2007–2008
COURSES of Study
Cornell University
Cornell University Officers of the Corporation

David J. Skorton, president
Carolyn A. (Biddy) Martin, provost
Antonio M. Gotto Jr., provost for medical affairs
Stephen T. Golding, executive vice president of finance and administration
James J. Mingie, university counsel and secretary of the corporation

Vice Presidents, Vice Provosts, and Dean of Faculty

Carolyn N. Ainslie, vice president for planning and budget
Thomas W. Bruce, vice president for communications and media relations
Stephen F. Johnson, vice president for government relations
Polly Ann McClure, vice president for information technologies
Susan H. Murphy, vice president for student and academic services
Mary George Opperman, vice president for human resources
Charles D. Phleger, vice president for alumni affairs and development
Joanne M. DeStefano, vice president for financial affairs and university controller
Charles Walcott, dean of the university faculty
Joseph A. Burns, vice provost
David R. Harris, vice provost
Robert L. Harris, Jr., vice provost
Stephen Kresovich, vice provost
Michele A. Moody-Adams, vice provost
Alan S. Paau, vice provost
Robert C. Richardson, vice provost
Ronald Seeger, vice provost
John A. Siliciano, vice provost
David Wippman, vice provost

Cornell University has an enduring commitment to support equality of education and employment opportunity by affirming the value of diversity and by promoting an environment free from discrimination. Association with Cornell, either as a student, faculty, or staff member, involves participation in a free community where all people are recognized and rewarded on the basis of individual performance rather than personal convictions, appearance, preferences (including sexual or affectional orientation), or happenstance of birth.

Cornell University's history of diversity and inclusion encourages all students, faculty, and staff to support a diverse and inclusive university in which to work, study, teach, research, and serve. No person shall be denied admission to any educational program or activity on the basis of any legally prohibited discrimination involving, but not limited to, factors such as race, color, creed, religion, national or ethnic origin, gender, sexual orientation, age, gender identity or expression, marital status, disability, or veteran status. Cornell University is an affirmative action, equal opportunity employer.

Concerns and complaints related to equal opportunity in education and employment based on aspects of diversity protected under federal, state, and local law, including sexual harassment complaints filed by any member of the Cornell community against an academic or nonacademic staff member, as well as complaints arising under Title IX, should be directed to the Office of Workforce Diversity, Equity and Life Quality, 160 Day Hall, Ithaca, NY 14853-2801 (telephone: 607-255-5976; fax: 607-255-7481; TDD: 607-255-7086; e-mail equalopportunity@cornell.edu).

All members of the Cornell Community are encouraged to report bias activity, including hate crimes, either experienced directly or observed to WDELQ. They may also report the matter to a bias reporting team member (www.cornell.edu/diversity/biasresponse.cfm).

Members of the Cornell University community are strongly encouraged to report immediately any criminal activity and suspicious persons to the Cornell University Police Department. Incidents that may or may not be crimes may also be reported to "campus security authorities," which include, in addition to the Cornell University Police, those with responsibility for controlling access to buildings or facilities and officials with significant responsibility for student or campus activities. Licensed counselors and campus clergy (pastoral counselors) are exempt from reporting requirements.

Cornell University encourages counselors and clergy, if and when they deem it appropriate, to inform those who they counsel of procedures for reporting crimes on a voluntary, confidential basis for inclusion in the Cornell University Police Statistical Crime Record.

For Cornell University directory information or general information, call 607 255-2000 or 607 254-INFO. The 2006-2007 Courses of Study is available on the web at cuinfo.cornell.edu/Academic/Courses/.

To obtain a copy of this catalog, please follow these guidelines:

If you are a prospective undergraduate student and don’t have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488; 607 255-5211.

If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address).

If you are a currently enrolled student, please contact your college registrar.

All others please contact the Office of the University Registrar, Cornell University, B07 Day Hall, Ithaca, NY 14853-2801, 607 255-4232, e-mail: dsv1@cornell.edu

Courses of Study

2007–2008

Change in Course Numbering System

The university will be moving from a three-digit to a four-digit course numbering system (e.g., HIST 404 becomes HIST 4041). As part of this transition, this issue of Courses of Study shows both three- and four-digit (in parentheses) course numbers for course listings. For a complete explanation of the course numbering system, see page 12.

Accreditation

Cornell University is accredited by the Middle States Commission on Higher Education.

A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Paul Streeter, assistant vice president for planning and budget, Cornell University, 441 Day Hall, Ithaca, NY 14853-2801, ps33@cornell.edu.

Introduction

Courses of Study (www.cornell.edu/academics/courses.cfm), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time Roster and the Course and Room Roster. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu.

The following are offices and sources of information about admission to Cornell University:

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 255-5820, gradschool.cornell.edu,.gradschool@cornell.edu.

College of Veterinary Medicine, Office of Student and Academic Services, Cornell University, Schurman Hall, Ithaca, NY 14853-6401, 255-5700, www.vet.cornell.edu/admissions/.

Joan and Sanford I. Weill Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067, www.med.cornell.edu/education/admissions/.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:
- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from their college, the Office of the Judicial Administrator, Gannett: Cornell University Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or their access to services and education will be terminated and they will be subject to a $350 late fee plus any finance charges.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes, reside in university-owned residences, or use any other university services. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted by the student's college upon recommendation by Gannett: Cornell University Health Services.

Bursar Information

Tuition, Fees, and Expenses

Tuition for Academic Year 2007-2008

Endowed Divisions

Undergraduate
Architecture, Art, and Planning
Arts and Sciences
Engineering
Hotel Administration $34,600
Graduate
Graduate School (with chair in an endowed college) $32,800
Johnson Graduate School of Management
entering students $42,700
continuing students $40,700
Professional
Law School
entering students $43,620
second-year students $42,710
third-year students $41,720

Contract Divisions (tuition rates are tentative)

Undergraduate
Agriculture and Life Sciences
Human Ecology
Industrial and Labor Relations
New York State resident* $19,110
Nonresident $33,500
Graduate and Professional Students
Graduate School (with chair in a contract college) $20,800
Veterinary Medicine
New York State resident DVM $24,000
Nonresident DVM $35,000
Graduate, Ph.D. $20,800

Student Activities Fee (Tentative)

Undergraduate students $181
Graduate and professional students $68

Summer Session (2007) per credit**

In Absentia Fees
Undergraduate $15 per semester
Graduate and professional $200 per semester
Law and management $75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

Joan and Sanford I. Weill Medical College and Graduate School of Medical Sciences, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067, www.med.cornell.edu/education/admissions/.
**Residency status** is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2007 semester is June 1, 2007. The deadline for the Spring 2008 semester is November 1, 2007. Further information and an application can be found at www.bursar.cornell.edu.

**Regular session rate** Special program rates may vary.

Admission application fees and forms may be found at www.cornell.edu/admissions.

**Tuition Refund Policy**

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. All students refer to the "Proration Schedule for Withdrawals and Leaves of Absence" below.

**Repayment policy.** Students receiving financial aid from the university who withdraw during a semester will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

</tbody>
</table>

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

**BILLING AND PAYMENT**

**Billing**

Electronic billing (E-billing) is the official method of billing. Paper bills will not be sent. Tuition and room and board charges will be billed in July and December and must be paid before registration. The due date for these semester bills will normally be 5 to 10 working days before registration day. All other charges, credits, and payments will appear on monthly statements.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

The Office of the Bursar maintains the Bursar/ Cornellcard billing address. Informing another department of a change of address will not affect your billing address. The Office of the University Registrar keeps your permanent home address. You may change both addresses on Just the Facts. If your billing address changes and you do not notify the bursar, you will be responsible for any finance charges resulting from delays in the delivery of your bill.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student’s name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

**Student Health Insurance**

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage.

The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midyear may be eligible to purchase the Early Grad Plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30.

Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, students should contact Cornell University Office of Student Health Insurance, 409 College Avenue, Suite 211 (tel. 255-6363; sicu@cornell.edu; www.studentinsurance.cornell.edu).

**Student Records**

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. These rights include:

1. The right to inspect and review the student's education records within 45 days of the day the university receives a request for access. Students should submit to the registrar, dean, head of the academic department, or other appropriate official, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student's education record that the student believes is inaccurate. Students may ask the university to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of its decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent:

a. Disclosure to school officials with legitimate educational interests. A school official is a person employed by the university who is involved in a student's education or required to have access to the student's education records in order to perform his or her educational functions. A student's education records, including [name of student]’s educational records, are not accessible to non-officials except as the result of consent.

b. Disclosure to the [name of student]'s parents or legal guardians in the case of a child under the age of 18.

c. Disclosure to school officials so that they may contact a child in a post-secondary educational environment, where the student lives.

d. Disclosure in connection with a financial aid policy, or other student services, such as career planning, counseling, or health services, or safety documents.

e. Disclosure to organizations conducting certain studies for the purpose of developing, administering, implementing, carrying out, or evaluating a student assistance program, or another aid program.

f. Disclosure to military recruiters, if the student has not objected in writing.

g. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of institutional or student fraud.

h. Disclosure for law enforcement purposes, if the student has requested a law enforcement officer to conduct an on-campus investigation.

i. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of a violation of a right to privacy.

j. Disclosure at the request of another individual, if the student has signed a consent form that authorizes release of the student’s educational records. This form must include the purpose for release and the names of the intended recipients.

k. Disclosure to a third party at the request of a parent, if the student is less than 18 years old or if the student is legally emancipated.

1. Disclosure to agencies conducting studies for the purpose of developing, administering, implementing, carrying out, or evaluating a student assistance program, or another aid program.

m. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of institutional or student fraud.

n. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of a violation of a right to privacy.

o. Disclosure at the request of another individual, if the student has signed a consent form that authorizes release of the student’s educational records. This form must include the purpose for release and the names of the intended recipients.

p. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of an emergency involving a student who is unlikely to be able to provide consent.

q. Disclosure at the request of another individual, if the student has signed a consent form that authorizes release of the student’s educational records. This form must include the purpose for release and the names of the intended recipients.

r. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of institutional or student fraud.

s. Disclosure to the U.S. Department of Education, a state agency, or any third party in the event of a violation of a right to privacy.

In the event that a student requests access to his or her Education Records and is refused, the student may file a complaint with the Office of the University Registrar, College of Arts and Sciences, and the Office of the Bursar, 260 Day Hall, Cornell University, Ithaca, NY 14853-2500; or with the U.S. Department of Education, Family Policy Compliance Office, 400 Maryland Avenue, Washington, DC 20202-4602; or with the appropriate state education agency.
Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals should be identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) (www.iacuc.cornell.edu/).

Cornell's Animal Users Health and Safety Program (AUHSP) covers faculty, staff, students, visiting scholars, contractors, and volunteers who have direct or indirect exposure to Cornell-owned vertebrate research and training animals. Program requirements are based on the type and frequency of exposure to animals, animal tissues, and/or time spent in an animal care facility (e.g., working, visiting, doing maintenance work). Students enrolled in courses utilizing vertebrate animals are required to fill out a Risk Assessment Form (www.oria.cornell.edu/AUHSP/documents/AUHSPRisksAssessmentForm.pdf) and enroll in the AUHSP. Additionally, students should contact the Occupational Medicine Office of Garnett Health Services, or their personal health care provider, before working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in Courses of Study should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are determined by the Code of Academic Integrity. A pamphlet titled the Code of Academic Integrity and Acknowledging the Work of Others is available from the office of the dean of the faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Participants in Research

The Institutional Review Board for Human Participants (IRB) is the official review board for all university projects that use humans as research participants, assuring compliance to federal regulations protecting human subjects in research at universities. A human participant is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human participants in any category, including those initiated by students, must be submitted to the IRB for review before the research projects begin. After reviewing an approval letter from the IRB, the project may be initiated. The guidelines for the use of human participants in research are available at www.osp.cornell.edu/Compliance/UCHS/homepageUCHS.htm. Inquiries and communications about the guidelines should be directed to the coordinating coordinator (255-5138; UCHS@cornell.edu).

Courses that use vertebrate animals are to be identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) (www.iacuc.cornell.edu/).

Cornell's Animal Users Health and Safety Program (AUHSP) covers faculty, staff, students, visiting scholars, contractors, and volunteers who have direct or indirect exposure to Cornell-owned vertebrate research and training animals. Program requirements are based on the type and frequency of exposure to animals, animal tissues, and/or time spent in an animal care facility (e.g., working, visiting, doing maintenance work). Students enrolled in courses utilizing vertebrate animals are required to fill out a Risk Assessment Form (www.oria.cornell.edu/AUHSP/documents/AUHSPRisksAssessmentForm. pdf) and enroll in the AUHSP. Additionally, students should contact the Occupational Medicine Office of Garnett Health Services, or their personal health care provider, before working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are determined by the Code of Academic Integrity. A pamphlet titled the Code of Academic Integrity and Acknowledging the Work of Others is available from the office of the dean of the faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Participants in Research

The Institutional Review Board for Human Participants (IRB) is the official review board for all university projects that use humans as research participants, assuring compliance to federal regulations protecting human subjects in research at universities. A human participant is defined by federal regulations as "a living individual about whom an investigator obtains data through intervention or interaction with the individual, or identifiable private information." Projects affected by regulation include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. All proposals involving human participants in any category, including those initiated by students, must be submitted to the IRB for review before the research projects begin. After reviewing an approval letter from the IRB, the project may be initiated. The guidelines for the use of human participants in research are available at www.osp.cornell.edu/Compliance/UCHS/homepageUCHS.htm. Inquiries and communications about the guidelines should be directed to the coordinating coordinator (255-5138; UCHS@cornell.edu).
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 255-5749 or by e-mail at iacuc-mailbox@cornell.edu.

