core courses: Applied Population Ecology, General Ecology, and Natural Resources Management and Planning. These foundation and core courses introduce the critical environmental and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses. Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management,
Areas of Concentration within the Major

Applied ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative population dynamics, resource inventory and information management, global ecology, or applied ecology and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically-based approach to environmental science or global studies. Students who select this concentration typically focus their work in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their course work within the department with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Science, Atmospheric and Earth Sciences, Animal Sciences, and Plant Biology.

Resource policy and management provides a foundation for students who wish to pursue careers or advanced study in the human dimensions or policy aspects of natural resource conservation and management, natural resource and environmental law, environmental policy analysis, or environmental communication. Students who select this concentration typically focus on courses related to the development of environmental policy, management strategies for particular species or ecosystems, natural resource planning, resource economics, or programs in environmental communication and education. They complement their course work within the department with courses in other departments such as Government, Ecology and Evolutionary Biology, Development Sociology, Communications, Applied Economics and Management, City and Regional Planning, and Policy Analysis and Management.

Environmental studies is intended for those who wish to pursue a broad and synthetic approach to understanding and participating in the multiple interactions between the society and environment. The concentration's emphasis is on developing an ability to think critically about these interactions. Building on a foundation of courses required for the major, environmental studies majors, during years 3 and 4, each student will design a cohesive sequence of six upper-division courses with help from their departmental advisor. These six courses should include two courses from each of three categories: (1) natural science; (2) social science and analytic skills, e.g., economics, political economy, logic, computer programming, GIS, statistics; and (3) humanities, e.g., history, philosophy, literature, language. This self-defined environmental theme ensures development of specific competencies linked to personal and professional ambitions of the individual student. Example themes include environmental law, environmental education, "green" business, sustainable agriculture, and environmental communication. Students are expected to design an interdisciplinary, independent study, and honors thesis opportunities, as appropriate.

Research and Work Opportunities for Undergraduates

The program offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and access for research at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and economics to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food processors, producers, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of required courses and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition, Health, and Society; NS 245 Social Science Perspectives on Food and Nutrition; NS 345 Nutritional and Physicochemical Aspects of Foods; NS 351 Physiological and Biochemical Bases of Nutrition; and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of nutrition, production, processing, and food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisors in the Division of Nutritional Sciences with whom they meet regularly. Advisors help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many of these participating in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, 355 MVR Hall, 255-4410, aadsn@cornell.edu.

The minor in nutrition and health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 115 Nutrition, Health, and Society plus 9 credits of 200-level or above didactic NS courses. Enrollment is limited in some courses. Please check www.nutrition.cornell.edu/undergrad/calsmin.html for details.

Plant Sciences

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious diet in a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture; others plan to contribute to advancements in our knowledge by way of teaching or research,
and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas including botany, plant pathology, entomology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose to complete one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in plant sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities.

Students who are planning to enter the workforce immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are freely available to students for on-campus research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas) and vegetable and field crop farms. Demonstration/research facilities in Auburn (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Saratoga County), Middletown (Orange County), Ossining (Tompkins County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

Crop science is a specialization that focuses on the major food and feed crops of the world, such as wheat, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program also take at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

**Enology and viticulture.** The College of Agriculture and Life Sciences offers a curriculum in viticulture and enology within existing undergraduate B.S. degree programs in plant sciences and food science. Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and specialization in viticulture. For these students, plant sciences will be their "major," and their required courses in enology (offered within the food science program) will constitute a "minor" in food science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will "major" in food science (with a concentration in enology) and "minor" in plant sciences (with a concentration in Horticulture). Students in either track take many of the same courses during their two to four years, and must satisfy the core-degree-program requirements of their major and minor programs, as well as the general requirements of the college. The curriculum consists of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students are expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is the study of plants grown in gardens and parks, public and athletic and recreational facilities, indoor plants, greenhouse and nursery plant production, and crops used for wines, herbs and spices, medicinal purposes, and coffee and tea. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses for the plant sciences major, plus the following courses:

- HORT 101 Horticultural Science and Systems (4 credits)
- HORT 400 Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges will petition to waive or adjust these requirements, in consultation with their faculty advisors.

**Plant biology** stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genetic evolution, and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an advisor each student plans a curricular, intercollege, or departmental program in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the 3-credit plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

**Plant genetics and breeding** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important crops are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology, biochemistry, plant pathology, entomology, conservation biology, intercollegiate agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PL 201, 403, 404, and BI OPL 543. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

**Plant pathology** is the study of plant diseases caused either by microorganisms or by chronic exposure to toxic elements in air and water. At the very least, specialists in the field must learn how to identify plant diseases and to design management strategies that will limit their overall impact. However, by employing contemporary tools from molecular biology, plant pathologists are also well positioned to answer fundamental questions about the nature of host-pathogen interactions and the genes that control them. Use of these new tools has already led to rapid deployment of disease-resistant crop varieties and it promises to offer much more in the future. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in the field. However, graduate training also may be employed as representatives with agribusiness firms, Cooperative Extension educators, state or federal regulatory agents, and laboratory technicians. Suggested courses beyond the plant sciences core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.
Plant protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Science of Earth Systems (SES)
During the past several decades, with the increasing concern about issues such as air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the basic study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the 21st century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but includes collaboration with other departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, biogeochemistry, and Earth's interior. These courses emphasize the interconnectedness of the Earth system.

The selection of upper-level concentration courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Areas of concentration include biogeochemistry, geological sciences, and ocean sciences. Students may work with faculty advisors to develop individually tailored concentrations.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology/geophysics, oceanography, hydrology, ecology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major
1. Basic Math and Sciences
   This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.
   a. MATH 191–192 (or MATH 111–112)
   b. PHYS 207–208 (or PHYS 112–213)
   c. CHEM 207–208 (or CHEM 211–217)
   d. BIO G 101–103/102–104, or 105–106, or BIO G 109/110
2. Required Introductory Course: EAS 220
   The Earth System
   The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science.

   a. Four core courses are required for the major.

   EAS 301 Evolution of the Earth System
   EAS 303/NRES 303 Biogeochemistry
   EAS 304 Interior of the Earth
   EAS 305/ASTRO 331 Climate Dynamics

4. Concentration Courses
   Four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required.
   Note that additional basic math and science courses may be required to complete the concentration courses; the specific courses will depend on the student's choice of a concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen during the junior year or before in consultation with an SES advisor whose interests match those of the student. Three concentrations are defined for the major: biogeochemistry, geological sciences, and ocean science (see EAS web site for details). Other concentrations can be tailored to the student's interests in concert with the student's advisor and approval of the curriculum committee.

5. Field/observational/laboratory experience
   Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Means of satisfying this requirement generally include 3 credits of course work. Possibilities include courses in the Hawaii Environmental Semester program; courses given by the Shoals Marine Laboratory; EAS 250 (Meteorological Observations and Instruments); EAS 352 (Synoptic Meteorology I); EAS 417 (Field Mapping in Argentina); EAS 437 (Geophysical Field Methods); EAS 491 and/or 492 (Undergraduate Research, total 3 credits) with appropriate choice of project.
Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Biotech Systems: BIOEE 261 Ecology and the Environment

Earth Systems: CSS 365 Environmental Chemistry: Soil, Air, and Water

Economic Science: AEM 250 Environmental and Resource Economics

Environmental Science: SNES 101 Intro to the Science and Management of Environmental and Natural Resources

Social Systems: D SOC 324 (S&S/SOC 324) Environment and Society

Programs of Study

Programs of study that focus in one or more areas of environmental science are being established to provide disciplinary expertise sufficient for entry-level proficiency. Each student in the major will be required to take four courses at the 300 level or above in at least one program of study.

Programs of study will not replace or duplicate current majors. Rather, they will provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications.

Programs of study include

- Agroecosystem Science
- Environmental Biology
- Environmental Economics
- Environmental Information Science
- Sustainable Development

For more information about this major, see http://snes.eas.cornell.edu, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

Special Programs in Agriculture and Life Sciences

Interdisciplinary Studies. The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for a special program must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences. Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

INTERDEPARTMENTAL/INTERCOLLEGE COURSES

American Indian Studies

The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 100 and AIS 101, plus at least three other courses from the AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. One of the courses offered toward the minor must be at the 300- or 400-level. Only one 3-credit independent study (AIS 497) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S/U credit will be counted toward the minor. Students seeking to minor in American Indian studies are encouraged to contact Professor Kurt Jordan, associate director of academic development, 255-3109. Application materials for the minor may also be obtained from the AIS office, 4th floor, Caldwell Hall. Students are also advised to consult wwww.aiap.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

Minor in American Indian Studies

Required Courses

- AIS 100 Introduction to American Indian Studies I: Indigenous North America to 1890
- AIS 101 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Electives

(Required courses must be completed)

- (Group A, Arts and Humanities)
- AIS 195 Colonial Latin America
- AIS 236 Native Peoples of the Northeast
- AIS 235 Seminar in Iroquois History
- AIS 260 Introduction to Native American Literature
- AIS 266 Introduction to Native American History
- AIS 364 Politics of “Nations Within”
- AIS 386 Contemporary American Indian Fiction of the United States
- AIS 404 Race and Ethnicity in Latin America

- (CA) (HA) (D)

AIS 486 American Indian Women’s Literature
AIS 490 New World Encounters, 1500-1800
(Group B, Social and Natural Sciences)
AIS 230 Cultures of Native North America
AIS 235 Archaeology of North American Indians
AIS 311 Social Movements
AIS 333 Environmental Issues and Indigenous People
AIS 340 Contested Terrain: Hawai‘i
AIS 348 Iroquois Archaeology
AIS 353 Anthropology of Colonialism
AIS 435 Indigenous Peoples and Globalization
AIS 472 Historical Archaeology of Indigenous Peoples
AIS 475 Governmentality, Citizenship, and Indigenous Political Theory

(Independent Study)

AIS 497 Independent Study

AIS 100(1100) Introduction to American Indian Studies I: Indigenous North America to 1890 (CA) (HA) (D)
Fall. 3 credits. K. Jordan.

Provides an interdisciplinary introduction to American Indian cultures and histories from Pre-Columbian times to 1890, emphasizing the current relevance of traditional values and the ways the deep past continues to affect present-day Indian peoples. Course materials draw on perspectives from the humanities, social sciences and expressive arts.

AIS 101(1110) Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America (CA) (HA)
Spring. 3 credits. A. Simpson.

Interdisciplinary exploration of contemporary issues in American Indian Country north of Mexico after 1890. Examines Indian sovereignty, nationhood, agency and engagement through time using the perspective of American Indian Studies. Course materials are drawn from the humanities, social science and expressive arts.

AIS 195(1950) Colonial Latin America (also HIST 195(1950)) (CA) (HA)

For description, see HIST 195.

AIS 230(2300) Cultures of Native North America (also ANTH 230(2730)) (CA) (HA) (D)
Fall. 3 or 4 credits. B. Lambert.

For description, see ANTH 230.

AIS 235(2350) Archaeology of North American Indians (also ANTH 235(2235)) (CA) (HA) (D)
Spring. 3 credits. K. Jordan.

For description, see ANTH 235.

AIS 236(2360) Native Peoples of the Northeast, Pre-Contact to the Present (also HIST/AMST 236(2360)) (CA) (HA) (D)
Spring. 4 credits. J. Parmenter.

For description, see HIST 236.
### [AIS 239](#) Seminar in Iroquois History (also HIST 239) (CA) (HA)
For description, see HIST 239.

### [AIS 260](#) Survey of American Indian Literatures in the United States (also ENGL 260) (LA) (CA) (D)
For description, see ENGL 260.

### [AIS 266](#) Introduction to Native American History (also HIST/AM ST 266) (CA) (HA)
Spring. 4 credits. J. Parmenter.
For description, see HIST 266.

### [AIS 311](#) Social Movements (also D SOC/LSP 311) (D)
Fall. 3 credits. Prerequisites: D SOC/SOC 101 or permission of instructor. S-U grades optional. Not offered 2006-2007. A. Gonzales.
Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are “politics by other means.” This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage the global political process to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these and related questions through an examination of indigenous peoples’ movements in the United States, Canada, and Latin America.

### [AIS 333](#) Environmental Issues and Indigenous People (also NTRES 333) (CA) (D)
Spring. 3 credits. M. Muskett.
For description, see NTRES 333.

### [AIS 340](#) Contested Terrain: Hawaii (also SOC 342) (CA) (SBA)
Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history. M. M. Hamabata.
This course, offered in conjunction with Earth and Atmospheric Sciences’ program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States, Direct experience with Hawaiian leaders and institutions is incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/hawaii/ regarding the status of this course.

### [AIS 348](#) Iroquois Archaeology (also ANTHR 348) (CA) (HA)
For description, see ANTHR 348.

### [AIS 353](#) Anthropology of Colonialism (also ANTHR 353) (CA) (SBA) (D)
Fall. 4 credits. A. Simpson.
For description, see ANTHR 353.

### [AIS 364](#) Politics of “Nations Within” (also GOVT 364) (SBA) (KCM)
Fall. 4 credits. Letter grades only. Offered alternate years. B. Hendrix.
For description, see GOVT 364.

### [AIS 386](#) Contemporary American Indian Fiction (also ENGL 367) (CA) (D)
Fall. 3 credits. Not offered 2006-2007.
Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove’s Coguaena, a novel of the American Enclid, and works by a range of Native fiction writers from a list that includes McNickel, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.

### [AIS 404](#) Race and Ethnicity in Latin America (also HIST 404) (LA) (CA) (D)
For description, see HIST 404.

### [AIS 435](#) Tribal Governance and Environmental Policy (also NTRES 435) (CA)
Fall. 3 credits. M. Muskett.
For description, see NTRES 435.

### [AIS 472](#) Historical Archaeology of Indigenous Peoples (CA) (HA)
Fall. 4 credits. K. A. Jordan.
Seminar examining the responses of indigenous peoples and the peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge document-based histories.

### [AIS 475](#) Governmentality, Citizenship, and Indigenous Political Theory (also ANTHR 475) (CA) (KCM)
Spring. 4 credits. A. Simpson.
For description, see ANTHR 475.

### [AIS 486](#) American Indian Women’s Literature (also ENGL 486) (LA) (CA) (D)
For description, see ENGL 486.

### [AIS 490](#) New World Encounters, 1500 to 1800 (also HIST 490) (AM ST 499) (CA) (HA) (D)
For description, see HIST 490.

### [AIS 497](#) Independent Study
Fall or spring. 1-4 credits. Staff.
Topical and credit hours TBA between faculty and student. The American Indian Program office must approve independent study forms.

### [AIS 600](#) American Indian Studies (D)
Fall. 4 credits. A. Simpson.

### [AIS 601](#) American Indian Studies Proseminar
Fall and spring. 1 credit. Staff.
Graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloquium format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

### [AIS 635](#) Indigenous Peoples and Globalization (also D SOC/LAT A 635) (D)
Fall. 3 credits. Not offered 2006-2007.
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the determinantalization of social and political arrangements contemporaneous with modernization or the expansion of communication technology and its impact on traditional knowledge systems, have had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

### [AIS 671](#) Law and Literature in the Antebellum United States (also ENGL 671)
For description, see ENGL 671.

### [AIS 726](#) Federal Indian Law: The Legal Construction of Indian Country (also LAW 726) (D)
Spring. 3 credits. Limited enrollment. Students who have taken LAW 608 American Indian Law may also take this seminar. Letter grades only. Not offered 2006-2007. E. Cheyfitz.
For description, see LAW 726.

### Department of Statistical Science
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found at the front of this catalog (see p. 25).
TOX 990(9900) Doctoral Thesis and Research Fall/spring. Credit TBA. Prerequisite: senior or graduate standing in field or permission of instructor. Not offered 2006-2007. Staff.

NO NONDEPARTMENTAL COURSES

ALS 101(1010) Transition to and Success at Cornell Fall. 1 credit. Prerequisite: entering students in CALS. Letter grades only. B. O. Earle and CALS Career Development Office.

Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Learn about Cornell, meet and discuss with guest speakers, student panels, and assignments that explore Cornell's history, academic opportunities, services, and organizations. Emphasizes the role of Agriculture and Life Sciences in the future of all related careers.

ALS 134(1340) Emergency Medical Technician Fall and spring. 3 credits each semester. Two-semester course; students enroll in fall semester only. Recommended: basic or advanced first aid. S-U grades optional. D. A. Grossman, P. Rach, and A. E. Ganter.

The intensive 140-hour course taught throughout the fall and spring semesters. Includes training in CPR. For the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, the use of medical antishock trousers, and defibrillation. Certification Exam upon successful completion of the course. Students qualify for the New York State E.M.T. Certification Exam upon successful completion of the course.

ALS 135(1350) Advanced Emergency Medical Technician, Critical Care Fall and spring. 2-semester course. 4 credits each semester. Prerequisite: current certification as N.Y.S. Basic E.M.T. or have applied for reciprocity. S-U grades optional. D. Grossman, P. Rach, and D. Spaulding.

Includes topics such as emergency pharmacology, patient assessment, advanced cardiac life support, emergency hypoperfusion management, and basic trauma life support. Uses classroom, lab, hospital, and field sessions to teach skills such as intubation, emergency IV access, electro-cardiogram reading, and pharmacology.

TOX 597(5970) Risk Analysis and Management (also CEE 597[5970]) Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 304, ENGRD 270, IRST 210, BTRY 261 or AEM 201; two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. R. Stedinger.

For description, see CEE 597.

[TOX 607(6070) Ecotoxicology (also NTR 607[6070]) Spring. 3 credits. Prerequisites: graduate or senior standing; two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years; not offered 2006-2007. Staff.

For description, see NTR 607.

TOX 610(6100) Introduction to Chemical and Environmental Toxicology (also BIOMI 610[6100]) Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. A. Nikitin.

For description, see BIOMI 610.

TOX 611(6110) Molecular Toxicology (also NS 611[6110]) Spring. 3 credits. Prerequisites: TOX 610 or permission of instructor. Offered alternate years. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp.

For description, see NS 611.

TOX 698(6980) Current Topics in Environmental Toxicology (also BIOMI 698[6980]) Fall, spring. 1 to 3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. S. Lee.

For description, see BIOMI 698.

TOX 699(6990) Environmental Toxicology Journal Club (also BIOMI 699[6990]) Spring only. 1 credit. Requirement for env. tox. students until post-A exam. A. G. Hay.

TOX 701(7010) Mouse Pathology and Transgenesis (also VTBMS 701[7010]) Fall. Spring only. 1 credit. Prerequisites: basic course in histology (BIOAP 413 or equivalent) highly recommended, or permission of instructor. Letter grades only. A. Nikitin.

For description, see VTBMS 701.

TOX 702(7020) Seminar in Toxicology (also NS 702[7020]) Fall or spring. 1 credit. For description, see NS 702.

[TOX 713(7130) Cell Cycle Analysis (also VTBMS 713[7130]) Spring. 1 credit. S-U grades only. Offered alternate years; next offered 2007-2008. A. Yen.

For description, see VTBMS 713.]

TOX 890(8900) Master's Thesis and Research Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

TOX 900(9000) Doctoral Thesis and Research Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Stocking Hall, or at toxicology.cornell.edu.

[TOX 323(3230) Principles of Toxicology (Undergraduate) (also NTR 323[3230]) Spring. 3 credits. Prerequisites: one year each of chemistry and biology with labs, one semester of organic chemistry lecture or permission of instructor. Not offered 2006-2007. Staff.

For description, see NTR 323.

TOX 370(3700) Pesticides and the Environment (also ENTRM 370[3700]) Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Offered even years. J. G. Scott.

For description, see ENTRM 370.

[TOX 406(4060) Ecology Risk Assessment (also NTR 406[4060]) Fall. 3 credits. Prerequisites: BIOEE 261 or equivalent; advanced student in natural sciences or engineering or permission of instructor. Not offered 2006-2007. Staff.

For description, see NTR 406.]

[TOX 437(4370) Eukaryotic Cell Proliferation (also BIOMI 437[4370]) Fall. Variable credit: students may take for 2 credits, or 2 credits and disc for 3 credits. Limited to 20 students per disc. Priority given to graduate students. Prerequisite: BIO G 101-102 or BIOM 105-106 and BIOM 330 or 331/332. Recommended: BIOGD 281 and BIOM 432. S. Lee.

For description see BIOM 437.

TOX 490(4900) Insect Toxicology and Insecticidal Chemistry (also ENTRM 490[4900]) Spring. 3 credits. Prerequisite: general chemistry course. Offered odd years. J. G. Scott.

For description, see ENTRM 490.

Related Course in Other Department

FD SC 621(6210) Food Lipids
and defibrillation, and patient assessment and pharmacological intervention. Requires extensive out of classroom (exceeds 140 hours) time.

ALS 382(3920) New York State Government Affairs (also PAM 392[3920])
Spring. 15 credits. Prerequisite: junior or senior standing; minimum GPA of 2.3. W. Rosen.
For description see PAM 392.

ALS 400(4000) Internship
Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S-U grades only.
Students may register only for internships in New York State Assembly Intern Program, the New York State Senate Session Assistant’s Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s). Students are responsible for their own travel and living expenses. No credit is awarded.
The student is responsible for obtaining any required licenses, forms, or agreements for the internship and for completing the required paperwork. Students must register for a minimum of 3 credits. Fall or spring. 3-6 credits max. Prerequisite: permission of instructor. Pimentel. For description, see BIOC 461.

ALS 476(4770) Environmental Stewardship in the Cornell Community I
Fall. 1 credit. Prerequisite: freshmen and new students. S-U or letter grades.
R. Sherman.
This two-semester course is an opportunity for you to become involved with the Cornell Sustainable Campus initiative by designing and implementing a project that promotes environmental stewardship on campus. During the fall semester, we will explore concepts of sustainability, meet with student leaders of various campus organizations who are promoting Cornell’s mission of sustainability, and learn about what has been done and what is being done to achieve a more environmentally friendly campus. In addition, each student will identify a potential project and conduct preliminary work that lays the groundwork for the spring semester course (ALS 477). Note: You are not required to take ALS 477 if you take ALS 476.

ALS 477(4770) Environmental Stewardship in the Cornell Community II
Spring. 2-4 credits, variable. J. M. Regenstein, plus faculty advisor.
Each student undertakes an original project to improve the environment at Cornell while working with a faculty advisor and the Cornell Infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present the final written project report orally at a public forum. (Note: If students prefer to take 1 or 2 credits of independent research in a department in the College of Agriculture and Life Sciences, this can be arranged. Assistance in finding a faculty advisor is provided. May be taken more than once.)

ALS 494(4940) Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits max. S-U grades optional.
The college teaches “trial” or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 499(4991/4992) Honors Project I and II (also B&SOC/SATS 499/4991/4992)
Fall and spring (yearlong). 8 credits (register for 8 credits each semester; total credits awarded is 8). Prerequisite: biology & society seniors and permission of department; overall GPA of 3.3. Apply in 360 Rockefeller Hall.
Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 500(4998) Politics and Policy: Theory, Research, and Practice (also AM ST 501[4998], PAM 406[4998], GOVT 500[4998])
Students in CALS must register for ALS 500. S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components involve students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office, M101 McGraw Hall.

ALS 580(5800) International Teaching Assistant Development Program Courses 3
Fall or spring. 2 credits. Prerequisite: EDUC 579. ITADP staff.
Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants address English-language issues relating to phonemes, grammar, and suprasegmentals. Activities in these areas target communicative functions such as presenting concepts, initiating and sustaining conversation, and interpreting information in academic settings.

ALS 581(5810) International Teaching Assistant Development Program Courses 4
Fall or spring. 2 credits. Prerequisite: ALS 580. ITADP staff.
Specifically designed for international graduate students who have completed ALS 580 and who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants develop skills in self-monitoring, critical listening and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

ALS 661(6610) Environmental Policy (also B&SOC 461[6611], BIOC 461[6610])
Fall and spring. 3 credits each semester; students must register for 6 credits each semester since “R” grade is given at end of fall semester. Limited to 12 students.
Prerequisite: permission of instructor. D. Pimentel.
For description, see BIOC 661.

APPLIED ECONOMICS AND MANAGEMENT

Courses by Subject
Farm management, agricultural finance, and production economics: 302, 403, 404, 405, 608, 708
Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 415, 417, 419, 711, 712, 713, 714, 717
Policy and international trade: 230, 335, 430, 451, 452, 433, 434, 630, 632, 633, 634, 750, 735
Environmental and resource economics: 250, 450, 451, 455, 651, 655, 750
Economics of development: 464, 660, 667, 762, 765
Consumer economics: 670
General, contemporary issues, research, and other: 101, 200, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

AEM 101(1101) Introduction to Applied Economics and Management
Fall. 1 credit. Prerequisite: required of and limited to freshmen in AEM. S-U grades only. D. A. Grossman and P. M. Novakovíc.
The purpose of this course is to acquaint first-year students in AEM with their new department and better enable them to make academic and early care decisions. A cross-section of faculty will lead discussions that introduce most of the major academic subjects taught in AEM. In addition, there are guest presenters on topics such as career planning, student organizations, course planning, and ethics and academic integrity. There are several homework assignments.
AEM 120(1200) Foundations of Entrepreneurship and Business
Fall. 2 credits. P. D. Perez.
Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurial strategy and skills. Includes lectures, selected guest appearances by successful entrepreneurs, and extensive use of IT-based learning and presentation tools.

AEM 121(1210) Entrepreneurship Speaker Series
Fall, spring. 1 credit. M. P. D. Perez.
Seminars and guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the Entrepreneurship and Personal Enterprise program at Cornell, with a view to inform and inspire students. Evaluation includes attendance and written feedback on lectures. Intended as a companion to AEM 120 but may be taken independently.

AEM 200(2000) Contemporary Controversies in the Global Economy
Fall. 3 credits. Recommended: ECON 102. Priority given to sophomores and juniors in AEM. C. Barrett.
Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies that attract regular attention in the international press and among key private and public sector decision-makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals worldwide, controls on commercial and humanitarian distribution of genetically modified foods, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

AEM 210(2100) Introductory Statistics
Spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Two evening prelims. C. van Es.
Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, and regression and correlation analysis. Includes an introduction to Minitab, a statistical software package.

AEM 220(2200) Introduction to Business Management (D)
Spring, summer. 3 credits. Two evening prelims. P. D. Perez.
Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technology and its impact on operations, globalization ethics, quality, and entrepreneurship. Guest speakers are an important part of the course.

AEM 221(2210) Financial Accounting
Fall. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. Little.
Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

AEM 222(2220) Business Management Case Analysis
Spring. 1 credit. Requirement for and limited to AEM majors. P. D. Perez.
Offers students the opportunity for hands-on application of general business management concepts through discussion and written analysis of a series of cases. Case topics are closely coordinated with both the content and sequencing of material presented in AEM 220.

AEM 230(2300) International Trade and Finance (also ECON 230(2300))
Spring. 3 credits. Prerequisites: ECON 101 or equivalent. Recommended: ECON 102. One evening prelim. D. L. Lee.
One-semester introduction to international economic principles and issues. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 430 and ECON 361-362.

AEM 240(2400) Marketing
Fall. 3 credits. E. W. McLaughlin.
Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lectures and current marketing applications from various companies are presented and analyzed.

AEM 241(2410) Marketing Plan Development
Fall. 1 credit. Requirement for and limited to AEM majors. D. J. Ehrlich.
Offers students the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 250(2500) Environmental and Resource Economics
Spring. 3 credits. S-U grades optional. L. D. Chapman.
Introduces fundamental economic principles and the "economic approach" to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 320(3200) Farm Business Management
Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 405 and 427. W. A. Knoblauch.
Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

AEM 321(3210) Business Law I (also NBA 561(5610)) (D)
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing. One evening prelim. D. A. Grossman.
Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 322(3220) Information Technology Strategy
Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.
Explores the impact of new technologies on business processes and industries. Focuses particularly on the effects of information and communication technologies (ICT). The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities.

AEM 323(3230) Managerial Accounting
Spring. 3 credits. Priority given to CALS majors. Prerequisites: AEM 221 or equivalent. Two evening prelims. J. Little.
Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes two evening prelims, a third exam, and weekly homework.

AEM 324(3240) Finance
Fall. 4 credits. Priority given to CALS majors. Prerequisites: AEM 210, 220, and 221, or equivalents. Three evening prelims. R. Curtis.
Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions, financing alternatives of capital and the capital-structure decision, distribution policy, mergers and acquisitions and
restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 325(3250) Personal Enterprise and Small Business Management
Spring. 4 credits. Prerequisites: junior or senior standing; ECON 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. $100 per team. D. Streeter.

Focuses on the activities involved in planning a startup or new venture. Exploring the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs, who discuss the startup process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 328(3280) Innovation and Dynamic Management (also H ADM 444[4443])
Spring. 3 credits. Prerequisite: junior or senior standing. Staff. For description, see H ADM 445.

AEM 329(3290) International Agribusiness Study Trip
Fall. 2 credits. Prerequisites: ECON 220 or 302, and 240. Open by application before March 1 of spring semester before course is offered. Approximately 12 students are selected each fall. Sophomores and juniors in CALS field study co-payment: $800. B. A. Gloy and L. W. Tauer.

Gives students interested in agribusiness management exposure to the managerial practices essential to the success of agriculture, agribusiness, and food companies competing in the global marketplace. Includes a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required.

AEM 330(3300) Managerial Economics and Decision Making
Spring. 3 credits. Prerequisites: ECON 220 and ECON 101. D. Simon.

Focuses on tools for making various decisions managers encounter in the real world, including decisions of pricing, output, advertising expenditures, and new product introductions. Considers issues such as how to estimate a firm's demand and cost functions as considered in making such decisions. Compares standard microeconomic models with more realistic approaches to making decisions. Emphasizes considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 331(3310) Economic of Business Regulation
Spring. 3 credits. Prerequisites: ECON 101, 313, and ECON 220. S-U or letter grades. W. Prince.

Studies the economics and other factors (e.g., politics, lobbying) that determine regulation policy along with firm strategies in regulated or potentially regulated markets. Major topics include: antitrust, economic regulation and environmental regulation. Applications to the current business environment are emphasized.

AEM 333 (3330) European Business Institutions
Spring. 1 credit. Prerequisites: ECON 101 and ECON 220. A. Leiponen.

This course examines the institutional environment of business in Europe on different levels including national and supranational (EU) power structures, forms of business organization and governance, and culture and values. As a result of this course, students will be able to understand and be sensitive to the drivers of business behavior and performance in a foreign, particularly European, context.

AEM 334(3340) Women, Leadership, and Entrepreneurship (D)
Fall. 1 credit. Prerequisite: junior or senior standing. D. Streeter.

Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners) in their business careers. Topics include status of women in business leadership, pathways and strategies for leadership development, family/business balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 335(3350) International Technology Marketing of Biotechnology
Spring. 3 credits. Prerequisites: ECON 101 and BIO G 109 or equivalents. S-U grades optional. W. H. Lesser.

Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 342(3420) Integrated Marketing Communication
Fall. 3 credits. Prerequisite: introductory marketing course; junior or senior standing. S. P. Raj.

Focuses on decisions regarding communicative and promotion decisions in companies that market consumer products and services. Course also explores business-to-business communication differences. Responsibility for many of these decisions typically resides under the brand-management umbrella and calls for an integrated approach to planning, budgeting, and evaluating advertising, sales promotion, and public relations.

AEM 344(3440) Consumer Behavior
Fall. 3 credits. Prerequisites: AEM 240 or equivalent. B. Warsink.

Develops a conceptual understanding of the problems and strategies associated with psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

AEM 346(3460) Dairy Markets and Policy
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; ECON 101 or equivalent. S-U grades optional. A. Novakovic.

Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities. Emphasizes learning both the origin and characteristics of dairy policies and methods for analyzing their impacts on market performance.

AEM 380(3800) Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Prerequisite: requirements for honors program met (see "Honors Program" under CALS). Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 403(4030) Farm Management Study Trip
Spring. 1 credit. Prerequisite: AEM 302. Open by application only. W. A. Knoblauch and B. Gloy.

Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. Students must write a paper that further explores an aspect of the trip.

AEM 404(4040) Advanced Agricultural Finance Seminar
Spring. 3 credits. Limited to 16 students. Prerequisite: senior standing, extensive coursework in farm management and farm finance. Open by application before March 1 of year before course is offered. Not offered 2006-2007. Staff.

Special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall semester, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring semester.

AEM 405(4050) Agricultural Finance
Spring. 1 credit. Prerequisite: AEM 302 or equivalent. Recommended: calculus and statistics. C. Turvey.

Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM 410(4100) Business Statistics
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. C. Vartanian.

Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introductions to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

AEM 411(4110) Introduction to Econometrics
Fall. 3 credits. Prerequisite: AEM 210 and either ECON 313 or PAM 200 or equivalents. D. Just.
Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Introduces assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques.

AEM 412(4120) Computational Methods for Management and Economics Spring. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 210 or equivalent. C. Gomes.

Course work applied mathematical programming. Emphasizes formulation of and interpretation of solutions to mathematical models of problems in economics and business. Studies blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management. Introduces integer and nonlinear programming.

AEM 414(4140) Behavioral Economics and Managerial Decisions Fall. 3 credits. Prerequisites: junior or senior standing; ECON 313 or PAM 200. Lab fee $46.00. Professor Leu.

Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are new recognized to be an important source of error in business decisions, and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

AEM 415(4150) Price Analysis (also ECON 415) Fall. 3 credits. Prerequisites: AEM 210 or equivalent; ECON 313 or PAM 200 or equivalent. H. M. Kaiser.

Focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

AEM 417(4170) Decision Models for Small and Large Businesses Fall. 3 credits. Prerequisites: junior or senior standing (priority given to AEM majors). AEM 210 or equivalent. No Flec in weeks labs are held. C. L. van Es.

Focuses on economic and statistical models of decision making and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sessions focus on implementing decision models with computers.

AEM 419(4190) Strategic Thinking Spring. 3 credits. Prerequisite: PAM 200 or ECON 313. S-U grades optional. N. H. Chau.

The art of thinking strategically puts outing one's adversary at the core of the decision-making process, even anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovative products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars, and the arms race).

AEM 420(4200) Investments Spring. 3 credits. Prerequisites: AEM 210 or equivalent and AEM 524. Recommended: basic knowledge of mathematics and linear algebra. Priority given to AEM students. Letter grades only. A. Wang.

Introduces the basic conceptual frameworks and analytical tools used in investment analysis. These tools are then applied to a variety of financial applications, both theoretical and empirical. Topics include: forwards and futures, portfolio theory, CAPM, options, financial management, and selected advanced topics. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 421(4210) Derivatives and Risk Management Fall. 3 credits. Prerequisites: AEM 210 and 324 or equivalents. Recommended: ECON 313 or equivalent and a calculus course; familiarity with calculus and probability and statistics. Priority given to students in AEM. S-U grades optional. H. Daoi.

Covers the pricing of derivatives and how derivatives can be used for the purpose of risk management. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422(4220) Estate Planning (also NBA 562(5620)) Fall. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. D. A. Grossman.

Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

AEM 423(4230) Contemporary Topics in Applied Finance Fall. 3 credits. Prerequisites: ECON 101, MATH 111 or equivalent, AEM 210 or equivalent, AEM 324. Letter grades. V. Bogan.

Stimulates critical thinking about contemporary topics and attract attention in the press and among key finance decision-makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

AEM 424(4240) Management Strategy Fall and spring. 3 credits. Prerequisite: AEM seniors in business. Fall: G. Blalock; spring: D. Simon.

Core course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and unit managers. Focuses on what should be considered and how strategic decisions should be made.

AEM 425(4250) Small Business Management Workshop Fall. 4 credits. Prerequisites: senior standing, AEM 325 or NBA 300 and permission of instructor. Cost of term project: approx. $100 per team. D. A. Grossman.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff members at arranged times during the semester.

AEM 426(4260) Fixed-Income Securities Fall. 3 credits. Prerequisites: MATH 111 or equivalent, AEM 210 or equivalent, AEM 324. Letter grades. V. Bogan.

This course focuses on fixed-income securities including corporate bonds, default-free bonds, and floating rate notes. Other topics include related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the analysis of specific types of fixed-income securities, there will be an examination of the tools used in bond portfolio management.

Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design, structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 428(4280) Valuation of Capital Investment Spring. 3 credits. Prerequisites: AEM 210 and 324 or equivalents. D. T.-C. Ng.

Focuses on the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to debt analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation,

AEM 429(4290) International Finance
Spring. 3 credits. Prerequisites: AEM 210 and 324. S-U grades optional. D. T.-C. Ng. To satisfy managerial needs in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of multinational capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 430(4300) International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101–102 or equivalents and intermediate microeconomics course. S-U grades optional. N. H. Chao. Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 431(4310) Agricultural and Food Policy
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 200. S-U grades optional. A. Novakovic. Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and distribution. Explores methods of policy analysis, and students learn to critique policies and write policy briefs.

AEM 432(4320) Business and Governments in a Global Marketplace
Fall. 3 credits. Prerequisite: intermediate microeconomics course, C. K. Ranney. The government agency and the individual business enterprise are two of the most powerful institutions in modern society. This course looks at the economic interfaces between government and business. The shifting and complicated relationships between them exert great influence on the changing performance of the economy and on the lives of citizens. These relationships range from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on public support for its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy, the business-government relationship is constantly changing and the line between public and private sectors frequently shifts. Furthermore managers are constantly confronted with issues that relate to government-business interfaces.

AEM 433(4330) Devolution, Privatization, and the New Public Management (also CRP 412(4120), FGSS 411/611[4110/6110])
Fall. 4 credits. Prerequisite: ECON 101. S-U grades optional. M. F. Warner. For description, see CRP 412.

AEM 434(4340) Government Policy Workshop (also CRP 418[4180], FGSS 420[4200])
Spring. 4 credits. S-U grades optional. M. E. Warner. For description, see CRP 418.

AEM 437(4370) Technological Change and Innovation Strategy
Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen. Explores innovation and technological change. Studies how technological change affects economies and industries, and how innovation of new products and services takes place in firms. Focuses on the creation, management, and exchange of knowledge within and across organizational boundaries.

AEM 442(4420) Emerging Markets
Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 240 and PAM 200 or ECON 313. R. D. Conaty. Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risks of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 443(4430) Food-Industry Strategy
Fall. 3 credits. Prerequisite: AEM juniors, seniors, or graduate students. AEM 240 or 448; or permission of instructor. J. M. Hagen. Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to their challenges and opportunities.

AEM 444(4440) Marketing Strategy and Brand Management
Fall. 3 credits. Prerequisite: AEM 240; junior or senior standing. S. P. Raj. A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 446(4460) Food Marketing Colloquium
Fall. 1 credit. Prerequisite: junior or senior standing, extensive course work in food industry management and marketing. D. J. Perosio. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A field trip may be taken. Students participate in research topics on various aspects of the food industry.

AEM 447(4470) Food Marketing Colloquium
Spring. 1 credit. Open to Food Marketing Fellows only. D. J. Perosio.

AEM 448(4480) Food Merchandising
Spring. 3 credits. Prerequisite: junior or senior standing; AEM 240. D. J. Perosio. Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers.

AEM 449(4490) Global Marketing Strategy (D)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; marketing course. J. M. Hagen. Examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. Includes case analysis and discussion.

AEM 450(4500) Resource Economics (also ECON 409[4090])
Fall. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course, and calculus. S-U grades optional. G. L. Poe. Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/ institutional perspectives and ecological economic concepts.

AEM 455(4550) Sustainability, Business and the Environment
Fall. 3 credits. Prerequisites: ECON 101 and 102 or equivalent and calculus course. L. D. Chapman.
Seminar giving an inside perspective on implementation and evaluation of environmental policy in a business or organization. Examines the effectiveness of the new market-based green policies, analyze the operational significance of sustainability in a business context: and come to understand the economic basis for government's role in environmental protection. Uses HBS case studies; each seminar participant prepares a case study of environmental management in a business or organization. Makes extensive use of guest speakers from finance, electricity, forest products, construction and manufacturing.

**AEM 460(4600) Security Trading and Market Making**

Spring. 3 credits. Prerequisite: AEM 324. Letter grades only. A. Wang.

**AEM 464(4640) Economics of Agricultural Development (also AEM 464(4640))**

Fall. 3 credits. Prerequisites: ECON 101-102 or permission of instructor. R. D. Christy.

Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topic include the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development and the role of international institutions. Uses examples from a wide variety of developing countries to illustrate the basis for economic analysis.

**AEM 494(4940) Undergraduate Special Topics in Applied Economics and Management**

Fall or spring. 4 credits max. S-U grades optional. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

**AEM 497(4970) Individual Study in Applied Economics and Management**

Fall or spring. Variable credit. S-U grades optional. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Used for special projects designed by faculty members.

**AEM 498(4980) Supervised Teaching Experience**

Fall or spring. 1-4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.

Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**AEM 499(4990) Undergraduate Research**

Fall, spring, or summer. 1-4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U grades optional. Staff.

Permits outstanding undergraduates to carry out independent study of specified problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

**AEM 605(6050) Agricultural Finance**

Fall. 3 credits. Prerequisite: AEM 324 or 405 or equivalent. Not offered 2006-2007. B. A. Gloy.

Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

**AEM 608(6080) Production Economics (also ECON 408(4080))**

Fall. 3 credits. Prerequisite: ECON 313 and MATH 111 or equivalent. L. W. Tauer.

Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production response over time and under risk.

**AEM 611(6110) Global Modeling**

Spring. 3 credits. Prerequisite: graduate micro theory course. T. D. Mount and R. N. Boisvert. Taught over Internet by Tom Hertel at Purdue University.

Teaches how to use a global general equilibrium model (GTAP) for research on trade and environment policies. Weekly assignments start with the components of a single-country model and end with a full global model. A final project and the assignments are the primary course requirements.

**AEM 612(6120) Applied Econometrics**

Fall 1 credit. Corequisite: AEM 411. D. Just.

Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 411, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

**AEM 630(6300) Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430(4300))**

Spring. 4 credits. Prerequisites: AEM 608 or ECON 603, ECON 313, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the production of welfare, measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

**AEM 632(6320) Open Economy Analysis: Theory and Applications**

Spring. 3 credits. Prerequisites: ECON 313-314 or permission of instructor. S-U grades optional. N. Chau and S. Kyle.

Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

**AEM 633(6330) Devolution, Privatization, and the New Public Management (also CRP 612(6120), FGSS 611(6110))**

Fall. 4 credits. S-U grades optional. M. E. Warner.

For description, see CRP 612.

**AEM 634(6340) Government Policy Workshop (also CRP 618(6180), FGSS 620(6200))**

Spring. 4 credits. S-U grades optional. M. E. Warner.

For description, see CRP 618.

**AEM 640(6400) Analysis of Agricultural Markets (also ECON 440(4400))**

Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. Offered every year. H. M. Kaiser.

Focuses on the unique features of agricultural commodity markets. Emphasizes the role of government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

**AEM 641(6410) Commodity Futures Markets**

Spring, weeks 8-14. 2 credits. Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640. W. G. Tomek.

Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

**AEM 642(6420) Globalization, Food Safety, and Nutrition (also MS 642(6420))**

Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen.
Directed readings course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion topics are based on assigned readings for each week.

AEM 651(6510) Environmental and Resource Economics
Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. W. D. Schultz.

Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for analyzing costs and benefits—including property value and wage hedonic approaches, travel cost models, and contingent valuation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

AEM 652(6520) Land Economics Problems
Fall or spring. 1 or more credits. Prerequisite: graduate standing and permission of instructor. S-U grades optional. Staff. Special work on any subject in the field of land and resource economics.

AEM 655(6550) Electric Systems Engineering and Economics (also ECE 551[5510])
Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount and R. Thomas.

For description, see ECE 551.

AEM 660(6600) Agroecosystems, Economic Development, and the Environment
Spring. 3-4 credits. Prerequisite: graduate standing. Open to graduate students outside economics: additional sec. TBA for economics majors. S-U grades optional. D. R. Lee.

Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs, sustainable technology development, trade and environment linkages, economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 667(6670) Topics in Economic Development (also ECON 770(7770))
Fall. 3 credits. Targeted to second- and third-year graduate students. Prerequisite: basic-first year courses in ECON or AEM or permission of instructor. S-U grades optional. R. Kanbur.

Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM 670(6700) Economics of Consumer Demand (also PAM 608(6080))
Fall. 3 credits. Prerequisites: ECON 311 or 513 and two semesters of calculus. S-U grades optional. C. K. Ranney.

Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, duality, constrained demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.

AEM 694(6940) Graduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits max. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

AEM 698(6980) Supervised Graduate Teaching Experience
Fall or spring. 1-4 credits; max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Undergraduates should enroll in AEM 698. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U grades optional. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 699(6990) M.P.S. Research
1-6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 700(7000) Individual Study in Applied Economics and Management
Fall or spring. Prerequisite: graduate standing. S-U grades optional. Credit, class hours, and other details TBA with faculty member. Staff.

Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

AEM 708(7080) Advanced Production Economics
Fall. 3 credits. Prerequisite: AEM 608, 710, or equivalents. Highly recommended: ECON 609. Offered alternate years; not offered 2006–2007. R. N. Boisvert.

Covers theoretical and mathematical developments in production economics, with emphasis on production relationships, scale economies, technical change, and factor substitution. Emphasizes developments in flexible functional forms, duality, and dynamic adjustment models. Gives considerable emphasis to empirical specification and estimation. Discusses other topics (risk, supply response, and household production functions) based on student interest.

AEM 710(7100) Econometrics I
Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 311 or ECON 619. H. Daouk.

Provides (together with AEM 711) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures.

AEM 711(7110) Econometrics II
Fall. 3 credits. Prerequisite: AEM 710 or equivalent. T. D. Mount.

Coverage beyond AEM 710 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include cointegration, stationarity, stability, causality, and cointegration.

AEM 712(7120) Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 417. R. N. Boisvert.

Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 713(7130) Dynamic Optimization
Spring. 3 credits. Prerequisite: ECON 609 and ECON 617. Letter grades only. J. M. Conrad.

Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 714(7140) Experimental Economics
Fall. 4 credits. Prerequisite: ECON 609. Offered alternate years. W. D. Schulze.

Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methodologies and games; markets (testing auction institutions), market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experimental design.

AEM 717(7170) Research Methods in Agricultural Economics
Spring. 2 credits. Prerequisite: graduate standing. R. N. Boisvert.

Discusses the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting
data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 730(7300) Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Prerequisite: graduate standing; AEM 630 or equivalent. Not offered 2006-2007. D. R. Lee. Examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

AEM 735(7350) Public Finance: Resource Allocation and Fiscal Policy (also ECON 735(7350))
Spring. 4 credits. R. Kanbur. For description, see ECON 735.

AEM 744(7440) Advanced Consumer Research
Fall. 3 credits. Prerequisite: graduate standing; priority given to AEM graduate students, especially in AEM, agricultural economics, or food technology. B. Wansink. Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 750(7500) Resource Economics
Fall. 3 credits. Prerequisites: ECON 609 and 618, or AEM 713. J. M. Conrad. Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 751(7510) Environmental Economics
Spring. 4 credits. Prerequisites: ECON 609 and 618, or AEM 713. J. M. Conrad. Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 765(7650) Development Microeconomics Graduate Research Seminar
Fall or spring. 1-3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett. Graduate students and the instructor present draft research proposals, papers, and preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others' work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 800(8900) Master's-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master's program.

AEM 900(9900) Graduate-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For Ph.D. students only after "A" exam has been passed.

AEM 901(9910) Doctoral-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For Ph.D. candidates after "A" exam has been passed.

ANIMAL SCIENCE

AN SC 100(1000) Domestic Animal Biology I
Fall. 4 credits. S-U or letter grades. W. B. Currie. Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals. Laboratory exercises include animal handling, examining aspects of anatomy, and small group discussions of contemporary biotechnologies. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

AN SC 105(1050) Contemporary Perspectives of Animal Science
Spring. 1 credit. Prerequisite: freshmen, sophomores, or first-year transfer standing. D. J. R. Cherney and D. E. Bauman. A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 110(1100) The Animals That Sustain Us: Lecture
Spring. 2 credits. S-U or letter grades. D. L. Brown. Teaches the importance of the symbiosis between humans and domestic animals and how animal enterprises can be ethically, environmentally, and economically sound.

AN SC 111(1110) The Animals That Sustain Us: Lab
Spring. 1 credit. S-U or letter grades. D. L. Brown. Teaches students to restrain and care for several species of domestic animals, including cats, dogs, sheep, cattle, goats, fish, and horses. Other species may be added according to student interest. Associated with AN SC 110 but may be taken separately.

AN SC 150(1500) Domestic Animal Biology II
Spring. 4 credits. S-U or letter grades. W. R. Butler and staff. Second of a two-semester sequence (100/150) applying the basic biology and physiology of growth, defense mechanisms, reproduction, and lactation to life cycle aspects of the production and care of domestic animals. Uses fresh tissues and organs from dead animals along with preserved specimens in laboratories, exercises, and demonstrations. Uses a colony of Japanese quail for growth exercises, behavior, and data collection.

AN SC 204(2040) Sophomore Seminar: Domestic Animal Issues
Fall. 3 credits. S-U or letter grades. D. Brown. Expression of discoveries, opinions, and solutions to problems in the area of domestic animal science and industry take on an extremely wide variety of forms. These expressions may include: the peer-reviewed journal article, summaries of scientific work for the public, grant writing for science, film, music, cowboy poetry, investigative journalism, web pages, online discussion groups, computer models and the conference. Topics used as points of reference for exposition of biological principles and for practicing those means of expression will vary, but for 2005-2006 included: roles animals play in society; BSE; vegetarianism; gender stereotypes and livestock; impact of animals on air and water quality; using hormones and antibiotics in food production; feral horses of the West.

AN SC 212(2120) Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. A. W. Bell and D. J. R. Cherney. Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.
AN SC 213(2130) Nutrition of the Dog
Spring. 2 credits. Prerequisite: AN SC 212 or equivalent. Offered alternate years. A. W. Bell.
Covers digestive physiology, nutrient requirements, feeding practices, and effects of nutrition and disease in canine species.

[AN SC 214(2140) Nutrition of Exotic Animals]
Fall. 2 credits. Limited to 100 students. Prerequisite: AN SC 100, 150, or one year introductory biology. D. S. Muscarella.
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and field trip activities.

AN SC 216(2160) Nutrition of the Cat
Fall, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. A. W. Bell.
Covers digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease in feline species.

AN SC 221(2210) Introductory Animal Genetics
Spring. 3 credits. Prerequisite: one year of college biology. J. Pollak.
Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 250(2500) Dairy Cattle Principles
Fall. 3 credits. Prerequisite for AN SC 251. 351, 354, and 355. S-U or letter grades. D. M. Galton.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques.

AN SC 251(2510) Dairy Cattle Selection
Fall. 2 credits. Prerequisite: senior standing or permission of instructor. S-U or letter grades. D. M. Galton.
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd profitability.

AN SC 265(2650) Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U or letter grades. C. Collyer.
Selection, management, feeding, breeding, and training of light horses.

[AN SC 280(2800) Molecular Biology in Agriculture and Medicine]
Fall. 3 credits. Prerequisite: one year introductory biology. Not offered 2006-2007. S. Quirk.
Lectures discuss the applications of molecular biology to animal research, animal agriculture, industry, and medicine. Class discussions explore ethical issues surrounding these technologies.

AN SC 290(2900) Meat Science (also FD SC 290[2900])
Fall. 2 or 3 credits. lab plus lab, 3 credits: lab cannot be taken without lec. Lab fee: $15. D. Shaw.
Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation. Laboratory exercises include anatomy, meat-animal slaughtering, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to a commercial meat plant may be taken.

AN SC 300(3000) Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 250-150 or equivalent and one year introductory biology. J. F. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and birth to sexual maturity; emphasizes on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301(3010) Animal Reproduction and Development Lab
Spring. 1 credit. Limited to 30 students per lab. Prerequisite: AN SC 100-150 or equivalent; concurrent enrollment in or completion of AN SC 300. J. F. Parks.
Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

AN SC 305(3050) Farm Animal Behavior (also FD SC 305[3050])
Spring. 2 credits. Prerequisites: one year introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent or BIOAP 311). Recommended: at least one animal production course or equivalent experience. S-U or letter grades. P. C. Perry.
The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 310(3100) Introduction to Animal Welfare
Fall. 2 credits. S-U or letter grades. Staff.
Animal welfare issues will be discussed, mainly for farm animals, but companion animals will also be considered. Both animal specific and general aspects of animal welfare will be discussed. This course will provide much of the background needed for Cornell to field a team and participate in the U.S. National Animal Welfare Judging contest in the spring.

AN SC 341(3410) Biology of Lactation
Spring. 2 credits. Prerequisite: AN SC 100-150 or animal physiology course. Offered alternate years. Y. R. Boisclair.
Comprehensive survey of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells, (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context, but examples from other mammals, including humans, are used.

AN SC 351(3510) Dairy Herd Management
Spring. 4 credits. Prerequisite: AN SC 250 or permission of instructor. Recommended: AEM 302. D. M. Galton.
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 354(3540) Dairy Cattle Nutrition
Spring. 3 credits. Prerequisite: AN SC 250 or permission of instructor. W. Stone and D. M. Galton.
Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

[AN SC 360(3600) Beef Cattle]
Spring. 3 credits. Offered even-numbered years; next offered 2007-2008. M. L. Thonney.
Emphasizes the management of reproduction, nutrition, and selection in beef cattle enterprises. Laboratories acquaint students with management skills through computerized simulations and working with cattle.

[AN SC 365(3650) Equine Nutrition]
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U or letter grades. Not offered 2006-2007. S. Hille.
Presents the principles of nutrition for horses. Discusses digestive physiology, sources of nutrients, feeding programs for various classes of horses, and interactions of nutrition and diseases.

[AN SC 370(3700) Swine Nutrition and Management]
Fall. 3 credits. Recommended: AN SC 212. Offered alternate years; not offered 2006-2007. X. G. Lei and K. Roneker.
Offers laboratory practice, animal projects, and exploration of ethical issues surrounding these technologies.

AN SC 380(3800) Sheep
Spring. 3 credits. Offered odd-numbered years. M. L. Thonney.
Emphasizes the breeding, feeding, management, and selection of sheep from a production-system approach. Lectures
laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

**AN SC 400(4000) Livestock in Tropical Farming Systems**
Spring. 3 credits. Prerequisite: upperclass standing. Cost of optional field trip (includes airfare, local transport, and lodging; some merit and need-based financial aid may be available): approx. $2,000. R. K. Blake.

Comprises analyses of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production in developing countries of the tropics. Economic objectives and risk are issues that professionals during a 10-day field-study trip provide opportunities for developing study projects aligned with needs of Yucatecan farmers.

**AN SC 401(4010) Dairy Production Seminar**
Spring. 1 credit. Prerequisite: senior standing. T. R. Overton.

Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

**AN SC 402(4020) Seminar in Animal Sciences**
Spring. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S-U or letter grades. S. Quirk.

Reports of undergraduate research and honors projects. Students present oral reports of their work for class discussion.

**[AN SC 403(4030) Tropical Forages**
Spring. 2 credits. Prerequisites: knowledge of crop production and livestock nutrition. Offered alternate years; not offered 2006-2007. Staff.

**AN SC 410(4100) Nutritional Physiology and Metabolism**
Fall. 3 credits. Prerequisites: biochemistry and physiology courses. R. E. Austic and D. E. Bauman.

Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

**AN SC 411(4110) Applied Cattle Nutrition**
Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: AN SC 100 and 212 (or equivalent). Highly recommended: AN SC 355. M. E. Van Amburgh.

Integrates concepts of cattle nutrition and farm nutritional management to help students understand and appreciate factors influencing the performance of cattle under diverse conditions. Topics covered include: the effect of environment on maintenance costs; the nutrient requirements for various stages of growth, lactation, and pregnancy; rumen function, feed composition and chemistry, nutrient partitioning and the environmental impacts of cattle and how to minimize them. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to actualize the information presented in lectures. Herd case studies are used in lab and there are field trips to farms to evaluate the nutrition program.

**AN SC 412(4120) Whole-Farm Nutrient Management (also CSS 412(4120))**
Spring. 2 or 4 credits. Prerequisite: junior, senior, or graduate standing. AN SC 411. Offered as two modules. Enrollment in Module 1 for first half of semester required (2 credits). Consists of crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester is optional (additional 2 credits); builds on crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herd nutrient management planning. Work on case studies outside lab. M. E. Van Amburgh and Q. M. Ketterings.

Provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (cuNMPs) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1. Students opting to continue through the end of the semester in Module 2 (+credit option) build upon knowledge gained in the first half of the semester by learning the knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms.

**AN SC 414(4140) Ethics and Animal Science**
Fall. 2 credits. Prerequisite: junior or senior standing. D. J. R. Cherney.

Explores the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and online, and a project of the student's choice are used to evaluate the performance of each student.

**AN SC 420(4200) Quantitative Animal Genetics**
Spring. 2 credits. Limited to 30 students. Prerequisite: AN SC 221 or equivalent. S-U grades only. E. J. Pollak.

Consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra programs for problem solving.

**AN SC 425(4250) Gamete Physiology and Fertilization (also BIOAP 425[4250])**
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years: next offered 2007-2008. J. E. Parks.

Study formation, growth, differentiation, maturation, and transport of mammalian sperm and oocytes and cytological, physiological, and molecular changes required for fertilization.

**AN SC 427(4270) Fundamentals of Endocrinology (also BIOAP 427[4270])**
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. P. A. Johnson.

Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology. Examples are selected from many animals, including humans.

**AN SC 451(4510) Dairy Herd Business Management**
Fall. 3 credits. Corequisite: AN SC 456. J. Karszes and D. M. Galton.

Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

**AN SC 456(4560) Dairy Management Fellowship**
Spring. 2 credits. Prerequisites: senior standing. AN SC 351; permission of instructor. S-U grades only. D. M. Galton.

Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

**AN SC 457(4570) Introductory Spanish for Dairy Producers**
Spring. 2 credits. Prerequisite: AN SC 250 or permission of instructor. Staff.

Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

**AN SC 458(4580) Advanced Spanish for Dairy Producers**
Fall. 2 credits. Prerequisite: AN SC 457 or permission of instructor. Staff.

Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-semester program that will further develop the students' skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.
AN SC 494(4940) Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: undergraduate standing. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 496(4960) Internship in Animal Science
Fall or spring. 1-3 credits, variable; 6 credits max., during undergraduate career. Students must register using independent study form (available in 140 Roberts Hall). S-U grades only. Staff.
Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships are arranged by the student and must be approved in advance by the student's academic advisor. The internship should provide a professionally supervised experience with at least 60 hours on the job per credit required.

AN SC 497(4970) Individual Study in Animal Science
Fall or spring. 1-3 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff. May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

AN SC 498(4980) Undergraduate Teaching
Fall or spring. 1-3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499(4990) Undergraduate Research
Fall or spring. 6 credits max. during undergraduate career. Prerequisite: junior or senior standing. GPA of at least 2.7. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 603(6030) Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603(6030))
Fall. 2 credits. Prerequisite: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years. X. G. Lei and C. C. McCormick
Emphasizes metabolism, gene regulation, antioxidation, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Discusses effective approaches to improve global mineral nutrition by agriculture and food systems.

AN SC 606(6060) Ruminant Nutrition: Microbial Ecology and Forage Chemistry
Spring. 4 credits. Prerequisites: AN SC 212, biochemistry course; senior or graduate standing or permission of instructor. S-U or letter grades. Offered alternate years. Staff.
Provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

AN SC 610(6100) Animal Science Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing. S-U grades only. A. W. Bell.
Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

AN SC 619(6190) Field of Nutrition Seminar (also NS 619(6190))
Fall and spring. 0 credits. No grades given. For description, see NS 619.

AN SC 620(6200) Seminar in Animal Breeding
Fall and spring. 1 credit. Prerequisite: graduate standing and major or minor in animal breeding. S-U grades only. E. J. Pollak.
Current topics in animal breeding and statistics as applied to genetic evaluation and selection of domestic animals.

AN SC 621(6210) Reproductive Physiology/Endocrinology Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. W. R. Butler and staff.
Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

AN SC 622(6220) Seminar in Animal Metabolism
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Y. R. Boisclair and D. E. Bauman.
Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research proposals for new initiatives, progress reports on ongoing projects and recent peer-reviewed publications of high significance.

Fall and spring. 1 credit. S-U grades only. R. W. Blake.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter involves research and training collaborations between Cornell University and Mexican institutions in the Gulf Region of Mexico.

AN SC 650(6500) Molecular Techniques for Animal Biologists
Spring. 4 credits. Limited to 15 students. Prerequisites: BIOBM 330 or 353 or equivalents and permission of instructors. Offered alternate years. Y. Boisclair and staff.
Intensive lab course designed for students who have limited experience with techniques in molecular biology. Emphasizes modern techniques used in conducting research on higher animals.

AN SC 694(6940) Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AN SC 720(7200) Advanced Quantitative Genetics
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics courses. S-U or letter grades. Offered alternate years; next offered 2007-2008. R. L. Quaas.
Covers statistical methods used in a variety of problems in the quantitative genetics of animal populations.

AN SC 800(8900) Master's-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty. For students admitted specifically to a master's program.

AN SC 900(9900) Graduate-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty. For students in a Ph.D. program only before "A" exam has been passed.

AN SC 901(9910) Doctoral-Level Thesis Research
Fall or spring. Credit TBA, max. 12 credits per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty. For students admitted to candidacy after "A" exam has been passed.

Related Courses in Other Departments
Introductory Animal Physiology (BIOAP 311)
Animal Physiology Experimentation (BIOAP 319)
Milk Quality (FO SC 251)
Agriculture in the Developing Nations (IARD 602)
Lipids (NS 602)
Basic Immunology Lectures (Bio G 305)

BIological and environmental engineering

BEE 102(1102) Introduction to Microcomputer Applications
Fall or spring. 3 credits. All students, including those pre-enrolled, must attend first lec and first lab to guarantee admittance to a desired lab sec. All graduating seniors will be admitted as long as they attend first lec. After first lec, students admitted only by permission of instructor. No students admitted after first lab. Letter grades only. Fee: $35.

BEE 110(1030) Introduction to Metal Fabrication Techniques
Spring. 3 credits. Limited to 20 students per lab. Letter grades only. T. J. Cook. Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, sheet metal work, welding, pipe fitting, forging, controlling distortion, oxy-acetylene torch cutting, welding and brazing, carbon steel stick arc welding, arc cutting and use of the carbon arc torch.

BEE 132(1040) Introduction to Wood Construction
Fall. 3 credits. Limited to 16 students per lab. Letter grades only. T. J. Cook. Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, footers and foundations, concrete work and block construction, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods and joinery, fasteners and their application. Each student plans and constructs an approved carpentry project (line furniture to livestock equipment that will be useful, durable, and show the students ability and mastery of the subject matter).

BEE 151(1510) Introduction to Computer Programming
Fall. 4 credits. Limited to 38 students per lab and rec. No previous programming experience assumed. Pre- or corequisite: Math 191 or equivalent. Letter grades only. Staff. Introduction to computer programming and concepts of program analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

BEE 200(1200) The BEE Experience
Spring. 1 credit. Prerequisite for CALS BEE freshmen. Not required for students who have completed ENGRG 150. Prerequisite: BEE majors or permission of instructor. Letter grades only. J. A. Bartsch. Forum covering the career opportunities for engineering students, the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE 222(2220) Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 192, BIO G 110, PHYS 213, and chemistry course completed or concurrent. Letter grades only. J. B. Hunter. Living systems rely on chemical and phase equilibria, precise coordination of biochemical reactions, and chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, heat transfer, reaction, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 251(2510) Engineering for a Sustainable Society (also ENGRD 251/2510)
Spring. 3 credits. Pre- or corequisite: Math 293. Letter grades only. Offered spring 2007 and fall 2007 and every fall thereafter. B. A. Ahner. Case studies of contemporary environmental issues including distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and environmental problems.

BEE 260(2600) Principles of Biological Engineering (also ENGRD 260/2600)
Fall. 3 credits. Pre- or corequisite: Math 293. Letter grades only. A. J. Baeumner. Focuses on the integration of biological principles with engineering design and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or ENGRD 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

BEE 299(3299) Sustainable Development: A Web-Based Course
Spring. 3 credits. Prerequisite: at least sophomore standing. S/U grades optional. N. R. Scott. Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development and explores the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.

BEE 305(3050) Principles of Navigation (also NAV S 301/3050)
Spring. 4 credits. Four classes each week (lec-rec-project work). Letter grades only. L. Gamichia. Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tidal currents. Also discusses electronic navigation systems.

BEE 310(1050) Advanced Metal Fabrication Techniques
Spring. 1 credit; 2-credit option available. Prerequisite: BEE 110 or permission of instructor. Letter grades only. T. J. Cook. Principles and practices beyond the scope of BEE 110. Includes out-of-position, low-hydrogen, high-carbon steel and cast iron welding. Topics include welding, brazing, and oxygen cutting of metals. Covers arc welding, plasma arc, and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project is required for the 2-credit option.

BEE 325(3250) Environmental Management
Fall. 3 credits. Letter grades only. Not offered 2006-2007. W. S. Jewell. Explores the decline in environmental quality caused by human activities and the limits of science and technology solutions. Emphasizes understanding complex issues such as global warming and deriving sustainable solutions, which are illustrated with case studies. Includes field trips to water supply and waste treatment facilities. Emphasizes water, using energy, air quality, and soil evaluations to illustrate environmental quality problems. Meets concurrently with BEE 625. BEE 625
students complete a semester-long design-oriented project."

**BEE 331 (3310) Bio-Fluid Mechanics**
- Fall. 4 credits. Prerequisites: ENGRD 202 and Engineering math sequence. Letter grades only. K. G. Gebremedhin.
- Properties of Newtonian and non-Newtonian fluids, hydrostatic and dynamic forces, principles of continuity, conservation of mass, energy and momentum and their applications, laminar and turbulent flows and boundary layer, introduction to Navier Stokes, dimensional analysis and similarity, blood flow in the cardiovascular system, gas exchange in the pulmonary system, blood flow and sodium transport in the kidney.

**BEE 350(3500) Biological and Environmental Transport Processes**
- Fall. 3 credits. Pre- or corequisites: MATH 293 and fluid mechanics course. Letter grades only. A. K. Datta.
- Focuses on understanding the principles of heat and mass transfer in the context of biological, biomedical, and environmental systems. Emphasizes physical understanding of transport processes and simple reaction rates with applications examples from plant, animal, and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

**BEE 360(3600) Molecular and Cellular Bioengineering (also BME 360(3600))**
- Spring. 3 credits. Prerequisites: biochemistry course or A&EP 252 or permission of instructor. Letter grades only. U. March.
- Biological engineering at the molecular and cellular level, focusing on different organisms (viruses, bacteria, cells, animals, and plants) and different scales (nano, molecular, cellular, tissue, and environment) with two underlying themes: DNA and cancer. Introduction of quantitative analysis and measurement as well as ethics in molecular and cellular bioengineering with emphasis on integration of molecular and cell biology with engineering.

**BEE 362(3620) Fundamentals of Tissue Engineering**
- Spring. 3 credits. Limited to 25 students; priority given to graduating seniors. Prerequisites: biochemistry, BEE 350. Letter grades only. R. C. Gorewit.
- Biological and physiological fundamentals of tissue engineering. Cell technology, cell function in constructs and sources of cells for tissue engineering. Biomaterials, including functional requirements, biomechanics and substrates, and bioartificial construct technology. Diffusion and transport processes in engineered tissue, manufacture and scale-up of production processes, regulation and FDA approval of engineered products. Examples include cartilage, bone, skin, cardiovascular and neural tissues.

**BEE 365(3650) Properties of Biological Materials**
- Spring. 3 credits. Pre- or corequisites: ENGRD 202. Letter grades only. J. A. Bartsch.
- Mechanics and structural properties of biological materials including mechanical testing of animal, plant, and food products. Laboratory exercises involve quasistatic and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials. Satisfies BEE laboratory experience requirement.

**BEE 368(3680) Biotechnology Applications: Animal Bioreactors**
- Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. G. Introduces students to the biotechnological applications of animals; their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals, growth factors, anti-tumor proteins, antibiotics, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

**BEE 371(3710) Physical Hydrology for Ecosystems**
- Spring 3 credits. Prerequisite: MATH 192 or permission of instructor. Letter grades only. Offered alternate years. T. S. Steenhuis and M. T. Walter.
- This is an introduction to fundamental hydrology emphasizing physical hydrological processes and the roles of interactions among hydrology, biogeochemistry, biology, and human activities. This course focuses on surface and near surface processes and introduces deeper, groundwater-hydrology. A broad range of specific topics is covered: e.g., the hydrological cycle, watershed hydrology, runoff generation, physical and biological vadose zone processes, erosion and sediment transport, and eco-hydrological systems.

**BEE 401(4010) Renewable Energy Systems**
- Spring. 3 credits. Prerequisite: college physics. Letter grades only. L. D. Albright.
- Introduces energy, utilizing various emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

**BEE 427(4270) Water Sampling and Measurement**
- Fall. 3 credits. Satisfies BEE laboratory experience requirement. Prerequisites: fluids or hydrology course and MATH 191. Letter grades only. L. D. Geohring and T. S. Steenhuis.
- Get wet and dirty with this course on water measurement sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based lab course focuses on quantification of surface and subsurface flow and quality, utilizing various sampling equipment and analytical techniques. Quality assurance and control protocols, and interpretation of watershed loading of contaminants are addressed.

**BEE 435(4350) Principles of Aquaculture**
- Spring. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit hour. Prerequisite: at least junior standing. Letter grades only. M. B. Timmons.
- An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Includes supervised "hands-on" laboratory experiences.

**BEE 450(4500) Biinstrumentation**
- Spring. 4 credits. Satisfies both BEE laboratory experience and BEE capstone design requirement. Satisfies College of Engineering technical writing requirement when co-registered in BEE 496. Prerequisites: MATH 294, BEE 151, PHYS 213, or permission of instructor. Letter grades only. D. J. Aneshansley.
- Lab-based course emphasizing biological and biomedical instrumentation. Students use the electronic instrument from sensor to computer. Static and dynamic characteristics of components and systems are determined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested.

**BEE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453(4530))**
- Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisite: heat and mass transfer (BEE 356 or equivalent). Letter grades only. A. K. Datta.
- Introduction to simulation-based design as an alternative to prototype-based design, analysis and optimization of complex real-life processes using standard physics-based computational software high-end personal computer. Covers biomedical processes and industrial food processing applications of heat and mass transfer. Computational tools introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project which is the major component of the course (no final exam).

**BEE 454(4540) Physiological Engineering**
- Fall. 3 credits. Satisfies BEE laboratory experience requirement. Corequisites: Fluid mechanics course. Letter grades only. D. J. Aneshansley.
- Engineering analysis and design in the physiology of animals and humans. Covers the use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and sensing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations.

**BEE 459(4590) Biosensors and Bioanalytical Techniques**
- Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. Next offered 2007–2008. A. J. Bacumier.
- Provides students with an understanding of the scientific, academic and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro-TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture; analyze biosensors published in literature, and theoretically design a biosensor, based on criteria discussed in class. Undergraduate students work together in teams of two to three. Meets concurrently with BEE 659. BEE 659 students work
independently on individual biosensor projects.)

**BEE 464(4640) Bioseparation Processes**
Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 192, BEE 260 or permission of instructor. Letter grades only. J. G. Hulteen.

Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibodies, bacteria, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

**BEE 471(4710) Introduction to Groundwater (also EAS 471(4710))**
Spring. 3 credits. Prerequisites: MATH 293, fluid mechanics or hydrology course: S-U or letter grades. Field trip. L. M. Cahill and T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**BEE 473(4730) Watershed Engineering**
Fall. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Satisfies College of Engineering technical writing requirement when co-registered in BEE 493. Satisfies BEE laboratory experience requirement. Prerequisites: fluid mechanics or hydrology course. Letter grades only. M. F. Walter and M. T. Walter.

This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design. Assignments are also addresses representative of real engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.

**BEE 474(4740) Water and Landscape Engineering Applications**
Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisite: fluid mechanics or hydrology course or permission of instructor. Letter grades only. T. S. Steenhuis and L. D. Gershenson.

This course will focus on how water moves in soil and the implications for design of drainage and irrigation systems. The course will also address aspects of water quality and water supply or disposal in regards to drainage and irrigation applications. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student.

**BEE 475(4750) Environmental Systems Analysis**
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only. D. A. Haith.

Applications of mathematical modeling, simulation, and optimization to environmental-quality management. Fad and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives for solid-waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

**BEE 476(4760) Solid Waste Engineering**
Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only. D. A. Haith.

Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling; materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

**BEE 478(4780) Ecological Engineering**
Spring. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Prerequisite: junior-level environmental quality engineering course or equivalent. Letter grades only. W. J. Jewell.

Ecological engineering is the language of sustainable living. Waste management with natural systems, the most advanced form of this new engineering direction, includes constructed wetlands, hydroponic applications of plants in resource-recovery waste management systems, soil restoration, phytoaccumulation and bioconversion of toxic materials, biomass refining to create energy-independent communities, sustainable drinking water systems, carbon sequestration, and zero polluting farms are future sustainable living topics that also solve some of society's larger problems.

**BEE 481(4871) LRFD-Based Engineering of Wood Structures (also CEE 481(4871))**
Spring. 3 credits. BEE students who wish to take this course to satisfy BEE capstone design requirement must co-register in BEE 496 for 1 credit. Prerequisite: ENGRD 402.

Letter grades only. Two evening prelins. K. G. Gehremlinche.

Computer-aided and manual computation procedures of LRFD-Based Design (LRFD)-Based Design of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; design of beams, columns, trusses, frames, arches, bridges, diaphragms, connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

**BEE 482(4820) Biothermal Engineering for Humans**
Fall. 3 credits. Satisfies BEE capstone design requirement. Prerequisites: BEE 350 or equivalent and introductory biology. Letter grades only. Fee: $25. P. E. Hillman.

Engineering design to help humans survive outdoor extremes of heat and cold as well as achieving comfort indoors. Three major topics are discussed: principles of heat and mass transfer applied to humans interacting with their environment, physiological responses to stressful environments, and designing outerwear for environmental extremes.

**BEE 484(4840) Metabolic Engineering**
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Spanswick.

The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

**BEE 487(4870) Sustainable Energy Systems**
Fall. 3 credits. Satisfies BEE capstone design requirement. Intended for upper-level undergraduates and graduate students. Prerequisite: BEE 350 or thermodynamics course. Letter grades only. Not offered 2007-2008. N. R. Scott and L. D. Albright.

Offers a systems approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

**BEE 489(4890) Engineering Entrepreneurship, Management, and Ethics**
Spring. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing; ENGRD 270 or CEE 304 or equivalent highly recommended. Letter grades only. M. B. Timmons.

The course focuses on how to start a new company centered around engineering or biological technologies. Course objectives include coverage of: entrepreneurship principles, fund raising, negotiation, financial calculations (internal rate of return, time value of money, proforma statements), legal structures of businesses; project management; and to develop an awareness of issues related to professional ethics; and technical writing and communication.

**BEE 493(4930) Technical Writing for Engineers**
Fall or spring. 1 credit. Meets College of Engineering technical writing requirement when taken concurrently with BEE 473 in fall or BEE 450 in spring. Letter grades only. Staff.

Covers writing skills necessary for technical project reports. Also covers outlines, style, audiences, and general writing mechanics.

**BEE 494(4940) Special Topics in Biological and Environmental Engineering**
Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered twice under this number.
BEE 494(4940) Mini Baja (also MAEE 490, section 56)
Fall, spring. 1–4 credits. Prerequisite: permission of instructor. No evening prelms. Letter grades only. L. Collins. Designed and built vehicle for Society of Automotive Engineers competition.

BEE 495(4950) BEE Honors Research
Fall or spring. 1–6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff. Intended for students pursuing the research honors program in BEE.

BEE 496(4960) Capstone Design in Biological and Environmental Engineering
Fall and spring. 1 credit. Corequisite: one approved upper-level course (BEE 435, 475, 478, 481). Letter grades only. Staff. Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 497(4970) Individual Study in Biological and Environmental Engineering
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to your project advisor. Staff. Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 498(4980) Undergraduate Teaching Fell and spring. 1–4 credits. Prerequisite: written permission of instructor. Letter grades only. Students must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 499(4990) Undergraduate Research
Fall and spring. 1–4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students must register using independent study form (available at 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE 501(5010) Bioengineering Seminar (also BME 501(5010))
Fall. 0 credits. Prerequisite: junior, senior, or graduate standing. S–U grades only. D. Lipson.
To give you, the engineer-in-training, a broad overview of different aspects of biological and biomedical engineering, including business, legal, and clinical issues. To give the students a working knowledge of how abstracts are written and revised.

BEE 520(5900) M.P.S. Project
Fall and spring. 1–6 credits. Requirement for each M.P.S. candidate in field. Letter grades only. BEE graduate faculty. Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

BEE 551(5950) Master of Engineering Design Project
Fall and spring. 3–6 credits. Prerequisite: admission to M.Eng. degree program. Letter grades only. BEE graduate faculty. Comprehensive design projects relating to the candidate's area of specialization. Projects are supervised by faculty members on an individual basis. A formal project report and oral presentation of the design project is required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551 is required for the M.Eng. degree (can be taken in two semesters).

[BEE 625(6250) Environmental Management]
Fall. 3 credits. Letter grades only. Not offered Fall 2007. W. J. Jewell. For description, see BEE 325.

[BEE 647(6470) Water Transport in Plants (also BIOPL 651(6510))]
Fall. 2 credits. Letter grades only. Offered alternate years; next offered 2007-2008. R. M. Spanswick.
Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities. Staff. Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

[BEE 649(6490) Solute Transport in Plants (also BIOPL 649(6490))]
Fall. 3 credits. Letter grades only. Offered alternate years. R. M. Spanswick.
Fundamental treatment of the transport of ions and small organic molecules in plants. Topics include electrolyophysics of cell membranes, including ion channels and electrogenic ion pumps; transport mechanisms for the major ions: intercellular and long-distance ion transport; cotransport systems for sugars and amino acids; phloem transport; ABC-type transporters.

BEE 651(6510) Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOI 290 or BIOI 351 or permission of instructor. Letter grades only. B. A. Ahner. Examines ways in which organisms may be used to remove or metabolize pollutants in the environment, including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. Examines the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.

[BEE 655(6550) Thermodynamics and Its Applications]
Fall. 3 credits. Prerequisites: MATH 293 or equivalent; for undergraduates, permission of instructor. Letter grades only. Offered alternate years; next offered 2007-2008. J.-Y. Parlang. Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

[BEE 659(6590) Biosensors and Bioanalytical Techniques]
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. Not offered 2006-2007. A. J. Baeumner. For description, see BEE 495.

BEE 671(6710) Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course. Letter grades only. Offered alternate years. J.-Y. Parlang. Encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques. Analyzes both homogeneous and heterogeneous soils. Offered alternately with CEE 635—a complementary, but not identical, course.

BEE 672(6720) Drainage
Spring. 4 credits. Prerequisites: BEE 471 or BEE 473. Letter grades only. T. S. Steenhuis and L. D. Georghi. Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage. Critically reviews various design as it relates to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and matrix flow on water quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

BEE 673(6730) Sustainable Development Seminar (also NBA 573[5730])
Spring. 1–3 credits. Prerequisites: upper-division undergraduate or graduate standing or permission of instructor. Letter grades only. N. R. Scott. Sustainable development is the most beneficial concept to come out of the environmental movement in years. The concept of a sustainable world, however, is not a constant. There are many aspects of sustainability involving economics, ethics, law, public policy, business, engineering, and political, social, scientific, and technological developments. This seminar explores topics such as energy, agricultural and food systems, green buildings and ecological design, corporate sustainability, and other contemporary issues.
BEE 687(6870) The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall, 1 credit. Prerequisite: graduate standing. S-U grades only. L. P. Walker. Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the industrial community that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 694(6940) Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring, 4 credits max. S-U grades optional. BEE graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

BEE 694(6940) Ecodynamics
Spring, 3 credits. Prerequisite: ecology or hydrology course. Letter grades only. Offered alternate years. Next offered 2007-2008. M. T. Walter. The objective of this course is to investigate novel topics that involve the interactions between physical hydrological processes and ecosystem processes, including the impacts of human activities on the ecodynamics system. This course is designed to encourage teams of students from historically disparate disciplines to collaboratively combine their unique skills and insights to answer multidisciplinary ecodynamics questions. This class will consider a broad range of questions, and emphasize quantitative analysis and model development to answer these questions.

BEE 696(6970) Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring, 1-6 credits. Prerequisite: permission of instructor. S-U grades only. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

BEE 700(7010) BEE Seminar Series
Spring, 1 credit. S-U grades optional. Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

BEE 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 740(6430))
Spring, March 4-May 16. 2 credits. Prerequisite: graduate standing or permission of instructor. D. D. Bowman. In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 750(7000) Orientation to Graduate Study
Fall, first seven weeks. 1 credit. Prerequisite: new graduate students. S-U grades only. D. J. Aneshansley. Introduction to BEE research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

BEE 754(7540) Watershed Management
Spring, 2-3 credits. Prerequisite: graduate standing or permission of instructors. S-U grades only. Offered alternate years; next offered 2007-2008. T. S. Steenhuis. Traditional top-down approaches to watershed management have been challenged by advocates of public participation. These challenges have raised questions about how to effectively integrate science, policy, and public participation. This course reviews different management approaches and evaluates their usefulness in dealing with different watershed management problems. Considers case examples from watersheds in the United States and overseas.

BEE 760(7600) Nucleic Acid Engineering (also BME 760(7600))
Spring, 2 credits. Prerequisite: graduate standing. BEE 500 or permission of instructor only. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine are introduced. A design project and formal project presentation are required.

BEE 771(7710) Soil and Water Engineering Seminar
Fall and spring, 1-3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades only. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, and M. T. Walter. Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

BEE 781(7810) Structures and Related Topics Seminar
Spring, 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Staff. Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

BEE 785(7850) Biological Engineering Seminar
Spring, 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Staff. Examines the interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology to improve communication between engineers and biologists.

BEE 787(7870) Industrial Ecology of Agriculturally Based Bioindustries
Spring, 3 credits. Prerequisite: graduate standing; one year of calculus, some knowledge of MATLAB, BEE 687. Letter grades only. L. P. Walker. This course is designed to bring students from the life sciences and engineering together in teams to model and simulate sustainable agriculturally based bioindustries like those currently being used to produce bioenergy and biodegradable products. It is a system modeling and analysis course focused on interconnecting discrete physical, chemical, and biological processes to create novel industrial ecologies that are sustainable. An input/output modeling methodology is employed to develop a system map of the structure of complex agriculturally based bioindustries and to generate the material, energy, and monetary flows. Special emphasis is placed on designing and analyzing webs of connected processes such that waste products from one process can be used as a raw material for another process. Students will use linear algebra and state space tools in the MATLAB toolbox to simulate static and dynamic behavior of these complex webs of connected processes and to conduct life cycle analysis of these complex webs.

BEE 788(7880) Biomass Conversion of Energy and Chemicals
Fall, 3 credits. Prerequisite: one year of college calculus and chemistry; minimum of one course in thermodynamics and computer programming. Letter grades only. L. P. Walker. Biological and physical conversion of biomass to bioenergy and bioproducts. Biological and engineering concepts associated with microbial and enzymatic conversion of biomass to useful products, physical and chemical concepts associated with the pretreatment of biomass and the separation of key biomolecules. Uses mass and energy balances and mathematical models (with MATLAB) to simulate process behavior.

BEE 800(8900) Master's-Level Thesis Research
Fall and spring, 1-15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty.

BEE 900(9900) Doctoral-Level Thesis Research
Fall and spring, 1-15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty. Variable credit for Ph.D. research.
BIOLOGICAL SCIENCES
The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the separate section "Biological Sciences."

BIOLOGY & SOCIETY
The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of these courses and field requirements, see "Biology & Society" under the College of Arts and Sciences.

BIOMETRY AND STATISTICS

The Department of Biostatistics and Computational Biology in Statistical Science offers the following courses in Biometry and Statistics. Students must register under Course Listings College of Agriculture and Life Sciences-Biometry and Statistics.

BTRY 301(3010) Biological Statistics I (also NTRES 313[3130], STBTRY 301[3010])
Fall and spring. 4 credits.
Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in the S-Plus statistical computing environment.

BTRY 302(3020) Biological Statistics II (also NTRES 413[4130], STBTRY 302[3020])
Spring. 4 credits. Prerequisite: BTRY 301 or 601.
Applies linear statistical methods to problems in the biological and environmental sciences. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in the S-Plus statistical computing environment.

BTRY 310(3100) Statistical Sampling (also ILRST 310[3100], STBTRY 310[3100])
Fall. 3 credits. Prerequisites: two semesters of statistics. Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

BTRY 382(3820) Introduction to Statistical Genomics and Bioinformatics (also STBTRY 382[3820])
Fall. 4 credits. Intended for undergraduates and beginning graduate students in mathematical and biological sciences. Prerequisite: BTRY 301, MATH 111, BIO G 102, or equivalent. Not offered 2006-2007.
Survey course in the statistical analysis of genomic data. Includes an introduction to probability and statistics and application to DNA sequence analysis, phylogenetic inference, population genetics, genetic mapping, molecular evolution, and macromolecular structure prediction. Evaluation is based on weekly problem sets and computer assignments as well as a midterm and final examination.

BTRY 408(4080) Theory and Probability (also STBTRY 408[4080])
Fall. 4 credits. Prerequisites: MATH 111, 112, at least concurrent enrollment in 213 or 222 or equivalents. Recommended: at least one introductory course in statistical methods.
Introduction to probability theory: axiomatic foundations, combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

BTRY 409(4090) Theory of Statistics (also STBTRY 409[4090])
Spring. 4 credits. Prerequisites: BTRY 408 or equivalent and at least one introductory course in statistical methods.
Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 408. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

BTRY 421(4210) Matrix Computation
Fall. 4 credits. Prerequisite: calculus course. Not offered 2006-2007.
Introductory course in matrix computations that reviews (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Discusses positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics.

BTRY 482(4820) Statistical Genomics (also STBTRY 482[4820])
Fall. 4 credits. Prerequisites: MATH 111. Highly recommended: at least one previous course in statistical methods and one in biology.
A course on the statistical analysis of genetic, molecular, and genomic data. The first module of the course presents a thorough treatment of important probabilistic distributions and the concepts of likelihood and Bayesian inference. We then focus on how statistical models are developed for linkage analysis, basic Quantitative Trait Locus mapping, analysis of pedigrees, molecular population genetics, and phylogenetic inference. Meets concurrently with BTRY 682.

BTRY 483(4830) Quantitative Genomics and Genetics (also STBTRY 483[4830])
Fall. 4 credits. Recommended: at least one previous course in statistical methods and genetics.
The focus of this course is recent advances in the statistical analysis and application of genomic data to the study of complex traits studied in molecular and population genetics, plant and animal sciences, and evolutionary biology. Topics include issues related to mapping, identification, and characterization of genes underlying complex traits (quantitative trait loci-QTLs), microarray data analysis, and analysis of genetic variation in populations. Meets concurrently with BTRY 683.

BTRY 484(4840) Computational Genomics (also STBTRY 484[4840])
Fall. 4 credits. Highly recommended: at least one previous course in statistical methods and at least one in algorithms.
A rigorous treatment of important computational principles and methods for the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstruction, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 684.

BTRY 494(4940) Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494[4940])
Fall and spring. 1-3 credits. S-U grades optional.
Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495(4950) Statistical Consulting (also STBTRY 495[4950])
Fall and spring. 2-3 credits. Pre- or corequisites: BTRY 302 or 602 and 409 and permission of instructor. S-U grades optional.
Participation in the Department of Biostatistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 497(4970) Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497[4970])
Fall and spring. 1-3 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498(4980) Undergraduate Supervised Teaching (also STBTRY 498[4980])
Fall and spring. 2 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).
Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section.
and regularly discuss objectives with the course instructor.

BTRY 499(4990) Undergraduate Research (also STBTRY 499(4990))
Fall or spring. Prerequisite: Instructor permission. Students must register using independent study form (available in 140 Roberts Hall).

BTRY 601(6010) Statistical Methods I (also STBTRY 601(6010))
Fall and summer. 4 credits. Prerequisite: BTRY 601 or equivalent.

Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through MATLAB statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

BTRY 602(6020) Statistical Methods II (also STBTRY 602(6020))
Fall or spring. 1-3 credits. Prerequisite: BTRY 601 or equivalent.

Continuation of BTRY 601. Emphasizes the use of model selection and inference for regression models, study designs, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include: least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria, principles of experimental design; analysis of variance for a number of designs, including multi-factorial, nested, and split plot designs, and analysis of covariance. Emphasizes appropriate design of studies before data collection, and the appropriate application and interpretation of statistical techniques.

Practical applications are implemented using a modern, widely available statistical package.

BTRY 603(6030) Statistical Methods III (also STBTRY 603(6030))
Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

BTRY 604(6040) Statistical Methods IV: Applied Design (also STBTRY 604(6040))
Spring. 4 credits. Prerequisites: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factors. Stresses use of the computer for both design and analysis, with emphasis on solutions of real data problems.

BTRY 652(6520) Computationally Intensive Statistical Inference (also STBTRY 652(6520))
Spring. 4 credits. Prerequisite: BTRY 421 and 409 or equivalent. S-U grades optional. Offered alternate years.

Modern applications of statistics often require intensive computation not handled by "off-the-shelf" software. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for solving problems in statistical inference and estimation.

BTRY 672(6720) Topics in Environmental Statistics (also STBTRY 672(6720))
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of instructor. Not offered 2000-2007.

Discussion group focusing on statistical problems arising in the environmental sciences. Explores these issues in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

BTRY 682(6820) Statistical Genomics (also STBTRY 682(6820))
Fall and spring. 4 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of instructor. Not offered 2000-2007.

This course is a graduate seminar on current topics in population genetic data analysis. Topics this semester may include: detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for association mapping; efficient methods for disease gene mapping; use of comparative genomic data for population genetic inference. Readings will be chosen primarily from current literature.

BTRY 684(6840) Graduate Special Topics in Biometry and Statistics (also STBTRY 684(6840))
Fall or spring. 1-3 credits. S-U grades optional.

Course of lectures selected by the faculty. Topic topics usually change from year to year, this course may be repeated for credit.

BTRY 697(6970) Individual Graduate Study in Biometry and Statistics (also STBTRY 697(6970))
Fall, spring, or summer. 1-3 credits. S-U grades optional.

Individual tutorial study selected by the faculty. Topic topics usually change from year to year, this course may be repeated for credit.

BTRY 717(7170) Theory of Linear Models (also STBTRY 717(7170))
Fall. 4 credits. Prerequisites: BTRY 421, and 602 or equivalents.

BTRY 720(7200) Topics in Computational Genomics (also STBTRY 720(7200))
Spring. 1 credit. Prerequisite: BTRY 484/684 or permission of instructor.

Weekly seminar series on recent advances in computational genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

BTRY 726(7260) Problems and Perspectivues in Computational Molecular Biology (also STBTRY 726(7260))
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional.

Weekly seminar series discussing timely topics of computational molecular biology. Addresses methodological approaches to the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstruction, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 484.
sequence annotation, protein structure and function relationships, and evolutionary relationships across species. Discusses statistical and deterministic computational approaches are covered and specific and detailed biological examples. Discusses topics of interest discussed in relation to papers prepared by teams of students and/or faculty members. Students/faculty members from biology backgrounds are paired with students from math, computer science, and statistics for paper preparation. Students summarize the salient questions addressed by the paper, the research methods used, and the results obtained. At the end of the presentation, questions should be listed on an overhead slide to initiate discussion in the group.

BTRY 795(7950) Statistical Consulting (also STBTRY 795(7950))
Fall and spring. 2-3 credits. Prerequisites: BTRY 602 and 409 and permission of instructor. S-U grades optional. Participation in the Department of Biological Statistics and Computational Biology consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 798(7980) Graduate Supervised Teaching (also STBTRY 798(7980))
Fall and spring. 2-4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S-U grades only. Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are dependent on written contract with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 800(8900) Master's-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: M.S. candidates; permission of graduate field member concerned. S-U grades only. Research at the M.S. level.

BTRY 900(9900) Graduate-Level Dissertation Research
Fall or spring. Credit TBA. Prerequisite: Ph.D. candidates; permission of graduate field member concerned. S-U grades only. Research at the Ph.D. level.

BTRY 901(9910) Doctoral-Level Dissertation Research
Fall or spring. Credit TBA. S-U grades only.

COMMUNICATION

COMM 101(1010) Cases in Communication (SBA)
Fall. 3 credits. B. Lewenstein.

Through analysis of cases, this course introduces students to key principles and theories in the study of human communication. Cases cover personal situations, entertainment, national crises, business situations, new technologies, and other contexts. The goal is to understand the links between these daily activities, "mid-range" theories of human behavior, and broad social concepts of modernity and postmodernity.

COMM 130(1300) Visual Communication
Spring. 3 credits. C. Scherer.
Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of advertising, TV news, documentaries, entertainment movies, print, and interactive media develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 131(1310) Writing about Communication
Spring. 3 credits. Corequisite: COMM 130. L. Van Buskirk and staff.
Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently. Several assignments focus on visual communication theories explored in COMM 130 as well as ideas from COMM 101.

COMM 201(2010) Oral Communication (D)
Fall, spring, or summer. 3 credits. Limited to 20 students per sec (fall and spring) or 15 students per sec (summer). Priority given to juniors and seniors, then sophomores. Fluency in spoken English assumed. Sections meet beginning first day of instruction; may precede lecture. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren, T. Russo, and staff.

Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203(2030) Argumentation and Debate (D)
Fall, spring, and summer. 3 credits. S. Nelson.
Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, policy analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Preparations students to work with a great range of opinion and evidence. Emphasizes different viewpoints, including those of different cultures. Assumptions are interrogated.

COMM 220(2300) Contemporary Mass Communication (SBA) (D)
Fall or summer. J. Shanahan.
The processes and effects of mass communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues.

COMM 245(2450) Psychology of Social Computing (also INFO 245(2450))
Fall. 3 credits. J. Hancock and staff.
Course focuses on understanding online communication through principles of cognitive and social psychology, and aspects of the Internet that defy traditional psychological understandings. Topics include impression formation and management, deception and trust, group dynamics, social support, "Internet addiction," online pornography, and organizational impacts of new communication technology.

COMM 260(2600) Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior or senior standing, college-level writing course. S. Control.

Intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include translations, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Emphasizes audience analysis. Not oriented to the mass media.

COMM 263(2630) Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior, senior, or graduate standing; college-level writing course. L. Van Buskirk and staff.
Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 272(2720) Principles of Public Relations and Advertising Summer. 3 credits. Not open to freshmen. Staff.
Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; strategies for media selection and message execution. Introduction to research and regulation.

COMM 275(2750) Cases in Communication and Social Influence (SBA)
Spring. 3 credits. Prerequisite: COMM 101. P. McLeod.
Social influence is one of the most basic and important functions of communication. Through case studies, exercises and field projects the course will address issues ranging from influence between individuals to influence at national and international levels.

COMM 282(2820) Research Methods in Communication Studies Fall. 3 credits. Prerequisite: sophomore standing. C. Yuan.
The course covers social scientific methods to solve communication research problems empirically. Topics include basic principles of
This course builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. We investigate how mass media frames our experience of the world and shapes our political involvement in it, and at how mass media intersects with our sense of identity and role in culture.

COMM 345(3450) Human-Computer Interaction Design (also INFO 345[3450])
Spring. 3 credits. G. Gay.
Gives students insight into the design of computer interfaces and interaction design from the user's point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and participant observation, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 349[3490] Media Technologies (also S&TS 349[3491])
Spring. 3 credits. Offered odd-numbered years. T. Gillespie.
Our efforts to communicate, share culture, and drive social agendas depend on the tools we've developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity for us to think about the power of the tools, communication, and its social context.

COMM 350[3500] Writing for Magazines
Fall. 3 credits. Limited to 25 students. Prerequisite: junior, senior, or graduate standing or permission of instructor; college-level writing course. No drops after third week. S. Conroe.
Course in nonfiction writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied, and many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine. Extensive out-of-class writing assignments.

COMM 352(3520) Science Writing for the Mass Media (also S&TS 352[3521])
Fall and spring. 3 credits. Limited to 24 students. Prerequisite: college-level writing course. B. Lewenstein and S. Conroe.
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, and other media.

COMM 353(3530) Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENGR 350, or permission of instructor. B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 376(3760) Planning and Implementing Communication Campaigns
Fall. 3 credits. Prerequisites: COMM 282 or equivalent social research course. K. McComas.
Provides a theoretical and practical overview of the audiences, messages, and media of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

COMM 382(4932) Advanced Communication Research
Fall. 3 credits. Prerequisites: COMM 282 or equivalent social research course. C. Yuan.
Advanced approaches to methods of data collection and analysis in communication research for students who intend to complete advanced research projects such as honors research or other independent studies and who have preliminary research under way. Every week the class examines one or two research situations in detail, analyzes specific problems, compares methods used, and discusses strategies for data analysis and presentation. This format provides all students—indeed, each student's specific topic—with an in-depth understanding of the methods used in communication research and how they are applied to specific projects.

COMM 398(3980) Issues in Teaching Communication
Fall and spring. 1 credit. Prerequisite: junior or senior standing; present or past undergraduate teaching assistant for COMM course. K. Berggren.
Seminar bringing together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405(4050) Community Service Practicum
Fall and spring. 1 credit; may be repeated once for credit. Meets one hour weekly. S. Nelson.
Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.
COMM 410(4100) Organizational Communication: Theory and Practice (D) (SBA)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; COMM 101 or permission of instructor. C. Yuan. Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today's business environment; examines formal and informal communication networks.