9. Faculty members should instruct students in the responsible use of animals. For more information, see www.policy.cornell.edu/vol1-4.cfm.

### Advanced Placement

#### Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

#### Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 9-10.

2. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).

3. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

4. GCE Advanced Level and International Baccalaureate Examinations are listed on page 11.

### CREDIT AND PLACEMENT

The tables on the following pages summarize how credit and placement are determined for most subjects. Supplementary information for some subjects follows immediately.

#### International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on pages 9 and 10. Students may submit results of the French Baccalauréat or German Abitur for possible credit depending on the stream or specialization followed.

Accepted students holding an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examination. To take the departmental examination, students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory, or online at www.chem.cornell.edu/credit/preregistration.aspx.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in G50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215-216 and should consult the CHEM 215 instructor or department staff.

### Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A level, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced signup is not necessary.

**Supplementary Information**

**Chemistry and Chemical Biology**

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 207-208 and 215-216. CHEM 215-216 is intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examination. To take the departmental examination, students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory, or online at www.chem.cornell.edu/credit/preregistration.aspx.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in G50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 215-216 and should consult the CHEM 215 instructor or department staff.

**Computer Science**

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A level, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 211. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced signup is not necessary.

**International Credentials**

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on pages 9 and 10. Students may submit results of the French Baccalauréat or German Abitur for possible credit depending on the stream or specialization followed.

Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the International Examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

General Certificate of Education (GCE) Advanced ("A") Level Examination are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to receive credit. Biology see www.biology.cornell.edu Chemistry A 8 credits (CHEM 207 or 209 and 208) Philosophy A or B 3 credits Mathematics A, B, or C 4 credits and placement out of MATH 106 and 111. Students may obtain more credit by taking the Mathematics Department placement exam. Students who take the A level exam in Singapore will receive 8 credits and placement out of MATH 106, 111, 112, 122, and 191. (Engineering and BEE students receive 4 credits.) Physics A or B 4 additional credits for PHYS 213 are granted for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 116. Students taking 116 do not receive 4 credits for 112. Students taking 217 do not receive credit for 213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm for credit and placement information.

Mathematics and Statistics
Students entering Cornell before fall 2004 should contact the Department of Mathematics for placement information. The following applies to students in fall 2004 or later.
The calculus courses MATH 111, 112, and 101 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.
The Department of Mathematics offers a placement examination during orientation week. (Separate mathematics placement exams are offered for students in the College of Engineering or the College of Agriculture and Life Sciences.) The Department of Mathematics exam should be taken by 1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or 2. students who believe that their placement is incorrect.
The exam covers the material of the AP calculus program. Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary. Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. Students who have been awarded AP credit for statistics (3 academic credits) will forfeit those credits if they take AFM 210, ILRST/STSCI 210, MATH 171, or IAM 210.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 106 or 111. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 112, 122, or 191 and all 8 credits if they take MATH 106 or 111.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 191, the first course in the sequence.
Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement Credit" under "Foreign Language Requirements" in the College of Arts and Sciences section of this catalog. Students whose SAT II or AP scores are two years old or more, or who have had a year of formal study or substantial informal study since they last took a placement test should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:

1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).

2. Students who achieve a minimum score of 65 on the language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 3 credits.

3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Note that credit transfer and placement are the result of different processes. Students wishing to enroll in a language course at Cornell are required to take the placement test.

4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 3 credits in a foreign language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services atcao.cornell.edu/orientation/placement.htm. For more information, see "College of Arts and Sciences" on language course placement, or contact Calleen Hile, 303 Morrill Hall, for French, Italian, and Spanish (placement tests in French, Italian, and Spanish are available online at http://colt.irc.cornell.edu/); Miriam Zuhali, 183 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Romance languages; Nava Scharf, 409 White Hall, for Hebrew; or Munther Younes, 409 White Hall, for Arabic.

Music

Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music; that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell nor on the basis of courses elsewhere. Outstanding performance on the departmental examination will earn students 3 credits and placement directly into MUSIC 152 in rare instances. Students may place into MUSIC 251, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week and, when necessary, at the beginning of the spring semester. For more information about the examination, see the departmental web site.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, consult the director of undergraduate studies, 101 Clark Hall (physicsuds@cornell.edu), or the department chair, 109 Clark Hall.

Physics B—Students earning a score of 5 may receive 8 credits for non–calculus-based PHYS 101 and 102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 112 or 207 instead of 8 credits in PHYS 101 and 102. Those earning a score of 4 may receive 4 credits in PHYS 101. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive 4 credits for PHYS 112 or 207, or placement into PHYS 116, a more analytic introductory course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 4 credits for PHYS 213.

Students will not receive credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:

- PHYS 101, 112, 116, 207
- PHYS 102, 208, 213, 217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her advisor or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrollment. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

Course Enrollment

PREENROLLMENT

Pre–course enrollment for each semester at Cornell takes place partway through the preceding semester using an online application through Just the Facts. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their faculty advisors during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Just the Facts. Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student's advisor and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

*Consult the college office for special considerations and requirements.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses as listed on their transcripts. Undergraduates may not register to audit courses.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND COURSE PREFIXES

As the university makes the transition to a new course numbering system, the course levels for three-digit (current) and four-digit (future) course numbers will correspond in the manner shown in the list below. In this issue of Courses of Study, all of the current three-digit course numbers and most of the future four-digit course numbers have been included in the course listings (some four-digit course numbers were not available at press time).
The list of courses that follows is arranged in two broad groups.

**Group 1:** Divisions that offer both undergraduate and graduate-level courses

- Agriculture and Life Sciences
- Architecture, Art, and Planning
- Arts and Sciences
- Engineering
- Hotel Administration
- Human Ecology
- Industrial and Labor Relations
- Nutritional Sciences
- Officer Education

**Group 2:** Graduate professional divisions

- Law
- Management
- Veterinary Medicine

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

**Course Prefixes and Their Meanings**

- AAP: Architecture, Art, and Planning
- AAS: Asian American Studies
- AEM: Applied Economics and Management
- AIR S: Aerospace Studies
- AIS: American Indian Studies
- ALS: Agriculture and Life Sciences
- AM ST: American Studies
- AN SC: Animal Science
- ANTHR: Anthropology
- ARCH: Architecture
- ARKEO: Archaeology
- ART: Art
- ART H: History of Art
- AS&RC: Africana Studies and Research Center
- ASTRO: Astronomy
- BEE: Biological and Environmental Engineering
- BENGL: Bengali
- BIOAP: Animal Physiology
- BIOHM: Biochemistry, Molecular and Cell Biology
- BIOEE: Ecology and Evolutionary Biology
- BIO G: Biology

- MUSIC: Music
- NAV S: Naval Science
- NBA: Business Administration
- NCC: Graduate School of Management Common Course
Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND MEETING TIMES

Students are expected to be present throughout each semester at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

</table>

On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 P.M. to 7:30 P.M., on Fridays the hours after 4:25 P.M., on Saturdays the hours before 12:05 P.M., and all day Sunday shall be free from all formal undergraduate classes or laboratory exercises.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 P.M. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each semester.

Evening academic activities commencing at 7:30 P.M. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.

**General Rules Governing Final Examinations**

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated...
by the Office of the University Registrar without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

1. Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.

3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

4. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.

5. Faculty can require students to submit papers during the week preceding the study period.

6. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-, F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A  = 4.0
- A- = 3.7
- B+ = 3.3
- B  = 3.0
- B- = 2.7
- C+ = 2.3
- C  = 2.0
- C- = 1.7
- D+ = 1.3
- D  = 1.0
- D- = 0.7
- F  = 0.0

This is how a semester average is computed:

\[ \text{Quality Points} = \text{Course Credits} \times \text{Quality} \]

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

**Grading Guidelines**

### EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, religious, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

**S-U Grades**

On September 6, 1972, the Faculty Council of Representatives passed the following legislation: *Resolved, that:*

- the S-U system have symbol equivalents:
  - S means C- or above;
  - U means D+, D, D-, or failure.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

**Agriculture and Life Sciences.** (1) Must have 100 credit hours with A, B, C, D grades. (2) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen may not exercise the S-U option. (4) Only one optional S-U course is allowed per semester.

**Architecture, Art, and Planning.** (1) All courses specifically required for a degree are excluded. Various departments may designate specific required courses where S-U will be permitted. (2) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (3) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

**Arts and Sciences.** (1) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (2) Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

**Engineering.** (1) The course in question must be offered with an S-U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S-U basis during their first semester with the exception of courses graded "S-U only" such as physical education, ROTC, supplemental courses, and writing workshops. (3) The proposed S-U course must count as either a liberal studies distribution or an approved elective in the student's curriculum. (4) Students may elect to enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S-U do not count toward eligibility on the Dean's List and may weaken a student's chances for acceptance toward eligibility on the Dean's List and may weaken a student's chances for acceptance toward eligibility on the Dean's List.
INCOMPLETE
The grade of incomplete is appropriate only when two basic conditions are met:

1. The student has a substantial equity at a passing level in the course with respect to work completed, and
2. The student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at transcript.cornell.edu. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test
The Faculty Advisory Committee on Athletics and Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. A swim test will be held on the student's record until he or she has passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division
Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their interest for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges
formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)
www.adwhiteprofessors.cornell.edu

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, performances, films, art exhibits, or conferences. Rhodes Class of '56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of up to five years. During each year of their appointment, Rhodes Class of '56 Professors visit the campus for a week to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments

Grandin, Temple, associate professor of animal science
Moses, Robert Parris, civil rights leader and founder of the Algebra Project

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4355)

The Center for Applied Mathematics administers a broad-based interdisciplinary graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information about graduate student opportunities, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering. Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics

MATH 413 Honors Introduction to Analysis I
MATH 414 Honors Introduction to Analysis II
MATH 433 Honors Linear Algebra
MATH 434 Honors Introduction to Algebra I
MATH 611 Real Analysis
MATH 612 Complex Analysis
MATH 615 Mathematical Methods in Physics
MATH 621 Measure Theory and Lebesgue Integration
MATH 622 Applied Functional Analysis
MATH 631-632 Algebra
MATH 633 Noncommutative Algebra
MATH 634 Commutative Algebra
MATH 651 Algebraic Topology
Mathematical Biology
BIOE 460 Theoretical Ecology
BTRY 697 Individual Graduate Study in Biometry and Statistics

Mathematical Economics
ECON 619 Econometrics I
ECON 620 Econometrics II
ECON 710 Stochastic Economics: Concepts and Techniques
ECON 717 Mathematical Economics
ECON 718 Topics in Mathematical Economics
ECON 719-720 Advanced Topics in Econometrics

Mechanics and Dynamics
CHME 731 Advanced Fluid Mechanics and Heat Transfer
CHME 751 Mathematical Methods of Chemical Engineering Analysis
CHME 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
M&AE 602 Fluid Dynamics High Reynolds Numbers
M&AE 733 Stability of Fluid Flow
M&AE 734 Analysis of Turbulent Flows
M&AE 736 Theory of Computational Aerodynamics
M&AE 737 Computational Fluid Mechanics and Heat Transfer
T&AM 570 Intermediate Dynamics
T&AM 578 Nonlinear Dynamics and Chaos
T&AM 671 Hamiltonian Dynamics
T&AM 672 Celestial Mechanics (also ASTRO 579)
T&AM 673 Mechanics of the Solar System (also ASTRO 571)
T&AM 675 Nonlinear Vibrations
T&AM 751 Continuum Mechanics and Thermodynamics
T&AM 752 Nonlinear Elasticity
T&AM 776 Applied Dynamical Systems (also MATH 717)

Probability and Statistics
ECE 562 Fundamental Information Theory
ECE 563 Communication Networks
ECE 566 Wireless Networks
MATH 671-672 Probability Theory
MATH 674 Introduction to Mathematical Statistics
MATH 777-778 Stochastic Processes
ORIE 561 Queueing Systems: Theory and Applications
ORIE 563 Applied Time-Series Analysis
ORIE 650 Applied Stochastic Processes
ORIE 651 Probability
ORIE 662 Advanced Stochastic Processes
ORIE 670 Statistical Principles
ORIE 671 Intermediate Applied Statistics
BTRY 408 Theory and Probability
BTRY 409 Theory of Statistics

Robotics and Vision
CS 664 Machine Vision
ECE 547 Computer Vision

Theoretical/Mathematical Physics/Chemistry
CHEM 792 Molecular Collision Theory
CHEM 793 Quantum Mechanics I
CHEM 794 Quantum Mechanics II
CHEM 796 Statistical Mechanics
CHEM 798 Bonding in Molecules
PHYS 553-554 General Relativity (ASTRO 500-510)
PHYS 561 Classical Electrodynamics
PHYS 562 Statistical Physics
PHYS 572 Quantum Mechanics I

PHYS 574 Applications of Quantum Mechanics II
PHYS 651-652 Relativistic Quantum Field Theory

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES
170 Uris Hall (255-6370)
The Mario Einaudi Center for International Studies, established in 1961 to encourage and support comparative and interdisciplinary research on international subjects, is one of the largest and most diverse centers of its kind in the United States. Currently, it includes four U.S. Department of Education Title VI National Resource Centers and 16 other areas, development, topical, and educational programs. More than 500 faculty members voluntarily collaborate in the center’s programs with well over 300 graduate students involved directly in its international programs.

Undergraduate students may choose concentrations in international relations, Latin American studies, modern European studies, East Asian studies, South Asian studies, or Southeast Asian studies. (See also African Studies and Research Center, Asian Studies, and International Agriculture for related majors and concentrations.)

Cornell’s international programs are poised to anticipate and respond to changing global circumstances and perspectives. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. As programs gain momentum and recognition to attract their own resources, the center applies its resources to new pilot activities that bring faculty members and students together across traditional disciplines and departmental boundaries.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horton Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussion of key world events.

The center coordinates an undergraduate course, Issues Behind the News: An Interdisciplinary Analysis of International Current Events, which is offered by the Government Department of the College of Arts and Sciences. (See that department for course description.) This course invites faculty from across the university who are affiliated with the Einaudi Center to critically discuss important current events as they unfold during the semester.

The center promotes graduate students’ overseas field research through an annual competition for travel grants and assistance with the Fulbright fellowship program and the Fulbright-Hays awards, both administered by the center.

Cornell is committed to the study of the global community in all its complexity—through a faculty of preeminent scholars and teachers, outstanding research facilities, instruction in more than 40 languages, and a library system that houses 2,500,000 volumes related to international and comparative studies.

COGNITIVE SCIENCE
278G Uris Hall
255-0431
cogsci@cornell.edu
www.cogsci.cornell.edu

Cognitive Science focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Science draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Science is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate concentration in Cognitive Science in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see the Cognitive Science Program under College of Arts and Sciences and/or contact Julie Simmons-Lynch, program coordinator (255-6431 or cogsci@cornell.edu).

Graduate Programs
Cornell offers a graduate field minor in Cognitive Science. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Science to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiology and behavior on common committees. For further information on the graduate field of Cognitive Science, contact Michael J. Spivey, director of graduate studies (255-9365, spivey@cornell.edu) and/or contact Julie Simmons-Lynch, program coordinator, 278G Uris Hall, Office of Cognitive Science (255-0431 or cogsci@cornell.edu).

Courses
Courses from across the university that are relevant to the Cognitive Science Program are listed in the catalog in the Cognitive Science Program section under Arts and Sciences.

CORNELL ABROAD
300 Caldwell Hall
255-6224 (tel.)
255-8700 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Recent events have made us aware that those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in a transnational world, Cornell Abroad offers a wide range of international study options that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Ghana, Kenya, Madagascar, Mali, Tanzania, Uganda: School for International Training (SIT)
Ghana: University of Ghana (through CIEE); NYU
Kenya: Wildlife Management (School for Field Studies)
South Africa: Universities of Cape Town and Kwazulu-Natal, Organization for Tropical Studies, School for International Training (SIT)

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester at Peking University; full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing; CET in Beijing or Harbin; Hong Kong University of Science and Technology; Alliance for Global Education in Beijing or Shanghai; Syracuse University program at Tsinghua University; *CAPS at Peking University
India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers Universities); CIEE at University of Hyderabad
Japan: Kyoto Consortium for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University

Korea: Yonsei University; Ewha University

Nepal: Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University

Thailand: Khon Kaen University (CIEE)

Vietnam: University of Hanoi (CIEE), CET

AUSTRALIA AND NEW ZEALAND

Australia: Australian National University, University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training, Sydney Internship (Arcadia, Boston University)

New Zealand: Otago, Auckland, Massey, and Lincoln Universities; EcoQuest

EUROPE

Czech Republic: UPCE (CERGE-ED) at Charles University, CET program in Jewish Studies, CIEE Prague

Denmark: *Denmark's International Study Program (DIS)

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d’Études Politiques de Paris (*Sciences Po*); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University)

Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University

Greece: College Year in Athens, Arcadia

Hungary: Central European University; CIEE Budapest

Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork

Italy: *Bologna Consortial Studies Program; *Cornell College of Art, Architecture, and Planning Program in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University Program in Padova; IES Milan and Rome; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence

Netherlands: University of Amsterdam; Leiden University

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian); Smolny College, Math in Moscow

Spain: *Cornell–Michigan–Penn program at the University of Seville; *Consortium for Advanced Study in Barcelona; various language and culture programs

Sweden: The Swedish Program at the University of Stockholm

United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia;

University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London King’s College; University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, the University of the Arts (including London College of Fashion), as well as other universities and art schools of choice.

Externally sponsored programs in the UK include the British American Drama Academy; the Arcadia, Boston, and Rochester University internships; and the Hansard Parliamentary Internship Programme.

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell-Brown–Penn Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN

Argentina and Chile: various university-based study abroad programs, through the Institute for Study Abroad of Butler University

Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)

Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Studies

Cuba: study abroad programs in Cuba are currently suspended

Ecuador and Jamaica: International Partnership for Service Learning

Honduras: Escuela Agrícola Panamericana (Zamorano)

Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; ISFA-Butler program at Universidad Autónoma de Yucatán, Merida

MIDDLE EAST AND NORTH AFRICA

Egypt: American University in Cairo

Israel: Ben-Gurion University; University of Haifa, Hebrew University of Jerusalem; Tel Aviv University

Jordan: University of Jordan (CIEE), SIT

Lebanon: American University of Beirut

Morocco: School for International Training

Other Locations

Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Tajikistan, Turkey, Venezuela, and elsewhere.

Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long

Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process

Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 300 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for applications to download and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisors in their colleges to discuss how they will meet college degree requirements. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty advisor and the college study abroad advisor. Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2008 semester and the 2008-2009 academic year is February 15, 2008, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2008-2009 is November 1, 2007. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.
Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for the required courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements

Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. In programs that enroll only in institutions abroad or that require students to take language courses while abroad, Cornell students must make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

Housing Arrangements

Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs

Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during term (except in U.K. universities), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2007–2008 the Cornell Abroad tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCCO (Emory, Duke, and Cornell in Paris), the Michigan–Cornell-Penn Program in Seville is $20,200.

For Denmark's International Studies Program (DIS), the Cornell Abroad tuition is $20,600 per semester, and for the Kyoto Consortium for Japanese Studies (KCJS), the tuition is $26,500 per semester. For the Arizona Cooperative Studies Program (BCSP), the tuition is $15,150 per semester for academic-year students and $17,600 for spring-only participants.

Students studying in all other programs in 2007–2008 pay the tuition and other costs charged by their programs and a Cornell International Program Tuition (CIPT) of $4,640 per semester. The CIPT covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program Tuition of $5,000. This higher amount covers the costs of on-site support services provided by Cornell Abroad.

Financial Aid

Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 50 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships and there are also external sources of aid for which Cornell Abroad students are eligible.

Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive updates regarding rapidly changing political situations worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by Cornell or study abroad programs approved by their colleges. In such cases, students must consult with the institution or program about the possibility of receiving credit. Students should think very carefully about the repercussions for future academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of study abroad programs approved by their colleges, as well as a database of institutions, program costs, and information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad website (www.cuabroad.cornell.edu), which incorporates links to universities, programs, and resources worldwide as well as a database of travel restrictions. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad website (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

College Study Abroad Advisors

Agriculture and Life Sciences: Tamara Durham, 140 Roberts Hall; Architecture, Art, and Planning: Jayne LeGro, B-1 West Sieble Hall; Arts and Sciences: Dean Pat Wasylyiw, 55 Goldwin Smith Hall; Engineering: Engineering Advising, 167 Olin Hall; Hotel Administration: Amber Cohen, 180 Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

Cornell in Washington Program

M101 McGraw Hall
255-4090
ciw.cornell.edu

Cornell in Washington is a program that offers students from all colleges in the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. Washington's vast high-technology sector, concentrated in both telecommunications and biotechnology, creates endless opportunities for the study of recent developments and future prospects in those arenas, as well. Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—and take electives in a wide range of departments. Students also conduct individual research projects, and choose externships in government agencies, research institutes, nonprofit organizations, and successful firms in the Washington area, and serve as interns at nonprofit organizations. The program offers students the opportunity to study abroad in a variety of English-speaking countries, including Japan, France, Italy, and Spain, and non-English-speaking countries, including China and Mexico.
organizations, and private professional firms and businesses. The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors. The Cornell in Washington program is open to organizations, and private professional firms and businesses.

The Cornell in Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also take two or three seminars from such fields as government, history, economics, history of art, and social policy. All seminars carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as interns with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

**Tuition**

Students are registered as full-time students, earn Cornell credit, pay full tuition of their home college, and remain eligible for financial aid.

**Housing**

Apartments are rented at the Cornell Center. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is convenient and accessible to students.

**Applications**

Application forms are available from the Cornell in Washington program office at M101 McGraw Hall. Students may also apply online at ciw.cornell.edu. Applications should be submitted the semester before participation.

**Summer in Washington**

A modified program involving courses and internships is available during the summer. Students earn 6 to 8 credits depending on their course selection.

**Information**

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

---

**CORNELL INSTITUTE FOR PUBLIC AFFAIRS**

294 Caldwell Hall 255-8018 (tel.)

255-5240 (fax)

cipa@cornell.edu

www.cipa.cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. CIPA provides leaders for government, for nonprofit organizations, and for institutions in the private sector that interact with both.

CIPA fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

**Faculty Members**

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing 25 departments, are assigned to each efficiency and three to each one-bedroom apartment. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is convenient and accessible to students.

**Applications**

Application forms are available from the Cornell in Washington program office at M101 McGraw Hall. Students may also apply online at ciw.cornell.edu. Applications should be submitted the semester before participation.

**Summer in Washington**

A modified program involving courses and internships is available during the summer. Students earn 6 to 8 credits depending on their course selection.

**Information**

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

---

**M.P.A. Program Flexibility**

The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA fellow works closely with a faculty advisor to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

**Advising**

Upon entering the M.P.A. program, each fellow is assigned a program advisor based on his or her area of interest. These advisors are drawn from the CIPA core faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another core faculty member to be their program advisor.

Toward the end of their first year, when they select their professional report/thesis topic, CIPA fellows choose a report/thesis advisor from among the more than 100 faculty members in the field of public affairs. The advisor guides the fellow in research and writing.

**Foundation Course Work**

To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA fellows take three courses in each of the following three subject areas:

- Administration, Politics, and Public Policy
- Economics and Public Finance
- Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA core faculty member.

**Concentration Course Work**

Concentration course work enables fellows to focus on a specific area of public policy study. Students choose their courses of study—domestic or international—from the following options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

Fellows select a concentration during the latter half of the first year of course work.

**Internships and/or Off-Campus Study Options**

CIPA fellows are expected to engage in public-affairs work related to their respective areas of concentration during the summer between their first and second years of study. The objective is to gain pragmatic professional experience that will complement a student's formal academic study. CIPA's Office of Professional Development provides assistance to fellows in finding placements that match their interests, expertise, and professional goals. Appropriate internships are available in public policy— or public-affairs-related organizations in both the public and private sector. Examples of placements include the following:

- Congressional Research Institute
- Deloitte and Touche
- Government Accountability Office
- New York City Office of Management and Budget
- Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
Professional Student Activities

CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities. These provide fellows with opportunities to share work experience with other fellows, and to meet professional and distinguished faculty members in the field of public affairs. Fellows participate in one or more of the following activities for at least two semesters. These initiatives include:

• Colloquium and Conference Committee: This student group sets the agenda for the weekly Colloquium Series and makes arrangements for the chosen guest lecturers to come to campus.

• Point of View (POV): The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.

• The Current: CIPA fellows publish a journal of student policy research. Working on The Current offers fellows a firsthand view of the rigors of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

• CIPA Public Service Exchange: A unique service learning partnership with nonprofit and government agencies, providing fellows with the opportunity to engage in the supervised practice of public policy.

Complementary Degrees

CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master's Program

An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master's Program can earn the equivalent of two semesters in residence during their senior year.

Admission

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective. Decisions are based on:

• potential for public-policy leadership as evidenced by professional work, community, extracurricular, or other relevant experience

• an evaluation of the applicant's overall academic record

• GRE scores

• two letters of recommendation

• current résumé

• an extensive written statement of purpose, as outlined on the CIPA web site: www.cipa.cornell.edu

Applicants for whom English is a second language will need to achieve the following minimum scores on the new (2005) Internet-based test version of the TOEFL: writing 20, listening 15, reading 20, speaking 22.

Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For an application or for more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255-8018; fax: 255-5240; cipa@cornell.edu; www.cipa.cornell.edu).

Financial Aid

CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions on institute funding are determined on a rolling basis following admission decisions.

Cornell Pla ntations

One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

Introduction

Cornell Plantations is Cornell University's arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 25 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. Many of Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We're also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women's issues, to nutrition.

Credit Courses

Cornell Plantations offers three for-credit courses: HORT 480 Plantations Fall Lecture Series, HORT 485 Public Garden Management, and HORT 640 New Directions in Public Horticulture. HORT 480 is a 1-credit course offered alternate spring semesters. HORT 640 is a 1-credit S-U discussion course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.plantations.cornell.edu, or call 255-2400 for more information.

Internships

Cornell Plantations' internship program is just for you, the Cornell University student! Since the 1990s, more than 90 university students have been working side by side with Plantations' knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students' interests in horticulture and the natural world. Visit our web site for details.
Master's Program
Cornell Plantations' master of professional studies program offers fully funded fellowships in public garden leadership. Visit our web site for program details.

Planning a Visit
To discover all that is Cornell Plantations, visit www.plantations.cornell.edu or pick up a visitor's map or a copy of the Cornell Plantations Path Guide at the Garden Gift Shop in the Lewis Education Center just below Tower Road. The Path Guide and accompanying video are also available at the Cornell Store.

PROGRAM ON ETHICS AND PUBLIC LIFE
240 Goldwin Smith Hall 255-8515
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about campaigning and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nonetheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

For information regarding content or availability of EPL core-related courses, contact the academic department listed.