[COMM 420(4200) Public Opinion and Social Process (SBA)]
Spring. 3 credits. Prerequisite: COMM 282. Offered even-numbered years. J. Shanahan. The course provides a scientific and applied overview of the concept of "public opinion" and its implications for macro-social processes. The concept's historical development in fields such as political science, social psychology, and communication science is reviewed, followed by a closer look at what is meant by "meaning" and "process" of computer. For example, in public opinion measured by summing across individual opinions, or are there macro-level dynamics of public opinion that go beyond what individuals in a society think?

COMM 421(4210) Communication and the Environment
Spring. 3 credits. Offered odd-numbered years. J. Shanahan. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422(4220) Psychology of Television (and Beyond) (SBA)
Fall. 3 credits. Prerequisites: introductory psychology or HD 120 or COMM 101 or 220 M. Shapiro. Survey of knowledge about how people mentally process television and other audiovisual communication technologies— including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 426(4280) Communication Law
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor D. Grossman. This course deals with the law governing communication media. Topics include First Amendment principles, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 429(4290) Copyright in the Digital Age (also INFO 429(4290) CA)
Fall. 3 credits. Offered odd-numbered years. T. Gillespie. This course looks at recent legal and cultural battles about digital copyright, to investigate how the world's digital world is structured: who speaks, what they can say, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture, and power.

COMM 440(4400) Advanced Human-Computer Interaction Design (also INFO 440(4400))
Fall. 3 credits. Prerequisite: COMM/INFO 245 or permission of instructor. G. Gay. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 445(4450) Seminar in Computer-Mediated Communication (also INFO 445(4450))
Spring. 3 credits. Prerequisite: COMM/INFO 245. J. Hancock and staff. Focuses on reading and evaluating the theories and research methodologies used to investigate computer-mediated communication systems. Assignments include student collaborations, summarizing teleconferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual reality, collaborative software, and others as they emerge.

COMM 450(4500) Language and Technology (also INFO 450(4500))
Spring. 3 credits. J. Hancock and staff. Examines how new communication technologies affect the way we produce and understand language and modify interaction with computers and other technologies. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 456(4550) Community Involvement in Environmental Decisions (SBA)
Spring. 3 credits. Prerequisite: junior or senior standing or permission of instructor. K. McComas. Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision making process. Through selected readings and course activities, this class will combine practical and theoretical methods of community involvement. When evaluating the methods, the class will discuss how social structures work to define criteria for success.

[COMM 466(4660) Communication Internship (D)]
Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor. S-AI, prerequisite. Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organizations. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator.

COMM 476(4760) Communication Fellows Program
Spring. 2 credits. Prerequisites: communication seniors selected based on goals and academic preparation; permission of instructor. Fee for three-day trip: $150. B. O. Earle. Series of lectures, seminars, and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers.

COMM 480(4800) Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Prerequisite: undergraduate standing; requirements met for honors program. Staff. Students who have successfully completed COMM 382 register for no more than 3 credits. Students who have not completed an advanced research methods course may register for up to 6 credit hours.

COMM 486(4860) Risk Communication
Fall. 3 credits. C. Scherer. Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticides, products, cosmetic quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

COMM 494(4940) Special Topics in Communication (D)
Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor. S-AI, prerequisite. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496(4960) Communication Internship
Fall or spring. Work component and variable 1 credit may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren. Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organizations. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator.

COMM 497(4970) Individual Study in Communication
Fall or spring. 1-3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.
COMM 498(4980) Communication Teaching Experience
Fall or spring. 1–3 credits, may be repeated to 6 credits with different courses. Intended for undergraduates desiring mainstream teaching experience. Prerequisite: junior or senior standing; 3.0 GPA (2.7 if teaching assistant for skills development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499(4990) Independent Research
Fall or spring. 1–3 credits, may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific, systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 610(6100) Seminar in Social Networks
Spring. 3 credits. Prerequisite: graduate standing, C. Yuan. Examination of the structures and processes of group, organizational, and social networks. Review of research literature in communication and social networks. Survey of network methods with an emphasis on quantitative analysis using relevant software. Application of graph theory, matrix algebra, and sociometry techniques. Analysis and social interpretation of extant network datasets.

COMM 618(6180) Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. Staff. Focuses on theories of communication's influence on persuasion and attitude change. Familiarizes students with a variety of social-psychological theories of attitude change and persuasion. Also applies those theories to a variety of communication situations including mass communication, advertising, public relations, public information, and interpersonal communication.

COMM 621(6210) Advanced Communication and the Environment
Spring. 3 credits. Offered odd-numbered years. J. Shanahan. Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 421; graduate students should enroll in COMM 621.

COMM 622(6220) Advanced Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. M. Shapiro. Survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 624(6240) Communication in the Developing Nations
Fall. 3 credits. Prerequisite: junior, senior, or graduate standing; R. D. Colle. The role of communication in development programs, particularly in Third World nations. Emphasizes communication interventions in agriculture, health, nutrition, family planning, and community development, and especially methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication.

COMM 640(6400) Human-Computer Interaction Design (also INFO 640(6400))
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. G. Gay. Graduate-level readings and research supplementing COMM/INFO 440. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 645(6450) CMC Graduate Seminar (also INFO 645(6450))
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. J. Hancock and staff. Graduate-level readings and research supplementing COMM/INFO 445. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 650(6500) Language and Technology (also INFO 650(6500))
Spring. 3 credits. J. Hancock. Graduate-level readings and research supplementing COMM/INFO 450. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 676(6760) Communication Planning for Social and Behavioral Change

COMM 680(6800) Studies in Communication
Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor. J. Shanahan. Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 681(6810) Advanced Communication Theory
Spring. 3 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M. Shapiro. Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

COMM 682(6820) Methods of Communication Research
Spring. 3 credits. Recommended: familiarity with basic statistical concepts. R. Ostman. Analyzes methods of communication research based on a social science foundation. Goals will be to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

COMM 683(6830) Qualitative Research Methods in Communication
COMM 684(6840) Theories and Methods of Small Group Research
Fall. 3 credits. P. McLeod. The main objective of this course is to prepare doctoral students to conduct independent empirical research relevant to small groups within organizations. We will examine theoretical foundations and special methodological issues of research in this area. We will focus on task-oriented groups, incorporating research from social psychology, sociology, and organizational behavior. Class sessions will consist of discussion and "hands-on" practice of data collection and analysis methods.

COMM 686(6860) Risk Communication
Fall. 3 credits. K. McCormas and C. Scherer. Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories of risk communication.

COMM 691(6910) Seminar: Topics in Communication
Fall and spring. 0 credits. S-U grades only. Staff. Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis.
COMM 901(9900) Doctoral-Level Dissertation Research
Fall or spring. 1-9 credits; may be repeated for max. of 9 credits. Prerequisite: completion of "A" exam; permission of committee chair. S-U grades only.
Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

Courses by Subject
Crop Science: 311, 312, 315, 317, 403, 414, 426, 444, 455, 608, 610, 612, 613, 614, 642, 690, 691, 820, 920, 921

General Courses
CSS 190(1900) Sustainable Agriculture
Fall. 3 or 4 credits. variable. Limited to 60 students. S-U grades optional. G. W. Fick. Concerns food, farming, and the future. Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture. Students can earn 1 extra credit by participating in team preparation and delivery of a lesson in sustainable agriculture.

CSS 494(4940) Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 497(4970) Individual Study in Crop and Soil Sciences
Fall or spring. 1-6 credits. S-U grades optional. Students must register using independent study form (available on 140 Roberts Hall). Topics in soil science, crop science, or environmental information science are arranged at the beginning of the semester for individual study or for group discussions.

CSS 498(4980) Teaching Experience in Crop and Soil Sciences
Fall or spring. 1-5 credits. S-U grades optional. Students must register using independent study form (available on 140 Roberts Hall). Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course. This course should not be taken by teaching assistants.

CSS 499(4990) Undergraduate Research
Fall or spring. Credit TBA. S-U grades optional. Students must register using independent study form (available on 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 690(6900) Scientific Method in Practice
Spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. Students in this course study Hugh Gauch's book, Scientific Method in Practice, which is designed to help students become better scientists through deeper understanding of common themes that extend across the disciplines. Topics include the history and philosophy of science, reliance on evidence, deductive and inductive logic, probability, parsimony, and hypothesis testing.

CSS 696(6960) Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S-U grades only. Staff. Covers current research and selected topics in the crop and soil sciences and related fields.

CSS 699(6990) Agroecological Perspectives for Sustainable Development
Fall and spring. Sec. 2 credit. S-U grades only. Staff. Agroecological perspectives for sustainable development.

Crop Sciences
CSS 311(3110) Grains and Nutraceuticals
Fall. 4 credits. Prerequisite: CSS 260 or BIOL 241. One or two field trips during lab periods. R. L. Obendorf. Globally, six seed crops provide 75 percent of the world's caloric and protein needs of mankind through direct consumption or indirectly through animal and microbial products. Seed crops for starch, protein, oil, fiber, sugar, nutraceutical, pharmaceutical, and industrial uses are emphasized, including adaptation, growth and development, environmental stress, optimization of yield and quality, and genetic improvement in the context of food systems for improved health. Laboratory uses living plants, an extensive crop garden, and computer simulation.

CSS 312(3120) Forage Crops
Spring. 4 credits. Prerequisite: introductory crop and/or soil science course. Recommended: animal nutrition course. G. W. Fick. Considers the production and management of crops used for livestock feed in terms of establishment, growth, maintenance, harvesting, and preservation. Emphasizes forage grasses, forage legumes, and corn
and considers their value as livestock feed in terms of energy, protein, and other nutritional components.

**CSS 315(3150) Weed Science**
Fall 4 credits. Prerequisite: introductory course in biology or botany. A. DiTommaso.
Examines principles of weed science. Emphasizes (1) weed biology and ecology; (2) weed-management strategies used in agricultural and natural ecosystems; and (3) chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, herbicide application, selectivity, and symptomology.

**[CSS 317(3170) Seed Science and Technology (also HORT 317)](3170)**
Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent. Two all-day field trips. Offered alternate years, not offered 2006–2007. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

**CSS 403(4030) Traditional Agriculture in Developing Nations (also IARD 403[4030])**
Fall. 1 credit. S-U grades only. P. Hobbs. Half the world's arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

**CSS 414(4140) Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 414[4140])**
Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. P. Hobbs. Characterizes and discusses traditional shifting cultivation, lowland and upland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

**CSS 426(4260) Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 426[4260])**
Fall. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs. For description, see HORT 426.

**[CSS 444(4440) Integrated Pest Management (also ENTOM 444[4440])]**(4440)
Fall. 3 credits. Prerequisite: biology course or permission of instructor. Not offered 2006–2007; next offered 2007–2008. J. E. Losey and A. DiTommaso. For description, see ENTOM 444.

**[CSS 455(4550) Mineral Nutrition of Crops and Landscape Plants (also HORT 455[4550])]**(4550)
Spring. 3-5 credits. Prerequisite: CSS 260 and BIOEE 261, or equivalent. Offered alternate years; not offered 2006–2007. H. C. Wien and staff. Modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries 1 credit; a minimum of 3 credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrition and nutrient function in crop plants, and are able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

**[CSS 608(6080) Water Status in Plants and Soils]**
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years; not offered 2006–2007. T. L. Setter. Covers techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

**CSS 610(6101) Physiology of Environmental Stresses**
Fall. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342) or permission of instructor. Offered alternate years. T. L. Setter. Study of the responses of plants to environmental stresses, including chilling, drought, freezing, high temperature, salinity, hypoxia, and toxic elements. Emphasizes the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

**CSS 612(6120) Seed Biology**
Fall. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342). Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

**CSS 613(6130) Physiology and Ecology of Yield**
Spring. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342) or permission of instructor. T. L. Setter. Study of environmental constraints on crop-plant productivity from the perspective of key biological processes. Examines acclimation responses and genetic adaptation for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include photosynthesis and nitrogen assimilation, translocation, and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral sinks in response to environment; seed set; water transport and stomatal regulation; root growth in flooded and compacted soils; and drought responses.

**CSS 614(6140) Weed Ecology and Management**
Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Offered alternate years. A. DiTommaso. Examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Explores the application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interference, invasive weed biology, biological weed control, and site-specific weed management.

**CSS 642(6420) Plant Mineral Nutrition (also BIOPL 642[6420])**
Spring. 3 credits. Prerequisite: BIOPL 341 or equivalent. Not offered 2006–2007. L. V. Kochian and R. M. Welch. For description, see BIOPL 642.

**CSS 691(6910) Special Topics in Crop Science**
Fall or spring. 1–6 credits. S-U grades optional. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 920(9200) Master's-Level Thesis Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Thesis research for M.S. candidates.

**CSS 920(9200) Graduate-Level Thesis Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. students before "A" exam has been passed.

**CSS 921(9210) Doctoral-Level Dissertation Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after "A" exam has been passed.

**Environmental Information Science**

**CSS 397(3970) Environmental Microbiology (also BIOPL 397[3970])**
Fall or spring. Credit TBA. S-U grades only. Offered alternate years. E. L. Madsen. Discusses the biology, behavior, and function of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**CSS 410(4100) The GMO Debate: Environmental Impacts**
Spring. 3 credits. Prerequisite: BIO G 109 or equivalent. D. Buckleby and P. Hobbs. This course covers issues pertaining to the agricultural use of genetically modified organisms with emphasis on evaluating their...
environmental impact. Students will learn to critically evaluate the risks of benefits associated with the use of GMOs. We will examine the types of GMOs in use and in development, how they are made, and their potential impacts on the environment including: gene flow, non-target effects, horizontal gene transfer, biodiversity effects and the implications of changes in farming practices and chemical inputs.

CSS 411(4110) Resource Inventory Methods (also CEE 411(4110)) Spring. 3 credits. Prerequisite: permission of instructor. A. Lembo.
Survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasizes using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

CSS 420(4200) Geographic Information Systems Fall. 4 credits. Prerequisite: CSS 411 or permission of instructor. A. Lembo.
Principles and applications of geographic information systems for the characterization and assessment of agronomic and environmental resources. Emphasizes methods for accessing, updating, analyzing, and mapping spatial data and information. Considers needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment.

CSS 465(4650) Global Positioning System Fall, first five Fri. of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. Spring, last five Fri. of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. A. Lembo.
Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

CSS 485(4850) Problem Solving in Environmental and Agroecosystem Science I Fall. 4 credits. Prerequisite: senior standing. CSS 260 or equivalent. P. Baveye.
Capstone experience for seniors, centering on the multidisciplinary analysis of a specific problem (e.g., a brownfield in Ithaca in Fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. Involves field trips, in-depth discussions of data assembled before the course, and presentation and discussion of scientific information (in groups), and report writing. Students are expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.

CSS 486(4860) Problem Solving in Environmental and Agroecosystem Science II Spring. 4 credits. Prerequisite: senior standing. CSS 485. P. Baveye.
Capstone experience for seniors, in continuation of CSS 485. Students work in groups to carry out the laboratory measurements identified in the fall, with faculty members serving as technical support and lecturing as needed. Students are expected to work approximately 15 hours per week on a range of laboratory measurements. The results of these measurements are discussed as they become available and are combined with the rest of the assembled information to come up with recommendations about the management of the targeted problem (e.g., in spring 2005; a brownfield in Ithaca).

CSS 620(6200) Spatial Modeling and Analysis Spring. 3 credits. Prerequisites: CSS 420, 461, or permission of instructor. A. Lembo.
Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification, and evaluation. Emphasizes application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student.

CSS 621(6210) Applications of Space-Time Statistics Spring. 2 credits. Prerequisite: STTRHY 601 or equivalent. S-U grades only. Offered alternate years; offered after spring break 2007. H. Van Es.
Introduction to space-time statistics with applications to soil and environmental management. Topics include geostatistics, temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. Focuses on landscape-scale processes and a user's perspective.

CSS 660(6600) Remote Sensing Fundamentals (also CEE 610(6100)) Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot.
Introduces equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Covers sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CSS 675(6750) Modeling the Soil-Plant-Air System (also EAS 675(6750)) Spring. 3 credits. Prerequisite: CSS 483 or equivalent. Offered alternate years. S. J. Rha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formulation.

CSS 694(6940) Special Topics in Environmental Information Science Fall or spring. 1-6 credits. S-U grades optional. Staff.
Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 860(8600) Master's-Level Thesis Research in Environmental Information Science Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Thesis research for master's students with approval of chair and thesis advisor.

CSS 960(9600) Graduate-Level Dissertation Research in Environmental Information Science Fall or spring. TBA. S-U grades only. Graduate faculty.
Dissertation research for Ph.D. students before "A" exam has been passed.

CSS 961(9610) Doctoral-Level Dissertation Research in Environmental Information Science Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Dissertation research for Ph.D. candidates after "A" exam has been passed.

CSS 260(2600) Soil Science Fall. 4 credits. S-U grades optional. J. Russell-Anelli.
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. (3) unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

Presents the principles for field identification of soil properties, horizons, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.

CSS 363(3630) Soil Genesis, Classification, and Survey Fall. 4 credits. Prerequisite: CSS 250. One all-day field trip required. J. Russell-Anelli.
Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

Overview of the chemical processes that control the fluxes, concentrations, and bioavailability of nutrients and pollutants in soil, air, and water. Gives particular attention to soil's function as a filter for contaminants. Describes the history of environmental contamination by xenobiotics and heavy metals, with emphasis on behavior and properties of pollutants that pose the greatest risk to human and ecological health.
CSS 372(3720) Nutrient Management in Agroecosystems
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Graduate students should enroll in CSS 472. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 412(4120) Whole-Farm Nutrient Management (also AN SC 412[4120]) Spring. 2- or 4-credit option. Prerequisite: AN SC 411; junior, senior, or graduate standing. Offered as two modules. Enrollment in Module 1 for first half of semester required (2 credits); consists of crop and soil management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester optional (additional 2 credits). M. E. VanAmburgh and Q. M. Ketterings. For description, see AN SC 412.

CSS 421(4210) Soil and Water Management Fall. 4 credits. Prerequisite: CSS 260, S-U grades optional. Not offered 2006–2007. H. M. van Es. Introduces students to the principles of soil and water interactions and to the effects of human intervention. Examines aspects of soil and water management, including hydrology, soil erosion and conservation, water and soil quality, contaminant movement, tillage, and soil compaction. Discusses case studies and policy approaches from both the United States and abroad.

CSS 466(4660) Soil Ecology (also HORT 466[4660]) Spring. 4 credits, lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor. J. E. Thies. Discover the wonder of life underground. In this course, you will study the amazing diversity of soil organisms along with their multifaceted functions in terrestrial ecosystems. The fundamental principles and features of biologically-mediated processes in the soil and the functions of soil biota in both managed and unmanaged ecosystems will be highlighted. Special topics include: beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Laboratory focuses on molecular activities and traditional methods for assessing the abundance, activity, and diversity of soil organisms.

CSS 471(4710) Properties and Appraisal of Soils of the Tropics Spring. 3 credits. Prerequisite: CSS 260 or equivalent. S-U grades optional. No auditors. Not offered 2006–2007. A. VanWambeke. Examines the conditions in which soils form, and considers the physical, chemical, biological, and ecological factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and preservation of the environment are examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation, and the characteristics of forest soils. Lectures include slides of soils, landscapes, and cropping systems. The course is available on a compact disk in Mann Library.

CSS 472(4720) Nutrient Management and Research in Agroecosystems Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without creating environmental hazards. Gives students hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

CSS 483(4830) Environmental Biophysics (also EAS 483[4830]) Spring. 3 credits. Prerequisite: CSS 260 or equivalent. Permission of instructor. Offered alternate years; next offered 2007–2008. S. J. Riha. Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Covers energy budgets, soil heat flow; water movement in saturated and unsaturated soils; evapotranspiration; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Considers applications to agronomic and environmental problems and instrument design and use through discussion and problems sets.

CSS 662(6630) Pedology Spring. 3 credits. Prerequisite: CSS 361 or permission of instructor. Offered alternate years; not offered 2006–2007. J. Russell-Anelli. Weathering, reactions, and processes of soil genesis; principles of soil classification and the rationale and use of soil taxonomy; development and significance of major groups of soils of the world.

CSS 666(6660) Applied Plant-Microbe Interactions Fall. 4 credits. Prerequisite: CSS 466 or equivalent or permission of instructor. Offered alternate years; next offered 2007–2008. J. E. Thies. This is a discussion and laboratory-based course that focuses on the nature of microbial interactions with plants and the importance of the interaction to the function of soils. Emphasizes microbe-plant interactions, including the function of the rhizosphere and phyllosphere environments as a habitat for microorganisms and the ecology of the organisms residing there through readings in the primary literature. In laboratory, all students will conduct an independent research project, aligned with their interests, in which they develop testable hypotheses and conduct experiments using relevant, modern methods.

CSS 667(6670) Advanced Soil Physics Spring. 3 credits. Prerequisites: one year of college physics and CSS 483 or permission of instructor. S-U grades optional. Offered alternate years. P. J. Anelli. Acquaints students with advanced topics in soil physics in a number of areas, including the statics and thermodynamics of soil water, the physics of swelling-shrinking soils, the transport of water and solutes in heterogeneous soils, the measurement of soil physical parameters, and the effect of spatial/temporal heterogeneity of soils on their physical characteristics. The format of the course, based on weekly individual tutorials, allows different topics to be covered, depending on the interest(s) of the students. If a group of students expresses interest, the course also can involve reflection on the detailed design of one or more laboratory or field experiments related to soil physics.

CSS 669(6690) Organic Matter—Soils, Sediments, and Waters Spring. 3 credits. Prerequisites: CSS 260 and CHEM 357–358 or equivalent. J. M. Duxbury. Discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 671(6710) Soil Chemistry Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years: not offered 2006–2007. M. B. McBride. Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange; mineral-solution equilibria; and adsorption reactions of silicate clays, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

CSS 672(6720) Nutrient Cycling in Natural and Managed Ecosystems Fall. 3 credits. Prerequisite: CSS 372 or NTRES 521 or BIOOE 478, or permission of instructor. Offered alternate years. J. Lehmann. Covers nutrient cycling in soil and the interface between the soil and the biosphere, atmosphere, and hydrosphere. Examines the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural soils, including pollution in watersheds. Students develop independent projects, present a research proposal, and conduct field research that culminates in a presentation and a paper in publishable format.
of data are used to evaluate those theories. Provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

D SOC 111(201) Development Sociology First-Year Writing Seminar (SBA) Fall, spring. 3 credits. The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

D SOC 112(200) Development Sociology First-Year Writing Seminar (SBA) Fall, spring, 3 credits. Staff. The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

D SOC 201(2010) Population Dynamics (also SOC 202(2020)(SBA)) Spring. 3 credits. Limited to 35 students. ALS students must enroll in D SOC 201. S-U grades optional. L. Williams. Introduction to population studies. First reviews basic concepts and demographic principles and techniques, then focuses on how demographic processes (fertility, mortality, and migration) affect social and economic outcomes. Discussions cover special topics related to population growth and distribution, including mass education, marriage and family formation, labor force participation, inequality and poverty, women's status, resource allocation, and the environment.

D SOC 205(2050) International Development (also SOC 206(2206) (SBA) (HA) (D) Spring. 3 credits. Limited to 74 students. P. McMichael. Examines new questions concerning development models in the post-Cold War era from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, the course examines Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multinational institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

D SOC 207(2070) Problems of Contemporary Society (also SOC 207(2070)) (SBA) For description, see SOC 207.

D SOC 209(2090) Social Inequality (also SOC 208(2208)(SBA) For description, see SOC 208.

D SOC 213(2130) Social Indicators, Data Management, and Analysis (SBA) Fall. 3 credits. P. Eberts. Survey of definitions of social indicators and general principles of social indicators research is illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, and quality of life based on census data, household surveys, and key-informant and other low-cost techniques, are examined using personal computers.

D SOC 214(2140) Research Methods for the Social Sciences (SBA) (KCM) Spring. 3 credits. Letter grades only. J. Francis. This course introduces students to various approaches to social science research, including observation techniques, unstructured, semi-structured, and structured interviews, experiments and focus groups.

D SOC 215(2150) Introductory Organizations (also SOC 215(2150)) (SBA) For description, see SOC 215.

D SOC 220(2200) Sociology of Health of Ethnic Minorities (also LSP 220(2200)) (SBA) (D) Fall. 3 credits. Limited to 15 students. S-U grades optional. P. A. Parra. Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status at home and in health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

D SOC 230(2300) Latino Communities (also LSP 230/AM ST/SOC 231(2300)) (SBA) (CA) Spring. 3 credits. R. Mize. From community sociology perspectives, an analysis of Latino community formation in U.S. urban and rural contexts. A major focus is the predominance of Puerto Ricans and Dominicans in New York, Cubans in South Florida, and Mexicans in the Southwest. The last portion of the course addresses the increasing "Latinization" of new receiving areas and the formation of transnational communities that transcend spatially defined communities.

D SOC 275(2750) Immigration and a Changing America (D) (SBA) (HA) Fall. 3 credits. S-U grades optional. D. Gurak. Immigration helped America become the nation that it is today. While many experts thought that immigration's contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no signs of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and how it impacts that immigrants are having on the American economy and society today. It looks in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

D SOC 301(3010) Theories of Society (SBA) (KCM) Spring. 3 credits. Limited to 30 students. Prerequisites: development sociology or sociology course. S-U grades optional. F. Makki. Introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic social upheavals of the industrialization, capitalism, and rise of
bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

D SOC 305(3050) Education, Inequality, and Development (SBA)

Survey of contemporary perspectives: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enyegue.

Improvements in formal schooling are often advocated as solutions for a variety of socioeconomic problems in nonindustrial and industrial nations alike. This course critically assesses human capital approaches to development. Topics include (1) the variety and functions of school systems, (2) the individual and macro-level determinants of education, (3) education and socioeconomic stratification, (4) the effects of education on development, and (5) tools for evaluating development projects.

D SOC 324(3240) Environment and Society (also S&T 324[3241], SOC 324[3240]) (SBA)

Fall and spring. 3 credits. Fall. G. W. Gillespie.

The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. A second objective is to familiarize students with some major contemporary environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion.

A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

D SOC 330(3300) Sociology of Sport (also SOC 330[3300], NES 389[3889]) (SBA)

Spring. 4 credits. T. Sorek. For description, see NES 389.

D SOC 332(3320) Martyrdom in Contemporary Societies (also SOC 332[3320], NES 332[3832]) (SBA)

For description, see NES 332.

D SOC 336(3360) Rural Areas in Metropolitan Society (SBA)

Spring. 3 credits. Prerequisite: social science course. D. Brown.

Analyzes the changing structure and role of small rural areas in metropolitan areas in developed nations. Focuses on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural contributions to national development. Students participate in group research projects in rural communities.

D SOC 340(3400) Agriculture, Food, and Society (SBA) (KCM)

Fall. 3 credits. S-U grades optional. G. W. Gillespie.

Changing food and agricultural systems reflect the directives and social organization of an increasingly global society. Sociological questions include: What are major trends? What drives them? What benefits and costs accrue to people, communities, and ecosystems? How do we evaluate issues? What development strategies might better manifest shared values?

D SOC 354(3540) Sociology of Contemporary Culture (also S&T 354[3540], SOC 352[3520]) (SBA) (CA)

For description, see S&T 354.

D SOC 370(3700) Comparative Issues in Social Stratification (also SOC 371[3710]) (D) (SBA)

Spring. 3 credits. Prerequisite: introductory social science course. P. Eberts.

Reviews both classical and contemporary issues in the comparative social stratification literature. Gives particular attention to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning, and experiences of inequality. Throughout the course special attention is given to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

D SOC 375(3750) Comparative U.S. Racial and Ethnic Relations (also AM ST/LSP 375[3750]) (D) (SBA) (HA)

Spring. 3 credits. Prerequisite: D SOC 101 or permission of instructor. Letter grades only. R. L. Mize.

Comparative historical study of the social construction of race. Examines structures of racism in American, African American, Native American, and Asian American experiences. Does a critical interrogation of whiteness and ethnic identities. Focuses on historical legacy of institutional and interpersonal racism and its contemporary role in terms of political, economic residential, legal, educational, cultural, health, and social-psychological inequalities.

D SOC 380(4900) Independent Honors Research in Social Science (SBA) (KCM)

Fall and spring. 1-6 credits; 6 credits max. may be earned in honors program. Prerequisite: requirements for honors program met. J. Francis.

Students should select a faculty advisor and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

D SOC 410(4100) Health and Survival Inequalities (also SOC 410[4100]) (D) (SBA)

For description, see SOC 410.

D SOC 421(4210) Theories of Reproduction (also SOC 421[4210]) (D) (SBA)

Spring. 4 credits. S-U grades optional. A. Basu.

For description, see SOC 421.

D SOC 481(4810) Global Conflict and Terrorism (KCM) (SBA)

Spring. 3 credits. Prerequisite: D. Simmer. Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the reading assignments.

D SOC 494(4800) Special Topics in Development Sociology (SBA)

Fall or spring. 4 credits max. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Course offerings exceeding a course number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 497(4901) Independent Study in Development Sociology (SBA)

Fall or spring. 3 credits, variable; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Informal study may include a reading course, research experience, or public service experience.

D SOC 560(5600) Managing Local Environmental Systems: Social Perspectives and Research Bases (SBA) (KCM)

Fall. 3 credits. J. Francis.

For students with diverse backgrounds: undergraduate, graduate, professionals in other fields, others with interesting environmental-locale identification, resolution, and management. Discussions include ecological, social, economic, and local government perspectives. Via lab exercises throughout the semester, students have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental-management problems. Readings, lectures, and a course project are mandatory.

D SOC 603(6030) Classical Sociological Theory (SBA)

Fall. 4 credits. F. Maki.

Reviews the mainstream of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

D SOC 606(6060) Sociological Theories of Development (SBA)

Spring. 3 credits. F. Maki.

Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.
D SOC 606(6060) Demographic Techniques (also PAM 606(6060)) (SBA)
Fall. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U grades optional. D. Gurak.
Introduces to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

D SOC 615(6150) Qualitative Research Methods (SBA) (CA)
Fall. 3 credits. Letter grades only. L. Williams.
Seminar introducing students to a number of qualitative methods of field research in the social sciences. Discusses field observation, archival research, in-depth individual interviews, and focus group interviews. Assesses the strengths and weaknesses of various strategies of field research and considers a range of practical matters such as choice of research site (and sample where appropriate), choice of questions, and issues of validity and reliability. Highlights ethical considerations.

D SOC 617(6170) Foundations in Social Research: Comparative Epistemologies (SBA) (KCM)
Fall. 3 credits. Letter grades only. T. Lyson.
Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

D SOC 619(6190) Quantitative Research Methods (SBA) (KCM)
Spring. 4 credits. Prerequisite: statistics course. Letter grades only. J. Francis.
Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social demography data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

D SOC 620(6200) Sociology of the Community (SBA)
Fall. 3 credits. D. Brown.
Graduate seminar that critically analyzes the intellectual core of community sociology and its theoretical development over time. "Community" as a concept is often reified and rarely critically examined, hence the course begins by challenging the various ways in which "community" has been conceptualized and operationalized by sociologists. The course provides students with both a grounded conceptual framework and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. Includes a critical examination of the forms and shapes of sociological research on the community assumes. Uses a case study approach to examine the assumptions driving the methods and analysis of both contemporary and historical research.

D SOC 625(6250) State, Economy, and Society (SBA) (HA)
Spring. 3 credits. P. D. McMichael.
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Draws theoretical perspectives from classical and modern social theory, including the application of comparative and world/historical methodologies.

D SOC 641(6410) Politics and Economics of Rural and Regional Development (SBA)
Spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 694(6800) Special Topics in Development Sociology (SBA)
Fall or spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 791(7910) Teaching Experience (SBA)
Fall or spring. 1–3 credits. Prerequisite: graduate standing. Graduate faculty.
Participation in the ongoing teaching program of the department.

D SOC 800(8900) Master's-Level Thesis Research (SBA)
Fall or spring. Credit. TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
Thesis research for master's students.

D SOC 872(8720) Development Sociology (SBA)
Prerequisite: master's and doctoral degree candidates, permission of graduate field member. S-U grades optional. Graduate faculty.

D SOC 900(7900) Graduate-Level Thesis Research (SBA)
Fall or spring. Credit. TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
Thesis research for Ph.D. students only before "A" exam has been passed.

D SOC 901(9900) Doctoral-Level Thesis Research (SBA)
Fall or spring. Credit. TBA. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
Thesis research for Ph.D. candidates after "A" exam has been passed.

EARTH AND ATMOSPHERIC SCIENCES
EAS 121(1121) Introduction to MATLAB
Fall. 2 credits. Corequisite: CIS/111 or equivalent. Letter grades only. A. J. Pershing.
Introduces students to MATLAB, a high-level programming language that is widely used in scientific computing, including data processing and modeling of the Earth, its atmosphere, and oceans. Emphasizes the application of scientific computing in the Earth sciences, including data processing and modeling of the Earth, its atmosphere, and oceans. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

EAS 131(1310) Basic Principles of Meteorology
Fall. 3 credits. D. Wysoczki.
Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric convection. The optional 1-credit laboratory for the course is offered as EAS 133.

Related Courses in Other Departments
(Others may be added)
Population Dynamics (SOC 205)
Gender Relations, Gender Ideologies, and Social Change (FGSS 224)
This course is required for atmospheric science majors, but is optional for other logical measurements and observations journals such as their consequences and predictability. Weekly climate changes and impacts. Also covers characteristics, calibration, and standardization; including surface, free-air, and remote.

**EAS 250(2500) Meteorological Observations and Instruments**  
Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger. Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis. The course is intended to serve as preparation for Observers Examination.

**EAS 260(2680) Climate and Global Warming**  
Spring. 3 credits. Prerequisite: basic college math. S-U grades optional. A. T. DeGaetano. Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also covers natural climate variations (e.g. El Niño) and their consequences and predictability. Weekly student-led discussions of issues appearing in journals such as Nature.

**EAS 296(2960) Forecast Competition**  
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks. Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

**EAS 305(3050) Climate Dynamics**  
Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. K. H. Cook. Discusses processes that determine climate and contribute to its change, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Investigates contemporary climate change issues and discusses them in the context of natural variability of the system.

**EAS 334(3340) Microclimatology**  

**EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics**  
Fall. 3 credits. Prerequisite: one year of calculus and one semester of physics. A. T. DeGaetano. Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of computation and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

**EAS 342(3420) Atmospheric Dynamics (also ASTRO 342[3342])**  
Spring. 3 credits. Prerequisites: MATH 192, 215, or equivalent; one year of physics. K. H. Cook. Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

**EAS 352(3520) Synoptic Meteorology I**  
Spring. 3 credits. Prerequisite: EAS 341. Corequisite: EAS 342. M. W. Wysocki. Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

**EAS 420(4200) The Linux Supercomputing Environment**  
Fall, spring. 3 credits. Prerequisite: EAS 150 or introductory programming. Next offered 2007–2008. M. W. Wysocki. This course will address the use of computers and software for research. An understanding of basic operating system concepts and computer hardware will tie into a survey of available software packages for programming and data presentation as well as computational techniques such as parallel processing. Students will be required to formulate and conduct a project using tools of their choice and demonstrate in a report and oral presentation that is open to other students and faculty that they have used the Linux supercomputing cluster and acquired significant skills. Undergraduates may work in a team. Graduate students will be expected to conduct an independent project and solve a computational problem in their domain of expertise.

**EAS 435(4350) Statistical Methods in Meteorology and Climatology**  
Fall. 3 credits. Prerequisite: one introductory course each in statistics (e.g. AEM 210) and calculus. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques.

**EAS 447(4470) Physical Meteorology**  

**EAS 451(4510) Synoptic Meteorology II**  
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci. Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

**EAS 456(4560) Mesoscale Meteorology**  
Spring. 3 credits. Prerequisites: EAS 341 and 342 or permission of instructor. Next offered 2007–2008. S. J. Colucci.

**EAS 457(4570) Atmospheric Air Pollution**  
Fall. 3 credits. Prerequisites: EAS 341 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. M. W. Wysocki. Examines sources, effects, transport, measurement, and controls of air pollution. Discusses the basic principles in each area with an emphasis on their local, regional, and global impacts.

**EAS 470(4700) Weather Forecasting and Analysis**  
Spring. 3 credits. Prerequisites: EAS 352 and 451. M. W. Wysocki. Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions, write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region, and lead class discussion on assigned readings.

**EAS 483(4830) Environmental Biophysics (also CSS 483[4830])**  

**EAS 487(4870) Introduction to Radar Remote Sensing (also ECE 487[4870])**  
Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent, or permission of instructor. D. L. Hysell. Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

**EAS 494(4940) Special Topics in Atmospheric Science (undergraduate level)**  
Fall or spring. 8 credits max. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.
EAS 497(4970) Individual Study in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Students must register using independent study form. Staff.
Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 499(4990) Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Students must register using independent study form. Staff.
Independent research on current problems in atmospheric science.

EAS 620(6200) The Linux Supercomputing Environment
Fall, spring. 3 credits. Prerequisite: EAS 150 or introductory programming. Next offered 2007-2008. M. W. Wysocki.
This course will address the use of computers and software for research. An understanding of basic operating system concepts and computer hardware will be integrated into a survey of available software packages for program development and presentation as well as computational techniques such as parallel processing. Students will be required to formulate and conduct a project using tools of their choice and demonstrate in a report and oral presentation that is open to other students and faculty that they have used the Linux supercomputing cluster and acquired sufficient skills. Undergraduates may work in a team. Graduate students will be expected to conduct an independent project and solve a computational problem in their domain of expertise.

EAS 652(6520) Advanced Atmospheric Dynamics (also ASTRO 652(6752))

EAS 666(6660) Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, two statistics courses. D. S. Wilks.
Statistical techniques for multivariable data. Topics include multivariable exploratory data analysis, the multivariate normal distribution, parametric and nonparametric inference about multivariate means, principal component analysis, canonical correlation analysis, discriminant analysis, and cluster analysis. Emphasizes geophysical applications, using primarily atmospheric and oceanographic data as examples, but the development is general enough to be of broader interest.

EAS 675(6750) Modeling the Soil-Plant-Atmosphere System (also CSS 675(6750))

EAS 682(6820) Special Topics in Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 711(7110) Upper Atmospheric and Space Physics
Fall or spring. 1-6 credits. Seminar course. D. L. Hysell.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Thesis research for atmospheric science master's students.

EAS 950(9500) Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades optional. Graduate faculty.
Dissertation research for atmospheric science Ph.D. students only before 'A' exam has been passed.

Science of Earth Systems

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 240, 322, and 351. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.

EAS 101(1101) Introductory Geological Sciences (To Know Earth)
Fall. 3 credits. Staff.
Designed to enhance an appreciation of the physical world for nonscientists and science majors. Emphasizes natural environments, surface processes, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Covers interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Examines water, mineral, and fossil resources and environmental concerns.

EAS 102(1102) Evolution of the Earth and Life (also BIO G 170[1700])
Spring. 3 credits. J. L. Cline.
Earth system sciences: their evolution; Earth history's astronomical context, plate tectonics, continental drift, and their implications for climate and life; evoolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

EAS 108(1108) Earth in the News
Summer. 3 credits. S. L. Losh.
Introduction to physical geology and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Lihupa area.

EAS 109(1109) Dinosaurs
Fall. 1 credit. J. L. Clane.
Introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

EAS 122(1220) Earthquake! (also ENGRD 122[1220])
Spring. 3 credits. Staff.
Explores the science of natural hazards and strategic resources. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 154(1540) Introductory Oceanography—Lecture (also BIOEE 154[1540])
Intended for both science and nonscience majors. Covers the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn to approach the world scientifically, chemically, and biologically in a single nonquantitative class.

EAS 155(1550) Introductory Oceanography—Laboratory (also BIOEE 155[1550])
Laboratory course covering topics presented in EAS/BIOEE 154.

EAS 201(2010) Introduction to the Physics and Chemistry of the Earth (also ENGRD 201[2010])
Fall. 3 credits. Prerequisite: PHYS 112 or 207. J. Phipps Morgan.
Covers formation of the solar system: accretion and evolution of the Earth; the rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rocks and minerals, earth dynamics, mantle plumes; the hydrologic cycle: runoff, flood and sedimentation, groundwater flow, and contaminant transport; and the weathering cycle: chemical cycles, CO2 (weathering), controls on global temperature (CO2 or ocean currents), and oil and mineral resources.
Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in ocean, atmosphere, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 304(3040) Interior of the Earth
Spring 3 credits. C. Andruciszyn.
This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large scale tectonics. Interaction between deformation, melt generation and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geochemical techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 315(3150) Geomorphology
Fall 3 credits. Prerequisite: geology, hydrology, or soil science course. Two Sat. field trips. B. L. Jacks.
Study of the processes that sculpt the Earth's landscapes (above and below sea level) and the nature of those landforms. The point of departure is landforms constructed by Earth's internal processes, as the course examines their modification by physical interaction with the atmosphere and oceans. Also treats depositional landforms that are generated by accumulations of grains or sediment. Laboratory exercises include both field examination of landforms of the Finger Lakes area and computer analysis of satellite images and Digital Elevation Models of examples from around the globe.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands
Spring 4 credits. Prerequisites: enrollment in EES semester in Hawaii; EAS 220, EAS 303, L. Derry.
Field-oriented study of biogeochemical processes and ecosystem interactions across the Hawaiian Islands. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 351(3510) Marine Ecosystems Field Course
Fall. 4 credits. Prerequisites: one year of calculus and mathematics classes. C. H. Greene and R. W. Howarth.
Special two-week course offered at Cornell's Shulls Marine Laboratory (SML), located on an island near Portsmouth, N.H. For more details, including estimated cost and an application, contact SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

EAS 355(3550) Physical Oceanography
Fall 3 credits. Prerequisites: MATH 112 or 192, or one year of physics, or permission of instructor. B. C. Monger.
The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are derived. Wind driven and buoyancy forcing are studied. The course will emphasize the basic mathematical principles at play, and not just the mathematical results. Student presentations of recent research papers will elaborate principles learned in the course.

EAS 365(3660) Petrology and Geochemistry
Spring 4 credits. Prerequisite: EAS 101 or 201 or 220 and CHEM 207/211 or permission of instructor. S. Mahlburg Kay.
Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include physical and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals and mineral assemblages. Independent project includes use of electron microprobe (EPMA) and x-ray facilities.

EAS 386(3880) Geophysics and Geotectonics
Spring 3 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. Offered alternate years, next offered 2007-2008. M. Pritchard.
[EAS 401(410)] Fundamentals of Energy and Mineral Resources

EAS 404(4040) Geodynamics
Spring. 3 credits. Prerequisites: calculus and calculus-based physics courses or permission of instructor. J. Phipps Morgan. Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.

EAS 405(4050) Active Tectonics
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 326/388. Offered alternate years. M. Pritchard.

EAS 417(4170) Field Mapping in Argentina
Summer. 3 credits. Prerequisite: introductory EAS course and EAS 326. S. Mahlburg Kay. Field mapping course in Argentina that fulfills field requirement for majors with interests in geological sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the U.S. Exercises are done in combination with a local NGO, environmental business, and the students will work with the students and faculty of the University of Buenos Aires.

EAS 425(4250) European Discovery of Impacts and Explosive Volcanism
Spring. 2 credits. Prerequisites: junior, senior, or graduate students with a background in geology and permission of instructor. Offered alternate years, next offered 2007–2008. J. Phipps Morgan.

EAS 434(4340) Reflection Seismology
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Offered alternate years. L. D. Brown. Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground-penetrating radar. Lab is key to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

EAS 437(4370) Geophysical Field Methods (also ARKEO 437[4370])
Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. Offered alternate years, next offered 2007–2008. L. D. Brown.

EAS 453(4530) Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 356. Offered alternate years, next offered 2007–2008. R. W. Kay.

EAS 454(4540) Advanced Mineralogy
Spring. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. M. Kay. Covers crystallography and crystal chemistry of minerals and methods of their study. Includes X-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasizes effects of high pressures and temperatures with implications for understanding the Earth's interior.

EAS 455(4550) Geochemistry

EAS 458(4580) Volcanology

EAS 460(4600) Late Quaternary Paleocoeology
Fall. 4 credits. M. Goman. Explores topics in Late Quaternary paleocoeology. Broadly divided into two sections: (1) lectures that cover a variety of topics, such as philosophy of paleocoeology, radiometric dating methods, and paleoenvironmental proxies; (2) field- and laboratory-based research. The field research provides students with hands-on experience in sediment core collection, while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.

EAS 462(4620) Marine Ecology (also BIOEE 462[4620])
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. C. D. Harvell and C. H. Greene. For description, see BIOEE 462.

EAS 471(4710) Introduction to Groundwater (also BEE 471(4710))

EAS 475(4750) Special Topics in Oceanography
Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall. springs. C. C. H. Greene; summer. C. B. Monger. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

EAS 476(4760) Sedimentary Basins: Tectonics and Mechanics
Fall. 3 credits. Prerequisite: EAS 301 or permission of instructor. Offered alternate years; next offered 2007–2008. T. E. Jordan.

EAS 478(4780) Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan. Covers modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Considers physical correlation, dating techniques, and time resolution in sedimentary rocks as well as physical controls on the stratigraphic record and numerical modeling.

EAS 479(4790) Paleobiology (also BIOEE 479[4790])
Fall. 4 credits. Prerequisites: one year of introductory biology and BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years, next offered 2007–2008. W. D. Allmon.

EAS 481(4810) Senior Survey of Earth Systems
Spring. Fall, 2 credits. J. Canes and R. Kay. Weekly seminar for seniors in the Science of Earth Systems major on current topics in Earth system science. Readings, presentations, and discussions will focus on results from the recent literature, including how to analyze a scientific paper, and exploration of connections across the subdisciplines in the field. The course will serve as both a review of key concepts, and a vehicle to explore developing concepts in the field.

EAS 491-492(4910-4920) Undergraduate Research
Fall, spring. 1 to 4 credits. Fill out form at 2124 Snee Hall. Staff. Introduction to the techniques and philosophy of research in geological sciences and an opportunity for students to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 496(4960) Internship Experience in Earth and Atmospheric Sciences
Fall, spring. 1 to 4 credits. S-U grades only. Students must register using independent study form. Staff.

EAS 500(5000) Design Project in Geohydrology
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. Not offered 2006–2007. L. M. Cathles.
EAS 502(5020) Case Histories in Groundwater Analysis

EAS 505(5050) Fluid Dynamics in the Earth Sciences

EAS 575(5750) Planetary Atmospheres (also ASTRO 575/6575)
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years. P. Gierasch.

EAS 577(5770) Planetary Surface Processes (also ASTRO 577/6577)
Spring. 3 or 4 credits. J. Bell.

EAS 578(5780) Planet Formation and Evolution (also ASTRO 578/6578)
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years. J.-L. Margot and M. Pritchard.

EAS 622(6220) Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.

EAS 624(6240) Advanced Structural Geology II
Spring. 3 credits. Prerequisites: EAS 326 and permission of instructor. Offered alternate years, next offered 2007–2008. R. W. Allmendinger.

EAS 628(6280) Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. Next offered 2007–2008. S. M. Kay.

EAS 641(6410) Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisites: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.

EAS 656(6560) Isotope Geochemistry
Fall. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years. W. M. White.

EAS 689(6930) Special Topics in Geological Sciences
1–3 var. credits. Fall or spring. S–U grades optional. Staff.

EAS 700-799(7000-7990) Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

EAS 722(7220) Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731(7310) Advanced Topics in Remote Sensing and Geophysics
M. Pritchard.

EAS 733(7330) Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 750(7550) Remote Satellite Sensing in Biological Oceanography
Summer. B. C. Monger.

EAS 751(7510) Petrology and Geochemistry
R. W. Kay.

EAS 755(7550) Advanced Topics in Tectonics and Geochemistry
J. Phipps Morgan.

EAS 757(7570) Current Research in Petrology and Geochemistry
S. Mahlbarg Kay.

EAS 762(7620) Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771(7710) Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773(7730) Paleobiology
J. L. Csine.

EAS 776(7750) Advanced Topics in Oceanography
C. H. Greene.

EAS 780(7800) Earthquake Record Reading
Fall. M. Barzangi.

EAS 781(7810) Exploration Geophysics
L. D. Brown.

EAS 782(7830) Advanced Topics in Geophysics
B. L. Isacks.

EAS 793(7930) Andes-Himalaya Seminar

EAS 795(7950) Low Temperature Geochemistry
L. A. Derry.

EAS 796(7960) Geochemistry of the Solid Earth
W. M. White.

EAS 797(7970) Fluid-Rock Interactions
L. M. Cathles.

EAS 799(7990) Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EDUCATION

EDUC 115(1150) Introductory College Mathematics
Fall. 4 credits. Does not count toward graduation credit in College of Arts and Sciences. Lab TBA. S. Piliero.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. Offers a multi-representational approach to topics in precalculus and calculus, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and
their transformations. Students use graphing calculators in a collaborative lab setting.

**(EDUC 151/1510) Engaging Diversity: Multicultural Issues in Education and Society (D)**

Fall or spring. 3 credits. S-U grades optional. Lec. Staff. Explores diversity issues that affect students e.g., race, ethnicity, gender, and class in the context of modern American society. Through selected readings and course activities, students recognize the strengths of a diverse community and acquire the knowledge and skills necessary to work and serve in it. The focus is on critical thinking about the differences in our society, and the strategies we need for cross-cultural interactions.

**(EDUC 220/2200) Community Learning and Service Partnership (CLASP)**

Fall only. 2 credits. Prerequisite: permission of instructor. Students must commit to taking EDUC 221 the following spring. S-U grades optional. A. Wilson. In this service-learning course, students partner with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Students examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 221 the following spring semester.

**(EDUC 221/2210) Community Learning and Service Partnership (CLASP)**

Spring only. 2 credits. Prerequisites: EDUC 220 and permission of instructor. S-U grades optional. A. Wilson. Continues the field experience and curriculum begun in EDUC 220. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Students examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 221 the following spring semester.

**(EDUC 240/2400) The Art of Teaching**

Fall and spring. 3 credits. B. Heath-Camp. Exploratory course designed for students of all backgrounds and experiences who have a desire to learn more about teaching. Teaching takes place in a variety of contexts from the family to the workplace and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to small group, from preschool to adult education, from traditional school subject matters to recreational/interpersonal areas, and from school-based to non-school based situations.

The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.

Fall. 3 credits. Disc. J. W. Sipple. Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels and the development of academic language and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels.

**(EDUC 271.1/2710.1) Social and Political Context of American Education Optional Section.**

Fall. 1 credit. Optional sec for 1 credit. Must be taken in conjunction with EDUC 271. Social and Political Context of American Education. J. Sipple.

**(EDUC 331/3310) Careers in Agriculture, Extension, and Adult Education**

Fall. 3 credits. Letter grades only. G. J. Applebee. Designed to examine program development, methodologies, leadership, evaluation, and implementation in three areas of teaching: adult education, cooperative extension, and agricultural education. The course provides an historical perspective and an introduction to the organization and scope of programs. Students examine career opportunities and characteristics of the professions addressed. Course activities include a class project, field observations, and experiences during arranged times.

**(EDUC 335/3350) Youth Organizations (CA)**

Fall. 3 credits. T. Park. Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations.

The course provides students with in-depth learning-by-doing experience of how youth organizations function. Requires field experience with a recognized youth organization.

**(EDUC 380/3800) Independent Honors Research in Social Science**

Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program. Prerequisite: requirements for honors program met. S-U grades optional. Staff.

**(EDUC 401/4010) Our Physical Environment**

Fall. 3 credits. Prerequisite: permission of instructor. Lab fee: approx. $10. V. N. Rockcastle. Practical, relatively nonmathematical study of some basic relationships and physical interactions in and with emphasis on physics and earth science. Pays attention to analysis for understanding and techniques for teaching. Includes an individual research project. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninteresting.

**(EDUC 404/4040) Learning and Teaching I**

Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. D. Trumbull. Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on learners' understandings and classroom structures.

**(EDUC 405/4050) Learning and Teaching II**

Spring. 4 credits. Prerequisite: EDUC 404 or permission of instructor. Letter grades. J. W. Camp, B. A. Crawford, and S. Piliero. Important part of sequence of courses and experiences intended to lead to excellence in science, agricultural science, and mathematics teaching. Prospective teachers develop understanding and skills in effective planning, instruction, and assessment, and to study basic principles underlying agricultural science, mathematics, and science in middle and high school. The course is intended to integrate theory and practice associated with learning and teaching in school classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

**(EDUC 411/4110) Educational Psychology (KCM) (CA) (D)**

Fall. 1 credit. Limited to 16 students. Optional sec for 1 credit. Must be taken with EDUC 411 Educational Psychology. D. Schraeder.

**(EDUC 420/4200) Field Experience**

Fall or spring. 1–4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grade. S-U grades optional. Staff. Students may engage in specialized, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

**(EDUC 441/4410) Language, Literacy, and Schooling**

Spring. 3 or 4 credits. Lab TBA. Staff. Foundation for literacy activities in secondary education. Examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a practical project based on fieldwork.

**(EDUC 448/4480) Instruction for Students with Disabilities (D)**

Summer. 3 credits. Prerequisite: educational psychology or introductory psychology course, or permission of instructor. S-U grades optional. Lec TBA. Three hours weekly. Staff. Provides preservice teachers and secondary school teachers a comprehensive overview of disability law, functional limitations caused by disabling conditions, and classroom strategies...
to provide academic accommodations/adaptations to meet the needs of students with disabilities. Focuses on specific classroom and curriculum strategies for adapting instruction to meet the needs of students with disabilities.

[EDUC 450(4500) Education Technology]
Fall. 3 credits. Letter grades. Staff.
Gives future educators the skills necessary to use current technology in educational settings. Focuses on examining how applying technology in the classroom can be used to enhance students’ understanding of course content. Course participants compile an electronic portfolio demonstrating skills developed throughout the semester. A quarter of the class time is lecture and discussion focused on the current use of technology in the classroom. The remainder of the time is spent in lab completing hands-on projects.

[EDUC 451(4510) Multicultural Issues in Education (also AM ST/LSP 451) (D)]
Fall. 3 credits. S. Villenas.
Explores issues pertaining to teaching and learning in multicultural classrooms in American schools. Examines events that have shaped contemporary American society, the educational policies and practices that affect the cultural diversity that has emerged, and the teacher’s role in dealing with cross-cultural issues in the classroom.

[EDUC 452(4520) Multicultural Issues in Secondary Education (D)]
Fall. 1 credit. Prerequisites: EDUC 451 and permission of instructor. Letter grades. Staff.
Students spend two out-of-class hours a week in a classroom setting in the Ithaca school community and write a project on culturally responsive teaching based on their experience.

[EDUC 459(4590) Educational innovations in Africa and the Diaspora (also AS&RC 459(4601)) (D)]
Fall. 3 credits; 4 in College of Arts and Sciences. N. Assis-Lumumba.
Deals with educational innovations geared to promoting education based on gender, race and class, in Africa and the African Diaspora. After introducing the concepts and theories of education and innovations and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. Selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction in Nigeria, science education also in Nigeria, Ujamaa and education for self-reliance in Tanzania, classroom action research in Lesotho, Information Communication Technologies (ICTs) in African higher education with a focus on African Virtual Universities (AVU), the application of the Global Development Learning Network (GDLN) in Côte d’Ivoire, and Online learning in South Africa.

[EDUC 463(4630) Policies, Practices, and Critical Issues of Distance Learning in Developing Countries]
Spring. 3 credits. S-U grades optional. N. Assis-Lumumba.
Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examine. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also eLearning programs designed in industrial countries for developing countries.

Summer. 3 credits. Letter grades. J. Sipple and S. Campbell.
Critically analyzes several competing intellectual currents in the socio-historical formation of the US public education system from 1890 through 1960. Students will use elements of sociological theory as lenses to understand and consider a key period of history in the formation of American public education. They will gain a deeper, and more critical, understanding of their own education experiences and how their experiences fit into the broader social tapestry of US public education.

[EDUC 494(4940) Special Topics in Education]
Fall or spring. 4 credits max. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and the department advertises by department. The semester courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[EDUC 497(4970) Individual Study in Education]
Fall or spring. 1-3 credits. S-U grades optional. Staff.
A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or take a tutorial study of an independent nature in an area of educational interest.

[EDUC 498(4980) Undergraduate Teaching]
Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career. Prerequisite: GPA of at least 2.7 S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to regularly discuss teaching objectives, techniques, and subject matter with the professional staff.

[EDUC 499(4990) Undergraduate Research]
Fall or spring. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Prerequisite: junior or senior standing; GPA at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project proposal, conduct the research, and prepare a report.

[EDUC 502(5020) Education and Development in Africa (also AS&RC 502(5020))]
Spring. 3 credits: 4 in College of Arts and Sciences. S-U grades optional. N. Assis-Lumumba.
Examines the relationship between education and individual and national development. Besides human capital theory, different paradigms of development, including modernization and dependency theories, and Third World Forum, are examined. Issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and the issues related to employment, migration and international brain drain, language, equity in access, output, and outcome based on social class, ethnicity, race, gender, and nationality. Finally, the information and communication technologies (ICTs), indigenous knowledge systems, and the role of higher education in the national, regional, and international contexts and cooperation are discussed.

[EDUC 503(5030) Diversity in the Classroom (D)]
Fall, spring, or summer. 1 credit for each semester. Prerequisite: admission to CTE program. S-U grades optional. Staff.
Builds on knowledge of literacy and diversity gained from course work and field activities in the CTE program. Students review literacy development, cultural diversity, race and class, ethnicity, style preferences, fieldwork experiences, and strategies for accommodating difference in teaching.

[EDUC 532(5320) Educational Programs in Agricultural Science]
Fall. 3 credits. W. Camp.
Overview of the planning and planning processes necessary to operate a successful agricultural science education program in the public schools. Topics include local needs assessments, agricultural advisory boards, community-partnering strategies, program planning, course development, sequencing instruction, professional development. Fieldwork provides experience with New York agricultural education students, teachers, and programs.

[EDUC 535(5350) Youth Organizations for Agricultural Science Education]
Spring. 3 credits. Prerequisite: senior or graduate standing in Agricultural Science Education. Letter grades only. T. Park.
Provides future agriculture educators a comprehensive overview of the components of an agriculture education program including supervised agricultural experience (SAE) and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA organization, structure, and functions on national, state, and local levels.
EDUC 544 (5440) Curriculum and Instruction
Spring. 3 credits. S-U or letter grades. B. Heath-Camp.
The focus of this curriculum and instructional planning course will be on the concepts and principles for developing curriculum and the processes for delivering curriculum. Experiences will be designed to assist in identifying the educational needs of clients/students, selecting curriculum content, designing curricula, and delivering the curriculum.

EDUC 548(5480) Effective College Teaching
Designed to help participants become more effective college teachers. Examines the basic principle of learning, identifies different learning styles, and explores a variety of teaching techniques, methods, and technologies. Participants also learn how to design a course and improve their effectiveness as teachers.

EDUC 571(5710) Social and Political Context of American Education (HA) (SBA) (D)
Fall. 3 credits. Prerequisites: admission to Cornell Teacher Education Program or permission of instructor. J. W. Sipple.
Examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 571.1(5710.0) Social and Political Context of American Education Required Discussion Section
Fall. 1 credit. Required sec for 1 credit. Must be taken with EDUC 571 Social and Political Context of American Education. J. Sipple.

EDUC 578(5780) International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching Practicum
Fall and spring. 2 credits. S-U grades only. TBA. ITADP staff.
Designed for first-time international teaching assistants from countries in which English is not the first language. Focuses on three areas: cross-cultural classroom dynamics, video teaching practicum, and language—enhancing communicative competence in English. Through small-group seminars and individual conferences, the ITADP helps international teaching assistants develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

EDUC 579(5790) Further Training for International Teaching Assistants
Fall, spring, summer. 2 credits.
Prerequisite: EDUC 578. S-U grades optional. Lectures, three contact hours per week. ITADP staff.
Designed for international teaching assistants from countries in which English is not the first language and who have completed EDUC 578, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

EDUC 601(6010) Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program; permission of instructor. S-U grades only. S. C. Piliero, D. J. Trumbull, B. A. Crawford, W. Camp, and T. Park.
Supervised student teaching in agriculture, science, or mathematics at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 602(6020) Practicum Seminar
Fall or spring. 9 credits. Corequisite: EDUC 601 or permission of instructor. W. Camp, B. A. Crawford, D. J. Trumbull, S. C. Piliero, and T. Park.
Focuses on the selection, use, and evaluation of teaching materials and practices. Students complete an extensive portfolio documenting their work.

EDUC 614(6140) Gender, Context, and Epistemological Development (also FGSS 624(6240)) (D)
Fall. 3 credits. S-U grades optional. D. E. Schrader.
Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of personal epistemology and their implications for educating students across the life span. Places particular emphasis on the role of gender and context in the development of thought and on metacognitive development.

EDUC 616(6160) Moral Psychology and Education
Fall. 3 credits. Prerequisites: EDUC 411, graduate standing or permission of instructor. S-U or letter grades. Offered alternate years beginning 2007–2008. D. Schrader.
Seminar exploring moral psychology from cognitive developmental, social contextual, normative, and feminist perspectives. Topics vary by semester, yet all semesters discuss theoretical and empirical studies of the development of moral reasoning, gender differences, cultural context, the relationship between moral judgment and moral action, the development of the self in relation to others and to society, and moral education. Emphasis is on development in adolescence through adulthood.

EDUC 617(6170) Psychology of Adolescence in Case Study
Spring. 3 credits. Prerequisite: any of the following: EDUC 411, HD 617, or permission of instructor. S-U or letter grades. D. Schrader.
This course addresses the physical, cognitive, emotional, self, social, and moral changes in adolescence, and how those factors in family, peer group, and societal contexts affect development. A case study methodological approach is used extensively. Students engage in empirical research outside of class time, using methods learned in class.

EDUC 620(6200) Internship in Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. Staff.
Opportunity for practical experience in educational professions development.

EDUC 621(6210) Work-Experience Coordinator Certification Course I
Summer. 3 credits. Prerequisite: EDUC 622. S-U grades optional. Staff.
First of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. Focuses on the history and philosophy, types, operation, and evaluation of work experience programs including articulation with JPTA and VESID. Requires field interviews.

EDUC 622(6220) Work-Experience Coordinator Certification Course II
Summer. 3 credits. Prerequisite: EDUC 621. Staff.
Second course for certification as a diversified cooperative work experience coordinator combines coursework and directed field experience leading to the planning, development, and approval of a work experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630(6300) Special Problems in Agricultural, Extension, and Adult Education
Fall or spring. May also be offered in summer. 1–3 credits. S-U grades optional. Staff.
Provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

EDUC 632(6330) Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: introductory teaching methods course or permission of instructor. Staff.
Focuses on the selection, use, and evaluation of methods and materials for teaching. Covers methods for group and informal instruction. Provides an opportunity for students to develop teaching competence based on their individual needs and interests. Develops self-evaluation skills. Class project on the development of instructional materials required.

EDUC 633(6330) Program Planning in Adult and Extension Education
Spring. 3 credits. S-U grades optional. Offered alternate years. A. Wilson.
Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 635(6350) Experiential Learning
Fall. 2 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades optional. Staff.
Participants explore various dimensions of experiential education, reflective practice, and a critical learning systems perspective. The course is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

[EDUC 645(6450) Curriculum for a Diverse and Technological Society
Spring. 3 credits. Letter grades only. Disc TBA. Staff.
Examines basic curriculum concepts, principles, and theories. Gives special emphasis to the ways diversity and technology drive changes in the development of curriculum. Each student chooses a particular curriculum for analysis as a project. Within this context, theoretical perspectives on curriculum and the basic elements of any curriculum are discussed.]

EDUC 661(6610) Administration Leadership and Organizational Change
Fall. 3 credits. J. W. Sipple.
Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 662(6620) Evaluation Design
Spring. 3 credits. Prerequisite: survey of research methods (or other graduate level class in research methods), statistics. S-U grades only. M. A. Constan.
This course is designed to introduce graduate students to the principles and practices of program evaluation. It addresses practical realities and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class discussions, and assignments will support the development of the proposal.

EDUC 664(6640) Methods for Interpretive Research
Spring. 3 credits. Prerequisites: course in research methods/research design, S-U or letter grades. D. J. Trumbull.
Course addresses the assumptions undergirding interpretive research and explores five methodological approaches. These approaches attend to the complex interactions between the researcher, the researched, and the context. Students carry out an actual study for the course, allowing them to experience doing actual research.

EDUC 671(6710) American School Reform: Organizational and Sociological Perspectives
Spring. 3 credits. S-U grades optional. J. W. Sipple.
For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K-12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 680(6800) Foundations of Adult and Extension Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. Offered alternate years. A. Wilson.
Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual frameworks, sociopolitical issues, and current research directions through a seminar approach.

EDUC 682(6820) Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grades only. S. Peters. Critical study of the democratic purposes and practices of educators in community and economic development, with a special focus on the role of education in community organizing. Key philosophies and traditions of community education and development are analyzed in their historical, cultural, social, and political context, with an eye toward implications for contemporary practice.

EDUC 683(6830) Adult Education and Globalization: Comparative Perspectives
Spring. 3 credits. S-U grades optional. M. Kroma.
Examines the interconnections between particular economic and political systems as key to understanding the relationships of adult education to society. Emphasizing a critical framework, the course explores emerging local, regional, and international responses in adult education that are planting seeds of change and creativity in ways that are nurturing new forms of educational life in the context of globalization. Particular attention is paid to modes of social analyses that explore the relationship between adult education and social structural factors, including gender, race and class, to inform a sense of place and social location.

EDUC 685(6850) Training and Development: Theory and Practice (also IARD 685/6850)
Spring. 4 credits. S-U grades optional. M. Kroma.
Prepares professionals to design, administer and facilitate training programs responsive to the challenges of sustainability in our world system. Focuses on the theory and practice of training for the development of human resources in small farm agriculture, rural health and nutrition and literacy. Through in-depth discursive critiques of selected readings, students develop insights into the range of methods and strategies employed in situation analysis, the analysis of socioeconomic, sociocultural, and sociopolitical contexts of training programs; facilitation of participatory training programs for the development of human resources in small holder agriculture, rural health and nutrition, and community building. The specific role of training/education in larger change-promoting systems is also explored. The course is appropriate for persons likely to be playing professional roles as educator-trainers, scientists, administrators, and social organizers in rural and agricultural development programs in international as well as domestic contexts.

EDUC 694(6940) Special Topics in Education
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Staff.
For study that predominantly involves library research and independent study.

EDUC 701(7010) Empirical Research
Fall or spring. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.
For study that primarily involves collection and analysis of research data.

EDUC 702(7020) Practicum
Fall or spring. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.
For study that predominantly involves field experience in community settings.

EDUC 703(7030) Teaching Assistantship
Fall or spring. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 704(7040) Research Assistantship
Fall or spring. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 705(7050) Extension Assistantship
Fall or spring. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U grades optional. Staff.
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 718(7180) Adult Learning and Development
Spring. 3 credits. W. Caffarella.
Seminar provides an opportunity for students to review and critique the seminal and current scholarly work in learning in adulthood. Emphasis is placed on three ways of framing adult learning: psychological, social, and cultural. Specific content areas, which vary by semester, are also explored (for example, transformational learning, experiential learning, intelligence and aging, non-western perspectives of learning, spiritual learning). Implications of this knowledge base relevant to the practice of educating adults in formal and non-formal settings, such as educational institutions, community based-setting, health...
Courses by Subject
Apiculture: 260, 264
Behavior: 215, 315, 325, 391, 471, 662
Conservation: 344
Ecology: 369, 452, 455, 470, 672
Introductory courses: 201, 210, 212, 215, 241
Medical and veterinary entomology: 210, 352, 652
Pathology: 322
Outreach: 335, 336
Pattern: 463-567, 670
Pest management: 241, 277, 420, 441, 443, 444, 477, 644, 670
Physiology, development, and toxicology: 370, 394, 400, 485, 490, 685
Systematics: 331, 333, 440, 453, 634, 635
Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible. Check the web site for updates.

ENTOM 201(2100) Alien Empire: Bizarre Biology of Bugs
Spring. 2 or 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lee, W. M. Tingey.
Introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, site identification, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, and turf; urban environments and pests of human, veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

ENTOM 260(2600) Biology of the Honey Bee
Fall. 3 credits. Lect. Offered alternate years; not offered 2007-2008. N. W. Calderone.
Introduces students to the life history, physiology, and behavior of honey bees, as well as to the fundamentals of practical beekeeping. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior. Also includes lectures on pollination of agronomic crops, honey and beewax, bees in ancient and modern rituals, Africanized honey bees, and insect pests.

ENTOM 264(2640) Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Prec.: or corequisite: ENTOM 260. Lab. Offered alternate years; not offered 2007-2008. N. W. Calderone.
Consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment. Topics include management of bees for apple pollination, honey harvesting and processing, and disease identification, control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate animal perception by bees, as well as the chemical basis for swarming, nest guarding, and mating.

ENTOM 277(2770) Natural Enemies and Invasive Species
Spring. 2-3 credits. S-U grades optional. Lab., demonstration; optional field trip. Optional disc session offered for 1 credit. A. E. Hajek and J. P. Nyrop.
The purpose of this course is for students to learn about biological control and the looming problems caused by invasive species. These topics are obviously grounded in biology; however, they also have social, economic, and philosophical links. Many projects on biological control and invasive species are conducted on the Cornell campus; examples of research will be provided, including talks by guest lecturers. Subjects covered will include basic concepts of biological control
and biological invasion. These subjects fit well together because one of the first lines of defense against invasive species is use of biological control agents. Invasive species impact agriculture but also increasingly affect and can permanently change natural systems. Natural enemies used for biological control that will be discussed include predators, parasites, and microbial pests and weeds.

ENTOM 315(3150) Spider Biology
Fall. 3 credits. Prerequisite: introductory biology or permission of instructor. Letter grades only. L. S. Rayor.

In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 215 (2 credits). Students in ENTOM 315 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Insect Biology Program of Study should take ENTOM 315 rather than 215. Students may not take both ENTOM 215 and 315 for credit.

ENTOM 322(3220) Comparative Insect Morphology
Spring. 4 credits. Prerequisite: ENTOM 212 or 243. Lec. Lab. Offered alternate years; not offered 2007-2008. B. N. Danforth. Provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modulation, and development. The lab introduces students to the basic methods of insect microsection, specimen preparation, and scientific illustration. High-quality, publishable illustrations are produced based on student artwork.

ENTOM 325(3250) Insect Behavior
Spring. 3 credits. Prerequisite: introductory biology and either ENTOM 212 or BIONB 221. Lec. Offered alternate years; not offered 2007-2008. L. S. Rayor.

Insects are the most diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parent care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

ENTOM 331(3310) Introductory Insect Systematics
Spring. 4 credits. Prerequisite: ENTOM 212. Lab fee: $50. Offered alternate years; not offered 2006-2007, next offered 2007-2008. Staff.

Introduction to the classification, evolutionary history, and distribution of insects. Includes lab practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures convey theory and practice of insect systematics and major features of insect evolution. Insect collections required.

ENTOM 333(3330) Maggots, Grubs, and Cutworms: Larval Insect Biology
Spring. 3 credits. Prerequisite: ENTOM 212 or permission of instructor. S-U grades optional. Offered alternate years; next offered 2007-2008. J. K. Liebherr.

The evolutionary history of the Holometabola has been greatly affected by the evolution of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

ENTOM 335(3350) Naturalist Outreach Practicum
Fall. 3 credits. Prerequisite: introductory biology, S-U or letter grades. L. S. Rayor. Learn the skills to do effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry-based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively multimedia presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

ENTOM 336(3360) Naturalist Outreach in Biology
Fall. 1-2 credits, variable. Prerequisite: ENTOM 335. S-U or letter grades. L. S. Rayor.

Students enrolled in the Naturalist Outreach Practicum will serve as members of the Naturalist Speakers Bureau to provide lively multimedia presentations on the ecology and behavior of organisms to second through college students. Includes field trips, develop their own science-based presentation, display materials, and teacher resource guides. For students who have already taken Naturalist Outreach Practicum (ENTOM 335) who wish to continue doing scientific outreach. This course can be taken twice.

ENTOM 344(3440) Insect Conservation Biology
Spring. 3 credits. Prerequisite: entomology or conservation biology course or permission of instructor. S-U grades optional. Lec. Offered alternate years; next offered 2007-2008. J. E. Lusey.

In-depth look at the concepts and issues surrounding the management of insects and other invertebrates. Topics include sampling rare populations; insect conservation genetics; the role of phylogeny in determining conservation priorities; refuge design; saving individual species; plus the unique political, social, and ethical aspects of insect conservation and preservation of their ecological services (i.e., pollination, decomposition, pest suppression, and insectivore food sources).

ENTOM 352(3520) Medical and Veterinary Entomology
Fall. 3 credits. Prerequisite: BIOC G 101-102 or permission of instructor. S-U grades optional. Offered alternate years; not offered 2007-2008; next offered 2008-2009.

L. C. Harrington.

Diseases resulting from arthropod-borne pathogens (such as malaria, West Nile virus, dengue, and yellow fever) cause considerable human and animal suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. The goal is to encourage an understanding of evolutionary and ecological issues associated with disease transmission. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.

ENTOM 353(3530) Lab in Medical and Veterinary Entomology
Fall. 1 credit. Prerequisites: ENTOM 352 at the same time or have taken another Medical Veterinary Entomology course. S-U grades optional. L. C. Harrington.

The laboratory complements the lecture course, ENTOM 352. Includes field trips, collection and identification and arthropods of medical veterinary importance, and hands-on experience with modern laboratory research methods.

ENTOM 369(3690) Chemical Ecology (also BIOEE/BIONB 369(3690))
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U grades optional. L. S. Rayor. A. Agrawal, G. Jander, A. Kessler, and J. Thaler. For description, see BIOEE 369.

ENTOM 370(3700) Pesticides, the Environment, and Human Health (also TOX 370(3700))
Fall. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Lec. Offered alternate years, not offered 2007-2008. J. G. Scott.

Survey of the different types of pesticides, their uses, properties, and effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

ENTOM 394(3940) Circadian Rhythms (also BIOGD/BIONB/PL PA 394(3940))
Fall. 2 credits. Prerequisite: 200-level biology course. S-U grades optional. Lec. K. Lee (even years) and J. Ewer (odd years).

Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms, including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).
ENTOM 400(4000) Insect Development
(also BIOGD 402(4020))
Spring. 4 credits. Prerequisite: ENTOM 212 or BIOGD 281 or permission of instructor. S-U grades optional. Lec, lab. Offered alternate years; not offered 2006–2007. Staff.
Emphasizes the mechanisms that underlie embryonic and post-embryonic developmental processes of insects. The portion of the course on embryonic development leans heavily on Integrated Developmental Genetics, and also covers more classical studies as well as recent advances exploring the molecular basis for the evolution of body plan. The post-embryonic development portion covers the control of growth, molting, and metamorphosis. The lab uses modern techniques to illustrate developmental events at the organismal and cellular level. The discussion section involves the analysis and presentation of primary research papers.

ENTOM 420(4200) Grape Pest Management
(also PL PA 420(4200))
Fall. 4 credits. Prerequisites: PL PA 390 (also ENTOM 241) or permission of instructors. Lab. Lec. S-U grades optional. Offered alternate years; not offered 2007–2008. W. Wilcox, G. English-Loeb, and A. Landers.

ENTOM 440(4400) Phylogenetic Systematics
(also BIOPL 440(4400))
Spring. 4 credits. Prerequisites: intro biology or permission of instructor. Lec and lab. Offered 2007–2008. K. Nixon.

ENTOM 443(4430) Entomology and Pathology of Trees and Shrubs
(also PL PA 443(4430))
Fall. 4 credits. Prerequisites: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U grades optional. Offered alternate years; not offered 2007–2008. P. A. Weston and G. W. Hudler.

ENTOM 444(4440) Integrated Pest Management
(also CSS 444(4440))

ENTOM 453(4530) Principles and Practice of Historical Biogeography
(also BIOPL 453(4530))
Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U grades optional. Lec, lab. Offered alternate years; not offered 2007–2008. J. K. Liebherr and M. Luckow.

ENTOM 455(4550) Insect Ecology
(also BIOEE 455(4550))
Fall. 4 credits. Recommended: ENTOM 212 or BIOEE 261 or permission of instructor. S-U grades optional. Offered alternate years; not offered 2007–2008. J. S. Thaler.

ENTOM 463(4630) Invertebrate Pathology
Spring. 4 credits. Prerequisites: one year introductory microbiology and PL PA 420 or permission of instructor. Lec, lab. Offered alternate years; next offered 2007–2008. A. E. Hajek.

ENTOM 470(4700) Ecological Genetics
Spring. 3 credits. Prerequisites: BIOEE 278 or permission of instructor. S-U grades optional. Offered alternate years; not offered 2007–2008. B. P. Lazzaro.

ENTOM 483(4830) Insect Physiology
Fall. 4 credits. Prerequisite: permission of instructor. Lec. L. Gilbert.

ENTOM 490(4900) Toxicology of Insecticides
(also TOX 490(4900))

ENTOM 494(4940) Special Topics in Entomology
Fall or spring. 4 credits max. S-U grades optional. Staff.

ENTOM 497(4970) Individual Study in Entomology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

ENTOM 498(4980) Undergraduate Teaching
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

ENTOM 634(6340) Special Topics in Systematic Entomology
Fall or spring; on demand. 2–4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 635(6350) Insect Molecular Systematics
Spring. 2 credits. Prerequisite: permission of instructor. Offered alternate years; next offered 2007–2008. B. N. Danforth.

ENTOM 652(6520) Seminar in Medical Entomology
Fall or spring. 2 credits. Prerequisite: medical students only. Staff.

ENTOM 655(6550) Seminar in Medical Entomology
Fall. 1 credit. Prerequisite: permission of instructor or ENTOM 352. Disc TBA. Staff.

ENTOM 676(6760) Seminar in Medical Entomology
Fall. 2 credits. Prerequisite: permission of instructor. Staff.

ENTOM 694(6940) Thesis
Fall or spring. 1–6 credits. Staff.

ENTOM 695(6950) Thesis
Fall or spring. 1–6 credits. Staff.

ENTOM 697(6970) Individual Study in Entomology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

ENTOM 698(6980) Undergraduate Teaching
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

ENTOM 699(6990) Thesis
Fall or spring. 1–6 credits. Staff.

ENTOM 794(7940) Dissertation
Fall or spring. 1–6 credits. Staff.
ENTOM 662(6620) Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor or ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years; next offered 2007-2008. C. Gilbert.

ENTOM 670(6700) Seminar on Biological Control
Fall. 1 credit. Prerequisite: ENTOM 277, 440, or 463 or permission of instructor. S-U grades optional. Offered alternate years; not offered 2007-2008. A. E. Hajek. Upper-level seminar series in biological control covering topics chosen by participating students and faculty. Weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focusing on a central theme for the semester.

ENTOM 685(6850) Seminar in Insect Physiology
Spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years; not offered 2007-2008. C. Gilbert.

ENTOM 707(7070) Individual Study for Graduate Students
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709(7090) Teaching Entomology Credit TBA. Staff. Teaching entomology or for extension training.

ENTOM 767(7670) Current Topics in Entomology
Fall and spring. 1 credit. Requirement for first- and second-year entomology graduate students. S-U grades only. Staff. After the Jugatae seminar, the students taking the course discuss the seminar and additional papers with the speakers from 4:30 to 5:30 in 2123 Comstock Hall.

ENTOM 800(8000) Master's-Level Thesis Research
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U grades optional. Staff. Research at the master's level.

ENTOM 900(9000) Doctoral-Level Thesis Research
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U grades optional. Staff. Research at the doctoral level.

Jugatae Seminar
Fall and spring. Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FOOD SCIENCE

FD SC 101(1010) Science and Technology of Foods
Fall. 1 credit. S-U grades only.
J. H. Hotchkiss and Staff. Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

FD SC 102(1020) Exploring Food Processing
Spring. 1 credit. S-U grades only.
J. H. Hotchkiss and Staff. Series of seminars on current technological and regulatory developments in food science. Field trips to five commercial food manufacturing/processing plants are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

FD SC 104(1040) Wines and Vines (also HORT 104(1040))
Spring. 3 credits, with lab. Limited to 30 students. Priority given to students in enology or viticulture program. Letter grades only. K. A. Romanik and J. A. Merwin. An introduction to grape cultivation and winemaking history, regions and practices, wine chemistry and microbiology. Sensory evaluations of wines illustrate components and processes that determine wine flavors. Lab sessions include experiments, local vineyard and winery visits, and discussion of selected readings.

FD SC 150(1500) Food Choices and Issues
Spring. 2 credits. S-U grades optional.
R. B. Gravani and D. D. Miller. Strategies for making healthier food choices through a deeper understanding of the scientific principles and concepts that form the basis for current dietary guidelines. Food safety regulations are discussed. Topics include the U.S. food system; relationships between diet and health; food processing, food safety; and selected contemporary issues relating to nutrition, food quality, and safety. Each student will conduct a nutritional analysis of her or his personal diet.

FD SC 151(1510) Food and Health: Current Issues and Controversies
Spring. 1 credit. Limited to 25 students. Pre- or co-requisites: FD SC 150 or permission of instructors. S-U grades only.
R. B. Gravani and D. D. Miller. Discussion-based course designed to explore current issues and controversies that involve relationships between food and health. Required reading from the popular press or the scientific literature is assigned each week. S-U grades are based on attendance, overall participation, and the oral presentation. Topics may include the obesity epidemic, food irradiation, food safety, plant sterols, heart disease, eating disorders, functional foods, dietary supplements, food regulations, genetically modified foods, and other current issues. Several class discussions are held at a Cornell dining facility on selected Wednesday evenings during the semester.

FD SC 200(2000) Introductory Food Science
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. J. H. Hotchkiss. Comprehensive introduction to the principles and practice of food science and technology. Topics include chemistry of foods; nutritional significance; food formulation, preservation and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Stresses interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging.

FD SC 210(2100) Food Analysis
Spring. 3 credits. Limited to 24 students. Prerequisite: CHEM 208 or equivalent. Lee, lab. R. H. Liu and staff. Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Discusses gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry.

FD SC 230(2300) Sophomore Seminar: Functional Foods; Where Food Science and Nutrition Meet (also NS 230(2300))
Spring. 2 credits. Limited to 15 students; priority given to sophomores who have completed two first-year writing seminars and introductory course in either food science or nutritional sciences. S. J. Mulvaney and R. Parker. Functional foods are foods whose nutrient composition has been modified to achieve targeted health outcomes. This course explores the interface between biological analysis and food science can work together to design and produce foods to meet certain health goals using a case study approach. Each case study involves interdisciplinary discussion, and a writing assignment that includes both technical (e.g., scientific basis for diet-health claims) and nontechnical (e.g., personal experience and opinions related to functional foods) content.

This is a special seminar sponsored by the John S. Knight Institute's Sophomore Seminars Program. Seminars offer discipline-intensive study within an interdisciplinary context. While not restricted to sophomores, the seminars aim at initiating students into the discipline's outlook, discourse community, modes of knowledge and ways of articulating that knowledge. Special emphasis is given to strong thinking and writing and to personalized instruction with top university professors.
and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FD SC 396(3960) Food Safety Assurance
Spring 2 credits. Prerequisite: BIOMI 290 or permission of instructor. Offered alternate years; not offered 2007–2008. R. B. Gravani.

Provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Uses case studies and class projects to demonstrate and apply the key principles discussed.

FD SC 400(4000) Current Topics in Food Science—Food Technology
Spring 1 credit. S-1 grades only. S. J. Mulvany.

Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FD SC 401(4010) Concepts of Product Development

Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FD SC 402(4020) Agriculture in Developing Nations I (also IARD 402(4020))
Fall. 2 credits. T. W. Tucker and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec).

Acquaints students with the major issues and problems in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

FD SC 405(4050) Managing Food Waste Without Trashing the Environment

Examines the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, state-wide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

FD SC 406(4060) Dairy and Food Fermentations
Fall. 2 credits. Prerequisite: BIOMI 290. Letter grades only. M. Wiedmann.

Lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FD SC 410(4100) Sensory Evaluation of Food
Fall. 2–3 credits. 1 lab credit. Lec and lab required for undergraduate food science majors. Prerequisite: statistics course. Letter grades only. H. T. Lawless.

Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

FD SC 415(4150) Principles of Food Packaging

Discusses the chemical and physical properties and manufacture of the basic materials used to construct packaging. Presents the influence of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FD SC 417(4170) Food Chemistry I
Spring. 3 credits. Prerequisites: CHEM 257 or BIOBM 330 or 331. S-U or letter grades. J. W. Brady.

Covers the chemistry of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods.

FD SC 418(4180) Food Chemistry II

Discusses the chemical composition of several food groups (such as meats, fruits, and vegetable, dairy) and describes the chemical reactions and changes that take place during processing and storage, as well their effects on the quality and nutritional characteristics of these foods.
FD SC 419(4190) Food Chemistry
Laboratory
Spring. 3 credits. Prerequisites: BIBOBM 330 or CHEM 257 or equivalent.
Deals with the chemical components of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research proposal that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

FD SC 422(4230) Physical Principles of Food Preservation and Manufacturing
Fall. 3 credits. Prerequisites: FD SC 321. Letter grades only. Lec, disc. S. J. Mulvaney.
Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FD SC 425(4250) Unit Operations and Dairy Foods Processing
Spring. 3 credits. Prerequisites: FD SC 321, 394, 417, 418, and 423. Letter grades only. Lec, lab. C. I. Moraru.
Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpins the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience in operating pilot plant equipment and the manufacture of safe, high quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FD SC 430(4300) Understanding Wine and Beer
Spring. 3 credits. Prerequisites: Introductory biology and chemistry or permission of instructor; age 21 by first day of class (Jan. 22, 2007). S-U grades optional. T. E. Acree, T. Henick-Kling, and K. J. Siebert.
Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples to help illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.

FD SC 450(4500) Fundamentals of Food Law
Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasizes the Food and Drug Administration and U.S. Department of Agriculture regulations but also refers to other regulatory agencies. Emphasizes how a food or agricultural professional interacts with the U.S. legal system during legislative action, regulatory rule making, and with respect to compliance.

FD SC 456(4560) Advanced Concepts in Sensory Evaluation
Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. Students conduct a major independent research project on a current issue in sensory evaluation.

FD SC 460(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/IARD 480[4800])
Spring. 3 credits. Prerequisite: Junior, senior, or graduate standing. J. Lassoie and D. Miller.
Modernization has led to development pressures that have increasingly disrupted natural systems, leading to widespread concerns about the long-term viability of important environmental services, including those critical to food security worldwide. This multidisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases examine contemporary issues such as population growth, genetically modified foods, biodiversity, sustainable marine fisheries, water quality, global warming, and global responsibility. Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, South Africa, and Australia through live interactive videoconferences and electronic discussion boards.

FD SC 494(4940) Special Topics in Food Science
Fall or spring. 4 credits max. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FD SC 497(4970) Individual Study in Food Science
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Staff.
May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FD SC 498(4980) Undergraduate Teaching Experience
Fall or spring. 4 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Staff.
Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FD SC 499(4990) Undergraduate Research in Food Science
Fall or spring. 4 credits max; may be repeated for credit. S-U grades optional. Staff.
Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FD SC 600(6000) Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students minoring in food science and technology.
Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FD SC 602(6020) Agriculture in Developing Nations II (also IARD 602[6020])
Spring. Field trips to Gulf Region of Mexico (sec. 1) and India (sec. 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and (or) permission of instructors. Cost of field study trip (including airfare, local transportation, and lodging; some merit and need based financial aid may be available): approx. $2,500. R. W. Blake, T. W. Tucker, and C. F. Nicholson (Mexico); K. V. Raman and W. R. Coffman (India).
For description, see IARD 602.
FD SC 604(6404) Chemistry of Dairy Products
Fall. 2 credits. Limited to 16 students. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy foods processing or permission of instructor. Letter grades only. Offered alternate years; not offered 2007–2008. D. M. Barbano.
Detailed study of milk constituents and their properties. Covers the chemical and physical changes that occur in dairy products before, during, and after processing. Emphasizes current research in dairy chemistry.

FD SC 607(6070) Advanced Food Microbiology
Explores advanced topics in food microbiology. Places major emphasis on critical evaluation of current literature and on microbial concepts that affect food microbiology. Specific areas covered include microbial ecology of foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

FD SC 608(6000) Chemometric Methods in Food Science
Fall. 2 credits. Prerequisites: basic statistics and chemistry course or permission of instructor. S-U grades only. Offered alternate years; not offered 2007–2008. K. J. Siebert.
Food science applications using multivariate statistical methods. Topics may include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying culturable species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

FD SC 616(6160) Flavonoids—Analysis and Applications
Spring. 2 credits. S-U grades only. Lecture, seminar, and laboratories; and tutoring. Offered alternate years; not offered 2007–2008. C. T. Lawless and T. E. Acree.
Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods. Emphasizes the chemistry of carbohydrates, emphasizing the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FD SC 620(6200) Food Carbohydrates
Spring. 2 credits. Prerequisite: qualified seniors and graduate students, BIOBM 330 or equivalent. Offered alternate years, not offered 2006–2007; next offered 2007–2008. B. A. Lewis and J. W. Brady.
Considers the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasizes the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FD SC 621(6210) Food Lipids
Fall. 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years; not offered 2007–2008. R. H. Liu.
Describes the chemical, physical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, emulsions, and functional foods associated with lipids.

FD SC 622(6220) Nutraceuticals and Functional Foods
Fall. 2 credits. Prerequisites: biochemistry course equivalent to BIOBM 330 and one year college biology or permission of instructor. Letter grades only. Offered alternate years; not offered 2006–2007; next offered 2007–2008. R. H. Liu.
Covers nutraceuticals and functional foods, natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Also discusses biomarkers, safety and efficacy testing, and regulations for nutraceuticals and functional foods.

FD SC 644(6640) Food Polymer Science: Principles and Applications
Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biomacromolecules of importance to the food industry. Emphasizes unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

FD SC 665(6650) Food and Bioprocessing Systems
Fundamental and quantitative analyses of current and emerging technologies used in the processing of foods and related biological materials. Topics include thermal processes, extrusion, supercritical fluids processing, membrane separation, high-pressure processing, pulsed electric field processing, ultraviolet and pulsed light treatment.

FD SC 694(6940) Special Topics in Food Science
Fall or spring. 4 credits max. S-U grades only. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FD SC 695(6950) Current Readings in Food Science
Fall and spring. 1 credit, may be taken multiple times. Graduate students in food science strongly encouraged to enroll. Prerequisite: 300- to 400-level course relevant to chosen topic. S-U grades only. Staff.
Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety; food chemistry; packaging; food engineering. Interested students should contact the designated instructor(s) for each semester.

FD SC 698(6900) Graduate Teaching Experience
Fall and spring. 1 to 3 credits. S-U grades only. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring.

FD SC 800(8000) Master's-Level Thesis Research
Fall or spring. Credit TBA; max. 12. Prerequisite: master's candidates; permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 900(9000) Graduate-Level Thesis Research
Fall or spring. Credit TBA. Max. 12. Prerequisite: doctoral students who have not passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

FD SC 901(9010) Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

HORTICULTURE

HORT 101(1110) Horticultural Science and Systems
Fall. 4 credits. I. A. Merwin.
Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and
integrated design and management of horticultural plantings and production systems.

HORT 102(1120) Hands-On Horticulture
Spring. 2 credits. Nominal materials fee. M. P. Prints.

The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest management, and flower arrangement. There is one Saturday field trip at the end of the semester to visit gardens in the local area.

HORT 104(1040) Introduction to Wines and Vines (also FD SC 104(1040))
Spring. 3 credits. Letter grades only. K. J. Arnink and I. A. Merwin.
For description, see FD SC 104.

HORT 201(2010) The Art of Horticulture I: Plants and Gardens as a Subject of Art
Fall. 2-3 credits. Fee for materials: $35. M. Eames-Shewy.
Part of a HORT 201 and 203 sequence, this experiential course considers plants and gardens as a subject of art. Students explore basic drawing techniques, botanical-illustration methods, watercolor, and photography. The course addresses the natural history and symbolic use of plants in fine art. Students critically reflect on course content in journals and explore the work of garden writers.

HORT 203(2030) The Art of Horticulture II: Plants Used in Art or as Artforms
Spring. 2 credits. Fee for materials: $40. M. Eames-Shewy.
Part of a HORT 201 and 203 sequence, this experiential course focuses on plant materials used to create art or manipulated as artforms. Acquaints students with a range of topics such as the use of plants in fibers and dyestuffs, sculpture, design, and living-sculpture practices such as topiary, bonsai, turfworks, and tree sculpture. Students create a final project focused on these or related methods.

HORT 215(2150) Sophomore Seminar: Nonfiction Adventure Writing: Reclaiming the Scientist's Voice
Classroom discussion, adventures in the field and lab provide raw material for writing individual narratives.
Sponsored by the John S. Knight Institute's Sophomore Seminars Program.

HORT 220(2200) Practicing Sustainable Land Care
Fall. 2-3 credits; 1 additional credit for student projects by permission of instructor. M. P. Prints.
Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production.

HORT 235(2350) Plants and Human Well-Being (G) (GA)
Spring. 3 credits. J. Mt. Pleasant and S. M. Skelly.
Examines the beneficial effects of plants on human cultures, communities and individuals areas of focus include: impacts of community gardens, green space, and farmer's markets; use of plants for pollution control, economic development, conflict resolution, and tourism; how plants benefit individuals, in terms of adult cognition. K-12 education, mental health and aging, governmental. Laboratories include field trips and exercises to allow students to analyze and evaluate plant-based initiatives in many phases of contemporary life.

HORT 243(2430) Taxonomy of Cultivated Plants (also BIOPL 243(2430))
Fall. 4 credits. One year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered every seven years. M. A. Luckow.
For description, see BIOPL 243.

HORT 300(3000) Herbaceous Plant Materials
Fall. 3 credits. Cost of plant materials: $75. W. B. Miller.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

HORT 310(3100) Production and Marketing of Greenhouse Crops
Spring. 4 credits. Letter grades only. Cost of required three-day field trip: approx. $130. Offered odd years. W. B. Miller.
Covers basic horticulture of greenhouse operation, growing crops in optimized environments, and serving niche or mass markets. Discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertilizing, materials handling; environmental stewardship and integrated pest management; and production management. Also covers world centers of greenhouse crop production, culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops.

HORT 317(3170) Seed Science and Technology (also CSS 317(3170))
Fall. 3 credits. Prerequisite: BIOPL 241 or equivalent course approved by instructor. Letter grades only. Not offered 2006-2007; next offered 2007-2008. A. G. Taylor.
Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment.

HORT 330(3300) Turfgrass-ing the Landscape
Spring. 3 credits. Prerequisite: CSS 260 or permission of instructor. Letter grades only. F. S. Rossi and A. M. Petrovic.
Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses. Case study projects are a major aspect of the course.

HORT 391(3910) Woody Plant Identification and Use I
Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.
Module of HORT/LA 491 covering the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil, microclimate, plant specifications and landscape establishment principles and techniques should take HORT/LA 491 or the 491-492 sequence.

HORT 392(3920) Woody Plant Identification and Use II
Spring. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.
Module of HORT/LA 492 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 391 (fall module) need not be taken before taking HORT 392 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 400(4000) Principles of Plant Propagation
Spring. 3 credits. Prerequisites: BIOPL 242 and 244 or another plant physiology course or permission of instructor. Offered odd years. K. W. Mudge.
Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 401(4010) The How, When, and Why of Grafting—A Distance Learning Approach
Spring. 10 weeks. 2 credits. Lec, autotutorial (web); lab, greenhouse/autotutorial (web); CD, web; one introductory face-to-face meeting. Offered even years; not offered 2006-2007; next offered 2007-2008. K. W. Mudge.
Web/CD-based autotutorial approach to the principles and hands-on practices of grafting and budding as applied to plant propagation.

HORT 420(4200) Nursery-Crop Production
Fall. 3 credits. Prerequisite: HORT 400 or permission of instructor. Letter grades only. Fee for materials: $75. Offered odd years 2007-2008. K. W. Mudge.
Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

HORT 425(4250) Postharvest Biology of Horticultural Crops
Fall. 3 credits. Offered odd years; not offered 2006-2007; next offered 2007-2008. S. Gan.
Study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts.

HORT 426(4260) Practicum in Forest Farming as an Agricultural System (also NTRES/CSS 426(4260))
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. Offered even years. K. W. Mudge, R. Hobbs, and L. E. Buck.
Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include:...
site evaluation and planning, temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, and medicinal-herb culture. Outdoor activities are integrated with selected readings via an online discussion board.

HORT 435(4350) The Care of Woody and Herbaceous Plants in the Landscape Fall. 3 credits. Prerequisites: HORT 300 and 491 or permission of instructor. Cost of required field trip: $75. Letter grades only. Offered even years. R. Weir, III. Study of the practices involved in the maintenance of ornamental plants in the landscape. The major emphasis is on post-planting techniques, including water and fertilization management, weed and invasive plant control, pruning and general tree care. Bidding and estimating for maintenance programs, as well as budget management, are also covered. Labs have a hands-on focus. Guest lecturers address special topics.