EPL Core Courses
PHIL 194/GOVT 294 Global Thinking
PHIL 242 Social and Political Philosophy
PHIL 246/BSOC 206/S&TS 206 Ethics and the Environment
PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality
GOVT 691/PHIL 691 Normative Elements of International Relations

Related Courses
AN SC 414 Ethics and Animal Science
ENGRG 360/S&TS 360 Ethical and Social Issues in Engineering
ILRCB 482 Ethics at Work
ILRCB 488 Liberty and Justice for All
NAV 5402 Leadership and Ethics
NBA 671 Business Ethics
NTRES 332 Introduction to Ethics and Environment
NTRES 433 Applied Environmental Philosophy
PAM 567 Health Policy
PHIL 145 Contemporary Moral Issues
PHIL 241 Ethics
PHIL 245 Ethics and Health Care
PHIL 341 Ethical Theory
PHIL 346 Modern Political Philosophy
PHIL 641 Ethics and Value Theory
Michele M. Moody-Adams, Wyn and William Y. Hutchinson Professor of Ethics and Public Life, and professor of philosophy; Burke Hendrix, assistant professor of government and assistant professor of ethics and public life; Henry Shue, professor of ethics and public life and professor of philosophy.

PROGRAM IN REAL ESTATE
114 West Sibley Hall 255-7110
The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate at Cornell University is home to the graduate program in real estate, the Cornell Real Estate Council, and is the centerpiece of academic and industry-related real estate activities on and off campus. The real estate field faculty is composed of 17 faculty members selected from several different disciplines. They are directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with design, development, finance, law, management, marketing, transactions, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration and to fulfill a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, or international real estate concentrations).

Admissions
Applicants to the Program in Real Estate must have completed a bachelor's degree with a good academic record. Applicants must submit a resume plus two letters of recommendation either from faculty members familiar with the applicant's academic work, or if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extensive and relevant work experience will receive favorable consideration.

International students for whom English is a second language will need to achieve a minimum TOEFL score of 250 (computer based) or 600 (paper based). There is no work experience required for admission; however, it is strongly preferred that applicants have at least some industry-related work experience, with three to five years' experience typical. Applications are reviewed on a rolling basis. The financial aid priority deadline is January 15. Otherwise, please submit complete application by March 1. Special, transfer, and wait list applications will be accepted until June 1. For more information, contact the Graduate Field Coordinator at 255-7110 or real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR
During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in a world that will be the primary challenge of the 21st century.

Graduates of Cornell's SES program are well prepared for several career and advanced study options:

- Graduate studies leading to the M.S. and/ or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, glaciology, geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level such as environmental consulting and science writing.
• Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
• Advanced degree in teaching, for example, earth science at the middle or high school level.
• Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major suitable for premedical study.

The SES major is available for students in the College of Agriculture and Life Sciences, the College of Engineering, and the College of Arts and Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences and includes collaboration with several departments across the university.

The SES Curriculum
The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:
1. Basic Math and Sciences
   a. MATH 111-112, or MATH 191-192
   b. PHYS 207-208, or PHYS 112-213
   c. CHEM 207-208 (or CHEM 207-257)
   d. BIO G 101/103 and 102/104 (or 105-106) or BIO G 109 and 110
2. Required introductory course: EAS 220 The Earth System
   The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.
   - EAS 301 Evolution of the Earth System
   - EAS 303/NTRES 303 Introduction to Biogeochemistry
   - EAS 304 Interior of the Earth
   - EAS 305 Climate Dynamics
4. Concentration Courses
   Four intermediate to advanced-level courses (300 level and up) are selected that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. These concentration courses build depth and provide the student with a specific expertise in some facet of earth system science. Four defined areas of specialization include geology, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also choose other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with an SES advisor whose interests match those of the student. Note: Additional basic math and science courses may be required to complete the concentration courses; the specific courses will depend on the student’s choice of concentration.

5. Field/observational/laboratory experience
   Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various forms of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Means of satisfying this requirement generally include 3 credits of course work. Possibilities include:
   - Hawaii Environmental Semester program Courses given by the Shoals Marine Laboratory;
   - EAS 250 Meteorological Observations and Instruments;
   - EAS 352 Synoptic Meteorology I;
   - EAS 417 Field Mapping in Argentina;
   - EAS 437 Geophysical Field Methods;
   - EAS 491 and/or 492 Undergraduate Research, total 3 credits with appropriate choice of project;
   - Field courses taught by another college or university (3-credit minimum)

Cornell Field Program in Earth and Environmental Systems: Semester in Hawaii
Cornell University offers a spring-semester program of environmental and Earth systems study on the Big Island of Hawaii. The Hawaiian Islands are an outstanding natural laboratory where students can explore a variety of ecosystems, examine their development over time, witness human influences on plant and animal communities, and experience geologic processes such as active volcanism and seismicity. Students spend most of their time in the field, gaining hands-on experience probing the interaction between earth, ocean, atmosphere, and biosphere. This is an ideal opportunity to apply fundamental concepts of geology, chemistry, and biology in a real-world setting. Students enrolled in the Environmental Semester Program will complete 17 credit hours of course work during the spring semester. For Cornell students majoring in Science of Earth Systems, EAS 240, EAS 322, and EAS 351 satisfy degree requirements for the major.

For more information contact Professor Bryan Isacks, Department of Earth and Atmospheric Science, bl1@cornell.edu, and visit www.eas.cornell.edu/.

Business and Preprofessional Study
UNDERGRADUATE BUSINESS STUDY
Cornell offers an accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied Economics and Management
The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree. Accredited by AACSB International—The Association to Advance Collegiate Schools of Business, AEM's undergraduate business program offers a broad, flexible curriculum that prepares students for careers in finance, marketing, and management. AEM also offers specialized programs in entrepreneurial, agribuiness, food industry management, applied economics, and environmental and resource economics. Courses reflect the program's analytical, applied economics focus (aem.cornell.edu).

Arts and Sciences
Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular, majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

Engineering
Many of today's business managers hold engineering degrees. Each of the College of Engineering's 12 majors prepare students for business careers. Operations Research and Engineering and Information Science, Systems, and Technology are the most business-oriented engineering degree programs, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any major can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science (www.engineering.cornell.edu).

Hotel Administration
The School of Hotel Administration, the world's leading hospitality management program, prepares students for management and entrepreneurial careers in businesses such as hotels, resorts, restaurants, amusement parks, sports arenas, cruise lines, and airlines. The school offers a rigorous business curriculum with courses in finance, accounting, real estate, facilities management, food and beverage management, marketing, tourism, strategy, information systems, operations management, organizational behavior and management, managerial communication, and law. The school's 150-room conference hotel gives students the opportunity to apply what they learn in a real-world business (www.hotelschool.cornell.edu).

Human Ecology
The College of Human Ecology offers three business-oriented majors. The fiber science and apparel design major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in facility planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and consultants. The policy analysis and management major offers concentrations focusing on health care, consumers, and family and social welfare, and its graduates pursue careers as nonprofit
managers, consumer advocates, and policy researchers (www.human.cornell.edu).

Industrial and Labor Relations

The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, collective bargaining, labor law, labor economics, labor history, international and comparative labor, and statistics. Students can then develop special interests in management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public policy, and international labor issues. Most ILR graduates begin careers in management, consulting, and public policy, but about one-third go directly to law school (www.ilr.cornell.edu).

Related Areas

Entrepreneurship@Cornell

This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. A series of almost 90 entrepreneurship-related courses are offered by the above six colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (eship.comell.edu).

International Programs

Several additional programs allow business students to focus on a particular geographic area. Majors and concentrations are offered in Latin American Studies, Modern European Studies, China and Asia-Pacific Studies, Asian Studies, Near Eastern Studies, South Asian Studies, and African Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdepartmental program in international agriculture and rural development.

COMBINED DEGREE PROGRAMS

Highly qualified undergraduates may co-register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to earn a B.S., M.B.A., and M.Eng. degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology; because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophical reasoning on legal reasoning and jurisprudence. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wide appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically, and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. In addition, members of the College of Agriculture and Life Sciences faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, physiology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, dental schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at and, benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as late as is feasible. Preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the appropriate college admissions brochures. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor of arts and D.V.M. degrees. Further information about this program is available from the Office of Multicultural and Diversity Programs, College of Agriculture and Life Sciences, 140 Roberts Hall, Ithaca, NY 14853.
INTRODUCTION

College Focus
The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- New life sciences

Faculty members challenge students with educational programs that promote problem-solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban, and rural development throughout New York State, the nation, and the world.

Administration
Susan A. Henry, dean
Barbara A. Knuth, co-senior associate dean
Jan P. Nyrop, co-senior associate dean
Margaret H. Ferguson, associate dean for finance and administrative services
Michael P. Riley, associate dean for alumni affairs, development, and communications
Donald R. Viands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station
Susan J. Riha, director for sponsored research in the senior associate dean's office
Helene R. Dillard, associate dean and director of cooperative extension
Christopher B. Watkins, associate director of cooperative extension
Glenn J. Applebee, associate director of cooperative extension
Daniel J. Decker, director of CALS land grant affairs, senior advisor to the dean
W. Ronnie Coffman, director of international programs

James E. Haldeman, associate director of international programs
Terry W. Tucker, associate director of international programs
Alice Pell, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs
Animal science: W. Ronald Butler, 149 Morrison Hall
Applied economics and management: William H. Lesser, 154 Warren Hall
Biological and environmental engineering: Michael F. Walter, 104 Riley-Robb Hall
Biological statistics and computational biology: Martin T. Wells, 1190 Comstock Hall
Communication: Geri K. Gay, 339 Kennedy Hall
Crop, and soil sciences: Stephen D. DeGloria, 222 Emerson Hall
Development sociology: Max Pfeffer, 133A Warren Hall
Earth and atmospheric sciences: Teressa E. Jordan, 2116 See Hall; Stephen J. Colucci, co-chair, 1116 Bradford Hall
Ecology and evolutionary biology: Richard G. Harrison, E345 Corson Hall
Education: Arthur L. Wilson, 435 Kennedy Hall
Entomology: Jeffrey G. Scott, 6134 Comstock Hall
Food science: Joseph H. Hotchkiss, 119 Stucking Hall
Horticulture: Marvin P. Pritts, 134A Plant Science Bldg.
Landscape architecture: Peter J. Trowbridge, 446 Kennedy Hall
Microbiology: William G. Ghiorse, B76C Wing Hall
Molecular biology and genetics: Kenneth J. Kemphues, 435 Biotechnology Bldg.
Natural resources: Marianne E. Krasny, 118 Fernow Hall
Neurobiology and behavior: Thomas D. Seeley, W301 S. G. Mudd Hall
Plant breeding and genetics: Mark E. Sorrells, 241 Emerson Hall
Plant pathology: George W. Hudler, 334 Plant Science Bldg.
Statistical sciences: Martin T. Wells, 301 Malott Hall

Student Services
Office of Academic Programs
The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty, and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office, and the Registrar's Office. Although most of the student services are in the Office of Academic Programs, services also are located across the college in the Office of Undergraduate Biology and in various departments. Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty advisor in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, coordinates the college international exchange programs, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, Tamara Durham.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college's undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State students who meet economic and
The CALS Registrar's Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university's policies and procedures and the student. The Registrar's Office maintains student records and reviews degree progress on a semester basis. It maintains The Student List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/current/Registrar/.

The CALS Registrar's Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 9:00 to 11:00 a.m. and Wednesdays from 2:00 to 4:00 p.m. in 140 Roberts Hall. No appointment is necessary during these times. Registrar's Office staff: Melanie Holland, Torrey Jacobs, Elisa Rafferty.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 400 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester, and are available on videotape. An active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer, and intradiversity transfer student processes. The office hosts on- and off-campus information sessions for prospective students, evaluates and makes decisions on more than 4,000 applications each year, and coordinates Cornell Days for admitted students each April. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Shells, Tara Bubbel, Jared Rivers, Lori Fessenden, and Heather Orkin.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations in the college provide supplemental aid for students who are eligible for financial aid. Information about these college grants is available from the Office of Academic Programs in 140 Roberts Hall for students who have their financial aid package established through the university office in Day Hall. Grants are processed through the university's Office of Financial Aid.

Students
Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 950 students are graduating, while 635 freshmen and 250 new transfer students are enrolled. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

Admission
The CALS Admissions Office selects applicants who are academically well prepared and will benefit from the college's various curricula. While approximately half of CALS students come from New York State, about 42 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 24 percent are self-identified as members of minority ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2356; www.cals.cornell.edu/admissions/).

Transfer Students
All accepted transfer credit must be from an accredited college or university. Transfer credit is evaluated based on review of official transcripts. Additional course information may be required. Contact the CALS Registrar's Office for information. A maximum of 60 non-Cornell credits may be transferred.

Approximately 50 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, agricultural and technical colleges, or four-year institutions. Many of them hold an associate's degree. Detailed information on transfer admission is available from the CALS Admissions Office.

Intra-University Transfer
A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program unavailable in their current college. Guidelines are available in the CALS Admissions Office. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and letter of interest.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Freshmen are not admitted—students need to spend two semesters in their home college before applying. In certain cases, a student may be considered to the Internal Transfer Division (ITD) to study for one semester before entering the college. A second semester in ITD is considered only in unusual circumstances. During this trial semester, the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students
A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should submit the standard Cornell transfer application, a résumé of their work experience, and a list of the courses in which they are interested. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students
Programs in which students study off campus but enroll for Cornell credit include SEA semester, Semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, Albany programs, Cornell in Washington, student teaching, IPM internship, and clinical microbiology internship.

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Ithod and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs. Cornell University Agricultural Experiment
Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55, with additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape Architecture offers an in-depth professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curriculum for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies:

Agriculture and life sciences [M.P.S. (agr.)]: Don Viands, 151 Roberts Hall, drv@cornell.edu
Agricultural economics: Loren Tauer, 451 Warren Hall, ltp1@cornell.edu
Animal breeding: John Pollak, B-47 Morrison Hall, hjp@cornell.edu
Animal science: Richard Quasa, B-47 Morrison Hall, rql@cornell.edu
Atmospheric sciences: Kerry Cook, 3114 Snee Hall, khc@cornell.edu
Biochemistry, molecular, and cell biology: Volker Vogt, 358 Biotechnology Bldg., vnv1@cornell.edu
Biological and environmental engineering: Dan Aneshansley, 306 Riley-Robb Hall, daa@cornell.edu
Biometry: Marty Wells, 301 Malott Hall, mw1@cornell.edu
Communication: Bruce Lewenstein, 521 Kennedy Hall, bwl@cornell.edu
Development sociology: Lindy Williams, 336 Warren Hall, lw28@cornell.edu
Ecology and evolutionary biology: Harry Greene, 1253 Sedgwick Hall, hjl@cornell.edu; Irby J. Lovette, 188 Johnson Center, Lab of Ornithology, ilj@cornell.edu
Education [also M.A.T.]: John Sipple, 421 Greene, E251 Corson Hall, jsips@cornell.edu
Entomology: Cole Gilbert, 6136 Comstock Hall, cg23@cornell.edu
Environmental toxicology: Andrew Yen, Stacking Hall, ay15@cornell.edu

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies and the master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences.

Students need an advisor in each major. Students in the College of Agriculture and Life Sciences major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences.

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Minors available in CALS can be found on the CALS counseling and advising web site (cals.cornell.edu/cals/current/advising/options/doubmaj.cfm). For minors outside of CALS, please consult with the specific department.

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual-enrollment and to ensure that degree requirements have been fulfilled.

Biometry and statistics: Steven Schwager, 424 Warren Hall, sj5@cornell.edu
Communication: Brian Earle, 328 Kennedy Hall, boe1@cornell.edu
Crop and soil sciences: Gary Fick, 507 Bradford Hall, gw2@cornell.edu
Developmental biology: John Huth, 335 Warren Hall, jth@cornell.edu
Entomology: John Losey, 4126 Comstock Hall, jrl27@cornell.edu
Environmental engineering: James Bartosh, 334 Riley-Robb Hall, jrb35@cornell.edu
Food science: Janice Brown, 107 Stocking Hall, jmb14@cornell.edu
Information science: Christine Stenglein, 303 Upson Hall, cms242@cornell.edu
Interdisciplinary studies: Lisa Ryan, 140 Roberts Hall, lwr1@cornell.edu
International agriculture and rural development: Terry Tucker, 33 Warren Hall, twr2@cornell.edu
Landscape architecture: Peter Trowbridge, 440 Kennedy Hall, pjt4@cornell.edu
Natural resources: Tim Fahey, 12 Femont Hall, tjf5@cornell.edu
Nutritional sciences: J. Thomas Brenna, B38 Savage Hall, jb4@cornell.edu
Plant sciences (plant biology, plant genetics and breeding, horticulture, plant pathology/protection): Peter Davies, 255 Plant Sciences Bldg., pd255@cornell.edu
Science of earth systems: Bryan Isacks, 3110 Snee Hall, bli2@cornell.edu
Science of natural and environmental systems: Tim Fahey, 12 Femont Hall, tjf5@cornell.edu

Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural science: Antonio DiTommaso, 903 Bradford Hall, aad97@cornell.edu
Agriculture science education: William Camp, 416 Kennedy Hall, wgc4@cornell.edu
Animal science: W. Bruce Currie, 434 Morrison Hall, whc1@cornell.edu
Applied economics and management: Dale Grossman, 205 Warren Hall, dag14@cornell.edu
Atmospheric science: Mark Wysocki, 1114 Bradford Hall, mw23@cornell.edu
Biological engineering: James Bartsch, 314 Riley-Robb Hall, dba35@cornell.edu
Biological sciences: Jeffrey Doyle, 200 Stimson Hall, jdf5@cornell.edu; Bonnie Cornella, 216 Stimson Hall, bcc3@cornell.edu
Biology and society: Brian Chabot, 102 Little Rice, bfc1@cornell.edu

Station, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar's Office. Mann Library, with its extensive collections of materials in the agricultural and life sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, Riley-Robb Hall, and Mann Library.
Food science and technology: Martin Wiedmann, 412 Stocking Hall, mw16@cornell.edu
Genetics and development: staff, 107 Biotechnology Bldg., dmc18@cornell.edu
Horticulture: Nina Bassuk, 33 Plant Science Bldg., nb26@cornell.edu
International agriculture and rural development (M.P.S. agr.): Steven Kyle, 249 Warren Hall, sck5@cornell.edu
International development: Norman Uphoff, 33 Warren Hall, ntu1@cornell.edu
Landscape architecture [M.L.A.]: Dan Krall, 440 Kennedy Hall, djk23@cornell.edu
M.P.S. agriculture with Peace Corps option (offered by most agriculture fields with M.P.S. programs): Jim Haldeman, 36 Warren Hall, or see director of graduate studies for chosen field, jeh5@cornell.edu
Microbiology: James Shapleigh, 257A Wing Hall, jck7@cornell.edu
Natural resources: Clifford Kraft, 16 Fernow Hall, cek7@cornell.edu
Neurobiology and behavior: David Deitcher, W125 Mudd Hall, dld14@cornell.edu
Nutritional sciences: Christine Olson, 376 MVR Hall, cmo3@cornell.edu
Physiology: Mark Roberson, T6-008a Vet Research Tower, msr14@cornell.edu
Plant biology: Thomas Owens, 217 Plant Science Bldg., tgo2@cornell.edu; Robert Turgeon, 256 Plant Science Bldg., rrt2@cornell.edu
Plant breeding: Lisa Earle, 514 Bradfield Hall, led3@cornell.edu
Plant pathology: Michael Milgroom, 357 Plant Science Bldg., mgm5@cornell.edu
Plant protection [M.P.S. (agr.)]: William Reissig, Barton Laboratory, Geneva Campus, wbrl@cornell.edu
Soil and crop sciences: Janice Thies, 719 Bradfield Hall, jet25@cornell.edu
Statistics: Robert Strawderman, 1172 Comstock Hall, rrs54@cornell.edu
Zoology: John Hermanson, T502A Vet Research Tower, jwh6@cornell.edu

OPPORTUNITIES IN RESEARCH

Undergraduate Research

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university. Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall, or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 499-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships. The following web sites provide information about research and internships:

CALS Career Development Office:
www.cals.cornell.edu/cals/current/career/

CALS Undergraduate Research Opportunities:
www.cals.cornell.edu/cals/current/student-research/undergrad/ (information on how to explore research opportunities)

CALS Research Honors Program:
www.cals.cornell.edu/cals/current/student-research/honors/

CALS Undergraduate and Graduate Student Grants Proposal Development:
www.cals.cornell.edu/cals/current/student-research/grants/

CALS Undergraduate Minority Research:
www.cals.cornell.edu/cals/current/student-research/minority/

CALS Internship Guidelines:
www.cals.cornell.edu/cals/current/student-research/internship/

Undergraduate Research @ Cornell:
www.research.cornell.edu/undergrad/

Cornell Undergraduate Research Board:
www.cals.cornell.edu/cals/current/student-research/undergrad/

Biological Sciences:
www.biology.cornell.edu/

Research Honors Program

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion requires a thesis written in the style of a master's thesis or scholarly journal article. Original honors research may be submitted for publication in a professional journal. Students are required to send an electronic version of their thesis title, abstract, and the research advisor's name to Ann Gantner, amg2@cornell.edu, by the end of the spring semester. In addition to copies of the entire thesis received by the program area, one copy is required by the Office of Academic Programs (140 Roberts Hall). This copy will be made available in Mann Library. Students may volunteer to publish their theses in the Internet First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During each summer the CALS Research Honors Abstracts is published as a compilation of honors theses abstracts.

The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program and have been recommended for the degree by the honors committee.

Research may be done in these program areas: animal sciences, biological sciences, biology & society, computer science, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair.

Consult "Undergraduate Research Opportunities" on the web (cals.cornell.edu/cals/current/student-research/undergrad/) for information about identifying a research topic, confessing with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must submit a written application and thesis proposal early in the first semester of their senior year; however, they are encouraged to make arrangements with a faculty member during the second semester of their junior year. Several program areas require students to submit their applications and thesis proposal to the program area honors committee chair by the end of the third week, while other program areas have students submit the application and proposal to the CALS Registrar's office by the end of the sixth week. It is the student's responsibility to know the deadlines and submission procedures for the particular program area of interest. Application forms are available from the CALS Registrar in 140 Roberts Hall or from the web at www.cals.cornell.edu/cals/current/student-research/honors/. Applications for biological sciences students can be picked up at 306 Rockefeller Hall, and for biology & society students at 306 Rockefeller Hall.

Before the completed application is submitted, signatures of approval are required in the following order: faculty research mentor, academic advisor, and research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each program area.

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for research funds (up to $350). If approved, the funding will be transferred to a departmental account of the student's research advisor to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described at cals.cornell.edu/cals/current/student-research/undergrad.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program are not eligible for
The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research.”

At or near the completion of their research, students are required to give an oral presentation or poster session during an appropriate event. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors/.

The following are the honors program areas:

**Animal Sciences**

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavachlin, P. A. Johnson, T. R. Overton

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisors by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

1. Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year.
2. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
3. Register for AN SC 499 Undergraduate Research.
4. Participate in AN SC 402 Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
5. Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
6. Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the research committee.

Details pertaining to the specific requirements of the program can be obtained from the administrative office of the Department of Animal Science, 149 Morrison Hall.

**Biological Sciences**

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 210 Stimson Hall.

**Biology & Society**

Faculty committee: D. Pimentel, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.5, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in B&SOC, ALS, or HE 499, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 11: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 25: Thesis defense accomplished.
- May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

**Sequence of Requirements**

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic advisor, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student's academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
4. Submit a completed application and proposal approved by the honors project supervisor to the chair of the Entomology Research Honors Committee no later than the end of the fifth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available from the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).
5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by mid-term of the semester in which the student will complete his or her graduation requirements.

6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Jugatae seminar) in the last semester of the senior year.

7. Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee selected by the chair of the honors committee.

8. Referees will return the thesis to the student one week before the last day of classes. If referees indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

The complete text of this section can be found at: www.entomology.cornell.edu/Undergrad/EntomHonors.shtml

Information Science

Students should follow the CALS social sciences guidelines to obtain research honors in information science.

Landscape Studies

Faculty committee: P. J. Trowbridge, chair

The research honors program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be a major in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding, whether or not they intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in the major of landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic advisor to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines for being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of "distinction in research" on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 499).

2. Work with a faculty advisor to identify and formulate a research problem. If the faculty advisor is not in the Department of Landscape Architecture, select a cooperating advisor from the department to ensure that the research is consistent with the field.

3. Submit a completed application and proposal approved by the honors project sponsor and the chair of the research honors committee no later than the end of the fourth week of the first semester of the senior year. Earlier submissions are encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.

4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.

5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.

6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.

7. Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.

8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13. These copies are in addition to the unbound copy required for Mann Library. A 250-word abstract must be provided electronically to the CALS Office of Academic Programs and must appear at the front of the thesis (see "CALS Requirements for Honors Thesis").

Natural Resources

Faculty director: J. B. Yavitt, chair

The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 497, Honors Research in Natural Resources) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule.

Junior Year

1. File an informal application with the faculty director. The application includes a project description and advisor information.

Senior Year

1. Register for NTRES 497 before the add deadline (fall and spring).

2. Sixth week of fall semester: Submit formal application to faculty director (16 Fernow Hall).

3. March 31: Thesis should be close to completion.

4. April 15: Submit two copies of the thesis to the faculty director for ad hoc reviews.

5. May 3: Pick up ad hoc reviewers' comments from the faculty director.

6. May 15: Submit two copies of the final thesis: one for the college, one for the program director.

7. Week of May 25: Students will be notified of the decision, and the faculty director will recommend that each approved student graduate with "Distinction in Research."
Nutritional Sciences
Faculty committee: J. T. Brenna, C. Bisogni
The research honors program in the Division of Nutritional Sciences is a structured experience that involves (1) taking a course in research (NS 398), (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) reporting the project findings. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program is an excellent opportunity to participate in research projects that will span at least four semesters and are labor intensive and that are suitable for all students. The honors program in physical sciences is a structured experience that involves (1) taking a course in research (NS 398), (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) reporting the project findings. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Science, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:
1. Identify a thesis advisor and thesis topic before the end of the junior year.
2. Work with the thesis advisor to prepare a budget, short research proposal (2–3 pages), and application form. These materials must be received by the Physical Sciences committee chair by the end of the third week of senior year.
3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.
5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.
7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which the student plans to graduate.

There is no required format, but the thesis is usually written in the format of a research journal article or a master's thesis.

Additional guidelines can be found at www.css.cornell.edu/Programs/PlantSciHon/.

Social Sciences
Faculty committee: N. Chau, M. Shapiro
Research projects in the social sciences include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student's writing ability, and on approval of a detailed thesis proposal. The application and proposal are due to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis advisor during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors commit-
three reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. Research Topic: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

2. Research Questions/Empirical Hypotheses: Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

3. Research Methods: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

4. Expected Significance: State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise pending petition to the Social Science Research Honors Committee. Students should register for honors credit directed by the faculty research honors project advisor.