HORT 440(4400) Restoration Ecology Fall. 5 credits. Prerequisite: upper division or graduate standing and permission of instructor. Letter grades only. Lab, plus several weekends. T. H. Whitlow. Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

HORT 442(4420) Berry Crops: Culture and Management Fall. 3 credits. Offered even years. M. P. Pritts. Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Considers marketing and economics and discusses alternate production practices for both commercial and home gardeners. Frequent field trips enhance classroom activities.

HORT 443(4430) Viticulture and Vineyard Management—I Fall. 3 credits. Prerequisites: BIO G 101/103, 102/104, BIOL 241, CSS 260, BIOL 242 or 244 or equivalents. Letter grades only. A. N. Lakso and M. C. Goffinet. First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring productivity, equality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

HORT 444(4440) Viticulture and Vineyard Management—II Spring. 3 credits. Prerequisites: or corequisites. HORT 443 and PL BR 225 or equivalent. Letter grades only. A. N. Lakso, B. L. Reich, P. Cousins, and C. Owens. Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine, and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 449(4490) Green Signals and Triggers—The Plant Hormones (also BIOPL 449(4490)) Fall. 1 or 2 credits. Prerequisites: introductory biology and BIOPL 242 or 342 or permission of instructor. S-U grades optional. Offered odd years; not offered 2006–2007; next offered 2007–2008. P. J. Davies. For description, see BIOPL 449.

HORT 450(4500) Principles of Vegetable Production Fall. 3 credits. Prerequisite: HORT 101, CSS 260, or equivalent. Letter grades only. Two Sat. field trips, students responsible for cost of their meals. Offered even years. R. R. Bellinder and S. Reiners. Commercial vegetable production from variety selection to postharvest. Topics include: crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production. Term project required. Field trips to large scale conventional, small, diversified, and organic farms are planned early in semester.

HORT 455(4550) Mineral Nutrition of Crops and Landscape Plants (also CSS 455(4550)) Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242 or 342 or permission of instructor. Offered even years; not offered 2006–2007; next offered 2007–2008. H. C. Wien and staff. Modular course on principles of plant mineral nutrition and nutrient management for agronomic crops, vegetables, floriculture, and fruit crops.

HORT 460(4600) Plant-Plant Interactions Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even years; not offered 2006–2007; next offered 2007–2008. D. W. Wolfe. Uses our basic understanding of plant ecology and physiology to evaluate the mechanisms by which plants interact with each other in natural and managed ecosystems.

HORT 462(4620) Physiology of Vegetables and Flowers Spring. 4 credits. Prerequisite: BIOPL 242 or equivalent. Offered odd years. H. C. Wien. Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Emphasis on growth and development, fruit and seed set, and the balance of vegetative and reproductive growth, especially in perennials. Practical hands-on greenhouse experiments and small group discussions illustrate the lecture material.

HORT 466(4660) Soil Ecology (also CSS 466(4660)) Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor. J. E. Thies. For description, see CSS 466.

HORT 473(4730) Ecology of Agricultural Systems (also BIOEE 473(4730)) Fall. 3 credits. Prerequisite: BIOEE 261 or permission of instructor. S-U grades optional. During first six weeks, 8 meetings may run later due to field trips. L. E. Drinkwater and A. G. Power. For description, see BIOEE 273.

HORT 480(4800) Plantations Lecture Series Fall, 12 weeks. 1 credit. S-U grades only. Not offered 2006–2007. D. A. Rakow. Introductory class, 10 lectures, and a final evaluation session. Each week, lectures feature prominent speakers on a broad range of popular horticultural, natural-science, and human-cultural themes.

HORT 485(4850) Public Garden Management Spring. 3 credits. Prerequisites: HORT 300 or 301; HORT 230 or 335. Cost of two-and-a-half-day field trip to botanical gardens and arboretums. Offered odd years. D. A. Rakow and S. M. Skelly. Explores the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Includes separate units on collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

HORT 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491(4910)) Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructor. Preregistration required. N. L. Bassuk and P. J. Trowbridge. Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492(4920)) Spring. 4 credits, limited to 48 students. Prerequisite: passing grade in HORT/LA 491; horticulture or landscape architecture majors or permission of instructor. Preregistration required. N. L. Bassuk and P. J. Trowbridge. Second half of course focusing on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation
are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

HORT 494(4940) Special Topics in Horticulture
Fall or spring. 4 credits max. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495(4950) Undergraduate Seminar—Current Topics in Horticulture
Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 495. S-U grades only. L. Cheng. Weekly seminars consisting of graduate student research project reports, faculty research topics, and guest speakers from other universities and/or industry.

HORT 496(4960) Internship in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of student's advisor in advance of participation in internship programs. S-U grades optional. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. Staff.

HORT 497(4970) Individual Study in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S-U grades optional. Students must register using individual study form (available in 140 Roberts Hall). Individual study in horticultural sciences under the direction of one or more faculty members. Staff.

HORT 498(4980) Undergraduate Teaching Experience
Fall or spring. Variable credit. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S-U grades optional. Students must register using individual study form (available in 140 Roberts Hall). Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. May include leading discussion sections, preparing, assisting in, or teaching laboratories, and tutoring.

HORT 499(4990) Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Students must register using individual study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in horticultural sciences.

HORT 500(5000) Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits; 6 credits max. toward M.P.S. (agriculture) degree. Requirement for M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S-U grades optional. Staff. Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 600(6000) Seminar in Horticulture
Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 495. S-U grades only. L. Cheng. Weekly seminars consisting of graduate student research project reports, faculty research topics, and guest speakers from other universities and/or industry.

HORT 615(6150) Quantitative Methods in Horticultural Research
Spring, weeks 1–7. 2 credits. Prerequisite: BTRY 601, or permission of instructor. S-U grades only. Offered every year; not offered 2006–2007; next offered 2007–2008. D. W. Wolfe. Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature.

HORT 617(6170) Advanced Analytical Methods for Plant Systems
Spring. 3 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Offered every year; not offered 2006–2007; next offered 2007–2008. Staff. Principles and application of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills.

HORT 618(6180) Breeding for Pest Resistance (also PL BR 618[6180])
Fall. 2 credits. Prerequisites: BIOLGD 281 and PL BR 405 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Offered every year. P. D. Griffiths. For description, see PL BR 618.

HORT 625(6250) Advanced Postharvest Biology
Fall. 1-3 credits, variable. Offered even years. Coordinators: S. Gan and C. B. Watkins
Sec 01 Advanced Postharvest Physiology. 1 credit. (12 lec). S. Gan. Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts.
Sec 02 Plant Senescence (also BIOPhL 483.06). 1 credit. (12 lec). S. Gan. Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Also discusses genetic manipulation of senescence/ripening processes.

Sec 03 Advanced Postharvest Technology. 1 credit. (12 lec). C. B. Watkins. Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.

HORT 635(6350) Tools for Thought
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. T. H. Whitlow. Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 636(6360) Current Topics in Horticulture
Fall or spring. 1 credit. S-U grades only. One hour per week. Staff. Seminar series on current issues chosen by participating students and faculty members, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each semester.

HORT 640(6400) New Directions in Public Horticulture
Spring. 1 credit. Offered even years; offered 2006–2007; next offered 2007–2008. D. A. Rakow and S. M. Skelly. Designed to introduce students to a range of current issues facing public gardens through a set of required readings. Discussions based on readings and personal experiences.

HORT 694(6940) Special Topics in Horticulture
Fall or spring. 4 credits max. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 700(7000) Graduate Teaching Experience
Fall or spring. Variable credit. Prerequisite: permission of instructor; graduate standing. Undergraduates should enroll in HORT 498. S-U grades optional. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections, preparing, assisting in, or teaching laboratories, and tutoring.

HORT 800(8000) Thesis Research, Master of Science
Fall or spring. Credit TBA. S-U grades only.

HORT 900(9000) Thesis Research, Doctor of Philosophy
Fall or spring. Credit TBA. S-U grades only.
INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

IARD 300(3000) Perspectives in International Agriculture and Rural Development
Fall. 2 credits. R. Everett and R. Nelson. Forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

IARD 314(3140) Tropical Cropping Systems: Biodynamics, Social, and Environmental Impacts (also CSS 314(3140))
Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course permission or instructor. P. Hobbs. Characterization and discussion of traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems, smallholder farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the effect of tropical cropping systems on the environment.

IARD 402(4020) Agriculture in Developing Nations I (also FD SC 402(4020))
Fall. 2 credits. T. W. Tucker and R. W. Blake (Mexico sec) or K. V. Raman and W. R. Coffman (India sec). Acquaint students with the major issues and problems in international agriculture and rural development and to demonstrate how problems in development are being addressed in the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the upcoming semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

IARD 403(4030) Traditional Agriculture in Developing Countries (also CSS 403(4030))
Fall. 1 credit. S-U grades only. P. Hobbs. Today, perhaps more than half of the world’s arable land is farmed by traditional farmers. They developed sustainable agriculture practices that allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional subsistence- or partially subsistence farmers in developing countries. This course examines traditional systems from several disciplinary points of view.

IARD 404(4040) Crop Evolution, Domestication, and Diversity (also PL BR/BIOPL 404(4040))
Spring. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S-U grades only. T. W. Tucker. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Underlying ethical, legal, and social issues affecting conservation and use also are addressed.

IARD 480(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/FG SC 480(4800))
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. Letter grades. J. Lassoie and D. Miller. For description, see NTRES 480.

IARD 494(4940) Special Topics in International Agriculture (also IARD 694(6940))
Fall, spring, summer. 1-3 credits. S-U grades optional. Staff. The department teaches "trials" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under this number are approved by the department curriculum committee; and the same course is not offered more than twice under this number.

IARD 496(4960) International Internship
Fall, spring. 1-6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S-U grades optional. Staff. International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student studies and investigates an appropriate international agricultural problem and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

IARD 497(4970) Independent Study in IARD
Fall and spring. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Staff. Students must submit written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions of the Gulf Region of Mexico and India.

IARD 507(5070) Management of Agriculture and Rural Development I (also GOVT 507(5070))
Fall and spring. 1-3 credits. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S-U grades only. S. Kyle. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.
Analysis, design, and administration of social organizers in rural and agricultural training programs for the development of IARD 685(6850) Training and Development Programs in the United States and abroad.

IARD 694(6940) Graduate Special Topics in IARD
Fall or spring. 1-4 credits. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 696(6960) Agroecological Perspectives for Sustainable Development (also NTRES/CSS 696[6960])
Fall, spring. 1 credit. S-U grades only. L. Fisher and L. Buck. A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 697-698(6970-6980) International Development M.P.S. Seminar
Fall, spring. 1 credit. S-U grades only. N. Uphoff. For M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 699(6990) International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S-U grades only. S. C. Kyle. Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 763(7830) Farmer-Centered Research and Extension (also EDUC 783[7830])
Fall. 3 credits. S-U or letter grades. M. Kroma and T. Tucker. Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

INFORMATION SCIENCE

INFO 130(1300) Introductory Design and Programming for the Web (also COM S 130[1300])
Fall. 3 credits. For description, see COM S 130 in CIS section.

INFO 172(1700) Computation, Information, and Intelligence (also COGST 172, COM S 172[1700], ENGR 172[1700])
Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100. For description, see COM S 172 in CIS section.

INFO 204(2040) Networks (also ECON 204[2040], SOC 204[2120]) (SBA)
Spring. 4 credits. For description, see ECON 204.

INFO 214(2140) Cognitive Psychology (also COGST/PSYCH 214[2140]) (KCM)
Fall. 3 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students: see INFO 614, PSYCH 614, or COGST 501. For description, see PSYCH 214.

INFO 230(2300) Intermediate Design and Programming for the Web (also COM S 230[2300])
Spring. 3 credits. Prerequisite: COM S/ INFO 130 or equivalent. For description, see COM S 230 in CIS section.
INFO 292(2921) Inventing an Information Society (also AM ST 292[2980], ECE/ENGRG 298[2980], HIST 292[2920], S&T S 292[2921])
Spring. 3 credits; may not be taken for credit after ECE/ENGRG 198.
For description, see ENGRG 298.

INFO 295(2950) Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 231 or equivalent.
For description, see INFO 295 in CIS section.

INFO 330(3300) Data-Driven Web Applications (also COM S S 330[3300])
Fall. 3 credits. Prerequisites: COM S/ENGRD 211.
For description, see COM S 330 in CIS section.

INFO 345(3450) Human-Computer Interaction Design (also COMM 345(3450))
Spring. 3 credits.
For description, see COMM 345.

INFO 349(3491) Media Technologies (also COMM 349[3490], S&T S 349[3491])
Spring. 3 credits.
For description, see S&T S 355.

INFO 355(3551) Computers: From the 17th Century to the Dot.com Boom (also S&T S 355[3551])
Fall. 4 credits.
For description, see S&T S 355.

INFO 356(3561) Computing Cultures (also S&T S 356[3561]) (CA)
For description, see S&T S 356.

INFO 372(3720) Explorations in Artificial Intelligence
Spring. 3 credits. Prerequisites: MATH 111 or equivalent. Information science approved statistics course, and COM S 211 or permission of instructor.
For description, see INFO 372 in CIS section.

INFO 387(3871) The Automatic Lifestyle: Consumer Culture and Technology (also S&T S 387[3871]) (CA)
For description, see S&T S 387.

INFO 429(4290) Copyright In the Digital Age (also COMM 429[4290]) (CA)
For description, see COMM 429.

INFO 430(4300) Information Retrieval (also COM S S 430[4300])
Fall. 3 credits. Prerequisite: COM S/ENGRD 211 or equivalent.
For description, see COM S 430 in CIS section.

INFO 431(4310) Web Information Systems (also COM S S 431[4310])
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.
For description, see COM S 431 in CIS section.

INFO 435(4350) Seminar on Applications of Information Science (also INFO 635[6350])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent; experience in using information systems.
For description, see INFO 435 in CIS section.

INFO 440(4400) Advanced Human-Computer Interaction Design (also COMM 440(4400))
Fall. 3 credits. Prerequisite: COMM/INFO 245.
For description, see COMM 440.

INFO 445(4450) Seminar in Computer-Mediated Communication (also COMM 445[4450])
Fall. 3 credits. Prerequisite: COMM/INFO 245.
For description, see COMM 445.

INFO 447(4470) Social and Economic Data (also ILRLE 447[4470])
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.
For description, see INFO 447 in CIS section.

INFO 450(4500) Language and Technology (also COMM 450[4500])
Spring. 4 credits. Prerequisites: one of COMM 240 or 245 or permission of instructor.
For description, see COMM 450.

INFO 490(4900) Independent Reading and Research
Fall. spring. 1-4 credits.
Independent reading and research for undergraduates.

INFO 491(4910) Teaching in Information Science, Systems, and Technology
Fall. spring. 4 credits.
Teaching experience as a TA in a course in the information science, systems, and technology major.

INFO 515(5150) Culture, Law, and Politics of the Internet
Fall. 4 credits.
For description, see INFO 515 in CIS section.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also COM S S 530[5300])
Spring. 4 credits. Prerequisite: COM S/INFO 330 or COM S 432.
For description, see COM S 530 in CIS section.

INFO 614(6140) Cognitive Psychology (also COGST 614, PSYCH 614[6140])
Fall. 5 credits. Two components: PSYCH 214 (3 credits) and COGST 501 (2 credits).
Required for graduate students; undergraduates opting for 5 credits should enroll simultaneously in PSYCH 214 and COGST 501.
For description, see PSYCH 614.

INFO 630(6300) Human Language Technology (also COM S S 630[6300])
Spring. 4 credits. Prerequisite: basic knowledge of linear algebra and probability theory; basic programming skills.
For description, see COM S 630 in CIS section.

INFO 634(6341) Information Technology in Sociocultural Context (also S&T S 634[6341])
Spring. 4 credits. Prerequisite: permission of instructor.
For description, see S&T S 634.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 435[4350])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience in using information systems. Undergraduates and master's students should enroll in INFO 435; Ph.D. students should enroll in INFO 635.
For description, see INFO 635 in CIS section.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640[6400])
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645[6450])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 645.

INFO 648(6648) Speech Synthesis by Rule (also LING 648[6648])
Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor.
For description, see LING 648.

INFO 650(6500) Language and Technology (also COMM 650[6500])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 650.

INFO 685(6850) The Structure of Information Networks (also COM S S 685[6850])
Fall or spring. 4 credits. Prerequisite: COM S 482.
For description, see COM S 685 in CIS section.

INFO 709(7090) IS Colloquium
Fall. spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 747(7400) Social and Economic Data (GR-ID) (also ILRLE 740[7400])
Spring. 4 credits. Limited to Ph.D. and research master's students.
For description, see INFO 747 in CIS section.

INFO 790(7900) Independent Research
Fall. spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.
P. J. Trowbridge, chair (446 Kennedy Hall) talks about the sense of place and "the power of place" by R. W. Venables. Lectures with slides and other media illustrate how successive waves of New Yorkers continually defined and redefined their sense of place and "the power of place" by references to natural symbols such as Niagara Falls and to human constructions such as towns of Iroquois long houses and cities of skyscrapers.

LA 140(1400) The Symbols of New York State's Cultural Landscape (CA) (LA)
Spring. 3 credits. Lectures with slides and other media illustrate how successive waves of New Yorkers continually defined and redefined their sense of place and "the power of place" by references to natural symbols such as Niagara Falls and to human constructions such as towns of Iroquois long houses and cities of skyscrapers.

LA 141(1410) Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grades only. Fee for required drafting equipment plus materials for projects: approx. $25.

LA 142(1420) Grounding in Landscape Architecture
Spring. 4 credits. Limited to approx. 20 students. Prerequisite: freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. $250.

LA 155(1550) American Indian Cultural Landscapes: Changes in Time (D) (CA) (LA)
Fall. 3 credits. Lectures with slides and other media illustrate American Indian cultures and philosophies both before and after 1492. A major focus is on how all Indian societies, from hunting societies to agricultural communities, continually transformed their cultural landscapes. Lectures also include how European expansion forcefully transformed American Indian cultural landscapes.

LA 201(2010) Medium of the Landscape
Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. $200; field trip: approx. $250.

LA 202(2020) Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250.

LA 215(2150) Sophomore Seminar: Engaging Places
Fall. 4 credits. Lec. A. Hammer. Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. While the course serves as an introduction to landscape studies, it calls for the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

LA 261(2610) Fieldwork in Urban Archaeology (also ARKEO 261[2610]) (CA) (LA)
Fall. 4 credits. Urban archaeologists study American Indian, colonial, and 19th-century sites that now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation. Three 8-hour Saturday field labs are required; students choose three labs that are offered.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620]) (CA) (LA)
Spring. 3 credits. Prerequisites: LA 201 or ARKEO 261 or permission of instructor. Various American Indian civilizations and European cultures have altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 263/547(2630/5470) American Indians, Planners, and Public Policy (also CRP 363/547/3630/5470) (D) (CA) (LA)
Fall. 3 credits. Offered alternate years; not offered 2006–2007.

LA 266(2660) Jerusalem through the Ages (also NES 266[2660], JWST/ARKEO/RELST 266[2660]) (CA) (LA)
Fall. 3 credits. Explores the history, archaeology, and natural topography of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (ca. 4000 B.C.E.) to the 19th century, including Jebusite Jerusalem, Jerusalem as the capital of the Davidic dynasty, the Roman era city of Herod and Jesus, the Crusaders and medieval Jerusalem, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Uses slides and videos to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.

LA 282(2820) Photography and the American Landscape Architecture (CA) (LA)
Fall. 3 credits. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19c, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. Engages participants in the art and science of design. The studio focuses on site scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 315(3150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316(3160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor. Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318(3180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. Emphasizes detail design and use of landscape materials in project implementation. Explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation are the foci for this course. Includes lectures, studio projects, and development of drawings leading to construction documentation for a comprehensive project.

LA 360(3600) Pre-Industri al Cities and Towns of North America (also ARKEO 360[3600], CRP 360/666/[3600/6660], LA 666[6660]) (CA) (LA)
Fall. 3 credits. Not offered 2006–2007.

LA 401(4010) Advanced Synthesis: Project Design
Fall. 5 credits. Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture.

LA 402(4020) Integrating Theory and Practice II
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the expression of site design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

LA 404(4040) Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: landscape architecture undergraduates in final year of study. Working with their advisor, students create a written and visual paper that documents the concentration interest.
LA 410(4100) Computer Applications in Landscape Architecture (D)  
Fall or spring. 3 credits. Limited to 15 students. Prerequisite: landscape architecture students. Designed to develop a working knowledge of various computer software applications with emphasis on AutoCad. Explores other applications relative to land-use planning and the profession of landscape architecture.

LA 412(4120) Professional Practice  
Spring. 1 credit. Presents the student with an understanding of the role of the professional landscape architect. The course helps students choose a type of practice and introduces the problems and opportunities one may encounter in an office or in other professional situations. Topics include job-seeking preparation, practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 418(4180) Audio Documentary: History/Sound/Landscape (CA) (LA)  
Spring. 3 credits. Limited to 15 students. Letter grades only. Offers hands-on experience in basic audio documentary. Students create audio portraits of New York landscapes and communities undergoing critical changes. Encourages projects appropriate for podcasting, webcasting and radio. Explores relationships between sound and the still or moving image.

LA 483(4830) Seminar in Landscape Studies (CA) (LA)  
Spring. 3 credits. Prerequisite: senior or graduate standing in any major or field. Topical seminar with different subject and method each time it is offered.

LA 486(4860) Placemaking by Design  
Fall. 3 credits. Limited to 20 students. Priority given to juniors, seniors, and graduate students. S-U grades optional. Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place? What are the characteristics of a planned design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491(4910))  
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required. Supplies: approx. $50; field trips: approx. $50.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. Students will understand the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site amelioration and plant establishment. Design follows by written specifications and graphic details is produced to implement these practices.

LA 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 492(4920))  
Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 491. Preregistration required. Supplies: approx. $50; field trips: approx. $50.

Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Topics include site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites; and select appropriate trees, shrubs, vines and ground covers for a given site. Designs for specific sites are followed by written specifications, and graphic details are produced to implement these proposals. Projects implement, in a hands-on manner, site remediation and planting techniques they have learned by developing a landscape that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

LA 494(4940) Special Topics in Landscape Architecture  
Fall or spring. 1-5 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 495(4950) Green Cities: The Future of Urban Ecology (also CRP 384/584/3840/5840)  
Fall. 4 credits. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of "green cities" in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 497(4970) Individual Study in Landscape Architecture  
Fall or spring. 1-5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498(4980) Undergraduate Teaching  
Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 499(4990) Undergraduate Research  
Fall or spring. 1-5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding undergraduates to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 501(5010) Composition and Theory  
Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Basic principles of natural and cultural processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture; particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 502(5020) Composition and Theory  
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505(5050) Landscape Representation I  
Fall. 3 credits. Prerequisite: LA 501 or permission of instructor. Introduces students to both conventional and unconventional modes of landscape architectural representation. Teaches drafting, orthographic drawing, axonometric project, lettering, analysis, and concept drawing alongside more expressive modes of direct site study and representation.

LA 506(5060) Graphic Communication II  
Spring. 3 credits. Prerequisite: LA 505. Corequisite: LA 502 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modeling, composite drawings, and visual books.

LA 524(5240) History of European Landscape Architecture  
Fall. 3 credits. *Offered through College of Architecture, Art, and Planning.

LA 525(5250) History of American Landscape Architecture  
Spring. 3 credits. *Offered through College of Architecture, Art, and Planning.

LA 545(5450) The Parks and Fora of Imperial Rome  
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art; other disciplines, or permission of instructor. Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture; horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a comprehensive study of the ancient forums and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.

LA 569(5690) Archaeology in Preservation Planning and Site Design (also CRP 569[5690])  
Spring. 3 credits. Offered alternate years; not offered 2006-2007.

LA 580(5800) Landscape Preservation: Theory and Practice  
Fall. 3 credits. Prerequisite: junior, senior, or graduate standing.
Examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

**LA 582(5820) Photography and the American Landscape Architecture**

Fall. 3 credits.

Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19c, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

**LA 590(5900) Theory Seminar**

Spring. 3 credits. Prerequisite: senior or graduate standing.

Seminar in landscape design theory.

**LA 598(5980) Graduate Teaching**

Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour).

**LA 601(6010) Integrating Theory and Practice I**

Fall. 5 credits. Prerequisite: graduate standing or permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design. Includes seminar topics and group study not repeated for credit. Prerequisite: LA 603 or permission of instructor.

**LA 602(6020) Integrating Theory and Practice II**

Spring. 5 credits. Prerequisite: graduate standing or permission of instructor.

Studio building on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historical factors and their relationship to site design and planning are critically explored through theory and practice.

**LA 603(6030) Directed Study: The Concentration**

Fall, spring. 1 credit. Prerequisite: landscape architecture graduate students in final year of study. Working with their advisor, students create a written and visual paper that documents the concentration intent.

**LA 605(6050) Sound + Landscape Architecture**

Fall. 1 credit. Must be taken with LA 601. Letter grades only. Much landscape design privileges the eye. Sound and Landscape focuses on designing for the ear as well. Explores landscapes in terms of their sonic dimensions: their keynotes, signals, and soundmarks. Offers tools for mapping and analyzing the acoustic profile of a site. Introduces basic digital recording and editing skills and considers how sound may be integrated with visual presentations.

**LA 615(6150) Site Engineering I**

Spring. 3 credits. Prerequisite: permission of instructor.

Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

**LA 616(6160) Site Engineering II**

Fall. 2 credits. Prerequisite: LA 615 or permission of instructor.

Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 618(6180) Site Construction**

Spring. 5 credits. Prerequisite: permission of instructor.

Emphasizes detail design and use of landscape materials in project implementation. Explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project.

**LA 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 666(6660)) (D)**

Fall. 3 credits. Not offered 2006–2007.

**LA 680(6800) Graduate Seminar in Landscape Architecture**

Fall or spring. 1–3 credits; may be repeated for credit. Prerequisite: graduate standing. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

**LA 694(6940) Special Topics in Landscape Architecture**

Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.

Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

**LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555(5550))**

Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. $250; required field trip: approx. $250.

Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Investigates issues of urbanism and applies them to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Introduces three-dimensional computer modeling and digital design media as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

**LA 702(7020) Advanced Design Studio**

Spring. 5 credits.

Capstone studio providing the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

**LA 800(8000) Master's Thesis in Landscape Architecture**

Fall or spring. 9 credits.

Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

**NATURAL RESOURCES**

**NRTES 100(1001) Introduction to Environmental Studies**

Summer. 3 credits. S-U grades optional. R. J. McNeil.

Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

**NRTES 101(1010) Intro to the Science and Management of Environmental and Natural Resources (also SNES 101(1010))**

Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environment Systems, or other "environmental cluster" areas in CALS.

This course provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth's ecological and environmental systems. Case studies, guided readings, multi-media presentations, discussions, and field and laboratory exercises are used to introduce students to the
interdisciplinary basis for understanding the complexities of such systems within the text of modern society. Active student participation in all phases of the course is expected.

**NTRES 102(1020) Science Fiction and Environment**

Summer. 3 credits. S-U grades optional. J. B. Yavitt.

This course is intended to be primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in environmental studies. Science fiction short stories and two books will be used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles which may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

**NTRES 201(2010) Environmental Conservation**

Spring. 3 credits. T. Falsey.

At the beginning of the 21st century, our lives increasingly ask questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environment different offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 210(2100) Introductory Field Biology**

Fall. 4 credits. Limited to 60 students. Prerequisite: sophomore or junior standing with advisor in natural resources or permission of instructor; BIO G 101 and 102 or equivalent. Cost of two required overnight weekend field trips: approx. $12. T. Gavin and C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of those events.

**NTRES 232(2320) Nature and Culture (HA) (CA)**

Spring. 3 credits. S-U grades optional. J. Tantillo.

We will examine the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, will be introduced.

**NTRES 303(3030) Introduction to Biogeochemistry (also EAS 303)**

Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry.

For description, see EAS 303.

**NTRES 310(3100) Applied Population Ecology**

Fall. 3 credits. Prerequisite: completion of calculus (MATH 106, 111, or equivalent). Highly recommended: background in biology or ecology. Letter grades only. E. Cooch.

In-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. Examines Normal and other probability species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer and field-based exercises are used to reinforce concepts presented in lecture.

**NTRES 311(3110) Fish Ecology, Conservation, and Management**

Spring. 3 credits. Prerequisite: none. Recommended: NTRES 210, BIOEE 26l, or equivalent. E. Mills, L. Rudstam, and R. Jackson.

Covers basic principles of fish ecology at the individual, population, and community level, particularly as they relate to interactions between fish and their environment and the implications of human activities to these relationships. Emphasizes the application of ecological principles to the conservation and management of fishery resources and aquatic habitats. Extensive use of current literature and case studies will provide context for principles covered.

**NTRES 312(3111) Fish Ecology Laboratory**

Spring, four field trips TBA. 1 credit. Pre or corequisite: NTRES 311. E. Mills, L. Rudstam, and R. Jackson.

Four field trips are planned to provide hands-on experiences in fish ecology and management. They include: a one-weekday Great Lakes experience aboard the USGS Kahoe on Lake Ontario, a one-day Laceida Lake trip to a state-of-the-art fish hatchery during the walleye run, a one-day Oneida Lake trip to a state-of-the-art fish hatchery during the walleye run, and a two-hour trip to Cayuga Inlet to witness the spring run of rainbow trout and possibly lamprey eels. Activities include demonstrations of various fish sampling gears and sample analysis techniques. Each student is required to maintain a written journal describing activities and concepts learned from each field trip that will be turned in at the end of the semester.

**NTRES 313(3130) Biological Statistics I (also BTRY 301[3010])**

Fall. 4 credits. Prerequisite: one semester of calculus. J. S. Schaeffer.

Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

**NTRES 314(3140) Conservation of Birds**

Spring or summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. Offered alternate odd years; next offered 2007. C. R. Smith.

**NTRES 315(3141) Conservation of Birds Laboratory**

Spring or summer. 1 credit. Corequisite: NTRES 314. S. A. T., TBA. Offered alternate odd years; next offered 2007. C. R. Smith.

**NTRES 322(3220) Global Ecology and P. J. Manjai**

Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.

The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

**NTRES 323(3230) Principles of Toxicology (also TOX 323[3230])**

Spring. 3 credits. Corequisite: one class per year each of chemistry and biology with labs; one semester of organic chemistry lecture or permission of instructor. Not offered 2006–2007.

**NTRES 324(3240) Ecological Management of Water Resources**

Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic variability and communities; groundwater-surface connections, how paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

**NTRES 325(3250) Forest Management and Maple Syrup Production**

Spring. 3 credits. Letter grades only. Offered alternate even years; next offered 2007–2009. P. J. Smallidge.

Practical, field-oriented course emphasizing principles and practices of stewardship and multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

**NTRES 326(3260) Applied Conservation Ecology**

Spring. 3 credits. Prerequisite: BIOEE 26l or permission of instructor. S. Morello.

Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation ecology. Students will use laboratory and computer laboratory equipment to complete their field studies. Topics include: field sampling techniques, resource and conservation mapping, spatial referencing, GIS, measures of biodiversity, and manual and automated techniques for studying soil, stream, and forest biota and related physical factors.
Asks the question "How should I live?" and explores the implications of different answers to that question for our treatment of nature. The course seeks to understand why human behavior, the course explores possible methods for altering this behavior.

**NTRES 420(4200) Forest Ecology**

Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey. Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests; ecophysiology of forest trees; disturbance, succession and community analysis; primary productivity; and nutrient cycling.

**NTRES 421(4201) Forest Ecology Laboratory**

Fall. 1 credit. Corequisite: NTRES 420. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

**NTRES 422(4220) Wetland Ecology and Management—Lecture**

Fall. 3 credits. Prerequisite: BIOEE 261. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Considers current regulations, protection programs, and management strategies.

**NTRES 423(4221) Wetland Ecology and Management—Laboratory**

Fall. 3 credits. Prerequisite: NTRES 422. One weekend field trip required. B. L. Bedford. Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

**NTRES 424(4240) Landscape Impact Analysis**

Spring. 3 credits. Prerequisites junior standing; one introductory and one advanced course in ecology or equivalents. B. L. Bedford. Presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. Explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

**NTRES 426(4260) Practicum in Forest Farming as an Agroforestry System**

Spring. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs. Students actively take part in the development and management of a 70-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching.
research, and extension site. Hands-on activities include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-frut and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and outdoor field trips to other agroforestry-related sites. Outdoor activities are integrated with selected readings via an online discussion board.

NTRES 427(4270) Ecoregions: Ecology and Conservation
Spring. 2 credits. Prerequisites: NTRES 210, 310; junior standing or above. Recommended: statistics course. Letter grades only. Lec/lab. Offered alternate even years; next offered 2007–2008. C. R. Smith.

NTRES 428(4280) Principles and Practices of Applied Wildlife Science
Spring. 3 credits. Prerequisites: NTRES 310 or equivalent, permission of instructor. S-U grades optional. Offered alternate even years; next offered 2007–2008. M. E. Richmond, R. A. Malecki, and P. D. Curtis. The course covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science will be discussed. The application of basic science and the scientific method will be integrated into community/agency-based problem solving. Issues and approaches to management of terrestrial and wetland wildlife will be discussed with emphasis on technical, logistical, analytical, and communication skills.

NTRES 430(4300) Environmental and Natural Resources Policy Processes
Spring. 3 credits. Prerequisites: junior standing; special application process. Lec: Wash., D.C. during Jan. 11-day winter session; three-two hour orientation sessions in fall semester and four-two hour sessions in Feb. and March. Fee: approx. $450. Completed applications due by October 12. Applications available from msu@cornell.edu or at www.dnr.cornell.edu/teaching/ugrad/courses/. B. A. Knuth.

Intensive field-based exploration of the environmental policy process and its conceptual framework. Defining environmental problems; aggregating interests; agenda-setting, formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislators, executive branch, and other actors. Case studies; discussion with about 20 prominent Washington policymakers who appear as guest panelists. Self-selected research topics require conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

NTRES 431(4310) Environmental Strategies (SBA)
Spring. 3 credits. S. Wolf. Research-oriented seminar focused on conservation of natural resources in the context of institutional and institutional environment. We study opportunities to mobilize market mechanisms and competitive strategies of firms to harmonize economic and environmental demands on ecological systems. Through production of a portfolio of analyses of real-world integrated environmental management schemes, students will come to understand the mechanics of this general class of environmental policy tools and develop a critique as to why the market does not represent a comprehensive approach to sustainability. Course details at www.dnr.cornell.edu/saw44/ntres431.html.

NTRES 432(4320) Human Dimensions of Natural Resource Management
Spring. 3 credits. Prerequisite: junior or senior standing. S-U grades optional. J. Enck. Focuses on how a social science-based understanding of human attitudes, values, and behaviors can be incorporated in natural resource management decisions and actions. Uses examples from federal, state, and non-governmental fish, wildlife, and forest management programs to illustrate the importance of socioeconomic considerations in problem solving and decision making.

NTRES 433(4330) Applied Environmental Philosophy (KCM)
Spring. 3 credits. Recommended: NTRES 332. J. Tanitulo. Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus non-anthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecolomism, and pragmatism.

NTRES 434(4340) International Conservation: Communities and the Management of the World's Natural Resources
Fall. 3 credits. Letter grades only. Next offered 2007–2008. J. Lassoie. Lectures, readings, and multimedia information, including the Internet, build a multidisciplinary understanding of the principles underpinning conservation and natural-resource management. Specific attention is given to the role of local communities in developing sustainable land-use strategies. Case studies from Africa, Latin America, and the United States examine particular conservation and management issues from widely different geopolitical perspectives. Stakeholder analyses are used to base discussions of each case, followed by a synthesis and discussion of key contrasts and comparisons centered on common themes identified during the course.

NTRES 435(4350) Tribal Governance and Environmental Policy (also AIS 435(4350)) (CA)
Fall. 3 credits. S-U grades optional. M. Muskett. This course explores historical tribal relationships to the environment and current environmental policies. Tribal environmental governance has a contested history in which Western and environmental policies have clashed with tribal land use and environmental policies because of different understandings of land relationships. The course examines interactions between tribal and federal, state, and local governments, and evaluates environmental policy and management of Native American lands.

NTRES 444(4440) Resource Management and Environmental Law (also CRP 444(4440))
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S-U grades optional. R. Booth. For description, see CRP 444.
sustainable management of parks, protected areas, and fragile landscapes. Attention is
given to the roles of local communities, governmental agencies, and non-governmental
organizations in protecting biodiversity while providing livelihood opportunities for
those most dependent on the natural resources in question. Discussions based on
selected readings will examine issues from widely different geopolitical perspectives.
An additional 1 credit is available for those interested in writing a term paper.

Environmental and Society (D SOC 324, 340, 410)
Environmental Law, Ethics, and Philosophy (S&T S 206; CRP 380, 443, 444, 451, 453, PHIL 241, 246, 247, 381)

Human Systems and Communication (COMM 260, 285, 352, 421)
Physical Sciences (BEE 151, 371, 401, 427, 435, 471, 473, 475, 476; CSS 260, 365, 372, 397, 433; EAS 102, 104, 303; CEE 432)
Policy and Politics (GOVT 427, 428, B&SOC 461)
Resource Economics (AEM 250, 450, 451)
Spatial Data Interpretation (CSS 411, 420, 620, 660)

PLANT BREEDING AND GENETICS

PL BR 201(2010) Plants, Genes, and Global Food Production
Fall. 2 credits. May be used for partial fulfillment of CALS distribution requirement GROUP B—Biological Sciences. Prerequisite: one year introductory biology or permission of instructor. V. Gracen. Introduces plant breeding, offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers specific examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems.

PL BR 225(2250) Plant Genetics
Spring. 3 or 4 credits. 2 credits if taken after BIOGD 281. Prerequisites: one year of introductory biology or equivalent, permission of instructor for students who have taken BIOGD 281. M. Mutschler. Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyploidy, analysis of nuclear, chloroplast and mitochondrial genomes; pollination controls; and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PL BR 290(2990) Introduction to Research Methods in Plant Breeding and Genetics
Fall, spring, or summer. 1-3 credits, variable. S-U grades only. Staff. Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

PL BR 401(4010) Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. E. D. Earle. Provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue and organ culture techniques related to plant propagation, germplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

PL BR 403(4030) Genetic Improvement of Crop Plants
Fall. 3 credits. Prerequisites: BIOGD 281, PL BR 225, or other standard genetics course and course in crops or horticulture. V. Gracen. Genetic enhancement of crop value to humans began with domestication and continues with farmers’ variety development and scientifically trained plant breeders’ applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PL BR 404(4040) Crop Evolution, Domestication and Diversity (also BIOL/IAED 404(4040))
Fall. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S-U grades only. K. N. Watanabe. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addresses underlying ethical, legal, and social issues affecting conservation and use.

PL BR 446(4460) Plant Cytogenetics Laboratory
Spring, two-week module. 1 credit. S-U grades only. Prerequisite: genetics course or permission of instructor. Check with department for further information. K. N. Watanabe. Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and
plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.

**PL BR 482 Plant Biotechnology (also PL PA 462.2, BIOL 482.6)**

Spring. 1 credit. Prerequisite: BIOL 483.1 or permission of instructor. S-U grades optional. 12 lec. E. D. Earle and M. Zaitlin. Deals with current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

**PL BR 483.1 Concepts and Techniques in Plant Molecular Biology (also BIOL 483.1, PL PA 463.01)**

Fall, eight weeks. 2 credits. Prerequisites: see BIOL 483. S-U grades optional. Two lec. and one day of disc. per week. S. M. Handley and J. Rose. For description, see BIOL 483.1.

**PL BR 483.3 Plant Genome Organization (also BIOL 483.3)**

Fall. 1 credit. Prerequisite: BIOL 483.1. S-U or letter grades. Offered alternate years. S. D. Tanksley. For description, see BIOL 483.3.

**PL BR 485.5 Molecular Breeding (also BIOL 485.5)**

Fall or spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 494(4940) Special Topics in Plant Breeding**

Fall or spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 496(4960) Internship in Plant Breeding**

Fall or spring. Variable credit; may be repeated to max. of 6. Minimum 60 on-the-job hours per credit granted. Prerequisites: junior or senior in plant breeding; minimum GPA of 3.0 in plant breeding courses; permission of advisor and enrollment during pre-enrollment period of semester before internship. S-U grades. Students must attach to their course enrollment materials a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

**PL BR 497(4970) Individual Study in Plant Breeding**

Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff.

**PL BR 498(4980) Undergraduate Teaching**

Fall or spring. Variable credit; may be repeated to max. of 6. S-U grades optional. Prerequisites: permission of instructor and previous course to be taught or equivalent. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499(4990) Undergraduate Research**

Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

**PL BR 504(5040) Research Experience for Teachers (also EDUC 504(5040), BIO G 504(5040))**

Spring. 3 credits. Intended for, but not restricted to, students in M.A.T. degree program, practicing teachers, and students considering becoming teachers. Prerequisites: appropriate science major, 6 credits education or educational psychology course work, and permission of instructor. S-U or letter grades. Offered alternate years. P. Griffiths.

**PL BR 612(6120) Patents, Plants, and International Agriculture**

Fall. 1 credit. S-U or letter grades. Offered alternate years; not offered 2006-2007; next offered 2007-2008. S. Tanksley. For description, see BIOG 612. Staff.

**PL BR 618(6180) Breeding for Pest Resistance (also HORT 618(6180))**

Fall. 2 credits. Prerequisites: BIOG 261 and PL BR 403 or equivalents. Highly recommended: introductory course in plant pathology and/or entomology. Offered alternate years or weeks. P. Griffiths.

**PL BR 622(6220) Seminar**

Fall or spring. 1 credit. S-U grades only. Staff, graduate students, and visitors.

**PL BR 624(6240) Quantitative Trait Loci Analysis (also BIOG/PL PA 624(6240))**

Fall. 1 credit. Prerequisites: introductory statistics and BIOG 281 or permission of instructor. S-U or letter grades. Offered alternate years; not offered 2006-2007; next offered 2007-2008. K. Lee. For description, see BIOG 624.

**PL BR 650(6500) Special Problems in Research and Teaching**

Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising research or teaching. Staff.

**PL BR 694(6940) Special Topics in Plant Breeding**

Fall or spring. 4 credits max. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL BR 716(7160) Perspectives in Plant Breeding**

Spring. 3 credits. Prerequisites: BIOG 281 and equivalent or permission of instructor. S-U grades optional. W. Pawlowski. Advanced survey of genetics in higher plants including selected topics in Mendelian genetics, chromosome biology (cytogenetics), and epigenetics. The development of critical analytical skills is stressed through case studies, in-class exercises, and the course project.

**PL BR 717(7170) Perspectives in Plant Breeding Strategies**

Spring. 3 credits. Prerequisite: PL BR 403. S-U grades optional. Offered alternate odd years. M. E. Sorrells. Emphasizes critical discussion and evaluation of selected benchmark papers and current literature. Reviews and discusses conventional and molecular selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops.
Requires extensive outside reading. Grades are based on four papers demonstrating creative thinking and analysis of plant breeding concepts.

**PL BR 717(7170) Quantitative Genetics in Plant Breeding**  
Spring. 3 credits. Prerequisites: PL BR 403 and BTRY 601 or equivalent. S-U grades optional. Offered even years; not offered 2006–2007; next offered 2007–2008.  
D. R. Vanis.

Discussion of quantitative genetics for more effective plant breeding. Specific topics include population genetics, linkage, components of variance (estimated from various mating designs); heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

**PL BR 800(8900) Master's-Level Thesis Research**  
Fall or spring. Variable credit. Prerequisite: Ph.D. students only before "A" exam has been passed; permission of instructor. S-U grades optional. Graduate faculty.  
For students working on a master's thesis.

**PL BR 900(9900) Graduate-Level Dissertation**  
Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.

**PL BR 901(9910) Doctoral-Level Dissertation Research**  
Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.  
For students admitted to candidacy after "A" exam has been passed.

**PL PA 110(1100) Symbiotic Associations in Nature**  
Spring. 3 credits. E. B. Nelson.

This course is a Freshman Writing Seminar where students will explore symbiotic biology and the nature of science and written scientific communication through discussions of a broad range of symbiotic relationships. Students will be exposed to a broad range of writing styles in scientific communication. Students will gain experience writing in a number of styles common in the biological sciences. Additionally, students will learn to use evidentiary and inferential reasoning, articulate their thoughts and ideas through writing, make logical and systematic arguments, learn to revise their own writing and effectively critique others' writing content, organization, and style.

**PL PA 201(2010) Magical Mushrooms, Mischievous Molds**  
Spring. 2 credits. S-U grades optional.  
G. W. Hudler.

Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasizes the historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.

**PL PA 301(3010) Plant Diseases and Disease Management**  
Fall. 4 credits. Prerequisite: one year of biology. M. G. Milgroom.  
Introduction to plant diseases, their diagnosis, and their management. Topics include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control.

**PL PA 308(3080) Fungi**  
Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PL PA 319. K. T. Hodge.  
A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, yeasts, yeast-like, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and in human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.

**PL PA 319(3190) Mushrooms of Field and Forest**  
Fall, weeks 1–8. 2 credits. Letter grades only. K. T. Hodge.  
Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoons lab field trips. During the evening labs, students use keys and microscopes to identify mushrooms they've collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

**PL PA 384(3940) Circadian Rhythms**  
Fall. 4 credits. Limited to 30 students.  
G. W. Hudler.

Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

**PL PA 409(4090) Principles of Virology**  
Fall. 3 credits. Prerequisites: BIOM 290, 291 or permission of instructor. Recommended: BIOM 330–332, 343.  
Letter grades only. G. R. Whitaker and S. G. Lazarowitz.

For description, see VETMI 409.

**PL PA 411(4110) Plant Disease Diagnosis**  
Fall. 3 credits. Limited to 18 students.  
Prerequisites: PL PA 301 or equivalent and permission of instructor. Next offered 2007–2008. Staff.

Teaches a method of diagnosing plant diseases caused by infectious and noninfectious agents with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.

**PL PA 419(4190) Agricultural Application of Plant Disease Concepts**  
Fall. 2 credits. Eight sessions. Prerequisite: PL PA 301 and permission of instructor. S-U or letter grades. H. S. Aldwinckle and J. P. Nyrop.

Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable field crops, a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. This course is taught at Geneva. Free transportation available.

**PL PA 420(4200) Grape Pest Management (also ENTOM 420(4200))**  
Fall. 3 credits. Prerequisite: PL PA 301, ENTOM 241, or permission of instructors. S-U or letter grades. W. Wilcox, G. English-Loeb, and A. Landers.

The course emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratories emphasize field illustrations of classroom concepts. Team taught by a plant pathologist, entomologist, and agricultural engineer.

**PL PA 443(4430) Pathology and Entomology of Trees and Shrubs (also ENTOM 443(4430))**  
Fall. 4 credits. Limited to 30 students.  
Prerequisites: PL PA 301 or equivalent, ENTOM 212 or equivalent. Offered even years. G. W. Hudler and T. Weston.

For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.

**PL PA 448(4480) Evolution and Ecology of Symbiotic Associations**  
Spring. 2 credits. BIO G 101-102 or equivalent. Letter grades only. T. Pawlowska.

Symbiosis, a living together of two organisms in close associations, encompasses a spectrum of interactions ranging from mutually detrimental to mutually beneficial. We are going to focus on a selection of ecologically important symbiotic interactions, consider their evolutionary origins, and explore conditions that would favor their establishment and maintenance.
PL PA 462.1(4620.1) Molecular Plant-Pathogen Interactions I and II (also BIOL 482.1)

Spring. 1 credit. Jan. 22-Feb. 16 (12 lec). Prerequisites: BIOGD 281, BIOMB 350 or 331, and BIOL 483.1; A. R. Collmer and B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years).

Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

PL PA 462.2(4620.2) Plant Biotechnology (also BIOL 482.2, PL BR 482)

Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides; produce useful products; or have improved nutritional and food-processing characteristics. Discusses regulatory and social issues relating to plant biotechnology.

PL PA 463(4630) Plant Molecular Biology 1

Fall. 1-5 credits. Prerequisite: BIOGD 281, BIOMB 350 or 331.

Sec 01 Concepts and Techniques in Plant Molecular Biology (also BIO PL/PL BR 483.1)

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences, and serves as a prerequisite to other modules in the BIOPL 653 (fall) and BIOPL 652 (spring) series. The course is divided into two sections: (1) gene discovery, which covers genetic, molecular, and genomics approaches to the isolation of plant genes; and (2) gene characterization, which covers DNA sequencing, DNA and RNA blotting, use of gene databases, and various approaches to producing transgenic plants. Emphasis is on understanding the approach and tools used, not the actual protocols used, but this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 497(4970) Independent Study

Fall or spring. 1-5 credits. S-U grades only. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 498(4980) Teaching Experience

Fall or spring. 1-5 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PL PA 499(4990) Undergraduate Research

Fall or spring. 1-5 credits. S-U grades optional. Students must register using independent study form (available in 140 Roberts Hall).

Undergraduate teaching assistant in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 601(6010) Concepts of Plant Pathology

Spring. 3 credits. Prerequisites: PL PA 301 or equivalent. S-U grades optional. T. Pawlowska.

Concepts in plant-pathogen relationships, unity of molecular and populaiton biology approaches, with emphases on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PL PA 602(6020) Biology of Plant Pathogens

Spring. 3 credits. Prerequisite: PL PA 301. Recommended: PL PA 601 as corequisite. Staff.

Biological and ecology of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Model plant pathogens are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PL PA 601 to provide students with a comprehensive understanding of pathogen-host interactions at all levels from molecular to ecological. Laboratory periods are used for hands-on demonstration of pathogen diagnosis and manipulation or to discuss current literature relevant to lecture topics.

PL PA 606(6060) Molecular Plant Virology (also BIOM 650(6500))

Spring. 7 weeks, first half of semester. 1 credit. Prerequisites: BIOM 409 or equivalent or permission of instructor. S-U grades optional. Offered odd years. S. G. Lazarowitz.

Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Topics include virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

PL PA 608(6080) Genomics of Bacterium-Host Interactions (also BIOM 608(6080))

Fall. second half of semester. 1 credit. Prerequisite: BIOM 290 or equivalent or permission of instructor. S-U grades optional. Offered even years. A. R. Collmer and S. C. Winans.

Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artenis tools, the pathogen V. jirovecii, Pythium, Fusarium, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium meliloti.

PL PA 624(6240) Quantitative Trait Loci Analysis (also BIOGD/PL BR 624(6240))

Fall. 1 credit. Limited to 20 students. Prerequisite: introductory statistics and genetics or permission of instructor. S-U grades optional. K. Lee.

The combination of genomic sequences, new molecular marker technologies and sophisticated mapping algorithms has made it possible to use natural variation in combination with quantitative genetic techniques to dissect complex traits down to single loci. In this modular QTL analysis course, students learn basic principles of statistical inference and quantitative genetics for QTL analysis. Students also learn how to use the statistical and QTL analysis programs to do their own QTL analysis work independently.

PL PA 625(6250) Evolution and Ecology of Mutualisms

Fall. 1 credit. S-U grades only. T. Pawlowska.

Mutualisms are mutually beneficial interactions between species. Despite their ubiquity, the understanding of evolution and ecology of
mutualisms is surprisingly limited. We are going to explore the conceptual framework explaining the establishment and maintenance of mutualisms and examine whether the empirical findings from various interactions support the theoretical predictions.

**PL PA 639/6380** Filamentous Fungal Genomics and Development (also BIOG 638/6380)  
Spring, last four weeks of semester. 1 credit. Prerequisite: BIOG 281 or equivalent. S-U grades optional. Offered odd years. B. G. Turgeon.

Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as *Cochliobolus heterosporus*, *Fusarium graminearum*, *Magnaporthe grisea*, and *Ustilago maydis* and from well known genetic models such as *Aspergillus nidulans* and *Neurospora crassa*.

**PL PA 642/652(6420)/6520** Special Topics in Plant Pathology  
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Staff.

Weekly discussions of current topics in plant pathology and plant protection. Emphasizes current research in areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

**PL PA 649/6440** Special Topics in Plant Pathology  
Fall or spring. 1 credit. Required for all plant pathology majors. S-U grades only. B. G. Turgeon.

Fall or spring. 4 credits max. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**PL PA 788/7880** Research in Molecular Plant Pathology  
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer.

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

**PL PA 797(7970)** Special Topics  
Fall or spring. 1-5 credits. S-U grades optional. Staff. Opportunity for independent study of a special topic.

**PL PA 798(7980)** Graduate Teaching Experience  
Fall or spring. 1-5 credits. S-U grades. Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

**PL PA 800(8900)** Master's-Level Thesis Research  
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of advisor. Graduate faculty.

For students working on a master's degree.

**PL PA 900(9900)** Graduate-Level Thesis Research  
Fall or spring. Credit TBA. S-U grades optional. Prerequisite: permission of advisor. Graduate faculty.

For Ph.D. students who have not passed "A" exam.

ADMINISTRATION
Mohsen Mostafavi, dean
W. Stanley Taft, associate dean
Peter Turner, assistant dean of administration and finance
Arthur Ovaska, department head, department of architecture
Buzz Spector, chair, department of art
Kenneth M. Reardon, chair, department of city and regional planning
Deborah Durnam, director, admissions
Carol Cooke, director, alumni affairs and development
M. Susan Lewis, director, career services
Leon Lawrence, director, multicultural affairs
Margaret N. Webster, director, visual resources facility
Jayne A. LeGro, registrar

FACULTY ADVISORS
Architecture students are assigned faculty advisors and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty advisor for the first year. After the first year, students may select their advisors. Students are required to have an advisor throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisors. All students in the college are invited to share concerns and seek advice from the volunteer student advisors (EARS) at any time.

DEGREE PROGRAMS
Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university.

The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES
The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall.

The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses.

All users of darkrooms pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 177,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,300 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, historical architecture, and art. The collection now includes approximately 450,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has an administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program
The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th-century Palazzo Lazzaroni in the center of the eternal city near such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, urban and regional planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an
understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program office, 149 East Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. A student's work may be selected by the college and may not continue studies in it. Certain works may be selected by the college for retention for academic purposes.

Ownership of Student Work

Ownership of Student Work

Ownership of Student Work

Ownership of Student Work

Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Ollie Tainter Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Scholastic Standards

Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average of at least 2.0 (C) for graduation. It is necessary to have a cumulative grade point average of at least 2.0 (C) for graduation.

ARCHITECTURE COURSES
### Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the bachelor of architecture, the master of architecture, and the doctor of architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Master's degree programs may consist of a preprofessional undergraduate degree and a professional graduate degree, which, when earned sequentially, constitute an accredited professional education. The preprofessional degree, however, is not, by itself, recognized as an accredited degree.

### Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two semesters of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, art, city and regional planning and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

### Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the post-professional master of architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 601–602 or 603–604 for ARCH 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601–602 or 603–604 and other advanced courses taken in excess of distribution requirements for the bachelor of architecture degree.

**Total Credits**: 12

**Free**

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.

**Total Credits**: 176

**Architecture Concentrations for Majors**

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of any concentration earned within the university. Architecture Concentrations for Majors taken outside the College of Architecture, Art, and Planning, and set by those departments) on the transcripts of any concentration earned within the university.

**Alternative Programs**

**Bachelor of Fine Arts**

After completing the first four years of requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a bachelor of science degree conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint students with opportunities, issues, and methods in the field of architecture.

**Dual-Degree Options**

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially.

Students who have transferred into the B. Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program available in the third, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student

**Curriculum**

A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Advisors and students together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 300-level courses in architectural history. ARCH 380 through 399
2. 12 credits in 600-level architectural history seminars: ARCH 461 through 499, or ARCH 499, offered for honors candidates only
3. One 300-, 400-, or 600-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's advisor
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honors Program**

Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a master of arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

**Transfer Students**

Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M. Arch. I program. Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer semesters, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint students with opportunities, issues, and methods in the field of architecture.

**Procedure**

Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must complete an application by November 15 for spring admission or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.
Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102(1102) Design II
Spring. 6 credits. Prerequisite: department students; ARCH 101 and 151. Staff. Continuation of ARCH 101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202(2101-2102) Design III and IV
Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 101, ARCH 201, ARCH 102, and 152; for ARCH 202, ARCH 201. Corequisites: ARCH 231-232. Staff.

ARCH 301-302(3101-3102) Design V and VI
Fall and spring. 6 credits each semester. Prerequisites: department students; for ARCH 301, ARCH 202, for 302, ARCH 301. Staff.

ARCH 401-402(4101-4102) Design VII and VIII
Fall and spring. 6 credits each semester. Prerequisite: department students; for ARCH 401, ARCH 302 and 362; for 402, ARCH 401. Staff. Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 501(5101) Design IX
Fall or spring. 6 credits. Prerequisite: department students. ARCH 402. Corequisite: ARCH 510. Staff. Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 502(5902) Design X—Thesis
Fall or spring. 8 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to Overlap Program are exempt from thesis requirement. Prerequisite: ARCH 501 and 510. Staff.

ARCH 601-602(6101-6102) Special Program in Architectural Design
Fall and spring. 9 credits each semester. Prerequisite: acceptance into Overlap Program. Registration by petition only. Staff.

ARCH 603-604(6103-6104) Special Program in Urban Design
Fall and spring. 9 credits each semester. Prerequisite: acceptance into Overlap Program. Registration by petition only. Staff.

Graduate Courses
ARCH 511-512(5111-5112) Core Design Studios
Fall and spring. 6 credits. Prerequisites: M. Arch. I students; for ARCH 512, ARCH 511 and 551. Staff. Two-semester sequence in which fundamental design skills are taught. The core studios integrate a broad range of architectural territories and students acquire a command of techniques of design and representation through a number of complex architectural problems.

ARCH 513-516(5113-5116) Vertical Design Studios
Fall and spring. 6 credits. Prerequisites: M. Arch. I students; ARCH 513, ARCH 512 and 552; ARCH 513-516 must be taken in sequence. Staff. Vertical studios investigate a variety of programs and project types, from individual buildings to urban districts. Students examine topics of architectural production—such as building technology, landscape, urbanism, history, and theory—and their roles in analysis and design.

ARCH 701-702(7101-7102) Problems in Architectural Design
Fall and spring. 9 credits each semester. Staff. Basic first-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 703-704(7103-7104) Problems in Urban Design
Fall and spring. 9 credits each semester. Staff. Basic first-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 801(8901) Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701-702. Staff. Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 802(8902) Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703-704. Staff. Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 811(8911) Graduate Thesis Proseminar
Fall. 3 credits. Prerequisites: M. Arch. I students; ARCH 519. Staff. First half of the yearlong thesis in architecture. Covers research methods and other subjects students employ in the development of their individual thesis topics. Emphasizes learning different types of theses and developing specific programming, design, and site definition techniques.

ARCH 812(8912) Independent Design Thesis
Spring. 9 credits. Prerequisites: M. Arch. I students; ARCH 516. Staff. The master of architecture thesis is an independent design project on a topic selected by the student and researched in ARCH 811. The student develops a thesis statement outlining an area of study or a problem that has consequences for contemporary architectural production and produces a design project that examines it. Marking the transition between the academic and professional worlds, the thesis project is an opportunity for each student to define an individual position with regard to a specific aspect of architectural practice.
Elective Design Courses
ARCH 103-104(1103-1104) Elective Design Studio
Fall, spring. 6 credits. For students who are not architecture majors at Cornell. Prerequisite: permission of department office. All students are assigned to a class of appropriate level. Staff. Non-architecture majors may enroll in sec 01; arch technology credit, sec 02; and in-college elective credit, sec 03. Prerequisite: permission of instructor. Not offered every year. F. Davis.

ARCH 200, 300, 400, 500(2100, 3100, 4100, 5100) Elective Design Studio
Fall, spring, or summer. 6 credits. For students who are not architecture majors or non-architecture students; for ARCH 103, permission of instructor; for ARCH 104, ARCH 103 and permission of instructor. Staff.

ARCH 503(5103) Design IXa
Fall and spring. 6 credits. Limited to department students. Prerequisite: ARCH 403 and passing, but nonadvancing, grade in ARCH 501. Structured studio for those needing to re-take ARCH 501. The course operates within the fourth-year design studios.

ARCH 504(5104) Design Xa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 503 and passing, but nonadvancing, grade in ARCH 502. A structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars
ARCH 110(1110) Introduction to Architecture: Design Studio
Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111(1111) Concentration in Architecture: Design Studio
Summer only. 3 credits. Subject to enrollment. Prerequisite: non-architecture students are not offered every year. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.

ARCH 303(3103) Special Problems in Architectural Design
Fall or spring. Variable credit; max. 3. Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 306(3106) Praxis: Community Design Workshop (also ARCH 606(6106))
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.

ARCH 313(3113) Furniture Design
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn arch visual representation credit must enroll in sec 01; arch technology credit, sec 02; and in-college elective credit, sec 03. Prerequisite: permission of instructor. Not offered every year. G. Hascup. Explores the history, design, and materiality of furniture. Analyses of materials and joinery-construction systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 317(3117) Contemporary Italian Culture
Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 510(5110) Thesis Prospectus Seminar
Fall and spring. 2 credits. Prerequisite: ARCH 402. Staff. Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 521(5201) Professional Practice
Fall or spring. 3 credits. Staff. Examination of organizational and management theories and practices for delivering professional design services. Includes a historical overview of the profession and a review of the architect's responsibilities from the pre-contract phase through construction. Application of computer technology in preparing specifications.

ARCH 522(5202) Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 521. Staff. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 605(6109) Special Problems in Design
Fall and spring. Variable credit; max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff. Independent study.

ARCH 610(6110) Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in architecture and urban design. S-U grades optional. Not offered every year. Staff. Issues in architectural and urban design.

ARCH 611-612(6111-6112) Urban Housing Developments
Fall, 6 credits. Intended for, but not limited to, graduate students in architecture and urban design. S-U grades optional. Not offered every year. Staff. Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 130(1300) An Introduction to Architecture: Lectures
Fall. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S-U grades optional. Not offered every year. Staff. Survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

ARCH 131(1301) An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 131 is not a prerequisite for ARCH 132. Staff. Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous homes and cultures as well as from contemporary Cornell campus.

ARCH 231(2310) Architectural Analysis I
Fall. 2 credits. Corequisite: for architecture students, ARCH 201. Staff. Introduction to analysis of the object of study in the interest of broadening one's
Architectural thinking is investigated through a cross-section of contemporary theoretical texts and an analysis of built projects, unbuilt propositions, drawings, and other forms of representation.

ARCH 634(6304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334[3304])

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.

Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 337(3307) Special Investigations in the Theory of Architecture I

Fall or spring. Variable credit. max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338(3308) Special Topics in the Theory of Architecture I

Fall or spring. 3 credits. Prerequisite: permission of instructor and approved independent study form. Not offered every year. Staff. Topic TBA before preregistration.

Spring. 3 credits. Not offered every year. J. Minot.

Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

[ARCH 431(4301) Theory of Architecture

Not offered 2006-2007.]

ARCH 432(4302) Theory of Architecture

Spring. 3 credits. Prerequisite: third-year standing. Not offered every year. Staff. Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings, and social housing types, site planning, and transportation.

ARCH 435(4305) Architecture and Representation

Fall. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 231-232. Not offered every year. Staff. Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 531-532(5301-5302) Architectural Analysis I and II

Fall and spring. 3 credits. Prerequisites: for ARCH 532, 531; M. Arch. I students; or permission of instructor. Staff. Introduction to a wide range of questions that inform the discipline of architecture.

Architectural thinking is investigated through a cross-section of contemporary theoretical texts and an analysis of built projects, unbuilt propositions, drawings, and other forms of representation.

ARCH 634(6304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334[3304])

Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.

For description, see ARCH 334.

ARCH 635(6305) Theory and Criticism in Architecture

Spring. 3 credits. Prerequisite: permission of instructor and approved independent study form. Not offered every year. Staff. Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 637(6309) Special Investigations in the Theory of Architecture II

Fall or spring. Variable credit. max. 4. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 638(6308) Special Topics in the Theory of Architecture II

Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic TBA before preregistration.

Architecture, Culture, and Society

ARCH 342(3402) Architecture as a Cultural System (also ARCH 542[5402])

Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 by permission of instructor. B MacDougall.

What have been the major issues in the theory and practice of architectural design throughout time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 349(3409) Undergraduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit. max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 441-442(4408-4418) Special Topics in Architecture, Culture, and Society

Fall and spring. 3 credits each semester. Prerequisite: permission of instructor. B MacDougall.

ARCH 445(4405) Architecture and the Mythic Imagination

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. B MacDougall.

ARCH 447(4407) Architectural Design and the Utopian Tradition

Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. Staff.

ARCH 542(5402) Architecture as a Cultural System

Spring. 3 credits. Can substitute ARCH 445, 446, 447, or 448 by permission of instructor. B MacDougall.

For description, see ARCH 342.

CLASS 647-648(6401-6402) Architecture in its Cultural Context I and II

647, fall; 648, spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered every year. B MacDougall.

ARCH 649(6409) Graduate Investigations in Architecture, Culture, and Society

Fall or spring. Variable credit. max. 4. Prerequisite: permission of instructor and approved independent study form. B. MacDougall.

Independent study.

Visual Studies

ARCH 151(1501) Drawing I: Freehand Drawing

Fall. 2 credits. Staff. Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 152(1502) Drawing II: Drawing Systems

Spring. 2 credits. Prerequisite: ARCH 151 or permission of instructor. Staff. Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, parallel projection, shade and shadow, and perspective.

ARCH 253(2503) Drawing III: Digital Media in Architecture

Fall or spring. 2 credits. Prerequisite: ARCH 152 or permission of instructor. Letter grades only. Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

[ARCH 450(4530) Architectural Publications

Not offered 2006-2007.]

ARCH 458(4508) Special Investigations in Visual Representation

Fall or spring. Variable credit. max. 3. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.
ARCH 459(4509) Special Topics in Visual Representation I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics TBA before preregistration.

ARCH 551-552(5511-5512) Techniques in Visual Representation I and II
Fall and spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff. These courses explore the practice of drawing through analog and digital methods. They serve as an introduction to visualization and representation skills necessary to the development of architectural thought. Students learn a broad range of techniques and tools in relation to one another.

ARCH 658(6509) Special Investigations in Visual Representation II
Fall or spring. Variable credit; max. 4. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 659(6508) Special Topics in Visual Architectural Science and Technology
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics TBA before preregistration.

ARCHITECTURE

Structures

ARCH 263(2603) Structural Concepts
Fall. 4 credits. Prerequisite: MATH 111 or approved equivalent. M. Cruvellier. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264(2604) Structural Elements
Spring. 3 credits. Prerequisite: ARCH 263. J. Ochshorn or staff. Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 363(3603) Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 264. M. Cruvellier. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 364(3604) Vertigo Structures (also ARCH 664(6604))
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

ARCH 365(3605) Bridge Design (also ARCH 665(6605))
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. M. Cruvellier. The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 366(3606) The Tectonic Articulation of Structure (also ARCH 666(6606))
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. J. Ochshorn. Through a series of readings, exercises, and case studies, students investigate ways in which structural forms can be expressed in works of architecture. Both the structural basis of form as well as the formal articulation of structure are considered. Course objectives include: gaining insight into the behavior of structure; investigating the cultural meaning of structure and technology; and exploring the interaction of structure and form.

ARCH 463(4603) Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 363 or permission of instructor. Not offered every year. Staff. Topics TBA before preregistration.

ARCH 473(4609) Special Investigations in Structures
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 563(5603) Structural Concepts
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff. For description, see ARCH 263.

ARCH 564(5604) Structural Elements
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff. For description, see ARCH 264.

ARCH 663(6603) Structural Systems
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff. For description, see ARCH 363.

ARCH 664(6604) Vertigo Structures (also ARCH 364(3604))
Fall or spring. 3 credits. Prerequisite: ARCH 563 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier. For description, see ARCH 364.

ARCH 665(6605) Bridge Design (also ARCH 365(3605))
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. Staff. For description, see ARCH 365.

ARCH 666(6606) The Tectonic Articulation of Structure (also ARCH 366(3606))
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Not offered every year. J. Ochshorn. For description, see ARCH 366.

Construction

ARCH 262(2602) Building Technology, Materials, and Methods
Fall. 3 credits. J. Ochshorn. Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 367(3607) Working Drawings (also ARCH 667(6607))
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 465(4605) Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 262 or permission of instructor. Not offered every year. Staff. Topics TBA before preregistration.

ARCH 475(4604) Special Investigations in Construction
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 562(5602) Building Technology, Materials, and Methods
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff. For description, see ARCH 262.

ARCH 667(6607) Working Drawings (also ARCH 367(3607))
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation

ARCH 261(2601) Environmental Systems I—Site Planning
Spring. 3 credits. Staff. Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory, including grading and drainage. Foundations, surfacing, and construction.

ARCH 361(3601) Environmental Systems II—Thermal Environmental Systems
Fall. 3 credits. Prerequisite: ARCH 261. Corequisite: ARCH 301. R grade only. Staff. The first semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn how to shape the form of a building to respond to climate and the needs of an occupant. In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVAC) equipment, vertical transportation, communication, security, and fire protection systems.
ARCH 361(3601) Environmental Systems III—Building Systems Integration
Spring. 3 credits. Prerequisites: ARCH 262, 263, 301 and 361. Corequisite: ARCH 302. Letter grades only. Staff.
The second half of this yearlong course addresses the design of the visual and acoustical environments of buildings. Beginning with the basics of vision, fallowed by the concept and practice of daylighting, electric lighting sources, and human health, this course will provide students with a working understanding of light and sound as architectural media.
The objective of this yearlong course is to engage students to produce a comprehensive architectural project based on a building program and site. To do this, students will be required to select a design from a prior design studio project to develop in this course. In the comprehensive design project, students will be required to demonstrate an understanding of structural systems, environmental systems, building code provisions, wall sections, building assemblies and the basic principles of sustainability.
ARCH 461(4601) Ecological Literacy and Design (also DEA 422(4220))
Spring. 3 credits. Letter grades only. Cost of field trips: approx. $25. J. Elliott. Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://instruct1.cit.cornell.edu/courses/dea422/. ARCH.
ARCH 464(4619) Special Topics in Environmental Systems and Conservation
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff. Topics announced before preregistration.
ARCH 474(4618) Special Investigations in Environmental Systems and Conservation
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.
ARCH 661(6601) Environmental Systems II—Thermal Environmental Systems
Fall. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. R grade only. Staff. For description, see ARCH 361.
ARCH 662(6602) Environmental Systems III—Building Systems Integration
Spring. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. R grade only. Staff. For description, see ARCH 362.
Computer Applications
ARCH 374(3704) Computer Graphics I (also COM S 465)
Fall. 4 credits. Prerequisite: COM S/ENGRD 211. Staff. For description, see COM S 465.
ARCH 470(4708) Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff. Topics TBA before preregistration.
ARCH 479(4709) Advanced Computer Graphics: Virtual Reality (also ARCH 679(6709))
Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course, or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson. Explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course examines the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second half explores the uses of information technologies to model and simulate the creative design process. These explorations include developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.
Graduate Courses
ARCH 679(6709) Advanced Computer Graphics: Virtual Reality (also ARCH 479)
Fall. 3 credits. Prerequisite: architectural science graduate students. D. Greenberg. Starting with the basics of vision, followed by the practice of design through participatory approaches to learning. Visit http://instruct1.cit.cornell.edu/courses/dea422/. ARCH.
ARCH 761-762(7701-7702) Architectural Science Laboratory
761, fall; 762, spring. 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg. Projects, exercises, and research in the architectural sciences.
ARCH 763-764(7903-7904) Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff. Independent study.
Architectural History
The history of the built domain is an integral part of all aspects of the architecture curriculum. It is a tool in architectural production, how it has been mediated by various cinematic genres including film, television, and documentaries. Consider how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is inhabited in the historical development of architecture and urbanism.
Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky. Examines the complex relationship between the built environment, the construction and
definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World’s Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384(3804) The Urban Landscape of Renaissance Rome: 1450 to 1600
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Lasansky. Exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity: the role of the Vatican with its high population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and the unique topography and natural resources of the city’s location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 385(3805) Magnificent Utility—Architecture and the Arts of Persuasion

ARCH 386(3806) The Architecture of India and Its Interpretation
Spring. 3 credits. Not offered every year. B. MacDougall. Surveys the architectural record of ancient and medieval India with an emphasis on stupas and temple ruins. Attention to European efforts to write a Western-style architectural history of India and to the British fascination with explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Ferguson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 387(3807) 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods. Focuses on 19th-century cities as settings for modernism and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities. Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment, painting, photography, and film are examined.

ARCH 388(3808) Modernism

ARCH 389(3809) Architecture, Revolution, and Tradition

ARCH 390(3810) American Architecture and Building I (also AM ST 390J3810)
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods. Review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 391(3811) American Architecture and Building II (also AM ST 391J3811)
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods. Continuation of ARCH 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392(3812) Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. M. Woods. Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium’s birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 393(3813) The Cumulative City

ARCH 395(3815) History of the Present—Contemporary Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: ARCH 181-182 or permission of instructor. C. F. Otto. Theory and practice in architecture and urbanism are investigated from later Modernism to contemporary positions. Built work, theoretical texts and graphics, and the nature of design practice in locations worldwide (such as the United States and the Pacific Rim) raise issues of globalization and the specificity of place and cultural identity. In engaging the immediate past using methods of cultural and design history, the course problematizes the relationship (and relevance) of history to architectural practice and experience.

ARCH 396(3816) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 397(3817) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 398(3818) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 399(3819) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181-182 or permission of instructor. Not offered every year. Staff. Topics TBA.

Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 682 to 699 TBA before the start of the semester.

ARCH 680(6800) Seminar in Historiography
Fall. 4 credits. Requirement for first- and second-year graduate students in History of Architecture and Urbanism Program. Prerequisite: permission of instructor. Staff. Examines historiographic and methodological issues in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

[ARCH 686(6806) Seminar in 17th- and 18th-Century Architecture and Urbanism
Not offered 2006-2007.]

[ARCH 688(6808) Seminar in 20th-Century Architecture and Urbanism
Not offered 2006-2007.]

[ARCH 690(6810) Seminar in American Architecture, Building, and Urbanism
Not offered 2006-2007.]

[ARCH 692(6812) Seminar in 19th-Century Architecture, Building, and Urbanism
Not offered 2006-2007.]

ARCH 699(6814) Seminar in Theory and Practice in Architecture and Urbanism
Spring. 4 credits. Corequisite: ARCH 680 and permission of instructor. Staff. Examines theoretical and methodological issues in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.
ARCH 696(6816) Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 697(6817) Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 698(6818) Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 699(6819) Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff. Independent study for undergraduate students.

ARCH 499(4001) Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff.

ARCH 799(7809) Graduate Independent Study in the History and Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Prerequisite: independent study for graduate students only.

ARCH 899(8921) M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Staff. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999(9901) Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Staff. Independent study for the doctoral degree.

ART
B. Spector, chair (224 Tjaden Hall, 255-3558); R. Bertoia, J. Lacey, T. McGrain, E. Meyer; G. Page, director of graduate studies; B. Perlis, W. S. Taft, and visiting artists and critics.

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art, and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it to be an excellent preparation for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives. All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an advisor in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution
The B.F.A. degree requires 130 academic credits. A minimum of 58 are taken in the Department of Art.

Specific Course Requirements
By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration
Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, photography, or electronic imaging and printmaking (26 credits each). Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in electronic imaging and printmaking)
The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (senior thesis)
Sculpture: ART 141, 241, 341, 441, 442 (senior thesis)
Photography: ART 161, 261, 263, 264, 265, 361 (1 of 3); 461, 462 (senior thesis)
Electronic Imaging: ART 171, 271, 273 (1 of 2), 373, 374 (1 of 2), 471, 472 (senior thesis)

Dual Concentration
Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration  Total Credits
Painting: ART 121, 221, 321, 421, 422 23
Sculpture: ART 141, 241, 341, 441, 442 23
Photography: ART 151, 251, 252, 253 (1 of 3), 351, 451, 452 (senior thesis)
Electronic Imaging: ART 171, 271, 273 (1 of 2), 373, 374 (1 of 2), 471, 472 (senior thesis)

Second Area of Concentration  Total Credits
Drawing: ART 151, 152, 251, 252, independent study 15
Painting: ART 121, 221, 321, 322 15
History of Art in Rome: 14-15

Contemporary Italian Film

Sculpture: ART 141, 241, 341, 342

The combined media concentration enables

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance.

Students must file an approved “area of concentration” form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 200 or 300 level, a minimum of two “out of college” studio electives (OCE studio) of 3-4 credits each, ART 481 Pre-Thesis in Combined Media and ART 482 Thesis in Combined Media.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty advisor and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The program requires that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome program.

Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

**Students may add by approved petition to take 19 credits in Rome.

18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, city and regional planning, and the Independent Studio in Art.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

Fulfills 300-level theory and criticism requirement.

Out-of-College Requirements

A minimum of 57 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include: physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each), and humanities and expressive arts (minimum of three courses, of at least 5 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

Three electives: any art history elective at the 300 level or above or any architectural history elective. (Note: Offerings may vary each semester. Students are encouraged to consult with their advisor. Students may petition to substitute courses of similar content.) The university requirement of two semesters in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two semesters of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two semesters.

Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

For those students matriculating in fall of 2006:

Students are required to take ART 111 Introductory Art Seminar; ART 121 Introductory Painting; or ART 141 Introductory Sculpture; Art History elective; and a first-year writing seminar during the fall semester of the freshman year. ART 131/132/135 Introductory Printmaking; Art History elective; and an additional first-year writing seminar must be taken during the spring semester of the freshman year. Two 300-level courses in theory and criticism must be taken sometime between the sophomore and senior years.

Courses that will fulfill the theory and criticism requirement (Note: Offerings may vary from year to year. Check the current course catalog):

Students are required to take at least 12

access to studios and labs.
in graduate seminar (ART 611, 612, 623, 624). provided individual studios and have 24-hour

The ratio of graduate faculty to students allows an exceptional opportunity for introductory or advanced courses in any field

The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar (ART 611, 612, 623, 624).

Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

Guidelines for Independent Study

A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing.

Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

Courses in Theory and Criticism

ART 111(1101) Introductory Art Seminar: Fall. 1 credit. Prerequisite: B.F.A. students. S-U grades only. Staff.

Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

ART 170(1700) Visual Imaging in the Electronic Age: Fall or spring. 3 credits. D. Greenberg.

Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and composing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

Related Courses

ART 209(2009) Site-Specific Processes: Fall or spring. 3 credits. Prerequisite: ART 251 or permission of instructor. Staff.

This studio course investigates materials, methods, and processes specific to Rome. The Italian experience and specifically the city of Rome is used to engage in artistic practices not readily available on the Ithaca campus. The methods to be studied in workshop settings could include fresco painting, egg tempera, watercolor, paper making, wood carving, stone carving, mosaics, and ceramics. The final project involves the use of one or more processes presented in a site-specific installation.

ART 214(2104) Art and the Multicultural Experience: Fall. 3 credits. R. Dalton.

Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 311(3101) Issues in Contemporary Art: Fall or spring. Lab fee: $25. Staff.

Students will be exposed to the ideas, issues, and methods of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course combines lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and in encouraging the understanding of the connections between the conceptual and the technical in art making.

ART 312(3102) Modern Art in Italy: Fall or spring. 3 credits. Fulfills 300-level theory and criticism requirement for fine arts majors. Prerequisite: Rome Program participants. Staff.

Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic, and museum, and art collecting.

Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 419(4109) Independent Study/Supervised Readings in Art: Fall, spring, or summer. 4 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff.

Independent research and reading allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. A student develops a plan of study to pursue under the supervision of a faculty member.

ART 570(5700) Theory Seminar: Fall and spring. 4 credits. Priority given to AAP and Art History graduate students. B. Spector and M. Fernandez.

Introduces students in art, art history, and architecture to diverse theoretical texts of...
relevance to the three fields. Readings include classic texts in post-structural theory and more recent writings in new areas of theory and artistic practice, including digital art, cyber-feminism, globalization, museums and museology, architecture in/as visual space, biotechnology and artificial life, as well as issues in cognitive science and human-computer interaction centering on space and embodiment. Occasionally this seminar focuses on a single topic of convergence for these diverse areas.

**ART 611(6101) Professional Skills for the Visual Artist**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
This seminar helps fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

**ART 612(6102) Recent Practice in the Visual Arts**
Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as "Documenta," "La Biennale di Venezia," and the "Whitney Biennial" are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

**ART 613(6103) Online Publication for the Visual Artist**
Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

**ART 614(6104) Contemporary Theory in the Visual Arts**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 624(6204) Current Criticism in the Visual Arts**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

**Studio Courses in Painting**
Fees for painting courses (121, 221, 321, 322, 421, 422, 429): $40

**ART 121(1201) Introductory Painting**
Fall, spring, or summer. 3 credits. Staff. Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

**ART 221(2201) Painting II**
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. Staff. Continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

**ART 321(3201) Painting III**
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. Staff. Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encrust, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

**ART 322(3202) Painting IV**
Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor. Staff. Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

**ART 421(4201) Pre-Thesis in Painting**
Fall or spring. 6 credits. Prerequisite: ART 322. Staff. Advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

**ART 422(4202) Thesis in Painting**
Fall or spring. 6 credits. Prerequisite: ART 421. Staff. Focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the semester.

**ART 429(4209) Independent Studio in Painting**
Fall, spring, or summer. 4 credits. Variable. Prerequisite: Juniors in good academic standing and permission of instructor. Staff. Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

**ART 721-722(7201-7202), 821-822(8201-8202) Graduate Painting**
721, fall; 722, spring. first-year M.F.A. students. 9 credits. Spring 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

**Studio Courses in Printmaking**
Fees for printmaking courses:
- Intaglio (131, 231, 431, 432, 439): $95
- Screenprinting (132, 232, 431, 432, 439): $45
- Lithography (133, 233, 431, 432, 439): $95
- Expanded Print Forms (134, 234): $95

**ART 131(1301) Introductory Intaglio**
Fall and spring. 3 credits. Staff.
Basic introduction to intaglio techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 132(1302) Introductory Graphics**
Fall and spring. 3 credits. Staff.
Introduces the two-dimensional thought process and the language of vision. Students explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

**ART 133(1303) Introductory Lithography**
Fall and spring. 3 credits. Staff.
Study of the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 134(1304) Expanded Print Forms**
Spring. 3 credits. Prerequisite: one of the following: ART 131, 132, 133, 161, 171, 251, or permission of instructor. Staff.
Intensive experimental studio designed to introduce students to various ideas and processes of making artists' books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography, ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital publication as an expanded print form helps students investigate how the book is reinvented or reshaped within an electronic context.

**ART 231(2301) Intaglio II**
Spring. 4 credits. Prerequisite: ART 131. Staff.
Studio course in advanced etching techniques. Refinement of processes and ideas through the uses of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

**ART 232(2302) Advanced Screen Printing**
ART 233(2303) Lithography II
Spring; 4 credits. Prerequisite: ART 133. Staff.
Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 234(2304) Large-Format Digital Printing
Fall and spring; 4 credits. Prerequisites: ART 161, 171, and one of the following: ART 131, 132, 133, 134 or permission of instructor. Staff.
Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photo-mechanical processes. Students use appropriate software, including Adobe Photoshop, QuarkXpress, Final Cut Pro, and Adobe illustrator to draw from both still and video base sources. Students work with large-format inkjet printers.

ART 331(3301) Printmaking III
Fall or spring; 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Staff.
Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332(3302) Printmaking IV
Fall; 4 credits. Prerequisite: ART 331 or permission of instructor. Staff.
Continuation and expansion of ART 331.

ART 431(4301) Pre-Thesis in Printmaking
Fall or spring; 6 credits. Prerequisite: ART 331. Staff.
Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432(4302) Thesis in Printmaking
Fall or spring; 6 credits. Prerequisite: ART 431. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439(4309) Independent Studio in Printmaking
Fall, spring, or summer; 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 731-732(7301-7302), 831-832(8301-8302) Graduate Printmaking
Fall, Spring; 3 credits. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

ART 241(2401) Sculpture I
Fall or spring; 4 credits. Prerequisites: ART 141, 142, or permission of instructor. Staff.
Introduction to sculpture through an approved statement of purpose. Group discussions and bimonthly group critiques. Exercise and study in various media. Group discussions and individual instruction.

ART 242(2402) Sculpture II
Fall or spring; 4 credits. Prerequisite: ART 241 or permission of instructor. Staff.
Continuation and expansion of ART 241. Continued study of the principles of sculpture and the expressive use of materials and media. Group discussions and individual instruction.

ART 243(2403) Sculpture III
Fall or spring; 4 credits. Prerequisite: ART 242. Staff.
Continuation of Sculpture II, concentrating on advanced technical and expressive skills in sculpture. A culminating project, incorporating all aspects of the course, is executed in a chosen medium. Special projects may include site-specific and/or large-scale installations.

ART 341(3401) Sculpture III
Fall or spring; 4 credits. Prerequisite: ART 340. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism. Experimentation is encouraged.

ART 342(3402) Sculpture IV
Fall or spring; 4 credits. Prerequisite: ART 341 or permission of instructor. Staff.
Continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 343(3403) Sculpture V
Fall or spring; 4 credits. Prerequisite: ART 342. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441(4401) Pre-Thesis in Sculpture
Fall or spring; 6 credits. Prerequisite: ART 342. Staff.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bimonthly group discussions and individual criticism. Students complete a body of work through an approved thesis statement of purpose and proposed schedule.

ART 442(4402) Thesis in Sculpture
Fall or spring; 6 credits. Prerequisite: ART 441. Staff.
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449(4409) Independent Studio in Sculpture
Fall, spring, or summer; 4 credits. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate their results.

ART 741-742(7401-7402), 841-842(8401-8402) Graduate Sculpture
Fall; prerequisites: 1 semester: $135

Studio Courses in Photography

ART 161(1601) Photography I
Fall, spring, or summer; 3 credits. Staff.
Basic lecture-studio course in black-and-white photography for beginners. Emphasis is on camera technique, camera skills, darkroom techniques, and the understanding of photographic imagery.

ART 168(1608) Black-and-White Photography
Summer; three-week session only. 3 credits. Staff.
Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169(1609) Color Photography
Summer, three-week session only. 3 credits. Staff.
Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261(2601) Photography II
Fall, spring, or summer; 4 credits. Prerequisite: ART 160 or ARCH 251, or permission of instructor. Staff.
Continuation of Photography I, concentrating on black-and-white photographic processes, history and theory of creative practice, and individual projects.

ART 263(2603) Color Photography
Fall and summer; 4 credits. Prerequisite: ART 160 or ARCH 251, or permission of instructor. Staff.
Studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264(2604) Photo Processes
Fall, spring, or summer; 4 credits. Prerequisite: ART 160 or ARCH 251, or permission of instructor. Staff.
Studio course in alternative and nontraditional photographic processes. Emphasis is on camera skills, camera techniques and processes, image content, and creative use of photo processes.

ART Courses in Sculpture

ART 141(1401) Introductory Sculpture
Fall, spring, or summer; 3 credits. Staff.
Series of studio problems introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

ART 241(2401) Sculpture II
Fall or spring; 4 credits. Prerequisite: ART 140 or architecture design studio, or permission of instructor. Staff.
Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze or metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze-casting foundry.

ART 341(3401) Sculpture III
Fall or spring; 4 credits. Prerequisite: ART 241 or permission of instructor. Staff.
Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

ART 342(3402) Sculpture IV
Fall or spring; 4 credits. Prerequisite: ART 341 or permission of instructor. Staff.
Continuation and expansion of ART 341. Special projects may include site-specific and/or large-scale installations.

ART 343(3403) Sculpture V
Fall or spring; 4 credits. Prerequisite: ART 342. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441(4401) Pre-Thesis in Sculpture
Fall or spring; 6 credits. Prerequisite: ART 342. Staff.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bimonthly group discussions and individual criticism. Students complete a body of work through an approved thesis statement of purpose and proposed schedule.

ART 442(4402) Thesis in Sculpture
Fall or spring; 6 credits. Prerequisite: ART 441. Staff.
Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

ART 449(4409) Independent Studio in Sculpture
Fall, spring, or summer; 4 credits. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate their results.
ART 265(2605) Studio Photography
Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
Course in the use of medium- and large-format cameras that explores technique, lighting, the use of digital cameras for personal expression both in the studio and outdoors.

ART 361(3601) Photography III
Fall, spring, or summer. 4 credits. Prerequisite: ART 161, 261, or permission of instructor. Staff.
Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461(4601) Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 261, 263. Staff.
Studio course intended for photography majors and other qualified students.

ART 462(4602) Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 461. Staff.
Studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 469(4609) Independent Studio in Photography
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762(7601-7602), 861-862(8601-8602) Graduate Photography
761, fall; 762, spring. First-year M.F.A. students. 9 credits. 861, fall; 862, spring. Second-year M.F.A. students. 9 credits. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing

Fees for all drawing courses: $25

ART 151(1501) Drawing I
Fall, spring. 3 credits. Staff.
General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 152(1502) Drawing II
Spring. 3 credits. Prerequisite: ART 151. Staff.
General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 151 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 158(1508) Conceptual Drawing
Summer, six-week session. 3 credits. Staff. Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159(1509) Life and Still-Life Drawing
Summer, six-week session. 3 credits. Staff. Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

ART 251(2501) Drawing III
Fall. 3 credits. Prerequisite: ART 152. Staff. Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

ART 252(2502) Advanced Drawing Workshop
Fall or spring. 3 credits. Prerequisite: ART 251. Corequisite: BFA pre-thesis studio. Staff.
This advanced studio workshop focuses on the use of drawing for the development and refinement of complex visual expression. Using both traditional and nontraditional drawing approaches, students work to clarify their conceptual concerns and develop a pertinent visual vocabulary. This course begins with assignments structured to identify the conceptual and formal considerations central to each student's individual artistic intentions. Once identified, these artistic intentions become the basis for a rigorous investigation. The resulting body of work informs and supports advanced thesis work across the visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.

ART 458(4509) Independent Studio in Drawing
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 171(1701) Electronic Imaging in Art
Fall or spring. 3 credits. Staff.
Introductory studio course using the computer as a tool for making art. Students explore various approaches to 2- and 3-D web art using software programs and various functions. This course is an introduction to the web.

ART 234(2304) Large-Format Digital Printing
Fall and spring. 4 credits. Prerequisite: ART 171. Staff.
Focuses on the use of digital printing and its use in combination with traditional forms of photomechanical processes. Students use approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, Quarkxpress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.

ART 271(2701) Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff. Studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. This course concentrates on the web.

ART 272(2702) Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff.
Studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interaction. Students produce animations using computers and CD-ROM production. This course concentrates on the web.

ART 273(2703) Computer Animation (also CIS 565[5640])
Fall. 4 credits. D. Greenberg.
Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

ART 373(3703) Advanced Projects in Time-Based Art
Fall. 4 credits. Prerequisites: ART 170 and one of the following: ART 272, 273, 234 or permission of instructor. Letter grades only. Staff.
This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key frame-based animation, layering animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public spaces.

ART 374(3704) Interactive Digital Media
Spring. 4 credits. Prerequisites: ART 171 and one of the following: ART 272, 273, 234 or permission of instructor. Letter grades only. Staff.
This is a project-centered studio course designed to encourage students to integrate computer-aided and time-based media (video, sound, motion graphics, and text) using physical materials and space. The course will challenge students to develop a theoretical understanding of the relationship between body and technology in a social and cultural context. Students will use digital technologies to create projects using interactive CD-ROM/
In the realm of computer and interpersonal communications, a micro-controller aided interactive video and sound installations, real-time performance, and public space. The course encourages integrative approaches to studio production.

**ART 471(4701) Pre-Thesis in Electronic Imaging**
Fall and spring, 6 credits. Prerequisites: ART 171, 234 or 271, 272 or 273, 375 or 274. Staff. For information, please call department.

**ART 472(4702) Thesis in Electronic Imaging**
Fall and spring, 6 credits. Prerequisite: ART 471. Staff. For information, please call department.

**Special Studio Courses**

**ART 109(1109) Internship Practicum**
Fall, spring, and summer. Variable credit.
S-U grades only. Students serving as interns with art-related businesses or institutions may receive 1 academic credit upon receipt of a letter from the internship sponsor confirming successful performance of internship responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements.

**ART 155(1550) Drawing Rome**
Summer. 3 credits. Letter grades only. Staff. The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome: its public spaces, churches, museums, archaeological zones, and the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done on site. This course is scheduled to begin initially during the Summer 2006 Art Studio and Creative Writing Workshop in Rome. Course meets four weeks, 5X per week.

**ART 372(3702) Special Topics In Art Studio**
Fall, spring, or summer. 4 credits, variable. Staff. Exploration of a particular theme: or project.

**ART 372.20(3702.20) Special Topics In Art History**
Spring. 4 credits, variable. Prerequisite: Rome Program participants. Staff. Topic TBA.

**ART 379(3709) Independent Studio in Rome**
Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; junior or senior standing; and written permission of instructor. Staff. Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

**ART 391(3901) Media Arts Studio I (also ARCH 459/659)(4500/6509), FILM/DANCE 391(3910)**
Fall. 3 credits. Prerequisites: FILM 277 or 377; junior standing and permission of instructor. Lab fee: $50. Staff. For description, see FILM 391.

**ART 392(3902) Media Arts Studio II**

**ART 400(4000) Rome Studio**
Fall or spring. 4 credits. Fulfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Lab fee: $60; additional fees for photography and printmaking. Staff. Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

**ART 479(4709) Independent Studio in Combined Media**
Fall, spring, or summer. 4 credits. Variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**ART 481(4801) Pre-Thesis In Combined Media**
Fall or spring. 6 credits. Prerequisite: written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in pre-thesis course in their primary area of concentration. Lab fee: $70. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 482(4802) Thesis In Combined Media**
Fall or spring. 6 credits. Prerequisites: ART 481 and written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in thesis course in their primary area of concentration. Lab fee: $70. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 489(4803) Independent Studio In Combined Media**
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Lab fee: $70. Staff. An independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**CITY AND REGIONAL PLANNING**

The department offers several programs of study at both the undergraduate and graduate levels.

**The Undergraduate Program in Urban and Regional Studies**
The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a bachelor of science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary-perspectives.

**Basic Degree Requirements**
for students in the graduating class of 2006 and earlier

Requirements for graduation: URS requirements include: (1) eight semesters of residence; (2) 120 credits; (3) two first-year seminars; (4) qualification in one foreign language; (5) four groups of distribution requirements; (6) required courses for major; (7) area requirements for major; (8) free electives; (9) a minimum of 34 courses; and (10) completion of the university requirement of two 1-credit nonacademic courses in physical education. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

1. General education
a. First-year writing seminars: two courses
b. Foreign language: three courses or qualification in one foreign language
c. Distribution requirement: nine courses
Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (two to three courses required)
Group 2: Quantitative and formal reasoning (one to two courses required)
Group 3: Social sciences and history (two to three courses required)
Group 4: Humanities and the arts (two to three courses required)

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

Requirements for students in the graduating class of 2007 and after

General Education:
1. First-year writing seminars: two courses
   Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.

Distribution Requirements:
(For a complete listing of courses in Groups 1 through 4, see "Distribution Requirements" under "College of Arts and Sciences." Note: The Arts and Science distribution requirement has been changed for entering freshmen in that college (class of 2007). Rather than selecting courses from Groups 3 (social sciences and history) and 4 (humanities and the arts), as of fall semester 2004, Arts and Sciences students are required to complete five courses in at least four of the following five categories: Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA). Social science and humanities courses are marked individually by category, and any given department may offer courses that fall into distinct categories. URS students are also encouraged to select their Group 3 and Group 4 courses from four of these five categories.

2. Required Courses for the Major in Urban and Regional Studies: seven courses
   CRP 106 URS First-Year Seminar (fall, 1 credit)
   CRP 200 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
   CRP 201 People, Planning and Politics in the City (spring, 3 credits)
   ECON 101 Microeconomics (both semesters, 3 credits)

Statistics: Various courses (both semesters, 3 credits)

Area Requirement: six CRP courses
A. Design and Land Use (one course)
B. Urban History, Society, and Politics (one course)
C. Environment (one course)
D. Regional Development and Globalization (one course)
E. Methods for Planning and Urban Studies (two courses)

Qualitative/Field Methods (one course)

Honors Program
Each year a few well-qualified juniors may join the honors program. Each honors student develops and writes an honors thesis under the guidance of his or her faculty advisor.

Concentrations
Urban Studies Concentration (non-URS majors)
The Urban and Regional Studies Concentration has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies and who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies (URS) concentration, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above.

Nine (9) credits of required core courses:
CRP 100 American Cities (3 credits)
CRP 101 The Global City: People, Production in the Third World (3 credits)
CRP 200 The Promise and Pitfalls of Contemporary Planning (3 credits)

And 9 credits of elective department courses at the 300 level or higher.

Additional Degree Options
Linked degree options. Urban and regional studies majors may earn both a bachelor of science degree and a master of regional planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 36 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual-degree option. A student accepted in Cornell College of Arts and Sciences may
There are five graduate degree programs in agriculture, are eligible to apply. The Graduate Program in City and Regional Planning may contact Professor Richard Booth, Applicants who want further information should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous college work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, business management, and agriculture, are eligible to apply. Although an interview is not required, applicants are urged to visit the campus.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation. Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous college work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, business management, and agriculture, are eligible to apply. Although an interview is not required, applicants are urged to visit the campus.