Distinction in research is awarded upon approval of the research honors thesis by the Social Science Research Honors Committee. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. The Honors Committee recommends the submission of the thesis draft to the research advisor two months before graduation to permit sufficient time for revision. Two copies of the thesis must be submitted to the chair of the Honors Committee no later than the middle of the second-to-last month before graduation (i.e., April or November). A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed and further revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the Honors Committee.

OFF-CAMPUS OPPORTUNITIES

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution should refer to the non-Cornell credit policies on p. 37. Information about enrolling at another institution outside of the United States can be found under "Study Abroad."

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders for the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments are made. Students should plan a program of study in consultation with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement. To receive academic credit for the Assembly Intern Program, students enroll in ALS 392. To receive academic credit for the Senate Assistants Program, students enroll in ALS 400. Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington

The Cornell in Washington program offers students from all colleges in the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty members, conduct individual research projects, and work as externs. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, and carry out individual research projects under the supervision of Cornell faculty members. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 21, inquire at M101 McGraw Hall, 255-4090, or visit ciw.cornell.edu.

Marine Biological Laboratory's (MBL) Semester in Environmental Science

The Marine Biological Laboratory's (MBL) Semester in Environmental Science is a semester-long program held each fall in Woods Hole, Massachusetts. This is a multidisciplinary and college program run by the staff of the Ecosystems Center of the MBL. Approximately 35-40 students interact intensively with the world-class research staff of the Ecosystems Center in a mixture of classroom, laboratory, and field-research activities. The major foci of the program are on biogeochemistry, ecosystem science, and the impacts of land use and global change on the environment. Students spend about 20 hours each week conducting intensive, hands-on field and lab work in coastal forests, freshwater ponds, and estuaries, and complete an independent research project as part of their academic program. The curriculum. The MBL is one of the oldest (founded in 1888) and most distinguished biological field stations in North America. Cornell credit for up to 16 credits is offered. More information on the program is obtained from the Cornell faculty liaison (Prof. Bob Howarth, E309 Corson Hall, 255-6175) or from the director of the program (Dr. Ken Foreman, MBL Ecosystems Center, 508-289-7777, http://courses.mbl.edu/SEVS/).

SEA Semester

The SEA Semester program is an educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA's two sailing vessels: the SSV Robert Seamans or the SSV Corsiivith Cramer. For more information, contact the Cornell Marine Programs office, G14 Stimson Hall (255-3717) or visit www.sea.edu. CALS students should file an intent to study abroad with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML offers undergraduates and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," in the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge and experience gained following the CALS guidelines for assigning credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, or Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For
GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Requirements

A. Minimum total credits: 120 academic credits are required for graduation.

Important Exceptions:

- Review or supplemental courses (e.g., 00-level courses) increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
- Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits do count toward the minimum 12 credits required for full-time status.
- Physical education courses do not count toward 120 credits for graduation. They do not count toward the minimum 12 credits required for full-time status.

B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.

C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.

D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation. CALS credits include all courses from departments within CALS, and courses offered in the Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences Departments. Specific courses offered under the following subject prefixes count as CALS credits: AJS, AIS, AEM, AN SC, BEE, BIO G, BIOAP, BIOBM, BIOE, BIOGD, BIOM, BION, BIONB, BIOPL, BIOTR, COMM, CSS, DSOC, EAS, EDUC, ENTOM, FD SC, HORT, IARD, INFO, LA, NS, NTRES, PL BR, PL PA.

E. Maximum credits from endowed colleges: 55 endowed credits can be completed without incurring excess tuition charges. Endowed credits include all courses from departments in the College of Arts and Sciences, Architecture, Art, and Planning, Engineering, the Hotel School, the Johnson School of Graduate Management, and the Law School. Courses completed during the summer and winter sessions do not count against the 55 endowed credit limit.

F. Minimum letter-graded credits: 100 (prorated for transfer students).

G. Maximum credits earned through independent study, research, teaching assistantships, and/or internships: 15 credits of "unstructured" course work can be applied toward graduation requirements (prorated for transfer students) (i.e., a minimum of 100 "structured" credits are required for graduation).

2. Physical Education Requirement

A. Pass two PE courses with a satisfactory grade.
Exception: External transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college before matriculation.

B. Pass a required swim test, administered during orientation. External transfer students who are exempt from PE are exempt from the swim test.

C. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

3. Residency Requirements
A. Eight semesters of full-time study are expected. Transfer students are credited with one semester in residence for each 15 credits earned at another institution.

H. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in the Internal Transfer Division.

C. The final semester before graduation must be completed in a Cornell program as a full-time student in continued good academic standing.

D. Students in the ninth and final semester may apply for prorated tuition. The eligibility criteria are listed below. The student will be charged the full administrative fee and student service charge, plus one-fifteenth of the remaining full tuition per credit hour.

All of the following conditions must be met in order for a student to be considered for prorated tuition:

1. The prorated semester is the ninth and final semester of study.

2. The student is in good academic standing with the college and the major.

3. Maximum of 11 credit hours of course work are allowed under prorated tuition. Students cannot exceed the number of credits approved or full tuition will be charged, and no refund will be allowed if fewer credits than applied for are completed.

4. Approval of the student’s faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be adjusted accordingly.

5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to be prorated in the spring semester are encouraged to submit the application by December 15. The final deadline is January 15.

Please be advised that prorated tuition may impact the student’s financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements
Minimum cumulative GPA: 2.00 or above must be maintained. The cumulative GPA includes all grades earned at Cornell.

5. Schedule Requirements
A. Students are expected to enroll in at least one CALS course each semester until 55 CALS credits have been earned.

B. Freshmen may not enroll in more than 18 credits. Not including physical education.

C. Freshmen are limited to one S-U course per semester.

D. PE does not count toward the 12 credit minimum required for full-time status.

6. Distribution Requirements
The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

Please note: Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be review or supplemental in the discipline, such as 00-level courses, will not be counted in the distribution areas.

Physical and Life Sciences. 18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.

Social Sciences and Humanities. Students must complete four courses of 3 or more credits each from the following six categories of courses in the humanities and social sciences:

• At least one course must be completed from three different categories.

• No more than two courses in the same department will be counted toward the distribution requirement.

Categories:

• Cultural Analysis (CA)

• Historical Analysis (HA)

• Knowledge, Cognition, and Moral Reasoning (KCM)

• Literature and the Arts (LA)

• Social and Behavioral Analysis (SBA)

• Foreign Language (FL)

Detailed descriptions follow.

Social Sciences and Humanities: Category Descriptions

Cultural Analysis (CA)

These courses study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

Historical Analysis (HA)

These courses interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

Knowledge, Cognition, and Moral Reasoning (KCM)

These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify
moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Literature and the Arts (LA)
These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and the nature of justice, the good life, or human focusing on moral reasoning explore ways of making moral judgments. Courses investigating the arts and on their history, aesthetics, and the nature of justice, the good life, or human focusing on moral reasoning explore ways of making moral judgments.

Social and Behavioral Analysis (SBA)
These courses examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict resolution).

Foreign Language (FL)
These courses are taught by the following departments: Africana Studies and Research Center (AS&RC—language only), Asian Studies (BENGL, BURM, CHIN, HINDI, INDO, JAPAN, KHAMER, KOREA, SANSK, TAG, THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only, DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FREN, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSIA, HUNG, POLISH, SEBCR, and UKRAN).

Diversity (D)
Although not a requirement, the college recommends that students take at least one diversity course.

Written and Oral Expression. 9 credits total, of which at least 6 must be in written expression. Oral expression is not required by the college (it may be for some majors); all 9 credits may be in written expression. Courses in written and oral expression may be selected from the following:

Oral Expression
COMM 201, 203
ENTOM 335
Written Expression
First-Year Writing Seminars
Sophomore Seminars
AEM 200

7. Quantitative Literacy Requirement
Faculty legislation requires minimum competency in quantitative literacy to complete a degree in the College of Agriculture and Life Sciences. This requirement can be satisfied in one of three ways:
• Earning a score of 4 or 5 on the AP Calculus exam;
• Transferring an approved calculus or statistics course with a grade of "C" or better;
• Taking an approved math or statistics course at Cornell.

A complete listing of approved math and statistics courses is available online at www.cals.cornell.edu/current/registrar/. Pre-approval forms are available in CALS Registrar's Office.

Non-Cornell Credit Policies
1. Non-Cornell credit includes:
• advanced placement credit (see p. 8 for further details);
• credit earned at an accredited college or university;
• credit earned through the Ithaca College and Wells College Exchange Programs;
• credit earned through a Cornell Abroad or CALS exchange program.

2. Non-Cornell credit is accepted by CALS when:
• the credits are earned at an accredited institution;
• the credits do not duplicate course work already completed at Cornell;
• the credits are earned before matriculating into CALS or during the summer or winter session or through Cornell Abroad or an approved exchange program;
• the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
• the grade earned is "C" or better; and
• an official transcript is sent directly to the CALS Registrar's Office from the college/university where the credits were completed.

Please note: Cornell University does not accept non-Cornell credit including advanced placement credit for courses taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 8–11 of this catalog.

A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.
• If more than 60 non-Cornell credits have been completed, the CALS Registrar's Office will work with the student to determine which credits best fulfill CALS graduation requirements.
• Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.

4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.
• Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
• Non-Cornell courses that are equivalent to Cornell courses that fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.

5. Students who have already matriculated into CALS and are planning to take courses at another institution should complete a transfer credit pre-approval form before completing the course work. Pre-approval forms are available in the CALS Registrar's Office in 140 Roberts Hall.

6. During the regular academic year, students can be enrolled in courses at both Cornell and another institution only if the student is taking a course not offered at Cornell. (Schedule conflicts or unavailability of courses in a given semester do not constitute valid rationales for concurrent enrollment at another institution.)

Graduation Procedures
1. The progress of each student toward meeting the degree requirements is recorded each semester in the CALS Registrar's Office on a graduation summary form. Students can review their graduation summary online at https://dust.cals.cornell.edu.

2. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are expected to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate early or delay graduation must complete an additional application with the CALS Registrar's Office.
38 AGRICULTURE AND LIFE SCIENCE 007–2008

GRICULTURE AND LIFE SCIENCE

3. Application to graduate. In the first semester of their senior year, students must complete and file an application to graduate with the CALS Registrar's Office.

Deadlines to File the Application to Graduate:
January graduates: September 14
May graduates: October 12
Failure to meet these deadlines could result in a student's name being omitted from the commencement program and/or a diploma not being available for pick-up on commencement Sunday.

Student Responsibilities: It is the student's responsibility to complete the application to graduate; obtain signatures from faculty advisor(s), and then schedule an appointment to file the application with the CALS Registrar's Office.

Faculty Advisor Responsibilities: It is the faculty advisor's responsibility to inform seniors of any courses still needed to fulfill major and/or minor requirements and to list those courses on the application to graduate. Faculty advisors must sign the application to graduate before the student meets with the CALS Registrar's Office. If a student is completing more than one major and/or a minor, the signatures of all faculty advisors are required.

CALS Registrar's Office Responsibilities: It is the responsibility of the CALS Registrar's Office to inform seniors of any credits needed to fulfill the CALS graduation requirements and to list those credits on the application to graduate. The Registrar's Office will sign the application to graduate and provide both the student and faculty advisor with copies of the signed application. The student should retain a record of the application.

Commencement Information: Commencement information will be provided to all graduating seniors directly by the Commencement Office. Information is also available at www.commencement.cornell.edu/.

ACADEMIC POLICIES AND PROCEDURES

Registration
All students must register with the university at the beginning of each semester. In order to be considered a registered student by the university, a student must:

• complete course enrollment according to individual college requirements;
• settle all financial accounts, including current semester tuition;
• clear any holds, whether these are from the Bursar's Office, Gannett Health Center, the judicial administrator, or the dean of your college; and
• satisfy New York State health requirements.

Students can check their registration status using Just the Facts. The first screen in Just the Facts will indicate whether you are registered and will list any holds that need to be cleared, including the correct office to visit to have the holds removed.

Course Enrollment
Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty advisor, students pre-enroll by computer.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the CALS Registrar's Office, 140 Roberts Hall.

Repeated Courses
Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their cumulative GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their cumulative GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Incompletes
Students must not enroll again for a course in which they received an incomplete. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Enrollment Changes
A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through "Just the Facts" or the official course drop and add form at the Registrar's Office, 140 Roberts Hall. Approval of the faculty advisor may be required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

Academic Integrity Policy
The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings; students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2. Students are guilty of violating the code if they:
   • knowingly represent the work of others as their own.
   • use or obtain unauthorized assistance in any academic work.
   • give fraudulent assistance to another student.
   • fabricate data in support of laboratory or field work.
   • forge a signature to certify completion or approval.
   • submit the same work for two different courses without advance permission.
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
   • in any other manner violate the principle of absolute integrity.

3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4. Faculty members fulfill their responsibility to:
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
   • make clear the conditions under which examinations are to be given.
   • make clear the consequences of violating any aspects of the code.
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are made to test what students can do independently.
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
   • monitor the work and maintain such records as will support the crucial underpinnings of all guidelines: the students' submitted work must be their own and no one else's.

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides formal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent
The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

**Academic Honors**

The college encourages high academic achievement and recognizes outstanding students in several ways:

1. **Dean's List.** Each semester, students are recognized for academic excellence by inclusion on the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
   a. a minimum course load for the semester of 12 letter-graded credits,
   b. completion of at least one CALS course,
   c. achievement of a semester GPA of at least 3.50, and
   d. achievement of a grade of A or better in each course (including physical education), with no Incompletes.

2. **Bachelor of Science with Honors**
   a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate "summa cum laude."
   b. Students receiving a cumulative GPA of 3.75 or greater (based on the cumulative Cornell GPA) will graduate "magna cum laude."
   c. Students receiving a cumulative GPA of 3.00 or greater (based on the cumulative Cornell GPA) will graduate "cum laude."

3. **Bachelor of Science with Distinction in Research.** Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

4. **Ho-Nun-De-Kah.** Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community. Visit Ho-Nun-De-Kah's web site at www.hokdh.org.

5. **Golden Key** is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key's web site at www.rso.cornell.edu/gkhs.

---

### Academic Standing

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory academic progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- Semester GPA of at least 2.00
- Cumulative GPA of at least 2.00
- Satisfactory completion of 12 or more credits per semester
- Reasonable progress toward completion of major and distribution requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight years is usually required.

### Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee:

- Reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements.
- Receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee.
- Acts on readmission requests from persons whose previous enrollment was terminated by the committee.
- Notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student's faculty advisor, whose signature is required. The advisor's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there is evidence of misunderstanding and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when unforeseen circumstances beyond the control of the student exist and when the faculty and the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for "withdrawal") is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

### Leave of Absence

A student taking a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester must submit a written petition for a leave of absence. Such action serves as appropriate notification to university offices and corrects the student's transcript.

An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Committee on Academic Achievement and Petitions).

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

### Withdrawal

A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

---

### MAJOR FIELDS OF STUDY

The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.
Agricultural Sciences

Agriculture is an exciting and dynamic field involving a wide range of disciplines. The Agricultural Sciences major trains students to be broad thinkers who are scientifically skilled and knowledgeable about socioeconomic issues related to agriculture and the environment. This interdisciplinary program is for students wishing to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources. Such careers may include the production and marketing of plant/animal foods, agricultural education in secondary schools, organic farming, cooperative extension, and crop consultation. By providing students with focused courses of study to choose, the Agricultural Sciences program is designed to allow students to work with their advisor in developing a curriculum that best fits their needs of each individual. The program allows students to focus on one or two areas of concentration while gaining a broad exposure to the agricultural courses across the college. All students are required to take the core courses in sustainable agriculture, soil science, and integrated pest management, as well as gain practical experience by completing either an internship and a "hands-on" experiential learning capstone course addressing real problems in agricultural science. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

Students graduating with an Agricultural Sciences major will be trained to address complex problems of today and will have a knowledge base that leads to employment in a variety of fields. The required emphasis on one or two concentration areas also allows students to become experts in the area of agriculture that is most exciting to them. Since students in the Agricultural Sciences program come from across the college, we create a family of students who take courses, study, learn, and discuss together as a group. We do this by organizing activities that facilitate interdisciplinary settings, such as inviting guest speakers from various sectors of the agricultural industry to lead discussions, offering professional development workshops to train students for the workforce, and hosting social events for students in the major. Opportunities are also available in research and outreach experiences, and in summer employment, which serve to enrich the students' practical experiences.

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal genetics, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisors. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged.

Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional schools following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy business or enter a related career. Other students may elect a program oriented toward economics and business preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with the department, meet a student's career interest related to animals.

For information, contact Deloris Bevins in 149 Morrison Hall, dbh@cornell.edu.

Applied Economics and Management

The Department of Applied Economics and Management (AEM) offers undergraduate programs of study in three broad areas: business, agribusiness, and applied economics.

AEM is home to Cornell's undergraduate general business degree. Here students can immerse themselves in finance, marketing, management, and business strategy courses, as well as take specialized courses in entrepreneurship, food industry management, and agribusiness. This highly selective program is accredited by AACSB International, the accrediting body for general business degree programs.

AEM also includes undergraduate specializations that focus on the economics of agriculture and the environment. All AEM courses stress the application of analytical skills, critical thinking, and economic theory to real-world business and public policy issues.

Ten (10) areas of specialization are offered in AEM.

Specializations: Students must choose at least one specialization, but may choose more than one. Note: courses may be used to satisfy both an AEM core requirement and a specialization requirement.

Accounting

Agribusiness Management

Applied Economics

Entrepreneurship

Environmental and Resource Economics

Finance

Food Industry Management

International Trade and Development

Marketing

Strategy

Minors

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in five different subject areas: Agribusiness Management and Finance, Business, Environmental and Resource Economics, Food Industry Management, or Applied Economics. These minors consist of between 18 and 20 credits of required courses.

Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside CALS. For those lacking time to incorporate all the business minor requirements during the regular school year, up to three of the required courses can be taken during Summer Session.

Atmospheric Science

Atmospheric science is the study of the atmosphere and its effects on the climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and
acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science at the College of Agriculture and Life Sciences are as follows:

1. **Atmospheric science**: a. EAS 341, 342, 352, 447, 451
   b. See tracks listed below for additional required courses

2. **Mathematics, statistics, and computer science**:
   a. MATH 111, 112, (192 or 213), 293
   b. AEM 210 or equivalent
   c. EAS 121/150 or equivalent

3. **Basic physical sciences**:
   a. PHYS 207, 208, or equivalent
   b. CHEM 206

4. **Tracks**

   **Operational required**
   - EAS 250
   - EAS 331
   - EAS 435

   **Education required**
   - EAS 131/133
   - EAS 250
   - EAS 331
   - EAS 435

   **Broadcasting required**
   - EAS 131/133
   - EAS 250
   - EAS 331
   - EAS 435

   **Courses suggested**
   - EAS 250
   - EAS 268
   - EAS 435

   **Environmental science required**
   - CHEM 207–208
   - EAS 347

   **Courses suggested**
   - EAS 131/133
   - EAS 250
   - EAS 268
   - EAS 331
   - EAS 435
   - EAS 483

It is recommended that students who are interested in gradient study in atmospheric science should take additional courses in mathematics and physics. A student may minor in atmospheric science by completing any of the following EAS courses: 131, 250, 268, 331, 341, 342, 352, 355, 447, 451, 456, 470, 531, 652 or 666.

*(two of the courses must be taken at Cornell.)*

Courses satisfying the requirements for a major or minor in atmospheric science may not be taken S-U.

**Biological Sciences**

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematics and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.biology.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

**Biological and Environmental Engineering**

The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and environmental engineering. BEE faculty and students address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering majors in the Department of Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in biological or environmental engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences.

Engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (solid mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and engineering design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students may further strengthen their programs by completing an engineering minor. Students preparing for medical school will take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills and collaborative problem-solving. Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu/.

The department also offers technology concentrations in biological engineering technology and environmental engineering technology within the Interdisciplinary Studies Major in CALS. The technology concentrations emphasize technical applications of biological, environmental, physical, and life sciences. Students take courses in basic biological and physical sciences and mathematics, and choose electives in engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology students participate in undergraduate teaching and research, internships, independent study, project teams, and study abroad. Students should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for technical people who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is preparing the next generation to meet these challenges.

Specific course requirements for the engineering programs are found in the College of Engineering section of this book.
Specific course distribution requirements for the concentrations in biological engineering technology and environmental engineering technology include the following:

1. **Basic Subjects**
   - Calculus: 8 credits
   - Chemistry: 7 credits
   - Physics: 8 credits
   - Computer applications: 4 credits
   - Statistics or probability: 3 credits
   - Introductory biological sciences*: 6-8 credits
   - Written and oral expression*: 9 credits
   - Social sciences and humanities*: 12 credits
   - *Required of CALS majors.

2. **Advanced and Applied Subjects**
   - Five courses (15 credits) in the biological, environmental, or natural sciences.
   - Five courses (15 credits) in technology. Three courses from the list of approved technology courses.
   - At least three courses total have to be in engineering at or above the 300 level.
   - One course must be chosen from the list of approved laboratory courses.
   - The lab course cannot double count as one of the three required technology courses.
   - **Contact department for a list of approved courses.

3. **Electives**
   - Additional courses to complete College of Agriculture and Life Sciences requirements

4. **Total (minimum)**: 120 credits

For further details on the biological and environmental technology concentrations, contact the BEE department undergraduate program office at 207 Riley-Robb Hall, 607-255-2173 or www.bee.cornell.edu.

**Biology & Society**

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society program provides students with the skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumers, or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and related fields.

**Admissions**

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes:

1. a one- to two-page statement explaining the student's intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. a selected theme.
3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. a transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 50 faculty members from three colleges serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also "Biology & Society" in the College of Arts and Sciences section of this publication.

**Biology & Society requirements:**

1. Introductory biology (101-104, 105-106, or 107-108, or a 5 in AP biology)
2. College calculus (one course)
3. Ethics (one course)
4. Two social sciences/humanities foundation courses
5. Three biology foundation courses
6. One biology depth course
7. Statistics (one course)
8. Core course
9. Five theme courses (a coherent group of five courses relevant to the student's special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.

**Biometry and Statistics**

Quantitative prediction and interpretation are increasingly essential components of biological, physical, and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, continues to increase exponentially, providing the means for sophisticated analysis of complex phenomena.

The Biometry and Statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of statistical and mathematical techniques to the sciences. Biometry applies statistics and mathematics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small firms; salaries are usually excellent. Experience gained through summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended. For further details on the Biometry and Statistics major/minor, please contact the Director of Undergraduate Studies, Professor Steven J. Schwager (1194 Comstock Hall) at sjss@cornell.edu or go to www.bscb.cornell.edu.

**Requirements for the Major** (beyond the college requirements)

Ten (10) core courses: plus either the Statistics or the Statistical Genetics sequence.

Only courses for which the student receives a grade of C- or better will count toward the major in biometry and statistics.

Core Courses:

- BTRY 301 Biological Statistics I or BTRY 601 Statistical Methods I
- BTRY 302 Biological Statistics II or BTRY 602 Statistical Methods II
BTRY 408 Theory of Probability
BTRY 409 Theory of Statistics
BTRY 495 Statistical Consulting
MATH 111 Calculus I
MATH 112 or 122 or 191 Calculus II
MATH 221 or 223 or 231 or 294 Linear Algebra
MATH 192 or 213 or 222 or 224 Multivariable Calculus
CS 100M Introduction to Computer Programming or
BEE 151 Introduction to Computing
Statistics concentration: Students must complete three (3) advanced courses in statistics, computer science, operations research, biology, and/or mathematics courses, below is a sample of such courses (for complete list, go to www.bscb.cornell.edu/ugrads06/):
BTRY 310 Statistical Sampling
BTRY 410 Multivariate Analysis
BTRY 482 Statistical Genomics
BTRY 483 Quantitative Genomics and Genetics
BTRY 484 Computational Genomics
BTRY 603 Statistical Methods III: Categorical Data Analysis
BTRY 604 Statistical Methods IV: Applied Design
NTRES 670 Spatial Statistics
CS 426 Computational Biology
OR&IE 361 and 462 Stochastic Processes
OR&IE 473 Empirical Finance
BIOP 440 Phylogenetic Systematics
AN SC 420 Quantitative Animal Genetics
MATH 311 or 413–414 Introduction to Analysis
MATH 420 Differential Equations and Dynamical Systems

Statistical genetics concentration: Students must complete two (2) courses from BTRY 482 Statistical Genetics, BTRY 483 Quantitative Genomics and Genetics, and BTRY 484 Computational Genomics; BIOGD 281 Genetics; and in addition, they must complete one (1) course from the advanced courses previously listed (for complete list go to www.bscb.cornell.edu/ugrads06/).

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student’s responsibility to develop this concentration, with advice from the faculty, particularly the student’s faculty advisor. It will be helpful to discuss the selection of courses with the Director of Undergraduate Studies or Undergraduate Advising Coordinator of a department closely linked with the chosen concentration.

The Minor
A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 1198 Comstock Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student’s major and a BSCB faculty advisor. Students and advisors in other departments should contact the Director of Undergraduate Studies in the Department of Biological Statistics and Computational Biology if they have general questions about Biometry and Statistics courses or the minor. A BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor
BTRY 301 Biological Statistics I or BTRY 601 Statistical Methods I
BTRY 302 Biological Statistics II or BTRY 602 Statistical Methods II
BTRY 408 Theory of Probability
BTRY 409 Theory of Statistics
MATH 111 Calculus I
MATH 112 or 122 or 191 Calculus II
MATH 192 or 213 or 222 or 224 Multivariable Calculus
MATH 221–222 or 223-224 Linear Algebra and Multivariable Calculus

One (1) additional statistics elective:
BTRY 310 Statistical Sampling
BTRY 410 Multivariate Analysis
BTRY 482 Statistical Genomics
BTRY 483 Quantitative Genomics and Genetics
BTRY 484 Computational Genomics
BTRY 495 Statistical Consulting
BTRY 603 Statistical Methods III: Categorical Data Analysis
BTRY 604 Statistical Methods IV: Applied Design
ILST 614 Structural Equations
NTRES 670 Spatial Statistics
A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C- or better will count toward the minor in biometry and statistics.

Communication
Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how
• communication influences attitudes, opinions, and behaviors.

• mass media work in our society.
• to use, evaluate, and design communication technologies.
• to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education.

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses
Fall semester
COMM 101 Cases in Communication
Spring semester
COMM 130 Visual Communication
COMM 131 Writing about Communication

This set of courses provides students with a basic understanding of communication and communication processes.

Required sophomore courses
COMM 201 Oral Communication
COMM 282 Research Methods in Communication Studies

Two of the four Focus Area introductory courses:
COMM 220 Contemporary Mass Communication
COMM 245 Psychology of Social Computing
COMM 276 Cases in Communication and Social Influence
COMM 285 Communication in the Life Sciences

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication distributed among advanced writing and presentation courses, electives, and focus area requirements. In consultation with their advisers, students concentrate in one of four defined focus areas appropriate to specific educational and career goals.