CRP 101(1101) The Global City: People, Production, and Planning in the Third World
Spring. 3 credits. S-U grades optional for out-of-department students only. N. Kudva. Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, and short-comings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 106(1106) URS First-Year Seminar
Fall. 1 credit. S-U grades only. N. Kudva. Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

Fall. 3 credits. Prerequisite: CRP 100. K. Reardon. Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 201(2010) People, Planning, and Politics in the City
Spring. 3 credits. Prerequisites: CRP 100 and 101. P. Olpadwala. Seminar examining various bases of political and professional power. Students will examine why professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 261(2610) Fieldwork in Urban Archaeology (also LA 261[2610])
Fall. 4 credits. S. Baugher. For description, see LA 261.

CRP 293[2930] Inequality, Diversity, and Justice (also ENS 293[2930], SOC 293[2930], PHIL 193[1930])
Fall. 4 credits. R. Miller. For description, see PHIL 193.

CRP 309(3090) Community Development Seminar (also CRP 509[5090])
Spring. 3 credits. Letters grades. K. Reardon. Introduction to the theory, method, and practice of contemporary community development. Topics include: the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the

Architectural, Art, and Planning 2006-2007

The Graduate Program in City and Regional Planning
There are five graduate degree programs in the city and regional planning department. The master of professional studies in regional planning program stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning, The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. The master of professional studies in regional development (M.P.S./I.D) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or midcareer professionals in related fields. The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage. The master of science (M.S.) or master of arts (M.A.) degrees in regional science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations. The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities
Rome Program: Graduate students have the opportunity to spend one or two semesters in Rome, study at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies
CRP 100(1100) The American City
Fall. 3 credits. S-U grades optional for out-of-department students only. W. W. Goldsmith. Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 106(1106) URS First-Year Seminar
Fall. 1 credit. S-U grades only. N. Kudva. Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

Fall. 3 credits. Prerequisite: CRP 100. K. Reardon. Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 201(2010) People, Planning, and Politics in the City
Spring. 3 credits. Prerequisites: CRP 100 and 101. P. Olpadwala. Seminar examining various bases of political and professional power. Students will examine why professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 261(2610) Fieldwork in Urban Archaeology (also LA 261[2610])
Fall. 4 credits. S. Baugher. For description, see LA 261.

CRP 293[2930] Inequality, Diversity, and Justice (also ENS 293[2930], SOC 293[2930], PHIL 193[1930])
Fall. 4 credits. R. Miller. For description, see PHIL 193.

CRP 309(3090) Community Development Seminar (also CRP 509[5090])
Spring. 3 credits. Letters grades. K. Reardon. Introduction to the theory, method, and practice of contemporary community development. Topics include: the role community-based organizations are playing in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the
organizational capacity of community-based organizations, and the interplay between neighborhood-based community development activities and regional economic development policy-making.

**CRP 318[3180] Politics of Community Development (also CRP 518[5180])**
Spring. 3 credits. Letter grades. Staff. Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

**CRP 321(3210) Introduction to Quantitative Methods for the Policy**
Fall. 3 credits. Not offered every year. Y. Mansury. Introduction to the role and use of quantitative methods in the study of urban and regional issues. Focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of these methods are also considered.

**CRP 327(3270) Regional Economic Impact Analysis (also CRP 627[6270])**
Fall. 3 credits. Letter grades. Y. Mansury. A central concern of practicing planners and economic development professionals is how different events affect the regional economy of concern. Some events are the result of policy choices, such as the closing of a military base or an increase in the local sales tax. Some are the result of exogenous economic forces such as out-migration of the population, disasters, natural-floods and hurricanes. This course defines the context, a regional economy, for such analysis, and then presents analytical tools for estimating economic impacts. The major tool covered in depth is regional input-output. Most of the course is devoted to understanding and applying IMPLAN, a software and data system for performing regional input-output analysis at the county level.

**CRP 328(3280) Overview: Quantitative Methods in Policy Planning (also CRP 528[5280])**
Fall or spring. 3 credits. S-U grades optional. Staff. Introduces students to the basic tools that are used in policy analysis. The goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

**CRP 330(3300) Neighborhood Planning Workshop (also CRP 530[5300])**
Spring. 4 credits. Letter grades. K. Beardon. Offers students the opportunity to collaborate with local residents, leaders, and officials in the development of revitalization plans that address the critical environmental, economic, and sociocultural challenges confronting their neighborhoods. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

**CRP 331(3310) Social Justice and the City: Preparation for Urban Fieldwork**
Spring. 3 credits. Prerequisite: Urban Scholar status or permission of instructor. Letter grades only. R. Sinton. Students are introduced to key sociological, economic, historical, and cultural issues embodied in planning for social justice in urban America. Topics include: local realities and micro and macro policies affecting housing, education, immigration, health, legislation, legal affairs, community development, and organizing in a large urban setting. In preparation for field-based learning and research experiences, the challenges of experiential education, public scholarship, and reflective practice will also be addressed from the perspective of non-profit organizations and local government agencies serving under-resourced urban communities, and the undergraduate student as learner and worker. Students will be exposed to the principles of participant observation, informal/formal interviewing skills, managing field relations, professional ethics, and ethnographic report-writing.

**CRP 332(3320) Urban Policy Research Seminar on New York City**
Fall. 3 credits. S-U grades optional. R. Sinton. Designed to enhance students' organizational, analytical, research, and communication skills in producing scholarly articles of publishable quality that critically examine important urban policy issues affecting the lives of New York City's poorest children, families, and neighborhoods. Students will also be policy-oriented journal articles that address vital issues confronting the city's most vulnerable residents, whom they've identified while working in Cornell-sponsored summer internships with nonprofit organizations and public agencies that provide direct services to the poor.

**CRP 343(3430) Affordable Housing Policy and Programs (also CRP 643[6430])**
Fall. 3 credits. S-U grades optional. R. Pendall. Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people: public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

**CRP 354(3540) Introduction to Environmental Planning (also CRP 554[5540])**
Spring. 3 credits. Staff. Introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventoring, and risk analysis.

**CRP 360(3600) Pre-Industrial Cities and Towns of North America (also LA 260[260], CRP 660[660])**
Spring. 3 credits. Letter grades only. R. Sinton. Pre-Industrial Cities and Towns of North America: A historical overview of American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial rural-urban flows, socio-spatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations: violence and repression, coping strategies, social movement, and transmigration.

**CRP 361(3610) Seminar in American Urban History (also CRP 661[6610])**
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan. Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and social and economic responses to the city.

**CRP 363(3630) American Indians, Planners, and Public Policy (also CRP 547[5470], LA 263[263], CRP 647[6470])**

**CRP 365(3650) Gender and Globalization**
Fall. 3 credits. L. Bene. For description, see FGSS 360.

**CRP 366(3660) The History of Urban Form in America (also CRP 668[6680])**
Fall or spring. 3 credits. Letter grades. M. Tomlan. Covers the history of city planning in America from colonial times to the early 20th century, including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

**CRP 370(3700) The Regional Question: The Case of Latin America**
Spring. 3 credits, variable. Prerequisite: Rome Program participants; majors in urban and regional studies. Staff. The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy's integration into the European Union affects and is affected by its regional issues will be considered.

**CRP 372(3720) 20th-Century Italy: Politics and Society**
Spring. 3 credits. S-U grades optional for out-of-department students only. Staff. Comprehensive survey of Italian society today, starting with Italy's geographic and historical factors and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community structure, urban development, and family forms. The course also covers selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

**CRP 376(3760) Latin American Cities (also CRP 676[6760])**
Fall. 3 credits. B. Lynch. This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial rural-urban flows, socio-spatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations: violence and repression, coping strategies, social movement, and transmigration.
CRP 377(3770) The City in Brazil (also CRP 687[6870])
Summer. 3 credits. S-U grades optional. W. Goldsmith.
Students are required in Brazil by professors from Cornell and the Instituto de Pesquisa e Planejamento Urbano e Regional (IPUR), at the Federal University of Rio de Janeiro. Students will live in three Brazilian cities, on site with local scholars, town city officials, and activists. In Brasilia, the focus is on modernist planning of the new national capital with its signature Plano Piloto, the separated satellites cities, and migration from the Brazilian Northeast. In Rio de Janeiro, the focus is on housing, transportation, and the informal economy in the context of metropolitan growth and decline.

CRP 378(3780) Recycling and Resource Management (also CRP 578[5780])
Spring. 3 credits. S-U grades optional. Not offered every year. R. Young.
Advanced resource-recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed-loop resource-management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling-program development, the course provides students with comprehensive, ongoing exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Undergraduate students have additional research requirements.

[CRP 380(3800) Environmental Politics

CRP 381(3810) Principles of Spatial Design and Aesthetics (also CRP 581[5810])
Fall. 3 credits. Limited to 15 students. R. Trancik.
A lecture-project course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are explored as means toward transforming cities into the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 386(3860) Planning for Sustainable Transportation (also CRP 686[6860])
Spring. 3 credits. S-U or letter grades. Y. Levitte.
Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews’ themes such as planning history and politics, the problems with auto-dominated system, and key challenges to development sustainable transport systems; and (3) looks at regulatory, design, and market-based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 390(3900) Professional Planning Colloquium I (also CRP 790[7950])
Fall. 1 credit. Staff.
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a three- to five-page paper about the lecture series.

CRP 395(3950) Special Topics (also CRP 585[5850])
Fall, spring, summer. 4 credits, variable. Times TBA. Staff.
For description, see department coordinator, 106 West Sibley Hall.

CRP 395.03(3950) Wilderness and Wildlife Issues in Planning and Planning (also CRP 679.03[6850])
Fall. 2-3 credits, variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thornhike.
Wilderness and wildland resources have been under assault by the Congress, the “Wise Use” movement, property-rights activists, pollutants, and the actual users. This seminar considers historical and philosophical foundations and political factors that affect decisions about wilderness policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined. Projects in planning and policy development through readings, discussions, guest practitioners, and a field trip to the Finger Lakes National Forest. Optional weekend trip to Adirondack Park Wilderness area.

CRP 404(4040) Urban Economics (also CRP 504[5040])
Spring. 4 credits. Not offered every year. Prerequisite: microeconomics course. Staff.
Analyses urban phenomena from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, urban and rural poverty, the concentrated growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

CRP 408(4080) Introduction to Geographic Information Systems (GIS) (also CRP 5080)
Spring. 4 credits. Staff.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 412(4120) Devolution, Privatization, and the New Public Management (also CRP 612[6120], AEM 433/633[4330/6330], FGSS 411/611[4110/6110])
Fall. 4 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. M. Warner.
Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 416(4160) European City: The Public Sphere and Public Space
Spring. 4 credits. Variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing; Rome Program participants. S-U grades optional for nonmajors. Staff.
Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished areas? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 417(4170) Economic Development: Firms, Industries, and Regions (also CRP 517[5170])
Fall. 4 credits. S. Christopherson.
Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multifirm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

CRP 418(4180) Government Policy Workshop (also CRP 618[6180], AEM 434/634[4340/6340], FGSS 420/620[4200/6200])
Students undertake research requested by clients (associations of local government.
unions, nonprofits, and state, federal, and international agencies) to analyze and identify alternative approaches to restructuring government-service delivery. The course requires teamwork and includes qualitative and quantitative methods of analysis in collaboration with clients.

CRP 444(4440) Resource Management and Environmental Law (also CRP 544[5440], NTRES 444[4440])
Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor R. Booth.
Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

CRP 448(4480) Social Policy and Social Welfare (also CRP 548[5480])
Spring. 4 credits. Not offered every year. S. Christopherson.
Addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social-welfare controversies. The first part of the course introduces principles that guide the development of social policy, including fairness and justice. Various conceptions of society are examined with reference to their influence on the nature and extent of social-welfare provision, comparing the United States with other industrialized countries. The second part examines how economic change and government policy affect social provision in the United States.

CRP 451(4510) Environmental Law (also CRP 551[5510])

CRP 453(4530) Environmental Aspects of International Urban Planning (also CRP 683[6830])
Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences. Staff.
This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

CRP 457(4570) Community Service Fieldwork
Fall or spring. 4 credits, variable. Prerequisite: permission of instructor. Staff.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

CRP 474(4740) Urban Transformations in the Global South (also CRP 674[6740])
Fall or spring. 4 credits. S-U grades only. M. Khulo.
Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 477(4770) Issues in African Development (also CRP 677[6770])
Fall and spring. 1 credit. S-U grades only. M. Khulo.
This seminar examines the ways in which a student and faculty member choose a topic related to urban and regional studies.

CRP 490(4900) Student-Faculty Research
Fall or spring. 4 credits, variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S-U grades only. Staff.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 492(4920) Honors Thesis Research
Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honors students by department faculty. Each selected student works with his or her thesis advisor.

CRP 493(4930) Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: CRP 492. Staff.
Each selected student works with his or her thesis advisor.

CRP 497(4970) Independent Study
Fall or spring. 4 credits, variable. Prerequisite: junior or senior standing; permission of instructor. Staff.

Graduate Courses and Seminars
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upper-level undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504(5040) Urban Economics (also CRP 404[4040])
Spring. 4 credits. Not offered every year. Prerequisite: microeconomics course. Staff.
For description, see CRP 404.

CRP 508(5080) Introduction to Geographic Information Systems (GIS) (also CRP 408[4080])
Spring. 4 credits. Staff.
For description, see CRP 408.

CRP 509(5090) Community Development Seminar (also CRP 309[3090])
Spring. 3 credits. B. Beardon.
For description, see CRP 309.

CRP 512(5120) Public and Spatial Economics for Planners
Fall. 3 credits. No prior knowledge of economics necessary. Staff.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public–nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics.

The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513(5130) Introduction to Planning Practice and History
Fall. 4 credits. Staff.
Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the application of economic and geographic theories, get practice in writing, and explore one research topic in depth.

CRP 517(5170) Economic Development: Firms, Industries, and Regions (also CRP 417[4170])
Fall. 4 credits. S. Christopherson.
For description, see CRP 417.

CRP 518(5180) Politics of Community Development (also CRP 318[3180])
Spring. 3 credits. B. Beardon.
For description, see CRP 318.

CRP 519(5190) Urban Theory and Spatial Development
Spring. 3 credits. W. Goldsmith.
Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities; the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 520(5200) Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. Not offered every year. Staff.
Introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression and the use of a microcomputer statistical package.
CRP 521(5210) Mathematical Foundation for Planning Analysis
Fall. 1 credit. Meets for two hours, once each week, for approximately half the semester. Prerequisite: permission of instructor. S-U grades only. Not offered every year. Staff.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis.

CRP 525(5250) Introductory Methods of Planning Analysis
Fall. 4 credits. R. Pendall. Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics; mapping, and observation. Required lab experience with essential microcomputer applications and builds skills in writing and analysis.

CRP 528(5280) Overview: Quantitative Methods in Policy Planning (also CRP 328/3280)
Fall and spring. 3 credits. S-U grades optional. Staff. For description, see CRP 328.

CRP 529(5290) Mathematics for Planners
Fall. 4 credits. Variable S-U grades optional. Not offered every year. Staff. Covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 530(5300) Neighborhood Planning Workshop (also CRP 330/3300)
Spring. 4 credits. R. Pendall. Staff. For description, see CRP 330.

CRP 532(5320) Real Estate Development Process
Fall. 3 credits. R. Pendall. Staff. Examinations of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and class studies included.

CRP 533(5330) Real Estate Marketing and Management
Fall. 3 credits. R. Abrams. Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preference locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and class studies included.

CRP 537(5370) Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S-U grades. B. Olson. Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 544(5440) Resource Management and Environmental Law (also CRP 444/4440) [INTRES 444/4440]
Spring. 4 credits. Staff. For description, see CRP 444.

CRP 546(5460) Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester. Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547(5470) American Indians, Planners, and Public Policy (also CRP 363/3630, LA 263/2630, LA 547/5470)

CRP 548(5480) Social Policy and Social Welfare (also CRP 448/4480)
Spring. 4 credits. Not offered every year. S. Christopherson. For description, see CRP 448.

CRP 551(5510) Environmental Law (also CRP 451/4510)
Fall. 4 credits. Not offered 2006–2007.

CRP 552(5520) Land-Use Planning
Fall. 3 credits. R. Pendall. Covers surveys, analyses, and plan-making techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasizes residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553(5530) Land-Use Regulations
Spring. 3 credits. B. Olson. This seminar covers the essentials of “smart growth,” zoning, and subdivision, and all the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timeing controls, redevelopment, and planned-unit development.

CRP 554(5540) Introduction to Environmental Planning (also CRP 354/3540)
Spring. 3 credits. Staff. For description, see CRP 354.

CRP 555(5550) Urban Systems Studio [also LA 701/7010]
Fall. 5 credits. Prerequisite: permission of instructor. R. Trancik. Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical-design interventions involving the street, square, block, garden, and park systems. Topics include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital-design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556(5560) Design in Real Estate Development
Spring. 3 credits. S-U grades optional. H. Richardson. Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557(5570) City Planning Design Studio
Spring. 4 credits. Prerequisite: design courses or permission of instructor. Staff. Series of individual and team small-area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558(5580) City and Regional Planning Workshop
Fall or spring. 4 credits. Variable. S-U grades optional. R. Pendall. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or nonprofit organizations in New York State. Projects are undertaken on a community-service basis for “clients” who specifically request planning assistance. Students work individually or in teams.

CRP 560(5600) Documentation for Preservation
Fall or spring. 3 credits. M. Tomlan. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561(5610) Historic Preservation Planning Workshop: Surveys and Analyses
Fall or spring. 4 credits. J. Chusid. Covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.

CRP 562(5620) Perspectives on Preservation
Fall. 3 credits. J. Chusid. Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable cities and districts.
Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 607(6070) GIS Applications Workshop
Fall. 4 credits. Prerequisites: introductory GIS course or permission of instructor. A.-M. Esnard.
Advanced GIS course that focuses on GIS applications and projects for one or more clients. During some semesters students work on their own projects. Contact the instructor directly to learn about project options for the current semester.

CRP 612(6120) Devolution, Privatization, and the New Public Management (also CRP 412(4120), AEM 433/633[4330/6330], FGSS 411/611[4110/6110])
Fall. 4 credits. Prerequisite: ECON 101 or equivalent. S-U grades optional. M. Warner.
For description, see CRP 412.

CRP 614(6140) Gender and International Development (also FGSS 614[6140])
Spring. 3 credits. L. Beneria.
The seminar examines a range of topics that are key to understanding the role and development of NGOs: their effectiveness at service provision and advocacy, their political role in constructing social capital and strengthening civil society; their relationship with the state and with donor agencies; and issues related to organizational design for success. The intention is to gain a broad-based understanding of the role and development of NGOs. The emphasis throughout will be to critically evaluate the literature, research, and accounts on NGOs as both institutional actors and organizational types.

CRP 615(6150) Current Issues and Debates on NGOs
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. N. Kudva.
This seminar examines a range of topics that are key to understanding NGO actions: their effectiveness at service provision and advocacy, their political role in constructing social capital and strengthening civil society; their relationship with the state and with donor agencies; and issues related to organizational design for success. The intention is to gain a broad-based understanding of the role and development of NGOs. The emphasis throughout will be to critically evaluate the literature, research, and accounts on NGOs as both institutional actors and organizational types.

CRP 616(6180) Government Policy Workshop (also CRP 418[4180], AEM 434/634[4340/6340], FGSS 420/620[4200/6200])
For description, see CRP 418.

CRP 621(6210) Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. D. Lewis.
Examines selected analytical techniques used in the planning and evaluation of both public and private policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 627(6270) Regional Economical Impact Analysis (also CRP 327[3270])
Fall. 3 credits. Letter grades. Staff.
For description, see CRP 327.

CRP 632(6320) Methods of Regional Science and Planning I
Spring. 4 credits. variable. Staff.
Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 635(6350) Workshop: State Economic Development Strategies
Fall or spring. 4 credits. S-U grades optional. S. Christopherson.
The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic-development strategies; and (2) to provide a critical understanding of the primary economic-development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic-development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 637(6370) Regional Development Planning: An International Perspective
Fall. 4 credits. variable. S-U grades optional. T. Vietorisz.
Develops a broad historical and theoretical context within which urban and regional planning problems across the world are embedded; addresses aspects of the global information economy affecting economic development and cultural identity; and demonstrates how such a broad perspective can make for more viable local plans. From the perspective of commitment to an open society, the course also examines the tension between planning oriented to social equity and the polarizing forces of market fundamentalism.

CRP 638(6380) Planning and the Global Knowledge Economy: Sustainability Issues
Spring. 4 credits. variable. S-U grades optional. T. Vietorisz.
Analyzes the current sustainability crisis in terms of major changes in the social
organization of production, emphasizing the worldwide economic and cultural shocks created by the emerging knowledge economy. Insight into the dynamics of this transition, in the light of similarly dramatic transitions in the past, can guide attempts to move toward sustainability and high-quality urban and regional living environments.

CRP 642(6420) The Micro-Politics of Participatory Planning Practices
Spring. 4 credits. Variable. J. Forester. This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identity, historical trauma and working-through, and more. The approach taken can be called a "critical pragmatism." Practitioners' oral histories are used to investigate the challenges of participatory planning practices.

CRP 643(6430) Affordable Housing Policy and Programs (also CRP 343[3430])
Fall. 3 credits. S-U grades optional. R. Pendall. For description, see CRP 343.

CRP 653(6530) Legal Aspects of Land-Use Planning
Spring. 3 credits. R. Booth. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 655(6550) Real Estate Project Workshop
Spring. 4 credits. Prerequisite: permission of instructor. Fee for mandatory field trip. R. Abrams and M. Schack. Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field is addressed, including project feasibility, marketing, planning and design, and legal constraints and concerns. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 657(6570) Real Estate Law
Spring. 3 credits. Letter grades. A. Klausner. Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Case studies affecting the real estate industry are discussed.

CRP 658(6580) Residential Development
Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson. Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Consideration in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

CRP 661(6610) Seminar in American Urban History (also CRP 361[3610])
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan. For description, see CRP 361.

CRP 662(6620) Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 561. M. Tomlan. Preparation of elements of historic preservation plans, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 663(6630) Historic Preservation Law
Spring. 3 credits. Offered alternate years. R. Booth. Covers law of historic district and landmark designation, tools for preservation (e.g., police power, taxation, eminent domain), and recent developments in state and federal historic preservation.

CRP 664(6640) Economics and Financing of Neighborhood Conservation and Preservation
Spring. 3 credits. M. Tomlan. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban and regional economies, and private financing of real estate projects.

CRP 665(6650) Preservation Planning and Urban Change
Fall. 3 credits. M. Tomlan. Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360[3600], LA 260/666[2600/6600])

CRP 668(6680) The History of Urban Form in America (also CRP 368[3680])
Fall or spring. 3 credits. M. Tomlan. For description, see CRP 368.

CRP 670(6700) Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Staff. Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, externalities, international linkages, and integration. Resource development, national integration, human development, and migration issues are discussed.

CRP 671(6710) Seminar in International Planning
Spring. 1 credit. S-U grades only. W. Goldsmith. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672(6720) International Institutions
Spring. 3 credits. R. Pendall. Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 674(6740) Urban Transformations in the Global South (also CRP 474[4740])
Fall or spring. 4 credits. S-U grades optional. W. Goldsmith. For description, see CRP 474.

CRP 675(6750) Workshop on Project Planning in Developing Countries
Fall. 4 credits. D. Lewis. Examines the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social-impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar–workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 676(6760) Latin American Cities (also CRP 376[3760])
Fall. 3 credits. B. Lynch. For description, see CRP 376.

CRP 677(6770) Issues in African Development (also CRP 477[4770])
Fall or spring. 1 credit. S-U grades only. M. Ndulo. For description, see CRP 477.

CRP 678(6780) Concrete Manifestations—Infrastructure in the New World Order

CRP 679.03(6850) Wilderness and Wildlands: Issues in Policy and Planning (also CRP 395.03[3850])
Fall. 2-3 credits. Variable. Graduate seminar open to juniors and seniors. Not offered every year. L. Thorndike. For description, see CRP 395.03.

CRP 683(6830) Environmental Aspects of International Urban Planning (also CRP 453[4530])
Fall. 4 credits. Staff. For description, see CRP 453.

CRP 686(6860) Planning for Sustainable Transportation (also CRP 386[3860])
Spring. 3 credits. S-U or letter grades. Y. Levitte. For description, see CRP 386.
CRP 687[6870] The City in Brazil (also CRP 377[3770])
Summer. 3 credits. Letter grades optional. Staff.
For description, see CRP 377.

CRP 689[6890] Sustainable Panama: An Interdisciplinary Workshop Course on the Future of the Panama Canal Metropolitan Landscape (also CRP 359[3580])
Winter. 4 credits. R. Tranck.
For description, see CRP 359 (section 1).

CRP 790[7850] Professional Planning Colloquium I (also CRP 390[3900])
Fall. 1 credit. Staff.
For description, see CRP 390.

CRP 791(8910) Master's Thesis in Regional Science
Fall or spring. 12 credits. Variable. S-U grades optional. Hours TBA. Regional Science faculty. Staff.

CRP 792(8920) Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits. Variable. S-U grades optional. Staff.

CRP 794(7940) Planning Internships
Fall, spring, or summer. 12 credits. Variable. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795(8950) Master's Thesis in Preservation Planning
Fall or spring. 6 credits. Variable. Staff.

CRP 796[7960] Professional Writing and Publishing (Colloquium)
Fall or spring. 2 credits. S-U grades only. Not offered every year. Staff.
Individual and group projects culminating in the production of a professional journal.

CRP 797(7970) Graduate Independent Study
Fall or spring. 4 credits. Variable. Prerequisites: graduate student standing, permission of instructor. Staff.
For description, see department coordinator, 106 West Sibley Hall.

CRP 800(8000) Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. S. Christopherson.
Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

CRP 801(8010) Advanced Seminar in Urban and Regional Theory II

CRP 830(8300) Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 4 credits. Variable. S-U grades only. Staff.
Provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 880(8900) Planning Research Seminar I
Fall or spring. 2 credits. Staff.
Intended for doctoral candidates in city and regional planning, other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 882(9920) Doctoral Dissertation
Fall or spring. 2 credits. Variable. Staff.

Special Topic Courses
Fall or spring. Variable credit. Staff.
Typical topics are:

CRP 609(6090) Urban and Regional Theory
CRP 619(6190) Planning Theory and Politics
CRP 629(6290) Quantitative Methods and Analysis
CRP 639(6390) Regional Development Planning
CRP 649(6490) Social-Policy Planning
CRP 659(6590) Urban Development Planning
CRP 669(6690) History and Preservation
CRP 679(6790) Planning and Developing Regions
CRP 689(6890) Environmental Planning
CRP 699(6990) Regional Science
CRP 719(7190) Planning Theory and Politics

LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program
Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives.

Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 140(1400) The Symbols of New York State's Cultural Landscape
Spring. 3 credits.

LA 141(1410) Grounding in Landscape Architecture
Fall. 4 credits.

LA 142(1420) Grounding in Landscape Architecture
Spring. 4 credits.

LA 155(1550) American Indian Cultural Landscapes: Changes in Time
Fall. 3 credits.

LA 201(2010) Medium of the Landscape
Fall. 5 credits.

LA 202(2020) Medium of the Landscape
Spring. 5 credits.

LA 215(2150) Sophomore Seminar: Engaging Places
Fall. 4 credits.

LA 252(2520) Daily Life in Ancient Israel
Spring. 3 credits.

LA 261(2610) Fieldwork in Urban Archaeology (also CRP 261[2610])
Fall. 4 credits.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620])
Spring. 3 credits.

LA 263(2630) American Indians, Planners, and Public Policy (also CRP 363[3630], 547[5470], LA 547[5470])

LA 266(2660) Jerusalem through the Ages
Fall. 3 credits.
Architecture, Art, and Planning

LA 282(2820) Photography and the American Landscape Architecture
Fall. 3 credits.
LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits.
LA 315(3150) Site Engineering I
Spring. 3 credits.
LA 316(3160) Site Engineering II
Fall. 2 credits.
LA 318(3180) Site Construction
Spring. 5 credits.

LA 360(3600) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 666[6660])

LA 401(4010) Advanced Synthesis: Project Design
Fall. 5 credits.
LA 402(4020) Integrating Theory and Practice II
Spring. 5 credits.
LA 403(4030) Directed Study: The Concentration (also LA 603[6030])
Fall or spring. 1 credit.
LA 410(4100) Computer Applications in Landscape Architecture
Fall or spring. 3 credits.
LA 412(4120) Professional Practice
Spring. 1 credit.
LA 418(4180) Audio Documentary: History/Sound/Landscape
Spring. 3 credits.

LA 433(4330) Seminar in Landscape Studies

LA 486(4860) Placemaking by Design: Theory Seminar
Fall. 3 credits.
LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491[4910])
Fall. 4 credits.
Spring. 4 credits.
LA 494(4940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.
LA 495(4950) Green Cities (also CRP 384/584[3840/5840])
Fall. 4 credits.
LANAR 497(4970) Individual Study in Landscape Architecture
Spring. 1–5 credits; may be repeated for credit. U.Grade optional. L. J. Mirin. Work on special topics by individuals or small groups.
LA 498(4980) Undergraduate Teaching
Fall or spring. 1–2 credits.
LA 499(4990) Undergraduate Research
Fall or spring. 1–5 credits.
LA 501(5010) Composition and Theory
Fall. 5 credits.

LANAR 502(5020) Composition and Theory
Spring. 5 credits.
LA 505(5050) Graphic Communication I
Fall. 3 credits.
LA 506(5060) Graphic Communication II
Spring. 3 credits.
LANAR 524(5240) History of European Landscape Architecture
Fall. 3 credits. L. Mirin. Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.
LANAR 525(5250) History of American Landscape Architecture
Spring. 3 credits. L. Mirin. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.
LA 545(5450) The Parks and Fora of Imperial Rome
Spring. 3 credits.

LA 547(5470) Americans, Indians, Planners, and Public Policy (also CRP 363/547[3630/5470], LA 263[2630])

LA 569(5690) Archaeology In Preservation Planning and Site Design (also CRP 569[5690])
LA 580(5800) Landscape Preservation: Theory and Practice
Fall. 3 credits.
LA 582(5820) Photography and the American Landscape Architecture
Fall. 3 credits.
LA 590(5900) Theory Seminar
Spring. 3 credits.
LA 598(5980) Graduate Teaching
Fall or spring. 1–2 credits.
LA 601(6010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: graduate standing.
LA 602(6020) Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: graduate standing.
LA 603(6030) Directed Study: The Concentration (also LA 403[4030])
Fall or spring. 1 credit.
LA 605(6050) Sound and Landscape Architecture
Fall. 1 credit.
LA 615(6150) Site Engineering I
Spring. 3 credits.
LANAR 616(6160) Site Engineering II
Fall. 2 credits.
LANAR 618(6180) Site Construction
Spring. weeks 8–15. 5 credits

LA 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 260[2600])
LA 680(6800) Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits.
LA 694(6940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.
LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555[5550])
Fall. 5 credits.
LA 702(7020) Advanced Design Studio
Spring. 5 credits.
LA 800(8000) Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.

FACULTY ROSTER
Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.
Baughner, Sherene, Ph.D., SUNY, Stony Brook. Visiting Prof., City and Regional Planning.
Berina, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning.
Booth, Richard S., J.D., George Washington U. Prof., City and Regional Planning.
Chi, Lily H., Ph.D., McGill U. (Canada). Assoc. Prof., Architecture.
Christopher, Susan M., Ph.D., U. of California, Berkeley. Assoc. Prof., City and Regional Planning.
Chusid, Jeffrey, M.Arch., U. of California, Berkeley. Assoc. Prof., City and Regional Planning.
Clavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning.
Crump, Ralph W., B. Arch., Cornell U. Prof., Emeritus, Architecture.
Czamanski, Stan, Ph.D., U. of Pennsylvania. Prof. Emeritus, City and Regional Planning.
Daly, Norman M., Ohio State U. Prof., Emeritus, Art.
Drennan, Matthew P., Ph.D., New York U. Prof., City and Regional Planning.
Forester, John, Ph.D., U. of California, Berkeley. Prof., City and Regional Planning.
Goehner, Werner H., M.Arch., Cornell U. Prof., Architecture.
Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning.
Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture
Hascup, George E., B. Arch., U. of California, Berkeley. Prof., Architecture
Hubbell, Kent L., M.F.A.S., Yale U. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, City and Regional Planning
Kira, Alexander, M.R.P., Cornell U. Prof. Emeritus, Architecture
Kord, Victor, M.F.A., Yale U. Prof. Emeritus, Art
Kudva, Neema, Ph.D., U. of California, Berkeley. Asst. Prof., City and Regional Planning
Lasansky, D. Medina, Ph.D., Brown U. Asst. Prof., Architecture
Levite, Yael, Ph.D., U. of Toronto (Canada). Visiting Lect., City and Regional Planning
Lewis, David B., Ph.D., Cornell U. Prof., City and Regional Planning
Locrey, Jean N., M.F.A., Ohio U. Prof., Art
Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning
MacDougall, Bonnie G., Ph.D., Cornell U. Assoc. Prof., Architecture
Mikus, Eleanor, M.A., U. of Denver. Prof. Emeritus, Art
Miller, John C., M. Arch., Cornell U. Prof. Emeritus, Architecture
Mostafavi, Mohsen, AADipl, Architectural Assoc., School of Arch., London (England)
Olpadwala, Porus, Ph.D., Cornell U. Prof., City and Regional Planning
Otto, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M. Arch., Cornell U. Assoc. Prof., Architecture
Pearman, Charles W., B. Arch., U. of Michigan. Prof. Emeritus, Architecture
Pendall, Rolf, Ph.D., U. of California, Berkeley. Prof., City and Regional Planning
Perlus, Barry A., M.F.A., Ohio U. Assoc. Prof., Art
Poleskie, Stephen F., B.S., Wilkes Coll. Prof. Emeritus, Art
Reardon, Kenneth, Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Reps, John W., M.R.P., Cornell U. Prof. Emeritus, City and Regional Planning
Richardson, Henry W., M.R.P., Cornell U. Prof., Architecture
Saltzman, Sid, Ph.D., Cornell U. Prof. Emeritus, City and Regional Planning
Schack, Mario L., M. Arch., Harvard U. Arthur L. and Isabel B. Wiesenberger Prof. Emeritus, Architecture
Shaw, John P., M. Arch., Massachusetts Inst. of Technology. Prof. Emeritus, Architecture
Simitch, Andrea, B. Arch., Cornell U. Assoc. Prof., Architecture
Singer, Arnold, Prof. Emeritus, Art

Spector, Buzz, M.F.A., U. of Chicago. Prof., Art
Squier, Jack L., M.F.A., Cornell U. Prof. Emeritus, Art
Stein, Stuart W., M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning
Taff, W. Stanley, M.F.A, California Coll. of Arts and Crafts. Assoc. Prof., Art
Tomlan, Michael A., Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Trancik, Roger T., M.L.A.-U.D., Harvard U. Prof., Landscape Architecture/City and Regional Planning
Ungers, O. Mathias, Diploma, Technical U. Karlsruhe (Germany). Prof. Emeritus, Architecture
Vietorisz, Thomas, Ph.D., Massachusetts Inst. of Technology. Adjunct Prof., City and Regional Planning
WalkingStick, Kay, M.F.A., Pratt Inst. Emeritus Prof., Art
Warke, Val K., M. Arch., Harvard U. Assoc. Prof., Architecture
Warner, Mildred, Ph.D., Cornell U. Asst. Prof., City and Regional Planning
Wells, Jerry A., B. Arch., U. of Texas. Prof., Architecture
Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture
Zissoci, John, M. Arch., Cornell U. Assoc. Prof., Architecture
BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by more than 15 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/?p=38.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.bioLOGY.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole, Mass., or aboard the schooner Corwith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIO G 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108.

For students in the College of Arts and Sciences, all biology ("BIO") courses can be used toward fulfillment of the biological sciences distribution requirement except BIO G 250 (unless permission is obtained), BIO G 209, or BIOSM 204. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIO G 101–104, 105–106, 107–108, 109–110, 170, BIOAP 212, BIOEE 154, 207, 275, BIOGD 184, BIOI 192, BIONB 111, BIONL 240, 241.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics.

Switching between BIO G 109–110 and either BIO G 101–104 or 105–106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIO G 101–104.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching."

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86–23, revised 1996; see p. 7, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . .) at the first meeting of the course.

ADVANCED PLACEMENT

For information on credit for advanced placement in biological sciences, see www.biology.cornell.edu/advising/ap.html.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated by the Office of Undergraduate Biology (OUB), www.biology.cornell.edu. Located in Stimson Hall, the Office of Undergraduate Biology administers the SEA Semester program for students interested in the marine sciences and provides academic advising for all biology major. Students with questions, particularly concerning their ability to complete the major, are encouraged to consult with their biology advisor and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U grades only or if the student's advisor grants permission.

1. Introductory biology for majors (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell summer session for 8 credits, also satisfies the introductory biology requirement for majors.

2. General chemistry: CHEM 207–208 or 215. Students who, via advanced placement, take only CHEM 208 or only 215 should be aware that some professional and graduate schools require 8 credits of general chemistry.
These students may wish to take both CHEM 215 and 208 or 215 and 216. Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.

3. College mathematics (one year): one semester of calculus (MATH 106, 111, 191, or their equivalents) plus one semester selected from the following:
   a. a second semester of calculus (MATH 112, 192, or their equivalents).
   b. a course in finite mathematics (BTRY 101, 417, MATH 105, 231).
   c. a course in statistics (BTRY 301, MATH 171, AEM 210, ILR 212, PSYCH 350, PAM 210, ECON 319, ECON 321, SOC 301).

4. Organic chemistry: CHEM 257 and 251, or 357–358 and 251, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

7. Biochemistry: BIOBM 330, or 331 and 332, or 333.

8. Evolutionary Biology: BIOEE 278 or BIOP 448. Note: BIOP 241 Botany is a prerequisite course to BIOP 448.

9. A program of study selected from the outline below.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisors when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the program of study requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology major, must choose a program of study. A survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen from the list of options below. Students should consult their faculty advisors when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the program of study requirements.

Programs of Study and Requirements

- **Animal Physiology**: BIOAP 311 Introductory Animal Physiology, BIOAP 316 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.
  b. Laboratory courses: BEE 454 Physiological Engineering, AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transillumination for Biologists: BIOGD 413 Histology: The Biology of the Tissues; BIOAP 319 Animal Physiology Laboratory; BIOAP 416 Cellular Physiology and Genomics Laboratory; BIOBM 440 Laboratory in Biochemistry and Molecular Biology; BIONB 419 Principles of Neurophysiology.

2. **Biochemistry**: BIOBM 440 Laboratory in Biochemistry and Molecular Biology, physical chemistry (CHEM 287–288 or 389–390 or 389–390), 6 credits of organic chemistry (CHEM 357–358 or CHEM 359–360; plus one of the following two alternatives. Students wanting to maximize their background in chemistry should take CHEM 300 Quantitative Chemistry and CHEM 301 Honors Experimental Chemistry I. Students wanting to gain further depth in biochemistry and related disciplines should take BIOBM 432 Survey of Cell Biology and either CHEM 500 Quantitative Chemistry or CHEM 252 Elementary Experimental Organic Chemistry. Students choosing the first alternative are encouraged to take BIOBM 432.

Note: CHEM 288 is designed for biologists. Five hours of biochemistry are recommended (331 and 332, or 350 and 353 or 331 and 334). Students interested in graduate work in biochemistry should take PHYS 207–208 and should consider taking CHEM 389–390 and its prerequisites. They should be sure to complete CHEM 207–208 or 217–216 during their freshman year.

3. **Computational Biology**: Computation has become essential to biological research. Genomic databases, protein databanks, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that are transforming almost all of biology. Problems investigated by computational biologists include topics as diverse as the genetics of disease susceptibility; comparing entire genomes to reveal the evolutionary history of life; predicting the structure, motions, and interactions of proteins; designing new therapeutic drugs; modeling the complex signaling mechanisms within cells; predicting how ecosystems will respond to climate change; and designing recovery plans for endangered species. The computational biologist must have skills in mathematics, statistics, and the physical sciences as well as in biology. A key goal in training is to develop the ability to relate biological processes to computational models. Cornell biologists have a unique opportunity to combine their background in biology with skills in two major disciplines, computer science and the physical sciences, and may wish to take additional courses in these areas.

Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional coursework in mathematics and computer programming, a "bridging" course that prepares the biologist to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in the more rigorous course in the physical and mathematical sciences and may wish to take additional courses in these areas.

Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is great, and increasing, demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems. The program is also an excellent preparation for graduate study in any area of biology or computational biology.

**Required Courses for Program of Study in Computational Biology**

- a. One course in computer programming (COM 340 Introduction to Computer Programming or BEE 151 Introduction to Computing)
b. One additional course in mathematics (MATH 221 Linear Algebra and Calculus, or MATH 231 Linear Algebra; or MATH 294 Engineering Mathematics II; or MATH 420 Differential Equations and Dynamical Systems, or BTRY 408 Theory of Probability; or BTRY 421 Matrix Computation)

c. A bridging course, i.e., a course in mathematical modeling applied to biology (BIOECE 362 Dynamic Models in Biology; BIOECE 460 Theoretical Ecology, COM S 321/BIOBM 321, Numerical Methods in Computational Molecular Biology; BTRY 382 Introduction to Statistical Genomics and Bioinformatics, BTRY 494 Quantitative Genetics, or COM S 428 Introduction to Computational Biophysics)

Notes

• It is strongly recommended that students complete the Core physics requirement using the PHYS 207–208 option.

• It is strongly recommended that students complete the Core organic chemistry requirement using the CHEM 257/251 option and that the time saved be used to take either MATH 221 or a second mathematics course from the list above

• MATH 221 Linear Algebra and Calculus, MATH 231 Linear Algebra, MATH 294 Engineering Mathematics II, or BTRY 421 Matrix Computation is recommended for bridging course COM S 321/BIOBM 321, MATH 221 Linear Algebra and Calculus, MATH 231 Linear Algebra, or MATH 420 Differential Equations and Dynamical Systems is recommended for bridging course BIOECE 460.

• Courses may not be used to simultaneously satisfy two different requirements. For example, BTRY 408 can be used to satisfy either requirement (2) or requirement (4), but not both.

• Students who use BTRY 408 to fulfill the additional mathematics requirement should not use OR&IE 360 Engineering Probability and Statistics II to fulfill the requirement for an advanced course.

• Biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

4. Ecology and Evolutionary Biology: BIOEE 261 Ecology and the Environment. Effective fall semester 2005, new students must also complete 13 credits each from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list.

b. Organisms: BIOEE 274 TheVertebrates: Structure, Function, and Evolution; BIOEE 573 Biology of the Marine Invertebrates or BIOEE 376 Marine Invertebrate Zoology; BIOEE 450 and 451 Mammalogy, lec and lab; BIOEE 470 and 472 Herpetology lec and lab; BIOEE 475 Ornithology; BIOEE 476 Biology of Birds; ENTOM 212 Insect Biology; BIOEE 481 Botany; BIOEE 482 Plant Ecology; BIOEE 484 Molecular Evolution.

5. General Biology: The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–10 on pages 152–153. These 13 credits must include:

a. One course from each of three different programs of study in biology.

b. A course with a laboratory.

c. A minimum of two upper-level (300 and above) courses of 2 or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIOG 498 may not be used to fulfill the requirements of this program of study. BIOG 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 413 Histology could count in all three areas: as a course in the Animal Physiology program of study, as an upper-level course, and as a course with a lab.

6. Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIODG 385 Developmental Biology; BIODG 400 A Genomics Approach to Life; BIODG 401 Genomics Analysis; BIODG 450 Vertebrate Development; BIODG
Bacterial Physiology; BIOM 418 Microbial Ecology; BIOM 485 Bacterial Genetics.

Additional approved courses are included in the list below. Students are invited to complete their requirements in one of three areas of interest (these are only recommended areas of interest; students can design their own course list as long as they meet the requirements described above): (a) Prokaryotic Biology, (b) Molecular Microbiology and Biotechnology, and (c) Pathogenic Microbiology. Courses acceptable to the program may be chosen from other biological sciences courses, including BIO G 499 Independent Undergraduate Research in Biology, with approval from the faculty advisor.

7. Insect Biology: ENTOM 212 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of these additional courses must be selected from group a.

Group a: ENTOM 322 Insect Morphology; ENTOM 331 Introductory Insect Systematics; ENTOM 335 Larval Insect Biology; ENTOM 400 Insect Development; ENTOM 455 Insect Ecology; ENTOM 483 Insect Physiology

Group b: ENTOM 315 Spider Biology; ENTOM 325 Insect Behavior; ENTOM 344 Insect Conservation Biology; ENTOM 352 Medical and Veterinary Entomology; ENTOM 369 Chemical Ecology; ENTOM 370 Pesticides, Environment, and Health; ENTOM 416 Insect Rhythms; ENTOM 443 Entomology and Pathology of Trees and Shrubs; ENTOM 444 Integrated Pest Management; ENTOM 452 Herbivores and Plants; ENTOM 453 Principles and Practice of Historical Biograpy; ENTOM 456 Stream Ecology; ENTOM 465 Invertebrate Pathology; ENTOM 470 Ecological Genetics; ENTOM 477 Biological Control; ENTOM 490 Insect Toxicology

8. Microbiology: Students in the Microbiology program of study must complete 290 General Microbiology, Lab; BIOM 291 General Microbiology, Lab. At least 8 additional credits are required, which must include at least one of the following courses: BIOM 414 Bacterial Diversity; BIOM 416 Bacterial Physiology; BIOM 418 Microbial Ecology; BIOM 485 Bacterial Genetics.

Note: Students who declare the program of study in Neurobiology and Behavior after taking BIOGN 221 or 222 for only 3 credits must still take the 1-credit discussion section in BIOGN 221 and 222. To arrange this, the student should consult the professors in charge of the two courses.

11. Nutrition: NS 331 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 422 Medical Nutrition and Child Nutrition, NS 315 Obesity and the Regulation of Body Weight, NS 352 Methods in Nutritional Sciences, NS 341 Human Anatomy and Physiology, NS 347 Human Growth and Development, NS 361 Biology of Normal and Abnormal Behavior, NS 421 Nutrition and Exercise, NS 431 Mineral Nutrition and Chronic Disease, NS 441 Nutrition and Disease, NS 452 Molecular Epidemiology and Dietary Markers of Cancer, NS 445 Nobel Prizes in Biomedical Research, NS 475 Mechanisms Underlying Mammalian Developmental Defects, NS 602 Lipids, NS 603 Mineral Nutrition: Metabolic, Biochemical, and Nutritional Aspects, and NS 614 Topics in Maternal and Child Nutrition. Some courses require NS 115 Nutrition Health and Society, which may be used as part of the additional 9 credits. Independent study and independent study credits cannot be used toward the 13-credit minimum.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in A&S if those credits fulfill major requirements.

12. Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take BIOL 241 Introductory Botany. Students should then choose, with the aid of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOL 242 and 244 Plant Function and Growth, Lee and Lab; BIOL 243 Taxonomy of Cultivated Plants; BIOL 245 Plant Biology (4 credits); BIOL 246 Plant Biotechnology; BIOL 248 Taxonomy of Vascular Plants; BIOL 340 Methods in Biological and Biochemical Prospecting; BIOL 342 and 344 Plant Physiology, Lee and Lab; BIOL 453 and 567 Molecular Biology and Genetic Engineering of Plants, Lee and Lab; BIOL 345 Plant Anatomy;
156

BIOLICAL SCIENCES - 2006-2007

BIOPL 348 The Healing Forest; BIOPL 359 Biology of Grasses; BIOPL 380 Strategies and Methods in Drug Discovery; BIOPL 404 Crop Evolution, Domestication, and Diversity; BIOPL 422 Plant Development; BIOPL 440 Phylogenetic Systematics; BIOPL 442 Current Topics in Ethnobiology; BIOPL 444 Plant Cell Biology; BIOPL 447 Molecular Systematics; BIOPL 448 Plant Evolution and the Fossil Record; BIOPL 449 Green Signals and Triggers—The Plant Hormones; BIOPL 452/454 Systematics of Tropical Plants and Field Lab; BIOPL 453 Principles and Practice of Historical Biogeography; BIOPL 462 Plant Biochemistry; BIOEE 452 Heredity and Plants; BIOEE 463 and 465 Plant Ecology and Population Biology, Lee and Lab; or BIOEE 466 and 488 Physiological Plant Ecology, Lee and Lab.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 347 Molecular Biology and Genetic Engineering of Plants, Lee and Lab. Students choose, in consultation with their faculty advisor, a minimum of 10 additional credits from the following list: BIOPL 241 Introductory Botany; BIOPL 242 and 244 Plant Function and Growth, Lee and Lab; BIOPL 342 and 344 Plant Physiology, Lee and Lab; BIOPL 422 Plant Development; BIOPL 442 Plant Cell Biology; BIOPL 462 Plant Biochemistry; BIOPL 482, 483 Plant Molecular Biology I and II modules; PL BR 401 Plant Cell and Tissue Culture; or PL BR 402 Plant Tissue Culture Laboratory.

13. Systematics and Biotic Diversity: A minimum of 13 credits from the following two groups, including at least 7 credits from group a and three from group b and at least two laboratory courses (marked with *) BIO G 499, Independent Undergraduate Research in Biology, with approval of the advisor, can be used in fulfillment of up to 4 credits in group (a), and can count as one laboratory course if it has a laboratory component of 2 or more credits.

a. *BIOEE 264 Tropical Field Ornithology; *BIOEE 274 The Vertebrates: Structure, Function, and Evolution; *BIOE 371 Human Paleontology; *BIOE 373 Biology of the Marine Invertebrates; BIOE 405 Biology of the Neotropics; BIOE 470 Herpetology, Lee; *BIOE 471 Mammalogy; *BIOE 472 Herpetology, Lab; *BIOE 475 Ornithology; *BIOE 476 Biology of Fishes, BIOE 477 Marine Invertebrates Seminar; BIOMI 290 General Microbiology, Lee; *BIOMI 291 General Microbiology, Lab; BIOMI 414 Prokaryotic Diversity, Lee; *BIOP 241 Introductory Botany; *BIOP 243 Taxonomy of Cultivated Plants; *BIOP 245 Plant Biology; *BIOP 247 Ethnobiology; *BIOP 248 Taxonomy of Vascular Plants, BIOPL 348 The Healing Forest; BIOPL 359 Biology of Grasses; BIOPL 452 Systematics of Tropical Plants; *BIOP 454 Systematics of Tropical Plants Field Laboratory; *ENTOM 212 Insect Biology; ENTOM 215 Spider Biology: Life on a Silken Thread; ENTOM 315 Spider Biology; *ENTOM 322 Comparative Insect Morphology; *ENTOM 331 Introductory Insect Systematics; *ENTOM 333 Maggots, Grubs, and Cutworms: Larval Insect Biology; *ENTOM 631 Systematics of the Coleoptera; PL PA 309 Introductory Mycology; *PL PA 319 Field Mycology.

b. BIOEE 453 Speciation; BIOEE 464 Macroevolution; BIOEE 479 Paleobiology; *BIOE 440 Phylogenetic Systematics; BIOPL 442 Current Topics in Ethnobiology BIOPL 447 Molecular Systematics; *BIOPL 448 Plant Evolution and the Fossil Record; *BIOE 453 Principles and Practices of Historical Biogeography.

14. Independent Option: Students who want to undertake a course of study not covered by the existing programs of study may petition the Biological Sciences Curriculum Committee. Information on independent option and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 216 Stimson Hall.

The Minor in Biological Sciences

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to choose courses of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking either all three biology core course requirements (listed below) or two biology core course requirements and 5 or more biology credits from the lists of approved program of study courses (found in Courses of Study) or from the following list of courses:

- AN SC 300, 301, 410, 420, 427
- BEE 454
- BTRY 382, 482/682
- COM S 426, 620, 627
- CSS 421
- EAS 350, 479
- NS 222, 315, 331, 332, 341, 347, 361, 421, 431, 441, 452, 455, 475, 602, 603, 614
- NTRS 305, 310, 411, 412, 418, 419, 408, 670
- PL BR 401, 402, 403, 606
- PL PA 309, 319

Biology core courses

1. Biochemistry: BIOMM 330, 333, or 331-332; one year of general chemistry and organic chemistry lecture (CHEM 257 or 357-358) are prerequisites

2. Evolutionary biology: BIOE 278 or BIOE 448

3. Genetics: BIOMG 281

Notes:

- BIO G 499 Independent Research may not be used to fulfill any requirement for the minor. No course substitutions are allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.

- All courses for the minor must be taken for a letter grade unless a course is offered S-U only.

- Applications for the minor are located in 216 Stimson Hall. See Bonnie Cornella or Wendy Aquadro for academic advising and for certifying completion of the minor.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have comparable research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, intellectual interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIO G 299, an S-U course designed to introduce students to research. After the first semester, students enroll in BIO G 499. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the program of studies in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 216 Stimson Hall, and must be submitted in October of the senior year to the Honors Program Committee by the announced deadline. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 80 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An S-U course candidate usually earns for credit in BIO G 499.

Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.0 Cornell cumulative and science GPA through
graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project. Students interested in staying for the summer also are encouraged to apply to the Cornell Hughes Scholars Program.

Biologists who are considering study abroad and graduating with honors are encouraged to meet with their academic and research advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program. Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at wwwbiology.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or go to the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program biology and society should see "Special Programs and Interdisciplinary Studies" in the "College of Arts and Sciences" section of this catalog.

TRANSFERRING CREDIT

Students wishing to transfer biology credit to Cornell must receive approval from the director of advising, 216 Stimson Hall. Biology majors are required to complete all three biology core courses at Cornell. External transfer and study abroad students may be allowed to transfer a limited number of biology credits upon approval from the director of advising.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year:

BIO G 101-104, 105-106, and 109-110; and one during the eight-week summer session:

BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

BIO G 101-102(1101-1102) Biological Sciences, Lectures

101, fall; 102, spring. 2 credits each semester. Corequisite: BIO G 103 (fall) or 104 (spring). Prerequisite: for 102, passing grade (D or better) in 101 or permission of instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional by permission of instructor. First lec of fall semester, F Aug. 25. Evening prelims: fall, Sept. 21 and Oct. 31; spring, Feb. 22 and Apr. 3. Fall, staff, spring, staff. Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, including laboratory work. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of the modern evolutionary theory, and discussions of plant and animal systems are integrated.

BIO G 103-104(1103-1104) Biological Sciences, Laboratory

103, fall; 104, spring. 2 credits each semester. Corequisite: BIO G 101 (fall) or 102 (spring). Prerequisite: for 104, passing grade (D or better) in 103 or permission of instructor. Students registered for lab courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. S-U grades optional by permission of instructor. K.-c. Chen. Designed to provide lab experience with major biological phenomena to support an understanding of the important concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal dissection, and ecology. During the first semester, students dissect a double pitted frog (pitting is done by the staff). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIO G 105-106(1105-1106) Introductory Biology

105, fall; 106, spring. 4 credits each semester; 2 credits by permission of instructor. Limited to 200 students. Taking 105-106 in sequence preferred but not required. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. S-U grades optional by permission of instructor. First lec of fall semester R Aug. 24, 9:05; additional study and lab. D. Campbell. Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in the fall semester. The spring semester covers genetics, development, ecology, evolution, behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predesected specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

BIO G 107-108(1107-1108) General Biology

Summer, 8-week session; 107, weeks 1-4; 108, weeks 5-8. 4 credits each. 107-108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school. Prerequisite: one year of college or permission of instructor; for BIO G 108, a grade of D or better in the prerequisite course (BIO G 101, 103, 105, or 107). Fee for weeks 1-4, $25, for weeks 5-8, $25. Staff. Designed for students who plan further study in biology or who want a broad course in biology as part of their general education. 107 covers biological metabolism, first at the molecular level and then progressively to the organism level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.
BIOL G 109-110(1109-1110) Biological Principles
109, fall; 110, spring. 3 credits each semester. Limited to 600 students. Nonmajors survey course, not appropriate for major science or biology-prepared requirement. Both BIO G 109 and 110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills Arts and Sciences distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in content, BIO G 109 may not be taken after BIO G 102 or 106, or equivalent, and BIO G 110 may not be taken after BIO G 101, 105, or equivalent. Note: This course may not satisfy prerequisite for upper-level courses in biology. Letter grades only. Lab sec assignments made in first class. Prelims: fall (in class), Sept. 21 and Oct. 31; spring (evening), Feb. 22 and Apr. 5. D. Winkler, R. Wayne, and staff. Offers a comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the potential benefits and limitations of science, the complexity and workings of the natural world, and the inner machinery of how our bodies and those of other animals and plants work. Fall: biological diversity, genetics, ecology, behavior, and conservation biology. Spring: human physiology, plant development, genetic engineering, infectious diseases, and human health. Laboratory sections (16 maximum) are used for problem-solving experiments, demonstrations, discussions, and dissections (preserved vertebrate, invertebrate, and plant materials); for those students who object to dissection, alternative materials are available for study without grade penalty. Testing on dissection labs involves identification of important structures in real organisms.

BIO G 170(1700) Evolution of the Earth and Life (also EAS 102[1102])
Spring. 3 credits. S-U grades optional. J. L. Case. For description, see EAS 102.

Fall, spring, or summer. 1–3 credits
Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Simson Hall. S-U grades optional by permission of instructor. Staff. Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that is to be offered as a complete course. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 201(2010) Seminar: Your Future in Biology at Cornell and Beyond
Fall. 1 credit. Limited to 40 students. Prerequisite: one year introductory biology; sophomores and new junior transfer students. S-U grades only. Lect. 2 hours each week. J. Doyle and B. Cornella. Focuses on the academic and career interests of sophomore biology majors and new junior transfer students. Biology faculty, Office of Undergraduate Biology staff, biology alumni, and upperclass students lead weekly sessions on diverse topics that may include the biology curriculum, bioethics, burgeoning fields and careers in biology, faculty and undergraduate research, life in the post-S-91 era, and women in science.

[BIO G 202(2020) The Diversity of Life
Fall. 3 credits. S-U grades optional. Offered alternate years; not offered 2006–2007. J. L. Davis and J. J. Doyle.]

BIO G 299(2990) Introduction to Research Methods in Biology
Fall, spring, or summer. Variable credit; max. 3 suggested. S-U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology. 216 Simson Hall. Applications available in OUB and at www.bio.cornell.edu. Add deadline is three days before university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable. Intended for students who are new to undergraduate research. Students enrolled in BIO 299 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIO G 305(3050) Basic Immunology Lectures (also VETMI 315[3150])
Fall. 3 credits. Highly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional. Lec. J. A. Marsh. For description, see VETMI 315.

BIO G 400(4000) Undergraduate Seminar in Biology
Fall or spring. Variable credit; 1–3 assigned for individual seminar offerings; may be repeated for credit. S-U grades optional. Staff. Specialized seminars on topics of interest to undergraduates presented by biology faculty including visiting faculty. For description, see BIOGD 480.

[BIO G 401(4010) Introduction to Scanning Electron Microscopy
Spring, weeks 1–8. 1 credit. Limited to 8 students. S-U grades optional. Fee may be charged. Lec, lab. Offered alternate years; not offered 2006–2007. Staff. Introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological structures and architectural features. In addition to preparing the specimens, students use the scanning electron microscope to study and obtain micrographs of features that interest them.]

[BIO G 403(4030) Transmission Electron Microscopy for Biologists
Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 8 students; minimum of 4 prerequisites: BIOAP 315, BIOL 345 or 443. S-U grades optional. Two sec: 01, 1 credit, weeks 1–4; 02, 3 credits, weeks 5–12. Students may register for one or both sec. Fee may be charged. Lec, lab. Not offered 2006–2007. Staff. Section 01 covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02 covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbial materials, this section covers grids, fixatives, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.]
Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contract, fluorescence, polarization, interference, differential interference and modulation contrast, and optical microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance, and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

**BIO G 498(4980) Teaching Experience**
Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 credits for good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U grades optional by permission of instructor. Staff.

**BIO G 499(4990) Independent Undergraduate Research in Biology**
Fall, spring, or summer. Variable credit. S-U grades optional. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 8 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIO G 499, 498) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systems and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester of BIO G 299 or equivalent. For students continuing their Cornell research. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. Students interested in biomedical science. Add deadline is three days before university deadline. Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

**BIO G 504(5040) Research Experience for Teachers**
(also EDUC/PL BR 504(5040))
Spring. 3 credits. S-U or letter grades. T. Fulton.

**BIO G 600(6000) Graduate Seminar in Biology**
Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Staff.

Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

**BIO G 663(6630) Nanobiotechnology**
(also A&EE 663[6630])
Spring. 3 credits. Letter grades only. C. Batt.

For description, see A&EE 663.

**BIO G 705[7050] Advanced Immunology**
(Lectures also VETMI 705[7050])
Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Offered alternate even years; not offered 2006-2007. Lect. Coordinator: J. A. Marsh.

For description, see VETMI 705.

**BIO G 706[7060] Immunology of Infectious Diseases**
(also VETMI 719[7190])
Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional. Offered odd alternate years; next offered 2007-2008. Coordinator: E. Denkers.

For description, see VETMI 719.

**ANIMAL PHYSIOLOGY (BIOAP)**

**BIOAP 215/2140 Biological Basis of Sex Differences**
(also B&SOC 214[2141], FGSS 214[2140])
Fall. 3 credits. Prerequisite: one year introductory biology. S-U grades optional. Offered alternate years. J. E. Fortune.

Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

**BIOAP 311/3110 Introductory Animal Physiology, Lectures**
(also VTBMS 348[3480])
Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S-U grades optional by permission of instructor.

Evening prelims. E. R. Loew.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/ function relationships are stressed along with underlying physico-chemical mechanisms.

**BIOAP 312/3120 Farm Animal Behavior**
(also AN SC 305)
Spring. 2 credits. Prerequisites: one year introductory biology, and introductory animal physiology (AN SC 100 and 150 or equivalent) is sufficient or BIOAP 311. Recommended: at least one animal behavior course or equivalent experience. S-U grades optional. P. Perry and K. A. Houpt.

For description, see AN SC 305.

**BIOAP 316/3160 Cellular Physiology**
Spring. 3 credits. Pre- or corequisite: BIOBM 330 or 331, or S-U grades optional. Staff.

Comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of cellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

**BIOAP 319/3190 Animal Physiology Experimentation**
Fall. 4 credits. Limited to 40 students per lab sec. Pre- or corequisite: BIOAP 311 or permission of instructor. For pre-med, pre-vet juniors and seniors and graduate students interested in biomedical science. E. R. Loew, N. A. Lorr, and staff.

Student-conducted in vitro and in vivo experiments designed to elucidate basic physiological processes, physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection, and real-time computer recording and analysis of experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems.

**BIOAP 412(4130) Histology: The Biology of the Tissues**
Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOBM 330 or 331, or equivalents. S-U or letter grades. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes dynamics of structure, composition, and function in cells and tissues.

**BIOAP 416(4160) Cell Physiology and Genomics Laboratory**
Spring. 4 credits. Limited to 24 students. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical science. Pre- or corequisite: BIOAP 316 or BIOBM 432 or permission of instructor. A. Quaroni, N. A. Lorr, and staff.

A laboratory course introducing modern methods and instrumentation in cell physiology and genomics, while pursuing a research project. Students learn: (1) primary cell culture, cell cloning; (2) imaging using fluorescence and electron microscopy; (3) karyotyping; chromosome spreading, staining, and FISH; (4) flow cytometry; (5) protein electrophoresis, Western blotting; (6) recombinant DNA technology: restriction analysis cloning, plasmid isolation, and transfection; (7) analysis of gene expression using RT-PCR, real time-PCR and microarray analysis; and (8) analysis of electrogeneric transport in epithelia mounted in Ussing chambers. Students will review with an independent project.
BIOLOGICAL SCIENCES - 2006-2007

[BIOAP 425(4250)] Gamete Physiology and Fertilization [also AN SC 428(4250)]
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years; next offered 2007-2008. Lec. J. E. Parks.

[BIOAP 427(4270)] Fundamentals of Endocrinology [also AN SC 427(4270)]
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Lec. P. A. Johnson. For description, see AN SC 427.

[BIOAP 458(4580)] Mammalian Physiology
Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 311 or equivalent. Recommended for biological sciences majors, pre-med, and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Evening prelms. K. W. Beyenbach.
The course offers a treatment of selected topics in vertebrate and human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course concluding lectures aim to illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the deepest roots of their molecular etiology. Weekly problem sets count 50 percent of the final grade.

[BIOAP 475(4750)] Mechanisms Underlying Mammalian Developmental Defects [also NS 475(4750)]
Spring. 3 credits. Prerequisites: BIOBM 330, 331-332, or 333 (may be taken concurrently). Offered alternate years; next offered 2007-2008. D. M. Noden and P. Stover.
Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

[BIOAP 489(4980)] Mammalian Embryology [also BIOGD 489(4980)]
Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years; next offered 2007-2008. D. M. Noden. Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

[BIOAP 619(6190)] Lipids [also NS 620(6200)]
Fall. 2 credits. A. Benedaoun. For description, sec. NS 602.

[BIOAP 710-718(7100-7180)] Special Topics in Physiology
Fall or spring. 1 or 2 credits per topic; may be repeated for credit. Enrollment in each topic may be limited. S-U grades optional by permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

[BIOAP 711(7110)] Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years; next offered 2007-2008. Lec. K. A. Houpt.

[BIOAP 714(7140)] Cardiac Electrophysiology
Fall. 1 credit. S-U grades only. Offered alternate years. R. Glumour. Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasizes nonlinear dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.

[BIOAP 715(7150)] Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. K. A. Houpt.
Emphasizes physiological assessment of stress.

[BIOAP 720(7200)] Animal Physiology and Anatomy Seminar
Spring and fall. 1 credit each semester. Prerequisite: admission to graduate field of physiology. M. Roberson. Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

[BIOAP 757(7570)] Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisite: undergraduate degree in biology and strong interest in reproductive biology. S-U grades optional. Offered alternate years; next offered 2007-2008. J. E. Fortune. W. R. Butler, and staff.
Team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, sperm physiology/function); female reproductive function (endocrine regulation, ovarian development and function, oocyte physiology/function); fertilization and gamete transport; pregnancy; parturition; lactation; aging; reproductive technology. Student participation in the form of discussions and/or presentations.

[BIOBM 330(3300)] Principles of Biochemistry
Fall or spring. 4 credits. Prerequisites: one year introductory biology and one year general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 334. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional by permission of instructor. Evenfall, Sept. 28 and Oct. 31; spring, Feb. 22 and Apr. 3. J. E. Blankenship, P. C. Hinkle, and staff.
Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

[BIOBM 331(3310)] Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 257 or 357-358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades by permission of instructor. Evenfall, evening prelms Oct. 19.
G. W. Feigenson.
The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

[BIOBM 332(3320)] Numerical Methods in Computational Molecular Biology [also COM S 332(3350)]
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and course in linear algebra (e.g., MATH 221 or 294 or BTRY 417). No particular course in programming required, but student should have some familiarity with iteration, arrays, and procedures. Offered alternate years; next offered 2007-2008. For description, see COM S 332.

[BIOBM 330-332(3300-3320)] Principles of Biochemistry
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332). May be taken concurrently or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 334. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional by permission of instructor. Evenfall, Sept. 28 and Oct. 31; spring, Feb. 22 and Apr. 3. J. E. Blankenship, P. C. Hinkle, and staff.
Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.
BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY

BIOBM 332(3320) Principles of Biochemistry, Molecular Biology
Spring. 2 credits. Prerequisites: one year introductory biology and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333 or 335-336. Required by permission of instructor. Lec. B. K. Tyk.

Comprehensive course in molecular biology that covers the structure and properties of DNA, RNA replication and repair, synthesis and processing of RNA, DNA, and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technologies, genomics, and proteomics.

BIOBM 333(3330) Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer, six-week session. 4 credits.

Prerequisites: one year introductory biology, one year general chemistry, and CHEM 257, or 357–358, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 330, 331, or 332. S. P. B.

Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334(3340) Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: BIOBM 333 or 351–352 (BIOBM 332 may be taken concurrently). Corequisite: BIOBM 330. J. E. Blankenship.

P. C. Hinkle, and staff.

Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 432(4320) Survey of Cell Biology
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. Recommended: BIOGD 281. Rec. By. M. Vogl.

Survey of some topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as cell-cycle progression, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 457, BIOGD 485, and BIOBM 652, 666, and 670.

BIOBM 424(4340) Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332. Recommended: BIOGD 281. S-U grades optional. Lect. J. M. Calvo and S. Ely.

Lecture topics include large-scale sequencing of genomes, drug discovery based on genomics, combinatorial approaches to chemical libraries, pharmacogenomics, antibodies derived from immune system, DNA and edible vaccines, transgenic animals, engineering plants resistant to insects, and gene therapy. About one-quarter of the course is devoted to exploring factors that are required for commercializing ideas and to some social ramifications of biotechnology.

BIOBM 435-436(4350-4360) Undergraduate Biochemistry Seminar
1 credit. May be repeated. Prerequisites: upperclass standing; BIOBM 330, 333, or 335-336, or written permission of instructor. S-U grades only. D. Wilson.

Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOBM 437(4370) Regulation of Cell Proliferation, Senescence, and Death (also BIOGD/TOX 437[4370])
Spring. Variable credits; students may take 1-2 credits per sec. and dis for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIO G 101-102 or 105-106 and BIOBM 350 or 331/332. Recommended: BIOGD 281 and BIOBM 432. S-U grades optional. S. Lee.

Covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncopogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion section.

[BIOBM 439(4390) Molecular Basis of Human Disease (also BIOGD 439[4390])
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 330, 331–332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 316) and physiology (e.g., BIOAP 311 or 452). S-U grades optional. Lec. Not offered 2006–2007; next offered 2007–2008. W. H. Kao.

This course examines how changes in the expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenotypes, and environmental agents lead to human diseases.

BIOBM 440(4400) Laboratory in Biochemistry and Molecular Biology
Fall, spring, or summer (three-week session). 4 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular Biology and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOBM 330 or 333 or 331-332 (at least one of 331–332 completed but one may be taken concurrently). S. Ely and H. Nivison.

Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immuno blotting), and determination of enzyme kinetic parameters.

BIOBM 443(4430) Experimental Molecular Neurobiology (also BIOBM 443[4430])

For description, see BIOBM 430.

BIOBM 450(4500) Principles of Chemical Biology (also CHEM 450[4500])
Fall. 3 credits. Prerequisites: CHEM 357–358, 359–360, or equivalent. T. P. Begley.

For description, see CHEM 450.

BIOBM 483[4830] Molecular Aspects of Plant Development I (also BIOPL 483[483])
Fall. 1 credit; may be repeated. Prerequisites: BIOGD 281. Recommended: BIOBM 330 and BIOBM 331-332 or 333 or 335. Lec. J. R. Peters.

For description, see BIOPL 483[483].

BIOBM 485(4850) Bacterial Genetics (also BIO/BIOMG 485[4850])
Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOGD 280 and BIOBM 330 or 331 and 332 or 333. Lec. J. E. Peters.

For description, see BIOBM 485[4850].

BIOBL 615(6150) Nuclear Hormone Receptors (also NS 615[6150])
Spring. 2 credits. S-U or letter grades. N. Noy.

For description, see NS 615.

BIOBM 631(6310) Protein Structure and Function
Fall. 3 credits. Prerequisites: BIOBM 330 or 331-332 and organic chemistry. Recommended: physical chemistry course. S-U grades optional. Lec. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

BIOBM 632(6320) Membranes and Bioenergetics
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331-332 or equivalent. Lect. Offered alternate years; next offered 2007–2008. P. C. Hinkle.

Structure and dynamics of biological membranes, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, transport in animals, bacteria and structures of membrane proteins.

BIOBM 633(6330) Biosisynthesis of Macromolecules
Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331-332. Recommended: BIOGD 281. Rec. J. W. Roberts and D. B. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 636(6360) Advanced Cell Biology
Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332, and 432, or equivalents. Lect. A. P. Bretscher and W. J. Brown.

Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOBM 457, 652, and 670 this course provides broad coverage of the cell biology subject area.

BIOBM 638(6380) Macromolecular Interactions and Cell Function
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331-332, and 432, or equivalents. Lec. A. P. Bretscher and W. J. Brown.

Lectures focusing on the principles of protein-protein and protein-nucleic acid interactions that underlie cellular processes such as signal transduction, intracellular traffic, gene regulation, and cell development. The
emphasis throughout is on the structural basis of these processes as related to cell function. Some specific topics are signal amplification, nuclear import and export, transcription by RNA polymerases, RNA processing and export, and translation of mRNAs.

**BIOBM 639(6390) The Nucleus**
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331–332, or equivalent. Recommended: BIOGD 281. Lect. J. T. Lis. Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cellular biological levels and, together with BIOBM 437, 652 and 636, provides broad coverage of the cell biology subject area.

**BIOBM 641(6410) Laboratory in Plant Molecular Biology (also BIOPL 641[6410])**
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson and K. Van Wijk. For description, see BIOPL 641.

**BIOBM 720(7300) Protein NMR Spectroscopy (also VETM 707[7070])**
Spring. 2 credits. Prerequisites: CHEM 389 and 390, or 287 and 288, or permission of instructor. S-U grades optional. Offered, alternate years, next offered 2007–2008. Lect. L. K. Nicholson and R. E. Oswald. Students acquire the tools necessary for understanding multidimensional NMR of proteins. NMR fundamentals and schemes for magnetization transfer, water suppression, decoupling, and others are presented.

**BIOBM 732–737 (7320–7370) Current Topics in Biochemistry**
Fall or spring. 0.5 or 1 credit for each topic; may be repeated for credit. Prerequisite: BIOBM 330 or 335 or 331–332 or 632 or 636. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester or the department mini-courses web site, mbg.cornell.edu/about/minicourses.cfm.

**BIOBM 736(7380) Macromolecular Crystallography (also CHEM 780[7880])**
Fall. 3 credits. Prerequisite: permission of instructor. Lect. S. E. Ealick. For description, see CHEM 780.

**BIOBM 751(7510) Ethical Issues and Professional Responsibilities**
Spring. 1 credit. Prerequisite: graduate students beyond first year. S-U grades only. Organizational meeting first W of semester. Sem. P. Hinkle. Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

**BIOBM 751(7510) Topics in Cancer Cell Biology (also VETM 709[7090])**
Spring. Series of 0.5- or 1-credit graduate sections that reflect cancer expertise of Cornell faculty. Course director, B. U. Pauli. For description, see VETM 709.

**BIOBM 830(8300) Biochemistry Seminar**
Fall or spring. 0 credits. Prerequisite: graduate students in Biochemistry, Molecular, and Cell Biology. Lect. open to everyone. V. Vogt. Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

**BIOBM 831(8310) Advanced Biochemical Methods I**
Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab. and disc. Organizational meeting first R of semester 10:10. T. C. Huffaker. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOBM 832). Students must enroll separately for each half.

**BIOBM 832(8320) Advanced Biochemical Methods II**
Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab. and disc. Research in the laboratory of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

**BIOBM 833(8330) Research Seminar in Biochemistry**
Fall or spring. 1 credit each semester may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S-U grades only. W. L. Kraus and V. M. Vogt. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**BIOBM 836(8360) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I**
Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular, and cell biology. S-U grades only. Sem. and disc. G. P. Hess. Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular, and cell biology.

**BIOBM 838(8380) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II**
Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genetics and development. S-U grades only. D. Shalloway. Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

**Related Courses in Other Departments**
Advanced Development Biology (BIOGD 483)
Lipsidus (BIOAP 619, NS 620)
Teaching Experience (BIG 498)
Undergraduate Research in Biology (BIG 499)

**ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)**

**BIOEE 154(1540) Introductory Oceanography, Lectures (also EAS 154[1540])**
Fall. 3 credits. Optional 1-credit laboratory offered as BIOEE/EAS 155. S-U or letter grades. B. C. Monger and C. H. Greene. For description, see EAS 154.

**BIOEE 155(1550) Introductory Oceanography, Laboratory (also EAS 155[1550])**
Fall. 1 credit. Corequisite: BIOEE/EAS 154. S-U or letter grades. B. C. Monger and C. H. Greene. For description, see EAS 155.

**BIOEE 207(2070) Evolution (also HIST/S&TS 287[2870])**
Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet evolutionary biology requirement for biological sciences major. S-U or letter grades. W. B. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**BIOEE 261(2610) Ecology and the Environment**
Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S-U or letter grades. Fall: A. S. Flecker and J. P. Sparks. Summer: one weekend field trip. A. T. Wawer. Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing
examples from both plant and animal studies. Phenomena that occur at the individual, problems and issues.

Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

**BIOEE 264(2640) Tropical Field Ornithology**
Winter, Jan. 4–18, 2007, two-week, full-time field trip. Limited to 12 students; minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S-U or letter grades. Daily fieldwork, disc, reading, and individual projects. Cost of tuition covers airfare, food, and lodging. A. D. Dhondt.

Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

**BIOEE 265(2650) Tropical Field Ecology and Behavior**
Winter, field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructor. Letter grades only. J. J. Lovette and D. Rubenstein.

Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Most in-country costs (e.g., ground transportation, room, board) are covered by course tuition, but students pay separately for their international airfare and insurance. The course may also be a small supplementary laboratory fee.

**BIOEE 267(2670) Introduction to Conservation Biology**
Fall. 3 credits. Intended for both science and nonscience majors. May not be taken for credit after NRES 410(450). Prerequisite: BIOEE 267 not required for NRES 410. S-U or letter grades. One Sat. a.m. field trip. Offered alternate years; not offered 2006–2007; next offered 2007–2008. J. W. Fitzpatrick.

**BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution**

Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various groups, sensory systems, thermoregulation, life cycles, locomotion, feeding, and reproduction. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

**BIOEE 275(2750) Human Biology and Evolution (also ANTHR/NS 275[2750])**

**BIOEE 278(2780) Evolutionary Biology**
Fall, spring, or summer. Fall or spring: 3 or 4 credits. 4-credit option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. Students may not preregister for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; first-semester freshmen by permission of instructor. S-U or letter grades. Evening prelins: spring. Mar. 1 and Apr. 3. Fall, I. J. Lovette; spring, M. J. Shulman. Summer (three-week session): 4 credits. Prerequisite: one year introductory biology or equivalent or permission of instructor. Letter grades only. Two all-day Sat. field trips. I. J. Lovette.

Considers explanations for patterns of diversity and for the apparent good fit of organisms to the environment. Topics include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the fall or spring 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelins. The 4-credit, summer version also considers special topics such as sexual selection and evolutionary perspectives on disease and medicine and offers expanded hands-on activities, greater exposure to current research and the primary literature and an emphasis on students' interpretive learning as reflected in essays and other writing assignments.

**BIOEE 350(3500) Dynamics of Marine Ecosystems (also EAS 350[3500])**
Fall. 3 credits. Limited to 25 students. Prerequisites: one year of calculus and one semester of an introductory course (e.g., BIOEE/ EAS 154), or permission of instructor. S-U or letter grades. Offered alternate years; not offered 2006–2007; next offered 2007–2008. C. H. Greene and R. W. Howarth. For description, see EAS 350.

**BIOEE 351(3510) Marine Ecosystems Field Course (also EAS 351[3510])**
Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester and two semesters of biology or permission of instructor. Letter grades only. C. H. Greene, C. D. Harvell, and B. C. Monger. For description, see EAS 351.

**BIOEE 362(3620) Dynamic Models in Biology (also MATH 362[3620])**

**BIOEE 363(3630) Field Methods in Ornithological Research**
Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: introductory biology or equivalent, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S-U or letter grades. P. H. Wrge, D. W. Winkler, C. B. Cooper, and D. N. Bonter. Detailed, hands-on experience with the methods commonly used in ornithological field research, focusing on different methodologies used to obtain data on organismal structure and function, life history characteristics, and behavior. While being immersed in an ongoing, intensive research program in the Ithaca area, students will learn about the types of evolutionary and ecological questions that can be addressed through use of different research methodologies, experimental design, and basic statistical analysis techniques.

**BIOEE 369(3690) Chemical Ecology (also BION/BIOS 369[3690])**
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. A. Agrawal, G. Jander, A. Kessler, and J. S. Thaler. Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include: plant defenses, microbial warfare, communication in marine organisms, and human phenomones.

**BIOEE 371(3710) Human Paleontology (also ANTHR/NS 371[3710])**
Spring. 4 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 101 or permission of instructor. Letter grades only. Not offered 2006–2007; next offered 2008–2009. K. A. Kennedy.

**BIOEE 373(3730) Biology of the Marine Invertebrates**
Fall (but course must be taken previous summer at Shools Marine Laboratory [SML], three-week, full-time course. 5 credits; students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because of off campus. Letter grades only. Daily and evening lab, and fieldwork. Total cost for room, board, and overhead at SML $1,200. Offered alternate years; not offered 2006–2007; next offered 2007–2008. C. D. Harvell and J. G. Morin.
BIOLOGICAL SCIENCES - 2006-2007

[BIOEE 446(4460) Plant Behavior—Induced Plant Responses to Biotic Stresses] Spring. 3 credits. Limited to 12 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. A. Kessler. How do plants respond to herbivore attack? What are the molecular, plant hormonal, metabolic mechanisms of these responses? What ecological consequences do these responses have for the plant's and their attackers' fitness? The course provides an overview of the plant's myriad responses to herbivores and compares them to responses to pathogens. It gives an introduction to the study of induced plant responses in the lectures as well as practical independent and group-intensive work.

[BIOEE 451(4510) Mammalogy, Laboratory] Spring. 1 credit. Limited to 24 students. Pre- or corequisite: BIOE 450. Letter grades. S-U grades by permission only. Fee: $15. Travel to Cornell University Museum of Vertebrates (CUMV) at the Laboratory of Ornithology is necessary. One all-day field trip may be scheduled. Offered alternate years. B. A. McGuire. Laboratory topics include systematics, morphology, and behavior. Focus is on terrestrial mammals of North America. Most laboratories involve studies of skeletons and museum specimens; dissection of preserved material is possible. Live animals may be studied in the field and used in the laboratory for nondestructive experiments and demonstrations.

[BIOEE 453(4530) Speciation] Spring. 4 credits. Limited to 40 students. Prerequisites: BIOEE 278 and BIOGD 281 or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years. R. G. Harrison. Advanced course in evolutionary biology focusing on the pattern and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Lecture topics include species concepts and definitions, the history of ideas about speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, rates of speciation. Emphasis is on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

[BIOEE 455(4550) Insect Ecology (also ENTO 455(4550))] Fall. 4 credits. Recommended. ENTO 212 or BIOEE 261 or permission of instructor. S-U or letter grades. Offered alternate years. J. S. Thaler. For description, see ENTO 455.

[BIOEE 456(4560) Stream Ecology (also NTRES 456(4560))] Fall. 4 credits. Limited to 40 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. Field project with lab papers. One Sat. field trip. Offered alternate years; not offered 2006-2007; next offered 2007-2008. A. S. Flecker and C. E. Kraft. For description, see NTRES 456.

[BIOEE 460(4600) Theoretical Ecology] Spring. 4 credits. Limited enrollment. Prerequisites: completion of Biological Sciences mathematics requirement or equivalent, and one additional semester of mathematics, statistics, or modeling (e.g., BEE 260/453/475, NTRES 310/411, BIOL 422) or permission of instructor. S-U or letter grades. Offered alternate years. S. P. Ellner. Introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multispecies and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

[BIOEE 462(4620) Marine Ecology (also EAS 462(4620))] Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Letter grades. S-U grades by permission only. Offered alternate years. C. D. Harvill and C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

[BIOEE 464(4640) Macroevolution] Spring. 4 credits. Limited to 35 students. Prerequisite: BIOEE 278 or permission of instructor. Interested graduate students strongly encouraged to preregister. Letter grades; S-U grades by permission only. Offered alternate years; not offered 2006-2007; next offered 2007-2008. A. R. McCune.

[BIOEE 466(4660) Physiological Plant Ecology, Lectures] Spring. 3 credits. Limited to 30 students. Prerequisite: BIOEE 261 or introductory plant physiology. Letter grades; S-U grades by permission only. Offered alternate years. J. P. Sparks. Detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population, community, and ecosystem levels. Material drawn from the primary literature and textbooks.

[BIOEE 467(4670) Seminar in the History of Biology (also HIST 415(4150), B&SOC/S&TS 447(4471))] Fall or summer (six-week session). 4 credits. Limited to 18 students. S-U or letter grades. W. B. Provine and K. A. R. Kennedy. Specific topic changes each year.

[BIOEE 468(4680) Physiological Plant Ecology, Laboratory] Spring. 2 credits. Limited to 15 students. Pre- or corequisite: BIOEE 466. Letter grades only. Offered alternate years. J. P. Sparks. Detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspirational plant design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours per week in additional lab time for this course.
[BIOEE 469(4690) Food, Agriculture, and Society (also B&SOC/IST 469(4691))] Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S-U or letter grades only. Offered alternate years 2006–2007; next offered 2008–2009. A. G. Power.]

[BIOEE 470(4700) Herpetology, Lectures Spring. 2 credits. Limited to 50 students. Recommended: BIOEE 274 and concurrent enrollment in BIOEE 472. Letter grades. S-U grades by permission only. Offered alternate years. H. W. Greene. Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology.

[BIOEE 472(4720) Herpetology, Laboratory Spring. 2 credits. Limited to 35 students. Pre- or corequisite: BIOEE 470. Letter grades. S-U grades by permission only. Fee: $30. Occasional field trips and special projects. Offered alternate years. H. W. Greene. Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

[BIOEE 473(4730) Ecology of Agricultural Systems (also HORT 473(4730)) Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. L. E. Drinkwater and A. G. Power. Analysis of the ecological processes operating in agricultural systems, with an emphasis on understanding relationships between agroecosystem structure and function and interactions among organisms. Examines agroecological theory and research through readings and discussions. The first part of this course emphasizes understanding biogeochemical processes, population and community concepts, and emphasis on plant-herbivore and plant-microbial interactions, and evolutionary processes in agroecosystems. The latter part focuses on the application of ecological knowledge to the design and management of multifunctional agroecosystems. Field trips to local farms and case studies from both the tropics and the temperate zone are used to illustrate important concepts.

[BIOEE 475(4750) Ornithology Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by petition in F141 Conron Hall. Recommended: BIOEE 274. Letter grades; S-U grades by permission only. Carpooling to lab of Ornithology necessary. Fee: $15. Occasional field trips and special projects. Offered alternate years; not offered 2006–2007; next offered 2007–2008. D. W. Winkler.]

[BIOEE 476(4760) Biology of Fishes Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 274 or equivalent experience in vertebrate zoology. Letter grades; S-U grades by permission only. Small lab fee may be required. Two field trips. Offered alternate years. A. R. McCune. Introduction to the study of fishes: their structure, physiology and functional morphology, behavior, ecology, diversity, evolution, classification, and identification. Emphasizes examples from different habitats (temperate, tropical coastal reef, intertidal, and deep sea); local freshwater species; and interesting freshwater fishes from around the world, especially South America and Africa. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

[BIOEE 477(4770) Marine Invertebrates Seminar Fall. 1 credit. Prerequisite: BIOEE 373 or permission of instructor. S-U grades only. Offered alternate years; not offered 2006–2007; next offered 2007–2008. C. D. Harvell and J. G. Morin.]

[BIOEE 478(4780) Ecosystem Biology Spring. 4 credits. Prerequisite: BIOEE 261 or equivalent. Letter grades. Offered alternate years. C. L. Goodale and R. W. Howarth. Analyzes ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Considers anthropogenic effects on ecosystems, such as acid precipitation and nitrogen pollution. Also analyzes climate change and regional environmental change from an ecosystem perspective.

[BIOEE 479(4790) Paleobiology (also EAS 479(4790)) Fall. 4 credits. Prerequisites: one year introductory biology for majors and either BIOEE 274, 373, EAS 375, or permission of instructor. S-U or letter grades. Offered alternate years. W. D. Allmon. For description, see EAS 479.]

[BIOEE 490(4900) Topics in Marine Biology Spring. 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates. S-U or letter grades. Offered alternate years; not offered 2006–2007; next offered 2007–2008. J. G. Morin and M. J. Shulman.]

[BIOEE 660(6600) Field Studies in Ecology and Evolutionary Biology Fall or spring. Variable credit. Prerequisites: BIOEE 261, taxon-oriented course, and permission of instructor. S-U grades by permission only. Fee and field trips TBA. Estimated costs: TBA. Staff. Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors. Organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

Sec 01 Tropical Field Ecology Spring. 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater organisms. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing: TBA. Offered alternate years. C. D. Harvell, J. P. Sparks, and N. G. Hairston, Jr. Field trip to the big island of Hawaii, the Yucatan Coast of Mexico, or similar environment, check with instructors for planned location. Students employ experimental approaches to study ecological and evolutionary questions across a range of tropical biomes.

Sec 02 Graduate Field Course in Ecology Spring. 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years; not offered 2006–2007; next offered 2007–2008. J. P. Sparks.]

[BIOEE 661(6610) Environmental Policy (also ALS 661[6610], B&SOC 661[4611]) Fall and spring. 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only. D. Pimentel. Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research taxum spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

[BIOEE 668(6680) Principles of Biogeochemistry Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S-U or letter grades. Offered alternate years; not offered 2006–2007; next offered 2007–2008. R. W. Howarth and C. L. Goodale.]

[BIOEE 673(6730) Human Evolution: Concepts, History, and Theory (also ANTHR 673[6572], ECO 673[6573]) Spring. 3 credits. Prerequisite: one year introductory biology or ANTHR 101 or permission of instructor. Letter grades only. Not offered 2006–2007; next offered 2008–2009. K. A. R. Kennedy.]

[BIOEE 675(6750) Current Topics in Plant Molecular Ecology Fall. 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. Offered alternate years. A. Kessler. Seminar with presentations and discussions of papers that utilize molecular genetic techniques to address consequential questions in plant ecology, evolution, and conservation. Independent and group-intensive study of current interest.
BIOEE 750-760(7590-7600) Special Topics in Evolution and Ecology
Fall or spring. 1-3 credits; may be repeated for credit. Limited enrollment. Letter grades; S-U grades by permission only. Staff. Independent or group-intensive study of special topics of current interest. Content varies each semester.

BIOEE 761(7610) Microsatellite DNA: Techniques
Fall. 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail S. M. Bogdanowicz (smb31) by end of Aug. if interested. S-U grades only. Fee: TBA. R. G. Harrison and S. M. Bogdanowicz. Construct and screen genomic DNA libraries for microsatellite loci. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.

BIOEE 763(7630) Workshop in Biogeochemistry
Fall or spring. 1-3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 668. S-U grades only. Staff. Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

BIOEE 764(7640) Plant-Insect Interactions Seminar
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. A. Agrawal and J. S. Thaler. Group-intensive study of current research in plant-insect interactions. Topics vary from semester to semester, but include: chemical defense, coevolution, insect community structure, population regulation, biocontrol, tritrophic interactions, and mutualism.

BIOEE 767(7670) Current Topics in Ecology and Evolutionary Biology
Fall. 4 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades only. P. P. Feeny. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

BIOEE 899(8990) M.S. Thesis Research
Fall or spring. 1-15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S-U or letter grades. E&EB field faculty. Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOGD 132(1320) Orientation Lectures in Molecular Biology and Genetics (also BIOM 132(1320))
Spring, weeks 1-3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lect. S. Staff. For description, see BIOM 132.

BIOGD 280(2800) Lectures in Genetics
Fall, spring, or summer (eight-week session). 3 credits. Not open to freshmen in fall semester. Prerequisite: one year introductory biology or equivalent. Lect. Lee component of BIOGD 281. Not open to students majoring in biological sciences; may not be used to fulfill requirements for biological sciences major. Prerequisites: one year introductory biology or equivalent, or permission of instructor. Lect. Highly recommended: problem-solving sessions. T. D. Fox and R. J. MacIntyre. For description, see BIOGD 281.

BIOGD 281(2810) Genetics
Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen in fall semester. Prerequisite: one year introductory biology or equivalent. Lect. lab. Highly recommended: problem-solving sessions. T. D. Fox, R. MacIntyre, and D. Neter. General study of the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, gene linkage and recombination, gene structure, gene and chromosome mutations, gene expression, and the manipulation of genes.

BIOGD 282(2820) Human Genetics
Spring. 2 or 3 credits; 2 credits if taken after BIOGD 281. Limited to 20 students per disc. Prerequisite: one year introductory biology or equivalent. S-U grades optional. Lee. M. L. Goldberg. Designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 385(3850) Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281. Lect. K. Kemphues. Introduction to the morphogenetic, molecular and cellular, and genetic aspects of the developmental biology of animals.

BIOGD 394(3940) Circadian Rhythms (also ENTOM/BIONB/PL PA 394(3940))
Fall. 2 credits. Prerequisite: ENTOM 212 or BIOGD 281 or BIONB 221 or 222 or permission of instructor. S-U grades optional. Lect. K. Lee. For description, see ENTOM 394.
BIOGD 400(4000) A Genomics Approach to Studying Life
Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 281 or 330 or 333 or 331/332 or permission of instructor. S-U or letter grades. T. P. O'Brien.
Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide organization of genomes and the methods
of statistical inference in interpreting genomic data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.
BIOGD 482(4820) Human Genetics and Society
Fall. 4 credits. Limited to 24 students. Prerequisite: biological sciences majors; priority given to seniors studying genetics and molecular and cellular biology and biochemistry; BIOGD 281 and BIOMB 330 or 333 or 331 and 332. R. A. Calvo.
Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, eugenic, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, forensic uses of genetics, and genetic diseases. Students lead some discussions. There is a major writing component to the course.
BIOGD 483(4830) Advanced Developmental Biology
Spring. 3 credits. Prerequisites: BIOGD 281, BIOMB 330 or 333 or 331 and 332, or BIOMB 330 or 331. Recommended: BIOGD 281 and BIOMB 432. S-U grades optional. S. Lee.
For description, see BIOMB 437.
[BIOGD 439(4390) Molecular Basis of Human Disease (also BIOMB 439(4390)]
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOMB 330, 331/332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: BIO G 101–102 and BIOMB 330 or 331 and 332. Recommended: BIOGD 281 and BIOMB 432. S-U grades optional. S. Lee.
For description, see BIOMB 439.
BIOGD 452 Molecular Biology of Plant Organelles (also BIOPL 462, Sec 5)
Spring. 1 credit. Prerequisites: BIOPL 465 Sec 1 or BIOGD 281 and permission of instructor. S-U or letter grades. M. R. Hanson and D. B. Stern.
For description, see BIOPL 462, Sec 5.
BIOGD 481(4810) Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 281. BIODEE 278, or equivalents. Lec, disc. C. F. Aquadro and B. LaZararo.
Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the

BIOGD 486(4860) Advanced Eukaryotic Genetics
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOMB 330 or 333 or 331 and 332. S-U grades optional. T. P. O'Brien and P. E. Cohen.
Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.
BIOGD 487(4870) Human Genomics
Fall. 3 credits. Prerequisite: BIOGD 281. Lec. A. G. Clark.
Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic information. Population genetics, and the central role of understanding the role of the human genome in mediating variation in disease risk, are explored in depth. Methods such as homozogosity mapping, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

BIOGD 489(4890) Mammalian Embryology (also BIOAP 489(4890])
Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOGD 490(4900) Manipulating the Mouse Genome (also NS 490(4900])
Fall. 1 credit. Prerequisite: BIOGD 280, 281, or 282 and BIOMB 330, 332, or 333 or NS 320. Lec. P. D. Soloway.
For description, see NS 490.
BIOGD 608(6080) Epigenetics (also NS 608(6080])
Fall. 2 credits. Prerequisites: BIOGD 281 and BIOMB 330, 332, or 333 or NS 320. Letter grades only. P. Soloway.
For description, see NS 608.
BIOGD 610(6100) Genomes as Chromosomes
Fall. 3 credits. Limited to 15 students. Prerequisites: BIOGD 281 and BIOMB 330 or 333 or 331/332 or equivalent by permission of instructor. Letter grades only. T. P. O'Brien and P. E. Cohen.
The eukaryotic genome is partitioned into discrete structural units, the chromosomes. The course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus.
Experimental and computational approaches used to address chromosome structure and function are studied.

**BIOGD 611(6110) Genome Maintenance Mechanisms**

Fall. 1 credit. Limited to 25 students. Prerequisites: BIOGD 281, as well as BIOBM 390, or 335, or 351-352 (or equivalents). S-U or letter grades. R. Weiss.

The course focuses on the molecular mechanisms utilized by eukaryotic cells to preserve genomic integrity. Topics to be discussed include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addressed will be how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, especially cancer.

**BIOGD 612(6120) Overview of Model Genetic Organisms**

Spring. 1 credit. Limited to 20 students. Prerequisites: BIOGD 281 or 400 or permission of instructor. S-U or letter grades. J. Schimenti.

Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed include: yeast, Arabidopsis, Drosophila, C. elegans, zebralfish, and mice.

**BIOGD 613(6130) Genomics, Biotechnology, and Society**

Spring, weeks 10-13. 1 credit. Prerequisite: BIOGD 281 or BIOGD 400 or permission of instructor. S-U or letter grades. D. S. Kresovich and S. Tanksley.

A multidisciplinary examination of four to six selected topics that relate to the applications of biological insights derived from genomic analysis. Technical, scientific, ethical, political, legal, and/or social aspects of each topic will be considered from various perspectives.

**BIOGD 624(6240) Quantitative Trait Loci Analysis (also PL PA 624[6240])**

Fall. 1 credit. Prerequisites: introductory statistics and BIOGD 281 or permission of instructor. S-U or letter grades. Offered alternate years; not offered 2006-2007; next offered 2007-2008. K. Lee. For description, see PL PA 624.

**BIOGD 638(6380) Fertilization and the Early Embryo**

Spring. 2 credits. Prerequisites: BIOGD 281, BIOBM 332, 350 or 333; and BIOGD 385 or permission of instructor. Lec. Offered alternate years; not offered 2006-2007; next offered 2007-2008. M. F. Wolfner.

We explore the latest molecular/cell/genetic findings about the biology of gametes, fertilization and early development—and their application to fertility modulation, "cloning" and stem cells.

**BIOGD 687(6870) Developmental Genetics**

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or equivalents. S-U grades optional. Lec/TBA. Offered alternate years; not offered 2006-2007; next offered 2007-2008. K. J. Kemphues.

Course focuses on methods of genetic analysis of fruitflies, nematodes, mice, and fish to understand mechanisms of development. No text. Lectures and problems from literature.

**BIOGD 699(6990) Cellular Basis of Development**

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281, 385, and either BIOBM 320 or 351-352. Lec. S-U grades optional. Offered alternate years. J. Liu.

Focuses on the integration of different cellular processes in various developmental contexts. Topics include cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.

**BIOGD 780(7800) Current Topics in Genetics**

Fall of spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S-U grades only, by permission of instructor. Seminar TBA. Staff.

**BIOGD 781(7810) Problems in Genetics and Development**

Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.

**BIOGD 782-783(7820-7830) Current Genetics/Development Topics**

Spring. 0.5 or 1 credit for each topic; may be repeated for credit. S-U grades only. Lec and sem on specialized topics. Staff.

**BIOGD 784(7840) Introduction to Quantitative Analysis**

Fall. 1 credit. Letter grades only. E. Alani (organizer), A. Clark, C. Bustamante, and M. Goldring.

The goal of this course is to introduce biostatistic and probability/statistical tools at an intuitive level that will be meaningful to first-year graduate students in Genetics and Development.

**BIOGD 785(7860) Research Seminar in Genetics and Development**

Fall and spring. 1 credit. Requirement for, and limited to second-, third-, and fourth-year graduate students in genetics and development. S-U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

**BIOGD 787(7870) Seminar in Genetics and Development**

Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S-U grades only. Sem. TBA. Staff. Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

**MICROBIOLOGY (BIOMI)**

**BIOMI 290(2900) General Microbiology Lectures**

Fall, spring, or summer (six-week session). 3 credits. Prerequisites: one year introductory biology for majors and one year college chemistry, or equivalent. Highly recommended: concurrent registration in BIOMI 291. W. C. Ghiorese.

Comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Some material may overlap with BIOGD 281 and BIOBM 330. Also covers applied aspects of microbiology such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology. 4-credit option involves one discussion per week led by faculty in the Department of Microbiology and will involve readings and a writing assignment. Students may not pre-register for 4-credit option. Interested students complete an application form on first day of class (enrollment will be limited to 20 students).
BIOMI 291(2910) General Microbiology Laboratory
Fall or spring, summer (six-week session). 2 credits. Pre- or corequisite: BIOMI 290. S. M. Merkel.
Study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 292(2920) General Microbiology Discussion
Spring. 1 credit. Pre- or corequisite: BIOMI 290. S-U grades only. Staff. Series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 321(3210) General Parasitology (also VETMI 331(3310))
Spring. 2 credits. Prerequisites: one year introductory biology, D. Bowman. Introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of nonmedically important groups. Introduces the major animal parasites: protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

BIOMI 391(3910) Advanced Microbiology Laboratory
Fall. 2 or 3 credits. Prerequisites: BIOMI 290, 291, and BIOMIB 330 or 331 or 333. Priority given to biological sciences students in microbiology program of study. W. C. Ghiorse, J. P. Shapleigh, and S. H. Zinder.
Illustrates basic principles of experimental microbiology. The course is organized into four modules that last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 394(3940) Applied and Food Microbiology (also FD SC 394[3940])
Fall. 2-3 credits. Prerequisites: BIOMI 290-291. C. A. Batt. For description, see FD SC 394.

BIOMI 397(3970) Environmental Microbiology (also CSS 397[3970])
Spring. 3 credits. Prerequisites: BIOEE 261 or BIOMI 290 or CSS (SCAS) 263 or permission of instructor. Offered alternate odd years. E. L. Madsen. Discusses the biological properties, evolution, and behavior of microorganisms in natural systems in relation to past and present environmental conditions on Earth and other living planets. Also considers the functional role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater treatment, environmental biotechnology, and astrobiology.

BIOMI 404(4040) Pathogenic Bacteriology and Mycology (also VETMI 404[4040])
Spring. 2 or 3 credits. 2 credits with lab and sem. Prerequisites: BIOMI 290 and 291; for undergraduates, permission of instructor. Highly recommended: BIO G 305. Offered alternate even years. D. Debbie. For description, see VETMI 404.

BIOMI 409(4090) Principles of Virology (also VETMI/PL PA 409[4090])
Fall. 3 credits. Prerequisites: BIOMI 290, 291 or permission of instructor. Recommended: BIOMIB 330-332, 432. Letter grades only. G. R. Whitaker and S. G. Lazarkowtiz. For description, see VETMI 409.

BIOMI 414(4140) Prokaryotic Diversity
Spring. 3 credits. Prerequisites: BIOMI 290 and 291. Recommended: BIOMIB 330 or 331 or 333. Offered alternate odd years. S. H. Zinder.
Consideration of the evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of prokaryotes. Topics include prokaryotic phylogeny, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416(4160) Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMIB 330 or 331 or equivalents. Offered alternate even years. J. P. Shapleigh.
Focuses on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

BIOMI 418(4180) Microbial Ecology
Spring. 3 credits. Prerequisites: BIOMI 290 and 291, or 398 and permission of instructor, and BIOMIB 330 or 331 and 332. E. R. Angert.
Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

BIOMI 420(4200) Microbial Genomics
Spring. 2 credits. Prerequisites: BIOMI 290, BIO G 281, BIOG 350, or equivalent. Offered alternate odd years. J. P. Shapleigh and J. D. Helmmann.
Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

BIOMI 431(4310) Medical Parasitology (also VETMI 431[4310])
Fall. 2 credits. Prerequisites: zoology and biology courses. D. Bowman. For description, see VETMI 431.

[BIOMI 482(4840)(Sec 02) Molecular Plant-Microbe Interactions (also BIOPL 482, Sec 02, PL PA 484[4840])
Spring. 1 credit. Prerequisites: BIOGD 281, BIOMIB 330 or 331 or 333, and BIOPL 483 (sec 01) or equivalents. S-U grades optional. Offered alternate even years. S. C. Winans. For description, see BIOPL 482, Sec 02.1

BIOMI 485(4850) Bacterial Genetics (also BIOGD/BIOBM 485[4850])
Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOMIB 330 or 331 and 332 or 333. J. E. Peters. Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 610(6100) Introduction to Chemical and Environmental Toxicology (also TOX 610[6100])
Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades. A. Hay. Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

BIOMI 651(6080) Genomics of Bacterium-Host Interactions (also PL PA 608[6080])
Fall, second half of semester. 1 credit. Prerequisites: BIOMI 290 or equivalent or permission of instructor. S-U grades optional. Offered alternate even years. A. Collmer and S. Winans. For description, see PL PA 608.

BIOMI 690 Prokaryotic Biology
Fall and spring. 4 weeks/8 lec. 1 credit per sec to be offered.

Sec 1 Microbial Structure and Function
Fall. J. P. Shapleigh. Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Sec 2 Environmental Microbiology
Fall. E. L. Madsen. Core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. Discusses the crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere.

Sec 3 Microbial Physiology/Diversity
Fall. S. H. Zinder. Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.
Sec 4  Microbial Genetics
Spring, J. D. Helmann. Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, phage, and mutagenesis.

Sec 5  Microbial Pathogenesis
Spring, S. C. Winans. Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenic determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 699(6990) Toxicology Journal Club
Sec 01—Environmental Toxicology
(Tox 6990)
Spring. 1 credit. Required for toxicology students until post-grad exam. A. C. Hay.

BIOMI 725(7250) Mechanisms of Microbial Pathogenesis (also VETMI 725(7250))
Spring. 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOMI 404, 409, 417, or equivalent. Highly recommended: completion of two of the three courses. D. Debiase, M. Hesser, H. Marquis, J. Parker, M. Scidmore, and G. Whitaker. For description, see VETMI 725.

BIOMI 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VMTED 740(6430))
Spring. 6 credits. Prerequisites: third and fourth-year veterinary students. Letter grades only. D. D. Bowman. For description, see VTMED 740.

BIOMI 791(7910) Advanced Topics in Microbiology
Fall or spring. 1 credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, S. C. Winans; Sec 02 Environmental Microbiology, E. R. Argent. Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 796(7960) Current Topics in Microbiology
Fall and spring. 0.5 to 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lect. Staff. Lectures and seminars on special topics in microbiology.

BIOMI 797(7970) Scientific Communication Skills
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters, third semester optional. S-U grades only. Staff. The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.

BIOMI 798(7980) Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S-U grades only. Staff. All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

BIOMI 799(7990) Microbiology Seminar
Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.

The Soil Ecosystem (CSS 366)

NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 111(1110) Brain Mind and Behavior (also PSYCH/COGST 111[1110])
Spring. 3 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use course for credit toward major. Letter grades only. Planned M W F 9:05. E. Adkins-Regan and R. R. Hoy. For description, see COGST 111.

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior
Fall, 3, 4, or 5 credits; 4 credits with one disc per week. 5 credits with two disc per week and participation in Writing in the Majors program. 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Planned M W F 12:20; disc TBA, H. K. Reeve and staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior Summer, six-week session. 3 or 4 credits; 4 credits with one disc per week. Prerequisite: one year introductory college biology. S-U grades optional. Course fee: none. Planned M-F 4:00-5:15. Staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222(2220) Neurobiology and Behavior II: Introduction to Neurobiology Spring. 3 or 4 credits; 4 credits with disc and written projects; 4-credit option required of students studying neurobiology and behavior. Limited to 15 students per disc; priority given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Planned M W F 12:20; disc TBA, R. Harris-Warrick and staff. General introduction to the field of cellular and integrative neurobiology. Topics include: neural systems, neurotransmitters, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 231(2310) Sophomore Seminar: Topics in Cognitive Studies: Borges and I: A Quest for Self-Knowledge (also PSYCH 231/531[2310/6331], COGST 531[6331])
Spring. 4 credits. 231 limited to 15 students. Planned M W 2:55-4:10. S. Edelman. For description, see PSYCH 231.

BIONB 322(3220) Hormones and Behavior (also PSYCH 322[3220])
Fall. 3 credits. Prerequisites: junior or senior standing; all one of the following: PSYCH 223 or BIONB 221 or 222 or one year introductory biology plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 722. Planned M W F 11:15. E. Adkins-Regan. For description, see PSYCH 322.

BIONB 323(3230) Methods in Animal Behavior
Fall. 4 credits. Prerequisite: BIONB 221. Letter grades only. Offered alternate years; next offered 2006-2007. 3 credits with one disc per week. 4 credits with two disc per week. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Planned M W F 12:20; disc TBA, H. K. Reeve and staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.
Biological Psychology Laboratory (also PSYCH 324[3240])
Spring. 4 credits. Limited to 20 students. Prerequisite: Junior or senior standing. PSYCH 224 or, BIOL 221 or, permission of instructor. Planned T R 1:25–4:25. T. J. DeVoogd.
For description, see PSYCH 324.

Bionb 325[3250] Insect Behavior (also ENTOM 325[3250])
Spring. 3 credits. Prerequisite: ENTOM 212 or BIOL 221. Intended for juniors, seniors, and graduate students. S-U grades optional. Planned T 10:10–11:25. L. S. Rayor.
For description, see ENTOM 325.

[Bionb 326[3260] The Visual System]
Spring. 4 credits. Prerequisite: BIONB 222 or BIOP 311 or permission of instructor. S-U grades optional. Planned M W F 10:10–12:10, disc TBA. Offered alternate years; next offered 2007–2008. H. C. Howland.
The visual systems of vertebrates are discussed in breadth and depth as well as some aspects of invertebrate vision.

Bionb 327[3270] Evolutionary Perspectives on Human Behavior
Fall. 3 credits. Prerequisites: BIONB 221 and permission of instructor. Letter grades only. Planned M W 2:55–4:10. S. T. Emlen.
Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior. Topics include genes and behavior, the evolutionary environment of adaptation, the evolutionary function of emotions, human mating system, parenting strategies, cooperation and conflict within family-based societies. All students read and discuss primary papers and recent books. Each student is responsible for leading multiple discussions, writing an original paper, and peer-reviewing papers of other class members.

Bioph 328[3280] Biopsychology of Learning and Memory (also PSYCH 332[3320])
Spring. 3 credits. Limited to 60 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 222. S-U grades optional. Graduate students, see PSYCH 632. Planned M W F 11:15. T. J. DeVoogd.
For description, see PSYCH 332.

Bioph 329[3290] Ecology of Animal Behavior (also BIOSM 329[3290])
Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: Ecology, psychology, or behavior course. S-U grades optional. Special two-week course offered at Shaola Marine Laboratory (SMU), located on an island off Portsmouth, N.H. For more details and an application, contact SMU office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SMU faculty.
For description, see BIOSM 329.

Bioph 330[3300] Introduction to Computational Neuroscience (also PSYCH/COGST/BME 330[3300])
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises for computer science students. Prerequisites: BIONB 222 or permission of instructor. S-U grades optional. Offered alternate years. Planned M W 2:55–4:10. C. Linster.
Covers the basic ideas and techniques involved in computational neuroscience. Surveys diverse topics, including neural dynamics of small networks of cells, neural coding, learning in neural networks and brain structures, memory models of the hippocampus, sensory coding, and others.

Bioph 331[3310] Human Sociobiology
Spring. 3 credits. Prerequisite: BIONB 221 or PSYCH 223 or permission of instructor. S-U grades optional. Planned M W 2:55–4:10. P. Barclay.
Lecture-based course drawing on research in evolutionary biology and animal behavior to investigate various aspects of human social behavior. Findings are presented from areas such as evolutionary psychology, anthropology, human behavioral ecology, and evolutionary game theory. Topics may vary slightly from year to year, but include mating, cooperation (with kin and nonkin), conflict and aggression, parental behavior, costly signaling, and culture.

Bioph 369[3690] Chemical Ecology (also BIOEE/ENTOM 369[3690])
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U grades optional. Planned M W F 11:15. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.
For description, see BIOEE 369.

Bioph 392[3920] Drugs and the Brain
Fall. 4 credits. Prerequisites: BIONB 222 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry, S-U grades optional. Planned T R 10:10–11:25, disc TBA. Offered alternate years; next offered 2007–2008. R. M. Harris-Warrick and L. M. Nowak.
Introduction to neuropsychopharmacology, emphasis on neural mechanisms of psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, alcohol, and drugs for psychotic treatment.

Bioph 394[3940] Circadian Rhythms (also BIOG/ENTOM/PL PA 394[3940])
For description, see ENTOM 394.

[Bioph 396[3960] Introduction to Sensory Systems (also PSYCH/698[6980]/6960)]
Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus introductory course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Planned T R 10:10–11:25. Offered alternate years. B. P. Halpern.
For description, see PSYCH 396.

Bioph 412[4120] Molecules of Social Behavior and Emotion
Neurotransmitters, hormones and receptors governing courtship, pair bonding, parental care, territoriality, cooperation, stress responses, etc. Active-learning format.

Bioph 420[4200] Topics in Neurobiology and Behavior
Fall or spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S-U grades optional. Staff. Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

Bioph 421[4210] Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431/631[4310/6310])
Fall. 3 or 4 credits; 4-credit option involves term paper or creation of relevant web site. Limited to 25 students. Prerequisites: introductory cognitive psychology or psychology, plus second course in perception, neurobiology, cognitive science, or biopsychology. Planned T R 10:10–11:25. B. P. Halpern.
For description, see PSYCH 431.

Bioph 422[4220] Modeling Behavioral Evolution
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S-U grades optional. Planned T R 2:55–4:10, computer lab TBA. Offered alternate years, next offered 2008–2009. H. K. Reeve.

Bioph 423[4230] Cognitive Neuroscience (also PSYCH 425/625[4250/6250])
Fall. 4 credits. Prerequisites: introductory biology; biopsychology or neurobiology (e.g., PSYCH 223 or BIONB 221), and introductory course in perception, cognition, or language (PSYCH 102, 209, 214, or 215 essential). S-U grades optional. Graduate students, see PSYCH 625. Planned M W F 9:05. Offered alternate years. B. L. Finlay.
For description, see PSYCH 425.

Bioph 424[4240] Neuroethology (also PSYCH 424[4240])
Spring. 4 credits. Prerequisites: BIONB 221 or 222, or one year introductory biology for majors and permission of instructor. S-U grades optional. Offered alternate years; next offered 2007–2008. C. D. Hopkins.
Introductory survey of neuroethology, including exotic senses, amazing motor behaviors, and neuroethological applications.

Bioph 425[4250] Molecular Neurophysiology
Structure/function of ion channels responsible for electrical signals, in, e.g., learning, memory, sensing heat and jaundice, epilepsy, directional plant growth.

How and why do animals communicate (topics include signal evolution, environmental effects on communication, cooperation vs. conflict signals, signal honesty, interspecific communication).

[BIONB 427(4270) Animal Social Behavior] Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and permission of instructor. Letter grades only. Planned T R 2:30-4:25. Offered alternate years; next offered 2007-2008. P. W. Sherman.

Writing-intensive advanced course for upper-division students. Lectures, discussions, student presentations on topics in animal behavioral ecology, human sociobiology, Darwinian medicine.

[BIONB 428(4280) Clinical Neurobiology] Spring. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIONB 330 or 331, co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S-U grades optional. Planned M W 2:30-4:25. Offered alternate years. R. Booker.

The goal of this course is to provide students with an appreciation of the current challenges facing researchers studying neurodiseases. The focus is on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neurodiseases, including but not limited to Alzheimer's disease, Parkinson's disease, neural ischemia, depression, ADHD, eating disorders, and AIDS-related dementia. The course is provided a health context that enriches the student's learning experience in other advanced courses in the biological sciences. Guest speakers include faculty from across the Ithaca campus and the Weill College of Medicine, Departments of Neurology and Neuroscience.

[BIONB 429(4290) Offalence and Taste: Structure and Function (also PSYCH 429(4290))] Spring. 3 or 4 credits; 4-credit option requires term paper or research project (research project can but does not need to study nonhuman vertebrates.) Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629.

Prerequisite: one 300-level course in biopsychology or equivalent. Planned T R 10:10-11:25. Offered alternate years; next offered 2008-2009. B. P. Halpern.

For description, see PSYCH 429.

[BIONB 430(4300) Experimental Molecular Neurobiology (also BIONB 4311)] Spring. 4 credits. Limited to 12 students. Corequisite: BIONB 440 lab. Letter grades only. Planned T all day; disc TBA. Offered alternate years. D. L. Detich.

Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, DNA sequencing, and protein interactions. Experiments emphasize how molecular techniques can be applied to studying neurobiological problems.

Genes influence how we behave. Explores the current understanding of how genes influence the behavior of a variety of animals, including humans.

[BIONB 440(4400) Electronics in Neurobiology (also BME 440(4400))] Fall. 4 credits. Prerequisite: junior, senior, or graduate standing, calculus course. S-U grades optional. Planned T R 8:40-9:55, lab W 1:25-4:25. Offered alternate years; next offered 2007-2008. B. R. Land.

http://instruct1.cit.cornell.edu/courses/bionb440/}

[BIONB 441(4410) Computers in Neurobiology (also BME 441(4410))] Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Planned TR 8:40-9:55, lab W 1:25-4:25. Offered alternate years. B. R. Land.

Introduces to computer programming techniques and data reduction. Gives a basic understanding of the techniques for using a computer in a biological context. Includes techniques to convert raw data to scientific visualization. Includes some computer modeling examples drawn from practical neurobiological problems.

For description, see A&EP 470.

[BIONB 491(4910) Principles of Neurophysiology (also BME 491(4910))] Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students by permission of instructor. Planned M W 10:10; lab planned M or T 12:20-4:25. B. R. Johnson.

Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and clamp techniques; explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. See instructor1.cit.cornell.edu/courses/bionb491/index.html.

[BIONB 492(4920) Sensory Function (also PSYCH 492/692(4920/6920))] Spring. 4 credits. Limited to 25 students. Prerequisite: 300-level course in biopsychology, or BIONB 222, or BIBAOP 311, or equivalent knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Graduate students, see PSYCH 692. Planned M W F 10-10. Offered alternate years. H. C. Howland.

For description, see PSYCH 492.

Focuses on both the morphological and molecular basis of neurodevelopment. Assigned readings are taken from original journal and review articles.

[BIONB 494(4940) Brain Evolution and Behavior] Spring. 3 credits. Intended for juniors, seniors, and graduate students.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors.

[BIONB 495(4950) Molecular and Genetic Approaches to Neuroscience] Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; BIONB 222 and BIONB 350 or 332. Letter grades only. Planned T R 8:40-9:55. Offered alternate years; next offered 2008-2009. D. L. Detich.

Focuses on how molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine research articles.

[BIONB 496(4960) Bioacoustic Signals in Animals and Man] Fall. 3 credits. Limited to 12 students.

Prerequisites: junior, senior, or graduate standing; one year introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Planned M W 9:05; lab TBA. Offered alternate years. C. W. Clark and R. R. Hoy.

Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems. Presents the physical properties of sound, physiological mechanisms for sound production and hearing, and the behavioral contexts in which sounds are used. Acoustic techniques are provided in the laboratory where students learn how to record, synthesize, and analyze sounds with the aid of recorders and Mac and/or PC computers running customized software. Labs are designed around the lecture material and for the practical "real-world" exercises designed to simulate discovery of fundamental principles described in lectures. Class research projects on a selected topic in bioacoustics are required. Engineering students with interests in music, audio analysis, digital signal processing, and computer science are encouraged.
BIOL 720(7200) Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor. S-U grades optional. Staff and students. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

BIOL 721(7210) Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIOL 221 and 222 not required. S-U grades only. Planned W 4:00-6:00. D. L. Deitcher and staff. Lectures, readings, and discussion introduce first-year graduate students to the research activities of the faculty in the graduate field of neurobiology and behavior. Class meets weekly for two hours. Students also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

Spider Biology (ENTOM 215)

PLANT BIOLOGY (BIOL)
BIOL 240(2400) Green World/Blue Planet
Fall. 3 credits. S-U grades optional. Lec. T. Silva.
Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision-making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOL 241(2410) Introductory Botany
Fall. 3 credits. Lec. lab. K. J. Niklas. Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOL 242(2420) Plant Function and Growth Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function; suitable as second-level course for nonmajors to satisfy biology distribution requirement.
Prerequisites: one year introductory biology and/or BIOL 241. Corequisite for plant science undergraduates (and highly recommend for other science majors). BIOL 244. Recommended: one year introductory chemistry. May not be taken for credit after BIOL 242 except by written permission of instructor. S-U grades only. Even-Dan Kasile Research.
How plants function and grow. Examples deal with crop plants or other plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

BIOL 243(2430) Taxonomy of Cultivated Plants (also HORT 243(2430))
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOL 243. Lec. Lab. Offered alternate years; not offered 2006–2007; next offered 2007–2008. M. A. Luckow.
Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOL 244(2440) Plant Function and Growth, Laboratory
Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOL 242. May not be taken for credit after BIOL 244. Disc and lab; students must take lab and disc on same day. T. G. Owens.
Experiments exemplify concepts covered in BIOL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

BIOL 245(2450) Plant Ecology
Summer, six-week session. 3 credits. Limited to 24 students. Lec. Lab. T. Silva. Introductory botany and plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

BIOL 247(2470) Ethnobotany
Consideration of the principles, methods, and issues of ethnobotany. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and function of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

BIOL 248(2480) Taxonomy of Vascular Plants
Introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOL 340(3440) Methods in Biological and Biochemical Prospecting
Spring. 2 credits. Prerequisites: BIO G 101–104. Recommended: previous or concurrent enrollment in organic chemistry. Offered alternate years; not offered 2006–2007. E. Rodriguez.
Students learn theory and methodologies in ethnobotany, chemical ecology, and zoo pharmacognosy as they apply in a multidisciplinary fashion to chemoprosppecting. The use of techniques in the chemistry of natural products and biological assays in the discovery of chemicals and their role in nature is described. Classical examples of drug development, from quinine to taxol, in the course of chemical prospecting are discussed. An overall medicinal purpose in chemoprospecting is emphasized, with mention of specific worldwide spread of diseases pressing for new drugs.

BIOL 342(3420) Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: one year introductory biology. Corequisite: BIOL 344 or written permission of instructor. May not be taken for credit after BIOL 242 unless written permission obtained from instructor. Lec. Lab. T. G. Owens.
Integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant-water relations, mineral nutrition, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.
BIOL 343(3430) Molecular Biology and Genetic Engineering of Plants
Spring. 2 credits. Prerequisite: one year general biology or permission of instructor. S-U grades optional. Lect. M. E. Nasrallah. Introduces the student to recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

BIOL 344(3440) Plant Physiology, Laboratory
Spring. 2 credits. Corequisite: BIOL 342. May not be taken for credit after BIOL 244. Similar to BIOL 244 but at a more advanced level. Lab. W. A. Silva. Experiments exemplify concepts covered in BIOL 342 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

BIOL 345(3450) Plant Anatomy
Fall. 4 credits. Limited to 15 students. Prerequisite: one year introductory biology or a semester of botany. Lect. A. Gandolfo. Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOL 347(3470) Laboratory in Molecular Biology and Genetic Engineering of Plants
Spring. 2 credits. Limited to 24 students. Prerequisite: BIOL 343 or permission of instructor. Recommended: concurrent enrollment in BIOL 343. S-U grades optional. Lab. M. E. Nasrallah. Companion to BIOL 343 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

BIOL 348(3480) The Healing Forest
Spring. 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lect. or disc. Offered alternate years; not offered 2006–2007, 2008–2009. D. M. Bates and E. Rodriguez. Ethnobotanical and ethnopharmacological consideration of the role of plants, fungi, and insects in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, bioresource prospecting, compensation for indigenous knowledge, and sustainable development.

BIOL 359(3590) Biology of Grasses
Fall. 2 credits. Prerequisite: one year introductory biology or course in plant systematics or permission of instructor. S-U grades optional. Lect. Offered alternate years; not offered 2007–2008, 2011–2012. J. I. Davis. Systematics and related aspects of the biology of the graminid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.

BIOL 380(3800) Strategies and Methods in Drug Discovery
Spring. 2 credits. Prerequisite: one year introductory biology and organic chemistry course or permission of instructor. S-U grades optional. M. A. Arquelin. Covers strategies and methodologies in chemotaxonomy, chemical ecology, and ethnomedicinal chemical prospecting for new pharmaceuticals. Discusses the biosynthesis and distribution of plant secondary metabolites, the use of techniques in isolation and structure elucidation of natural products, and biological assays in the discovery of chemicals with pharmacological activity.

BIOL 404(4040) Crop Evolution, Domestication and Diversity (also PL BR/IARD 404/4040)
Fall. 2 credits. Prerequisites: BIOL 281 or PL BR 225 or permission of instructor. S-U grades optional. Lect. S. Kresovich. For description, see PL BR 404.

BIOL 422(4220) Plant Development
Fall. 2 credits. Lect. Prerequisites: course work in molecular biology (e.g., BIOBM 330, 331, 332, or 333), or genetics (e.g., BIOGD 281), or permission of instructor. S-U grades optional. J. Hua. Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

BIOL 440(4440) Phylogenetic Systematics (also ENTM 440/4440)
Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lect. or lab. Offered alternate years; not offered 2007–2008. K. C. Nixon. Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOL 442(4420) Current Topics in Ethnobotany
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades optional. Lect. or disc. Offered alternate years; not offered 2006–2007; next offered 2007–2008. D. M. Bates. Explores the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and trade, and in thought.

BIOL 443(4430) Topics and Research Methods in Systematics
Fall or spring. 1–2 credits; 1 credit per sec. Prerequisite: permission of instructor. S-U grades optional. K. C. Nixon. Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taken every semester. Topics and instructors are listed in the division's calendar of enrollment issued at the beginning of the semester.

BIOL 444(4440) Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: one year introductory biology or permission of instructor. Lect. Offered alternate years; not offered 2006–2007; next offered 2007–2008. R. O. Wayne. Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanism of cell division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 447(4470) Molecular Systematics
Fall. 3 credits. Prerequisites: BIOL 278 or BIOGD 281 or BIOBM 330, or BIOBM 332, or written permission of instructor. Lect. Offered alternate years; not offered 2006–2007; next offered 2007–2008. J. J. Doyle. Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organellar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 448(4480) Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Lect. or lab. Offered alternate years; not offered 2007–2008. K. J. Niklas and W. L. Crepet. Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOL 449(4490) Green Signals and Triggers—The Plant Hormones (also HORT 449/4490)
Fall. 1 or 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOL 242 or 342) or permission of instructor. S-U grades optional. Offered alternate years; not offered 2006–2007; next offered 2007–2008. P. J. Davies. Study of plant hormones and how they regulate plant growth and development.

Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.
and RNA interference; and (2) the genetic
focus on: (1) plant perception of microbial
and plant responses to pathogen infection.
Factors that control pathogen-plant interactions
Examination of the molecular and cellular
nature of dominant and recessive resistance,
in resistance or susceptibility to disease.

I and II (also PL PA 462.1)

BIOPL 452(4520) Systematics of Tropical
Plants
Fall. 3 credits. Prerequisite: BIOPL 243 or
248. Letter grades only. Lec. lab. Offered
every three years. K. C. Nixon.
The families of flowering plants represented in forests of
the American tropics. Emphasis is on field
identification combined with laboratory analysis
of available materials in a “whole-biology”
context. Two-week field trip over winter break.

BIOPL 462(4620) Plant Biochemistry
Spring. 3 credits. Prerequisites: BIOPL 242
or 342 or equivalent and BIOBM 350 or
351 or equivalent or permission of
instructor. Letter grades only. Lec. J. Rose
and K. Van Wijk.
Focuses on biochemical analysis of plant specific
processes, with the aim to obtain an
integrative overview of plant biochemistry.
Examples include processes such as cell
wall biochemistry, pigment biosynthesis
and degradation, secondary metabolism,
senescence, defense mechanisms, amino acid
biosynthesis, and small molecule transport.
Genomics-based experimental tools such as
proteomics and metabolomics are discussed.

BIOPL 482 Plant Molecular Biology II
Spring. 3-6 credits; 1 credit per sec.
Prerequisites: BIOGD 281 and BIOBM 330 or
332, or equivalents. Recommended:
BIOBM 331. S-U grades optional.
Series of four-week modules on specialized
topics. Coordinator: J. B. Nasrallah
Sec 01 Molecular Plant-Pathogen Interactions
I and II (also PL PA 462.1)
1 credit. 12 lec. A. Collmer, S. G. Lazarowitz,
G. Martin, and B. G. Turgeon.
Examination of the molecular and cellular
factors that control pathogen-plant interactions
and the role of plant defenses and signaling
mechanisms in plant pathogen interaction.
Beginning spring 2004, alternate years
focus on: (1) plant perception of microbial
pathogens and the role of plant defenses
and pathogens in resistance or susceptibility to disease.
Production of transgenic plants for agricultural and
industrial purposes. Topics include procedures for gene
introduction and control of expression, as well as strategies for obtaining transgenic
plants that are resistant to insects, diseases,
and herbicides, produce useful products,
or have provided nutritional and food
processing characteristics. Regulatory and
safety issues relating to plant biotechnology are
discussed.

Sec 07 Plant Cell Walls: Structure to Proteome
1 credit. S-U grades optional. 12 lec.
J. Rose.
Examines the structure and function of plant cell
walls, exploring their dynamic nature and complexity.
Topics include wall biosynthesis, wall structure and
composition; regulation of cell expansion and
differentiation; defense against pathogens
and pests; and cell wall composition as a
metabolically active subcellular compartment.
Techniques include: biochemistry to proteomics.

BIOPL 483 Plant Molecular Biology I
Fall. 1–5 credits; 1 credit per sec.
Prerequisites: BIOGD 281 and BIOBM 330 or
332, or equivalents. Recommended:
BIOBM 331. S-U grades optional.
Coordinator: J. B. Nasrallah
Series of four-week modules on specialized
topics.

Sec 01 Concepts and Techniques in Plant
Molecular Biology (also PL PA 463.01, PL BR
483.01)
2 credits. Lec. S. R. McCouch,
J. Giovannoni, and J. Rose.
Introductory module that provides a broad overview of molecular biology concepts
relevant to the plant sciences. Serves as a
prerequisite to other modules in the BIOPL
483 (fall) and BIOPL 482 (spring) series.
The course is divided into three sections: (1)
Gene discovery: covers genetic and
genomics approaches to the isolation of
plant genes; (2) Gene characterization: covers
DNA sequence analysis, assessment of gene
expression, functional genomics approaches,
and production of transgenic plants; (3) Analysis
and characterization of proteins and metabolites:
includes proteomics approaches to the analysis
of plant proteins, protein-protein interactions,
and phosphoproteomics approaches to
metabolomic techniques. This course consists
of two lectures and one day of discussion per week.
Course material is coordinated with
BIOPL 611 (lab). Emphasis is on understanding
and techniques and approaches appropriate for
different experiments and objectives.

Sec 02 Proteomics in Plant Biology
1 credit. S-U grades optional. 12 lec.
K. van Wijk.
Introduction to proteomics and mass
spectrometry and its application in plant
biology. Includes discussion of protein
separation, protein identification and visualization
techniques; principles of biological
mass spectrometry and interpretation of
spectra; bioinformatics tools in proteomics;
comparative proteomics; phosphorylation
profiling through emerging metabolic
mapping. Discusses limitations and
possibilities of proteomics on plants for
which little sequence information is available
and the use of techniques is appropriate.

Sec 03 Plant Genome Organization
and Function (also PL BR 483.3)
1 credit. 12 lec. Offered alternate years.
S. Danksley.
Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Sec 04 Molecular Aspects of Plant Development I (also BIOBM 483.4)
J. B. Nasrallah.
Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is a companion to BIOPL 482, Sec 02 (Molecular Plant-Microbe Interactions).

Sec 05 Molecular Breeding (also PL BR 483.5)
1 credit. 12 lec. Offered alternate years; not offered 2006–2007. S. D. Tanksley.
Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

Sec 06 Plant Senescence (alsoHORT 625.2)
1 credit. S-U grades optional. (12 lec).
S. Gan.
Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

BIOL 641(6410) Laboratory in Plant Molecular Biology (also BIOBM 641[6410])
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, H. Wang, T. Brutnell, G. Jander, J. Hua, M. Scanlon, and K. van Wijk.
Includes selected experiments on gene expression, biolistic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

BIOL 642(6420) Plant Mineral Nutrition (also CSS 642[6420])
Detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

BIOL 647(6470) Systematic Biology Journal Club
Fall or spring. 1 credit; may be repeated for credit. Intended for graduate students and advanced undergraduates in systematic biology. S-U grades only. Disc. TBA. Bailey Hortorum staff. Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

BIOL 649(6490) Solute Transport in Plants (also BEE 649[6490])
Fall. 3 credits. Letter grades only. Disc. Offered alternate years; not offered 2007–2008. R. M. Spanswick.
For description, see BEE 649.

BIOL 651(6510) Water Transport in Plants (also BEE 647[6470])
For description, see BEE 647.

BIOL 654(6540) Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec and disc. Offered alternate years; not offered 2006–2007. M. A. Luckow.
Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOL 656(6560) Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years. K. J. Niklas.
Ser. of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOL 740(7400) Plant Biology Seminar
Fall and spring. 0 credits (no official registration). Requirement for graduate students doing work in plant biology. W. L. Crepet.
Lectures on current research in plant biology, presented by visitors and staff.

BIOL 741(7410) Problems in Plant Cell and Molecular Biology
Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc. Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOL 742(7420) Current Papers in Plant Biology
Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S-U grades only. Sem. Staff.

BIOL 743(7430) Faculty Research in Plant Cell and Molecular Biology
Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc. TBA. Staff.
Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOL 744(7440) Graduate Research in Plant Cell and Molecular Biology
Fall or spring. 1 credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students in Plant Cell and Molecular Biology. Sem. Staff.
Each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation.

BIOL 745(7450) Seminar in Systematic Botany
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Sem. Bailey Hortorum staff.
Seminar with student presentations of current topics in systematics.

BIOL 746(7460) Seminar in Systematic Botany: Student Research
Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorum staff.
Student-led seminar presentation based on his or her thesis research or a related topic.

BIOL 749(7490) Graduate Research in Botany
Fall or spring. Variable credit, may be repeated for credit. S-U grades optional. Staff.
Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

COURSES IN MARINE SCIENCE
Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology offered through the Office of Undergraduate Biology, the undergraduate specialization in ocean sciences offered.
through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall, or at www.sml.cornell.edu.

**Undergraduate Specialization in Marine Biology and Oceanography**

Biological sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1. BIOEE 154 The Sea: An Introduction to Oceanography
2. BIOSM 364 Field Marine Science or BIOSM 375 Field Marine Biology and Ecology and at least one 400-level BIOSM field course at the Shoals Marine Laboratory
3. BIOE 462 Marine Ecology

**Undergraduate Specialization in Ocean Sciences**

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1. BIOEE 373 Biology of the Marine Invertebrates
2. BIOE 457 Limnology
3. BIOE 462 Marine Ecology
4. BIOE 478 Ecosystem Biology
5. BIOE 490 Topics in Marine Biology
6. BIOSM 577 Diversity of Fishes
7. BIOSM 310 Marine Symbiosis
8. BIOSM 309 Climates and Ecosystems
9. BIOSM 329 Ecology of Animal Behavior
10. BIOSM 364 Field Marine Science
11. BIOSM 365 Underwater Research
12. BIOSM 374 Field Ornithology
13. BIOSM 375 Field Marine Biology and Ecology
14. BIOSM 413 Research in Marine Biology
15. BIOSM 449 Seaweeds, Plankton and Seagrass
16. BIOSM 376 Marine Invertebrate Zoology (Note: Not same as BIOE 373)
17. BIOSM 477 Marine Vertebrates
18. EAS 375 Sedimentology and Stratigraphy
19. EAS 455 Geochemistry

20. EAS 475 Special Topics in Oceanography
21. EAS 479 Paleobiology

**Sea Semester**

- BIOSM 366 SEA: Introduction to Oceanography
- BIOSM 367 SEA: Introduction to Maritime Studies
- BIOSM 368 SEA: Introduction to Nautical Science
- BIOSM 369 SEA: Practical Oceanography I
- BIOSM 370 SEA: Practical Oceanography II

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience. These courses must be taken concurrently. Special program run by the Sea Education Association. Contact the Marine Programs office (255–3717) for more details.

**SHOALS MARINE LABORATORY (BIOSM)**

G14 Stimson Hall, 255–3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, John M. Kingsbury, or the 36-foot research vessel, John B. Heiser. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading institutions, are selected based not only on their academic excellence but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

**BIOSM 123(1230) Ocean Sciences**

Summer. 4 credits. Prerequisite: permission of instructor. Letter grades only. D. Taylor. An inquiry-based, hands-on introduction to marine biology using the rocky intertidal and open sea as a natural laboratory. Students will learn the skills necessary for success in science courses: understanding disciplinary discourse; reading scientific papers critically; generating scientific hypotheses; designing experiments and interpreting data using basic statistics; and constructing, presenting and understanding data in graphs and tables. Students will learn and apply these skills to field experiences centered on textbooks, primary literature, lectures, seminars and discussions.

**BIOSM 160(1600) The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. Special two-week course offered aboard a SML vessel and at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office. G14 Stimson Hall or Sea Education Association office, P.O. Box 6, Woods Hole, MA 02543. Daily lecture, lab, and fieldwork for two weeks. SML faculty.

Exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for advanced high school students. Students spend 10 days aboard the Sea Education Association's sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the marine characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

**BIOSM 161(1610) Introduction to Marine Science**

Summer. 4 credits. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lecture, lab, and fieldwork for two weeks.

Allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.
BIOSM 162(1620) Marine Environmental Science

Summer. 3 credits. Prerequisite: open to high school students who have successfully completed two high school years of chemistry. Six-credit, 12-day course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec, lab, and fieldwork for 12 days. SML faculty.

Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this coursework to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island's rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

BIOSM 204(2040) Biological Illustration

Summer. 2 credits. Special one-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily sessions for one week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. Provides the science or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 209(2090) Climates and Ecosystems

Summer. 4 credits. Prerequisite: one year college-level biology; background preferred in physics/physical geography. S-U grades optional. Special two-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

BIOSM 310(3100) Marine Symbiosis

Summer. 4 credits. Prerequisite: one year college-level biology. Recommended: background in microbiology or cell biology. S-U grades optional. Special two-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec and fieldwork for two weeks. SML faculty.

Introduction to the concepts of symbiosis as applied to marine organisms, with an emphasis on microbial symbionts. Students develop the ability to analyze symbioses using a comprehensive set of criteria, including duration, specificity, integration and modes of interaction. Morning lectures are followed by afternoons collecting, preparing and studying live specimens. Each student learns to use a variety of light microscopic techniques and can study through fieldwork and by written reports, to a comprehensive survey of symbiotic associations on and around Appledore Island.

BIOSM 329(3290) Ecology of Animal Behavior (also BIOSM 329(3290))

Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: coursework in ecology, zoology, or behavior. S-U grades optional. Special two-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec and lab, and fieldwork for two weeks. SML faculty.

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory observation. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation in the field and prepares a research proposal for studying a problem within the course subject area.

BIOSM 364(3640) Field Marine Science (FMS)

Summer. 8 credits. Prerequisite: one year college biology. S-U grades optional. Special four-week course offered twice each summer at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. Students may not take FMS after taking FBME (BIOSM 375). For more details or an application, contact SML office, G14 Stinson Hall. Daily lec, lab, and fieldwork for four weeks. Three core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an in-depth overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, especially on the seashore. Ecological, evolutionary and physiological adaptations of marine organisms, and field experiments.

BIOSM 365(3650) Underwater Research

Summer. 4 credits. Prerequisites: one year college-level biology, recognized SCUBA certification, and medical exam. S-U grades optional. Special two-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec and fieldwork for two weeks.

Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOSM 373(3730) Biology of the Marine Invertebrates

Fall. (but course must be taken previous summer at Shools Marine Laboratory (SML), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily and evening lab and fieldwork. Offered alternate years; not offered 2006-2007. next offered 2007-2008 C. D. Harvell and J. G. Morin.

BIOSM 374(3740) Field Ornithology

Summer. 4 credits. Prerequisite: one year college-level biology. S-U grades optional. Special two-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec and fieldwork for two weeks. SML faculty.

Introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, survival, and migration. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375(3750) Field Marine Biology and Ecology (FBME)

Summer. 8 credits. Prerequisite: one full year college-level biology. S-U grades optional. Four-week course offered at Shools Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stinson Hall. Daily lec, lab, and fieldwork for four weeks. SML faculty.

Designed for students seeking an introduction to the marine sciences and marine ecology. FBME emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FBME places special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may not take FBME after taking FMS (BIOSM 364).
Appledore Island's unique location provides an excellent venue for the study of freshly evolved marine life, including aspects of anatomy, morphology, development, life histories, physiology, and ecology. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and invertebrates. A grobacterium tum efaciens and the symbiont Sinorhizobium meUloti.

BIOSM 449(4490) Seaweeds, Plankton, and Seagrass: The Ecology and Systematics of Marine Plants
Summer. 4 credits. Prerequisites: BIOSM 364 or one year introductory biology. S-U grades optional. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, consult SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Overview of the major algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

BIOSM 477(4770) Marine Vertebrates
Summer. 6 credits. Prerequisites: vertebrate biology course. S-U grades optional. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, consult SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, animal collections, practical applications, and readings from the current literature. Topics include systematics of fishes of the Gulf of Maine; elasmobranch morphology; interpretation of life history and parameters from otolith microstructure; teleost skeleton morphology, structure and function; population biology and the contemporary Gulf of Maine fishery; Mesozoic marine reptiles; the biology of sea turtles in cold water; colony death in sea birds; avian adaptations to life at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 495(4950) Research Methods in Marine Biology
Summer. 1 credit. Corequisite: BIOSM 499 or permission of instructor. Primarily for undergraduates. Special eight-week course offered at Shoals Marine Laboratory (SML) located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Weekly sem for eight weeks. J. G. Morin and M. J. Shulman.

Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

BIOSM 498(4990) Research in Biology
Summer. Variable credit. 2 credits per seven days on site. For more details and an application, contact SML office, G14 Stimson Hall.

Section A: Independent Biological Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

Research Experiences for Undergraduates (REU)
6 credits. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students are selected from a competitive, national pool to participate in the eight-week summer program. For more information and an application, contact SML office, G14 Stimson Hall, or view SML's web site at www.sml.cornell.edu.

BIOSM 650(6500) Field Marine Ecology and Environmental Science for Teachers
Summer. 2 credits. Prerequisites: one year college-level biology. Recommended: teaching experience. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for one week. SML faculty.

Intended for teachers of grades 6-12 but also open to undergraduate junior and senior students interested in teaching. Teaching experience. Emphasis on the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also are included. Fieldwork is emphasized, with numerous excursions to the rocky intertidal and with offshore ocean sampling. Lectures focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

BIOSM 699(6990) Research in Biology for Teachers
Summer. 2 credits per week. Prerequisite: BIOSM 650. Special course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty.

Opportunity for teachers who have taken BIOSM 650 to return to Shoals to pursue in greater depth a topic of their choosing under the direction of the BIOSM 650 faculty.

BIOMI 650(6080) Molecular Plant Virology (also PL PA 606[6060]) Spring, first seven weeks of semester. 1 credit. Prerequisite: BIOMI 400 or cell biology course, or permission of instructor. S-U grades optional. Offered alternate years. S. G. Lazarowitz.

Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Material covered includes virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.

BIOMI 651(6080) Genomics of Bacterium-Host Interactions (also PL PA 608[6080]) Fall, second half of semester. 1 credit. Prerequisite: BIOMI 290 or equivalent or permission of instructor. S-U grades optional. Lec: Offered alternate years. A. Collinge and S. Wilson Hall, or view. Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the pathogens Xanthomonas citri pv. citri, and the xanthomonas of citrus, and the symbiont Sinorhizobium meliloti.
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Robert C. Seamans or the SSV Corwith Cramer. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 908-552-3653. Program costs are to be paid in place of regular Cornell tuition and fees. Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**Shore Component (six weeks)**

**BIOSM 366(3660)-SEA Introduction to Oceanography**

3 credits. Corequisites: BIOSM 367 and 368. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current research activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOSM 367(3670)-SEA Introduction to Maritime Studies**

3 credits. Corequisites: BIOSM 366 and 368. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 368(3680)-SEA Introduction to Nautical Science**

3 credits. Corequisites: BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**Sea Component (six weeks)**

Courses 359, 370, and 372 take place aboard the SSV Robert C. Seamans, a 134-foot steel auxiliary-powered brigantine schooner built in 2001, or the SSV Corwith Cramer, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of 34. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, several visiting investigators are frequently aboard. Up to 24 students round out the complement.

**BIOSM 369(3690)-SEA Practical Oceanography I**

4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOSM 370(3700)-SEA Practical Oceanography II**

4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

**BIOSM 372(3720)-SEA Practical Oceanography III**

3 units. Corequisites: BIOSM 360, 366, and 368. Students assume responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

COMPUTING AND INFORMATION SCIENCE

ADMINISTRATION
Robert Constable, Dean
Juris Hartmanis, Senior Associate Dean
John Guckenheimer, Associate Dean for Advanced Computing
Jennifer Wofford, Assistant Dean for Educational Programs

INTRODUCTION
Computing and Information Science (CIS) offers courses and programs campus-wide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the major in Information Science, and interdisciplinary programs in computational biology, computational science, and engineering. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit.

Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu/, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS
Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology
The program of study in computational biology is part of the biological sciences major offered through the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and information sciences. It is designed for students who want to emphasize basic biological science.

The concentration in computational molecular biology is offered by the Department of Computer Science to students enrolled in the College of Arts and Sciences and the College of Engineering. It provides core training in computer science and biology. It is designed for students who want to emphasize computational science.

The concentration in statistical genomics is offered by the Department of Biological Sciences and the Department of Computer Science. It provides training in statistics, biology, and computer science. It is designed for students who want to emphasize statistics and bioinformatics.

The concentration in mathematical biology is offered by the Department of Mathematics and is open to students enrolled in the College of Arts and Sciences. It provides training in mathematics, biology, and computer science. It is designed for students who want to emphasize mathematics.

Computational Science and Engineering
Computational science and engineering is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control. CIS sponsors several "tool-based" short courses for students who anticipate that their studies will have a strong computational component (CIS 401, 402). A course on data structures for computational science (CIS 409) is also offered.

Computer Science
All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages, compilers, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases, networks, bioinformatics, the theory of algorithms, scientific computing, and computational logic.

The Department of Computer Science offers the computer science major to students in the College of Arts and Sciences and the College of Engineering, the computer science minor to students in the College of Engineering, and the Master of Engineering (M.Eng.) degree in computer science to students in the College of Engineering.

Information Science
Information science at Cornell is an interdisciplinary program that studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called "human-centered systems" because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks, information discovery, knowledge organization, interaction design, interface design and evaluation, collaboration within and across groups, communities, organizations, and society; computational linguistics, computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of collecting, preserving, and distributing information; information system design, cognition and learning; social informatics; and cultural studies of computation.

The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in information science, systems, and technology (ISST), which is offered jointly by the Department of Computer Science and the School of Operations Research and Industrial Engineering. For details about the IS and ISST majors, please refer to the respective colleges.

The minor/concentration in information science is available to students in all undergraduate colleges.

Applied Statistics
The Department of Statistical Science offers a Master of Professional Studies (MPS) in applied statistics, with an emerging track in bioinformatics, for students pursuing careers in business, industry, and government. The MPS program has three major components: a two-semester core course, ST 501 and 502, covering a wide range of statistical applications, computing, and consulting; an in-depth statistical analysis MPS project supported by the core course; required course work, including a two-semester course sequence in mathematical probability and statistics, and elective course work selected from offerings in the Department of Statistical Science and other departments at Cornell.

THE INFORMATION SCIENCE CONCENTRATION/MINOR
A concentration/minor in information science is available to students in the Colleges of Agriculture and Life Sciences (CALS); Architecture, Art, and Planning (AAP, available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor
Relations (ILR). Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student's college and, in a few cases, a student's major. All students interested in pursuing the information science concentration/minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate concentration/minor are as follows. All courses must be chosen from the course lists below. In addition, a letter grade of C or better is required; S-U courses are not acceptable. Students must select a course outside Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 270 or CEE 304. Hotel students must use H ADM 201.

**Statistics**
- one course.

**Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).

**Social systems** (social, economic, political, cultural, and legal issues): one course.

**Information systems** (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 130. COM S 211 may not be used by students who are required to take it for their major.

**Elective:** one additional course from any examinee area. Hotel students must take three courses in this category, from the following: H ADM 374, 574, and 476 or 576. Engineering students and all Computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisor to make sure there are no special departmental restrictions or requirements.

**Statistics**
An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:
- ENGRD 270 Basic Engineering Probability and Statistics
- CEE 304 Uncertainty Analysis in Engineering

Hotel students must take:
- H ADM 201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:
- MATH 171 Statistical Theory and Application in the Real World
- H ADM 201 Hospitality Quantitative Analysis
- AEM 210 Introductory Statistics
- PAM 210 Introduction to Statistics
- ENGRD 270 Basic Engineering Probability and Statistics
- BTRY 301 Statistical Methods I
- SOC 301 Evaluating Statistical Evidence
- CEE 304 Uncertainty Analysis in Engineering
- ILRST 312 Applied Regression Methods
- ECON 319 Introduction to Statistics and Probability
- PSYCH 350 Statistics and Research Design

**Human-Centered Systems**
- COGST 101 Introduction to Cognitive Science
- PSYCH 205 Perception
- INFO 214 Cognitive Psychology
- INFO 245 Psychology of Social Computing
- PSYCH 280 Introduction to Social Psychology
- INFO 345 Human-Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH 416 Modeling Perception and Cognition
- INFO 440 Advanced Human-Computer Interaction Design
- INFO 445 Seminar in Computer-Mediated Communication
- INFO 450 Language and Technology
- DEA 470 Applied Ergonomic Methods

**Social Systems**
- S&TS 250 Technology in Society
- INFO 292 Inventing an Information Society
- ECON 301 Microeconomics*
- SOC 304 Social Networks and Social Processes
- ECON 313 Intermediate Microeconomic Theory*
- AEM 322 Technology, Information, and Business Strategy*
- INFO 349 Media Technologies
- INFO 355 Computers: From the 17th Century to the Dot.com Boom
- INFO 356 Computing Cultures
- ECON 368 Game Theory*
- INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
- LAW 410 Limits on and Protection of Creative Expression—Copyright Law and Its Close Neighbors
- S&TS 411 Knowledge, Technology, and Property
- ECON 419 Economic Decisions Under Uncertainty
- COMM 428 Communication Law
- INFO 429 Copyright in the Digital Age
- OR&IE 435 Introduction to Game Theory*
- S&TS 438 Minds, Machines, and Intelligence
- INFO 447 Social and Economic Data
- H ADM 474 Strategic Information Systems*
- ECON 476/477 Decision Theory I and II
- H ADM 489 The Law of the Internet and E-Commerce
- INFO 515 Culture, Law, and Politics of the Internet

*Only one of ECON 301 and 313 can be taken for IS credit. Only one of OR&IE 435 and ECON 368 can be taken for IS credit. Only one of AEM 322 and H ADM 474 may be taken for IS credit.

**Information Systems**
- INFO 130 Introductory Design and Programming for the Web*
- INFO 172 Computation, Information, and Intelligence
- COM S 211 Computers and Programming*
- INFO 230 Intermediate Design and Programming for the Web*
- CIS 300 Introduction to Computer Game Design
- INFO 330 Data-Driven Web Applications
- LING 424 Computational Linguistics
- INFO 430 Information Retrieval
- INFO 431 Web Information Systems
- COM S 432 Introduction to Database Systems
- COM S 465 Computer Graphics I
- COM S 472 Foundations of Artificial Intelligence
- LING 474 Introduction to Natural Language Processing
- OR&IE 474 Statistical Data Mining
- COM S 478 Machine Learning
- OR&IE 480 Information Technology
- OR&IE 481 Delivering OR Solutions with Information Technology
INFO 130 may not be taken for information science credit by Engineering students. Computer science majors may not use INFO 130 or 230. COM S 211 may not be taken for information science credit by majors for which it is a required course, e.g., Computer science majors may not use INFO 130 or 230.

COMPUTING AND INFORMATION SCIENCE (CIS) COURSES

CIS 121(1121) Introduction to MATLAB [also EAS 121(1121)]
Fall, spring; 2 credits. Corequisite: MATH 111, 191, or equivalent. No programming experience assumed.

Introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

CIS 122(1002) Application of FORTRAN In the Earth and Environmental Sciences [also EAS 150(1500)]
Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. S-U grades only.

For description, see EAS 150.

CIS 165(1610) Computing in the Arts [also ART 175, COM S 165(1610), ENGR 165(1610), MUSIC 165(1465), PSYCH 165(1650)]
Fall. 3 credits.

For description, see COM S 165.

CIS 167(1620) Visual Imaging in the Electronic Age [also ART 170(1700), COM S/ENGR 167(1620)]
Fall. 3 credits. Not offered every year.

For description, see ART 170.

CIS 300(3000) Introduction to Computer Game Design
Fall, spring. 4 credits. Prerequisites: students generally choose one field (art, music, programming, writing), although working in multiple areas is encouraged; artists should have taken ART 251 or have equivalent experience; musicians should have programming experience (COM S 100, COM S/INFO 130 or equivalent) and music 120; programmers must have completed COM S/ENGR 211 or CIS 409 and have experience with, or the ability to learn quickly, C++; writers should have programming experience (COM S 100, COM S/INFO 130 or equivalent) and ENGL 280/281 or equivalent experience.

CIS 401(4201) Introduction to Applied Scientific Computing with MATLAB
Fall, usually weeks 2–5. 1 credit.
Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. Introduction to the use of MATLAB as an aid to scientific research. Introduces the basic syntax and features of MATLAB and develops the background necessary for the more specialized courses. Covers basic MATLAB programming and vectorized operations, data input/output, and simple visualization. Emphasizes applied issues such as managing large data sets, simulation, and visualization but also introduces fundamental ideas in scientific computing such as floating point arithmetic and round-off error. Although the course uses MATLAB, the ideas and concepts covered are common to many computational environments.

CIS 402(4202) Scientific Visualization with MATLAB
Fall, usually weeks 6–10. 1 credit.
Prerequisite: COM S 100 or equivalent programming experience. Recommended: CIS 401. S-U grades only.

Survey of the advanced visualization features in MATLAB. Covers MATLAB’s “handle graphics” paradigm, specialized graphics routines for vectors and fields, and introduces color mapping, lighting, and new features for controlling object transparency. Although the course is meant to introduce students to the capabilities of the MATLAB system, it also emphasizes the nature of visualization—producing an image that effectively communicates a scientific result.

CIS 405(4205) Effective Use of High-Performance Computing
Spring, weeks 1–8. 2 credits. Prerequisite: proficiency in C, C++, Fortran, or Fortran 90. S-U grades only.

Introduction to high-performance computing (HPC) for graduate students or advanced undergraduate students who will use HPC as a tool in their research. Various HPC architectural platforms are described, with a focus on computational clusters. Students learn how to identify and exploit the various types of parallelism in algorithms and legacy applications. Understanding how to measure speedup and efficiency and how various bottlenecks affect the overall efficiency of the code. Parallel programming with MPI, OpenMP, and task-farming techniques, such as the use of web services, is covered in detail. The goal of the course is for students to gain practical HPC experience for use in their specific fields of research.

CIS 409(4209) Data Structures and Algorithms for Computational Science [also M&AE 409(4090)]
Fall. 4 credits. Prerequisite: COM S 211 or equivalent programming experience.

Covers data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced areas. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

CIS 490(4999) Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

CIS 504(5040) Applied Systems Engineering [also CEE 504(5040), ECE 512(5120), M&E 591(5910), OR&IE 512(5120), SYSEN 510(5100)]
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field, concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.

For description, see SYSEN 510.

CIS 505(5505) Systems Analysis Architecture, Behavior, and Optimization [also CEE 505(5505), ECE 513(5130), M&E 592(5920), OR&IE 513(5130), SYSEN 520(5200)]
Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 504, ECE 512, M&E 591, OR&IE 512, or SYSEN 510).

For description, see SYSEN 520.

CIS 565(5640) Computer Animation [also ART 273(2703), COM S 565(5640)]
Fall. 4 credits. Prerequisite: none.

For description, see ART 273.

CIS 566(5642) Advanced Animation [also ART 372, COM S 566(5642)]
Spring. 4 credits. Prerequisite: none.

For description, see ART 372.

CIS 572(5722) Heuristic Methods for Optimization [also CEE 509(5090), COM S 572(5722), OR&IE 532(5340)]
Fall. 3 or 4 credits. Prerequisite: COM S/ENGRI 211 or 322, or CEE/ENGRI 241, or graduate standing, or permission of instructor.

For description, see CIS 509.

CIS 576(5846) Decision Theory I [also ECON 476/676(4460/6760)]
Fall. 4 credits. Prerequisite: mathematical sophistication.

For description, see ECON 476.

CIS 577(5847) Decision Theory II [also ECON 477/677(4770/6770)]
Spring. 4 credits. Prerequisite: mathematical sophistication.

For description, see ECON 477.

CIS 629(6229) Computation Methods for Nonlinear Systems [also PHYS 682/7682]
Fall. 4 credits. Enrollment may be limited. J. Sethna and C. Myers.

For description, see PHYS 682.

CIS 673(6724) Integration of Artificial Intelligence and Operations Research [also COM S 673(6724)]
Spring. 3 credits.

For description, see COM S 673.

CIS 706(7050) Seminar in Information Science
Fall, spring, 1 credit.

For description, see CIS 705.

CIS 714(7140) Practicum in Information Science
Fall, spring, 1 credit.

For description, see CIS 714.
COMPUTING AN SCIENCE (CIS) - 2006-2007

CIS 750(7726) Evolutionary Computation and Design Automation (also COM S 750[7726], M&AE 650[6500])
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. For description, see COM S 750.

CIS 790(7999) Independent Research
Fall, spring. Variable credit. Prerequisite: permission of faculty member. Independent research or master of engineering project.

CIS 797(7970) Topics in CIS/IGERT Seminars
Fall, spring. 1 credit. S/U grades only.
Discusses diverse topics in nonlinear systems. The seminar is one of six sections to the requirements for the IGERT Program in Nonlinear Systems, a National Science Foundation supported graduate training program. Includes a mixture of student, faculty, and visitor presentations and development of plans for internships and student projects.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS, and its courses are an integral part of its several educational programs.

COM S 099(1109) Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: freshmen standing. Credit may not be applied toward engineering degree. S/U grades only.

COM S 100M(1112) Introduction to Computer Programming
Fall. 3 credits. Prerequisite: none. No computer background necessary.

COM S 100J(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 100R(1114) Introduction to Computer Programming—Robotics
Fall. 4 credits. Limited to 25 students. Prerequisite: programming experience at level of advanced placement computer science.

COM S 101(1010] Introduction to Cognitive Science (also COGST 101[1010], LING 170[1700], PHIL 191[1910], PSYCH 102[1020])
Fall, summer. 3 credits.

COM S 113(2000) Introduction to C
Fall, spring, usually weeks 1-4. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Credit cannot be applied for both COM S 113 and 213 only if 113 taken first. S/U grades only.

COM S 114(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 117(1710) Introduction to Computer Programming—Robotics
Fall. 4 credits. Limited to 25 students. Prerequisite: programming experience at level of advanced placement computer science.

COM S 120(1200) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 130(1300) Introductory Design and Programming for the Web (also INFO 130[1300])
Fall. 3 credits. Prerequisite: none. No computer background necessary.

COM S 135(1310) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 139(1390) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 140(1400) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 142(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 143(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 144(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 146(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 147(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 150(1500) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 151(1510) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 152(1520) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 153(1530) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 154(1540) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 155(1550) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 156(1560) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 157(1570) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 158(1580) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 159(1590) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 160(1600) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 161(1610) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 162(1620) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 163(1630) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 164(1640) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: COM S 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S/U grades only.

COM S 165(1650) Computing in the Arts (also ART 175, CIS 165[1650], ENGR 165[1650], MUSIC 165[1650], PSYCH 165[1650])
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

COM S 167(1670) Visual Imaging in the Electronic Age (also ART 170[1700], CIS/ENGR 167[1670])
Fall. 3 credits. For description, see ART 170.

COM S 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGR 172[1700], INFO 172[1700])
Fall. 3 credits. Prerequisites: some knowledge of programming; permission of instructor for students who have completed equivalent of COM S 100.

COM S 201(2710) Cognitive Science in Context Laboratory (also COGST 201, PSYCH 201[2010])
Spring. 4 credits. Limited to 24 students. Recommended: concurrent or prior registration in PSYCH 102, COGST/COM S 101, LING 170, or PHIL 191.

COM S 211(2110) Computers and Programming (also ENGRD 211[2110])
Fall, spring. Summer. 3 credits. Prerequisite: COM S 100 or equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer
science. Topics include program structure and organization, algorithmic programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

COM S 212(211) Java Practicum
Fall, spring. 1 credit. Prereq. or coreq: COM S/ENGRD 211. Letter grades only. Project course that introduces students to the ways of software engineering using the Java programming language. The course requires the design and implementation of several large programs.

Spring, usually weeks 5–8. 1 credit. Prereq: COM S 114 or equivalent. S-U grades only.
Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take COM S 114 first.

COM S 215(2004) Introduction to C#
Fall, spring, usually weeks 5–8. 1 credit. Prereq: COM S/ENGRD 211 or equivalent experience. S-U grades only. Introduces the design and implementation of applications in the .NET environment using the C# language.

COM S 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])
Spring. 3 credits. Prereq: COM S 130 or equivalent knowledge. Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). COM S 130 concentrates almost exclusively on the client side. The main emphasis in COM S 230 is learning about server-side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

COM S 280(2800) Discrete Structures
Fall, spring. Prereq: or coreq: COM S 100 or permission of instructor. Covers the mathematics that underlies most of computer science. Topics include mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; basic probability theory; basic number theory, sets, functions, and relations; partially ordered sets; and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

COM S 305(3050) Creative Problem-Solving in Computer Science
Spring. 3 credits. Prerequisites: COM S 211 and 280.
Computer science is full of open-ended, vaguely specified problems; this course is about solving them. Examples draw from several sources, including the ACM programming competitions and a collection of "favorites" that interviewers like to pose to potential CS hires. Students will work on developing general problem-solving heuristics and teamwork. The course is discussion-based, with students working in groups, presenting solutions to the class, and critiquing the solutions of others. Grading rewards creativity and unusual thinking. Even an unsuccessful attempt to solve a problem can receive full credit if it is interesting, insightful, and clearly presented.

COM S 312(3110) Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: COM S 211 and 280 or equivalent programming experience. Should not be taken concurrently with COM S 314 or 316. Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory management, garbage collection. Also covers techniques for analyzing program performance and correctness.

COM S 314(3420) Computer Organization (also ECE 314[3140])
Spring. 4 credits. Prerequisite: COM S 211 or ENGRD 230. Should not be taken concurrently with COM S 312. Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

COM S 316(3410) Systems Programming
Fall. 4 credits. Prerequisite: COM S 211 or equivalent programming experience. Should not be taken concurrently with COM S 312.
Introduction to systems programming, computer organization, and the hardware/software interface. Topics include representation of information, machine and assembly languages, processor organization, memory management, input/output mechanisms, and basic network programming. Also covered are techniques for analyzing program performance and optimization.

COM S 321(3510) Numerical Methods in Computational Molecular Biology (also BioCHE 321[3210], ENGRD 321[3210])
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and linear algebra (e.g., MATH 221 or 294 or 417); COM S 100 or equivalent and some familiarity with iteration, arrays, and procedures; knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421. Offered odd-numbered years; next offered 2007–2008.
Introduction to numerical computing using MATLAB organized around five applications: the analysis of protein shapes, dynamics, protein folding, score functions, and field equations. Students become adept at plotting, linear equation solving, least-squares fitting, and cubic spline interpolation. More advanced problem-solving techniques that involve eigenvalue analysis, the solution of ordinary and partial differential equations, linear programming, and nonlinear minimization are also treated. The goal of the course is to develop a practical computational expertise with MATLAB and to build mathematical intuition for the problems of molecular biology.

COM S 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])
Spring, summer. 3 credits. Prerequisites: COM S 100 and MATH 221 or 294, knowledge of discrete probability and random variables at the level of COM S 280. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.
Introduction to elementary numerical analysis and scientific computing. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

COM S 324(3740) Computational Linguistics (also COGST 424[4240], LING 424[4424])
Fall or spring. 4 credits. Prerequisites: LING 203. Recommended: COM S 114. Labs involve work with natural language environment. For description, see LING 424.

COM S 330(3300) Data-Driven Web Applications (also INFO 330[3300])
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 433.
Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query languages, data modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

COM S 381(3810) Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: COM S 280 or permission of instructor. Credit not granted for both COM S 381 and 481; corrective transfers between COM S 381 and 481 (in either direction) encouraged during first few weeks of instruction.
Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.
COM S 400(4150) The Science of Programming
Fall. 3 credits. Prerequisite: COM S 211. Covers the practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. In addition, related ideas in algorithmic problem solving are explored.

COM S 411(4110) Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor. Not offered every year. Introduction to the theory, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.

COM S 412(4120) Introduction to Compilers
Spring. 2 credits. Corequisite: COM S 412. Compiler implementation project related to COM S 412.

COM S 414(4410) Operating Systems
Fall, spring, summer. 3 credits. Prerequisite: COM S 314 or 316. Corequisite: COM S 415 in spring only. Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415(4411) Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414. Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 418(4420) Computer Architecture (also ECE 475(4750))
Fall. 4 credits. Prerequisites: ENGRD 230 and COM S/ECE 314. For description, see ECE 475.

COM S 419 (4450) Computer Networks
Spring. 4 credits. Pre- or corequisite: COM S 414 or permission of instructor. Introduction to computer networks with an emphasis on fundamentals. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, and security. Fundamentals of layered protocols and techniques for protocol design and implementation. Course material is supplemented by network measurement projects, protocol simulations, and a substantial protocol implementation project running over sockets that requires use of C or C++.

COM S 421(4420) Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors and minors may use only one of the courses to fulfill their degree: COM S 321, 322, or 421.

COM S 426(4520) Introduction to Bioinformatics
Spring. 4 credits. Prerequisites: COM S/ENGRD 211, COM S 280. Overview of biological tools and techniques used in bioinformatics, a field that applies ideas from computer science, mathematical modeling, and statistics in order to make sense of the huge datasets that typify modern biology. Topics include a brief introduction to molecular biology, DNA sequencing, sequence alignment and multiple alignment, similarity searches and their statistics, phylogeny, gene regulation and motif finding, gene finding, and genome rearrangements. Much of the course is devoted to an in-depth study of the algorithms behind popular computational tools such as Smith-Waterman, BLAST, CLUSTALW, Genscan, and MEME.

COM S 428(4510) Introduction to Computational Biophysics
Fall, 3 credits. Prerequisite: COM S 100, CHEM 211 or equivalent, MATH 221, 293, or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330. Teaches the techniques used to simulate on the computer the structure, dynamics, and function of biological molecules. Computer models of vesicles, membranes using mechanical force fields are considered. Optimization methods (conjugate gradient and Newton-Raphson minimization) are explained in the context of structure optimization. Stochastic methods (metropolis algorithm) is used to estimate entropy and partition functions. Enhanced sampling approaches such as multi-tempering to estimate free energies are discussed. Continuum approximations to dielectric and the numerical solution of the Poisson Boltzmann equation are explored.

COM S 430(4300) Information Retrieval (also INFO 430(4300))
Fall. 3 credits. Prerequisite: COM S 211 or equivalent. Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauri. The techniques are illustrated with examples from web searching and digital libraries.

COM S 431(4302) Web Information Systems (also INFO 431(4302))
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology. Examines the architecture of web information systems such as the principles of authoring and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

COM S 432(4320) Introduction to Database Systems
Fall. 2 credits. Prerequisite: COM S 312 or coregistration in COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 330 or COM S 435. Students build part of a real database system in C++.

COM S 465(4620) Computer Graphics I (also ARCH 374[3704])
Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken after COM S 417. Introduction to the design and development of computer graphics in two and three dimensions. Topics include digital images, filtering and anti-aliasing, 2-D and 3-D affine geometry, ray tracing, perspective and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require programming.

COM S 467(4630) Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465. Covers the principles of computer graphics including advanced topics such as the modern graphics hardware pipeline, transformations, materials and shading models, advanced texturing, shadow algorithms, hierarchical acceleration structures, global illumination, animation, and 3D surface modeling.

COM S 468(4631) Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467. Provides COM S 467 students with hands-on experience in computer graphics programming on modern graphics hardware with a final 3D game project. Programming assignments cover 3D transformations, shading, rendering, animation, and user interfaces. The
course uses Java, OpenGL, and Q for code development.

COM S 472(4700) Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 (or equivalent). Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 474(4740) Introduction to Natural Language Processing (also COGST 474, LING 474/4744)
Fall or spring. 4 credits. Prerequisite: COM S 211.

COM S 475(4702) Artificial Intelligence: Uncertainty and Multi-Agent Systems
Spring. 4 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 or equivalent. A key issue in the design of intelligent system is how to deal with uncertain or incomplete information, as obtained, for example, through (noisy) sensory input. The first half of this course focuses on how to represent and reason with uncertain information. The second half covers the study and design of multi-agent systems. Topics include Bayesian networks, dynamic Bayesian networks, belief propagation, Markov random fields, exact and approximate probabilistic inference methods, Monte Carlo methods, connections to statistical physics and information science, adversarial reasoning and planning in multi-agent systems, and game theoretic notions underlying multi-agent systems. This course complements COM S 472, but is given as a self-contained unit.

COM S 478(4780) Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

Machine learning is concerned with the question of how to make computers learn from experience. The ability to learn is not only central to most aspects of intelligent behavior, but machine learning techniques have become key components of many software systems. For example, machine learning techniques are used to create spam filters, to analyze customer purchase data, and to explore new domains of science.

This course introduces the fundamental set of techniques and algorithms that constitute machine learning as of today, including classification methods like decision trees and support vector machines, parametric Bayesian learning and hidden Markov models, as well as unsupervised learning and reinforcement learning. The course discusses algorithms and methods and provides an introduction to the theory of machine learning.

COM S 480[4870] Introduction to Cryptology (also MATH 338[3350])
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. Students who take this course may not also receive credit for MATH 356. For description, see MATH 355.

COM S 482(4820) Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 280 and 312.

Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Example applications are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), computational complexity focusing on NP-completeness, and algorithmic techniques for intractable problems (including identification of structured special cases, approximation algorithms, and local search heuristics).

[COM S 483(4812) Quantum Computation (also PHYS 481/681[4481/7681])
Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. Not offered every year; next offered 2007-2008. For description, see PHYS 481.]

COM S 485(4850) Mathematical Foundations for the Information Age
Spring. 4 credits. Prerequisites: COM S 361 or 481.

Covers the mathematical foundations underlying modeling and searching of the WWW and other complex networks, discovering trends, data mining, and making recommendations based on user behavior. Topics include random graphs, tail bounds, branching processes, spectral analysis, clustering, learning mixtures of distributions, extracting information from large, high dimensional data, VC dimension, latent semantic indexing, and collaborative filtering.

COM S 486(4860) Applied Logic (also MATH 486[4860])
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (e.g., MATH 332, 432, 434, 481), and some additional coursework in mathematics or theoretical computer science.

COM S 490(4999) Independent Reading and Research
Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

COM S 501(5150) Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

COM S 513(5430) System Security
Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with JAVA, C, or C++ programming languages.

Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

COM S 514(5410) Intermediate Computer Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have included object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in COM S 490, 515, or 790.

[COM S 515(5420) Parallel Computer Architecture (also ECE 572/5720)
Spring. 4 credits. Prerequisite: ECE 475.

For description, see ECE 572.]

COM S 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530[5300])
Spring. 4 credits. Prerequisites: none.

Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, Net, J2EE, ASPs, Servlets, XML, and SOAP.

[COM S 565(5640) Computer Animation (also ART 273/2703, CIS 565[5640])
Fall. 4 credits. Prerequisite: none.

For description, see ART 273.]

[CIS 566(5642) Advanced Animation (also ART 372/3702, COM S 566/5642)]
Spring. 4 credits. Prerequisites: none.

For description, see ART 372.]
COM S 572(5722) Heuristic Methods for Optimization (also CEE 509(5090), CIS 572(5722), OR&E 533(5340))
Fall. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 522 or CEE/ENGRD 241, or graduate standing, or permission of instructor. For description, see CEE 509.

COM S 578(5780) Empirical Methods in Machine Learning and Data Mining
Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent. This implementation-oriented course presents a brief introduction to current algorithms and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and explaining their differences, and for exploring the conditions under which each is most appropriate.

COM S 611(6110) Advanced Programming Languages
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612(6120) Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

COM S 614(6410) Advanced Systems
Fall or spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 615(6460) Peer-to-Peer Systems
Spring. 4 credits. Recommended: COM S 614. Peer-to-peer (P2P) is a new paradigm for distributed computing. P2P systems lack centralized servers and rely on self-organization among peer-to-peer resource sharing to accomplish their tasks. This course examines the peer-to-peer paradigm and peer-to-peer systems, and it discusses existing and new applications. Students are expected to perform an in-depth study of an existing approach or to develop new peer-to-peer systems and applications as part of the course project.

COM S 619(6450) Advanced Computer Networks
Fall. 4 credits. Prerequisite: COM S 419 or permission of instructor. Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice over IP, header compression, and extreme networking environments (fast, slow, big, long). The emphasis is on both research and the latest standards. A project with research content is required.

COM S 621(6210) Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

COM S 622(6220) Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621.

COM S 624(6240) Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisite: exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations, and knowledge of MATLAB. Offered even-numbered years; next offered 2007–2008. Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for solving elliptic and hyperbolic equations. Other topics include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse-matrix computation for PDES.

COM S 625(6510) Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods. Problems and algorithms in computational molecular biology. Topics include sequences (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families, and function), the protein folding problem (lattice models, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading), and the dynamics of complex biosystems (the Molecular Dynamics method, long-range forces, statistics of flexible systems, reduced models).

COM S 628(6522) Biological Sequence Analysis
Fall. 4 credits. Prerequisite: none. Typically concentrates on one topic in biological sequence analysis, providing an in-depth analysis of the algorithmic and statistical challenges in that area. The selected topics vary from year to year.

COM S 630(6300) Human Language Technology (also INFO 630(6300))
Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills. Information retrieval has evolved from the problem of locating books in a library to a multitude of tasks ubiquitous in business, science, and personal life. Modern information systems automatically search the web for newsgaters, extract facts from the web, and analyze usage patterns. This course covers the necessary techniques for representing, organizing, and accessing digital information that is in textual or semi-structured form. Topics combine information retrieval, natural language processing, and machine learning, with links to work in databases and data mining.

COM S 632(6320) Database Management Systems
Spring. 4 credits. Prerequisite: COM S 432 or graduate standing. Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

COM S 633(6322) Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 632 or permission of instructor. Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

COM S 664(6670) Machine Vision
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent. Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereo vision, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

COM S 665(6680) Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Covers advanced topics in realistic rendering with a focus on interactive techniques. Topics include light transport and global illumination, Monte-Carlo rendering, rendering using the modern graphics pipeline, rendering with complex scenes, shadow algorithms, perception for rendering, and image-based rendering.

COM S 667(6630) Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.
Advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry; light transport, and global illumination; rendering with participating media; advanced models for material properties, and physical measurement of light sources, images, and materials.

[COM S 671(6762)] Introduction to Automated Reasoning
Fall or spring. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor. Not offered every year.
Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis is on type theory and logic and on tactic-oriented theorem proving.

[COM S 672(6700)] Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

[COM S 673(6724)] Integration of Artificial Intelligence and Operations Research (also CIS 673(6724))
Spring. 3 credits.
Covers topics on the integration of artificial intelligence (AI) and operations research (OR) techniques for solving combinatorial problems as they appear in AI applications. Application domains include AI planning, scheduling, combinatorial auctions, market mechanisms, and combinatorial designs.

[COM S 674(6740)] Natural Language Processing
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. COM S 474 is not a prerequisite.
Prepares a graduate-level introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. Topics include syntactic analysis, semantic interpretation, and discourse processing, examining both symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildy context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

[COM S 676(6764)] Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.

[COM S 677(6766)] Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.
Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

[COM S 678(6780)] Advanced Topics in Machine Learning
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor. Not offered every year.
Extends and complements COM S 478 and 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

[COM S 681(6820)] Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Underlying assumptions are the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

[COM S 682(6810)] Theory of Computing
Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 482 or 681) or permission of instructor. Not offered every year; next offered 2007–2008.
Advanced treatment of theory of computation, computational complexity theory, and other topics in computing theory.

[COM S 683(6822)] Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisite: COM S 681 or permission of instructor.
An advanced study of current topics in the design of discrete algorithms. Topics may include randomization, approximation algorithms, online algorithms, learning theory, spectral methods, and techniques from the theory of metric spaces. The course will emphasize algorithmic problems in a range of areas including networks, electronic markets, and large databases.

[COM S 684(6840)] Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of COM S 482. No prior knowledge of game theory or economics assumed.
Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multicastr pricing.

[COM S 685(6850)] The Structure of Information Networks (also INFO 685(6850))
Fall or spring. 4 credits. Prerequisite: COM S 482.
Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

[COM S 686(6860)] Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and MATH 481 or MATH/COM S 486.

[COM S 709(7090)] Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.
Weekly meeting for the discussion and study of important topics in the field.

[COM S 711(7191)] Seminar in Advanced Programming Languages
Fall. Spring. 3 credits.

[COM S 713(7491)] Seminar in Systems and Methodologies
Fall, spring. 4 credits. Prerequisites: graduate course employing formal reasoning (e.g., COM S 611, 613, 671), logic course, or permission of instructor. Not offered every year.
Weekly discussion of contemporary issues in the design and analysis of computing systems. Emphasis is on the proper use of rigor, models, and formalism.

[COM S 714(7410)] Topics in Systems
Fall or spring. 3 credits. Prerequisite: permission of instructor.

[COM S 715(7192)] Seminar in Programming Refinement Logics
Fall. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods,
COM S 717(7430) Topics in Parallel Architecture
Fall, 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.
Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 718(7890) Computer Graphics Seminar
Fall, spring, 3 credits.

COM S 719(7190) Seminar in Programming Languages
Fall, spring, 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 721(7210) Topics in Numerical Analysis
Fall, spring, 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year.
Topics are chosen at instructor's discretion.

COM S 726(7590) Problems and Perspectives in Computational Molecular Biology
Fall, spring, 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only.
Weekly seminar series discussing timely topics in computational molecular biology. Addresses methodological approaches to sequence and structure analysis, function prediction, study of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. In each topic, one or two representative papers are selected that made significant advances in this field. The lectures are given by faculty and students. We try to highlight these disciplines by pairing students and faculty from complementary backgrounds.

COM S 732(7320) Topics in Database Systems
Fall, spring, 4 credits. S-U grades only.

COM S 733(7390) Database Seminar
Spring, 1 credit. Prerequisite: COM S 633 or permission of instructor. S-U grades only.

COM S 750(7726) Evolutionary Computation and Design Automation (also CIS 750[7726], M&AE 621[6222])
Fall, spring, 4 credits. Prerequisite: programming experience or permission of instructor. Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

COM S 754(7490) Systems Research Seminar
Fall, spring, 1 credit S-U grades only.

COM S 764(7670) Visual Object Recognition
Spring, 3 credits.
This course covers recent advances in object recognition in computer vision, set in the context of classical methods. The readings are primarily recent published research results. The course format is a mixture of lectures, student presentations, and discussion. The final project consists of both an implementation and a paper. While the course has no formal prerequisites, a degree of mathematical and algorithmic sophistication is required. Familiarity with computer vision or machine learning techniques would be helpful.

COM S 772(7790) Seminar in Artificial Intelligence
Fall, spring, 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 775(7794) Seminar in Natural Language Understanding
Fall, spring, 2 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 785(7850) Seminar on Information Networks
Fall, spring, 4 credits. Prerequisite: COM S 485 or 685 or permission of instructor.
Covers current research on algorithms and models for analyzing large-scale networks, with connections to work in information systems and the social sciences. The course is based on the presentation and discussion of recent research papers.

COM S 786(7860) Introduction to Kleene Algebra
Spring, 4 credits. Prerequisite: COM S 481. Recommended: COM S 882 or 681, COM S 682, elementary logic (MATH 481 or 681), algebra (MATH 432).
Kleene algebra is an algebraic system that axiomatically captures the properties of a natural class of structures arising in logic and computer science. It has appeared in various guises in relational algebra, semantics and logics of programs, automata and formal language theory, and the design and analysis of algorithms. This course reviews the history of the development of Kleene algebra and Kleene algebra with tests (Kleene/Boolean algebra); studies models, compare , axiomatizations, and derive completeness, expressiveness, and complexity results; and discusses discuss various applications in program sematology, program verification, compiler optimization, and programming language semantics and logic.

COM S 789(7890) Seminar in Theory of Algorithms and Computing
Fall, spring, 4 credits Prerequisite: permission of instructor. S-U grades only.

COM S 790(7999) Independent Research
Fall, spring. Prerequisite: permission of a computer science advisor. S-U grades only.
Independent research or master of engineering project.

COM S 990(9999) Thesis Research
Fall, spring. Prerequisite: permission of a computer science advisor. S-U grades only. Doctoral research.

INFORMATION SCIENCE (INFO)
INFO 130(1300) Introductory Design and Programming for the Web (also COM S 130[1300])
Fall. 3 credits.
For description, see COM S 130.

INFO 172(1700) Computation, Information, and Intelligence (also COGST 172, COM S 172[1700], ENGR 172[1700])
Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100. For description, see COM S 172.

INFO 204[2040] Networks (also ECON 204[2040], SOC 204[2120])
Spring. 4 credits.
For description, see ECON 204.

INFO 214[2140] Cognitive Psychology (also COGST/PSYCH 214[2140])
Fall. 3 credits. Limited to 175 students. Prerequisite: sophomore standing.
Graduate students, see INFO/PSYCH 614, or COGST 501.
For description, see PSYCH 214.

INFO 230[2300] Intermediate Design and Programming for the Web (also COM S 230[2300])
Spring. 3 credits. Prerequisite: COM S/ INFO 130 or equivalent knowledge.
For description, see COM S 230.

INFO 245[2450] Psychology of Social Computing (also COMM 245[2450])
Fall. 3 credits.
For description, see COMM 245.

INFO 292[2921] Inventing an Information Society (also AM ST 292[2980], ECE/ENGRG 298[2960], HIST 292[2920], S&T/S 292[2921])
Spring. 3 credits; may not be taken for credit after ECE/ENGRG 108.
For description, see ENGRG 298.

INFO 295[2950] Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 231 or equivalent.
Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 330[3300] Data-Driven Web Applications (also COM S 330[3300])
Fall. 3 credits. Prerequisite: COM S/ENG RD 211.
For description, see COM S 330.

INFO 345[3450] Human-Computer Interaction Design (also COMM 345[3450])
Spring. 3 credits.
For description, see COMM 345.

INFO 349[3491] Media Technologies (also COMM 349[3490], S&T/S 349[3491])
Spring. 3 credits.
For description, see S&T/S 349.
INFO 355[3551] Computers: From the 17th Century to the Dot.com Boom (also S&TS 355[3551])
Fall. 4 credits.
For description, see S&TS 355.

INFO 356[3561] Computing Cultures (also S&TS 356[3561])
For description, see S&TS 356.

INFO 372[3720] Explorations in Artificial Intelligence
Spring. 3 credits. Prerequisites: MATH 111 or equivalent, an information science approved statistics course, and COM S 211 or permission of instructor.
How do computers solve tasks as diverse as playing chess or backgammon, control autonomous space missions such as NASA’s Deep Space One, plan the route for a driverless car as in the Darpa Grand Challenge race, perform content-based selection of music programs, or solve Sudoku, the latest puzzle craze? This course introduces students to a range of computational modeling approaches and solution strategies using examples from AI and information Science. We cover different formalisms such as logical representations, constraint-based languages, mathematical programming, and multi-agent approaches (including adversarial games). Emphasis is on modeling, not on algorithms, but efficiency issues (complexity) are highlighted as part of the modeling approaches. Students also learn about the tradeoffs in modeling choices.

INFO 387[3871] The Automatic Lifestyle: Consumer Culture and Technology (also S&TS 387[3871])
For description, see S&TS 387.

INFO 429[4290] Copyright in the Digital Age (also COMM 429[4290])
For description, see COMM 429.

INFO 430[4300] Information Retrieval (also COM S 430[4300])
Fall. 3 credits. Prerequisite: COMM/INFO 211 or equivalent.
For description, see COM S 430.

INFO 431[4302] Web Information Systems (also COM S 431[4302])
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.
For description, see COM S 431.

INFO 435[4350] Seminar on Applications of Information Science (also INFO 635[6390])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience using information systems. Undergraduates and master’s students should register for INFO 435; Ph.D. students should register for INFO 635.
This course brings together the interdisciplinary themes of information science—sociological, legal, economic, and political—through a series of case studies of applications and areas of current research. The case studies are explored through reading and discussion of recent articles on aspects of information science, both social and technical. Several of the case studies center on current work at Cornell, e.g., arXiv, the Legal Information Institute, the NSDL, etc. Others build on the Information Science seminar series.

INFO 440[4400] Advanced Human-Computer Interaction Design (also COMM 440[4400])
Fall. 3 credits. Prerequisites: COMM/INFO 245.
For description, see COMM 440.

INFO 445[4450] Seminar in Computer-Mediated Communication (also COMM 445[4450])
Fall. 3 credits. Prerequisite: COMM/INFO 245.
For description, see COMM 445.

INFO 447[4470] Social and Economic Data (also ILRLE 447[4470])
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.
Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Censuses of Population and Housing, Current Population Survey, Consumer Expenditure Survey, American Housing Survey, Consumer Expenditure Survey, and American Community Survey. The course is appropriate for upper-level undergraduate, professional masters and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administer or survey data collected by their organizations.

INFO 450[4500] Language and Technology (also COMM 450[4500])
Spring. 3 credits. Prerequisite: COMM 240 or 245 or permission of instructor
For description, see COMM 450.

INFO 490[4900] Independent Reading and Research
Fall. spring 1–4 credits.
Independent reading and research for undergraduates.

INFO 491[4910] Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a T.A. in a course in the information science, systems, and technology major.

INFO 515[5150] Culture, Law, and Politics of the Internet
Fall. 4 credits.
Explores the culture, law, and politics of the Internet. Highlighted issues include: net neutrality, free speech, Internet governance, domain naming, intellectual property, DMCA compliance, privacy and security, and the development of institutional as well as national policy for the Internet.

INFO 530[5300] The Architecture of Large-Scale Information Systems (also COM S 530[5300])
Spring. 4 credits. Prerequisite: COM S/INFO 350 or COM S 452.
For description, see COM S 530.

INFO 614[6140] Cognitive Psychology (also COGST 614[6140], PSYCH 614[6140])
Fall. 5 credits.
For description, see PSYCH 614.

INFO 630[6300] Human Language Technology (also COM S 630[6300])
Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills.
For description, see COM S 630.

INFO 634[6341] Information Technology in Sociocultural Context (also S&TS 634[6341])
Spring. 4 credits. Prerequisite: permission of instructor.
For description, see S&TS 634.

INFO 635[6390] Seminar on Applications of Information Science (also INFO 435[4390])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 435; Ph.D. students should register for INFO 635.
For description, see INFO 435.

INFO 640[6400] Human-Computer Interaction Design (also COMM 640[6400])
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 640.

INFO 645[6450] Seminar in Computer-Mediated Communication (also COMM 645[6450])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 645.

INFO 648[6648] Speech Synthesis by Rule (also LING 648[6648])
Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor.
For description, see LING 648.

INFO 650[6500] Language and Technology (also COMM 650[6500])
Spring. 3 credits.
For description, see COMM 650.

INFO 651[6002] Critical Technical Practices
Fall or spring. 4 credits. Prerequisites: graduate-level training in human-computer interaction, science and technology studies, visual studies, communication, or equivalent, or permission of instructor. This course studies media research practices that incorporate cultural criticism into technology design. Topics include tangible media, ubiquitous computing, and critical design. Content draws on computer science, human-computer interaction, interactive art, cultural studies, and interaction design.

The School of Continuing Education and Summer Sessions (SCE) is dedicated to providing outstanding educational opportunities throughout the year for people of all ages and interests.

Our programs are presented in a wide variety of formats and time frames and are offered on and off campus and via distance learning. Join us to prepare for your future, enhance your studies, improve your job skills, or simply have fun learning something new!

For information about the following programs, write B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697; unless indicated otherwise below. You may also visit us on the web at www.sce.cornell.edu.

SCHOOL ADMINISTRATION
Glenn C. Altschuler, dean
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Diane E. Sheridan, director, finance and administration
Diane M. Duthie, assistant director, finance and administration

School Program Directors and Managers
Mary E. Adie, director, Special Programs and Executive Education
Stuart M. Blumin, director, Cornell in Washington Program
Abby H. Eller, director, Summer College Programs for High School Students
Ralph Janis, director, Cornell's Adult University and CyberTower

School Support Services
Graham Doboos, manager, information technologies
Ann L. Morse, manager, media services
Cathy M. Pace, registrar, and coordinator, continuing education information service

CORNELL'S ADULT UNIVERSITY
Cornell's Adult University (CAU) offers weeklong noncredit courses on campus for adults and families during the summer. During the fall, winter, and spring, it offers weekend seminars, weeklong domestic programs, and international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the belief that learning never ends, and that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, write Cornell's Adult University, 620 Thurston Avenue, Ithaca, NY 14850-2490; call 255-6260; e-mail caunfo@cornell.edu; fax 254-4482; or visit www.cau.cornell.edu.

CONTINUING EDUCATION INFORMATION SERVICE
This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 255-4987; e-mail cusce@cornell.edu; or fax 255-9697.

CORNELL IN WASHINGTON PROGRAM
Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects, all while enjoying the rich opportunities available in the nation's capital. For information, write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-4601; call 255-4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

DISTANCE LEARNING
Need a flexible schedule? Have a full-time job? Planning to travel during winter break or during the summer? Don't let any of these stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away. Distance learning courses may include a web-based component, videotapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but students have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl/.

For faculty members interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to the course. Services are tailored to individual needs and ongoing support is available. Visit www.sce.cornell.edu/dl/ to see what's possible.

CyberTower: Cornell at No Cost
Cornell's online CyberTower program is a great way to meet Cornell faculty and explore fascinating topics ranging from mastodons and wine appreciation to today's headline news, all at no cost.

CyberTower features three online program series, with new offerings added every month:

• Study Rooms contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty and fellow CyberTower users.

• Forums are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month's featured guest.

• Views and Reviews are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news. The newest addition to this series is "SunSpots! Op-Eds from the writers of the Cornell Daily Sun."

To explore CyberTower, simply log on to cybertower.cornell.edu and follow the registration instructions. It's all free and is a great way to see what Cornell has to offer.

EXECUTIVE AND PROFESSIONAL PROGRAMS
The school presents short, high-level professional updates, both on and off campus, in study tours and in locations worldwide via distance learning. These courses are taught by Cornell faculty and senior research staff in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, call 255-7259; e-mail cusp@cornell.edu; fax 255-8942; or visit www.sce.cornell.edu/exec/.

EXTRAMURAL STUDY
Cornell students whose studies have been interrupted may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff, faculty, "townies," and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school's Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you'd like to take advantage of Cornell's extensive course offerings but don't need college credit, you may register through the...
VISITOR'S PROGRAM AND RECEIVE A 90 PERCENT DISCOUNT ON TUITION.

FOR INFORMATION, WRITE TO EXTRAMURAL STUDY, B20 DAY HALL, ITHACA, NY 14853-2801; CALL 255-9697; E-MAIL CUSCE@CORNELL.EDU; FAX 255-9697; OR VISIT WWW.SCE.CORNELL.EDU/EXMU/.

SPECIAL PROGRAMS

IF YOU WANT TO IMMERSE YOURSELF IN A PARTICULAR SUBJECT, CONSIDER ENROLLING IN A SPECIAL PROGRAM. PROGRAMS ARE OFFERED ON AND OFF-CAMPUS, MAY INCLUDE AN INTERNSHIP, AND MAY BE COMBINED WITH OTHER COURSES.

FOR INFORMATION, CALL 255-7259; E-MAIL CUSP@CORNELL.EDU; FAX 255-8942; OR VISIT WWW.SCE.CORNELL.EDU/SP/.

CAMPUS TO CAREERS

THE JOB MARKET'S TOUGH. THE ECONOMY'S TIGHT. YOU'VE BEEN THINKING IT'S TIME TO GET SERIOUS ABOUT YOUR FUTURE....

THE SCHOOL OF CONTINUING EDUCATION AND SUMMER SESSIONS INVITES YOU TO JOIN US FOR ONE OF OUR HIGHLY REGARDED PROGRAMS LINKING CLASSROOMS AND CAREERS. NO MATTER WHAT YOUR MAJOR IS, YOU CAN:

• EXPAND YOUR CAREER OPPORTUNITIES

• STRENGTHEN YOUR RESUME AND SKILLS

• DEVELOP PROFESSIONAL CONTACTS

• TAKE FOCUSED, INTENSIVE CLASSES

• LEARN FROM DISTINGUISHED PROFESSORS, ALUMNI, PRACTITIONERS, AND EXECUTIVES

• STUDY IN WASHINGTON, D.C., NEW YORK CITY, OR ON THE CAMPUS IN ITHACA

• ENRICH YOUR PERSONAL, ACADEMIC, AND PROFESSIONAL LIFE

FOR MORE INFORMATION, VISIT WWW.SCE.CORNELL.EDU/SP/.

PRELAW PROGRAM IN NEW YORK CITY

SUMMER IN WASHINGTON

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS

CORNELL'S AWARD-WINNING PROGRAMS FOR HIGH SCHOOL STUDENTS OFFER ONE-, THREE-, FOUR-, AND SIX-WEEK PROGRAMS FOR TALENTED SOPHOMORES, JUNIORS, AND SENIORS FROM AROUND THE WORLD.

PARTICIPANTS LIVE ON OUR BEAUTIFUL CAMPUS, TAKE COLLEGE CLASSES WITH LEADING CORNELL FACULTY, EARN AN AVERAGE OF 6 CREDITS, AND EXPLORE CAREERS AND ACADEMIC MAJORS.

THE PROGRAM IS A WONDERFUL OPPORTUNITY FOR HIGH SCHOOL STUDENTS TO EXPERIENCE COLLEGE LIFE AND MAKE SOME GREAT FRIENDS. AT THE END OF THE PROGRAM, STUDENTS OFTEN SAY IT'S BEEN THE BEST SUMMER OF THEIR LIFE.

FOR INFORMATION, CALL 255-6203; E-MAIL SUMMER_COLLEGE@CORNELL.EDU; FAX 255-6605; OR VISIT WWW.SUMMERCOLLEGE.CORNELL.EDU.

WINTER SESSION

CORNELL UNDERGRADUATE AND GRADUATE STUDENTS, AS WELL AS EMPLOYEES AND AREA RESIDENTS, CAN EARN UP TO 4 CREDITS BETWEEN THE FALL AND SPRING SEMESTERS BY ENROLLING IN THE WINTER SESSION. THIS QUIET TIME ON CAMPUS ALLOWS STUDENTS TO ENJOY GENERALLY SMALLER CLASSES AND TO CONCENTRATE ON INTENSIVE STUDY. WINTER-SESSION STUDENTS MAY ENROLL IN SCHEDULED COURSES OR DESIGN INDIVIDUALIZED STUDY WITH A FACULTY MEMBER. FOR INFORMATION, WRITE TO WINTER SESSION, B20 DAY HALL, ITHACA, NY 14853-2801; CALL 255-4987; E-MAIL CUSCE@CORNELL.EDU; FAX 255-9697; OR VISIT WWW.SCE.CORNELL.EDU/WS/. IF A COURSE ALSO IS OFFERED THROUGH DISTANCE LEARNING, THE COURSE TITLE WILL BE FOLLOWED BY DL.

CORNELL UNIVERSITY SUMMER SESSION

SUMMER AT CORNELL IS AN EXCELLENT TIME TO GET A WORLD-CLASS EDUCATION WHILE ENJOYING ALL OF THE PLEASURES OF SUMMER IN THE FINGER LAKES.

SUMMER SESSION FEATURES OPEN ADMISSIONS AND OUTSTANDING INSTRUCTORS, NEARLY ALL OF WHOM ARE REGULAR CORNELL FACULTY MEMBERS. COURSES ARE OFFERED ON AND OFF-CAMPUS AND VIA DISTANCE LEARNING.

DURING OUR THREE-, SIX-, OR EIGHT-WEEK SESSIONS YOU CAN ACTUALLY GET TO KNOW YOUR PROFESSORS AND ARE SURE TO BE SURROUNDED BY INTRIGUING PEOPLE OF ALL AGES FROM ALL OVER THE WORLD.

AND, ALL WITH TIME LEFT OVER FOR TRAVEL OR A SUMMER JOB.
Summer Session offers the practical benefits of fulfilling requirements, accelerating your degree, gaining personal and professional growth, or easing your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad.

However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, call 255-4987; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by DL.

**African Studies**

AS&RC 131-132  Swahili

AS&RC 205  African Cultures and Civilizations

AS&RC 310  Introduction to African Art

AS&RC 422  African Literature

AS&RC 505  Teaching about Africa

**American Studies**

WRIT 134 An Introduction to Writing in the University

INDEPENDENT STUDY
Have a special interest you'd like to pursue? Want to do research and get credit for it? Need a particular course to graduate on time? Consider independent study.

Independent study encompasses courses of your own design, special topics courses, undergraduate research, or any regular course from the fall and spring semesters not being offered. If you can find a professor willing to supervise your study, all you need to do is pick up the application for independent study (available on the web at www.summer.cornell.edu or from the Summer Session office) and register in B20 Day Hall at least two weeks prior to beginning the independent study course. Also, please let the Summer Session office know if there are courses you would like to see offered next summer (call 255-4987 or e-mail cusce@cornell.edu).
FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, and the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences. Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

- **Center for Applied Mathematics**: This cross-disciplinary center administers a graduate program.
- **Center for Nanoscale Systems in Information Technologies**: The mission of this National Science Foundation Nanoscale and Technology Center is to explore new methods for creating nanoscale devices for use in information technologies. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.
- **Center for Radiophysics and Space Research**: This interdisciplinary unit facilitates research in astronomy and the space sciences.
- **Center for Theory and Simulation in Science and Engineering**: A supercomputer facility used for advanced research in engineering and the physical and biological sciences.
- **Cornell High Energy Synchrotron Source (CHESS)**: A high-energy synchrotron radiation laboratory in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
- **Cornell Nanoscale Science and Technology Facility**: This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.

**DEGREE PROGRAMS**

Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

- **Undergraduate Study**: Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:
  - biological engineering (BE)
  - chemical engineering (ChemE)
  - civil engineering (CE)
  - computer science (CS)
  - electrical and computer engineering (ECE)
  - engineering physics (EP)
  - environmental engineering (EnvE)
  - geological sciences (GeoS)

- **Programs on Science, Technology, and Society**: This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.

- **Master of Engineering Degrees**: The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.

- **Ph.D. Programs**: Additional Ph.D. degrees are awarded in applied sciences and engineering.

- **Announcement of the Graduate School**: For full details on M.Eng. degrees, see the "Master of Engineering Degree Programs." Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the undergraduate programs and the special announcement Graduate Study in Engineering and Applied Science.
Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2006-2007 edition of the Engineering Undergraduate Handbook.)

Course Category Credits
1. Mathematics (major-specific) 15-16
2. Physics (major-specific) 8-12
3. Chemistry (major-specific) 4-8
4. First-year writing seminar 6
5. Technical writing* 3
6. Computer programming 4
7. Introduction to engineering (ENGRI) 3
8. Two engineering distributions (ENGRI) 6-8
9. Liberal studies distribution (6 courses min.) 2-18
10. Advisor-approved electives 6
11. Major program
   a. Major-required courses 2-30
   b. Major-approved electives 9
   c. Courses outside the major 9
12. Two semesters of physical education in the freshman year and demonstration of proficiency in swimming (university requirement)

From 123 to 133 credits are required for graduation, depending on the major (see "Engineering Majors").

Technical writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 191, 192, 293 or 294 (depending on the major), and a major-specific math course. At least C- must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Courses that are taken a second time to meet this or any requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students must attain at least C- in each math prerequisite of a physics course before taking the physics course (e.g., C- in MATH 191 before taking PHYS 112 and C- in MATH 192 before taking PHYS 213). Students in the CE, CS, Geos (geoscience and SES options), ISST, and ORE may substitute CHEM 208 for PHYS 214. BE and EnVE students may substitute CHEM 257 or 357 for PHYS 214.

Chemistry

CHEM 211 or 207 is required. CHEM 211 is designed for students who do not intend further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 211 until the sophomore year.

Students intending to affiliate with the following majors usually take CHEM 211: engineering physics; computer science; electrical and computer engineering; information science, systems, and technology; materials science and engineering; mechanical engineering, and operations research and engineering. Students considering chemical engineering must take CHEM 207 in the fall of their freshman year and CHEM 208 in the spring semester. Students considering the science-of-earth-systems option in geophysical sciences or a health-related career such as medicine should take the CHEM 207-208 sequence.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from among more than 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP/ for more information.

1. ENGRG 350 or 335, taught by the Engineering Communications Program
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do an alternative major (see above). An instructor may wish to extend the writing done in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB's Subcommittee on Technical Writing, the instructor may have students co-register in ENGRG 302, which may be taken more than once with different courses by permission of the engineering instructor.
3. An officially designated Writing-Intensive (W-I) engineering course:
   • ENGRG 265
   • CHEM 452
   • MS&E 403 and 404 (both)
   • MS&E 405 and 406 (both)
   • M&AE 427
   • BEE 450 with co-registration in BEE 493
   • BEE 473 with co-registration in BEE 493
   • BEE 489
4. ENGRG 302, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing done in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB's Subcommittee on Technical Writing, the course may have students co-register in ENGRG 302, which may be taken more than once with different courses by permission of the engineering instructor.
5. COM 250, 263, or 352, taught by the Department of Communication (in the College of Agriculture and Life Sciences).
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB's Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Computer Programming

COM S 100 Introduction to Computer Programming is normally taken in the freshman year to fulfill the computer programming requirement. Before taking COM S 100, some students take COM S 099, Fundamental Programming Concepts, offered in the fall and summer. This 2-credit S-U course is meant for students with virtually no programming experience; students with previous programming experience may not enroll in it. Basic programming concepts
and problem analysis are studied. COM S 099 may not be used as credit toward graduation.

**Introduction-to-Engineering Course**

An introduction-to-engineering course (designated ENGR1) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.

**Engineering Distribution**

Two engineering distribution (ENGRD) courses (6–8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. **Scientific computing**
   - ENGRD 211 Computers and Programming
   - ENGRD 241 Engineering Computation
   - ENGRD 321 Numerical Methods in Computational Molecular Biology
   - ENGRD 322 Introduction to Scientific Computation

2. **Materials science**
   - ENGRD 261 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   - ENGRD 262 Electronic Materials for the Information Age

3. **Mechanics**
   - ENGRD 202 Mechanics of Solids
   - ENGRD 203 Dynamics

4. **Probability and statistics**
   - ENGRD 270 Basic Engineering Probability and Statistics
   - Majors in Electrical and Computer Engineering may substitute ECE 410 for ENGRD 270. Majors in Engineering Physics may substitute ECE 410 or MATH 471 for ENGRD 270. Majors in Civil Engineering, Biological Engineering, and Environmental Engineering may substitute CEE 304 for ENGRD 270.

5. **Electrical sciences**
   - ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers
   - ENGRD 230 Introduction to Digital Logic Design
   - ENGRD 264 Computer-Instrumentation Design

6. **Thermodynamics and energy balances**
   - ENGRD 219 Mass and Energy Balances
   - ENGRD 221 Thermodynamics

7. **Earth and life sciences**
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - ENGRD 251 Engineering for a Sustainable Society
   - ENGRD 260 Principles of Biological Engineering

8. **Biology and chemistry**
   - ENGRD 252/A&EP 252 The Physics of Life
   - BIO G 101 and 103 Biological Sciences, Lec and Lab
   - BIO G 105 Introductory Biology
   - BIO G 107 General Biology (summer only)
   - CHEM 389 Physical Chemistry 1

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

- Biological Engineering: ENGRD 202
- Chemical Engineering: ENGRD 219
- Civil Engineering: ENGRD 202
- Computer Science: ENGRD 211 (co-enrollment in COM S 212 highly recommended)
- Electrical and Computer Engineering: ENGRD 230
- Environmental Engineering: ENGRD 202
- Geological Sciences: ENGRD 201
- Information Science, Systems, and Technology: ENGRD 270
- Materials Science and Engineering: ENGRD 261 or ENGRD 262
- Mechanical Engineering: ENGRD 202
- Operations Research and Engineering: ENGRD 270

Some majors require additional distribution courses after the student affiliates.

**Liberal Studies Distribution**

The following liberal studies distribution requirements begin with the class entering in 2003. Students who entered before that may choose to use the new requirements.

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communication skills. Cornell has a rich tradition of reading, observing, and hearing and encouraging reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offers in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

**Group 5. Social and Behavioral Analysis (SBA)**

Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Group 6. Foreign Languages (not literature courses)**

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

**Electives**

- Advisor-approved electives: 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of...
the engineer, advisors generally accept
the following as approved electives:
1. One introduction-to-engineering course
   (ENGRD)
2. Engineering distribution courses
3. Courses stressing written or oral
   communication
4. Upper-level engineering courses
5. Advanced courses in mathematics
6. Rigorous courses in the biological and
   physical sciences
7. Courses in business, economics, or
   language (when they serve the student's
   educational and academic objectives)
8. Courses that expand the major or another
   part of the curriculum.
9. Up to 6 credits of advisor-approved
   electives may come from ROTC courses at
   the 300 level or higher.
• Major-approved electives: 9 credits
   (approved by the major and faculty
   advisors in the major). Refer to the major
   curricula for descriptions of courses in
   this category.
• Outside-the-major electives: 9 credits
   of courses outside the major to ensure
   breadth of engineering studies

Social Issues of Technology
It is important for engineers to realize
the social and ethical implications of their work.
Consequently, in selecting their liberal studies
distribution courses and approved electives,
students are urged to consider courses listed in
the "Science and Technology Studies" undergraduate area of concentration (see
"Interdisciplinary Centers and Programs").
These courses may provide students with important perspectives on their studies and
their future careers.

Engineering Advising
Entering first-year students are assigned a
faculty advisor (who may or may not be in
their intended major), who remains their
advisor until affiliation with a major (normally
during the fourth semester). The students are also under the administration of Engineering
Advising in Olin Hall, which implements the academic policies of the College Curriculum
Guiding Board. Engineering Advising serves as the primary resource center for
undergraduate students in the college, offering general advising and counseling.
Other student services offices located in
Olin Hall are Engineering Learning Initiatives and
Divinity Programs in Engineering (DPE), which are primary resources for counseling, support, tutoring, and networking opportunities.

First-Year Requirements
During the first year, engineering students are
expected to complete (or receive credit for)
the following core requirements:
• MATH 191 and 192
• Two of: CHEM 211, 207, 208, PHYS 112,
   213, 214* (or the Honors equivalent)
• COM S 100
• Two first-year writing seminars
• One introduction to engineering (ENGRI)
course
• Two physical education courses
  "Students with an interest in pre-med (or other
  health-related courses), chemical engineering,
  or the science-of-earth-systems option in
  geological sciences should enroll in the CHEM
  207–208 sequence during their first year.

Affiliation with a Major
Students must apply for affiliation with a
major during the first semester of their
sophomore year, although earlier affiliation
may be granted at the discretion of the major.
This is done by visiting the undergraduate
major office and completing the application
for major affiliation form. To affiliate, students
must (1) make good progress toward
completing required courses in the common
curriculum, (2) have a GPA ≥ 2.0, and (3)
have satisfied the major's course and grade
requirements as specified below:
(Majors may impose alternative affiliation
requirements for students applying for
affiliation later than the first semester of the
sophomore year.)

Major
Courses and Minimum
Grade Requirements
Biological
Engineering
At least one grade below
C– in math and science
courses and COM S 100 or
its equivalent.
Chemical
Engineering
At most one grade below
C– in chemistry, math,
physics, and chemical
engineering courses.
Civil
Engineering
GPA ≥ 2.0 in all
engineering and science
courses. At least C– in
ENGRD 202 or (ENGRD
251, for students who
do not take ENGRD 202
before affiliation).
Computer Science
At least C in all completed
COM S and math courses.
GPA ≥ 2.5 in COM S
211, 212, and 280.
GPA ≥ 2.5 in MATH 192
and COM S 280. Visit the
CS undergraduate office
web site for alternative
affiliation criteria.
Electrical and
Computer
Engineering
At least C+ in MATH
295, PHYS 213, and
one of ECE/ENGRD 210,
ECE 220, and ENGRD
230 (all taken for 4
credits). GPA ≥ 2.5 in
(if completed): MATH
192, 293, 294, PHYS 213,
ENGRD 211, 230, ECE/
ENGRI 210, ECE 220.
Engineering Physics
At least B– in all required
math and physics courses.
Environmental
Engineering
GPA ≥ 2.0 in all
engineering and science courses. At
least C– in ENGRD 251.
Geological Science
Good academic standing
in the College of Engineering.
Double Major in Engineering
The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject areas offered by the schools or departments of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in “Undergraduate Engineering Majors.”

Engineering Minors and Options
Most of the majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. Besides those minors, there are minors in applied mathematics, biomedical engineering, civil infrastructure engineering, management, engineering statistics, industrial systems and information technology, and information science. There is also the bioengineering option, which requires only four courses (12 credits). See “Engineering Minors and Options.”

Department of Biomedical Engineering
270 Olin Hall
The charge of the Department of Biomedical Engineering (BME) is to bridge engineering, biology, and medicine. Students are educated to understand the human body as an integrated system through quantitative engineering analysis and to use that understanding to design better therapeutic strategies, devices, and diagnostics to improve human health. Biomedical engineers also contribute to biological discovery. The 43 faculty in the biomedical engineering graduate field represent 12 departments and six colleges (including Weill Medical College). The BME field offers research opportunities in biomedical mechanics, biomaterials, drug delivery, design, production, and metabolism; biomedical instrumentation and diagnostics; and system computational biology. The Department of BME administers the undergraduate minor in biomedical engineering, the biomedical engineering graduate field, the M.S./Ph.D. degree programs, and the M.Eng. (BME) degree.

Engineering Communications Program
424 Hollister Hall, 255-8558, www.engineering.cornell.edu/ECP
The Engineering Communications Program (ECP), created in 1987 at the urging of the College of Engineering faculty and employers of Cornell engineers, provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean’s Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per semester. The writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students’ work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Diversity Programs in Engineering
146 Olin Hall, 255-6403
The Diversity Programs in Engineering (DPE) office operates programs at the undergraduate, graduate, and faculty levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities, women, and other underrepresented groups in Engineering. DPE serves as a resource center for academic support, career placement, graduate school preparation, and overall student success.

The office participates in a university-wide pre-freshman summer program for admitted students, coordinates two summer program initiatives for high school students, CURIE (www.engineering.cornell.edu/curie) and CATALYST (www.engineering.cornell.edu/catalyst), and it also provides specialized instruction, in collaboration with Engineering Advising and Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

The DPE office sponsors networking events in April and throughout the academic year that allow company representatives from all over the United States to meet students from diverse populations. Summer internships and permanent jobs frequently result from these events.

In addition, the DPE office coordinates various trips, recreational activities, seminars, lectures, and workshops on a wide range of topics that are relevant to academic and extracurricular life in the university setting.

Engineering Learning Initiatives
The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, cooperative learning, research opportunities, and leadership development.

Academic Excellence Workshops (AEWs) offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour cooperative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for funding to cover student stipend and expense costs for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

LeadersShape, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a week-long retreat held in May of each year.

Engineering Cooperative Education and Career Services
201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices
This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers typically visit the office to recruit technical students and graduates; additional job opportunities are posted electronically through CornellTrak. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering for four semesters. Students majoring in computer science or biological engineering, but not registered in the College of Engineering, are also eligible. In most cases a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the
The College of Engineering awards credit by receiving qualifying scores on any of the following introductory courses. Students can earn AP (Advanced Placement) credit to entering first-year students who have strong experience in physics and calculus, e.g., a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHY 217 or 218 are strongly advised to start with PHY 116. Even for a student with a 5 on both Physics C AP tests, 116 will not be boring. Students must not simultaneously receive credit for PHY 116 and AP credit for PHY 217 and AP credit for PHY 213. For advice or more information, contact the department representative at 255-6016.

Chemistry: CHEM 207 or 211 is required. CHEM 207 or 211. AP credit may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for chemistry.

Note: Students who obtain AP credit for CHEM 207 and who are majoring in chemical engineering or materials science and engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. Students may want to discuss this option with their faculty advisor.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- 8 credits will be offered to students who receive a 5 on the CEEB AP exam.
- 4 credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss possible placement.

First-year writing seminar: Two first-year writing seminars are required.
- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEF AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

Modern languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to 3 credits in most languages. To qualify for the CASE exam, the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Modern language AP credits may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an
Approved elective requirement, contingent on discussions with the faculty advisor.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ('A') Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Mathematics: No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing exam during orientation.

Note: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall semester classes must be requested in a written petition to the college's Committee on Academic Standards, Petitions, and Credit (ASPAC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

General Policies for Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. (Forms are available from Engineering Advising or the Registrar's office and should be submitted before enrollment in the course to be transferred.) An official transcript from the offering institution (bearing the institutional seal and Registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in Engineering Advising.

- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the "Advanced Credit" section.

- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.

- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.

- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students to be in good standing at the College Engineering Advising, 167 Olin Hall.

Transfer Credit for Transfer Students

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means depends on the major.

Requirements for first-year engineering students may be in good academic standing at Cornell. Requirements for second-semester transfer students may be in good academic standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC); a warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

Requirements for unaffiliated second-semester first-year and sophomore students to be in good standing are as follows. Failure to meet these requirements will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC); a warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed in courses that meet B.S. degree requirements, normally at least two math, science, or engineering courses (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in a math course, if one was taken
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades
Academic Progress
The total number of credits required for graduation range from 123 to 133, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C- in their four required math courses. If at least C- is not earned, the course must be repeated immediately. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean's List
Dean's List citations are presented each semester to engineering students who have exemplary academic records. The Dean of the college determines the criteria for this honor. For 2006-2007, the requirement is a semester GPA $\geq$ 3.4 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the engineering registrar's office, and the honor is noted on the transcript.

Graduating with Distinction and Honors
Graduating with Distinction
Meritorious students graduating with a B.S. degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude:

- Cum laude will be awarded to engineering students with a GPA $\geq$ 3.5.
- Cum laude will also be awarded to engineering students who received a semester GPA $\geq$ 3.5 in each of the last four semesters at Cornell, in each of those semesters, at least 12 letter-grade credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA $\geq$ 3.5 in their last semester and meet the conditions above in the prior four semesters.
- Magna cum laude will be awarded to engineering students with a GPA $\geq$ 3.75 (based on all credits taken at Cornell).
- Summa cum laude will be awarded to engineering students with a GPA $\geq$ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program
To be eligible for major honors, a student must enter a major with and maintain a cumulative GPA $\geq$ 3.5. If the major has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the major may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more information, see "Engineering Majors."

S-U Grades
Many courses may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of at least C- in a course will receive a grade of S; those earning less than C- receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must previously have completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an advisor-approved elective in the engineering curriculum.
- Students may enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U grades only" may be taken in the same semester as the elected S-U course.)

The choice of grading option for any course is made initially during the pre-enrollment period. Grading options may be changed online. For permission-only courses submit a properly completed add/drop form to the engineering registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled (in the current semester) under a different grade option.

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major. Students must be accepted by a major as part of the admission process. Students who wish to enter as a second-semester freshman or later must be accepted by a major as part of the admission process. Students who wish to enter as a second-semester sophomore or later must be accepted by a major as part of the admission process.

A leave of absence generally is not granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition.

(See previous section, "Transfer Credit," for details.)
Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Medical leave: Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are granted for at least six months and up to two years with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the course makes better academic sense than being required to withdraw and complete the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING MAJORS
This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0. Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors
Many of the engineering majors supplement the major with an honors program.

Eligibility
The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. An honors program student must enter with and maintain a cumulative GPA ≥ 3.5. If the GPA drops below 3.5, the student is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures
An applicant to the honors program in a major must have an honors advisor, a faculty member from that major who will supervise the honors program and direct the research or project. The honors advisor need not be the student's advisor in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors advisor.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors advisor during the second semester of their junior year. Each major may place further constraints on timing.

Major-Specific Information
Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIOLOGICAL ENGINEERING
Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Biological and environmental engineering (BEE) addresses three great challenges facing humanity today: ensuring an adequate and safe food supply in an expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

An option in environmental engineering is discussed further below.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering applications. Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal.

Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in chemistry, biology, and biochemistry, throughout the curriculum, emphasie placed on communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical
industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers and technical people who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Biological Engineering major is designed to educate the next generation of engineers to meet these challenges.

The academic requirements* for students majoring in Biological Engineering are outlined below.

### Basic Subjects

### Option in Environmental Engineering

By completing the following courses, BE majors may earn the Environmental Engineering option within the framework of the BE curriculum.

**Chemistry:** CHEM 211/257 or 207/208

**Organic Chemistry:** CHEM 257 or CEE 451

**Microbiology:** CEE 451 or BIOMI 290

**Fluid Mechanics:** BEE 331 or CEE 331

**Engineering Probability and Statistics:** CEE 304

**Environmental Quality Engineering:** CEE 351

**Environmental Engineering Lab:** BEE 427, BEE 473*, or CEE 453

**Environmental Engineering Design Analysis:** BEE 473 or 475 Watershed Engineering or Environmental Systems Analysis

* If BEE 473 is used for lab, students will need to complete BEE 475 for design analysis.

---

### CHEMICAL ENGINEERING

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 208 during the freshman year. The program for the last three years is as follows:

#### Semester 3

CIVIL ENGINEERING

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

While it is not necessary to do so, students may concentrate in environmental engineering, environmental fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

Admission Requirements

Students planning to affiliate with this major must complete ENGRD 202 Mechanics of Solids and PHYS 112 (or, for students following the Environmental Concentration, ENGRD 251) with at least a C-. It is strongly recommended that ENGRD 202 be taken as an engineering distribution course during the first semester of the sophomore year.

Engineering Distribution Courses

Majors are required to take ENGRD 202 Mechanics of Solids as an engineering distribution course. For the second engineering distribution course, one of the following is recommended:

ENGRD 261 Introduction to Mechanical Properties of Materials for students interested in structural engineering and geotechnical engineering.

ENGRD 221 Thermodynamics for students interested in fluid mechanics and hydraulics/hydrology.

ENGRD 211 Computers and Programming for students interested in transportation.

ENGRD 241 Engineering Computation* for all students interested in environmental engineering.

ENGRD 251 Engineering for a Sustainable Society for students interested in Environmental Engineering.

Major Program

Students may substitute CHEM 208 or CHEM 257 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum. (Students interested in the Environmental Concentration should follow the course requirements for the Environmental Engineering Major and should elect to use one of these courses as a second elective, etc.)

Core Courses

ENGRD 203 Dynamics* or CEE 478 Structural Dynamics 3

ENGRD 241 Engineering Computation* 3

CEE 304 Uncertainty Analysis in Engineering 3

CEE 323 Engineering Economics and Management 3

CEE 331 Fluid Mechanics 3

CEE 341 Introduction to Geotechnical Engineering and Analysis 4

CEE 351 Environmental Quality Engineering** 3

CEE 361 Introduction to Transportation Engineering* 3

CEE 371 Structural Modeling and Behavior 4

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved communications courses. Technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional advisor-approved elective must be taken.

*ENGRD 203 and ENGRD 241 can be used to satisfy a major requirement. If a student elects to use one of these courses as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

**ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the major, but only if ENGRD 270 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.

Civil Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400 Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 470 Peer Teaching in Engineering or CEE 401 Undergraduate Teaching in CEE (1-3 credits per semester).

3. Advanced or graduate courses at the 500 level or above.

Procedures

Application to the program shall be a resolution form for CEE 400 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. The program must be approved by the CEE Curriculum Committee, although the
ENGINEERING - 2006-2007

COMPUTER SCIENCE
Offered by the Department of Computer Science
Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- MATH 191, 192, and 294
- two semesters of introductory computer programming (COM S 100 and ENGRD 211)
- a 1-credit project (COM S 212)
- a seven-course computer science core (COM S 280, 312, 314, or 316; one of 321, 322, 421, or 428, 381, 414, and 482)
- two 400+ level computer science electives, totaling at least 6 credits (COM S 490 not allowed)
- a computer science project course (COM S 413, 415, 419, 433, 468, 473, 501, 514, or 664)
- a math elective course (e.g., ENGRD 270, MATH 293, MATH 300+, T&AM 310)
- two 300+ level courses (major-approved electives) that are technical in nature and total at least 6 credits.
- a three-course specialization in a topic area other than computer science, all numbered 300 level or greater.

All the major electives described above must be courses of at least 3 credits, with the exception of the COM S project course, which is at least 2 credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

Computer Science Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one COM S course (at least 3 credit hours) at or above the 500 level with at least A- (no seminars)
2. at least two 3-credit semesters of COM S 490 (independent research), with at least A- each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACK". Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982; or visit www.cs.cornell.edu/ugrad for more information on eligibility.

ELECTRICAL AND COMPUTER ENGINEERING
Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision, power systems, control, optimization, numerical and state-space methods, communications, computer networks, information theory and coding, signal processing, electronic circuits, VLSI, solid state physics and devices, MEMS, nanotechnology, lasers and optoelectronics; electromagnetics, radiophysics, space sciences, plasmas.

Students planning to affiliate with ECE must take ENGRD 230 as an engineering distribution course. Prospective majors are encouraged, but not required, to take ENGRD 211 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 210, ECE 220, ENGRD 230, and ECE 313 are taught in both the fall and spring semesters.

<table>

</tbody>
</table>

Major-approved electives

- These electives must include two 400-level Electrical and Computer Engineering courses that meet the CDE requirement and at least two additional courses at the 400 level or above. The remaining electives may not include independent project courses.

Electrical and Computer Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Academic Standards
Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Honors Seminar
Prospective majors must complete MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

ECE faculty members will give a lecture or short series of lectures as part of the honors seminar.

Honors Determinations are Made During the Senior Year.

The Electrical and Computer Engineering Undergraduate Handbook provides a list of courses that meet the CDE requirements. An updated list of courses that meet the CDE requirements is available on the bulletin board outside 222 Phillips Hall. All courses must have a college-level prerequisite.

Undergraduate concentration is achieved through the Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

Electrical and Computer Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Electrical and Computer Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Electrical and Computer Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Electrical and Computer Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. GPA ≥ 2.5 every semester.
2. At least C- in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.
Honors Project
A student in the honors program is required to accumulate at least 3 credit hours from a senior year honors project with an ECE faculty member, consisting of either design, research, or directed reading at the 400 level. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

Additional Course Work
At least 3 credit hours are required of advanced (senior level) ECE course work that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE major.

The requirement for at least 9 credits over and above the 128 credits required for a B.S. degree means that an honors degree requires 137 credit hours.

ENGINEERING PHYSICS
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/E&EP 110 Lasers and Photronics; ENGR/A&EP 112 Introduction to Nanoscience and Nanoelectroengineering; ENGRD 242/A&EP 252 Physics of Life; ENGRD/A&EP 264 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 320 Modern Experimental Optics (a junior/senior course); A&EP 363 Electronic Circuits (a sophomore/junior course); PHYS 410 Advanced Experimental Physics; and A&EP 438 Computer Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with the developing career goals in mind. They are encouraged to take PHYS 112 or 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the technical writing requirement with the engineering distribution course ENGRD 264. EP students need to take only one engineering distribution course, since A&EP 333, taken in the junior year, counts as the second one. Students are advised to take A&EP 363 (taking ECE 210 and 230, 4 credits each, can satisfy A&EP 363. Count ECE 210 as an approved elective and ECE 230 as A&EP 363) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A- in MATH 192 may wish to explore accelerating their math requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum, the major requirements are as follows:

Course Credits
A&EP 333 Mechanics of Particles and Solid Bodies 4
A&EP 355 Intermediate Electromagnetism 4
A&EP 356 Intermediate Electrodynamics 4
A&EP 361 Introductory Quantum Mechanics 4
A&EP 363 Electronic Circuits 4
A&EP 423 Statistical Thermodynamics 4
A&EP 454 Continuum Physics 4
PHYS 410 Advanced Experimental Physics 4
A&EP 321 Mathematical Physics I; or MATH 421 (applied mathematics) 4
A&EP 322 Mathematical Physics II; or MATH 422 (applied mathematics) 4
Six major-approved electives (18-23 credits), of which five must be technical upper-level courses (300 or above).

Total major credits=58 credit hours minimum

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 410 required for the B.S. degree in EP can be satisfied by completing A&EP/PHYS 330 or ASTRO 410. The remaining 2 credits of PHYS 410 can then be satisfied by taking PHYS 400 for 2 credits, provided that the experiments in PHYS 400 do not overlap with those in A&EP/PHYS 330 or ASTRO 410. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 or ASTRO 410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. Students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of A&EP, Clark Hall. Students are advised to consult with their EP advisor, a professor active in their area of interest, or with the associate director of the school.

Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing
Students are expected to pass every course in which they are registered, to earn at least C- in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester.

Engineering Physics Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. At least 8 credits of major-approved electives at the 400 level or higher with at least A- in each, not counting credits given for item 2.
2. Two semesters of A&EP 490 or an equivalent course, with at least 2 credits the first semester and 4 credits the second. The student will complete an independent research project or senior thesis under the supervision of an engineering or science faculty member.

The level of work required for successful completion is to be consistent with the amount of academic credit granted.

Procedures

Before enrolling in A&EP 490 or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the project or thesis and an honors advisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies. The proposed project or thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. A copy of the final report is to be given to the chair of the A&EP Honors Committee. The final research project course grade will be assigned by the faculty supervisor after consultation with the chair of the Honors Committee. At least A– is required for successful completion of the honors requirement.

ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

The School of Civil and Environmental Engineering and the Department of Biological and Environmental Engineering each offer a concentration in environmental engineering. With appropriate course selection, students taking these concentrations can double major in Environmental Engineering with minimal additional course requirements (as defined in the BEE and CEE undergraduate handbooks).

The major requires a GPA \( \geq 2.0 \) in engineering and science courses and at least a C– in ENGRD 251.

Students matriculating in the College of Engineering (COE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to affiliate with this major will be taking the following courses:

**Mathematics-science requirements**

- MATH 191, 192, 293, 294
- PHYS 112, 213
- CHEM 211, 257
- COM S 100 or BEE 151† (computer programming)

**Introduction to engineering**

- ENGRD 113 Water Treatment Design (recommended), or
- BEE 200* The BEE Experience (required for students matriculating in CALS)

**Engineering distribution courses**†

- ENGRD 251 Engineering for a Sustainable Society 3
- ENGRD 202, 241, or 221 are recommended (other good choices include ENGRD 201, or BIO G 101 and 103, BIO G 105, BIO G 107). 3–4

**Major-required courses**

Laboratory Course (one from the following list):

- CEE 453 Lab course Lab Research in Environmental Engineering 3
- BEE 427 Water Sampling and Measurement 3
- BEE 473 Watershed Engineering 3
- CEE 437 Experimental Methods in Fluid Dynamics 3
- BEE 475 Environmental Systems Analysis 3
- Engineering Economics 3
- CEE 323 Engineering Economics and Management 3
- BEE 489 Engineering Entrepreneurship, Management, and Ethics 4

**Electives**

- Technical communications courses†††
- BEE 493 taken with BEE 473 or BEE 450, or BEE 489) 3–4

Three Environmental design electives 9-credit minimum†

**Students must complete two ENGRD courses.**

**Students planning graduate-level study in Environmental Engineering may take BIOMI 290 Introduction to Microbiology in place of CEE 451.**

Total credits (minimum) 125

*Students must complete two CEE courses.

**Students using this course as a second engineering distribution course must take an additional major-approved elective. BIO G 109 is not an engineering distribution course.

***It may be accepted (by petition) to substitute for CEE 304 if taken prior to affiliation with the Environmental Engineering major or if necessary because of scheduling conflicts caused by co-op or study abroad.

†††Students must complete two ENGRD courses.

‡‡‡The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and renewable energy systems. The respective lists are available at the departmental offices.
Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

GEOLICAL SCIENCES (SCIENCE OF EARTH SYSTEMS)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. Natural hazards such as earthquakes, hurricanes, and volcanic eruptions can alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important to both future policymakers and ordinary citizens, who must find new sources of energy and sustain the quality of our environment. Because the human need to understand the earth is so pervasive and the earth system is so multifaceted, the major covers the spectrum of modern earth sciences, including the structure, composition, and evolution of our planet; the planetary processes producing weather and climate; and processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment.

The major is built on a rigorous introduction to this broad spectrum plus a concentration chosen by the student to obtain expertise in an area of interest and relevance to the student's career plans.

The major prepares students for a number of career paths including further graduate study in geology, geophysics, geochemistry, biogeochemistry, atmospheric sciences, ocean sciences, hydrology, or environmental sciences and engineering. Career opportunities cover a wide range, including university research groups, governmental agencies and the private sector dealing with energy and mineral resources, natural hazards, weather and climate, ocean sciences, water, air and ground quality, and contamination. The major also prepares students for careers in environmental policy, law or medicine, science in the media, and K-12 science teaching.

Requirements for the Major

The Geological Sciences major of the Engineering College has the same requirements as the Science of Earth Systems major in other Cornell undergraduate colleges. The Geological Sciences curriculum includes strong preparation in mathematics, physics, chemistry and biology. A second semester of chemistry (CHEM 208) is required with PHYS 214 optional. Two semesters of biology are required (either BIO G 103-104 or BIO G 109-110). A second semester of biology can be replaced by CHEM 257 Introduction to Organic Chemistry.

A required introductory course in earth science can be satisfied by either EAS 201 (ENGRD 201) or EAS 220. Only one of these courses should be taken.

The core courses emphasize the interconnectedness of the earth system, and are founded on the most modern views of the planet as an interactive and ever-changing system. Each course crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.

- EAS 301 Evolution of the Earth System
- EAS 303 Biogeochemistry
- EAS 304 Interior of the Earth
- EAS 305 Climate Dynamics

The concentration is achieved by completion of four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses may be required to complete the concentration courses, depending upon the student's choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four defined areas of specialization include geology, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also design other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with the student's advisor with approval required of the Director of Undergraduate Studies. For concentrations beyond the four first named, approval by the SES Curriculum Advisory and Oversight committee is needed.

- Exposure to the basic observations of earth science, whether directly in the out-of-doors, or indirectly by the many advanced techniques of remote sensing of our planet, or in the laboratory, is necessary to understand fully the chosen area of concentration, the major. Three credits of appropriate course work are required. Possibilities include the following:
  - Courses in the Hawaii Environmental Semester Program
  - Courses given by the Shoals Marine Laboratory
  - EAS 250 Meteorological Observations and Instruments
  - EAS 352 Synoptic Meteorology I
  - EAS 417 Field Mapping in Argentina, plus one credit of EAS 491 or 492
  - EAS 437 Geophysical Field Methods
  - EAS 491 and/or EAS 492 Undergraduate Research with appropriate choice of project
  - Field course or courses taught by another college or university (e.g. Semester at Sea)

Students should discuss with their faculty advisor whether the fourth core course listed above or the course used to fulfill the observation-field requirement may also be used to satisfy the concentration.

For more information contact Professor Bryan Isacks, Department of Earth and Atmospheric Sciences, bll@cornell.edu, or visit www.eas.cornell.edu.

Field Study in Hawaii

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Geological Sciences major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Geological Sciences major include EAS 240, 322, and 351. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii.

Geological Sciences Honors Program

The BS degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. Acceptance of the written proposal of the honors project by the faculty advisor and the director of undergraduate studies.
2. An honors thesis involving research (EAS 491-492 or 499, 2 or more credits each) of breadth, depth, and quality.

INDEPENDENT MAJOR

Offered by the Independent Major Committee

Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-6240.

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. With the exception of certain faculty-sponsored programs, this major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not
accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Industrial Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information technology option studies the design and significance of these new technologies employed.

Information Science, Systems, and Technology Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures or ENGRD 262 Electronic Materials for the Information Age
2. 13 required major courses:
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 261 or MS&E 262 (whichever was not taken as a distribution course)
   - MS&E 301 Materials Chemistry
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
   - MS&E 307 Materials Design Concepts I
   - MS&E 311 Junior Lab I
   - MS&E 312 Junior Lab II
   - MS&E 402 Mechanical Properties of Materials, Processing, and Design
   - MS&E 403/405 Senior Materials Lab I or Senior Thesis I
   - MS&E 404/406 Senior Materials Lab II or Senior Thesis II
   - MS&E 407 Materials Design Concepts II
3. Two materials-related electives covering two groups of different materials
4. Three application-related electives to develop knowledge of the physics and chemistry underlying the unique properties of modern engineering materials and processes.
5. Two of the application-related electives must be taken from outside MS&E
6. One additional technical elective outside MS&E

Materials Science and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

1. The 9 credits (giving a total of 140) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 400 and graduate level, with selected courses at the 500 level. The courses must be approved by the major advisor.
2. Senior honors thesis (MS&E 405/406) with a grade of at least A.

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 108 Upson Hall, 255-3573, maeug@cornell.edu, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas in which mechanical engineers work. The program covers both major streams of mechanical engineering.

(1) Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are: mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

(2) Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 202 (also T&AM 202) as an engineering distribution course. ENGRD 221/M&AE 221 is required for the major and is recommended as the second engineering distribution course. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval from their major advisor.

The major requires 15 courses (beyond ENGRD 202 already mentioned) and five major-approved elective courses.
Required courses
M&AE 212 Mechanical Properties and Selection of Engineering Materials
ENGRD 221 Thermodynamics
M&AE 225 Mechanical Synthesis
ENGRD 203 Dynamics
M&AE 378 Mechatronics or ENGRD 210, Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 360, Electronic Circuits
M&AE 323 Introductory Fluid Mechanics
M&AE 324 Heat Transfer
M&AE 325 Analysis of Mechanical and Aerospace Structures
M&AE 326 System Dynamics
M&AE 327 Mechanical Property and Performance Laboratory
M&AE 427 Fluids/Heat Transfer Laboratory
M&AE 428 Seminar on Engineering Design
M&AE 429 Supervised Senior Design Experience

Electives
Students should use the flexibility provided by the major-approved electives, advisor-approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (300+) M&AE courses. Of these three, two must be a concentration of M&AE’s upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
- Aerospace engineering, M&AE 305, 306, 415, 423, 500, 507
- Biomechanics, M&AE 463, 464, 466, 565
- Engineering materials, M&AE 312, 313, 455, 464, 470, 513
- Mechanical systems and design, M&AE 378*, 409, 415, 417, 470, 477, 478, 514
- Thermo-fluids engineering, M&AE 423, 449, 453, 501, 543

*Students who took M&AE 378 as a required course (see above) may not use it again as a major-approved elective.

One major-approved elective must be a senior design elective involving M&AE 429 “Supervised Senior Design Experience.” One way to satisfy this requirement is to take a 3+ credit section of M&AE 429, directed by a faculty member as an individual or team exercise. The other option is to take a senior design elective course (M&AE 400, 423, 425, 470, 479, or 489) along with the corresponding one-credit section of M&AE 429.

One of the major-approved electives must be an approved upper-level math course taken after MATH 294. The course must include some statistics. Currently, the approved courses are T&AM 310, ENGRD 270, CEE 304, and ENGRD 241.

One of the major-approved electives, the "technical elective," may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted. Advisors may approve such courses as advisor-approved electives. M&AE 498 may not be used as a major-approved elective.

Advisor-approved electives
To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester. Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 300 or above or co-listed in an academic department are allowed as AA electives. Students must document AA electives approved before M&AE affiliation within a month of registration as an M&AE student. The faculty encourages students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

Other considerations
It is recommended that humanities, arts, and social sciences electives include studies in:

- history of technology
- societal impacts of technology
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

The Sibley School encourages its students to spend a junior year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by M&AE 427. A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

Preparation in Aerospace Engineering
There is no separate undergraduate accredited program in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration, for example spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example: electrical and computer engineering, engineering physics, or the physical sciences.

Other subjects recommended as preparation for aerospace engineering endeavors include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

OPERATIONS RESEARCH AND ENGINEERING

Offered by the School of Operations Research and Industrial Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

This major provides a broad education in the techniques and modeling concepts needed to analyze and design complex systems and an introduction to the technical and professional areas of operations research and industrial engineering. The major prepares students for a wide range of careers including operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the major is the development of basic skills in calculus, statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take OR&IE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, or financial engineering.

Because of the wide range of career goals among ORE students, the major is designed with a minimum of required courses and a large number of required electives. Students should consult with their major advisors to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 270 Basic Engineering Probability and Statistics after completing MATH 192; MATH 294 should be completed.
before or concurrently with ENGRD 270. ORE affiliates are required to complete MATH 191, 192, and 294 (or their subject matter equivalents.) Either MATH 293, COM S 280, or MATH 304 can be used to satisfy the four-semester mathematics requirement. Students should discuss with their advisors which of these three courses is most appropriate to their future program of study in ORE. The following considerations should be borne in mind.

1. MATH 293 (differential equations) is essential for advanced study in financial engineering. Also, MATH 293 is a prerequisite for PHYS 214, thus students who do not take MATH 293 must plan to take CHEM 208.

2. COM S 280 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.

3. MATH 304 covers fundamentals of formal proof techniques; this material is strongly recommended for students who intend advanced (PhD-level) study in Operations Research or a related field. Early consultation with a faculty member or the associate director for undergraduate studies can be helpful in making appropriate choices.

The required courses for the ORE major and the typical terms in which they are taken are as follows:

**Semester 2 or 3**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 211 Computers and Programming</td>
<td>3</td>
</tr>
<tr>
<td>ENGRD 270 Basic Engineering Probability and Statistics</td>
<td>3</td>
</tr>
</tbody>
</table>

**Semester 4**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 312 Industrial Data and Systems Analysis*</td>
<td>4</td>
</tr>
</tbody>
</table>

**Semester 5**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 320 Optimization I</td>
<td>4</td>
</tr>
<tr>
<td>OR&amp;IE 360 Engineering Probability and Statistics II</td>

<td>3</td>
</tr>
<tr>
<td>Humanities/social sciences elective</td>
<td>3</td>
</tr>
</tbody>
</table>

*It is highly recommended that OR&IE 312 be taken in semester 4. If the student's schedule does not permit this, the course may be taken in semester 6 or 8.

The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, ILROB 170, 171, and 175, HADM 135, ENGRG 335 (which also satisfies the technical writing requirement), and others.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

**Minimum credits**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 580 Simulation Modeling and Analysis</td>
<td>4</td>
</tr>
</tbody>
</table>

Three upper-class OR&IE electives as described below | 9 |
| Two major-approved electives (at least 3 credits must be outside OR&IE) | 6 |
| Two humanities/social sciences electives | 6 |
| One advisor-approved elective | 3 |

Available OR&IE electives are as follows:

- Manufacturing and distribution systems: OR&IE 416, 451, 480, 481, 483, 518, 525, and 562 and JGSM MBA 641
- Optimization methods: OR&IE 451, 452, 454, 455, 456, and 533
- Applied probability and statistics: OR&IE 462, 469, 474, 476 (2 credits), 561, 563, 574, 575 (2 credits), 576 (2 credits), and 577
- Financial engineering: OR&IE 473, 567, 568, and 569

**Academic Standing**

The student in the major should obtain a passing grade in every course; at least C- in ENGRD 211 and 270, OR&IE 312, 320, 321, 350, 360, 361 and 980; a GPA of 2.0 each semester; a GPA of 2.0 for ORE major courses; and satisfactory progress toward completion of the degree requirements. Each student's performance is reviewed at the conclusion of each semester. If at least C- is not earned in a required course, the course must be repeated within one year before the next course in the sequence may be taken (OR&IE 321 and 361, in particular). Failure to achieve at least C- in the second attempt will generally result in withdrawal from the major.

**Operations Research and Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category.

1. Advanced courses in OR&IE at the 500 level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 499 OR&IE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490 Teaching in OR&IE or ENGRG 470 Undergraduate Engineering Teaching.

**Procedures**

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

**ENGINEERING MINORS AND OPTIONS**

The engineering minor is a supplement to the B.S. degree majors in the college, including the independent major. It recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. In many cases, however, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor or option requires:

- successful completion of all requirements for a B.S. degree in engineering
- enrollment in an engineering major that approves participation in the minor or option.
- satisfactory completion of six courses (at least 18 credits) in a college-approved minor (or four courses and a seminar (at least 13 credits) in the option).

Students may apply for certification of an engineering minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor or option appears on the Cornell transcript following graduation.

The College of Engineering offers minors and one option in the following areas (offering units are indicated in parentheses):

- Applied Mathematics (T&AM)
- Biological Engineering (BEE)
- Bioengineering Option (Bioengineering Program)
- Biomedical Engineering (BME)
- Civil Infrastructure (CEE)
- Computer Science (COM S)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
- Engineering Statistics (OR&IE)
- Environmental Engineering (BEE/CEE)
- Geological Sciences (EAS)
- Game Design (COM S)
- Industrial Systems and Information Technology (OR&IE)
- Information Science (INFO)
- Materials Science and Engineering (MS&E)
- Mechanical Engineering (M&AE)
MINOR: APPLIED MATHEMATICS
Offered by the Department of Theoretical and Applied Mechanics
Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.tam.cornell.edu/Undergrad.html
All engineering undergraduates are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses beyond MATH 294, to be chosen as follows:

1. Analysis
   - T&AM 310 Introduction to Applied Mathematics I
   - MATH 321 Manifolds and Differential Forms
   - MATH 420 Differential Equations and Dynamical Systems
   - A&EP 321 Mathematical Physics I

2. Computational Methods
   - ENGRD 322 Introduction to Scientific Computation
   - ENGRD 241 Engineering Computation
   - OR&IE 320 Optimization I
   - BEE 449 Computational Tools for Engineers
   - COM S 421 Numerical Analysis

3. Probability and Statistics
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 360 Engineering Probability and Statistics II
   - ECE 310 Introduction to Probability and Random Signals
   - CEE 304 Uncertainty Analysis in Engineering
   - MATH 471 Probability

4. Applications
   - A&EP 333 Mechanics of Particles and Solid Bodies
   - CHEM 323 Fluid Mechanics
   - CEE 331 Fluid Mechanics
   - CEE 371 Modeling of Structural Systems
   - COM S 280 Discrete Structures
   - ECE 425 Digital Signal Processing
   - MS&E 303 Thermodynamics of Condensed Systems
   - M&AE 323 Introductory Fluid Mechanics

5. Advanced courses
   - Only one of these three may be chosen:
     - T&AM 311 Introduction to Applied Mathematics II
     - MATH 422 Applied Complex Analysis
     - A&EP 322 Mathematical Physics II
   - Only one of the following two may be chosen:
     - ECE 411 Random Signals in Communications and Signal Processing
     - OR&IE 361 Introductory Engineering Stochastic Processes I
   - Only one of the following two may be chosen:
     - COM S 381 Introduction to Theory of Computing
     - COM S 481 Introduction to Theory of Computing
   - Only one of the following two may be chosen:
     - M&AE 571 Applied Dynamics
     - T&AM 570 Intermediate Dynamics
   - Also, you may choose from:
     - COM S 482 Introduction to the Design of Algorithms
     - OR&IE 321 Optimization II
     - OR&IE 431 Discrete Models
     - OR&IE 435 Introduction to Game Theory
     - OR&IE 462 Introductory Engineering Stochastic Processes II
     - T&AM 578 Nonlinear Dynamics and Chaos
     - TR&M 610 Methods of Applied Mathematics I
     - TR&M 611 Methods of Applied Mathematics II

6. Mathematics courses
   - Any 300+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:
     - MATH 323 or 420, if any course from group 1 is chosen
     - MATH 471, if any course from group 3 is chosen
     - MATH 440, if T&AM 311 or A&EP 322 is chosen from group 5
     - Only one of the following may be chosen:
       - MATH 332 Algebra and Number Theory
       - MATH 335 Introduction to Cryptology
       - MATH 336 Applicable Algebra

MINOR: BIOLOGICAL ENGINEERING
Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu
Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.

Educational objectives of the minor:
Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C- in each course in the minor.

Requirements
At least six courses (≥ 18 credits), as follows:
BEE 350 Biological and Environmental Transport Processes (3 credits) required

1. Analysis: Two (2) of these:
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations (3 credits)
   - CHEM 313 Chemical Engineering Thermodynamics (3 credits)
   - CHEM 390 Reaction Kinetics and Reactor Design (3 credits)
   - CEE 437 Experimental Methods in Fluid Dynamics (3 credits)

2. Application: Two (2) of these:
   - BEE 450 Biostatistics (4 credits)
   - BEE/M&AE 453 Computer-Aided Engineering Applications to Biomedical Processes (3 credits)
   - BEE 454 Physiological Engineering (3 credits)
   - BEE 459 Biosensors and Bioanalytical Techniques (3 credits)
   - BEE 625 Thermodynamics and Its Applications (3 credits)
   - CHEM 543 Bioprocess Engineering (3 credits)

3. Basic Sciences: One (1) of these:
   - BIONB 243 Introduction to Biomolecular Structure (3 credits)
   - BIOMI 290 General Microbiology (3 credits)
   - BIBO 330-333 Principles of Biochemistry (2-4 credits)
   - BIBO 434 Applications of Molecular Biology (3 credits)
   - BIONB 470 Biophysical Methods (3 credits)
OPTION: BIOENGINEERING
Offered by the Bioengineering Program
Contact: 270 Olin Hall, 255-7577

Students in all majors, except biological engineering, may participate. Students may participate in only one of the following: bioengineering option, biological engineering minor, or biomedical engineering minor.

The purpose of the option is to provide students with a guided, coherent, individualized plan of exploration in bioengineering. Bioengineering consists of subjects that fall at the interface between engineering and life science. It involves bioprocesses, environmental engineering, biomedical devices, biomaterials, molecular engineering, systems biology, and more.

Students are asked to enroll after affiliation and before the beginning of the sixth semester. Enrollment requires selecting a bioengineering advisor (in addition to the major advisor), who will help select appropriate bioengineering-related courses and provide advice on careers in bioengineering.

Academic standards: S in the bioengineering seminar and at least C− in the other courses and a 2.0 GPA in all bioengineering courses.

Requirements
At least 12 credit hours consisting of two to three bioengineering courses, one to two biological sciences courses, and 1 credit of BME 501 Bioengineering Seminar. A list of approved courses can be found in 167 Olin Hall.

MINOR: BIOMEDICAL ENGINEERING
Offered by the Department of Biomedical Engineering (BME)
Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/

All undergraduates in the College of Engineering, College of Arts and Sciences, and College of Agriculture and Life Sciences are eligible to participate in this minor. Students may participate in only one of these areas of interest: the bioengineering option, the biological engineering minor, or the biomedical engineering minor.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The field includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in biomedical engineering.

Academic standards: At least C− in each course in the minor. A cumulative GPA ≥ 2.0 for all courses in the minor.

Requirements
The 1-credit Bioengineering Seminar as well as at least six courses (≥ 18 credits) from the five categories listed below; two courses need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering, 4. Biomedical engineering analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories. At least four of the six courses must not be specifically required major degree courses or cross-listings.

Required course: BME 501/BEE 501 Bioengineering Seminar (1 credit, 1 semester)

Category 1. Introductory biology (maximum of 4 credits and one course toward the BME minor)
A 5 on AP biology exam
A 4 on AP biology exam and ENGR 131
A 4 on AP biology exam and BIO G 103 or BIO G 104
BIO G 101, 102, 103, and 104 Biological Sciences
BIO G 105 and 106 Introductory Biology
BIO G 107 and 108 General Biology
BIO G 110 and ENGR 131 Biological Principles and Introduction to Biomedical Engineering

Category 2. Advanced biology
BIOAP 311/VTHMS 356 Introductory Animal Physiology Lectures
BIOBM 330 Principles of Biochemistry, Individualized Instruction
BIOBM 331 Principles of Biochemistry, Proteins and Metabolism
BIOBM 332 Principles of Biochemistry, Molecular Biology
BIOBM 333 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology
BIOGD 281 Genetics
BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
BIOMI 290 General Microbiology Lectures

Category 3. Molecular and cellular biomedical engineering
A&EP 252/ENGR 252 The Physics of Life
BEE 360/BME 360 Molecular and Cellular Bioengineering
BME 301/CHM 401 Molecular Principles of Biomedical Engineering
BME 302/CHM 402 Cellular Principles of Biomedical Engineering

Category 4. BME analysis of physiological systems
BEE 454 Physiological Engineering
BIONB 330/BME 330/COGST 330/PSYCH 330 Introduction to Computational Neuroscience

MINOR: BIOENGINEERING
BIONB 491/BME 491 Principles of Neurophysiology
BME 401/M&AE 466 Biomedical Engineering of Metabolic and Structural Systems
BME 402 Electrical and Chemical Physiology
CHM 481/BME 481 Biomedical Engineering
M&AE 463/BME 463 Neuromuscular Biomechanics
M&AE 464/BME 464 Orthopaedic Tissue Mechanics

Category 5. Biomedical engineering applications
A&EP 470/BIONB 470/BME 570 Biophysical Methods
BEE 365 Properties of Biological Materials
BEE 450 Bioinstrumentation
BEE 453/M&AE 453 Computer-Aided Engineering: Applications to Biomedical Processes
BEE 459 Biosensors and Bioanalytical Techniques
BEE 494 Fundamentals of Tissue Engineering
BIONB 440/BME 440 Electronics in Neurobiology
BIONB 441/BME 441 Computers in Neurobiology
COM S 321/BIOBM 321/ENGRD 321 Numerical Methods in Computational Molecular Biology
ECE 402/BME 404 Biomedical System Design
ECE 578 Computer Analysis of Biomedical Images
M&AE 565/BME 565 Biomechanical Systems—Analysis and Design
MS&E 461 Biological Materials and Their Applications
MS&E 541/ECE 336 Nanofabrication
TXA 439/BME 539 Biomedical Materials and Devices for Human Body Repair

MINOR: CIVIL INFRASTRUCTURE
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering are eligible to participate in this minor. The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics,
materials, analysis, design, and construction and to show these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

**Academic standards:** At least C in each course in the minor

**Requirements**
At least six courses (≥ 18 credits), chosen as follows:

1. **Required course:** ENGRD 202 Mechanics of Solids
2. **Additional courses:** choose any five (groupings are for information only)*

**Geotechnical engineering**
- CEE 341 Introduction to Geotechnical Engineering
- CEE 440 Foundation Engineering
- CEE 441 Retaining Structures and Slopes
- CEE 444 Environmental Site and Remediation Engineering

**Structural engineering**
- CEE 371 Structural Modeling and Behavior
- CEE 372 Inelastic and Nonlinear Behavior of Materials and Structures
- CEE 471 Fundamentals of Structural Mechanics
- CEE 472 Finite Element Analysis of Solids and Structures
- CEE 473 Design of Concrete Structures
- CEE 474 Design of Steel Structures
- CEE 478 Structural Dynamics and Earthquake Engineering

**Other related courses**
- CEE 595 Construction Planning and Operations

*Other CEE courses may be approved by petition in advance

**MINOR: COMPUTER SCIENCE**
Offered by the Department of Computer Science
Contact: 303 Upson Hall, 255-9220, www.cs.cornell.edu

Students affiliated with all engineering majors except Computer Science are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

**Academic standards:** At least C in each course in the minor.

**Requirements**
At least six courses (18 credits) chosen as follows:

1. **Required courses**
   - COM S/ENGRD 211 Computers and Programming
   - One of the following:
     - COM S 321 Numerical Methods in Computational Molecular Biology
     - COM S/ENGRD 322 Introduction to Scientific Computing

2. **Additional courses**
   - Three COM S courses numbered 280 or higher (excluding seminars and COM S 490).
   - Computing courses offered by other departments cannot be applied toward the computer science minor, with the exception of ECE 314. All qualifying courses should be taken at Cornell for a letter grade. No substitutions allowed.

**MINOR: ELECTRICAL AND COMPUTER ENGINEERING**
Offered by the School of Electrical and Computer Engineering
Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor, but MS&E students must receive prior written approval from both MS&E and ECE, via petition.

This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

**Academic standards:** At least C in each course in the minor. GPA ≥ 2.3 for all courses required in the minor.

**Requirements**
At least six courses (≥ 18 credits), chosen as follows:

1. **Required courses (3):**
   - CEE 371 Structural Modeling and Behavior
   - CEE 372 Inelastic and Nonlinear Behavior of Materials and Structures
   - CEE 471 Fundamentals of Structural Mechanics

2. **Additional courses:**
   - Three CEE courses numbered 300 or higher (excluding seminars and CEE 304).

**MINOR: ENGINEERING MANAGEMENT**
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors are eligible to participate in this minor. CEE students may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

**Academic standards:** At least C in each course in the minor.

**Requirements**
At least six courses (≥ 18 credits), chosen as follows:

1. **Required courses (3):**
   - ECE 310 Introduction to Probability and Random Signals
   - CEE 304 Uncertainty Analysis in Engineering
   - CEE 314 Computer Organization

2. **Additional courses:**
   - Three other ECE courses at the 400 level or above (3-credit minimum)

3. **Other courses approved by petition in advance**

*Other CEE courses may be approved by petition in advance

1. **OR&IE students must substitute NCC 556 or NBA 500 for OR&IE 350**
2. **T&AM 310 cannot be substituted for CEE 304**
3. **Other courses approved by petition in advance**
4. **This course is not accepted for OR&IE students**
MINOR: ENGINEERING STATISTICS
Offered by the School of Operations Research and Industrial Engineering
Contact: 205 Rhodes Hall, 255-5088, www.orie.cornell.edu
Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor. The goal of the minor is to provide the student with a firm understanding of statistical principles and engineering applications and the ability to apply this knowledge in real-world situations.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Required courses:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 350 Basic Engineering Probability and Statistics II or ECE 310 Introduction to Probability and Random Signals
2. Four of these (≥ 11 credits)*:
   - OR&IE 361 Introductory Engineering Stochastic Processes I or ECE 411 Random Signals in Communications/Signal Processing
   - OR&IE 476 Applied Linear Statistical Models
   - OR&IE 576 Regression
   - OR&IE 563 Applied Time Series Analysis
   - OR&IE 575 Experimental Design
   - OR&IE 577 Quality Control
   - OR&IE 580 Simulation Modeling and Analysis
   - MATH 472 Basic Probability or BTRY 409 Theory of Statistics
   - BTRY 602 Statistical Methods II
   - BTRY 603 Statistical Methods III or ILRST 411 Statistical Analysis of Qualitative Data
   - ILRST 310 Statistical Sampling
   - ILRST 314 Graphical Methods for Data Analysis
   - ILRST 410 Techniques of Multivariate Analysis
*Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING
Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering
Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Students majoring in biological engineering or civil engineering are eligible if they are not following the environmental concentration offered by those majors. Eligible civil engineering majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group.

Group A. Environmental engineering processes:
   - BEE 251 Engineering for a Sustainable Society
   - CEE 351 Environmental Quality Engineering
   - CEE 451 Microbiology for Environmental Engineering
   - CEE 452 Water Supply Engineering
   - CEE 453 Laboratory Research in Environmental Engineering
   - CEE 454 Sustainable Small-Scale Water Supplies
   - CEE 455 Sustainable Water Supply Project
   - BEE 476 Solid Waste Engineering
   - BEE 478 Ecological Engineering
   - CEE 444 Environmental Site and Remediation Engineering
   - CEE 492 Engineers for a Sustainable World
   - BEE 651 Bioremediation
   - CEE 653 Water Chemistry for Environmental Engineering
   - CEE 656 Physical/Chemical Process
   - CEE 657 Biological Processes
   - CEE 658 Microbial Biodegradation and Biocatalysis Lab

Group B. Environmental systems
   - ENGRU/CEE 113* Water Treatment Design (*may count only if taken before the junior year)
   - BEE 475 Environmental Systems Analysis
   - CEE 597 Risk Analysis and Management
   - CEE 623 Environmental Quality Systems Engineering

Group C. Hydraulics, hydrology, and environmental fluid mechanics
   - CEE 331 Fluid Mechanics (CHEM 325 or M&AE 323 may be substituted for CEE 331)

MINOR: GAME DESIGN
Offered by the Department of Computer Science
See: www.cs.cornell.edu

MINOR: GEOLOGICAL SCIENCES
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu
Students affiliated with all majors except geological sciences are eligible to participate. Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. One of these courses:
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - EAS 220 The Earth System
2. At least two of these courses:
   - EAS 301 Evolution of the Earth System
   - EAS 303 Introduction to Biogeochemistry
   - EAS 304 Interior of the Earth
   - EAS 305 Climate Dynamics
3. Additional EAS courses at the 300 level or higher. These may include, e.g., additional courses from the above lists.
MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY

Offered by the School of Operations and Industrial Engineering

Contact: Undergraduate Programs Office, 303 Upson Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives, and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. At least three of the following:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - ORIE 312 Industrial Data and Systems Analysis
   - ORIE 320 Optimization I
   - ORIE 480 Information Technology

2. The remaining courses chosen from:
   - ORIE 350 Financial and Managerial Accounting
   - ORIE 416 Design of Manufacturing Systems
   - ORIE 451 Economic Analysis of Engineering Systems
   - ORIE 525 Production Planning and Scheduling Theory and Practice
   - ORIE 577 Quality Control
   - ORIE 580 Simulation Modeling and Analysis

MINOR: INFORMATION SCIENCE

Offered by the Department of Computer Science

Contact: Undergraduate Programs Office, 303 Upson Hall, 255-9837, www.infosci.cornell.edu

Students affiliated with any major except information science, systems, and technology are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses for the minor; S-U courses are not allowed.

Requirements

Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- Statistics: one course (must be ENGRD 270 or CEE 304)
- Information systems (primarily computer science): two courses
- Human-centered systems (human computer interaction and cognitive science): one course
- Social systems (social, economic, political, cultural, and legal issues): one course
- Elective: one additional course from either human-centered systems or social systems

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

- ENGRD 270 Basic Engineering Probability and Statistics
- CEE 304 Uncertainty Analysis in Engineering

Information Systems

- INFO 172 Computation, Information, and Intelligence
- COM S 211 Computers and Programming*
- INFO 230 Intermediate Design and Programming for the Web*
- CIS 300 Introduction to Computer Game Design
- INFO 330 Data-Driven Web Applications
- LING 424 Computational Linguistics
- INFO 430 Information Retrieval
- INFO 431 Web Information Systems
- COM S 452 Introduction to Database Systems
- COM S 465 Computer Graphics I
- COM S 472 Foundations of Artificial Intelligence
- LING 474 Introduction to Natural Language Processing
- ORIE 476 Statistical Data Mining I
- COM S 478 Machine Learning
- ORIE 480 Information Technology
- ORIE 481 Delivering OR Solutions with Information Technology
- ORIE 483 Applications of Operations Research and Game Theory to Information Technology
- COM S 501 Software Engineering
- COM S 513 System Security
- COM S 530 Architecture of Large-Scale Information Systems
- ECE 562 Fundamental Information Theory
- ORIE 574 Statistical Data Mining II
- COM S 578 Empirical Methods in Machine Learning and Data Mining

*Computer science majors may not use INFO 230. COM S 211 cannot be used by majors for which it is a required course, e.g., computer science and operations research and industrial engineering.

Human-centered systems

- COGST 101 Introduction to Cognitive Science
- PSYCH 205 Perception
- INFO 214 Cognitive Psychology
- INFO 245 Psychology of Social Computing
- PSYCH 280 Introduction to Social Psychology
- INFO 345 Human–Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH 416 Modeling Perception and Cognition
- INFO 440 Advanced Human-Computer Interaction Design
- INFO 445 Seminar in Computer-Mediated Communication
- INFO 450 Language and Technology
- DEA 470 Applied Ergonomic Methods

Social systems

- S&S 250 Technology in Society
- INFO 292 Inventing an Information Society
- ECON 301 Microeconomics*
- SOC 304 Social Networks and Social Processes
- ECON 313 Intermediate Microeconomic Theory*
- AEM 322 Technology, Information, and Business Strategy*
- INFO 349 Media Technologies
- INFO 355 Computers: From the 17th Century to the Dot.com Boom
MINOR: MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students affiliated with all majors except materials science and engineering are eligible to participate in this minor.

Material properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related areas with modern materials.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses (≥18 credits), chosen as follows:

1. ENGRD 261 Mechanical Properties of Materials: From Nanodevices to Superstructures, or ENGRD 262 Electronic Materials for the Information Age

2. Two of:
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 301 Materials Chemistry
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations

3. Three electives chosen from:
   - Any MS&E course at the 300 level or above.
   - Selected courses in materials properties and processing (at the 300 level or above) from A&EP, CHEM, CEE, ECE, M&A, PHYS, and CHEM, as approved by the MS&E undergraduate major coordinator.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE

Offered by the School of Operations Research and Industrial Engineering
Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.

Operations research and management science aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of the area, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to give a broad knowledge of these fundamentals, rather than to train the student in a particular application domain.

With this preparation, students can adjust their advanced courses and pursue either methodological or application-oriented areas of greatest interest and relevance to the overall educational goals of their program.

Academic standards: At least C— in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥18 credits), chosen as follows:

1. At least three of these courses:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&IE 320 Optimization I
   - OR&IE 321 Optimization II
   - OR&IE 360 Engineering Probability and Statistics II
   - OR&IE 580 Simulation Modeling and Analysis

2. Any OR&IE courses at the 300 level or higher (including those in 1).
M.Eng. (Materials): materials science and engineering
M.Eng. (Mechanical): mechanical and aerospace engineering
M.Eng. (Nuclear): graduate field of nuclear science and engineering
M.Eng. (OR&IE): operations research and industrial engineering
M.Eng. (Systems): systems engineering

These degrees are discussed below because the curricula are integrated with the undergraduate majors.

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:

- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on www.engr.cornell.edu/grad.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester in both programming, finishing up their B.S. degree and also doing their first semester of the M.Eng. program.

Master of Engineering Options

The following M.Eng. options are offered:

- bioengineering
- financial engineering
- manufacturing
- engineering management
- systems engineering

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the Twelve-Month M.B.A. Program of the Johnson Graduate School of Management (JGSM).

Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion.

For further details, go to Engineering Advising (150 Olin Hall), the M.Eng. office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers three options or categories of financial support:

- Alumni Knight Scholarship
- Undergraduate Knight Scholarship
- Six-Year Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng. M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact ORGAPF or refer to the Knight Scholarship web site (www.engr.cornell.edu/grad/knight) for program specifics.

MASTER OF ENGINEERING (AEROSPACE)

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in aeronautics, astronautics, and aeronautical and astronautical sciences. The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, fluid mechanics, and computational fluid dynamics.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry. All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program, credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the M&AE master of engineering chair.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering options.

MASTER OF ENGINEERING (BIOMEDICAL)

Offered by the Department of Biomedical Engineering

Contact: 361 Olin Hall, 255-2573, www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarn needs and economic opportunities for the application of engineering to improve
health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in BME will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. in BME with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 301, 302, 401, and 402 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CHEMICAL)
Offered by the School of Chemical and Biomolecular Engineering
Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu

This degree is awarded at the end of the one-year program that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 301, 302, 401, and 402 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL)
Offered by the School of Civil and Environmental Engineering
Contact: 219 Hollister Hall, 255-7560, www.cee.cornell.edu

The Master of Engineering degree is a course work and project-oriented program. It is normally completed in nine months of intensive study. Thirty credit hours consisting of course work in major and supporting areas and a project are required.

Students may choose their studies in one of the following major subject areas: civil engineering, materials, civil infrastructure systems, structural engineering, geotechnical engineering, environmental processes, environmental fluid mechanics, hydrology, environmental and water resource systems engineering, and transportation systems engineering. For the M.Eng. program in civil and environmental engineering, each program typically consists of course work in a major concentration and supporting areas as well as a project. Courses in supporting areas come from many disciplines, including microbiology, materials science, operations research, computer science, economics, architecture, historic preservation, and engineering management to name just a few.

MASTER OF ENGINEERING (COMPUTER SCIENCE)
Offered by the Department of Computer Science
Contact: 4126 Upson Hall, 255-8593, www.cs.cornell.edu/grad/meng

The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in a major subject area and supporting areas in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. In fact, slightly under half the courses may be taken outside the computer science department (many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. "early admit" program.

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (computer science), and M.B.A. degrees. See "Master of Engineering Degrees."

MASTER OF ENGINEERING (ELECTRICAL)
Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 223 Phillips Hall, 255-8414, www.ece.cornell.edu/meng

The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.
MASTER OF ENGINEERING (ENGINEERING MANAGEMENT)
The M.Eng program in Engineering Management is aimed at engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action. A student's program of study is designed individually in consultation with an academic advisor and then submitted to the school's Professional Degree Committee for approval. For the M.Eng. program in Engineering Management, the requirements are:
1. Three core courses: These include: CEE 590 Project Management, CEE 593 Engineering Management Methods, and CEE 591 Management Project.
2. Two focus courses, from a list that includes CEE 594, CEE 596, CEE 597, CEE 598, and CEE 690.
3. Two managerial breadth courses, including one in finance/accounting and one focused on behavior.
4. Three disciplinary or functional electives. The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master of Engineering and Master of Business Administration degrees. See the beginning of the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING (ENGINEERING MECHANICS)
Offered by the Department of Theoretical and Applied Mechanics
Contact: 212 Kimball Hall, 255-0988, www.tam.cornell.edu/meng1.html
This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries such as the finite element method. Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: T&AM has many laboratories related to research areas and courses of study for the M.Eng. program:
- Ultrasonic and Materials Characterization Laboratory—Wolfgang Sachse
- Bio-robotics and Locomotion Laboratory—Andy Ruina
- Granular Flow Research Laboratory—Jim Jenkins
- Composites Laboratory—Leigh Phoenix and Pietro Petrina
- Fracture Mechanics Laboratory—Alan Zehnder
- Dynamics Laboratory—Dan Mittler
- Mechanics of Solids Laboratory—Dan Mittler
- Biological Fluid Dynamics Laboratory—Jane Wang

Course Work:
(project 10–12 credit hours)

Current Interesting Projects
1. Animal, Human and Robotic Locomotion—Andy Ruina
2. Dynamical Systems—Richard Rand
3. Stress Rupture Testing of High-Performance Fibers and Yarns—S. Leigh Phoenix
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—K. Bingham Cadby
5. Fracture and Reliability—Hui, Phoenix, Zehnder
6. Response Theory—K. Bingham Cadby
7. Nuclear Reactor Theory—K. Bingham Cadby
8. Determination of Elastic Constant of Composite Materials Using Ultrasonics—Wolfgang Sachse

Engineering Mechanics
Fall semester
Course Title Credits

T&AM 663 Solid Mechanics I 4
T&AM 570 Intermediate Dynamics 3
T&AM 610 Methods of Applied Mathematics I 3
T&AM 800 Seminar 1

Spring semester

CEE 786 Fracture Mechanics 3
T&AM 713 Fracture 3
T&AM 655 Composite Materials 4
MS&E 582 Mechanical Properties of Material, Processing and Design 4
M&AE 570 Finite Element Analyses for Mechanical and Aerospace Design 4
T&AM 800 Seminar 1

Applied Mathematics and Modeling
Fall semester

T&AM 610 Methods of Applied Mathematics I 3
T&AM 570 Intermediate Dynamics 3

T&AM 611 Methods of Applied Mathematics II 3
T&AM 578 Nonlinear Dynamics and Chaos 3
T&AM 671 Hamiltonian Dynamics 3
T&AM 674 Nonlinear Vibrations 3
M&AE 570 Finite Element Analyses for Mechanical and Aerospace Design 4
CEE 672 Finite Element Analysis of Solids and Structures 3

MASTER OF ENGINEERING (ENGINEERING PHYSICS)
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu
The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanotechnology, materials science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with an academic advisor and then submit it to the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C– in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits).
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included.

Some courses at the senior level (400) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

MASTER OF ENGINEERING (GEOLICAL SCIENCES)
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255-5460, www.eas.cornell.edu

The one-year M.Eng. (Geological Sciences) degree program provides future professional geologists or engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts.

Individual programs are developed within two established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student's background.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

The design project is normally involved in groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)
Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MASTER OF ENGINEERING (MECHANICAL)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the M&E Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the M&E master of engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. Students are expected to use technical electives to develop proficiency in math beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering math or statistics are particularly recommended.

Check with the M&E graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems manufacturing programs leading to special dean's certificates in those areas.

MASTER OF ENGINEERING (NUCLEAR)
Offered by the Nuclear Engineering Program
Contact: 312 Rhodes Hall, 255-1453, www.gradschool.cornell.edu/academics_research/fields/nuc-sci.html

The two-semester curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate concentrations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including nuclear physics; (3) math, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before
beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college’s introductory section.

The following courses, or equivalents, are included in the 30-credit program:

**Fall semester**
- NS&IE 509 Nuclear Physics for Applications
- Technical elective
- Spring semester
- NS&IE 545 Energy Seminar
- Technical elective
- Engineering design project
- Mathematics or physics elective

Note: Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- AE&EP 606/ECE 581 Introduction to Plasma Physics (fall, 4 credits)
- AE&EP 607 Basic Plasma Physics (spring, 4 credits)
- AE&EP 661 Microcharacterization (fall, 3 credits)
- ECE 457 Silicon Device Fundamentals (fall, 4 credits with lab)
- M&AE/CHME 372 Feedback Control Systems (fall, 4 credits)
- MS&E 459 Physics of Modern Materials (spring, 4 credits)
- MS&E 603 Analytical Techniques for Materials Science (spring, 4 credits)
- MS&E/A&EP/ECE 459 Introduction to Controlled Fusion: Principles and Technology (spring, 3 credits)
- MS&E 521 Radiation Effects in Materials (fall, 1–3 credits)

**Master of Engineering (Operations Research and Industrial Engineering)**

Offered by the School of Operations Research and Industrial Engineering

Contact: 201 Rhodes Hall, 255-9128, www.ore.cornell.edu

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems and methods in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory “Degree Programs” section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate major in OR&IE who wish to expand their practical knowledge of the field; Cornell undergraduates in other math-based areas who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong background programs in the United States and abroad.

Undergraduates majoring in engineering may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Operations Research and Industrial Engineering), and M.B.A. degrees. See "Master of Engineering Degrees."

To ensure completion of the program in two semesters, the student must have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the applied operations research option, the manufacturing option, the financial engineering option, the systems engineering option, the information technology option, the Semester in Strategic Operations, and the data mining and analytical marketing option (on a pilot basis). These options are offered jointly with various other Cornell departments and schools and they provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many of the applied operations research option, offered only by OR&IE, has project teams made up entirely of OR&IE M.Eng. students and offers the broadest choice of elective courses and career alternatives, in business and elsewhere. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Systems, 251 Cornman Hall, 255-5545; financial engineering, systems engineering, information technology, and analytical marketing, 201 Frank H. T. Rhodes Hall, 255-9128; Semester in Strategic Operations, 36 Sage Hall, 255-4591. For students lacking an undergraduate degree in operations research, the financial engineering option, which is highly specialized, may entail additional prerequisites or more than two semesters.

1. For matriculants with preparation comparable to that provided by the undergraduate major in operations research and engineering:

   **Fall semester**
   - OR&IE 516 Case Studies 1
   - OR&IE 893 Applied OR&IE Colloquium 1
   - M.Eng. project 1
   - Technical electives 5

   **Spring semester**
   - OR&IE 894 Applied OR&IE Colloquium 1
   - M.Eng. project minimum of 4
   - Technical electives 10

2. For matriculants from other majors who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other OR&IE electives in their place):

   **Fall semester**
   - OR&IE 560 Engineering Probability and Statistics II 4
   - OR&IE 520 Optimization I 4
   - OR&IE 522 Topics in Linear Optimization 1
   - OR&IE 516 Case Studies 1
   - OR&IE 590 Simulation Modeling and Analysis 4
   - OR&IE 893 Applied OR&IE Colloquium 1
   - M.Eng. project 1

   **Spring semester**
   - OR&IE 523 Introduction to Stochastic Processes I 4
   - OR&IE 894 Applied OR&IE Colloquium 1
   - M.Eng. project minimum of 4

   Technical electives 5

   For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. For scheduling reasons, some options may entail an additional summer or semester, depending on the student’s preparation.

   The project requirement can be met in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, and service organizations such as hospitals.

   Additional program requirements are described in the Master of Engineering Handbook. For further details, see the contact information at the beginning of this section.

As part of their undergraduate ORE major or M.Eng. (OR&IE) curriculum, students may study several subjects that are required for the Johnson Graduate School M.B.A. This early start on business degree requirements may make it possible to get both the M.Eng. and the M.B.A. in two years, rather than the usual three. For details, see “Cooperative Program with the Johnson Graduate School of Management” under “Master of Engineering Degrees,” and contact the OR&IE M.Eng. office, 201 Rhodes Hall.

**Master of Engineering (Systems)**

Offered by The Systems Engineering Program

Contact: 206 Rhodes Hall, 254-8998, www.systemseng.cornell.edu

Today’s engineering environment is increasingly complex and changing rapidly. Due in part to emerging technologies and globalization, engineers must think in terms of integrated, globally optimized solutions to devise designs that address the complexity of the real world. Success in this environment
requires a comprehensive understanding of systems engineering. The Systems Engineering Program emphasizes the fundamentals of requirements analysis, systems architecture, product development, project management, optimization, simulation, and systems analysis. The program’s strength in these areas helps promote an understanding of the systems process throughout an organization and prepares students to transition from designing and managing independent engineering components and projects to creating integrated solutions that meet customer needs. The M.Eng. (Systems) program is designed for students with a solid disciplinary background who want to specialize in Systems Engineering. It requires a minimum of 30 credit hours. Students must complete the following required courses:

Applied Systems Engineering (3 credits)
Systems Architecture, Behavior, and Optimization (3 credits)
Project Management (4 credits)
Systems Engineering Design Project (0-8 credits)

Approved electives account for the remaining credits to reach the minimum of 30 credits required for the degree and are to be chosen from the following areas:

Systems Modeling and Analysis (at least one course)
Courses that enrich the understanding of generic methods to design and analyze systems including courses in simulation, feedback and control, decision-making, or risk analysis.

Systems Applications
Courses that provide depth in the design and operation of specific systems such as power, communication, software, manufacturing, or transportation.

Systems Management (at most one course)
Courses that enhance student understanding of the management activities and processes which are necessary to successfully design and operate these systems.

In addition to the Master of Engineering degree in Systems, the Systems Engineering Program offers a second course of study: the Option in Systems Engineering. The SE Option is designed for students who want Systems Engineering as part of the Master of Engineering degree in another engineering discipline.

ENGINEERING COMMON COURSES

Engineering Communications Courses
Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGRC 334(3340) Independent Study in Engineering Communications 1-5 credits, variable: Letter grades. TBA with instructor.
Members of the ECP occasionally give independent (also called “directed”) studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP’s regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

ENGRC 355(3550) Communications for Engineering Managers (LA) Fall, spring. 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.
This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and management information, articulate and support ideas, and communicate with technical and nontechnical audiences.

ENGRC 350(3500) Engineering Communications (LA) Fall and spring. 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and affiliation with a major.
This course prepares students for important communication activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, progress reports), give oral presentations, and incorporate graphics in their oral and written work. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student’s work. (Note: Absences are limited to three, after which sharp penalties occur.)

Engineering Distribution Courses
Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

ENGDR 201(2010) Introduction to the Physics and Chemistry of the Earth (also EAS 201(2010)) Fall. 3 credits. Prerequisite: PHYS 112 or 207. J. Phipps Morgan.
Covers the formation of the solar system: accretion and evolution of the earth; the rock cycle: radioactive isotopes and the geological time scale; plate tectonics, rocks and minerals, earth dynamics, mantle plumes, the hydrologic cycle: runoff, floods and sedimentation, groundwater flow; contaminant transport, and the weathering cycle: chemical cycles, CO2 (weathering), controls on global temperature (CO2 or ocean currents), oil and mineral resources.

ENGDR 202(2020) Mechanics of Solids (also T&AM 202(2020)) Fall, spring. 4 credits. Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor. All students must take a lab section. Staff.
Covers principles of statics, force systems, and equilibrium; frames; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, thermal stress, stretching, bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

ENGDR 203(2030) Dynamics (also T&AM 203(2030)) Fall, spring. 3 credits. Prerequisite: ENGRD/T&AM 202, coregistration in MATH 215, or permission of instructor. All students must take a lab and a section. Staff.
Newtonian dynamics of a particle, systems of particles, a rigid body, Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinetics, angular velocity, moment of momentum, the inertia tensor.
Euler equations, the gyroscope. Laboratory experiments demonstrate basic principles of dynamics.

**ENGRD 210(2100)** Introduction to Circuits for Electrical and Computer Engineers (also ECE 210[2100])

Fall, spring. 4 credits. Corequisites: MATH 293 and PHYS 213. All students must take a lab and a section. First course in electrical circuits and electronics that establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

**ENGRD 211(2110)** Computers and Programming (also COM S 211[2110])

Fall. 4 credits. Prerequisite: COM S 100 or equivalent course in Java or C++.
Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

**ENGRD 219(2190)** Mass and Energy Balances (also CHEM E 219(2190))

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. W. L. Olbricht

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biological processes.

**ENGRD 221(2210)** Thermodynamics (also M&AE 221[2210])

Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192, Calculus for Engineers, and PHYS 112, Physics 1.

Presents the definitions, concepts, and laws of thermodynamics. Topics considered include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and to broader environmental issues.

**ENGRD 230(2300)** Introduction to Digital Logic Design

Fall, spring. 4 credits. Prerequisite: COM S 100.

Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite-state machines, design of microcomputer design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

**ENGRD 241(2410)** Engineering Computation (also CEE 241[2410])

Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294.

Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include: Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.

**ENGRD 251(2510)** Engineering for a Sustainable Society (also BEE 251[2510])

Spring. 3 credits. Corequisite: MATH 293.

Offered spring 2007 and fall 2007 and every fall thereafter.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Studied to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

**ENGRD 252(2520)** The Physics of Life (also A&EP 252(2520))

Fall. 3 credits. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 213. L. Pollack.

Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

**ENGRD 260(2600)** Principles of Biological Engineering (also BEE 260(2600))

Fall. 3 credits. Corequisite: MATH 293.

Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems and practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

**ENGRD 261(2610)** Mechanical Properties of Materials: From Nanodevices to Superstructures (also MS&E 261[2610])

Fall. 3 credits. S. S. Sastry.

Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Effects of time and temperature on materials properties are discussed. This course emphasizes considerations for design and optimal performance of materials and engineered objects.

**ENGRD 262(2620)** Electronic Materials for the Information Age (also MS&E 262(2620))

Spring. 3 credits. Prerequisite: MATH 192. Corequisite: PHYS 213 or permission of instructor. G. Malliaras.

Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal-semiconductor and semiconductor-semiconductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

**ENGRD 264(2640)** Computer-Instructional Design (also A&EP 264[2640])

Fall, spring. 3 credits. Prerequisite: COM S 100, permission of instructor for seniors.

1 lec, 1 lab. T. Cool.

Covers the use of a small computer in an engineering or scientific research lab. The experiments and data investigated include analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. Students develop effective written communication skills in the context of science and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.

**ENGRD 270(2700)** Basic Engineering Probability and Statistics

Fall, spring, summer. 3 credits. Prerequisites: MATH 191 and 192. MATH 294 should be completed before or concurrently with ENGRD 270.

Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

Courses in this category are of general interest to students at or above the level of course material, designed to enhance understanding of core concepts in COM S 100M.

ENGRG 323(3230) Career Development
Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing. Introduces concepts and techniques that can be used now and in the future to set appropriate personal and professional career goals.

ENGRG 250(2500) Technology in Society (also ECE/HIST 250[2500], S&T 250[2500])
Fall. 3 credits. Approved for humanities distribution.
Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

Engrg 100J(1000J) Cooperative Workshop for Comm 100J(1000J)
Fall. Spring. 1 credit. Corequisite: Comm 100J. S-U grades only.
Academic Excellence Workshop for Comm 100J. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in Comm 100J.

ENGRG 298(2980) Inventing an Information Society (also ECE 298[2980], AM ST 292[2980], HIST 292[2980], S&T 292[2981], INFO 292[2981])
Spring. 3 credits. Approved for humanities distribution.
Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 323(3230) Engineering Economics and Management (also CEE 323[3230])
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Prerequisite: second-year junior and seniors. Students must register under CEE 323. D. P. Loucks. Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.
ENGRG 357(3570) Engineering in American Culture (also AM ST 356[3570], S&T S 357[3571], HIST 357[3570])
Fall. 4 credits. Approved for humanities distribution 2007-2008. The history of engineering in the United States from 1800 to the present. Investigates the education of engineers, how engineering changed from a masculine profession to one more open to women, the building of monuments and projects, public images of the engineer, enthusiasm and disasters, and engineering in a global setting.

ENGRG 360(3600) Ethical and Social Issues in Engineering (also S&T S 360[3601]) (KCM)
Spring. 3 credits. Open to sophomores. Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle blowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 461(4610) Entrepreneurship for Engineers (also M&E AE 461[4610], OR&IE 452[4521])
Fall. 3 credits. Prerequisite: upper-class engineers or permission of instructor. Staff. For description, see M&E AE 461.

ENGRG 678(6780) Teaching Seminar
Fall, spring. 1 credit. S/U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process. Followed by a formal feedback session with program staff, and completion of a reflective journal on teaching experiences. Designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGRI 102(1020) Introduction to Nanoscience and Nanoelectronics (also A&EE 102[1020])
Fall, spring. 3 credits. Staff. Lecture/laboratory course designed to introduce freshmen to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design, basic micromachining and chemical synthesis methods, i.e., "top-down" and "bottom-up" approaches to nanofabrication; how to manipulate structures on the nanoscale, physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the entire manufacturing sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with their real behavior, construct a simple STM and learn through hands-on experience the basic workings of the device.

ENGRI 110(1100) Lasers and Photonics (also A&EE 110[1100])
Fall. 3 credits. F. Wise. Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a model of a laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRI 111(1110) Nanotechnology (also M&E S 111[1110])
Fall. 3 credits. E. Giannelis. Nanotechnology has been described as enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGRI 112(1120) Introduction to Chemical Engineering (also CHEM 112[1120])
Fall. 3 credits. Prerequisite: freshman standing. T. M. Duvall. Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRI 113(1130) Water Treatment Design (also CEE 113[1130])
Spring. 3 credits. M. L. Weber-Shirk. Students learn how to design reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. The course includes field trips, building a computer-controlled miniature water treatment plant, and understanding water technologies for making safe drinking water.

ENGRI 118(1180) Design Integration: DVDs and iPods (also T&AM 118[1180])
Spring. 3 credits. Not offered 2006-2007. W. Sachse. This course examines the broad range of systems and engineering technologies required to build today's remarkable music/data and video source.

ENGRI 119(1190) Biomaterials for the Skeletal System (also MS&E 119[1190])
Fall. 3 credits. D. Grubb. Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.
of practical devices for studying biological systems and treating disease. Collaborative work will be a key element in all aspects of the course, from the lectures and labs, to the assignments and term project.

ENGRI 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], COM S 165[1610], MUSIC 165[1645], PSYCH 165[1650])
Fall. 3 credits. Complements ART 171+ and MUSIC 120+. S-U grades optional. For description, see COM S 165.

ENGRI 167(1700) Computation, Information, and Intelligence (also COGST 172, COM S 172[1700], INFO 172[1700])
Fall. 3 credits. Prerequisites: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM S 100. An introduction to computer science using methods and examples from the field of artificial intelligence. Topics include game playing, search techniques, learning theory, computer-intensive methods, data mining, information retrieval, the web, natural language processing, machine translation, and the Turing test. This is not a programming course; rather, "pencil and paper" problem sets are assigned. Some calculus required.

APPLIED AND ENGINEERING PHYSICS

A&EP 102(1020) Introduction to Nanoscience and Nanotechnology (also ENGR E 102(1020))
Spring. 3 credits. Course in Introduction to Engineering series. For description, see ENGR E 130.

A&EP 110(1110) Lasers and Photonics (also ENGR E 110(1100))
Fall. 3 credits. F. Wise. Course in Introduction to Engineering series. For description, see ENGR E 110.

A&EP 217(2170) Electricity and Magnetism (also PHYS 217[2217])
Fall, spring. 4 credits. Prerequisites: permission of advisor and instructor; co-registration in PHYS 216 or knowledge of special relativity at level of PHYS 216; MATH 192 or equivalent and co-registration in MATH 293 or equivalent. Staff. Intended for students who have done well in PHYS 112 or 116 (or equivalent) and mathematics and who desire a more analytic treatment than that of PHYS 215. At the level of Electricity and Magnetism by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester, permitting students who find material too abstract or analytical to transfer into PHYS 213 without difficulty.

A&EP 252(2520) The Physics of Life (also ENGR E 252(2520))
Fall. Prerequisites: MATH 192, CHEM 207 or 211, and co-registration in or completion of PHYS 215 or 216. L. Pollack. For description, see ENGR E 252.

A&EP 264(2640) Computer-Instrumentation Design (also ENGR E 264(2640))
Fall, spring. 3 credits. Prerequisites: seniors by permission of instructor; COM S 100. 1 lab. For description, see ENGR E 264.

A&EP 321(3210) Mathematical Physics I
Spring. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in physical sciences. B. Kusse. Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping, Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists and Mathematical Physics by Butkov.

A&EP 322(3220) Mathematical Physics II

A&EP 324(3240) Maple Supplement to Mathematical Physics 321 and 322
Spring. 1 credit. R. V. E. Lovelace. A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.
A&EP 333(3330) Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 112 or 116 and co-registration in A&EP 321 or equivalent or permission of instructor. Staff.
Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts; and applications. (At the level of Classical Dynamics by Marion and Thornton.)

A&EP 355(3550) Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and co-registration in A&EP 321 or equivalent, or permission of instructor. Staff.
Topics include vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasi-statics, and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356(3560) Intermediate Electrodynamics
Spring. 4 credits. Prerequisites: A&EP 355 and co-registration in A&EP 322 or equivalent, or permission of instructor. Staff.
Topics include electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis is on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361(3610) Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318. Corequisite: A&EP 322 or equivalent, or permission of instructor. Staff.
Focuses on classical and quantum mechanics. Topics include vector calculus, electrostatics, quantum phenomena, electromagnetic waves, equations of motion, general beam equations, waves, fluids, and the origins of optical nonlinearities, harmonic generation, parametric amplification, self-trapping, multiphoton processes, spontaneous and two-level atoms, atom cooling and trapping, optical phase conjugation, optical resonance focusing, optical bistability, propagation of light, quantum phenomena of elasticity, simple beams, stress and strain tensors, materials equations, waves, fluids, and the origins of optical nonlinearities, harmonic generation, parametric amplification, self-trapping, multiphoton processes, spontaneous and two-level atoms, atom cooling and trapping, optical phase conjugation, optical resonance focusing, optical bistability, propagation of light, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum cryptography and quantum computing. Prerequisites: A&EP 361 or equivalent or permission of instructor. Staff.

A&EP 363(3630) Electronic Circuits (also PHYS 360(3630))
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of instructor. No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded; 1lec, 2 labs. Fall: E. Kirkland; spring: J. Alexander.
Students analyze, design, build, and experiment with circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 423(4230) Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester physics sequence and one year of calculus. Staff.
Quantum statistical basis for equilibrium thermodynamics, macrocanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-star systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics by Kittel and Kroemer and Statistical Physics by Rosen.

A&EP 434(4340) Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent. Staff.
Topics: Elasticity and Fluid Mechanics: basic phenomena of elasticity, simple beams, stress and strain tensors, materials equations, waves, fluids, and the origins of optical nonlinearities, harmonic generation, parametric amplification, self-trapping, multiphoton processes, spontaneous and two-level atoms, atom cooling and trapping, optical phase conjugation, optical resonance focusing, optical bistability, propagation of light, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum cryptography and quantum computing. Prerequisites: A&EP 361 or equivalent or permission of instructor. Staff.

A&EP 438(4380) Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; co-registration in A&EP 361 permitted. Staff.
Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440(4440) Quantum and Nonlinear Optics
Spring. 4 credits. Prerequisites: A&EP 356, 361, or equivalent. Staff.
Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

A&EP 450(4500) Introductory Solid State Physics (also PHYS 454(4454))
Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 443, A&EP 361, or CHEM 793. Staff.
Introduction to the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids.

A&EP 470(4700) Biophysical Methods (also BION 470(4700))
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: solid knowledge of cellular biology. Letter grades only.
Overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics.

A&EP 490-491(4900-4910) Independent Study in Engineering Physics
Fall, spring. Credit TBA.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 or equivalent. Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics: semiconductors, solid state electronic devices, solid state detectors and generators of electro-magnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum
mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of *Introduction to Applied Solid State Physics* by Dalven.

A&EP 57I(5710) Biophysical Methods

Advanced Laboratory

Spring, first three weeks of Jan. or TBA during spring semester. 3 credits. Prerequisite: A&EP 470 highly recommended but qualified students who have not taken A&EP 470 also accepted. Letter or S/U grades. M. Lindau.

Offered to students in the engineering, physics, chemistry and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

A&EP 607(6070) Advanced Plasma Physics (also ECE 582(5820))

Spring. On demand. 4 credits. Prerequisites: ECE 581 and A&EP 606. For description, see ECE 582.

A&EP 633(6330) Nuclear Reactor Engineering (also NS&E 633(6330))

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

For description, see NS&E 633.

A&EP 661(6610) Nanocharacterization

Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling. Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and beyond. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

A&EP 662(6620) Micro/Nano-fabrication and Processing

Spring. 3 credits. Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 663(6630) Nanobiotechnology (also BIO G 663(6630), MS&E 563(5630))

Spring. 3 credits. Letter grades only. C. Batt.

Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedicsal and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.

A&EP 71I(7110) Principles of Diffraction (also MS&E 671(6710))

Fall. 3 credits. Letter grades only. J. D. Brock.

Graduate-level introduction to diffraction/ scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 75I(7510) M.Eng. Project

Fall, spring. 6-12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 75J(7530) Special Topics Seminar in Applied Physics

Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

Fall. 3 credits. Not offered 2006–2007. R. Lovelace.

Uses Cosmic Plasma Physics by Sonnev and covers the following topics: charged particles and EM fields, statistical description of plasma, distribution functions and the Vaslov equation, propagation of particles, motion of particles in given fields, wave particle interactions, Coulomb collisions, hydrodynamic description of plasmas, magnetohydrodynamic description of plasmas, and cosmic plasma flows.

A&EP 782(7820) Advanced Plasma Physics (also ECE 682(6820))

Spring. 3 credits. Prerequisite: ECE 581. C. E. Seyler.

For description, see ECE 682.

BIOMEDICAL ENGINEERING

For description, see ENGR 151.

BME 301(3010) Molecular Principles of Biomedical Engineering (also CHEM 401[4010])

Fall. 3 credits. Prerequisite: BME 301 or permission of instructor. S-U grades optional. Next offered 2007-2008.

BME 302(3020) Cellular Principles of Biomedical Engineering (also CHEM 402[4020])

Spring. 3 credits. Prerequisite: BME 301 or course work in basic biology such as BIO G 110, BIOMB 330, or BIOMI 290. Lect and lab. M. P. DeLisa and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and systems biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 330(3300) Introduction to Computational Neuroscience (also BIOM/BPSY/COGST 330[3300])

Fall. 5 or 4 credits. 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIOMB 222 or permission of instructor. S-U grades optional. Offered alternate years. C. Linster.

For description, see BIOMB 330.

BME 360(3600) Molecular and Cellular Bioengineering (also BME 360[3600])

Spring. 3 credits. Prerequisite: BIOM/BPSY/COGST 330[3300]. 2 credits. Lect and lab. B. R. Land.

For description, see BME 360.

BME 404(4040) Biomedical System Design (also ECE 404[4040])

Spring. 3 credits. Prerequisite: BME 301, 302, or 401 or biology background or permission of instructor. Lec and lab. B. R. Land and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter-organ and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 441(4410) Computer in Neurobiology (also BIONB 441[4410])

Fall. 4 credits. Prerequisite: junior, senior, or graduate standing; calculus course. S-U grades optional. Offered alternate years; next offered 2007-2008. B. R. Land.

For description, see BIONB 441.

BME 463(4630) Neuromuscular Biomechanics (also M&AE 463[4630])

Spring. 3 credits. Prerequisite: ENGRD 202 and 203 or permission of instructor. Offered alternate years.

For description, see M&AE 463.

BME 464(4640) Orthopaedic Tissue Mechanics (also M&AE 464[4640])

Spring. 3 credits. Prerequisites: ENGRD 202 and M&AE 325 or permission of instructor. Offered alternate years.

For description, see M&AE 464.

BME 481(4810) Biomedical Engineering (also CHEM 481[4810])

Fall. 4 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEM 481.

BME 490(4900) Independent Undergraduate Project in Biomedical Engineering

Fall, spring. Variable credit. Research or projects by an individual or a small group of undergraduates.

BME 491(4910) Principles of Neurophysiology (also BIOM/BPSY 491[4910])

Spring. 4 credits. Limited to 20 students. Prerequisite: BIOM/BPSY 222 or written permission of instructor. S-U grades optional for graduate students by permission of instructor. B. R. Johnson.

For description, see BIOM 491.

BME 501(5010) Biomedical Engineering Seminar (also BEE 501[5010])

Fall. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Lipson.

Provides the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 687(6870) The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries

Fall. 1 credit. Prerequisite: graduate standing. S-U grades only.

BEE 688(6880) Biomass Conversion of Industrial Ecology of Biological Engineering

BEE 685(6850) Watershed Management

BEE 694(6940) Ecohydrology

BEE 697(6970) Graduate Individual Study in Biological and Environmental Engineering

Fall, spring. 1-0 credits. Prerequisite: permission of instructor. S-U grades optional.

BEE 700(7010) BEE Seminar Series

Fall. 1 credit. S-U grades only.

BEE 740(6430) Veterinary Perspectives on Pathogen Control In Animal Manure (also VTMED 740[6430], BIOMI 740[6430])

Spring. 2 credits. Prerequisite: graduate standing or permission of instructor.

BEE 750(7000) Orientation to Graduate Study

Fall. 1 credit. Prerequisite: newly joining graduate students. S-U grades only.

BEE 754(7540) Watershed Management

Spring. 2 credits. Prerequisite: graduate standing or permission of instructor. S-U grades only. Next offered 2007-2008.

BEE 760(7600) Nucleic Acid Engineering (also BME 760[7600])

Spring. 2 credits. Prerequisite: BEE 360 or permission of instructor; graduate standing.

BEE 771(7710) Soil and Water Engineering Seminar

Fall, spring. 1-3 credits. Prerequisite: graduate standing or permission of instructor. S-U grades only.

BEE 781(7810) Structures and Related Topics Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only.

BEE 785(7850) Biological Engineering Seminar

Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only.

BEE 787(7870) Industrial Ecology of Agriculturally Based Biindustries

Spring. 3 credits. Prerequisites: one year calculus, MATLAB, BEE 687, graduate standing.

BEE 788(7880) Biomass Conversion of Energy and Chemicals

Fall. 3 credits. Prerequisites: one year college calculus and chemistry; minimum of one course in thermodynamics and computer programming.

BEE 800(8900) Master’s-Level Thesis Research

Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

BEE 900(9900) Doctoral-Level Thesis Research

Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.
biomedical engineering including business, legal, and clinical issues. To give students a working knowledge of how abstracts are written and revised. Sessions may occasionally be held outside of scheduled times.

BME 539(5390) Biomedical Materials and Devices for Human Body Repair (also TXA 439/439R) Spring. 2-3 credits. Prerequisites: college natural science requirement (chemistry or biology). C. C. Chu.

For description, see TXA 439. Extra project required; some lectures as TXA 439.

BME 550(5500) Product Engineering and Design in Biomedical Engineering Spring. 3 credits. Prerequisite: graduate standing, requirement for M.Eng. students majoring in BME. D. Lipson.

A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 591) to have timely exposure to key enabling concepts.

BME 565(5650) Biomechanical Systems—Analysis and Design (also M&AE 565(5650)) Spring. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., T&AM/ENGDR 202 and 203); senior or graduate standing or permission of instructor.

For description, see M&AE 565.

BME 570(5700) Biophysical Methods (also BIOM/B&AE 470/4700) Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only.

For description, see B&AE 470.

BME 578(5780) Computer Analysis of Biomed Images (also ECE 578/5780) Fall. 4 credits. Prerequisite: permission of instructor: A. P. Reeves.

For description, see ECE 578.

BME 591(5910) Design Project Fall, spring. 3-6 credits. Requirement for M. Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course. D. Lipson and staff.

Design and economic evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 592(5930) Independent Design Project Fall and spring. Variable credit. Prerequisite: graduate standing. D. Lipson and staff.

Graduate-level nonthesis research or studies on special projects in biomedical engineering.

BME 618 (6180) Principles of Medical Imaging (also VTMED 618 [6180]) Fall. 3 credits. Prerequisites: calculus-based general physics including electricity and magnetism, mechanics, thermal physics, and some modern physics; calculus; linear algebra. Graduate study. Y. Wang.

This is an introductory course on medical imaging. The course consists of lectures and field trips to radiology facilities to illustrate the basic physical principles of all major imaging modalities in current clinical practice, including x-ray, ultrasound, computerized tomography, magnetic resonance imaging, and mammographic imaging. There are also guest lectures from clinicians to demonstrate the clinical utility of medical imaging.

BME 626(6260) Biomedical Optics, Imaging, and Spectroscopy Spring. 3 credits. Prerequisites: introductory physical biology by W. R. Zipfel. Fundamentals of optical systems design, application and analysis concepts used in biomedical imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, deconvolution and interference; all in relation to biomedical microscopy, spectroscopy and biochemical techniques.

BME 631(6310) Engineering Principles for Drug Delivery (also CHEM 631[6310]) Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam.

Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability, stimuli-sensitive systems, controlled release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 663(6630) Advanced Topics in Neuromuscular Biomechanics (also M&AE 663[6630]) Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. F. Valero-Cuevas.

For description, see M&AE 663.

BME 664(6640) Mechanics of Bone (also M&AE 664[6640]) Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years.

For description, see M&AE 664.

BME 665(6650) Principles of Tissue Engineering (also M&AE/MS&E 665[6650]) Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar.

Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BME 703(7030) Graduate Student Teaching Experience Fall, spring. Variable credit. S-U grades optional. Staff.

Guided individual experience in laboratory instruction and/or lectures/recitation. Provides a preparatory teaching experience for graduate students considering an academic career.

BME 711(7110) Fundamentals of Biomedical Engineering Research I Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. L. Olbricht and staff.

First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

BME 712(7120) Fundamentals of Biomedical Engineering Research II Spring. 3 credits. Prerequisite: BME 711 or permission of instructor. W. L. Olbricht and Staff.

Continuation of BME 711.

BME 716(7160) Immersion Experience in Medical Research and Clinical Practice Fall and spring. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang.

Six-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

BME 718 (7180) Advanced Medical Imaging Fall. 3 credits. Prerequisites: calculus based general physics including electricity and magnetism, mechanics, thermal physics, and some modern physics; calculus; linear algebra. Graduate study. Y. Wang.

Meets concurrently with BME 618. Requires a deeper background in physics and mathematics. Special homework assignments, projects, and occasional discussion periods. Primarily for Ph.D. students focusing on imaging.

BME 731(7310) Advanced Biomedical Engineering Analysis of Biological Systems Fall. 3 credits. Prerequisite: graduate standing, priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk.

Covers the fundamentals of quantitative analysis of bio-physical systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

BME 760(7600) Nucleic Acid Engineering (also BEE 760[7600]) Spring. 2 credits. Prerequisite: graduate standing, BEE 360, or permission of instructor. D. Liu.

For description, see BEE 760.

BME 790(7900) Biomedical Engineering Seminar Fall. spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler.

Research-based seminars. May meet with other seminar series as appropriate.
Applications to problems involving conduction, convection, and diffusion.

**CHEM 322(3230)** Analysis of Separation Processes

Spring. 3 credits. Prerequisites: CHEM 313 and 324. Y. L. Joo.

Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria, equilibrium-based separation processes, and dynamic behavior. Applications of fundamental principles to the design and operation of separation systems. Laboratory experiments on separation processes.

**CHEM 390(3900)** Reaction Kinetics and Reactor Design

Spring. 3 credits. Prerequisites: CHEM 313 and 324. T. M. Duncan.

Study of chemical reaction kinetics and principles of reactor design for chemical processes.

**CHEM 401(4010)** Molecular Principles of Biomedical Engineering (also BME 301(3010))

Fall. 3 credits. Prerequisite: BIO G 110 or BIOSM 350. M. P. DeLisa.

For description, see BME 301.

**CHEM 402(4020)** Cellular Principles of Biomedical Engineering (also BME 302(3020))

Spring. 3 credits. D. A. Putnam.

For description, see BME 302.

**CHEM 432(4320)** Chemical Engineering Laboratory

Fall. 4 credits. Prerequisites: CHEM 325, 324, 332, and 350. A. M. Center and staff.

Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

**CHEM 462(4620)** Chemical Process Design

Spring. 4 credits. Prerequisite: CHEM 432. A. M. Center and staff.

Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

**CHEM 470(4700)** Process Control Strategies

Spring. 3 credits. A. M. Center.

Introduction to how control concepts are represented, control valve sizing and selection, process control diagrams, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

**CHEM 472(4720)** Feedback Control Systems (also ECE 472(4720), M&A 470(4780))

Fall. 4 credits. Prerequisites: CHEM 372, ECE 220, M&A 326, or permission of instructor.

For description, see M&A 478.

**CHEM 480(4800)** Chemical Processing of Electronic Materials

Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. L. Olbricht.

Special topics in biomaterials, including cell separations, blood flow, flow of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmokinetics, and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

**CHEM 484(4840)** Microchemical and Microfluidic Systems

Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. J. R. Engstrom.

Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

**CHEM 490(4900)** Undergraduate Projects in Chemical Engineering

Fall, spring. Variable credit.

Research or studies on special problems in chemical engineering.

**CHEM 499(4990)** Senior Seminar

Fall, spring. 1 credit. Prerequisite: CHEM 392.

Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at “Colloquia and Seminars in Physics and Related Fields” which includes the weekly seminars. For example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

**CHEM 520(5200)** Chemical, Polymer, Biomedical, and Electronic Materials Processing

Fall, spring. 1-6 credits; 1 credit per sec.

**520.1 An Overview of Chemical Processing**

Spring, first third of semester. 1 credit. Prerequisite: nonchemical engineers. T. M. Duncan.

Introduction to chemical engineering design and analysis-methodical modeling, graphical methods and dynamic scaling.
Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEM 590(5999) Special Projects in Chemical Engineering
Fall, spring. Variable credit. Prerequisite: graduate standing.
Nonthesis research or studies on special problems in chemical engineering.

CHEM 631(6310) Engineering Principles for Drug Delivery [also BME 631(6310)]
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see BME 631.

CHEM 640(6400) Polymeric Materials
Fall. 3 credits. C. Cohen.
Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEM 661(6610) Air Pollution Control
Spring. 3 credits. P. H. Steen.
Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

CHEM 664(6640) Energy Economics
Fall. 3 credits. A. J. Hunter.
Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEM 665(6650) Energy Engineering
Spring. 3 credits. A. J. Hunter.
Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

CHEM 675(6750) Synthetic Polymer Chemistry [also M&AE 622(6220), CHEM 671(6710)]
Spring. 4 credits. Prerequisites: CHEM 350-360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHEM 711(7110) Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 389-390 and CHEM 313 or equivalent. A. B. Anton.
Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEM 713(7130) Chemical Kinetics and Transport
Spring. 5 credits. Prerequisite: CHEM 390 or equivalent. C. Cohen and A. D. Stroock.
Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEM 731(7310) Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323-324 or equivalent. Y. L. Joo.
Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEM 741(7410) Selected Topics in Biochemical Engineering
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Offered alternate years. L. A. Archer.
Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels; polymer melts.

CHEM 751(7510) Mathematical Methods of Chemical Engineering Analysis
Fall, spring. Variable credit. Prerequisite: CHEM 751 or equivalent. Offered alternate years. L. A. Archer.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEM 753(7530) Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years, next offered 2005-2007. P. H. Steen.

CHEM 790(7900) Seminar
Fall, spring. 1 credit each semester.
Requirement for all graduate students in field of chemical and biomolecular engineering. General chemical engineering seminar.

CHEM 890(8999) Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEM 990(9999) Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.
CIVIL AND ENVIRONMENTAL ENGINEERING

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Each area has several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

**General**

CEE 113 Water Treatment Design (also ENGRI 113) (s,3)
CEE 116 Modern Structures (also ENGRI 116) (f,3)
CEE 241 Engineering Computation (also ENGRD 241) (s,3)
CEE 304 Uncertainty Analysis in Engineering (f,4)
CEE 308 Introduction to CADD (f,3)
CEE 309 Special Topics in Geotechnical Engineering (f,3)
CEE 323 Engineering Economics and Management (also ENGRG 323) (f,su,3)
CEE 400 Senior Honors Thesis (f,3)
CEE 401 Undergraduate Engineering Teaching in CEE (f,3)

**Civil Infrastructure**

See also: CEE 116, 241, 304, 308, 503, and 595

**Geotechnical Engineering**

CEE 341 Introduction to Geotechnical Engineering (f,4)
CEE 440 Foundation Engineering (f,3)
CEE 441 Retaining Structures and Slopes (f,3)
CEE 444 Environmental Site and Remediation (f,3)
CEE 501/502 Design Project in Geotech Structures (f,3)
CEE 602 Seminar—Civil Infrastructure (f,3)
CEE 640 Foundation Engineering (f,3)
CEE 641 Retaining Structures and Slopes (f,3)
CEE 644 Environmental Applications of Geotechnical Engineering (f,3)
CEE 649 Special Topics in Geotechnical Engineering (f,3)
CEE 740 Engineering Behavior of Soils (f,3)
CEE 741 Rock Engineering (f,3)
CEE 744 Advanced Foundation Engineering (s,2)
CEE 745 Soil Dynamics (s,3)
CEE 746 Embankment Dam Engineering (s,2)
CEE 749 Research in Geotechnical Engineering (f,3)
CEE 840 Thesis—Geotechnical Engineering (f,3)

**Structural Engineering**

CEE 116 Modern Structures (f,3)
CEE 371 Structural Modeling and Behavior (f,3)
CEE 372 Inelastic and Nonlinear Behavior of Materials and Structures (f,4)
CEE 471 Fundamentals of Structural Mechanics (s,3)
CEE 472 Introduction to the Finite Element Method (f,3)
CEE 473 Design of Concrete Structures (f,3)
CEE 474 Design of Steel Structures (s,4)
CEE 475 Concrete Materials and Construction (f,3)
CEE 477 Introduction to Composite Materials (f,3)
CEE 478 Structural Dynamics and Earthquake Engineering (s,3)
CEE 479 Collaborative Distance Design of Structural Systems (s,3)
CEE 481 LRFD-Based Engineering of Wood Structures (f,3)
CEE 501/502 Design Project in Structural Engineering (f,3)
CEE 602 Seminar—Civil Infrastructure (f,3)
CEE 671 Structural Mechanics (s,3)
CEE 672 Introduction to the Finite Element Method (f,3)
CEE 673 Design of Concrete, Masonry, and Steel Structures (f,3)
CEE 675 Concrete Materials and Construction (f,3)
CEE 676 Advanced Composite Materials (s,4)
CEE 677 Engineering Analysis (f,3)
CEE 678 Structural Dynamics and Earthquake Engineering (f,3)
CEE 679 Evaluation and Failure of Structures (f,3)
CEE 697 Special Topics in Structural Engineering (f,3)
CEE 770 Engineering Fracture Mechanics (f,3)
CEE 771 Stochastic Mechanics (f,3)
CEE 772 Random Vibration (f,3)
CEE 773 Structural Reliability (f,3)
CEE 774 Advanced Structural Concrete (f,3)
CEE 775 Nonlinear Finite Element Analysis (f,3)
CEE 776 Advanced Topics in Stability (f,3)
CEE 777 Computational Solids and Structural Mechanics (f,3)
CEE 779 Advanced Behavior of Metal Structures (f,3)
CEE 781 National Disaster Risk Assessment and Management (f,3)
CEE 783 Civil and Environmental Engineering Materials Project (f,3)
CEE 785 Research in Structural Engineering (f,3)
CEE 880 Thesis—Structural Engineering (f,3)

**Environment**

See also CEE 113, 241, 304, and 492

CEE 113 Water Treatment Design (s,3)
CEE 255 Sustainable Water Supply Project (s,3)
CEE 351 Environmental Quality Engineering (s,3)
CEE 451 Microbiology for Environmental Engineering (f,3)
CEE 452 Water Supply Engineering (f,3)
CEE 453 Laboratory Research in Environmental Engineering (f,3)
CEE 454 Sustainable Small-Scale Water Supplies (f,3)
CEE 455 Sustainable Water Supply Project (s,3)
CEE 501/502 Design Project in Environmental Engineering (f,3)
CEE 601 Seminar—Water Resources and Environmental Engineering (f,3)
CEE 653 Water Chemistry for Environmental Engineering (f,3)
CEE 654 Aquatic Chemistry (f,3)
CEE 655 Transport, Mixing, and Transformation in the Environment (f,3)
CEE 656 Physical/Chemical Process (f,3)
CEE 657 Biological Processes (s,3)
CEE 658 Microbial Biodegradation and Biocatalysis Lab (f,3)
CEE 659 Seminar—Environmental Quality Engineering (f,3)
CEE 736 Turbulences and Turbulent Mixing in Environmental Stratified Flows (f,3)
CEE 750 Research in Environmental Engineering (f,3)
CEE 759 Special Topics in Environmental Engineering (f,3)
CEE 850 Thesis—Environmental Engineering (f,3)
CEE 877 Advanced Behavior of Metal Structures (f,4)
CEE 878 National Disaster Risk Assessment and Management (f,3)
CEE 879 Civil and Environmental Engineering Materials Project (f,3)
CEE 880 Thesis—Structural Engineering (f,3)

**Environmental Systems**

See Engineering Systems and Management mission areas for a listing of courses in Environmental and Public Systems.

**Environmental Fluid Mechanics and Hydrology**

CEE 331 Fluid Mechanics (f,3)
CEE 332 Hydraulic Engineering (f,3)
CEE 431 Introduction to Groundwater Hydrology (also EAS 445, BEF 471) (s,3)
CEE 432 Hydrology (s,3)
CEE 435 Coastal Engineering (s,3)
CEE 436 Case Studies in Environmental Fluid Mechanics (s,3)

**CEE 113(1130) Water Treatment Design (also ENGR 113(1130))**

Spring. 3 credits. Students must register under ENGR 113. M. L. Weber-Shirk. Course in Introduction to Engineering series. For description, see ENGR 113.

**CEE 116(1160) Modern Structures (also ENGR 116(1160))**

Fall. 3 credits. Students must register under ENGR 116. Staff. Course in Introduction to Engineering series. For description, see ENGR 116.

**CEE 241(2410) Engineering Computation (also ENGRD 241(2410))**

Spring. 3 credits. Students must register under ENGRD 241. C. Shoemaker. For description, see ENGRD 241.

**CEE 255(2550) Sustainable Water Supply Project**

Spring. 3 credits. Meets with CEE 455. M. L. Weber-Shirk. For description, see CEE 455.

**CEE 304(3040) Uncertainty Analysis in Engineering**

Fall. 4 credits. CEE Engineering co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger. Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, wind speed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

**CEE 308(3080) Introduction to CADD**

Fall, spring. 1 credit. Students should enroll in only one sec. Preenrollment limited to CEE students. All other students by permission of instructor and only after first meeting of sec. Course begins second full week of classes. Staff. Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD 2004 techniques. Alternative software tools for 3D visualization and solid modeling are introduced. Course meets in ACCEL once per week for 12 weeks, and grades are based on attendance, weekly exercises completed in class, and a semester project.

**CEE 309(3090) Special Topics in Civil and Environmental Engineering**

Fall. spring. 1–6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

**CEE 323(3230) Engineering Economics and Management (also ENGRG 323(3230))**

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks. For description, see ENGRG 323.
CIVIL AND ENVIRONMENTAL ENGINEERING 245

CEE 331(3310) Fluid Mechanics
Fall. usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202. E. A. Cowen. Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

CEE 332(3320) Hydraulic Engineering
Spring. 4 credits. Prerequisite: CEE 331. Next offered 2007-2008. Staff. Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.

CEE 341(3410) Introduction to Geotechnical Engineering
Spring. 4 credits. Prerequisites: ENGRD 202, CEE 331 (or equivalent), or permission of instructor. Letter grades only. H. E. Stewart.

CEE 351(3510) Environmental Quality Engineering
Spring. 3 credits. L. W. Lion.

CEE 361(3610) Introduction to Transportation Engineering
Spring. 4 credits. Prerequisite: ENGRD 202. A. H. Meyburg and J. Mbwana.

CEE 371(3710) Structural Modeling and Behavior

CEE 372(3720) Inelastic and Nonlinear Behavior of Materials and Structures
Fall. 4 credits. Prerequisites: MATH 294, CEE 371. W. Aquino. The course presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course will be a synergy of mathematical modeling, computer simulations, and physical experimentation.

CEE 400(4000) Senior Honors Thesis
Fall, spring. 1-6 credits. For students admitted to CEE Honors Program. Staff supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401(4010) Undergraduate Engineering Teaching in CEE
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

CEE 406(4060) Civil Infrastructure Systems
Fall. 3 credits. Prerequisites: probability and statistics (CEE 304 or equivalent) and engineering economics (CEE 325 or equivalent) course. Letter or S-U grades. Staff.

CEE 411(4110) Remote Sensing: Resource Inventory Methods (also CSS 411(4110))
Spring. 3 credits. Prerequisite: permission of instructor. A. Lembo.

CEE 422(4220) Hydrology
Spring. 3 credits. Prerequisite: CEE 331. Intended for undergraduates. Lec concurrent with CEE 652. W. H. Brutsaert.

CEE 423(4230) Coastal Engineering
Spring. 4 credits. Prerequisite: CEE 331. P. F. Liu.

CEE 435(4350) Coastal Engineering
Spring. 4 credits. Prerequisite: CEE 331. P. F. Liu.

CEE 436(4360) Case Studies in Environmental Fluid Mechanics
Spring. 4 credits. Prerequisite: CEE 331 or equivalent. E. A. Cowen.

CEE 441(4410) Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341.

CEE 442(4420) Environmental Site and Remediation Engineering

CEE 451(4510) Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson.

CEE 471(4710) Pollution Control Engineering
Spring. 3 credits. Prerequisite: CEE 331 or equivalent.

CEE 472(4720) Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341.

CEE 473(4730) Experimental Methods in Fluid Dynamics
Spring. 3 credits. Prerequisite: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen.

CEE 440(4400) Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.

CEE 444(4440) Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341.

CEE 450(4500) Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson.

CEE 471(4710) Pollution Control Engineering
Spring. 3 credits. Prerequisite: CEE 331 or equivalent.

CEE 472(4720) Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341.

CEE 473(4730) Experimental Methods in Fluid Dynamics
Spring. 3 credits. Prerequisite: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen.

CEE 440(4400) Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.

CEE 444(4440) Environmental Site and Remediation Engineering

CEE 451(4510) Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson.

Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms, roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOM 290 or equivalent.

CEE 452(4520) Water Supply Engineering
Fall. 3 credits. Prerequisite: CEE 351. Next offered 2007-2008. J. J. Bisogni.

Analysis of contemporary threats to human health from water supplies. Covers criteria and standards for potable-water quality; water-quality control theory; design of water supply facilities.
We explore the technical, economic, and remediation; and wastewater treatment. contaminated soil-site assessment and characteristics; acid rain/lake chemistry; Laboratory investigations of reactor flow. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

**CEE 454(4540) Sustainable Small-Scale Water Supplies**
Fall. 3 credits. M. L. Weber-Shirk. This course covers the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

**CEE 455 (4550) Sustainable Water Supply Project**
Spring. 3 credits. Prerequisite or co-requisite: CEE 452 or CEE 454. Meets with CEE 255. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in Honduras. For more information see http://esserver.cornell.edu/aguaclara/.

**CEE 461(4610) Urban Transportation Planning and Modeling**
Spring. 3 credits. Prerequisite: CEE 361 or permission of instructor. A. H. Meyburg. Covers modern transportation planning practice and the analytical tools that are necessary to engage in this field. Emphasizes passenger transportation in the urban context. The legislative, political, and economic contexts of urban transportation planning (UTP) are discussed. The course presents the travel demand estimation process and the associated models and approaches and provides insights in travel survey data acquisition.

**CEE 463(4630) Transportation and Structures**
Fall. 3 credits. J. R. Mbwana. Improving the use of existing facilities has become an important objective in transportation planning. Examines the role of computer and telecommunications technologies to achieve these improvements. Focuses specific attention on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

**CEE 464(4640) Transportation Systems Design**
Spring. 3 credits. Prerequisites: CEE 361 and CEE 406 or permission of instructor. M. A. Turnquist. Analysis of capacity and operational design of transportation systems. The course is devoted to understanding design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

**CEE 465 (4650) Transportation, Energy, and the Environment**
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. H. O. Gao. For description, see CEE 665.

**CEE 471(4710) Fundamentals of Structural Mechanics**
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. M. D. Grigoriu. Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

**CEE 472(4720) Introduction to the Finite Element Method**
Spring. 3 credits. Prerequisites: CEE 371, 372, and 471. W. Aquino. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

**CEE 473(4730) Design of Concrete Structures**
Fall. 4 credits. Staff. Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements will be replaced with a reinforced concrete framing system. The course explore gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

**CEE 474(4740) Design of Steel Structures**
Spring. 4 credits. Prerequisite: 341 or permission of instructor. Staff. Behavior and design of steel members, connections, and structures. Discussion of structural systems for building and bridges.

**CEE 475(4750) Concrete Materials and Construction**
Spring. 3 credits. Next offered 2007–2008. K. C. Hover. Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

**CEE 476(4760) Evaluation and Failure of Structures**
Spring. 3 credits. Prerequisites: ENGRD 202, 261, and 203; CEE 371 and 473. Staff. This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., ultrasonic pulse velocity, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.

**CEE 477(4770) Introduction to Composite Materials (also M&AE 429/4291)**
Fall. 4 credits. A. Ingraffea and A. Zehnder. Conceptual and preliminary design projects of contemporary structural systems. Emphasis on multidisciplinary teamwork and use of state-of-the-art information technologies. Involves synchronous distance education with faculty and students at Syracuse University.

**CEE 478(4780) Structural Dynamics and Earthquake Engineering**
Spring. 3 credits. M. D. Grigoriu. Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

**CEE 479(4790) Collaborative, Distance Design of Structural Systems (also M&AE 429/4291)**
Fall. 4 credits. A. Ingraffea and A. Zehnder. Course focuses specific attention on the design and consideration of structures to achieve improved performance in the face of earthquakes. Cross-disciplinary team design projects. Emphasis on multidisciplinary teamwork and use of state-of-the-art information technologies. Involves synchronous distance education with faculty and students at Syracuse University.

**CEE 481(48191) LRFD-Based Engineering of Wood Structures (also BEE 481(48191))**
Spring. 3 credits. Prerequisite: ENGRD 202. For description, see BEE 481 under "College of Agriculture and Life Sciences.”

**CEE 490(4900) Management Practice in Project Engineering**
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2007–2008. K. C. Hover. Introduction to the principles of project management. Covers planning, organizing, communicating, scheduling, and controlling of engineering work done in project teams.

**CEE 492(4920) Engineers for a Sustainable World: Engineering in International Development**
Fall. 3 credits. R. A. Davidson and P. Doing. Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local, and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

**CEE 501–502 Design Project**
Fall, spring. 3 credits each semester. Requirement for students in M.Eng. (civil and environmental) program. Staff. CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect
the diverse specialty areas of the civil and environmental engineering field as described below:

CEE 501–502(5021–5022) Project in Environmental and Water Resources Systems

CEE 501–502(5031–5032) Project in Environmental Fluid Mechanics and Hydrology Staff

CEE 501–502(5041–5042) Project in Geotechnical Engineering

Design of major geotechnical engineering projects. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 501–502(5051–5052) Honduras Water Supply Project

M. Weber-Shirk.

CEE 501–502(5071–5072) Project in Structural Engineering

C. Earls and W. Aquino.

Design of a major civil engineering project. Planning and preliminary design are completed during the fall semester; the final design is completed in the January intersession.

CEE 501–502(5081–5082) Project in Civil Infrastructure Systems

R. A. Davidson.

Analysis of a problem in civil infrastructure.

CEE 501–502(5073–5074) Project in Civil Engineering Materials

K. C. Hover.

CEE 504(5240) Applied Systems Engineering (also COM S 504[5040], ECE/OR/IE 512[5120], M&E 591[5910], SYSEN 510[5100])

Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. R. A. George and R. Roundy.

For description, see SYSEN 510.

CEE 505(5252) System Architecture, Behavior, and Optimization (also COM S 505[5050], ECE 513[5130], OR/IE 513[5132], M&E 591[5910], SYSEN 520[5200])

Spring 3 credits. Prerequisite: CEE/COM S 504, ECE/OR/IE 512, M&EAF 591, or SYSEN 520. Staff.

For description, see SYSEN 520.

CEE 509(5290) Heuristic Methods for Optimization (also COM S/CIS 5707[5707], OR/IE 532[5320])

Fall. 3 or 4 credits. Prerequisites: graduate standing or COM S, ENGRD 211 or 321; ENGRD 241 or permission of instructor. Staff.

Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 590(5800) Project Management

Fall. Spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno.

Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 591(5910) Engineering Management Project

Fall. 3 credits. Prerequisite: permission of instructor. Staff.

Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592(5920) Engineering Management Project

Spring. 3 credits. Prerequisite: permission of instructor. Staff.

Continuation of CEE 591.

CEE 593(5930) Engineering Management Methods: Data, Information, and Modeling

Fall. 3 credits. Prerequisites: CEE 323 and 304 or equivalent. M. A. Turnquist.

Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operations, forecasting, and resource allocation.

CEE 594(5940) Economic Methods for Engineering and Management (also ECON 494[4940])

Fall. 4 credits. Prerequisite: calculus, probability and statistics, and economic course, senior or graduate standing or permission of instructor. R. E. Schuler.

Introduces economic concepts and uses them to select, calibrate and apply proper analytic decision tools in engineering design and management. Topics include market analysis and pricing strategies, production choices and cost estimation; input acquisition and employee motivation; project evaluation and the cost of capital; decision-making in risky and uncertain environments; bidding strategies and game theory; plus the regulatory and ethical consequences of overall management strategies.

CEE 595(5950) Construction Planning and Operations

Fall. 3 credits. P. G. Carr.

Covers the fundamentals of construction planning, organization of the work site; construction planning, scheduling, and cost estimating; bidding, temporary structures; contract documents and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 596(5960) Management Issues in Forensic Engineering

Fall. 3 credits. P. G. Carr.

Introduction to Management issues in Forensic Engineering, Contract Administration and Dispute Resolution, with particular emphasis on contract formation, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the client, the contractors, and the public are examined.

CEE 597(5970) Risk Analysis and Management (also TOX 597[5970])

Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 304, ENGRD 270, ILRST 210, BTRY 261, or AEM 210); two semesters of calculus; senior or graduate standing; permission of instructor. J. R. Stedinger.

Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technical risks, and social and psychological risks. Discussions address life risks in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, urban environment, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 598(5980) Introduction to Decision Analysis

Fall. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 304, ENGRD 270, ILRST 210, BTRY 261 or AEM 210); senior or graduate standing or permission of instructor. R. A. Davidson.

Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision analysis concepts and tools, such as decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life. Includes a group project to analyze a real-world decision.

CEE 601(6020) Seminar—Water Resources and Environmental Engineering

Fall. 1 credit. Staff.

Presents topics of current interest.

CEE 602(6070) Seminar—Civil Infrastructure

Fall, spring. 1 credit. Requirement for first-year graduate students. Staff.

Presents topics of current interest.

CEE 603(6080) Seminar—Engineering Systems and Management

Fall, spring. 1 credit. Requirement for first-year graduate students. Staff.

Presents topics of current interest.

[CEE 605(6050) Seminar—Issues in Risk Analysis (also NTRES 605[6050])]

Discussion of current issues and ongoing research on risk analysis issues from many perspectives with an emphasis on environmental risk analysis. Speakers address problem formulation, quantitative/ qualitative methods in assessment of risk, communication issues, and challenges to risk assessment methodologies. Some sessions held jointly with other seminar series.

Enrollment in seminar requires short reports.
and participation in two required discussion meetings for class members designed to integrate the issues raised during the semester.

CEE 606(6660) Civil Infrastructure Systems
Fall. 3 credits. Prerequisites: probability and statistics course (CEE 304 or equivalent) and engineering economics course (CEE 352 or equivalent). Letter or S-U grades Staff.
Introduction to the framing and solution of civil infrastructure problems using systems engineering approach. Systems tools, such as optimization, cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 609(6090) Numerical Methods for Engineers
Fall. 3 credits. P. J. Diamessis.
The primary focus is algorithm implementation within the context of engineering applications (spanning fluid and solid/fracture mechanics and beyond). Student projects will include parallel implementation using resources at the Theory Center. Course topics will include: Sources of error and error propagation, eigenvalue/eigenvector computation, solution of linear systems via direct or iterative methods and issues of parallel implementation, least squares approximation of lab/simulation data, solution of non-linear equations, interpolation in one and two dimensions, fast Fourier transforms (serial vs. parallel) and wavelets.

CEE 610(6100) Remote Sensing Fundamentals (also CSS 660(6100))
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philipot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CEE 615(6150) Digital Image Processing
Spring. 3 credits. Prerequisite: facility with algebra, trigonometry, and basic statistics or permission of instructor. W. D. Philipot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 617(6015) Special Topics—Remote Sensing Applications
On demand. 1-6 credits. W. D. Philipot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 620(6200) Water-Resources Systems Engineering
Spring. 3 credits. Prerequisites: CEE 323 and CEE 304 or equivalent. D. P. Lourakis.
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. Covers river-basin modeling, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621(6210) Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. J. Stedinger.
Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include: maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

CEE 623(6230) Environmental Quality Systems Engineering
Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 628(6021) Seminar—Environmental and Water Resources Systems Analysis
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 630(6300) Computational Fluid Dynamics for Environmental Flows
Spring. 3 credits. P. J. Diamessis.
Higher-order spatial discretization schemes (spectral and compact-finite difference). One-dimensional nonlinear partial differential equations (Burgers, Korteweg-de Vries eqn. and Shallow Water eqns.) and implications for environmental fluid flow simulations. Two-dimensional problems and fast iterative solvers. Numerical solution of the incompressible Navier-Stokes equations in an environmental/geophysical context. Advanced topics may include: Introduction to turbulence subgrid scale modeling in stratified/rotating flow, free surface flow modeling and representation of complex topography.

CEE 631(6310) Computational Simulation of Flow and Transport in the Environment
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics. P. L-F. Liu.
Covers fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in unsaturated media; dispersive and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 632(6320) Hydrology
Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers: physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

CEE 633(6330) Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge, land subsidence, seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

CEE 634(6340) Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Next offered 2007-2008. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635(6350) Small and Finite Amplitude Water Waves
Spring. 3 credits. P. L-F. Liu.
Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 636(6360) Environmental Fluid Mechanics
Spring. 3 credits. Staff.
Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence. Teaches the tools and plumes and their behavior in the environment, turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 637(6370) Experimental Methods in Fluid Dynamics (also M&AE 627L(627L))
Spring. 4 credits. Pre- or corequisites: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen.
Introduction to design, data collection, and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, and statistical data analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.
CEE 638(6030) Seminar—Hydraulics
Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. Staff. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639(6035) Special Topics in Hydraulics
On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640(6400) Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 641(6410) Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. Staff. Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

[CEE 644(6440) Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent or permission of instructor. Next offered 2008–2009. T. D. O'Rourke. Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.]

CEE 649(6045) Special Topics in Geotechnical Engineering
On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 653(6530) Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion. Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654(6540) Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or CHEM 287–288. G. J. Bisogni. Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655(6550) Transport, Mixing, and Transformation in the Environment

CEE 656(6560) Physical/Chemical Process
Fall. 3 credits. Pre- or corequisite: CEE 653 or permission of instructor. J. J. Bisogni. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 657(6570) Biological Processes
Spring. 3 credits. Prerequisites: introductory microbiology and CEE 656, or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment processes.

CEE 658(6580) Microbial Biodegradation and Biocatalysis Lab
Spring. 3 credits. Prerequisites: CEE 451 or BIOMI 290 or equivalent; CEE 351 or CHEM 390 or permission of instructor. R. E. Richardson. Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired biocatalytic capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.

CEE 659(6051) Seminar—Environmental Quality Engineering
Spring. 1 credit. Prerequisite: graduate students in environmental engineering. R. E. Richardson. Presentation and discussion of current research in environmental engineering.

CEE 661(6610) Urban Transportation Planning and Modeling
Spring. 3 credits. Prerequisite: CEE 361 or permission of instructor. A. H. Meyburg. For description, see CEE 461.

CEE 662(6620) Urban Transportation Network Design and Analysis
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. M. A. Turnquist. Covers the development and use of mathematical models and their application to urban transportation networks, including formulations and solution procedures based on user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study.

CEE 663(6630) Network Flows and Algorithms
Spring. 3 credits. Prerequisite: CEE 662 or permission of instructor. Offered alternate years. M. A. Turnquist. Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows and generalized flows, are presented. Applications to vehicle routing, dynamic vehicle allocation, and network design are included.

CEE 665 (6650) Transportation, Energy, and the Environment
Fall. 3 credits. Prerequisites: CEE 361 or permission of instructor. H. O. Gao. The course focuses on the nexus of transportation and air quality, energy, and climate-change concerns. It is interdisciplinary: drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory estimation, renewable fuels, air quality impact and benefit assessment of Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ).

CEE 668(6060) Seminar—Transportation System Engineering
Fall, spring. 1 credit. Staff. Presents topics of current interest.

CEE 671(6710) Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. M. D. Grigoriu. Topics include beam bending, beams on elastic foundation, stability analysis for columns and beam-columns, linear elasticity, numerical solutions for linear elasticity problems, and applications including stress concentration, torsion, and plates.

CEE 672(6720) Introduction to the Finite Element Method
Spring. 3 credits. Prerequisites: CEE 371, 372, and 471. W. Aquino. Covers the formulation of the finite element method in 2-D and 3-D continua, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.
CEE 673(6730) Design of Concrete Structures
Fall. 4 credits. Prerequisite: CEE 371 or permission of instructor. Staff.
Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

[CESS 675(6750) Concrete Materials and Construction
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.]

[CESS 677(6770) Engineering Analysis
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2008-2009. M. D. Grigoriu.
Vector spaces, linear transformations, and eigenvalue problems with applications to matrix structural analysis, linear dynamics, stability, and principal stresses, strains, and moments of inertia. Fourier analysis for periodic and non-periodic functions, with applications to the solution of ordinary differential equations, beams, plates, and other structural mechanics problems. Partial differential equations with applications to the analysis of static and dynamic response of continuous systems and transport problems.]

CEE 678(6780) Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

CEE 679(6760) Evaluation and Failure of Structures
Spring. 3 credits. Staff.
Teaches material and structural evaluation through the lens of failure. Builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, mathematics, soil mechanics, structural modeling, analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast impact loads on structures.

CEE 690 (6900) Creativity, Innovation, and Leadership
Spring. 3 credits. Prerequisite or co­require: CEE 590 or permission of the instructor. F. J. Wayno.
Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and the required skills to play a productive role in fostering both. Not incidentally, the course will also help

CEE 692(6095) Special Topics in Engineering Management
On demand. 1-6 credits. D. P. Loucks. 
Individually supervised study of one or more special topics not covered in regular courses.

CEE 693(6930) Special Topics in Systems
On demand. 1-6 credits. Staff. 
Individually supervised study of independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, Advanced Topics in Finite Element Analysis.

CEE 710(7010) Research—Remote Sensing
On demand. 1-6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 722(7200) Environmental and Water Resources Systems Analysis Research
On demand. 1-6 credits. D. P. Loucks.
Individually supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 729(6025) Special Topics in Environmental and Water Resources Systems Analysis
Offered on demand. 1-6 credits.

CEE 735(7030) Research in Environmental Fluid Mechanics and Hydrology
On demand. 1-6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 736 (7360) Turbulence and Turbulent M. and I. and Environmental Stratified Flows
Spring. 3 credits. Prerequisite: CEE 655 or a second course in fluid mechanics or with instructor's permission. P. J. Diamessis.
Fundamentals of stable stratified flows, stratified homogeneous turbulence (spectra, lengthscasles, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include: fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.

CEE 740(7400) Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart.

CEE 741(7410) Rock Engineering
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology, T. D. O'Rourke.
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers: stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

CEE 744(7440) Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 640. F. H. Kulhawy.
Continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

CEE 745(7450) Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

CEE 746(7460) Embankment Dam Engineering
Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor.
F. H. Kulhawy.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

CEE 748(7040) Research in Geotechnical Engineering
On demand. 1-6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 750(7050) Research in Environmental Engineering
On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 759(6055) Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.
CIVIL AND ENVIRONMENTAL ENGINEERING

CEE 782(7620) Practicum in Modeling Transportation Systems
Fall. 3 credits. Prerequisites: CEE 661, 662, and 663. L. K. Nozick.

CEE 764(6065) Special Topics in Transportation
On demand. 1-6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CEE 770(7700) Engineering Fracture Mechanics
Fall. 3 credits. Prerequisite: CEE 672 or equivalent and ENGR 753, or permission of instructor. A. Ingraffea.
Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

CEE 771(7710) Stochastic Mechanics in Science and Engineering
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2009-2009. M. D. Grigoriu.
Review of probability theory, stochastic processes, and Ito formula with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations with random/deterministic coefficients and random/deterministic input. Applications include: solution of Laplace, transport, Schrodinger, and other differential equations; random/deterministic coefficients and random/deterministic input. Application topics are chosen from the following areas: 3D finite elasticity, fully nonlinear beams and shells, distributed and discrete damage, contact-impact, and plasticity.

CEE 772(7720) Random Vibration
Fall. 3 credits. Prerequisites: M&AE 326 and OR&IE 260, or equivalent, and permission of instructor. Next offered 2008-2009. M. D. Grigoriu.
Reviews random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolomogorov equations, Ito calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

CEE 773(7730) Structural Reliability
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2008-2009. M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.

CEE 774(7740) Advanced Structural Concrete
Fall. 3 credits. Staff. Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and nonlinear modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.

CEE 775(7750) Nonlinear Finite Element Analysis
Fall. 3 credits. W. Aquino.
Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

CEE 776(7760) Advanced Topics in Stability
Spring. 3 credits. Prerequisite: CEE 374 or equivalent. Next offered 2007-2008. C. Earls.

CEE 777(7770) Computational Solid and Structural Mechanics
Spring. 3 credits. Staff.
This course covers the formulation and numerical solution of problems of solids and structures using the finite element method. Topics include: a review of solid mechanics: nonlinear kinematics, invariance first and second law of thermodynamics, and constitutive equations with internal variables; strong forms and weak forms; implicit and explicit algorithms; variants of Newton's method; and Lagrangian and Eulerian formulations. Application topics are chosen from the following areas: 3D finite elasticity, fully nonlinear beams and shells, distributed and discrete damage, contact-impact, and plasticity.

CEE 779(7790) Advanced Behavior of Metal Structures
Fall. 4 credits. Prerequisite: CEE 341 or permission of instructor. Staff.
This course covers the behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges is included.

CEE 781(7810) Natural Disaster Risk Assessment and Management
Explores ways to define, measure, and manage natural disaster risk using systems engineering, civil engineering, and social science perspectives and analysis tools. Considers multiple hazards and multiple viewpoints (local, international, individual, public sector, private sector).

CEE 783(7073) Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

CEE 784(7700) Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursues a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 810(8100) Thesis—Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 820(8200) Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 830(8300) Thesis—Environmental Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 840(8400) Thesis—Geotechnical Engineering
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 850(8500) Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 860(8600) Thesis—Transportation Systems Engineering
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.
ENGINEERING - 2006-2007

CEE 890(8800) Thesis—Civil Infrastructure Systems
Fall, spring. 1–12 credits. Students must register for credit professor at start of each semester. Staff.
The student selects a thesis research topic under the advice of the faculty member in charge and pursues it either independently
or in conjunction with others working on the same topic.

Computing and Information Science (CIS), and the College of Engineering. For complete
course descriptions, see the Computer Science listing in the CIS section.

COM S 099(1109) Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: freshman standing.
Credit may not be applied toward engineering degree. S-U grades only.

COM S 100H(1113) Introduction to Computer Programming—Honors
Spring. 4 credits.

COM S 100J(1110) Introduction to Computer Programming
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus),
but no programming experience.

COM S 100M(1112) Introduction to Computer Programming
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus),
but no programming experience.

COM S 100N(1114) Introduction to Computer Programming—Robotics
Fall. 4 credits. Limited to 25 students.
Prerequisite: programming experience at level of advanced placement computer science.

COM S 101(1710) Introduction to Cognitive Science (also COGST 101[1010], LING 170[1700], PHIL 191[1910], PSYCH 102[1020])
Fall, summer. 3 credits.
For description, see COGST 101.

COM S 113(2000) Introduction to C
Fall, spring, usually weeks 1–4. 1 credit.
Prerequisite: COM S 100 or equivalent programming experience. Credit granted for both COM S 113 and 215 only if 113
taken first. S-U grades only.

COM S 114(2006) Unix Tools
Fall, usually weeks 5–8. 1 credit.
Prerequisite: COM S 100 or equivalent programming experience. Recommended:
knowledge of at least one programming language. S-U grades only.

COM S 130(1300) Introductory Design and Programming for the Web (also INFO 130[1300])
Fall 3 credits. Prerequisite: none. No computer background necessary.

COM S 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], ENGRD 165[1650], MUSIC 165[1650], PSYCH 165[1650])
Fall. 3 credits. Recommended: good comfort level with computers and some of
the arts.

COM S 167(1620) Visual Imaging in the Electronic Age (also ART 170[1700], CIS 167[1620], ENGRD 167[1670])
Spring. 3 credits.
For description, see ART 170.

COM S 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGRD 172[1700], INFO 172[1700])
Fall. 3 credits. Prerequisite: some knowledge of differentiation, permission of instructor for students who have
completed equivalent of COM S 100.

COM S 201(2710) Cognitive Science in Context Laboratory (also COGST 201[2010], PSYCH 201[2010])
Spring. 4 credits. Limited to 24 students. Recommended: concurrent or prior registration in PSYCH 102/COGST
101/COM S 101/LING 170/PHIL 191.
Knowledge of programming languages not assumed.
For description, see COGST 201.

COM S 211(2110) Computers and Programming (also ENGRD 211[2110])
Fall, spring, summer. 3 credits. Prerequisite: COM S 100 or equivalent course in Java or C++.

COM S 212(2111) Java Practicum
Fall, spring. 1 credit. Pre- or corequisite: COM S 100 or equivalent.

Spring, usually weeks 5–8. 1 credit.
Prerequisite: COM S 114 or equivalent. S-U grades only.

COM S 215(2004) Introduction to C#
Fall, spring, usually weeks 5–8. 1 credit.
Prerequisite: COM S 100 or ENGRD 211 or equivalent experience. S-U grades only.

COM S 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])
Spring. 3 credits. Prerequisite: COM S 130 or equivalent knowledge.

Fall, spring. 3 credits. Pre- or corequisite: COM S 100 or permission of instructor.

COM S 305(3050) Creative Problem-Solving in Computer Science
Spring. 3 credits. Prerequisites: COM S 211 and 280.

COM S 312(3110) Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: COM S 211 and 212 or equivalent programming experience. Should not be taken
concurrently with COM S 314 or 316.

COM S 314(3420) Computer Organization (also ECE 314[3140])
Spring. 4 credits. Prerequisite: COM S 211 or ENGRD 230. Should not be taken concurrently with COM S 312.

COM S 316(3410) Systems Programming
Fall. 4 credits. Prerequisites: COM S 211 or equivalent programming experience.
Should not be taken concurrently with COM S 312.

COM S 321(3510) Numerical Methods in Computational Molecular Biology (also BIOBM 321[3210], ENGRD 321(3510))
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or
191) and a course in linear algebra (e.g., MATH 221 or 294 or BTRY 417); COM S
100 or equivalent and some familiarity with iteration, arrays, and procedures;
knowledge of discrete probability and random variables at the level of COM S
280. COM S majors and minors may use only one of the following toward their
degree: COM S 321, 322, or 421. Offered odd-numbered years; next offered 2007–2008.

COM S 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])
Spring, summer. 3 credits.
Prerequisites: COM S 100 and MATH 221 or 294; knowledge of discrete probability and
random variables at the level of COM S 280. COM S majors and minors may use
only one of the following toward their degree: COM S 321, 322, or 421.

COM S 324(3740) Computational Linguistics (also COGST 424[4240], LING 424[4424])
Fall, spring. 4 credits. Prerequisites: LING 203. Recommended: COM S 114. Labs
involve work in Unix environment.
For description, see LING 424.

COM S 330(3300) Data-Driven Web Applications (also INFO 330[3300])
Fall. 3 credits. Prerequisite: COM S/ENGRD 211. COM S majors may use only one of
the following toward their degree: COM S/INFO 350 or COM S 453.

COM S 381(3810) Introduction to Theory of Computation
Fall, summer. 3 credits.
Prerequisite: COM S 280 or permission of instructor. Credit
will not be granted for both COM S 381 and 481; corrective transfers between
COM S 381 and 481 (in either direction) encouraged during first few weeks of
instruction.

COM S 401(4150) The Science of Programming
Fall. 3 credits. Prerequisite: COM S 211.

COM S 411(4110) Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 312 or permission of instructor.

COM S 412(4120) Introduction to Compilers
Spring. 3 credits. Prerequisites: COM S 312 or permission of instructor and COM S 314 or 316. Corequisite: COM S 413.

COM S 413(4121) Practicum in Compilers
Spring. 2 credits. Corequisite: COM S 412.
COM S 414(4410) Operating Systems
Fall, spring, summer. 3 credits.
Prerequisite: COM S 314 or 316.
Corequisite: COM S 415 in spring only.

COM S 415(4411) Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: COM S 414.

COM S 416(4420) Computer Architecture
(also ECE 475(4750))
Fall. 4 credits. Prerequisites: ENGRD 230 and COM S/ECE 314.
For description, see ECE 475.

COM S 419(4450) Computer Networks
Spring. 4 credits. Pre- or corequisite: COM S 414 or permission of instructor.

COM S 421(4210) Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. COM S majors and minors may use only one of the following toward their degree: COM S 321, 322, or 421.

COM S 426(4520) Introduction to Bioinformatics
Spring. 4 credits. Prerequisites: COM S/EGRD 211, COM S 280.

COM S 429(4510) Introduction to Computational Biophysics
Fall. 3 credits. Prerequisite: COM S 100, CHEM 211 or equivalent, MATH 221, 293 or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330.

COM S 430(4300) Information Retrieval
(also INFO 430(4300))
Fall. 3 credits. Prerequisite: COM S 211 or equivalent.

COM S 431(4302) Web Information Systems
(also INFO 431(4302))
Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.

COM S 432(4320) Introduction to Database Systems
Fall. 3 credits. Prerequisites: COM S 312 (or COM S 211, 212 and permission of instructor).

COM S 433(4321) Practicum in Database Systems
Fall. 2 credits. Prerequisite: COM S 432 or coregistration in COM S 432. COM S majors may use only one of the following toward their degree: COM S/INFO 350 or COM S 433.

COM S 465(4620) Computer Graphics I
(also ARCH 374(3740))
Fall. 4 credits. Prerequisite: COM S/ENGRD 211. May not be taken after COM S 417.

COM S 467(4630) Computer Graphics II
Spring. 3 credits. Prerequisite: COM S 465.

COM S 468(4631) Computer Graphics Practicum
Spring. 2 credits. Prerequisite: COM S 465. Corequisite: COM S 467.

COM S 472(4700) Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 or equivalent.

COM S 473(4701) Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: COM S 472.

COM S 474(4740) Introduction to Natural Language Processing
(also COGST 474(4740), LING 474(4741))
Fall or spring. 4 credits. Prerequisite: COM S 211.

COM S 475(4702) Artificial Intelligence: Uncertainty and Multi-Agent Systems
Spring. 4 credits. Prerequisites: COM S/ENGRD 211 and COM S 280 or equivalent.

COM S 478(4780) Machine Learning
Spring. 4 credits. Prerequisites: COM S 280, 312, and basic knowledge of linear algebra and probability theory.

COM S 480(4870) Introduction to Cryptology
(also MATH 335(3350))
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 222 or 294. Students who take this course may not also receive credit for MATH 336.
For description, see MATH 335.

COM S 482(4820) Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 280 and 312.

COM S 483(4812) Quantum Computation
(also PHYS 481/681(4481/7681))
For description, see PHYS 481.

COM S 485(4850) Mathematical Foundations for the Information Age
Spring. 4 credits. Prerequisites: COM S 381 or 481.

COM S 486(4860) Applied Logic
(also MATH 486(4860))
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (e.g., MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490(4999) Independent Reading and Research
Fall, spring. 1–4 credits.

COM S 501(5150) Software Engineering
Spring. 4 credits. Prerequisite: COM S 211 or equivalent experience programming in Java or C++.

COM S 513(5430) System Security
Fall. 4 credits. Prerequisites: COM S 414 or 419 and familiarity with Java, C, or C# programming languages.

COM S 514(5410) Intermediate Computer Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 516(5420) Parallel Computer Architecture
(also ECE 572(5720))
Spring. 4 credits. Prerequisite: ECE 475. For description, see ECE 572.

COM S 530(5300) The Architecture of Large-Scale Information Systems
(also INFO 530(5300))
Spring. 4 credits. Prerequisite: COM S/INFO 350 or 432.

COM S 565(5640) Computer Animation
(also ART 273(2703), CIS 565(5640))
Fall. 4 credits. Prerequisite: none.
For description, see ART 273.

COM S 566(5642) Advanced Animation
(also ART 372, CIS 566(5642))
Spring. 4 credits. Prerequisite: none.
For description, see ART 372.

COM S 572(5722) Heuristic Methods for Optimization
(also ECE 509(5090), CIS 572(5722), OR&IE 533(5340))
Fall. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 322 or ECE/ENGAD 241, or graduate standing, or permission of instructor.
For description, see CEE 509.

COM S 578(5780) Empirical Methods in Machine Learning and Data Mining
Fall. 4 credits. Prerequisites: COM S 280 and 312 or equivalent.

COM S 611(6110) Advanced Programming Languages
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

COM S 612(6120) Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 614(6410) Advanced Systems
Fall or spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

COM S 615(6460) Peer-to-Peer Systems
Spring. 4 credits. Recommended: COM S 614.

COM S 619(6450) Advanced Computer Networks
Fall. 4 credits. Prerequisite: COM S 419 or permission of instructor.

COM S 621(6210) Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

COM S 622(6220) Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621.

COM S 624(6240) Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., COM S 421 or 621), differential equations, and knowledge of MATLAB. Offered even-numbered years; next offered 2007–2008.

COM S 626(6510) Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

COM S 628(6522) Biological Sequence Analysis
Fall. 4 credits. Prerequisite: none.

COM S 630(6300) Human Language Technology
(also INFO 630(6300))
Spring. 4 credits. Prerequisites: basic knowledge of linear algebra and probability theory; basic programming skills.

COM S 632(6320) Database Systems
Spring. 4 credits. Prerequisite: COM S 432–433 or permission of instructor.

COM S 633(6322) Advanced Database Systems
Spring. 4 credits.

COM S 664(6670) Machine Vision
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent.]
COM S 665(6620) Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.

[COM S 667(6630) Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: COM S 465 and 467 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.]

COM S 671(6762) Introduction to Automated Reasoning
Fall or spring. 4 credits. Prerequisite: COM S 611 and graduate standing or permission of instructor.

COM S 672(6700) Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor.

[COM S 673(6724) Integration of Artificial Intelligence and Operations Research [also CIS 673(6724)]
Spring. 3 credits.]

COM S 674(6740) Natural Language Processing
Spring. 3 credits. Prerequisite: COM S 472 or permission of instructor. COM S 474 is not a prerequisite.

[COM S 676(6764) Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.]

[COM S 677(6766) Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.]

COM S 678(6780) Advanced Topics In Machine Learning
Spring. 4 credits. Prerequisites: COM S 478 or equivalent, or COM S 578 or equivalent, or permission of instructor. Not offered every year.

COM S 681(6820) Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 482 or graduate standing.

[COM S 682(6810) Theory of Computing
Spring. 4 credits. Prerequisites: COM S 381 or 481 and COM S 482 or 681 or permission of instructor. Not offered every year; next offered 2007–2008.]

COM S 683(6822) Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisite: COM S 681 or permission of instructor.

[COM S 684(6840) Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of COM S 482. No prior knowledge of game theory or economics assumed.]

COM S 685(6850) The Structure of Information Networks [also INFO 685(6850)]
Fall or spring. 4 credits. Prerequisite: COM S 482.]
Covers topics presented in EAS 131.

EAS 133(1330) Basic Meteorology Lab

EAS 150(1500) Fortran Applications in Earth Science (also CIS 122[1122])
Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. Letter grades only.

EAS 154(1540) Introductory Oceanography (also BIOEE 154[1540])
Fall, summer. 3 credits. Lab. Corequisite: EAS 154. B. Monger and C. Greene.

EAS 155(1550) Introductory Oceanography Lab (also BIOEE 155[[1550]])

EAS 201(2010) Introduction to the Physics and Chemistry of the Earth (also ENGRD 201[2010])
Fall, spring. 5 credits. Prerequisites: PHYS 112 or 207. J. Phipps Morgan.

EAS 213(2130) Marine and Coastal Geology
Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 220(2200) The Earth System
Spring. 4 credits. Letter grades only. Staff.

EAS 222(2220) Seminar—Hawaii's Environment
Fall. 1 credit. S-U grades only. A. Moore and C. Greene.

EAS 240(2400) Field Study of the Earth System
Spring. 5 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (MATH 190, 191, 192, or 111, 112) and two semesters of any of the following: PHYS 207/208 or 112/113; CHEM 207/208; BIO G 101/103-102/104 or 105/106 or 109/110; or equivalent course work. A. Moore.

EAS 250(2500) Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger.

EAS 268(2680) Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math. S-U grades optional. A. T. DeGaetano.

EAS 296(2960) Forecast Competition
Fall and spring. 1 credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks.

EAS 301(3010) Evolution of the Earth System
Fall. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. T. Jordan, S. Riha, and W. D. Allmon. Four Saturday field trips.

EAS 303(3030) Introduction to Biogeochmistry (also NTRES 331[3310])
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a biology and/or geology course. L. A. Derry and J. Yavitt.

EAS 304(3040) Interior of the Earth
Spring. 3 credits. C. Andronicos.

EAS 305(3050) Climate Dynamics (also ASTRO 331[3311])
Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. K. H. Cook.

EAS 315(3150) Geomorphology
Fall. 3 credits. Prerequisite: geology, hydrology, or soil science course. Two 5 field trips. B. L. Isacks.

EAS 322(3220) Biogeochmistry of the Hawaiian Islands
Spring. 4 credits. Prerequisite: enrollment in EES semester in Hawaii, EAS 220, EAS 503, or permission of instructor. L. Derry.

EAS 326(3260) Structural Geology
Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. Offered alternate years, next offered 2007–2008. R. W. Allmendinger.

EAS 334(3340) Micrometeorology
Spring. 3 credits. Prerequisite: physics course. Offered alternate years; next offered 2007–2008. D. S. Wilks.

EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: MATH 192, 213 or equivalent; one year physics. K. H. Cook.

EAS 342(3420) Atmospheric Dynamics (also ASTRO 342[3423])
Spring. 3 credits. Prerequisite: MATH 192, 213 or equivalent; one year physics. K. H. Cook.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350[3500])
Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (e.g., EAS 154), or permission of instructor. Offered alternate years; next offered 2007–2008. C. H. Greene and R. W. Howarth.

EAS 351(3510) Marine Ecosystems Field Course (BIOEE 351[3510])
Spring and summer. 3 credits. Prerequisites: interested in marine and coastal studies and EAS 326. S. Mahlburg and C. Greene.

EAS 352(3520) Synoptic Meteorology I

EAS 353(3530) Physical Oceanography
Fall. 3 credits. Prerequisites: MATH 112 or 192, or one year of physics, or permission of instructor. B. C. Monger.

EAS 355(3550) Mineralogy
Fall. 4 credits. Prerequisites: EAS 101 or 201 or 220 and CHEM 207/211 or permission of instructor. S. Mahlburg Kay.

EAS 356(3560) Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 355. K. W. Kay.

EAS 388(3880) Geophysics and Geotectonics
Spring. 3 credits. Prerequisites: MATH 192 or PHYS 208 or 213. Offered alternate years, next offered 2007–2008. M. Pritchard.

EAS 401(4010) Fundamentals of Energy and Mineral Resources
Spring. 3 credits. L. Cathles.

EAS 404(4040) Geodynamics
Spring. 3 credits. Prerequisite: calculus and calculus-based physics course or permission of instructor. Offered alternate years. J. Phipps Morgan.

EAS 405(4050) Active Tectonics
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 326/388. Grading optional. Offered alternate years. M. Pritchard.

EAS 417(4170) Field Mapping in Argentina
Summer. 3 credits. Prerequisite: introductory EAS course and EAS 326. S. Mahlburg Kay.

EAS 420(4200) The Linux Supercomputing Environment
Fall, spring. 3 credits. Prerequisite: EAS 150 or introductory programming. M. Wysocki and V. Manakkal.

EAS 425(4250) European Discovery of Impacts and Explosive Volcanism
Spring. 3 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. One two-hour meeting per week plus field trip during spring break. Offered alternate years; next offered 2007–2008. J. Phipps Morgan.

EAS 434(4340) Reflection Seismology
Fall. 3 credits. Prerequisite: MATH 192 and PHYS 208, 213, or equivalent. Offered alternate years. L. D. Brown.

EAS 435(4350) Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisite: introductory statistics (e.g., AEM 210) and calculus course. D. S. Wilks.

EAS 437(4370) Geophysical Field Methods (also ARKEO 437[4370])
Fall. 3 credits. Prerequisite: PHYS 213 or 208 or permission of instructor. Offered alternate years; next offered 2007–2008. L. D. Brown.

EAS 447(4470) Physical Meteorology
Fall. 3 credits. Prerequisite: one year each of calculus and physics. Offered alternate years; next offered 2007–2008. A. T. DeGaetano.

EAS 451(4510) Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 341 and 342. S. J. Colucci.

EAS 453(4530) Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 355 or permission of instructor. Offered alternate years. S. Mahlburg Kay.

[EAS 457(4570) Atmospheric Air Pollution] Fall. 3 credits. Prerequisites: EAS 341 or thermodynamics course, and one semester of chemistry, or permission of instructor. M. W. Wysocki.

[EAS 458(4580) Volcanology] Fall. 3 credits. Prerequisite: EAS 356 or equivalent. Offered alternate years. R. W. Kay.

[EAS 460(4600) Late Quaternary Paleoecology] Fall. 4 credits. M. Goman.

[EAS 462(4620) Marine Ecology (also BIOEE 462[4620]) Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years. C. D. Harvell and C. H. Greene.

[EAS 475(4750) Special Topics in Oceanography] Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

[EAS 476(4760) Sedimentary Basins: Tectonics and Mechanics] Fall. 3 credits. Prerequisite: EAS 301 or permission of instructor. Offered alternate years; next offered 2007–2008. T. E. Jordan.

[EAS 478(4780) Advanced Stratigraphy] Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years. T. E. Jordan.

[EAS 479(4790) Paleobiology (also BIOEE 479[4790]) Fall. 4 credits. Prerequisites: one year introductory biology and either BIOEE 274 or 373 or EAS 375, or permission of instructor. Offered alternate years; next offered 2007–2008. W. Allmon.

[EAS 484(4840) Inverse Methods in the Natural Sciences] Spring. 3 credits. Prerequisite: MATH 294. D. Hysell.

[EAS 487(4870) Introduction to Radar and Remote Sensing (also ECE 487[4870]) Fall. 3 credits. Prerequisites: PHYS 208 or 213 or equivalent or permission of instructor. D. L. Hysell.

[EAS 491-492(4910-4920) Undergraduate Research] Fall, spring. 1–4 credits. Students must complete form at 2124 Snee Hall. Staff.

[EAS 494(4940) Special Topics in Atmospheric Science] Fall, spring. 8 credits max. Undergraduate level. S-U grades optional. Staff.

[EAS 496(4960) Internship Experience] Fall, spring. 1–2 credits. Prerequisite: EAS 240. S-U grades only. Staff.

[EAS 497(4970) Individual Study in Atmospheric Science] Fall, spring. 1–6 credits. Students must register using independent study form. S-U grades optional. Staff.

[EAS 498(4980) Teaching Experience in Earth and Atmospheric Sciences] Fall, spring. 1–4 credits. Students must register using independent study form. S-U grades only. Staff.

[EAS 499(4990) Undergraduate Research in Atmospheric Science] Fall, spring. Credit TBA. Students must register using independent study form. S-U grades only. Staff.

[EAS 575(5750) Planetary Atmospheres (also ASTRO 575[5750]) Fall. 4 credits. P. Gierasch.

[EAS 577(5770) Planetary Surface Processes (also ASTRO 577[577]) Spring. 3 or 4 credits. J. Bell.

[EAS 578(5780) Planet Formation and Evolution (also ASTRO 578[578]) Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or consent of instructor. Offered alternate years. J-L. Margot and M. Pritchard.

[EAS 584(5840) Inverse Methods in the Natural Sciences] Spring. 3 credits. Prerequisite: MATH 294. Complete substantial class project. D. Hysell.

[EAS 620(6200) The Linux Supercomputing Environment] Fall, spring. 3 credits. Prerequisite: EAS 150 or introductory programming. M. Wysocki, V. Manakall.

[EAS 624(6240) Advanced Structural Geology II] Spring. 3 credits. Prerequisites: EAS 240 and permission of instructor. Offered alternate years; next offered 2007–2008. R. W. Allmendinger.

[EAS 641(6410) Analysis of Biogeocological Systems] Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. L. A. Derry.

[EAS 652(6520) Advanced Atmospheric Dynamics (also ASTRO 652[7652]) Spring. 3 credits. Prerequisites: EAS 341 and 342 or equivalent. Offered alternate years. Next offered 2007–2008. S. J. Colucci.

[EAS 656(6560) Isotope Geochemistry] Fall. 3 credits. Open to undergraduates. Prerequisite: EAS 495 or permission of instructor. Offered alternate years. W. M. White.

[EAS 675(6750) Modeling the Soli-Plant-Atmosphere System (also CSS 675[6750]) Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Next offered 2008–2009. S. J. Riba.

[EAS 692(6920) Special Topics in Atmospheric Science] Fall, spring. 1–6 credits. S-U grades optional. Staff.

[EAS 693(6930) Special Topics in Geological Sciences] Fall or spring. 1–3 credits, variable. Grading optional. Staff.

[EAS 700–799(7000–7990) Seminars and Special Work] Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

[EAS 711(7110) Upper Atmospheric and Space Physics] Fall or spring. 1–6 credits. D. L. Hysell.

[Seminars and Special Work] Fall, spring. 1–3 credits. Grading optional. Staff.

EAS 733(7330) Advanced Topics in Geodynamics
Spring J. Phipps Morgan.

EAS 750(7500) Remote Satellite Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

EAS 751(7510) Petrology and Geochemistry
R. W. Kay.

EAS 755(7550) Advanced Topics in Tectonics and Geochemistry
Fall. 3 credits. J. Phipps Morgan.

EAS 757(7570) Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 762(7620) Advanced Topics in Paleobiology
W. D. Allmon.

EAS 771(7710) Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773(7730) Paleobiology
J. L. Cisne.

EAS 775(7750) Advanced Topics in Oceanography
C. H. Greene.

EAS 780(7800) Earthquake Record Reading
Fall. M. Barazangi.

EAS 781(7810) Exploration Geophysics
L. D. Brown.

EAS 783(7830) Advanced Topics in Geophysics
B. L. Isacks.

EAS 793(7930) Andes-Himalaya Seminar

EAS 795(7950) Low-Temperature Geochemistry
S. Mahlburg Kay.

EAS 796(7960) Geochemistry of the Solid Earth
W. M. White.

EAS 797(7970) Fluid-Rock Interactions
L. M. Catllys.

EAS 799(7990) Soil, Water, and Geology Seminar
Spring. L. M. Catllys and T. S. Steenhus.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science
Fall, spring. Credit. S-U grades only. Graduate faculty.

EAS 895(8950) Doctoral-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit. S-U grades optional. Graduate faculty.

ELECTRICAL AND COMPUTER ENGINEERING

ECE 210(2100) Introduction to Circuits for Electrical and Computer Engineers (also ENGRG 210[2100])
Fall, spring. 4 credits. Corequisites: MATH 293 and PHY 213. All students must enroll in a lab and a section. For description, see ENGRG 210.

ECE 220(2200) Signals and Information
Fall, spring. 4 credits. Prerequisite: MATH 293.

Introduction to signal processing. Topics include frequency-based representations: Fourier series, Fourier transform, and discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

ECE 250(2500) Technology in Society (also ENGRG 250[2500], HIST/S&T 250[2500])
Fall. 3 credits. Humanities elective for engineering students.

For description, see ENGRG 250.

ECE 291-292(2910-2920) Sophomore Electrical and Computer Engineering Independent Project
Fall, spring. 291: 1–8 credits. Individual study, analysis, and, usually, experimental tests in connection with a special engineering project chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall. ECE 292: 1 credits. Projects may be used only for 1 credit. One summary paper is required.

ECE 310(3100) Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294 and MATH 294-A.

Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ECE 311(3110) Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294.

Spring. 4 credits. Prerequisite: ECE 210. Spring. 1 or 2 credits.

Students are required to attend all the lectures. Honors students must take this seminar for letter grade and 2 credits. Two summary papers are required. Nonhonors students must take the seminar pass/fail and for 1 credit. One summary paper is required.
Summary papers review a topic presented in the seminar.

**ECE 314(3140) Computer Organization**
(Spring) 4 credits. Prerequisite: COM S/ENGRD 211 or ENGRD 230.
Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including cache and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

**ECE 315(3150) Introduction to Microelectronics**
(Fall, spring) 4 credits. Prerequisite: ECE/ENGRD 210.
Design of digital and analog electronic circuits in the context of modern integrated circuit technology. Includes the building blocks of integrated circuits: introductory physics of semiconductors, MOS and function transistors; digital electronic VLSI circuits, CMOS, BiCMOS, and memory; and analog circuits—multi-stage and differential amplifiers.

**ECE 320(3200) Networks and Systems**
(Spring) 4 credits. Prerequisites: ECE 220 and MATH 294.
Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include space-time techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

**ECE 329(3290) Foundations of ECE Mathematics**
(Fall) 3 credits. Prerequisites: MATH 293 and MATH 294.
Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions, linear algebra, inner products and orthogonal representations; basic ideas from these topics are then covered, including quantization, quantization effects in digital systems, compression, error control in networks, and optical resonators, interaction of lasers. Course is lab oriented, with a classical digital communications course and a classical digital communications systems course. The course is lab oriented, with a classical digital communications systems course.

**ECE 391(3910) Digital Communications**
(Spring) 4 credits. Prerequisite: ECE 320 or equivalent.
Introduces statistical signal processing. Signal representation and manipulation are covered via correlation, noise, quantization, and signal-to-noise ratio. The course is laboratory oriented, emphasizing fundamental signal processing and coding techniques. Topics include signal processing and coding techniques, noise and signal representation, and signal decomposition for communication systems. The course includes filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ECE 414(4110) Random Signals in Communications and Signal Processing**
(Fall) 4 credits. Prerequisite: ECE 310 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ECE 413(4130) Introduction to Nuclear Science and Engineering**
(Fall) 3 credits. Prerequisites: PHYS 214 and MATH 294.
Designed for juniors or seniors in any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. Also can serve as a basic core course for those who do not intend to continue in the field. Introduces the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering, reactor design, reactivity and reactivity feedback, fission spectrum, and reactor kinetics.

**ECE 415(4150) GPS: Theory and Design**
(Fall) 4 credits. Prerequisite: ECE 310 or MATH 326.
Analyses of GPS operating principles and engineering practice with a culminating design exercise. Navigation algorithms, receiver analysis, error propagation, dilution of precision, antennas, differential GPS.

**ECE 425(4250) Digital Signal Processing**
(Fall) 4 credits. Prerequisites: ECE 220 and MATH 294.
Introduces statistical signal processing. Signal representation and manipulation are covered via correlation, noise, quantization, and signal-to-noise ratio. The course is laboratory oriented, emphasizing fundamental signal processing and coding techniques. Topics include signal processing and coding techniques, noise and signal representation, and signal decomposition for communication systems. The course includes filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ECE 426(4260) Applications of Signal Processing**
(Spring) 4 credits. Prerequisite: ECE 310 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ECE 430(4300) Lasers and Optical Electronics**
(Fall) 4 credits. Prerequisite: ECE 303 or equivalent.
Introduction to the properties of microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

**ECE 437(4370) Fiber and Integrated Optics**
(Spring) 4 credits. Prerequisite: ECE 303 or equivalent.
Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

**ECE 446(4460) Digital Communications Over Packet-Switched Networks**
(Spring) 4 credits. Prerequisite: ECE 310 or equivalent.
Basic course in networking covering the design and performance analysis of communication systems operating over packet-switched networks. Aims to bridge the gap between a classical networking course and a classical digital communications course. The course is lab oriented, with a strong emphasis on programming assignments. Topics include data compression, error control in networks, and network algorithms.

**ECE 451(4510) Electric Power Systems I**
(Fall) 4 credits. Prerequisite: ECE 320 or equivalent.
Acquaints students with modern electric power system analysis and control. Stresses analytical techniques appropriate for the restructuring industry and advanced protection and control systems. Topics include transmission line models, transducers and per unit system, generator models, network matrices, load flow, system protection, computer relaying, and GPS-based measurement and control systems.
ECE 452(4520) Electric Power Systems II
Fall. 4 credits. Prerequisite: ECE 320 or permission of instructor. 
Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation. Objectives include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

ECE 453(4530) Analog Integrated Circuit Design
Fall. 4 credits. Prerequisite: ECE 315 or equivalent. 
Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

ECE 457(4570) Silicon Device Fundamentals
Spring. 4 credits. Prerequisites: ECE 315 and 306 or MS&E 262 or A&EP 450. 
Semiconductor carrier statistics, band diagrams, transport and their applications in diodes. MOSFETs and BJT. Emphasis is put on the CMOS operations for advanced VLSI technology. Six labs cover device measurements and design by simulation. By using the combined simulation and measurement the course cultivates in a comprehensive design project dealing with technical concerns in current VLSI industry as well as its economical, environmental, and social impacts.

ECE 457(4670) Digital Communication Receiver Design
Fall. 4 credits. Prerequisite: ECE 220. 
Introduction to broadband digital receiver design. Topics include PAM and QAM modulation and down-conversion, pulse-shaping, matched filtering, carrier frequency and phase recovery, baud-timing synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course project: composition and testing of a MATLAB-based software receiver.

ECE 472(4720) Feedback Control Systems (also CHEM 472[4720], M&A 476[4760])
Fall. Spring. 4 credits. Prerequisites: CHEM 372, ECE 220, M&A 326, or permission of instructor. 
For description, see M&A 478.

ECE 473(4730) Optimizing Compilers
Fall. 4 credits. Prerequisite: ECE 314/COM S 314. 
Covers compiler optimizations for high-performance microprocessors as well as how software interacts with hardware and the operating system. The projects involve implementing, testing, and evaluating an optimizing compiler backend that generates executables for a UNIX workstation. Lecture topics include three-address code, static single assignment form, many code optimizations, code tuning case studies, feedback optimizations, machine instruction formats, system calls, and executable formats.

ECE 474(4740) Digital VLSI Design
Spring. 4 credits. Prerequisites: ENGRD 230, ECE/COM S 314. 
Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include: CMOS logic, layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations. The course also includes an introduction to asynchronous design.

ECE 475(4750) Computer Architecture (also COM S 416[4420])
Fall. 4 credits. Prerequisite: ECE 314/COM S 314, ECE 315 is highly recommended. 
Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, build, and construct several systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 476(4760) Digital Systems Design Using Microcontrollers
Spring. 4 credits. Prerequisite: ECE 314/COM S 314. ECE 315 is highly recommended. 
Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 482(4820) Plasma Processing of Electronic Materials (also MS&E 482[4820])
Spring. 3 credits. Prerequisites: PHYS 213 and 214 or equivalents. Offered if sufficient demand. 
Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing are discussed in detail.

ECE 484(4840) Introduction to Controlled Fusion Principles and Technology (also M&A 459[4590], NS&E 484[4840])
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and physical sciences. Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: fuels and conditions required for fusion power and blanket design, tokamak reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and or inertial confinement fusion-reactor designs.

ECE 487(4870) Introduction to Radar and Remote Sensing (also EAS 487[4870])
Fall. 3 credits. Prerequisites: ECE 220 and 486 (or grade of B or better in ECE 303). For description, see EAS 487 in the College of Arts and Sciences.

ECE 488(4880) Radio Frequency (RF) Circuits and Systems
Spring. 4 credits. Prerequisite: ECE 315 or equivalent. 
Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Six laboratory sessions.

ECE 491-492(4910-4920) Senior Electrical and Computer Independent Engineering Project
Fall; 491; spring; 492. 1-4 credits. For description, see ECE 291-292.

ECE 493-499(4930-4990) Special Topics in Electrical and Computer Engineering
Spring. 3 credits. Prerequisite: ECE 315. 
For description, see ECE 303. Students taking ECE 504 will be expected to complete and present a substantial class project to be negotiated with the instructor.

ECE 512(5120) Applied Systems Engineering I (also CEE 504[5040], COM S 504[5040], MS&E 591[5910], ORIE 512[5120], SYSEN 510[5100])
Fall. 3 credits. Prerequisites: senior or concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. 
For description, see MS&E 591.

ECE 513(5130) Applied Systems Engineering II (also CEE 505[5050], COM S 505[5050], MS&E 592[5920], ORIE 513[5130], SYSEN 520[5200])
Spring. 3 credits. Prerequisite: CEE 504, COM S 504, ECE 512/ORIE 512, or MS&E 591. 
For description, see MS&E 592.
ECE 521(5210) Theory of Linear Systems  
(also M&E 521(5210))  
Fall. 3 credits. Prerequisite: ECE 320 or permission of instructor. Recommended: good background in linear algebra and linear differential equations. For description, see M&E 521.

ECE 522 Nonlinear System Analysis and Computation  
Spring. 4 credits. Prerequisite: ECE 521 or a solid background in linear algebra. Real analysis strongly recommended. Rigorous introduction to nonlinear systems. Includes introduction to notions of differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle’s Theorem, regions of attraction, slowly varying system, advanced stability theory, Lyapunov redesign, application nonlinear control, designing functions, averaging and singular perturbations, bifurcation analysis and control and application to physical systems.

ECE 526(5260) Signal Representation and Modelling  

ECE 536(5360) Nanofabrication of Semiconductor Devices (also M&E 536(5360))  
Fall. 4 credits. Prerequisites: ECE 315 and ECE 457 or equivalent. Introduction to modern nanofabrication technologies used to produce integrated circuits. Students perform a series of fabrication steps including lithography, metallization, plasma etching and annealing to realize working semiconductor devices (Schottky diodes, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each will be tested to verify the success (or failure) of the fabrication process.

ECE 547(5470) Computer Vision  
Fall. 4 credits. Prerequisites: ECE 220 (or COM S 280 and 314) or permission of instructor. Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptors of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 548(5480) Digital Image Processing  
Spring. 4 credits. Prerequisites: ECE 411, ECE 425, and familiarity with linear algebra. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ECE 551(5510) Electric Systems Engineering and Economics  
(Electricity Markets) (also AEM 655(6550))  
Fall. 2 credits. Prerequisites: basic calculus, microeconomics course. Designed to explore new arrangements in power system planning and operation brought about by the current restructuring of the electric industry. Organized around lectures on how economic principles interact with basic engineering principles used to determine the physical and operational makeup of the system; and (2) the principles and techniques of optimization and their applications to emerging institutional arrangements in the power industry. Involves extensive laboratory work designed to test the principles under discussion. A final requires building an intelligent software agent capable of performing in a competitive market with rules similar to those being set up in the electric power business today. The agents are exercised in a class competition.

ECE 554(5540) Advanced Analog VLSI Circuit Design  
Spring. 4 credits. Prerequisite: ECE 453. Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, linear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

ECE 558(5580) Compound Semiconductor Electronic  
Spring. 3 or 4 credits; 4 with a project. Prerequisite: ECE 457 or equivalent. Next offered 2007-2008. Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices, including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ECE 561(5610) Error Control Codes  
Fall. 4 credits. Prerequisite: ECE 320 or 521 or equivalent, strong familiarity with linear algebra. Next offered 2007-2008. Introduction to the theory and practice of error control codes. Topics include algebraic codes, cyclic codes, concatenated codes, and codes on graphs. Considers the construction and decoding of Reed-Solomon (RS) codes in some detail as well as the iterative decoding of concatenated codes and codes on graphs. The use of error control in wireless systems is discussed throughout the course.

ECE 562(5620) Fundamental Information Theory  
Spring. 4 credits. Prerequisites: ECE 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ECE 563(5630) Communication Networks  
Fall. 4 credits. Prerequisite: ECE 411 or permission of instructor. Next offered 2007-2008. Classical line-switched communication networks; point-to-point models for offered traffic; blocking and queueing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets. Flow control and capacity assignment algorithms. ATM networks.

ECE 564(5640) Detection and Estimation  

ECE 566(5660) Fundamentals of Networks  
Fall. 4 credits. Prerequisite: ECE 411. Recommended: ECE 446. Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols’ operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov Chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and wired networks are illustrated by examples from numerous practical systems. Discussions of some classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

ECE 567(5670) Digital Communications  
Spring. 4 credits. Prerequisites: ECE 310, 411, or permission of instructor. Next offered 2007-2008. Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity, applications in wireless and digital subscriber loops (DSL).

ECE 568(5680) Mobile Communication Systems  
Spring. 4 credits. Prerequisites: ECE 411 and 467. Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple...
access alternatives, CDMA system design, and
capacity calculations.

ECE 572(5720) Parallel Computer
Architecture (also COM S 516(5722))
Spring. 4 credits. Co- or prerequisite: ECE 475.
Principles and trade-offs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

ECE 575(5750) High-Performance
Microprocessor Architecture
Spring. 4 credits. Prerequisite: ECE 473 or 475.
Provides in-depth coverage of some of the advanced architectural features of current high-performance microprocessors. Lecture topics include trace caches, branch predictors, value predictors, confidence estimators, finite state machines, multi-threading, predication, software speculation, RISC, EPIC, case studies of modern high-end microprocessors, and research ideas. The projects involve writing simulators to evaluate architectural components on large programs that execute billions of instructions.

ECE 578(5780) Computer Analysis of
Biomedic Images
Spring. 4 credits. Prerequisite: instructor
permission. Open to students with engineering, biomedical, or biology background.
Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

ECE 581(5810) Introduction to Plasma
Physics (also A&EP 606(6060))
Fall. 4 credits. Prerequisite: ECE 303 or equivalent.
First-year graduate-level course; open to exceptional seniors.
Topics include plasma state, motion of charged particles in fields; drift-orbit theory; Coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

ECE 582(5820) Advanced Plasma
Physics
Boltzmann and Vlasov equations; waves in hot-magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; Nonlinear phenomena: solitons, nonlinear waves, taming, and reconnection.

ECE 584(5840) Advanced GPS Receiver
Design
Spring. 3 credits. Prerequisite: ECE 415 or M&AE 415.
GPS receiver design from the RF section to the observables is investigated and implemented in MATLAB software. Creation of C/A code, upsampling, down conversion, code correlation, acquisition, tracking, and interpreting the navigation message. Students start with the digitized GPS bandwidth and build a software receiver to create the navigation solution as the final project.

ECE 585(5850) Upper Atmospheric
Physics I
Fall. 4 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, ECE 466 or equivalent.

ECE 587(5870) Energy Seminar I (also
M&AE 554(5540), M&AE 546(5460))
Fall. 1 credit.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Topics include: energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

ECE 588(5880) Energy Seminar II (also
M&AE 546(5460))
Spring. 1 credit.
For description, see ECE 587; however, different speakers and/or topics are discussed in ECE 588.

ECE 591(5910) Adaptive Feedback
Systems
Fall. 4 credits. Prerequisites: ECE 411, 467, 472, or 521 and MATLAB.
Parameter adaptation algorithm construction and tuning for a variety of applications in which an adapted filter is embedded in a feedback loop: telephony echo cancellation, model-following control, recursive identification of pole-zero models, differential pulse code modulation, duct noise control, and decision feedback equalization.

ECE 593-599(5930-5990) Advanced
Topics in Electrical and Computer
Engineering
Fall, spring. 1–4 credits.
Seminars, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ECE 600(6000) Multi-Access
Communication Theory
Spring. 4 credits. Prerequisites: ECE 310, 411 and 567 or 562 or permission of instructor. Next offered 2007–2008.

ECE 610(6100) Graduate Seminar in
Medical Instrumentation
Fall. 1 credit. S-U grades only.
The seminar will provide a format for identifying, investigating, and discussing state-of-the-art developments related to instrumentation, analysis techniques, and simulation sciences as they apply to biomedical problems and solutions.

ECE 662(6620) Network Information
Theory
Fall. 3 credits. Prerequisite: ECE 562.
Second course in information theory, focusing on multiterminal aspects, as covered in the textbooks of Yeung and Csiszar/Koerner.

ECE 683(6830) Seminar in GPS and
GNSS
Fall, spring. 1–3 credits. Prerequisite: ECE 415/M&AE 415 or equivalent.
Seminar in GPS (Global Positioning System) and GNSS (Global Navigation Satellite Systems) science and engineering. Current topics in receiver design such as low signal acquisition, ambiguity resolution, and software receivers and topics in GPS science such as space weather effects on GPS and the use of GPS for remote sensing. Students typically make one presentation during the semester.

ECE 691-692(6910–6920) Electrical and
Computer Engineering Colloquium
Fall, 691; spring, 692. 1 credit each semester. For students in graduate field of Electrical and Computer Engineering. Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ECE 693-694(6930–6940) Master of
Engineering Design
Fall, 693; spring, 694. 1–8 credits. For
students enrolled in M.Eng. (Electrical) degree program.
Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 695-699(6950–6990) Graduate
Topics in Electrical and Computer
Engineering
Fall, spring. 1–4 credits.
Seminars, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ECE 791-792(7910–7920) Thesis
Research
Fall, 791; spring, 792. 1–15 credits. For
students enrolled in master's or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 793-799(7930–7990) Advanced
Graduate Topics in Electrical and
Computer Engineering
Fall, spring. 1–4 credits. Staff.
Seminars, reading course, or other special arrangement agreed on by the students and faculty members concerned.
INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

For complete descriptions, see the INFO listing in the CIS section.

INFO 130(1300) Introductory Design and Programming for the Web (also COM S 130(1300)) Fall. 3 credits.

INFO 172(1700) Computation, Information, and Intelligences (also COGST 172, COM S 172(1700), ENGR 172(1700)) Fall. 3 credits. Prerequisite: some knowledge of differentiation; permission of instructor for students who have completed equivalent of COM 100.

INFO 204(2040) Networks (also ECON 204[2040], SOC 204[2120]) (SBA) Spring. 4 credits. For description, see ECON 204.

INFO 214(2140) Cognitive Psychology (also COGST 214, PSYCH 214[2140]) (KCM) Fall. 3 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students, see INFO/PSYCH 614 or COGST 501.

INFO 230(2300) Intermediate Design and Programming for the Web (also COM S 230[2300]) Spring. 3 credits. Prerequisite: COM S/INFO 130 or equivalent.

INFO 245(2450) Psychology of Social Computing (also COMM 245(2450)) (SBA) Fall. 3 credits.

INFO 292(2921) Inventing an Information Society (also AM ST 292[2980], ECE/ENGR 298[2980], HIST 292[2920], S&T S 292[2921]) Spring. 3 credits. May not be taken for credit after ECE/ENGR 198.

INFO 295(2950) Mathematical Methods for Information Science Fall. 4 credits. Corequisite: MATH 231 or equivalent.

INFO 330(3300) Data-Driven Web Applications (also COM S 330[3300]) Fall. 3 credits. Prerequisite: COM S/ENGRD 211.

INFO 345(3450) Human-Computer Interaction Design (also COMM 345[3450]) (SBA) Spring. 3 credits.

INFO 349(3491) Media Technologies (also COMM 349[3490], S&T S 349[3491]) Spring. 3 credits.

INFO 355(3551) Computers: From the 17th Century to the Dot.com Boom (also S&T S 355[3551]) (HA) Fall. 4 credits.

INFO 372(3720) Explorations in Artificial Intelligence Spring. 3 credits. Prerequisites: MATH 111 or equivalent, an information science approved statistics course, and COM S 211 or permission of instructor.

INFO 429(4290) Copyright in the Digital Age (also COMM 429(4290)) Fall. 3 credits. Not offered 2006–2007; next offered 2007–2008. For description, see COMM 429.

INFO 430(4300) Information Retrieval (also COM S 430[4300]) Fall. 3 credits. Prerequisite: COM S/ENGRD 211 or equivalent.

INFO 431(4302) Web Information Systems (also COM S 431[4302]) Spring. 3 credits. Prerequisites: COM S 211 and some familiarity with web site technology.

INFO 435(4350) Seminar on Applications of Information Science (also INFO 635[6390]) Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent; experience using information systems. Undergraduate and master's students should register for INFO 435; Ph.D. students should register for INFO 635.

INFO 440(4400) Advanced Human-Computer Interaction Design (also COMM 440[4400]) Fall. 3 credits. Prerequisite: COMM/INFO 245.

INFO 445(4450) Seminar in Computer-Mediated Communication (also COMM 445[4450]) Fall. 3 credits. Prerequisite: COMM/INFO 245.

INFO 447(4470) Social and Economic Data (also IRILE 447[4470]) Fall. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, one upper-level social science course, or permission of instructor.

INFO 450(4500) Language and Technology (also COMM 450[4500]) Spring. 3 credits. Prerequisite: COMM 240 or COMM 245 or permission of instructor.

INFO 490(4900) Independent Reading and Research Fall. spring. 1–4 credits.

INFO 491(4910) Teaching in Information Science, Systems, and Technology Fall. Spring. Variable credit.

INFO 515(5150) Culture, Law, and Politics of the Internet Fall. 4 credits.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also COM S 530[5300]) Spring. 4 credits. Prerequisite: COM S/INFO 330 or COM S 452.

INFO 614(6140) Cognitive Psychology (also COGST 614[6140], PSYCH 614[6141]) Fall. 5 credits. Consists of two components: PSYCH 214 (3 credits) and COGST 501 (2 credits). Intended for graduate students; undergraduates opting for 5 credits should enroll simultaneously in PSYCH 214 and COGST 501.

INFO 630(6300) Human Language Technology (also COM S 630[6300]) Spring. 4 credits. Prerequisite: basic knowledge of linear algebra and probability theory; basic programming skills.

INFO 634(6341) Information Technology in Sociocultural Context (also S&T S 634[6341]) Spring. 4 credits. Prerequisite: permission of instructor.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 435[4350]) Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of COM S 211 or equivalent; experience using information systems. Undergraduates and master's students should register for INFO 435; Ph.D. students should register for INFO 635.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640[6400]) Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645[6450]) Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

INFO 648(6648) Speech Synthesis by Rule (also LING 648[6648]) Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor.

INFO 650(6500) Language and Technology (also COMM 650[6500]) Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see COMM 650.

INFO 651(7002) Critical Technical Practices Fall or spring. 4 credits. Prerequisites: graduate-level training in human–computer interaction, science and technology studies, visual studies, communication, or equivalent, or permission of instructor.

INFO 685(6850) The Structure of Information Networks (also COM S 685[6850]) Fall or spring. 4 credits. Prerequisite: COM S 482.

INFO 709(7090) IS Colloquium Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.
INFO 747(7400) Social and Economic Data [GR-RDC] (also ILRLE 740(7400))
Spring. 4 credits. Prerequisite: Ph.D. and research master's student.

INFO 790(7900) Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111[1110] Nanotechnology (also ENGR 111[1110])
Fall. 3 credits. E. Giannelis.
Course in Introduction to Engineering series.
For description, see ENGR 111.

MS&E 119[1190] Biomaterials for the Skeletal Systems (also ENGR 119[1190])
Fall. 3 credits. D. Grubb.
Course in Introduction to Engineering series.
For description, see ENGR 119.

MS&E 206[2060] Atomic and Molecular Structure of Matter (also MS&E 581[5810], M&AE 312[3120])
Spring. 4 credits. C. Liddell.
Discusses the basic elements of structure; order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MS&E 261[2610] Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 261[2610])
Fall. 3 credits. S. L. Sass.
For description, see ENGRD 261.

MS&E 262[2620] Electronic Materials for the Information Age (also ENGRD 262[2620])
Spring. 3 credits. Prerequisite: MATH 192.
Corequisite: PHYS 213 or permission of instructor. Staff.
For description, see ENGRD 262.

MS&E 269[2690] Technologies for Making the Small
Spring. 3 credits. Prerequisites: CHEM 207[211], MATH 192. M. Thompson.
This course provides an introduction to principles and practice of nanofabrication techniques, combining lectures with hands-on laboratory fabrication. A range of nanosystems is explored from microelectronic circuits to MEMS sensors and/or microfluidics. Fundamentals common to all fabrication including lithography, deposition, and etching processes are explored in lectures and lab exercises. New developments in "soft" micro-Stamphony and self-assembly methods are discussed. In the final project students build one of several nanosystems depending on their interests.

MS&E 291-292(2910-2920) Research Involvement I and II
291, fall; 292, spring. 3 credits each semester. Prerequisite: approval of department. Staff.
Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiment, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

MS&E 301[3010] Materials Chemistry
Fall. 4 credits. L. Estroff.
Provides a molecular understanding of materials properties: quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

MS&E 303[3030] Thermodynamics of Condensed Systems (also MS&E 584[5840])
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.
Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduces electrochemistry and fuel/power cells.

MS&E 304[3040] Kinetics, Diffusion, and Phase Transformation (also MS&E 584[5840])
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. Staff.
Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast-diffusion pathways; thermodynamic and electrotransport; interfaces and microstructure; nucleation and growth; product growth; potential layers (parabolic and linear kinetics); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

MS&E 305[3050] Electronic, Magnetic and Dielectric Properties of Exotic Materials (also MS&E 585[5850])
Spring. 4 credits. Prerequisite: MS&E 206 or permission of instructor. R. B. van Dover.

MS&E 307[3070] Materials Design Concept I
Fall. 2 credits. C. Umbach.
For description, see MS&E 407.

MS&E 311[3110] Junior Laboratory I
Fall. 1 credit. D. Ast.
Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in thermodynamics of condensed systems and electronic, magnetic, and dielectric properties of materials.

MS&E 312[3120] Junior Laboratory II
Spring. 1 credit. C. C. Umbach.
Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and mechanical properties of materials, processing, and design.

MS&E 391-392(3910-3920) Research Involvement III and IV
391, fall; 392, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.
For description, see MS&E 291. May be continuation or a one-semester affiliation with a research group.

MS&E 402[4020] Mechanical Properties of Materials, Processing, and Design (also M&E 312)
Fall. 4 credits. Prerequisite: MS&E 206.
Corequisite: MS&E 304 or permission of instructor. S. Baker.
Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials, how mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep deformation, fracture, and fatigue.

MS&E 403-404[4030-4040] Senior Materials Laboratory I and II
403, fall; 3 credits; 404, spring, 2 credits.
D. Grubb.
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials properties, and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MS&E 405-406[4050-4060] Senior Thesis I and II
405, fall; 406 spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. I. Blakeley.
Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original
experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

MS&E 407/4070 Materials Design Concepts II
Fall/Spring. 2 credits. C. Ubbach.
Introduces materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

MS&E 410/4100 Physical Metallurgy and materials (also MS&E 610/6100)
Spring. 3 credits. Prerequisites: MS&E 206, 303, 304 or permission of instructor. Next offered 2007–2008. S. Baker.
Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include thin films and patterned structures for use in microelectromechanical systems, superalloys for high temperature engine applications, shape memory alloys for biomedical applications, and others.

MS&E 433/4330 Materials for Energy Production, Storage, and Conversion (also MS&E 533/5330)
Fall. 3 credits. Next offered 2007–2008. Concerned with materials and technologies related to energy production, storage, and conversion as well as to sources used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

MS&E 481/4810 Technology Management (also MS&E 587/5870)
Spring. 3 credits. E. P. Giannelis.
Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage. Most applications recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.

MS&E 487/4870 Ethics and Technology
Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

MS&E 489/4890 Colloids and Colloid Assays for Advanced Materials Applications (also MS&E 589/5890)
Fall. 3 credits. C. Liddell.
Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneity structure, layered, hollow, porous, and heterofunction structures. Methods for preparation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and minienmulsions. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.

MS&E 491-492(4910-4920) Research Involvement IVA and IVB
Fall, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.
For description, see MS&E 291. May be continuation or a one-semester affiliation with a research group.

MS&E 495/4950 Undergraduate Teaching Involvement
Fall, spring. Variable credit. Staff.
Gives credit to students who help in the laboratory portions of select MS&E courses. The number of credits earned is determined by the teaching load and is typically 1–3.

MS&E 501-502(5010-5020) Special Project
Fall, spring. 6 credits. Master of Engineering research project.

MS&E 512/5120 Mechanical Properties of Thin Films (also M&E 512/5130)
Spring. 3 credits. S. P. Baker.
Stresses, elastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.

MS&E 521/5210 Properties of Solid Polymers

MS&E 523/5230 Physics of Soft Materials
Fall. 3 credits. Next offered 2007–2008.

MS&E 524/5240 Materials Chemistry of Synthetic Polymeric Materials
Fall. 3 credits. Prerequisite: MS&E 521 or permission of instructor. Offered alternate years. Staff.

MS&E 525/5250 Organic Optoelectronics
Fall. 3 credits. G. G. Malliaras.
The course begins with an overview of relevant materials, from small aromatic molecules to conjugated polymers. We then discuss their optoelectronic properties, including topics from photophysics (absorption, emission, photogeneration, recombination), charge transport and injection (doping, hopping, disorder) and nonlinear optics. Molecular conduction mechanisms are reviewed. Their applications in electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors are then discussed.

MS&E 531/5310 Introduction to Ceramics
Spring. 3 credits. R. Dieckmann.
Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomic and phenomenological approach, relationships between diffusion and point defect structure), ceramic phase diagrams, phase transformations. Emphasizes physicochemical aspects of the different topics.

MS&E 533/5330 Materials for Energy Production, Storage, and Conversion (also MS&E 433/4330)
For description, see MS&E 433.

MS&E 541/5410 Nanofabrication of Semiconductor Devices (also ECE 536/5360)
Fall. 4 credits. Prerequisites: ECE 315 and ECE 457 or equivalent.
For description, see ECE 536.

MS&E 542/5420 Flexible Electronics
Flexible electronics holds the promise of transformative developments in: (1) flat panel lighting (low cost, low energy), (2) energy production systems (solar), and (3) infrastructure control and monitoring (sensing, energy control, hazard monitoring). Practical realization of flexible circuits will require
dramatic progress in new materials that are compatible with flexible media and amenable to facile and low temperature processing as well as major advances in manufacturing technologies such as roll-to-roll processing. This course will discuss these and other developments.

[MS&E 543(5430) Thin-Film Material Science]  
Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics include deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is Electronic Thin Film Science for Electrical Engineers and Material Scientists by Tu, Mayer, and Feldman.

[MS&E 545(5450) Magnetic and Ferroelectric Materials]  
Fall. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Next offered 2007–2008. R. B. van Dover.

[MS&E 555(5550) Introduction to Composite Materials (also CEE/M&AE/T&MAM 455(4550)]  
Spring. 3 credits.  
For description, see T&MAM 455.

[MS&E 563(5630) Nanobiotechnology (also A&EP/BIO G 663(6630)]  
Spring. 3 credits.  
For description, see A&EP 663.

[MS&E 571(5710) Analytical Techniques for Material Science]  
Spring. 3 credits. D. Ast.  
Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopy, and X-ray techniques. Selection and design of experiments.

[MS&E 572(5720) Computational Materials Science]  
Spring. 3 credits. Prerequisite: MS&E 303/601 or equivalent. M. O. Thompson.  
Computational methods for predicting the behavior of condensed matter systems, including Monte Carlo, molecular dynamics, and phase field approaches. Extraction of physical parameters from simulation results and limitations of computational methods. Survey of interatomic potential development and quantum-mechanical ab-initio techniques. Examples drawn from surface and condensed phase systems.

[MS&E 581(5810) Atomic and Molecular Structure of Matter (also MS&E 206(2060), M&AE 312(3120)]  
Spring. 4 credits. C. Liddell.  
For description, see MS&E 206.

[MS&E 582(5820) Mechanical Properties of Materials, Processing, and Design (also MS&E 402(4020), M&AE 312(3120)]  
Fall. 4 credits. Corerequisite: MS&E 584 or permission of instructor. S. Baker.  
For description, see MS&E 302.

[MS&E 583(5830) Thermodynamics of Condensed Systems (also MS&E 303(3030)]  
Fall. 4 credits. M. O. Thompson.  
For description, see MS&E 303.

[MS&E 584(5840) Kinetics, Diffusion, and Phase Transformation (also MS&E 304(3040)]  
Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. J. Blakely.  
For description, see MS&E 304.

[MS&E 585(5850) Electronic, Magnetic, and Dielectric Properties of Materials (also MS&E 305(3050)]  
Spring. 4 credits. R. B. van Dover.  
For description, see MS&E 305.

[MS&E 587(5870) Technology Management]  
Spring. 3 credits. E. P. Giannelis.  
For description, see MS&E 481.

[MS&E 589(5890) Colloids and Colloid Assemblies for Advanced Materials Applications (also MS&E 489(4890)]  
Fall. 3 credits. C. Liddell.  
For description, see MS&E 489.

Graduate Core Courses

[MS&E 601(6010) Chemistry of Materials]  
Topics include basic statistical thermodynamics, partition functions and thermodynamic state functions, distributions, laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogenous systems and phase transitions, and lattice models of 1-, 2-, and 3-dimensional interacting systems. Also covers: statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

[MS&E 602(6020) Elasticity, Plasticity, and Fracture]  
Spring. 3 credits.

[MS&E 603(6030) Thermodynamics of Materials]  
Spring. 3 credits. Offered alternate years. J. Blakely.

[MS&E 604(6040) Kinetics of Reactions in Condensed Matter]  

[MS&E 606(6060) Condensed Matter Structure]  
Spring. 4 credits. Prerequisite: course at level of MS&E 206. J. Blakely.  
Focuses on ways to characterize structure. Includes lectures by several faculty on structural determination on a wide range of materials. Elements of structure at length scales ranging from sub-nanometer to millimeter. Descriptions of structure in crystals, liquids, amorphous solids/glasses. Short- and long-range order, microstructures, cellular structures, domains, domain boundaries, 2-
energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

**Specialty Courses**
**M&AE 800(8000) Research in Materials Science**
Fall, spring. Credit TBA. Staff. Independent research in materials science under the guidance of a member of the staff.

**M&AE 801(8010) Materials Science and Engineering Colloquium**
Fall and spring. 1 credit each semester. Enrollment limited to M&AE Ph.D. students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**M&AE 802(8020) Materials Science Research Seminars**
Fall. 2 credits each semester. Prerequisite: graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

**MECHANICAL AND AEROSPACE ENGINEERING**

**M&AE 103(1030) Introduction to Computer-Aided Manufacture (CAM)**
Fall, spring. approx. eight weeks (total 15 hrs. of instruction and 15 hrs. of lab). 1 credit. Limited enrollment. Prerequisites: M&AE 225 or equivalent experience and completion of Emerson Lab Product Realization Facility's CNC seminars: An Introduction to CNC Machining and CNC Programming; or permission of instructor. Completes the introduction to the fundamentals of computer-aided manufacture (CAM) seminars through the use of computer numerical control (CNC) programming. The course is the hands-on component of the three-part series on CAM. Provides practical applications of control G and C codes and solid modeling software: CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects. May not be used to fulfill any M&AE requirement.

**M&AE 111(1110) Naval Ship Systems**
(also NAV S 202[2020])
Spring. 3 credits. For description, see NAV S 202.

**M&AE 117(1170) Introduction to Mechanical Engineering**
(also ENGRD 117[1170])
Fall. 3 credits. For description, see ENGRD 117.

**M&AE 127(1270) Introduction to Entrepreneurship and Enterprise Engineering**
(also ENGRD 127[1270])
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none. For description, see ENGRD 127.

**M&AE 212(2120) Mechanical Properties and Selection of Engineering Materials**
Spring. 3 credits. Prerequisites: ENGRD/ T&AM 202 (Statics) with minimum of C (strictly enforced). Software fee. Mechanics of deformable bodies and a reinforcement of the concept of "simple engineering elements" for mechanical analysis associated with design. Introduction to the broad range of properties and behavior of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue and environmental effects are developed. A general introduction to the function/constraints/objectives approach to material selection associated with mechanical design is provided with candidate material systems coming from metals, polymers, ceramics and/or composites. A general overview of material processing is presented within this context of material selection.

**M&AE 221(2210) Thermodynamics**
(also ENGRD 221[2210])
Fall, spring, may be offered in summer. 3 credits. Prerequisite: ENGRD 202, MATH 192 and PHYS 112 or permission of instructor. For description, see ENGRD 221.

**M&AE 225(2250) Mechanical Synthesis**
Spring. 4 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGRD 203 and 221. Lab fee.

**Hands-on introduction to the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical dissection used to demonstrate successful product design and function. Basic instruction on CAD and technical sketching.**

**M&AE 305(3050) Introduction to Aeronautics**
Fall. 3 credits. Prerequisite: T&AM/ENGRD 203; upper-class engineers or permission of instructor. Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft. Analysis of aerodynamic performance, stability, and control.

**M&AE 306(3060) Spacecraft Engineering**
Spring. 3 credits. Prerequisite: junior or senior M&AE or ECE students or permission of instructor.

Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

**M&AE 312(3120) Mechanical Properties of Materials, Processing, and Design**
(also M&AE 402[4020], 582[5820])
Fall. 4 credits. For description, see M&AE 402.

**M&AE 313(3130) Atomic and Molecular Structure of Matter**
(also M&AE 206[2060], M&AE 581[5810])
Fall. 4 credits. For description, see M&AE 206.

**M&AE 323(3230) Introductory Fluid Mechanics**
Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202 and T&AM 202. Pre- or corequisites: ENGRD 203 and permission of instructor. Limited to ME majors and those officially registered for the ME minor.

Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

**M&AE 324(3240) Heat Transfer**
Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Topics include discussion of steady and unsteady heat conduction; forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boiling.

**M&AE 325(3250) Analysis of Mechanical and Aerospace Structures**
Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 202 and M&AE 212.

Topics in mechanics of materials applied to analysis and design of structural components encountered in mechanical and aerospace systems, including multiaxial stress states, statically indeterminate structures, torsion and bending of nonsymmetric or curved members, stability and stress concentrations. Solution strategies include both analytical and finite element methods.

**M&AE 326(3260) System Dynamics**
Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibration systems and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.
Addresses, at a technical level, broader through the study of individual cases such as traditional engineering or physics curriculum. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; diodes; transistors; MOSFETs and power amplification; pulse width modulation; transduction; mechanical and electronic-thermal devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming.

Lab experiments simulate the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

**M&AE 400(4001) Components and Systems: Engineering in a Social Context**

Spring. 3 credits. Prerequisites: upper-class standing, two years of college physics. Offered alternate years.

Addresses, at a technical level, broader questions that are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transportation, and the automobile and its effect on the environment, the course investigates interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 523.

**M&AE 425(4251) FSAE Automotive Design Project**

Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders. Prerequisite: M&AE 428 or ECE juniors and seniors or permission of instructor. Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams to design and build an automobile. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

**M&AE 427(4272) Fluids/Heat Transfer Laboratory**

Fall. 3 credits. Fulfills technical-writing requirement. Prerequisites: M&AE 323, 324. Laboratory exercises in fluid mechanics and the thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, airfoil stall, flow visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

**M&AE 428(4280) Seminar on Engineering Design**

Fall. 2 credits. Prerequisite: senior standing or permission of instructor. This course is offered to illustrate and practice the design process. It consists of formal lectures and invited seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermofluid processes, manufacturing, energy, mechanical design, aeronautics, and biological sciences. The invited lectures are supplemented by one or more design "projects" in the semester.

**M&AE 429(4291) Supervised Senior Design Experience**

Fall, spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing or permission of instructor; taken concurrently or after M&AE 428. Letter grades only.

Substantial design experience based on the knowledge and skills acquired in earlier coursework and incorporating engineering standards and realistic constraints that include most of the following considerations: economic; environmental; sustainability; manufacturability; safety and reliability; social, and political. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as "Senior Design Elective" (M&AE 460, 466, 425, 447, 470, 471) directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

**M&AE 449(4490) Combustion Engines and Fuel Cells**

Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323. Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion, knock. Formation and control of undesirable exhaust emissions.

**M&AE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes**

Fall, 3 credits. Fulfills technical elective requirement for M&AE students. Prerequisite: Heat and Mass Transfer (M&AE 453), Biomedical Engineering: Applications to Biomedical Processes, or CHEM 324, Heat Transfer, or equivalent. For description, see BEE 453.

**M&AE 455(4550) Introduction to Composite Materials**

Spring. 3 credits. Limited enrollment. Prerequisite: enrollment open to upper-class engineers or permission of instructor. Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft
and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated. Co-meets with M&AE 577.

M&AE 478(4780) Feedback Control Systems (also CHEM 472(4720), ECE 472(4720))
Fall. 3 credits. Prerequisites: CHEM E 372 or M&AE 326 or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with M&AE 578.

M&AE 479(4791) Modeling and Simulation of Mechanical and Aerospace Systems
Fall. 4 credits. Variable. Limited enrollment. Prerequisite: seniors in engineering or permission of instructor. Evening exams. F. Valero-Cuevas. Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB or Mathemtica) and special-purpose simulation software (such as Simulink). Selected applications from diverse fields. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 579.

M&AE 486(4861) Automotive Engineering
Fall. 3 credits. Prerequisites: ENGRD 202 or permission of instructor.
Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

M&AE 490(4900) Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. 4 variable credits. Prerequisite: undergraduate standing and permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 498(4980) Teaching Experience in Mechanical Engineering
Fall, spring. 3 credits. Prerequisite: permission of instructor.
Students serve as teaching assistants in Cornell mechanical engineering classes or in local middle school technology classes. Cannot be used to fulfill M.E. technical elective requirement but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor.

M&AE 500(5000) Components and Systems: Engineering in a Social Context
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Offered alternate years. Co-meets with M&AE 400. For description, see M&AE 400.

M&AE 501(5010) Future Energy Systems
Spring. 3 credits. Prerequisites: ENGRD 221 (Thermodynamics) or equivalent. Recommended: M&AE 323 (Introductory Fluid Mechanics), M&AE 324 (Heat Transfer), or equivalents; open to graduate or senior standing or permission of instructor.
Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear and lower-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

M&AE 506(5060) Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&AE 323 (Introductory Fluid Mechanics) and 305 (Introduction to Fluid Dynamics). Offered alternate years; not offered 2006-2007.

M&AE 507(5070) Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 305 (Introduction to Aeronautics) and M&AE 323 (Introductory Fluid Dynamics) and M&AE 326 (System Dynamics), concurrently or permission of instructor. Offered alternate years.

M&AE 512(5120) Mechanical Properties of Thin Films (also MS&E 512(5120))
Spring. 3 credits. For description, see MS&E 512.

M&AE 514(5140) Design for Manufacture and Assembly
Fall or spring. 3 credits. Prerequisites: two and a half years of engineering mathematics through probability and statistics; some knowledge of mechanical design and manufacturing; good visualization and sketching skills; some experience with MATLAB and a CAD system; or permission of instructor. Not offered 2006-2007.
Nominal DFMA (design for manufacture and assembly) and variational DFMA are covered in two parallel streams. The nominal
stream is based on readings in a popular text that surveys the role of manufacturing and assembly processes in part and product design. The second stream, covered mainly through lectures, addresses dimensional variability and its control through parametric and geometric tolerances, dimensional metrology, and statistical quality and process control.

M&AE 517(5170) Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits. Graduate version of M&AE 417. Co-meets with M&AE 417. For description, see M&AE 417.

M&AE 520(5200) Dimensional Tolerances in Mechanical Design
Fall. Spring. 3 credits. Seven-week half term. Prerequisites: M&AE 225 or an equivalent CAD-based design course, plus 2.5 years of engineering mathematics through probability and statistics. Engineers use dimensional tolerances to limit variations in the spatial properties of mechanical parts and assemblies; the primary constraints are interchangeability in assembly, functional performance, and cost. The course covers traditional limit and statistical tolerances and contemporary geometric tolerances. Students learn how to interpret modern tolerances, assign tolerance values in simple applications, and assess the limitations and probable future directions of tolerancing technology.

M&AE 521(5210) Theory of Linear Fluid Systems (also ECE 521[5210])
Fall. 3 credits. Prerequisites: M&AE 326, ECE 520 (may be taken as a corequisite), or permission of instructor; a strong background in linear algebra at the level of MATH 294, and the ability to solve differential equations at the level of MATH 293 is required. For description, see ECE 521.

M&AE 523(5230) Intermediate Fluid Dynamics
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Intended for M.Eng. students who wish to take a single fluid dynamics course. The course includes an introduction to fluid mechanics at the level of MATH 294, and the ability to solve differential equations at the level of MATH 293 is required. For description, see M&AE 423.

M&AE 524(5240) Physics of Micro- and Nanoscale Fluid Mechanics (also CHEM 524[5240])
Fall. 3 credits. Prerequisites: undergraduate fluid or continuum mechanics (e.g., M&AE 323) or permission of instructor. Co-meets with M&AE 424. For description, see M&AE 423.

M&AE 543(5430) Combustion Processes
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. An introduction to combustion and flame processes, with an emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex combustion systems, turbulent flames, fuel cells, or combustion of solids.

M&AE 545(5450) Energy Seminar I (also ECE 587[5870], NS&E 545[5450])
Fall. 1credit.
For description, see ECE 587.

M&AE 546(5460) Energy Seminar II (also ECE 588[5880])
Spring. 1 credit.
For description, see ECE 588.

M&AE 555(5550) Biomechanical Systems—Analysis and Design (also BME 556[5560])
Spring. 3 or 4 credits. Prerequisites: undergraduate courses in dynamics and strength of materials (e.g., ENGRD 202 and ENGRD 203), senior or graduate standing or permission of instructor. Mechanics and design in musculoskeletal systems. Emphasizes the modeling and analysis of human skeletal systems. Students learn how to interpret modern tolerances, assign tolerance values in simple applications, and assess the limitations and probable future directions of tolerancing technology.

M&AE 570(5700) Finite Element Analysis for Mechanical and Aerospace Design
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evenings. Term project. Graduate version of M&AE 470. Co-meets with M&AE 470. For description, see M&AE 470.

M&AE 571(5710) Applied Dynamics
Fall. 3 credits. Prerequisites: graduate standing, seniors with ENGRD/T&AM 203, M&AE 326 or permission of instructor. Introduces multi-body dynamics, dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Johnson methods), and applications to robotics, space dynamics of satellites, electro-mechanical systems. Introduction to multibody simulation using Working Model.

M&AE 577(5770) Engineering Vibrations
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Co-meets with M&AE 477. For description, see M&AE 477.

M&AE 579(5780) Feedback Control Systems
Fall. 4 credits. Graduate version of M&AE 478. For description, see M&AE 478.

M&AE 591(5910) Applied Systems Engineering (also CEE 504[5040], CIS 504[5040], ECE 512[5120], OR&IE 512[5120], SYSEN 510[5100])
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by course instructor. For description, see SYSEN 510.

M&AE 592(5920) Systems Architecture, Behavior, and Optimization (also CEE 505[5050], COMP S 505[5050], ECE 513[5130], OR&IE 513[5142], SYSEN 520[5200])
Spring. 3 credits. Prerequisites: senior or graduate standing and completion of Applied Systems Engineering 1 (CEE 504, CIS 504, ECE 512, OR&IE 512, M&AE 591, or SYSEN 510) or permission of instructor. For description, see SYSEN 520.

M&AE 593(5930) Systems Engineering for the Design and Operation of Reliable Systems
Fall. 3 credits. Prerequisites: M&AE 591 and either OR&IE 270 or CEE 304. For description, see SYSEN 530.

M&AE 594(5949) Enterprise Engineering Colloquium (also OR&IE 893-894[893-894])
Fall, Spring. 1 credit each semester. Usually 3-6 credits. For description, see OR&IE 893-894.

M&AE 601(6010) Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow; tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

M&AE 602(6020) Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: M&AE 601. Analysis and discussion of a wide range of specific flows and flow phenomena characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory, and Kelvin's impulse are included. Laminar viscous flows are studied, including fully turbulent flows, "exact" solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed. Finally, certain low-Reynolds number flows associated with creeping motions or with ultra-small scale are described.

M&AE 606(6060) Spacecraft Dynamics and Mission Design
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 294 is required. Introduction to spacecraft dynamics and MATLAB is expected.
The focus is on spacecraft dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also, introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data. Students will evolve their own MATLAB models of spacecraft linear and nonlinear dynamics.

[M&AE 608(6080) Physics of Fluids] Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; not offered 2006–2007.
Behavior of an ideal gas is considered at the microscopic level. Introduction to kinetic theory—the velocity distribution function, molecular collisions, and Boltzmann equation; to quantum theory—postulates of quantum mechanics, rigid rotor, harmonic oscillator, one-electron and multi-electron atoms and molecular structure; and to statistical mechanics (the partition function, relation to thermodynamics, calculations of thermodynamic properties.)

[M&AE 624(6240) Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer] Fall. 4 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., M&AE 323) or permission of instructor. Graduate version of M&AE 524. Co-meets with M&AE 524. For description, see M&AE 524.

Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

Covers turbulent transport of suspensions of microstructures: (1) particulates; (2) drops; and (3) polymer molecules. Topics include transport relevant to individual microstructures, statistical averaging and the closure problem, Euler/Lagrangean methods, multiphase transport equations, direct numerical simulation and large-eddy simulation. This course emphasizes fundamental questions concerning modeling of discrete phases by continuum means.

Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736 but is more applications oriented and uses commercial software for all computational exercises.

[M&AE 643(6430) Computational Combustion] Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; not offered 2006–2007. S. B. Pope.
Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational (Chaplin and Fluent) to calculate flame properties, which are compared to experimental data. Topics include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of M&AE 543, Combustion Processes, is useful but not required.

[M&AE 645(6450) Turbulent Reactive Flow] Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Large turbulent reactive flows occur in combustion devices in the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basic processes and governing equations, experimental techniques and observations, and a range of modeling approaches. Class meets, on average, twice per week.

[M&AE 650(6500) Evolutionary Computation and Design Automation (also COM S/CIS 750(7500)] Fall. 4 credits. Not offered every year. For description, see COM S 750.

[M&AE 651(6510) Conduction and Radiation Heat Transfer] Fall, weeks 1–7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor.
An intermediate treatment of heat conduction and thermal radiation. The conductive transport equation; steady, transient, and some multidimensional conduction, the radiative transport equation, view factors and radiant exchange between surfaces and volumes. At the level of, but extends beyond, Heat Transfer by Bejan.

[M&AE 652(6520) Convection Heat Transfer] Fall, weeks 8–14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor.

[M&AE 655(6550) Composite Materials (also T&AM 655(6550), MS&E 655(6550) Spring] 4 credits. For description, see T&AM 655.

[M&AE 656(6560) Nanoscale Energy Transport and Conversion] Spring. 4 credits. Prerequisite: undergraduate heat transfer recommended (e.g., M&AE 324) or permission of instructor. Offered alternate years. This course aims to provide a detailed look at thermal, electrical, and optical energy transport and conversion mechanisms at the nanoscale. Topics to be covered include: a brief review of macroscopic heat transfer with emphasis on limits of macroscopic models, microscopic picture of energy carriers, material waves, energy quantization and energy states in solids, statistical thermodynamics and probability distribution functions as related to thermal energy storage, energy transport by waves and material particle descriptions of transport processes and energy conversion and exchange processes between carriers. Emphasis will be put on practical applications and nanoelectronic principles including heat transfer in nanoelectronics, nanophotonic and nanofluidic devices and nanostructured energy conversion devices.

[M&AE 663(6630) Neural Control (also BME 663(6630)] Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years; not offered 2006–2007. F. Valero-Cuevas.
Advanced topics in modeling and simulation of biophysical systems using mechanics, dynamics, and control principles. Review of current literature on neuromuscular principles of control of vertebrate, posture, locomotion, and manipulation. Mathematical representation of the functional interactions among neurons, muscles, and skeletal structures. Numerical prediction of force and movement in biological systems, and projects exploring muscle coordination using numerical and optimization methods. Project-based investigation of basic science and clinically relevant topics.

[M&AE 664(6640) Mechanics of Bone (also BME 664(6640)] Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; not offered 2006–2007.
Covers current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.
Special lectures by faculty members on topics of current research.

M&AE 711(7110) X-Ray Diffraction
Methods for Engineering Materials
Fall. 4 credits. Prerequisites: graduate standing or permission of instructor.
We develop a general understanding of diffraction methods employed for
understanding the state of crystalline materials. The focus will be on x-ray diffraction and the
determination of crystal orientation and lattice strains. We conduct diffraction experiments
at the CCMR x-ray facility and exploit synchrotron x-ray data. We develop MATLAB-
based methods for reducing diffraction data and extracting distributions of orientation and
lattice strain.

M&AE 712(7120) Mechanics of Materials
with Oriented Microstructures
Spring. 4 credits. Prerequisites: T&AM 665 or equivalents. Offered alternate years.
The focus of this course is the evaluation of mechanical properties from knowledge of the
material microstructure; with attention to anisotropic elastic and plastic behaviors.
Topics include micromechanical preliminaries, mathematical foundations of
orientations, including parameterizations, symmetries, and fibers; construction and
sampling of orientation distributions; and hypotheses used to link macro and micro
length scales; methods for evaluation of effective elastic and plastic moduli;
evolution of orientations and orientation distributions with deformation. Applications
to polycrystalline solids (metal alloys and
minerals), composite materials. biomaterials
(soft tissues), and polymers.

M&AE 714(7140) Computational
Sensors: Information Technologies for Complex Continuum Systems
Fall. 4 credits. Prerequisites: exposure to computational mathematics. Not offered
Examples of industrial control of continuum systems; mathematical preliminaries; data-driven inverse problems; data mining and
knowledge discovery in continuum systems; Bayesian computational methods; robust
control; model reduction; uncertainty modeling and stochastic optimization; Sensors and sensor-networks.

M&AE 715(7150) Atomic Modeling of
Materials
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Intended for engineering students with interests in the simulation of materials at the
atomic scale using academic and commercial software. Emphasis is given to models of
intramolecular forces from Lennard-Jones models to self-consistent-electron solution of the quantum mechanical problem. Specific topics include:
energy models, density functional theory and the total-energy pseudopotential
method, Monte Carlo and molecular dynamics simulations, free energy and phase transitions,
fluctuations and transport properties, first-principles MD, Ab-initio thermodynamics and
structure prediction, coarse-graining methods and mesoscale models. The course
includes advanced applications of materials to nanotechnology. The material covered is
self-contained, but an earlier exposure to an undergraduate quantum mechanics, physical
chemistry or modern physics course is desirable.

M&AE 733(7330) Stability of Fluid Flow
Fall, on demand. 4 credits. Prerequisite: graduate standing or permission of instructor. S-U grades only. Not offered
Basic stability and bifurcation theory in fluid systems. The initial boundary value problem.
"Open" flow systems: inviscid Kelvin-Helmholtz and Rayleigh-Taylor instability.
Stability of nearly parallel flows and boundary layers. Spatial development of
linearly unstable motion: "absolute" and "convective" instability. Thermal,
double-diffusive, and related instabilities. Post-bifurcation behavior—
the Ginzburg-Landau (Stewartson-Stuart) and Davey-Hocking-Stewartson amplitude equations. Phase
dynamics and pattern formation. Additional topics chosen from the following possibilities.
Stability of periodic motion: Floquet theory. Secondary instabilities: Eckhaus instability,
Instability of concentrated vortex flows. Transient growth. Boundary layer receptivity.

M&AE 734(7340) Analysis of Turbulent Flows
Spring. 4 credits. Prerequisites: M&AE 601 Foundations of Fluid Dynamics and Aerodynamics or permission of instructor.
Offered alternate years. Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations and
the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation. Transported scalars. Probability density functions (pdfs); transport equations, relation to second-order closures.
stochastic modeling, and the Langevin equation. Large-eddy simulations: filtered and residual motions, Smagorinsky, and dynamic models. This course emphasizes comparison
of theory with experiment.

M&AE 736(7360) Theory of Computational Aerodynamics
Fall. 4 credits. Prerequisites: graduate standing, advanced course in continuum mechanics or fluid mechanics, and some
higher-level (e.g., FORTRAN, MATLAB) programming experience. Not offered
Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems,
including finite-difference, finite-volume, and surface-singularity methods. Accuracy,
convergence, and stability; treatment of boundary conditions and grid generation.
Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic
(steady transonic flow) problems. Assignments require programming a digital computer.

M & AE 737(7370) Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing, advanced course in continuum mechanics, heat transfer, or fluid
mechanics; and some MATLAB, C++, or other programming experience. Numerical methods are developed for the
eelliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability,
convergence, and conservation. Current methods are reviewed. Emphasis is on steady
and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

M&AE 791(7910) Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each semester. For graduate students involved in research projects. S-U grading only. Presentations on research in progress by faculty and students.

M&AE 799(7999) Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each semester; credit limited to graduate students. All students and staff are required to attend. Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&AE 890(8900) Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AE 990(9900) Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING
Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NS&E 484(4840) Introduction to Controlled Fusion: Principles and Technology (also A&EP/ECE 484[4840], M&AE 459[4590])
Spring. 3 credits. Prerequisites: PHYS 112, 211, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. D. A. Hammer. Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include fuels and conditions required for fusion power, and basic fusion-reactor concepts, fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertiail confinement fusion-reactor designs.

NS&E 545(5450) Energy Seminar (also ECE 587[5870], M&AE 545[5450])
Fall. 1 credit. May be taken for credit both semesters. D. A. Hammer. For description, see ECE 587.

NS&E 590(5900) Independent Study
Fall, spring. 1–4 credits. Letter or S-U grading only. Independent study or project under guidance of a faculty member.

NS&E 591(5910) Project
Fall, spring. 1–6 credits. Staff. Master of engineering or other project under guidance of a faculty member.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&IE 311(3100) Information Systems and Analysis
Spring. 4 credits. Prerequisites: MATH 111 or 112; CEE 401; or CS 111. An introduction to systematic techniques for computer information systems. Special emphasis is placed on the design of data bases. Programming techniques are emphasized. Applications are from a wide variety of areas. A. Lewis, M. Lewis, W. L. Maxwell, J. A. Muckstadt, N. Mahinoub, Trotter, S. T. Resnick, R. Roundy, D. Ruppert, P. Rusmevichientong, G. Samorodnitsky, D. Shmoys, E. Tardos, M. J. Todd, H. Topaloglu, L. E. Trotter, Jr., B. W. Turnbull, S. Weber, D. P. Williamson

OR&IE 312(3120) Industrial Data and Systems Analysis
Spring. 4 credits. Prerequisite: ENGRD 270. Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural programming (Visual Basic), and geographical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factory scheduling, optimization, materials planning, cost estimation, inventory planning, and quality engineering.

OR&IE 320(3300) Optimization I
Fall. 4 credits. Prerequisite: MATH 221 or 294. Introduction to optimization of linear programs and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. OR&IE 3320 is a prerequisite for most graduate courses in operations research.

OR&IE 321(3310) Optimization II
Spring. 4 credits. Prerequisite: OR&IE 3300 or equivalent. A variety of optimization methods stressing examples of linear programming and its applications. OR&IE 3320 is a prerequisite for most graduate courses in operations research.

OR&IE 350(3510) Financial and Managerial Accounting
Fall and spring. 4 credits. Covers topics such as financial and managerial accounting in the context of business, industry, and government. Specific topics include financial statements, accounting principles, budgeting, cost-volume-profit analysis, and capital budgeting. OR&IE 350 is a prerequisite for most graduate courses in operations research.

OR&IE 360(3500) Engineering Probability and Statistics II
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. A rigorous foundation in the methods for modeling, analyzing, and controlling randomness in engineering problems. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, and binomial. Hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&IE 431(4350) Introductory Engineering Stochastic Processes I
Spring. 4 credits. Prerequisite: OR&IE 350 or equivalent. Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

OR&IE 416(4100) Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: senior OR&IE students or permission of instructor. Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisors are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

OR&IE 431(4350) Discrete Models
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211 or permission of instructor. Not offered 2006–2007. Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

OR&IE 432(4320) Nonlinear Optimization
Spring. 4 credits. Prerequisite: OR&IE 320. Introduction to the practical and theoretical aspects of nonlinear optimization. Gives attention to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming and network optimization. A variety of optimization methods stressing examples of linear programming and its applications is considered. The simplex method and other methods are used to solve linear programming problems. OR&IE 3320 is a prerequisite for most graduate courses in operations research.

OR&IE 433(4300) Optimization Modeling
Spring. 3 credits. Prerequisite: at least B– in OR&IE 521/521. Not offered 2006–2007. Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Models involving students are
required to assimilate articles from the professional literature and to master relevant software.

**OR&IE 435(4350) Introduction to Game Theory**

Fall. 4 credits.

Broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**OR&IE 436(4360) A Mathematical Examination of Fair Representation**

Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. Not offered 2006–2007.

Covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. Indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to other realms where indivisible resources are to be allocated among competing constituencies.

**OR&IE 451(4150) Economic Analysis of Engineering Systems**

Spring. 4 credits. Prerequisites: OR&IE 320 and 350.

Topics include financial planning, including cash-flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

**OR&IE 452(4152) Entrepreneurship for Engineers (also M&AE/ENGR 461(4161))**

Fall. 3 credits. Prerequisite: upper-class engineers or permission of instructor. For description see M&AE 461.

**OR&IE 453(4154) Revenue Management**

Fall. 3 credits. Prerequisites: OR&IE 320 and 360, or permission of instructor.

Covers revenue management concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand uncensoring; overbooking and optimization with emphasis on stochastic models of demand, benefit measurement; computational and technological issues; bid-prices and dynamic programming techniques; examples from the airlines, hotels, car-rental agencies, restaurants, and other industries.

**OR&IE 462(4520) Introductory Engineering Stochastic Processes II**

Spring. 3 credits. Prerequisite: OR&IE 361 or equivalent. Not offered 2006–2007.

Topics include stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**OR&IE 464(4540) Extreme Value Analysis with Applications to Finance and Data Communications**

Spring. 3 credits. Prerequisites: undergraduate and M.Eng. students; stochastic processes course at level of OR&IE 361; statistics course. Not offered 2006–2007. Covers the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The course material intersects the related field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.

Spring. 3 credits. Prerequisites: engineering math through MATH 294 and ENGRD 270 and OR&IE 360. No previous knowledge of finance required.

Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys assets returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINITAB, and SAS for computation.

**OR&IE 474(4740) Statistical Data Mining I**

Fall. 4 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent; or permission of instructor.

Examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

**OR&IE 476(4710) Applied Linear Statistical Models**

Topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480(4800) Information Technology**

Fall. 4 credits. Pre- or corequisites: COM S/ENGRD 211, plus either OR&IE 311 or 312. This course covers a variety of fundamental aspects of information technology. Topics may include: information transmission, storage, encryption and security; the value of information and the economics of information goods; databases, the Internet, World Wide Web, wireless and cellular networks, and peer-to-peer networks.

**OR&IE 481(4810) Delivering OR Solutions with Information Technology**

Spring. 3 credits. Prerequisite: OR&IE 480. Study of ways information technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Several actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

**OR&IE 483(4850) Applications of OR to Information Technology**

Spring. 3 credits. Prerequisites: OR&IE 321, 361, or permission of instructor. Not offered 2006–2007.

Covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, network routing and congestion control, online auctions, and trust and reputations in electronic interactions.

**OR&IE 490(4990) Teaching in OR&IE**

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Involves working as a TA in an OR&IE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

**OR&IE 499(4999) OR&IE Project**

Fall, spring. Variable credit. Prerequisite: permission of instructor.

Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

**OR&IE 512(5140) Applied Systems Engineering (also CEE/CIS 504/5040, ECE 512/5120, M&E 591/5910)**

Fall. 3 credits. Prerequisite: permission of instructor.

For description, see SYSEN 510.

**OR&IE 513(5142) Systems Analysis Architecture, Behavior, and Optimization (also CEE/CIS 505/5050, ECE 513/5130, M&E 592/5920)**

Spring. 3 credits. Prerequisites: CEE/CIS 504, ECE/OR&IE 512, or M&E 592. For description, see SYSEN 520.

**OR&IE 515(5100) Design of Manufacturing Systems**

Fall. 4 credits. Prerequisite: graduate students in engineering and business school; permission of instructor.

For description, see OR&IE 416.

**OR&IE 516(5110) Case Studies**

Fall. 1 credit. Prerequisite: M.Eng. students in OR&IE.

Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.
ORIE 518(5128) Supply Chain Management
Spring. 3 credits. Prerequisites: one of the following: ORIE 312, 416, or 562. A supply chain is the scope of activities that convert raw materials (e.g., wheat) to finished products delivered to the end consumer (e.g., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, re-engineering. Covers the relationship between a number of cases that drive the company's strategic position relative to its clients and its competition. Consider dimensions of inter-organizational partners, including decision-making, incentives, and risk.

ORIE 519(5130) Service System Modeling and Design
Spring. 3 credits. Prerequisites: ORIE 320, 321, 360; 361; ability to program simple algorithms in some appropriate environment (e.g., VisualBasic or MATLAB). Recommended: ORIE 580. No programming experience by permission of instructor. Today's economy is dominated by service industries. These systems differ from manufacturing systems in many ways, but primarily in the level of interaction with the customer. Examples of service systems include contact centers (a.k.a. call centers), airlines, and hospitals. This course covers various techniques that are useful in the analysis and design of such systems. It is structured around a number of cases that drive the need for the theory. The emphasis is on modeling and solving the models. Both operational and strategic decisions are covered through appropriate examples.

ORIE 520(5300) Operations Research I: Optimization I
For description, see ORIE 320.

ORIE 521(5310) Optimization II
For description, see ORIE 321.

ORIE 522(5311) Operations Research I: Topics in Linear Optimization
Spring. 1 credit. Prerequisite: M.Eng. students. No credit for ORIE 520. Not open to students who have already taken ORIE 321 or 521.

ORIE 523(5514) Operations Research II: Introduction to Stochastic Processes I
For description, see ORIE 361.

ORIE 525(5120) Production Planning and Scheduling Theory and Practice
Topics include production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus is on setup time as a determinant of plans and schedules.

ORIE 526-529(5190-5191) Selected Topics in Applied Operations Research
Fall, spring. Prerequisites: ORIE 361 and ENGRD 270 or permission of instructor. Current topics dealing with applications of operations research.

ORIE 533(5340) Heuristic Methods for Optimization (also CEE 509/5090, COM S/CIS 572/5720)
Fall. 3 or 4 credits. Prerequisite: graduate standing or COM S/ENGRD 211, 321 or CE/ENGRD 241 or permission of instructors. For description, see CEE 509.

ORIE 551(5150) Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: ORIE 320 and 350. Lectures concurrent with ORIE 451.

ORIE 558(5560) Computational Methods in Finance
Spring. 3 credits. Prerequisite: ORIE 361 or M.Eng. students. This course covers computational techniques such as binomial trees, solution of PDEs, and Monte Carlo simulation for pricing various instruments such as European and American options, path-dependent options, and bonds. Other computational topics such as delta and gamma hedging, Value at Risk, and portfolio optimization will also be covered. The emphasis will be on implementation.

ORIE 560(5500) Engineering Probability and Statistics II
For description, see ORIE 360.

ORIE 561(5560) Queueing Systems: Theory and Applications
Fall. 3 credits. Prerequisite: ORIE 361 or permission of instructor. Covers basic queueing models, delay and loss systems, finite source, finite capacity, balking, reneging, systems in series and in parallel, FCFS versus LCFS, busy period problems; output; design and control problems; priority systems; queueing networks; the product formula; time sharing; server vacations; and applications to equipment maintenance, computer operations and flexible manufacturing systems.

ORIE 562(5122) Inventory Management
Fall. 3 credits. Prerequisite: ORIE 321, 361, or permission of instructor. Not offered 2006–2007.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

ORIE 563(5550) Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: ORIE 361 and ENGRD 270 or permission of instructor.
The first part of this course treats regression methods to model seasonal and nonseasonal data. After Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

ORIE 564(5520) Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: ORIE 361 or equivalent. Lectures concurrent with ORIE 462. For description, see ORIE 462.

ORIE 565(5960) Applied Financial Engineering
Spring. 4 credits. Project satisfies M.Eng. project requirement. Prerequisite: M.Eng. students.
This course has two components: a sequence of lectures and a project. The lectures are given by the faculty for the course and by invited speakers from the financial industry.

ORIE 566(5540) Extreme Value Analysis with Applications to Finance and Data Communications
Spring. 3 credits. For description, see ORIE 464.

ORIE 567(5620) Credit Risk: Modeling, Valuation, and Management
Spring. 4 credits. Prerequisite: ORIE 361.
Credit risk refers to losses due to changes in the credit quality of a counter party in a financial contract. This course is an introduction to the modeling and valuation of credit risks. Emphasis is on credit derivative instruments used for hedging credit risks, including credit swaps, option spreads, and collateralized debt obligations.

ORIE 568(5600) Financial Engineering with Stochastic Calculus I
Fall. 4 credits. Prerequisite: knowledge of probability at level of ORIE 360.
Introduction to continuous-time models of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Itô formula, the Feynman-Kac formula, and Girsanov transformations.

ORIE 569(5610) Financial Engineering with Stochastic Calculus II
Fall. 4 credits. Prerequisite: ORIE 568.
Building on the foundation established in ORIE 568, this course presents no-arbitrage theories of complete markets, including models for equities, foreign exchange, and fixed-income securities, in relation to the main problems of financial engineering: pricing and hedging of derivative securities, portfolio optimization, and risk management. Other topics include model calibration and incomplete markets.

ORIE 575(4711) Experimental Design
Covers randomization, blocking, sample size determination, factor designs, 2p full and fractional factorials, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.
The project must be approved by an ASE. The development of mathematical models introduces an introduction to a variety of production complexity issues. Approximation algorithms and related polynomial time optimization and machine scheduling, and shop scheduling, including single-machine problems, parallel-Scheduling and sequencing problems, required.

**OR&IE 577(5770) Quality Control**

Fall; 3 credits. Prerequisite: ENGRD 270. Not offered 2006–2007. Covers concepts and methods for process and acceptance control; control charts for variables and attributes, process capability analysis, acceptance sampling, continuous sampling plans, life tests; and use of experimental design and Taguchi methods for off-line control.

**OR&IE 580(4580) Simulation Modeling and Analysis**

Fall; 4 credits. Prerequisite: OR&IE 360 (may be taken concurrently) and computing experience, or permission of instructor.

**OR&IE 597(5940) Systems Engineering Project**

Fall, R grade only; spring, 8 credits. Prerequisite: M.Eng. students enrolled in systems engineering option. Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. The following projects are pre-approved: FSAE, HEV, Robocup Brain. A formal report is required.

**OR&IE 598(5910) Master of Engineering Manufacturing Project**

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students enrolled in manufacturing option. Project course coordinated by Center for Manufacturing Enterprise.

**OR&IE 599(5980) Project**

Fall, R grade only; spring, 5 credits. Prerequisite: M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**OR&IE 625(6335) Scheduling Theory**

Fall, 3 credits. Not offered 2006–2007. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

**OR&IE 626(6122) Advanced Production and Inventory Planning**

Spring, 4 credits. Not offered 2006–2007. Introduction to a variety of production and inventory control planning problems, the development of mathematical models corresponding to these problems, and a study of approaches for finding solutions.

**OR&IE 627(6127) Computational Issues in Large Scale Data-Driven Models**

Fall, 3 credits. Prerequisite: OR&IE 630, 650 and 670. Not offered 2006–2007. Availability of massive datasets such as web logs and point-of-sale transactions raises new modeling and computational issues. This course provides an introduction to this emerging research area. Topics include data-driven models in operation management, asymptotic statistics, uniform convergence of empirical process, and efficient computational methods. There are applications in engineering, economics, and marketing, along with current open research problems.

**OR&IE 629(6350) Foundations of Game Theory and Mechanism Design for Engineering Applications**

Spring, 3 credits. Prerequisite: basic knowledge of operations research at level of OR&IE 630 and 650. No prior knowledge of game theory or computer networks assumed. Not offered 2006–2007. Provides a rigorous foundation for the applications of mechanism design and game theory to problems such as data networks and computer science. The goal is to develop a deep understanding of the fundamental issues that are important in many applications while presenting many current open research problems.

**OR&IE 630(6300) Mathematical Programming I**

Fall, 4 credits. Prerequisites: advanced calculus and elementary linear algebra. Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities; Farkas Lemma; and exploiting special structure in the simplex method and computational implementation.

**OR&IE 631(6310) Mathematical Programming II**

**OR&IE 632(6320) Nonlinear Programming**

Spring, 3 credits. Prerequisite: OR&IE 630. Necessary and sufficient conditions for unconstrained and constrained optimality. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).

**OR&IE 633(6330) Graph Theory and Network Flows**

Spring, 3 credits. Prerequisite: permission of instructor. Not offered 2006–2007. Topics include graph theory and combinatorial optimization. Graphs and Euler tours; connectedness, matching, and coloring; flows in capacity-constrained networks; and maximum flow and minimum cost flow problems.

**OR&IE 634(6334) Combinatorial Optimization**

Spring, 3 credits. Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

**OR&IE 635(6325) Interior-Point Methods for Mathematical Programming**

Fall, 3 credits. Prerequisite: MATHE 411 and OR&IE 630, or permission of instructor. Not offered 2006–2007. Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discusses the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasizes recent mathematical theory and the most modern viewpoints.

**OR&IE 636(6336) Integer Programming**

Fall, 5 credits. Prerequisite: OR&IE 630. Not offered 2006–2007. Topics include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

**OR&IE 637(6327) Semidefinite Programming**

**OR&IE 650(6500) Applied Stochastic Processes**

Fall, 4 credits. Prerequisite: one-semester calculus-based probability course.

Introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

**OR&IE 651(6510) Probability**

Spring, 4 credits. Prerequisite: real analysis at level of MATH 413; one-semester calculus-based probability course. Covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence.
data are presented. MATLAB programming skills are useful.

[ORIE 674(6740)] Statistical Learning Theory and Data Analysis
Fall, 3 credits. Prerequisites: probability course at level of ORIE 651; statistics course at level of ORIE 670.
Provides a thorough grounding in probabilistic and computational methods for statistical data analysis. Covers a subset of the following topics from supervised and unsupervised data mining: the framework of learning. Performance measures and model selection. Methodology, theoretical properties and computational algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.

[ORIE 677(6720)] Sequential Methods in Statistics
Spring, 3 credits. S-U grades only. Not offered 2006–2007. The statistical theory of sequential design and analysis of experiments has many applications, including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. This course covers classical sequential hypothesis tests, Wald’s SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision-theoretic approaches.

[ORIE 679(6780)] Bayesian Statistics and Data Analysis
Spring, 3 credits. Prerequisites: ORIE 670 and some knowledge of measure theoretic probability (e.g., co-registration in ORIE 650). Not offered 2006–2007. Priors, posteriors, Bayes estimators, Bayes factors, credible regions, hierarchical models, computational methods (especially MCMC), empirical Bayes methods, Bayesian robustness. Includes data analysis and MCMC computation in WinBUGS and possibly other languages such as MATLAB.

[ORIE 680(6580)] Simulation
Fall. 3 credits. Prerequisites: experience with probability (e.g., co-registration in ORIE 650) or equivalent, or permission of instructor. Not offered 2006–2007. Introduction to Monte Carlo and discrete-event simulation. Emphasizes underlying theory. Random variate generation, input and output analysis, variance reduction, selection of current research topics.

[ORIE 728-729(7190-7191)] Selected Topics in Applied Operations Research
Fall, spring. Credit TBA. Current research topics dealing with applications of operations research.

[ORIE 738-739(7390-7391)] Selected Topics in Mathematical Programming
Fall, spring. Credit TBA. Current research topics in mathematical programming.

[ORIE 758-759(7590-7591)] Selected Topics in Applied Probability
Fall, spring. Credit TBA. Topics are chosen from current literature and research of the staff.

[ORIE 790(7900)] Special Investigations
Fall, spring. Credit TBA. For individuals or small groups. Study of special topics or problems.

[ORIE 799(9999)] Thesis Research
Fall, spring. 1 credit. Weekly one-and-one-half hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

[ORIE 893-894(9100-9101)] Enterprise Engineering Colloquium (also M &AE 594(5940))
Fall, 3 credits. S-U grades only. Not offered 2006–2007. Meetings on campus take place one afternoon per week with presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

SYSEN 510(510) Applied Systems Engineering (also CEE/COM S 504[5040], ECE/ORIE 512[5120], M &AE 591[5910])
Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) employment (on campus or off) with strong systems design component approved by course instructor. A. R. George, M. Peck, and R. Roundy. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations, and the system life cycle. Students majoring in Systems Engineering enroll in SYSEN 510. Students taking the Option in Systems Engineering enroll in CEE/COM S 504, ECE/ORIE 512, or M &AE 591. Students in Continuing Education enroll in SYSEN 511. Lectures are identical for all versions.

SYSEN 511(5110) Applied Systems Engineering
Fall. 3 credits. Intended for off-campus students. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) employment (on campus or off) with strong systems design component approved by course instructor. Staff. For description, see SYSEN 510.
THEORETICAL AND APPLIED MECHANICS

T&AM 118(1180) Design Integration: DVDs and iPods (also ENGR 118(1180))
Spring. 3 credits. Not offered 2006–2007. Course in Introduction to Engineering series. For description, see ENGR 118.

Fall, spring. 4 credits. Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor. For description, see ENGRD 202.

T&AM 203(2030) Dynamics (also ENGRD 203[2030])
Fall, spring. 3 credits. Prerequisite: T&AM 202, co-registration in MATH 293, or permission of instructor. For description, see ENGRD 203.

Basics in Engineering Mathematics

T&AM 191(1910) Calculus for Engineers (also MATH 191[1910])
Fall. 4 credits. Prerequisite: three years high school mathematics, including trigonometry. For description, see MATH 191.

T&AM 192(1920) Calculus for Engineers (also MATH 192[1920])
Fall, spring. 4 credits. For description, see MATH 192.

T&AM 293(2930) Engineering Mathematics (also MATH 293[2930])
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus knowledge of computer programming equivalent to that taught in COM S 100. For description, see MATH 293.

T&AM 294(2940) Engineering Mathematics (also MATH 294[2940])
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293. For description, see MATH 294.

T&AM 310(3100) Introduction to Applied Mathematics I
Fall, spring. 3 credits. Prerequisites: MATH/T&AM 293 and 294. Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

T&AM 311(3111) Introduction to Applied Mathematics II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken independently of T&AM 310). Not offered 2006–2007; next offered 2007–2008. Introduction to complex variable theory, including Cauchys integral theorem, Method of Residues, conformal mapping. Applications to inversion of transforms.

T&AM 312/512(3120/5120) Introduction to Mathematical Modeling Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken independently of T&AM 310). Next offered 2007–2008. Mathematical modeling of physical and biological systems.

T&AM 610(6100) Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. Intensive course requiring more time than normally available to undergraduates (see T&AM 310–311) but open to exceptionally outstanding undergraduates by permission of instructor. Emphasis is on applications. Course covers linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611(6110) Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis is on applications. Course covers partial differential equations, transform techniques, tensor analysis, and calculus of variations.

T&AM 612(6120) Methods of Applied Mathematics III

T&AM 613(6130) Asymptotics and Perturbation Methods
Spring. 3 credits. Prerequisites: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods) and asymptotic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Also covers regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reducitors, and Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 617(6170) Advanced Mathematical Modeling—Biological and Fluid Dynamics
Spring. 3 credits. Covers the fundamentals of fluid dynamics that rise in biological fluid dynamics such as the motion of the microscopic cells in low Reynolds number flows and unsteady aerodynamics of flapping flight and free falling objects. The topics in fluid dynamics include Stokes flow, propulsion of a beating flagellum and swimming sheets, potential flow, unsteady airfoil theory, reduced model of unsteady forces on a flapping and tumbling object, and computational methods. The current research in biofluids will be discussed in some depth.
Continuum Mechanics

T&AM 455(4550) Introduction to Continuum Mechanics (also CEE 477/4770, M&AE 455(4550), MS&E 555(5550))
Fall. 3 credits. Prerequisite: ENGRD 202.
Topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design, and manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591(5910) Master of Engineering Design Project I
Fall. 3–12 credits, variable.
M. Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 592(5920) Master of Engineering Design Project II
Spring. 3–12 credits, variable.
M. Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 655(6550) Advanced Composite Materials (also CEE 676/6760, M&A/E/MS&E 655(6550))
Spring. 4 credits. T&AM 455/555 not a prerequisite but excellent background.
Topics center around micromechanical and statistical (reliability) aspects of the strength and fatigue of fibrous composites. Topics include Hodgepodge shear-lag models of stress transfer around arrays of fiber breaks; statistical theories of composite failure to forecast reliability; stress distributions around holes and cuts in composite laminates; and compressive strength of composites.

T&AM 663(6630) Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing linear elasticity; tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity; anisotropic and isotropic; basic theories of elastostatics; and boundary-value problems, e.g., plates, St. Venant’s solutions.

T&AM 664(6640) Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 5 or equivalent.
Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, air stress functions; linear viscoelasticity, cracks and dislocations; classical plasticity, thermoelasticity, and three-dimensional elasticity.

T&AM 751(7510) Continuum Mechanics and Thermodynamics
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Course topics include kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752(7520) Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Not offered 2006–2007.
Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems.

T&AM 753(7530) Fracture
Spring. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Not offered 2006–2007.
Fundamentals of linear elastic fracture mechanics; K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral.

T&AM 754(7540) Topics in Continuum Mechanics

T&AM 757(7570) Inelasticity
Spring. 3 credits.
Plasticity: dislocations and slip systems; early experimental observations; torsion and bending of bars; inflation of thick cylinders and spheres, general equations governing yielding, flow and work hardening; solution of general boundary value problems; numerical solutions radial return and the consistent tangent operator. Linear viscoelasticity: simple rheological models; correspondence principle; hereditary integral approach; torsion and bending of bars; inflation of thick cylinders and spheres; solution of general quasi-static boundary value problems; thermoviscoelasticity, wave propagation.

T&AM 759(7590) Boundary Element Methods
Topics include a variety of applications of the boundary element method. Examples are: potential theory, linear elasticity, elastoplasticity, micro and nano-electro-mechanical systems, meshfree boundary methods.

Dynamics and Space Mechanics

T&AM 570(5700) Intermediate Dynamics
Fall. 3 credits.
Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work, Lagrangian mechanics; Hamilton’s principle; small vibration and stability theory. Newtonian-Fulerian mechanics of rigid bodies; and gyroscopes. As time allows, introduction to orbital mechanics and chaos may be offered.

T&AM 578(5780) Nonlinear Dynamics and Chaos
Spring. 3 credits. Prerequisite: T&AM 293 or equivalent.
Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations; phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 761(7610) Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent.
Course topics include review of Lagrangian mechanics, Kane’s equations, Hamilton’s principle; the principle of least action; and related topics from the calculus of variations; Hamilton’s canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory. KAM theory, and Melnikov method.

T&AM 672(6720) Celestial Mechanics
(also ASTRO 579/6579)
Spring. 3 credits.
Course topics include description of orbits; 2-body, 3-body, and n-body, Hill curves, libration points and their stability; capture problems; osculating orbital elements; perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; and secular perturbations, resonances, mechanics of planetary rings.

T&AM 673(6730) Mechanics of the Solar System
(also ASTRO 571/6571)
Spring. 3 credits. Prerequisite: T&AM 578 or equivalent. Not offered 2006–2007.
Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology.

T&AM 768(7680) Elastic Waves in Solids
Fall. 3 credits. Not offered 2006–2007.
Theory and equipment. Forward and Inverse Problems.

T&AM 776(7760) Applied Dynamical Systems (also MATH 717/7170)
Spring. 4 credits.
For description, see MATH 717.

T&AM 796(7960) Mechanics of Terrestrial Locomotion
Spring. 3 credits. Prerequisites: T&AM 570, M&A/E 571, or A+ level understanding of any sophomore or above mechanics course. The energetics and stability of people, other legged animals and robots are studied by mechanical analysis of simple models.

Special Courses, Projects, and Thesis Research

T&AM 491-492(4910-4920) Project in Engineering Science
491, fall; 492, spring. 1–4 credits TBA.
Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800(7960-8000) Topics in Theoretical and Applied Mechanics
Fall. spring. 1–3 credits TBA.
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890(8900) Master’s Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits TBA. S-U grades.

Zipfel, Warren, Ph.D., Cornell U. Assoc. Prof., Biomedical Engineering
**ADMINISTRATION**

Alison G. Power, dean  
J. Ellen Gainor, associate dean  
Terry D. Plater, associate dean  
Sarah S. Hale, assistant dean

Students interested in professional and research master's and doctoral degrees at Cornell pursue their graduate studies through the Graduate School, which administers 96 graduate fields, ranging from aerospace engineering to zoology. Programs leading to degrees in law (J.D.) and law (LL.M.) are administered by Cornell's Law School; the doctor of medicine (M.D.) is administered by Cornell's Weill Medical College in New York City; the doctor of veterinary medicine (D.V.M.) is administered by the College of Veterinary Medicine; and the master of business administration (M.B.A.) is earned through the Johnson Graduate School of Management.

**THE GRADUATE SCHOOL**

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of master of arts, master of science, and doctor of philosophy but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system, the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee, who usually has the primary responsibility for directing the student's thesis or dissertation research.

**REQUIREMENTS FOR ADMISSION**

A successful applicant to the Graduate School must:

1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;
2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be one of the following:

1. a score of at least 213 on the Test of English as a Foreign Language (TOEFL) taken between September 1, 2003, and September 1, 2005. Applicants who take the new four-part TOEFL after September 1, 2005, must meet the following minimum scores: writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.

or

2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

**DEADLINES**

Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available in the application booklet or online at catalog.gradschool.cornell.edu.

**INQUIRIES**

Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available online at catalog.gradschool.cornell.edu.

General questions about graduate study can be directed to Graduate School Student Services, 255-5820, or gradschool@cornell.edu or www.gradschool.cornell.edu or by writing to Graduate School, 143 Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.

**FOR MORE INFORMATION**

Detailed information about the admissions process, academic programs, financial aid, and student services is available at the Graduate School web site, www.gradschool.cornell.edu. The site features links to the Graduate School's online application (apply.gradschool.cornell.edu), printable forms, and links to sites of interest to graduate applicants.
SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION

Michael Johnson, dean
Sheryl E. Kimes, associate dean for academic affairs
Cathy Enz, associate dean of industry research and affairs
Margaret Haley Ferguson, associate dean for business administration
TBA, assistant dean
David Sherwyn, academic director, Center for Hospitality Research
Richard Penner, Richard J. and Monene P. Bradley director for graduate studies
Lisa M. Shaffer, director of student services
Brad Walp, director of enrollment management
Neoma Mullens, associate director of admissions
Molly deRoos, associate director of career management
Walter C. Williams, director of alumni affairs and development
Christine Natsios, director of alumni affairs
Emily Franco, director of Hotel School/Culinary Institute of America Alliance
Timothy J. Durnford, director of information technologies
Dina Kristof, registrar

DEGREE PROGRAMS

Hotel and Restaurant Administration  
B.S. 
M.M.H. 
M.S. 
Ph.D.

FACILITIES

Statler Hall  
Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage management center, a newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jan M. Beck Center, a 35,000-square-foot addition to Statler Hall. This $16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 2,000 videotapes, and more than 600 journals, magazines, newsletters, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including Business Source Premier, Proquest, Hotel Outlook, Mintel Marketing Intelligence, and the Hospitality and Tourism Index, a unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. More detailed information about the Nestlé Library can be found at www.library.hotel.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the Hotel School library provides instruction and research support to every student.

Statler Hotel and J. Willard Marriott Executive Education Center  
The Statler Hotel comprises 153 guest rooms, an executive education center, three restaurants, a lounge, and the university's faculty and staff club. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the local community and campus visitors, including parents and those who visit Cornell as part of the application process. The Statler Hotel provides a unique brand of hospitality that integrates the management theory taught at the Cornell Hotel School with practical expertise of the hotel's professional and student staff. The hotel offers part-time jobs to approximately 200 students each semester with priority given to students in the hotel school. A select group of students participate in the Statler Leadership Development program and earn supervisory and management positions in the hotel.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance/ accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook (available in the Office of Student Services, 180 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduates in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits (note: 120 credits does not include PE courses), as set forth in the table on the following page;
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 121 and 122 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or “Satisfactory” in each (C or above for transfer credit from other institutions); or (d) passing language course level 123 or the equivalent;
4. completion of two units of practice credit;
5. completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the hotel school electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 21-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.
Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 60 credits at Cornell University. In the core, transfer credit may be allowed against basic courses only (e.g., H ADM 121, 106). The communication courses (H ADM 165 and 365) are tailored specifically to the School of Hotel Administration and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer, except from the Culinary Institute of America. Eighteen credits in distributive electives may transfer, and 21 credits in free electives may transfer.

Concentration
While completing the hotel school elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages
Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under “Modern Languages, Literature, and Linguistics” and under “Advanced Placement for Freshmen” in the College of Arts and Sciences section of this catalog.

Independent Study and Research
Students may conduct independent study or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See H ADM 497, 498, 499, 698, or 699 for more details.

Practice Credit Requirement
As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the Student Handbook for Undergraduates in the School of Hotel Administration (available in the Office of Student Services, 180 Statler Hall).

Management-Intern Program
Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493, 494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Study Abroad
All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of this catalog.

The hotel school represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program, to career opportunities throughout the world. To prepare for the global nature of the industry, students should consult the coordinator of foreign language courses, undergraduates in the school may select a concentration.

While completing the hotel school elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493, 494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Concentration
While completing the hotel school elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages
Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under “Modern Languages, Literature, and Linguistics” and under “Advanced Placement for Freshmen” in the College of Arts and Sciences section of this catalog.

Independent Study and Research
Students may conduct independent study or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See H ADM 497, 498, 499, 698, or 699 for more details.

Practice Credit Requirement
As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the Student Handbook for Undergraduates in the School of Hotel Administration (available in the Office of Student Services, 180 Statler Hall).

Management-Intern Program
Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493, 494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Culinary Institute of America Alliance
The School of Hotel Administration has an alliance with the Culinary Institute of America, which is located in Hyde Park, N.Y. Among other opportunities, hotel school juniors and seniors are encouraged to apply for the Culinary Institute of America immersion program in January and during the summer. More information is available in the Office of Student Services, 180 Statler Hall.

Part-Time Study
Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the school’s student handbook.

Grading System
Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals C- or above and an unsatisfactory grade equals D+ or lower.

Students whose semester averages are at least 3.0 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for the Bachelor of Science Degree
Note: The curriculum was revised during the 2003–2004 academic year, and the following requirements are for students entering the program in the fall of 2004 or later. Students who enrolled before the fall of 2004 should check their individual graduation requirements with the Office of Student Services, 180 Statler Hall.

Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each semester, to include the following:

Required courses Credits
H ADM 105 Introduction to Hotel Operations 2
H ADM 106 Introduction to Food Service Operations 2
H ADM 115 Organizational Behavior and Interpersonal Skills 3
H ADM 121 Financial Accounting 3
H ADM 141 Microeconomics for the Service Industries 3
H ADM 165 Managerial Communication I 3
H ADM 174 Microcomputing 3
First-year writing seminar 3
Electives 6

Sophomore Year

Required courses Credits
H ADM 201 Hospitality Quantitative Analysis 3
H ADM 211 Human Resources Management 3
H ADM 221 Managerial Accounting 3
H ADM 222 Finance 3
H ADM 236 Culinary Theory and Practice 4
H ADM 243 Principles of Marketing 3
H ADM 255 Hotel Development and Planning 3
H ADM 275 Introduction to Information Systems Management 3
Electives 6

Junior Year

Required courses Credits
H ADM 301 Service Operations Management 3
H ADM 305 Restaurant Management 4
H ADM 321 Hospitality Financial Management 3
H ADM 355 Hospitality Facilities Operations 3
H ADM 365 Managerial Communication II 3
H ADM 387 Business and Hospitality Law 3
Electives 12

Senior Year

Required courses Credits
H ADM 441 Strategic Management 3
Electives 24

GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Office of Student Services, 180 Statler Hall, 255-6376.

Required Program for Master of Management in Hospitality Degree

Required courses Credits
H ADM 610 Dean's Distinguished Lecture Series 1
H ADM 700 Externship 1
H ADM 703 Operations Management 3
H ADM 711 Organizational Behavior 3
H ADM 712 Human Resources Management 3
H ADM 723 Corporate Finance 3

ORGANIZATIONAL MANAGEMENT, COMMUNICATION, AND LAW

Management and Organizational Behavior

H ADM 110(1110) Distinguished Lectures in Hospitality Management

Fall. 1 credit. Elective. Dean M. Johnson. The Dean's Distinguished Lecture Series is a long-standing hotel school tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

H ADM 115(1115) Organizational Behavior and Interpersonal Skills

Fall and spring. 3 credits. Required. T. Hinkin and K. Walsh.

Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations, and practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Students learn through case studies, self-assessments, experiential exercises, readings, discussions, papers, and group activities.

H ADM 310(3310) Statler Leadership Development Program

Fall and spring. 1 credit. Elective. Prerequisite: one semester (200 hours) of paid employment in Statler Hotel.

The SLDP is a partnership among Hotel School faculty, Statler Hotel management, and industry executives, who together teach and guide students to become tomorrow's leaders. The program enables students to progress through five different paid employment phases in the Statler Hotel, from entry level to student manager. Students who progress to the level of student manager become Statler Fellows and will travel to a major city for an all-expense-paid trip that includes forums with industry leaders, site visits of leading industry facilities, and cultural activities. Each phase requires approximately 200 hours of paid employment. The program is completed through a certification process. Weekly Friday afternoon sessions (2:30–4:00 P.M.) with Statler Hotel managers include discussions, performance reflection, training sessions, and industry tours with hospitality leaders.

H ADM 314(3314) High-Performance Leadership

Explores the nature of leaders and leadership from a variety of perspectives. Discussion of current articles in leadership prepares participants to be thoughtful leaders and discriminating consumers of leadership ideas. Topics include charismatic leadership, leadership characteristics, the exercise of power, symbolic communication, gender challenges, and related themes. Leadership is examined from the individual, small group, and organizational perspectives. Case studies further illustrate the application of course material. Students assess their own leadership style and engage in leadership development activities. Class members have opportunities to interact with hospitality leaders and to gain a better understanding of the dynamics of leadership behavior.

H ADM 410(4410) Hospitality Management Seminar

Fall. 1 credit. Elective. Limited to 30 seniors. Prerequisite: hotel seniors and graduate students. Corequisite: H ADM 110. Preregistered students or students wishing to add course who do not attend first class and fail to notify secretary in 146 Statler Hall.
first class automatically are moved to instructor's waiting list. Students permitted to take course will have until F, Sept. 1, 2006, to add it. Failure to do so will result in their being dropped from course. Dean M. Johnson.

Complements H ADM 110 by giving students the opportunity to interact with guest speakers, and to participate in roundtable discussions on issues relating to the hospitality industry. The dialog can give students a better understanding of industry trends, challenges, and opportunities.

[H ADM 411(4110)] Negotiations in the Hospitality Industry
Spring. 3 credits. Elective. Limited to 30 students. Prerequisites: undergraduate standing; H ADM 115 or equivalent. Not offered 2006–2007.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

[H ADM 414(4414)] Quality Planning in the Hospitality Industry
Spring. 3 credits. Elective. Limited to 25 students. Prerequisites: senior or graduate standing; all required hotel school undergraduate courses at 100, 200, and 300 levels. T. Hinkin.

Covers the analysis of work processes and examines organizations from three perspectives: the external customer, the internal customer, and management. This course is designed to provide students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes. Students learn to use the tools of quality management including cost of quality, flowcharting, statistical process control, and collecting, organizing, and presenting data. A major component of the course is a hands-on, in-person simulation that is conducted as a group activity. This is a seminar course, requiring active participation in discussion of readings and case studies.

[H ADM 415(4415)] Managerial Leadership in the 21st Century
Spring. 1 credit. Elective. Owing to popularity of class, priority is given in following order: seniors/second-semester grads, juniors/first-semester grads, nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up to 1st day, but absolute deadline for dropping course is 12 noon F, Feb. 9. F Feb. 16 (1-8 P.M.), S Feb. 17 (10 A.M.–6 P.M.), Sun. Feb. 18 (10 A.M.–4:30 P.M.), 2007, in Statler Auditorium. Students must be present. Insead mandatory for credit. Fee for required notebook (charged to student's bursar's bill; notebook distributed on first day of class). 535. K. Blanchard.

Helps students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop high-quality relationships between themselves and the people they support and depend upon (their boss, staff, peers, clients, and customers). When high-quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness. The concepts learned also have applications to personal friendships and family relationships. A final paper is due three weeks after the last day of class.

[H ADM 610(6610)] M.M.H. Distinguished Lectures in Hospitality Management
Fall. 1 credit. Required. M.M.H. students only. M. Johnson.

[H ADM 611(6611)] Negotiations in the Hospitality Industry
Spring. 3 credits. Elective. Limited to 30 students. Prerequisites: graduate standing; seniors by permission of instructor; H ADM 710 or equivalent. Not offered 2006–2007. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play, discussion, and writing, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations, and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

[H ADM 614(6614)] High-Performance Leadership

For description, see H ADM 314.

[H ADM 711(7711)] Organizational Behavior
Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. T. Hinkin.

Teaches the basics of how groups, and organizations interact within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal style influences leadership and decision-making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resources Management

H ADM 211(2211) Human Resource Management
Fall, spring. 3 credits. Required. Limited to 60 students per lec. Not open to freshmen or graduate students. Prerequisite: H ADM 115. B. Tracey.

Provides students with a broad yet in-depth overview of the policies, practices, and procedures that can be used to attract, select, develop, and retain quality employees. A number of factors are considered that high-influence HRM policies and practices and provide opportunities to apply course topics to substantive situations that students will face as future hospitality professionals. Lectures, discussions, case studies, and videos.

H ADM 712(7712) Human Resource Management
Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. M. Sturman.

Covers the strategies that enable companies to attract, develop, and retain high-quality employees, focusing on selection, compensation, performance appraisal, and career management. In each of these areas the focus is on the return on the human-resource investment.

Managerial Communication

H ADM 165(1165) Managerial Communication I
Fall. spring. 3 credits. Required. Limited to 18 students per lec. (Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in hotel school, including any semesters in Internal Transfer Division (ITD). Add/drop and see exchange clearance approved by chairperson.) Priority given to hotel students. N. Dahl, L. Arliss, A. Newman, and C. Snow.

Introduction to the role and importance of effective communication in management work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 364(3364) Corporate Communication
Spring. 3 credits. Elective. Limited to 20 students per lec. priority given to hotel students. Prerequisite: junior, senior, or graduate standing; or written permission of instructor; for hotel undergraduates H ADM 165 or waiver; for non-hotel undergraduates, completion of their college's writing requirement. A. Newman.

Focuses on communication in management work, especially in the hospitality industry. Emphasizes the development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 365(3365) Managerial Communication II
Fall, spring. 3 credits. Required. Limited to 22 students per lec. priority given to hotel students. Prerequisites: junior or senior standing; for hotel undergraduates, H ADM 165 and 115. N. Dahl and D. Lennox.

Broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. Presents the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups,
and formally developing and presenting ideas to larger audiences.

H ADM 462(4462) Intercultural Communication in the Hospitality Industry
Spring. 3 credits. Elective. Priority given to hotel students. D. Lennox.
Designed to help managers develop proficiency communicating among and between people who do not share some of their cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures, and the ethics of communication in international business. A blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with emphasis on the service industry.

H ADM 761(7761) M.M.H. Managerial Communication
Fall. 3 credits. Required. Limited to 20 M.M.H. students per sec. D. Lennox, C. Snow, and A. Newman.
Managers use communication strategies that involve written and oral messages to solve problems and accomplish professional goals within the workplace. The chief goal of this course is to help students become competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law

H ADM 305(3305) Business Law I
Fall, spring. 3 credits. Elective. Open to hotel school juniors, seniors, and graduate students and non-hotel students. P. Wagner.
Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students read judicial opinions, learn to identify issues, and analyze the issues by applying legal principles.

H ADM 387(3387) Business and Hospitality Law
Fall, spring. 3 credits. Required. Prerequisite: junior, senior, or graduate standing. D. Sherwyn.
Provides students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Examines relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

H ADM 485(4485) Employment Discrimination Law and Union-Management Relations
Spring. 3 credits. Elective. Prerequisites: junior, senior, or graduate standing. H ADM 387 or permission of instructor. D. Sherwyn.
Anti-discrimination statutes and union-management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course prepares students with an understanding of the discrimination law, a framework for complying with law, a method using the law to maintain positive employment relations, and an understanding of how to negotiate and administer a union contract.

H ADM 487(4487) Real Estate Law
Fall. spring. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Recommended: completion of H ADM 387. A. Klausner.
Provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students learn to recognize and evaluate legal issues to inform the decision-making process with respect to real estate, whether as a business executive, an entrepreneur, or in personal life.

H ADM 490(4490) The Law of the Internet and e-Commerce
Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. A. Klausner.
The Internet has changed how business is done in the hospitality industry. The change has raised numerous legal questions that courts and legislatures are trying to decide on or enact. The purpose of this course is to allow students to identify and understand the rapid developments of the law of e-commerce. Topics include: how the Internet works; consumer protection; privacy; intellectual property (patent, trademark, and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course introduces students to this emerging area of the law and enables them to identify issues so that they can seek counsel intelligently and understand the law as it continues to evolve.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management

H ADM 236(2236) Culinary Theory and Practice
Fall, spring. 4 credits. Required. Prerequisite: H ADM 106. Because this course is laboratory-based, students may not drop after second full week of classes. During first two weeks of classes, students may drop only with permission of instructor and/or academic dean. T. O'Connor and R. Spies.
Introduces the student to food-and-beverage operations through the major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods and to make the proper food preparation decisions. They also are involved in a project where they create menus, develop and standardize recipes, and complete a plan for a dining event. Completion of a five-hour practicum experience in the Statler Hotel back-of-the-house is a required course activity.

H ADM 430(4430) Introduction to Wines
Fall, spring. 2 credits. Elective. Prerequisite: hotel juniors and seniors; students may drop only with permission of instructor and/or academic dean. M. Tabacchi.
Hotel students strongly encouraged to enroll in fall semester. Students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor's records. However, students still must drop course officially with their own college. Because of high demand for this course and because a product is consumed, absolute drop deadline in fall for all students is Sept. 8, 2006, and drop deadline in spring is Feb. 2, 2007. Fee (includes cost of wine glass and tasting kit): $30. No auditors. S. Mutkoski.
Introduction to the major wine-producing regions of the world, and what the consumer needs to know to purchase wine at retail outlets and in a restaurant setting. Core topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wine, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

H ADM 431(4431) Wine and Food Pairing Principles and Promotion
Fall. 2 credits. Elective. Limited to 20 students. Prerequisite: hotel school juniors, seniors, and graduate students; H ADM 490. G. Pezzotti.
Focuses on the pairing and creative marketing of wine and food. The course emphasizes understanding of regional and varietal wine styles, food and wine combinations, and uses food and wine as a promotion tool for the hospitality industry. Wine and food topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurant and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

H ADM 432(4432) Contemporary Healthy Foods
Fall. 3 credits. Elective. Prerequisite: H ADM 305 or equivalent. Priority given to 20 seniors and graduate students; others may enroll, space permitting. Cost of required field trip: $75. M. Tabacchi.
Designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today's health-conscious and educated foodservice patron. Addresses the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

H ADM 434(4434) Creating Pleasurable Dining Experiences
Spring. 3 credits. Elective. Prerequisite: H ADM 305 or permission of instructor. J. LeBel.
This course provides students with the conceptual and analytical tools to better understand the customers' view of the dining experience. We will explore the complexities
of dining behavior and dining experiences such as the phenomenology and psychology of pleasure, the history of dining and celebrity chefs, the importance of context in shaping guests' dining behavior, as well as the role of the media in shaping dining trends. Students will be required to examine restaurants and dining experiences with a critical eye supported by both a theoretical and empirical point of view.

**H ADM 435(4435) Selection, Procurement, and Supply Management**
Fall. first seven weeks of semester. 2 credits. Elective. Limited to 20 students. Prerequisite: hotel school juniors, seniors, and graduate students or permission of instructor. Add/drop deadline Sept. 1, 2006. R. Spies.

Deals with contemporary management issues related to the procurement activities of the hospitality industry. Focuses on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator, and how the creation of distributor partnerships serves to improve efficiency and reduce costs. Topics include distribution of perishable items in the supply chain, food distributor financial statement analysis, evaluation and selection of suppliers, developing buying strategies, purchase timing and inventory management, the emerging role of the Internet, and e-procurement service providers.

**H ADM 436(4436) Beverage Management**
Spring. 3 credits. Elective. Limited to 25 students. Prerequisites: hotel juniors, seniors, and graduate students; H ADM 430 (co-registration not allowed). S. Mutkoski.

Designed for students who intend to pursue food and beverage management as a career. Deals specifically with the management of beverage operations. Lectures cover: dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.

**H ADM 437(4437) Anheuser Busch Seminar in Quality Brewing and Fine Beer**
Fall, spring, first seven weeks of semester. 2 credits. Elective. Prerequisite: H ADM 430; hotel students only. G. Pezzotti.

Designed for upper-level students who intend to pursue food and beverage careers. Serves to advance one's knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlets. Lecture topics include the brewing process, sensory aspects of beer, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues. There is one required local field trip, no fee.

**H ADM 438(4438) Seminar in Culture and Cuisine**
Fall, spring. 3 credits. Elective. Limited to 20 students. Prerequisites: H ADM 236 or permission of instructor. R. Spies.

Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines enabling students to make comparisons and draw relationships among foodways of different cultures. Possible incorporation of each cuisine into restaurant menus is discussed as well. Each student is involved in writing research reports, making oral presentations, and designing and organizing the preparation of menus.

**H ADM 631(6631) Multi-Unit Restaurant Growth Strategies**
Spring. 3 credits. Limited to 15 students. Prerequisite: graduate standing; seniors only by permission of instructor. A. Susskind.

Through a series of directed readings, case studies, and roundtable discussions with industry leaders, this course focuses on the strategic issues in the food and beverage industry that affect the growth and development of multi-unit restaurant companies. In addition to the weekly scheduled seminar time, students are required to attend two additional receptions to honor the roundtable speakers. In class, students critically evaluate selected research papers related to multiunit business management to serve as the basis for class discussion and the fostering of a broader understanding of leadership and growth strategies in the multiunit restaurant business.

**Operations**

**H ADM 105(1105) Introduction to Hotel Operations**
Fall, spring, seven weeks. 2 credits. Required. Prerequisite: hotel or ITD students. Corequisite: H ADM 106. Students enrolled in Lec 1 of H ADM 105 take Lec 1 of H ADM 106 in same semester, and vice versa. R. McCarthy.

Designed to introduce students to the scope of the hotel industry in addition to the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within and between hotel departments.

**H ADM 106(1106) Introduction to Food Service Operations**
Fall, spring. 2 credits. Required. Prerequisite: hotel or ITD students. Corequisite: H ADM 105. Students enrolled in Lec 1 of H ADM 106 take Lec 1 of H ADM 105 in same semester, and vice versa. J. LeBel.

Introduction to the principles of food and beverage management, beginning with an overview of the foodservice industry at large. Attention is focused on major industry segments, business practices, and trends. Subsequently, detailed consideration is given to the components of the foodservice system: marketing, menu planning, logistical support, production, service, and controls and quality assurance. Product and system differentiation in various industry segments are emphasized throughout. Completion of a work experience in the Statler Hotel is a required course activity.

**H ADM 201(2201) Hospitality Quantitative Analysis**
Fall, spring. seven weeks. 3 credits. Required. Prerequisite: hotel or ITD students. R. Lloyd.

Introductory statistics course taught from the perspective of solving problems and making decisions within the hospitality industry. Students learn some introductory probability and how to gather data, evaluate the quality of data, graphically represent data, and apply some fundamental statistical methodology. Statistical methods covered include estimation and hypothesis testing relating to one- and two-sample problems of means, simple linear regression, and multiple regression. Problems involving multiple means (one-way ANOVA) are covered as a special case of multiple regression, time allowing. Minitab is used as the statistical computing software.

**H ADM 301(3301) Service Operations Management**
Fall, spring. 3 credits. Required. Limited to 60 students per lec. Prerequisite: hotel students. Faculty.

Introduces statistical and operations research methods appropriate for the hospitality industry. The goal of the course is to provide students with the skills and understanding necessary for decision making using quantitative data. Students use computer spreadsheet software extensively. A key requirement of the course is an ability to communicate the results of the analyses in a clear manner. Topics include probability, decision analysis, modeling, forecasting, quality management, process design, waiting lines, and project management.

**H ADM 303(3303) Club Management**
Fall, second seven weeks, spring, first seven weeks. 2 credits. Elective. Deadline to drop seven-week course is midpoint of course. Limited to 35 students in fall; open enrollment in spring. Prerequisites for fall: no freshmen; hotel juniors and seniors. R. James.

Study of private membership clubs and the leadership role in club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry and other not-for-profit organizations. Topics include tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and human resource considerations; and marketing, pricing policies, and quality standards.

**H ADM 305(3305) Restaurant Management**
Fall, spring. 4 credits. Required. Limited to 27 students per lab. Prerequisites: hotel students; H ADM 236. Cost of lab manual, certification for alcohol service, utensils for front and back of house: approx. $85. Because this is a group course, absolute deadline to drop course in fall is Sept. 1, 2006, and in spring is Jan. 26, 2007. A. Susskind.

Offers the opportunity to synthesize the skills, concepts, and theories students have learned in other classes and apply them practically in an actual restaurant setting. Lecture topics cover pertinent issues and principles relevant to the industry at large and then, as a class,
the principles are incorporated into actions that occur in the student-run operation.

H ADM 401(4401) Restaurant Entrepreneurship
Fall, spring. 3 credits. Elective. Limited to 20 students. Prerequisites: H ADM 101; hotel students, written permission of instructor. Max. cost of required field trips: $350.
G. Pezzotti.

The catering and special events industries of catering and special events management, events, such as sporting events, artistic events, among the fastest-growing segments of the hospitality industry. This course focuses on the principles learned in the hospitality management.

Analysis considers consumer reaction as observed in actual hotel operations. Upon completion of the course, students are able to evaluate issues and formulate cogent strategies for managing hotel operations.

H ADM 403(4403) Speciality Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Elective. Limited to 20 students. Prerequisites: H ADM 305; hotel juniors, seniors, and graduate students by permission of instructor. G. Pezzotti.

The catering and special events industries are among the fastest-growing segments of the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions, the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include organizational structure, legal aspects of catering and special events management, product and service development, marketing, sales, catering function and special event planning and execution, staff recruitment and training, post-event analysis, financial success of catering, and special events businesses.

H ADM 407(4407) Seminar In Hotel Operations
Spring. 3 credits. Elective. Limited to 40 students. Prerequisite: junior or senior standing. Cost of field trips: approx. $250.

Students develop their leadership abilities through a series of hands-on projects for the Statler and Waldorf-Astoria hotels. They gain experience by identifying the requirements and challenges of a project, creating a plan, and carrying out the leadership responsibilities that will result in others successfully implementing their recommendations. Drawing on their specific knowledge and skills in all the academic disciplines, students gain a broader perspective of the hotel as a business organization. They investigate the combination of human and technical forces that make a hospitality business succeed or fail. Emphasis is on reconciling the real or apparent conflicts between theory, as learned in the students' college courses, and practice, as observed in actual hotel operations. Upon completion of the course, students are able to evaluate issues and formulate cogent strategies for managing hotel operations.

H ADM 408(4408) Introduction to Casino Operations
Fall. 2 credits. Elective. Prerequisite: hotel students. Cost of required field trip to Atlantic City: approx. $250. R. McCarthy.

A vital part of the hospitality industry, casino gaming is one of the most exciting and fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to the internal and external casino environment. It looks at the development of casino gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include casino marketing strategies and player rating systems; the social and economic impact of gaming; and the various environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

H ADM 502(5502) Advanced Hospitality Quantitative Analysis
Spring. 3 credits. Elective. Prerequisite: H ADM 201 or permission of instructor. R. Lloyd.

An applied statistics course designed for professionals working in the hospitality industry. Topics include a thorough review of multiple linear regression, including model-building with partial regression plots and first-order use of categorical predictors and the interpretation of their coefficients, increasingly used to answer questions in finance, marketing, and other managerial areas. Other topics include simple and multiple logistic regression, analysis of variance, test of independence with follow-up analysis, one- and two-factor ANOVA with follow-up analysis, and prediction and forecasting with neural networks, used in operations and revenue management.

H ADM 602(6602) Spa and Spa Hotel Development and Management
Fall, spring. 3 credits. Elective. Limited to 33 students. Prerequisite: hotel seniors and graduate study; meet enrollment, space permitting. Cost of two required field trips: approx. $150. M. Tabacchi.

Focuses on the development, management, and marketing of spas, spas in hotels and resorts, and spa restaurants. DAY spa, resort spa, and destination spas are studied in depth. The feasibility of success for new spas and marketing research necessary to establish new spas is discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, and other spa programs are all considered. Personnel required, safety, legal, and ethical issues regarding spas are an important part of the course. The integration of nutritious menu items into restaurant menus and their marketing and merchandising is studied. Guest speakers from spas are an integral part of the course.

H ADM 605(6605) Yield Management
Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: senior or graduate standing; H ADM 301 or 702 or equivalent.

Yield management involves the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 606(6606) Restaurant Revenue Management
Spring. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 703; graduate standing or permission of instructor. S. Kimes.

Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of yield management effectively. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 609(6609) Airline Service Management
Spring. 3 credits. Elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. $75. M. Tabacchi.

A must for those interested in careers in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in a service economy. The strategies of developing competitive and superior service in today's erratic economic climate is a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service
strategies both on the ground and in the air, and forecasting by these executives are examined. Case studies are used to analyze the performance of airlines and the effectiveness of their strategies, both on the ground and in the air, and their impact on the airline industry and its personnel in the airline's hub city.

A field trip to an airline's hub city enables students to observe first hand the industry and its personnel in action.

H ADM 703(7703) Operations Management
Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. G. Thompson. Based on principles of scientific management, the course gives students the skills and understanding necessary for decision-making using quantitative and qualitative data. Students use computer spreadsheet software extensively for "number-crunching" analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a "tool kit" of sophisticated Excel models for solving service operations problems.

Facilities Management, Planning, and Design

H ADM 255(2255) Hospitality Development and Planning
Fall, spring. 3 credits. Required. Prerequisite: sophomore standing. S. Robson. Introduction to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. The emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 351(3351) Hospitality Facilities Design
Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: H ADM 255 or permission of instructor. R. Penner. This intensive studio course covers the graphic skills important for design and experience in applying these skills in hospitality planning and design situations. Students prepare design projects using both hand drafting and computer-aided design (CAD) software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guestroom suite, lobby, and full-service restaurant or specialty coffee retail outlet.

H ADM 352(3352) Hotel Planning and Interior Design
Spring. 3 credits. Elective. Limited to 24 students. Prerequisites: H ADM 351 or permission of instructor. Cost of required field trip: min. $250; cost of presentation materials. min. $150. R. Penner. Helps students understand how to manage the design process—how to establish the scope of work, contracts, and budgets. Builds on earlier studies to give students experience in planning and designing guestrooms, lobby, food and beverage, function, and fitness spaces. The studio course focuses on a semester-long project, in which student teams prepare the interior design for a fictitious hotel. The class visits a northeastern city, tours the project site and competitive hotels, meets with an architect, and establishes an integrated concept for the hotel. Students design all the interior spaces, evaluating the architectural plan, necessary, lay out furniture and fixtures, select finishes and FF&E, and prepare a full design presentation.

H ADM 355(3355) Hospitality Facilities Operations
Fall, spring. 3 credits. Required. Prerequisite: H ADM 255. D. Zolke. Overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance personnel. Students study the challenge of serving meals and beverages in restaurants. Course components include the planning, design, and implementation of facilities for the hospitality industry. Students study the challenge of serving meals and beverages in restaurants. Course components include the planning, design, and implementation of facilities for the hospitality industry.

H ADM 451(4451) Restaurant Development
Fall. 3 credits. Prerequisites: hotel seniors or graduate students; juniors by permission of instructor; for undergraduates, H ADM 305. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in H ADM 453 in the following spring. S. Robson. Explores students to the process, challenges, and rewards of developing a restaurant concept from the idea to the construction of the first unit. Specific topics include concept creation, market research, creating the delivery process, concept testing and evaluation, restaurant feasibility, site selection, facility programming, and development issues such as licensing, permitting, and construction. Visits from industry address best practices and their own experiences in getting a restaurant concept off the ground. The course includes readings, discussions with industry leaders, and conversations with students and industry professionals.

H ADM 452(4452) Sustainable Development and the Global Hospitality Industry
Fall. 3 credits. Elective. Prerequisite: junior, senior, or graduate standing. Cost of required overnight field trip: approx. $150. D. Stipanuk. Multidimensional course introducing the global sustainability and environmental movements, their impact on the hospitality industry, and responses to and opportunities associated with sustainability. Readings are drawn from the environmental, sustainability, and hospitality literature. Students are expected to prepare for adversarial meetings in the readings and in classroom discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

H ADM 453(4453) Foodservice Facilities Design
Spring. 3 credits. Elective. Limited to 12 students per sec. Prerequisite: H ADM 351, 305, and 451 (other commercial food production experience acceptable) or permission of instructor; hotel seniors; juniors by permission of instructor. S. Robson. Introduction to the basics of foodservice facilities design and planning with an emphasis on restaurants. Students study the challenge of serving meals and beverages in restaurants. Students study the challenge of serving meals and beverages in restaurants. Students study the challenge of serving meals and beverages in restaurants. Students study the challenge of serving meals and beverages in restaurants.

H ADM 457(4457) Hotel Development
Fall. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip: approx. $150. D. Stipanuk. Focuses on the management structure and systems, laws and regulations, and industry practices that most influence the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design construction contracts, the construction process, scheduling, budgeting, and emerging issues and opportunities. Guest speakers present case studies of actual development projects.

H ADM 751(7751) Properties Development and Planning
Fall. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. R. Penner. Overview of hospitality project development and planning and from the perspective of an owner and manager. Students learn about the role of the development team, feasibility studies, space programming, and construction management, and about functional and design criteria for hotels and restaurants. Teams prepare program documentation for a new hotel or restaurant or one undergoing major repositioning.
H ADM 243(2243) Marketing Management for Services
Fall, spring. 3 credits. Required. Limited to 60 students per sec. Prerequisite: hotel students excluding freshmen.
L. Klein-Pearo and R. Kwortnik.
Develops an understanding of marketing management, the process through which organizations analyze, plan, implement, and control programs to develop and maintain beneficial exchanges with target buyers. Students learn marketing management through a mix of readings, lectures, class discussions, individual and group exercises, industry guest speakers, and exams. A key element of the course involves working as part of a small team to complete a marketing plan for a business organization. The plan provides a road map of an organization's future marketing strategies and programs.

H ADM 343(3043) Marketing Research for Decision Makers
Fall, 3 credits. Elective. Prerequisite: H ADM 243 and a statistics course.
M. Lynn.
Helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, and market choice models. Special emphasis is placed on what each method should and should not be used for and why.

H ADM 347(3347) Consumer Behavior
Fall, spring. 3 credits. Elective. Limited to 45 students. Prerequisite: junior or senior standing; H ADM 243. M. Lynn.
Helps students become better at understanding, predicting, and influencing consumer behavior. Topics include motivation, perception, learning, decision making, attitudes, nonverbal communication, persuasion, compliance, geodemographics, and psychographics. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing efforts, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

H ADM 441(4441) Strategic Management
Fall, spring. 3 credits. Required. Prerequisites: senior standing; at least one course in each of accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class.
A. Kedinger.
Students learn to evaluate firms, industries, and the broader environments in which they exist. Since this is a capstone course, a part of the analysis process involves integrating material learned in all of the functional disciplines. Students also evaluate specific firm strategies and their impact on competitiveness and performance. Using all of this information, students are trained to select strategies for firms and develop plans for implementing them. Topics include environmental analysis, firm resource analysis, competitive analysis, strategy formulation, strategy implementation, international strategy, and strategic control.

H ADM 442(4442) Strategic Marketing
Fall. 3 credits. Elective. Prerequisite: senior standing; marketing course. C. Dev.
Offers innovative, practical, and profitable knowledge and insights to improve revenue, profit, and customer loyalty. Concepts include understanding core competitiveness, product-market examples, and challenges facing hospitality brands. The unique benefits of this course come from the extensive use of detailed cases in which students break into competing teams to formulate strategies and tactics in a realistic marketing environment. Brands whose marketing strategies are examined include Hilton, Marriott, Accor, Choice, Four Seasons, Club Med, Harrahs, Shangri-La, Yum Brands, Starbucks, Disney, and Southwest Airlines. Learning is assessed via in-class contributions, written analysis of cases, a midterm, and a final exam.

H ADM 443(4443) Innovation and Dynamic Management (also AEM 328(3280))
Spring, 3 credits. Elective. Limited to 15 students. Prerequisite: H ADM 347, senior, or graduate standing. C. Enz.
University-wide seminar-style course that investigates the innovation process and how to develop good management practice. Innovative firm case analyses, and effective management skills and capabilities are explored. Emphasis is placed on examining how businesses and managers can build profitable organizations through a process of creative rethinking, re-evaluating, and discarding existing practices. The class will operate as a seminar.

H ADM 447(4447) Managing Hospitality Distribution Strategies
Spring, 3 credits. Elective. Prerequisites: H ADM 141 and 243. B. Carroll.
Provides a framework for managing marketing distribution strategies. Presents and analyzes the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated within the context of that system. Topics include dimensions of hospitality marketing distribution, economics of the major hospitality distribution segments, managing hospitality distribution strategies, and the role of convention and visitor bureaus, national tourist organizations, and associations in distribution management.

H ADM 540(5540) Brand Management
Fall. 3 credits. Elective. C. Dev.
Brands have become the central organizing principle of most hospitality organizations, guiding every decision and every action. Concepts include the unique benefits of brands. The unique benefits of brand management decisions faced by hospitality firms. Combining the latest in thought leadership on this topic with practical examples, core competencies, and brand management research, insights from the works of corporate and business strategies. The goal is to develop a mastery of the tools used to perform these roles in the industry and competitors and to develop skills at evaluating and implementing strategies to sustain a firm's competitive advantage while generating superior value for customers.

H ADM 645(6645) Advanced Topics in Services Marketing
Fall. 3 credits. Elective. Prerequisite: graduate standing; marketing course or permission of instructor. R. Kwortnik.
The main goal is to develop critical analytic skills and knowledge needed to implement service strategies for competitive advantage. Topics include key differences in goods versus services marketing and service gaps analysis, services consumer behavior and satisfaction, service reliability, relationship marketing, service recovery, service design (including analysis of service as theater), service blueprinting and the "servicecape," and services demand management, pricing, promotion, and distribution. Lectures, discussion of current services research, case analyses, and guest speaker presentations. Also used are a variety of group and individual written projects and presentations, including a services-marketing audit.

H ADM 743(7743) Marketing Management for Services
Summer. 3 credits. Elective. Prerequisite: M.M.H. students or permission of instructor. L. Klein-Pearo.
Covers the fundamental concepts of marketing management and in the techniques, analytical, and frameworks for marketing-management problems. Explores theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotions, and distribution policies. The capstone of the course is team development of a marketing plan for a new hospitality business.

H ADM 744(7440) Competitive Strategies for the Hospitality Industry
Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. Faculty.
Strategic management considers the total enterprise: the industry, the competitive environment in which firms operate. This integrative capstone course focuses on how firms formulate, implement, and evaluate corporate and business strategies. The goal is for students to develop a mastery of the tools used to perform these roles in the industry and competitors and to develop skills at evaluating and implementing strategies to sustain a firm's competitive advantage while generating superior value for customers.

Information Systems
H ADM 174(1174) Microcomputing
Fall, spring. 3 credits. Required. Limited to 30 students per sec. Prerequisite: fall, hotel school freshman and transfer students; spring, open enrollment. P. Clark, M. McCarthy, and T. Tallmadge.
Provides a foundation in information technology (IT) and how it relates to everyday business computing. Teaches IT concepts during lectures and reinforces these concepts in practical lab sessions using current standards of business computing. Topics include fundamental IT concepts, proficiency in Microsoft Office, and understanding the issues of tool selection, standardization, and efficiency, integration of applications, and recognizing the importance of good computer management.
H ADM 274(2274) Microcomputing
Spring. 3 credits. Elective. Limited to 30 students perlec. Prerequisite: non-hotel students. P. Clark.
Introduction to business computing to develop functional computer fluency. Students develop their skills in the areas of text, spreadsheets, presentation and file management, and web site management. The course is entirely lab-oriented and students work using Windows 2000. Software used is the latest in word processing, spreadsheet, presentation, database management, and web design.

H ADM 275(2275) Introduction to Information Systems Management
Fall. Spring. 3 credits. Required. Prerequisite: hotel students: H ADM 174. G. Piccoli and E. Wagner.