1. Communication in the life sciences (CILS): Students focusing in CILS will investigate how communication influences public understanding of science, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator/outreach specialist, environmental or health-risk communicator, and business, legal, and other graduate study.

2. Communication media studies (CMS): Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how what we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media, from politics to entertainment to news to the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media
industries, in designing the laws and policies regarding media, in business, legal, or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.

3. Communication and information technologies (CIT): Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as well as people's interface and information needs. Possible career paths include information systems designer, research analyst, user interface designer, software designer, usability specialist, technical writer, and business, legal, and other graduate study.

4. Communication and social influence (CSI): Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations, and institutional audiences to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human affairs. This focus area would be appropriate for students interested in using communication to bring about change at the individual and societal level. Possible career paths include public relations, communication specialists, pollster, human resources, governmental affairs, and business, legal, and other graduate study.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both.

The minor in communication consists of four required courses: COMM 101, 130, 201 and either 220, 245, 276, or 285. Students also complete three elective courses totaling 9 credits from the following courses (of which must be at the 300–400 level, excluding the advanced writing and presentation courses and COMM 303, 353, 405, 496, and 498).

The minor in information science is a cross-disciplinary program requiring one course in the subject area, two courses from the human-centered systems component area (primarily computer science), two courses from the social systems component area (social, economic, political, and legal issues), and one additional course from any other area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects and is a part of the Agricultural Sciences major. A specialization in crop science is a part of the environmental science major. A focus on soil science is possible in two majors, the science of natural and environmental systems (SNES) or the science of earth systems (SES). The SNES major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNES major, students can concentrate in agroecosystem science, environmental biology, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics.

A minor in crop management is also available for students interested in crop management at Cornell University. In summary, it requires at least two courses and at least 7 credits in each of crop science (CSS 311, 312, 317, or 413) and plant protection (CSS 315, 444, or ENTOM 312) plus at least three courses and at least 12 credits in soil science (CSS 260, 372, 412, 421 or 466). Equivalent transferred courses can be substituted. This minor helps prepare students for the graduate examination, which provides an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and 3 credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these and other facets of social change in both domestic and international settings.

The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and social systems, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agricultural systems on rural development and rural labor markets; community and regional development; environmental sociology; technology; the political economy of globalization; women in development; and ethnic stratification and integration. Most courses contribute to both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in development sociology are required to successfully complete seven core courses: introductory sociology (D SOC 101), international development (D SOC 205), population dynamics (D SOC 201), methods (D SOC 315 or 314), theory (D SOC 301), social stratification (D SOC 370), and a course in statistics. Four additional development sociology courses are also required of all majors, at least two of which must be at the 300 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development, the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in the analysis of practical problems. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

An undergraduate student minor is required to successfully complete three core courses from Group 1 (group I, introductory sociology (D SOC 101), international development (D SOC 205), social indicators (D SOC 316), or social stratification (D SOC 370). A student minor is also required to complete at least one course from Group 2 (theory (D SOC 301), statistical evidence (D SOC 302), inequality and development (D SOC 305), social movements (D SOC 315), environment and society (D SOC 324), social stratification (D SOC 370), cannot be used for Group 2 if selected for Group 1), or honors research (D SOC 380). One additional elective (any D SOC course) must be completed if only one course from
Group 2 is selected. Courses taken with an "S-U" option will not apply.

The department maintains strong ties with technical departments as well as with programs dealing with a range of issues of importance to international and domestic development. These include: the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfman Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area and ethnic studies programs including the American Indian Program, Latino Studies Program, Asian American Studies Program, Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also maintain working relations with faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

**Education**

The Department of education builds on strong academic disciplines such as sociology, psychology, anthropology, biological and political sciences, political thought, and philosophy, and is grounded in empirical and theoretical studies of educational practice in order to address education in diverse contexts and across the lifespan. The department has two foci to meet societal demands for teachers, researcher, and learners. The Learning, Teaching, and Social Policy (LTSP) concentration, which includes the Cornell Teacher Education Program (CTE), concentrates on teacher education in science, mathematics and agricultural science education, diversity, critical pedagogy, the study of schools and their families, and policy related to formal education. The Adult and Extension Education (AEE) concentration prepares scholars and practitioners for adult and extension education leadership and professional development roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include: participatory practices in research, policy, and adult education; public scholarship, university extension/outreach, and community organizing in the United States; international adult and extension education; learning in adulthood; education and program development; continuing professional education; staff development; and health issues related to the education of adults.

**Learning, Teaching, and Social Policy (LTSP)**

This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community participation in society.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning, teaching, and educational policy in a variety of contexts and at multiple governance levels. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the development of democratic values in educational policy and practice. Context, gender, social, and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interaction, and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigates factors that contribute to scientific and quantitative literacy, curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociomoral development, action, and reflective thought in schools and communities. Our work contributes to an educated, global society of leaders and citizens who are prepared to respond to emerging social, technological, and scientific issues, with ethical and critically reflective judgment.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agricultural science, science, and mathematics. Students in the CTE program develop a solid mastery of their content areas and an understanding of the issues in education, and interact with and learn from each other. Undergraduates accepted into the CTE program major in a mathematics, agriculture, or science discipline in any Cornell college and complete a minor in education. With a CTE minor and a bachelor's degree, students can complete the Master of Arts in Teaching (MAT) in one year. CTE teachers are prepared as scholars of teaching and learning, able to help all their students achieve the scientific and quantitative literacy and ethical decision making skills needed for participation in a democracy.

**Agricultural Science Education**

Agricultural Science Education is taught at the middle and high school levels in New York State and nationally. Building on strong academic disciplines in the agricultural sciences, and with a solid grounding in the psychological, social, empirical, and theoretical bases of educational practice, the department offers two programs that lead to professional certification in Agricultural Science Education. The undergraduate degree in Agricultural Science Education and the agriculture option in the Master of Arts in Teaching are both offered under the Cornell Teacher Education umbrella. In addition, the undergraduate degree offers a non-certification option for persons with interests in instruction in non-school settings such as extension, 4-H, arboreta, and state and national parks. All three of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

**Minor in Education**

The minor in education gives students a planned core of courses to provide them with an overview of education as a field. One option prepares students to move into the graduate segment of the Cornell Teacher Education (CTE) program. Other options provide preparation for admission into other graduate teacher certification programs or a background for professional development such as extension, business, and industry. Any undergraduate minor in the university may enroll subject to availability in courses required for the minor. Students who wish to pursue a minor in education must complete and submit an application. Applications are available in 408 Kennedy Hall, the CALS Office of Academic Programs, or by e-mailing cu_teacher_ed@cornell.edu.

**Effective College Teaching Series**

The Center for Learning and Teaching, under the auspices of the Department of Education,
offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty members and graduate students who are either currently teaching or intending to teach. For details, contact the Center for Learning and Teaching, 255-6130, or www.cit.cornell.edu.

Current offerings include:
EDUC 548(5480) Effective College Teaching
Spring and one-week summer session. 1–3 credits. For faculty and graduate students who intend to pursue an academic career.

EDUC 578(5780) ITADP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum
Fall and spring. 2 credits. For international graduate students who have, or will have, teaching assistantships.

EDUC 579(5790) ITADP Further Training for International Teaching Assistants
Fall and spring. Noncredit course for international teaching assistants who have completed EDUC 578 but need or desire continued work in classroom instructional and communication skills.

Graduate Teaching Development Workshops
Offered early in each fall and spring semester, this daylong series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty members and graduate teaching assistants.

EDUC 620(6200) Internship in Education
Fall and spring. 1 credit. Prerequisite: CALS Graduate Student Professional Development Workshop. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their workshop experience through reflectice practice and consultation with an instructional support specialist.

Entomology
The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisors.

Requirements
General Requirements for CALS (see Graduation Requirements for Bachelor of Science) Basic Science and Math Requirements

- One semester of physics (may need two depending on future plans)
- CHEM 206-208 or 207-208
- CHEM 257 (organics)
- Introductory biology (101–104 recommended, even if AP credit received)
- BIOG 281 (genetics) or PL BR 225 (plant genetics)
- BIOE 278 (Evolutionary Biology)
- Choose one of the following two courses: BIOE 261 (Ecology and the Environment)
- BIOBM 330 or 331 (Principles of Biochemistry)

(Choice depends on student interest in organismal vs. cellular/molecular aspects of biology)

Entomology Requirements (15–21 credits)

- ENTM 212 Insect Biology—4 cr
- Group A (core courses). Choose two of the following six courses:
  - ENTM 331/332 Insect Systematics—4 cr
  - ENTM 333 Larval Insect Biology—3 cr
  - ENTM 400 Insect Development—4 cr
  - ENTM 455 Insect Ecology—4 cr
  - ENTM 485 Insect Physiology—4 cr
- Two additional entomology courses from Groups A or B (see link to Entomology Course Spreadsheet for a complete list of entomology courses, www.entomology.cornell.edu)

Food Science
The food science program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the food science program can choose from one of four specialization options in the major: (1) food science; (2) food operations and management; (3) food biotechnology; or (4) enology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for the teaching and research needs of food companies who intend to pursue an academic career.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

Enology and Viticulture. Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in Viticulture. For these students, plant sciences will be their “major,” and their required courses in enology (offered within the Food Science program) will constitute a “minor” in Food Science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) can “major” in food science (with a concentration in enology) and a “minor” in plant sciences (with a concentration in Horticulture).

Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor program, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major. Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

Information Science
Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context. The field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their
use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.
- **Information Systems.** This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

**Note:** All INFO courses will count as in-college credit.

### Requirements

Core (11 courses):

1. **Introductory (one course):**
   - INFO 130 Introductory Design and Programming for the Web

2. **Math and Statistics (four courses):**
   - **MATH 111 Calculus I**
   - **one course chosen from:**
     - MATH 171 Statistical Theory and Application in the Real World
     - AEM 210 Introduction to Statistics
     - PAM 210 Introduction to Statistics
     - ENGRD 270 Basic Engineering Probability and Statistics
     - BTRY 301 Statistical Methods I
     - SOC 301 Evaluating Statistical Evidence
     - CEE 304 Uncertainty Analysis in Engineering
     - ILRST 312 Applied Regression Methods
     - ECON 319 Introduction to Statistics and Probability
     - PSYCH 350 Statistics and Research Design
   - either MATH 231 Linear Algebra with Applications or MATH 221 Linear Algebra
   - INFO 295 Mathematical Methods for Information Science

3. **Human-Centered Systems (two courses):**
   - INFO 214 Cognitive Psychology
   - INFO 245 Psychology of Social Computing

4. **Information Systems (two courses):**
   - CS 211 Computers and Programming
   - INFO 230 Intermediate Design and Programming for the Web

5. **Social Systems (two courses):**
   - either ECON 301 Microeconomics or ECON 313 Intermediate Microeconomic Theory
   - one course chosen from:
     - INFO 292 Inventing an Information Society
     - INFO 355 Computers: From the 17th Century to the Dot.com Boom
     - INFO 356 Computing Cultures

Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

### Tracks

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade.

Additional information on Information Science courses can be found below and in the CIS section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, and S&TS).

1. **Human-Centered Systems**
   - **PSYCH 342 Human Perception:** Applications to Computer Graphics, Art, and Visual Display*
   - INFO 345 Human–Computer Interaction Design
   - PSYCH 347 Psychology of Visual Communications
   - PSYCH 380 Social Cognition*
   - PSYCH 413 Information Processing: Conscious and Unconscious
   - PSYCH 416 Modeling Perception and Cognition
   - INFO 440 Advanced Human–Computer Interaction Design
   - INFO 445 Seminar in Computer-Mediated Communication
   - INFO 450 Language and Technology
   - DEA 470 Applied Ergonomic Methods

*Students who take PSYCH 342 may also count its prerequisite, PSYCH 205, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 380 may also count PSYCH 206 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 205 or 280 can be counted toward the primary/secondary track requirements.

2. **Information Systems**
   - INFO 330 Data-Driven Web Applications
   - INFO 372 Explorations in Artificial Intelligence
   - CS 419 Computer Networks
   - LING 424 Computational Linguistics

3. **Social Systems**
   - INFO 204 Networks
   - SOC 304 Social Networks and Social Processes
   - INFO 320 New Media and Society
   - AEM 322 Technology, Information, and Business Strategy*
   - INFO 349 Media Technologies
   - INFO 355 Computers: From the 17th Century to the Dot.com Boom
   - INFO 356 Computing Cultures
   - INFO 366 History and Theory of Digital Art
   - ECON 368 Game Theory (formerly ECON 467)*
   - INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
   - S&TS 411 Knowledge, Technology, and Property
   - INFO 415 Environmental Interventions
   - ECON 419 Economic Decisions Under Uncertainty
   - INFO 429 Copyright in a Digital Age
   - INFO 435 Seminar on Applications of Information Science
   - OR&IE 435 Introduction to Game Theory*
   - S&TS 438 Minds, Machines, and Intelligence
   - INFO 444 Responsive Environments
   - INFO 447 Social and Economic Data
   - H ADM 474 Strategic Information Systems*
   - ECON 476/477 Decision Theory I and II
   - H ADM 489 The Law of the Internet and E-Commerce
   - INFO 515 Culture, Law, and Politics of the Internet

*Only one of OR&IE 435 and ECON 368 may be taken for IS credit. Only one of AEM 322 and H ADM 474 may be taken for IS credit.
The Minor
A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of Courses of Study. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

International Agriculture and Rural Development
International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an advisor to plan a program oriented toward international agriculture. The courses in international agriculture and rural development are designed to acquaint students with the socioeconomic factors in agricultural development, the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist.

Requirements
In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 36 credits toward the major. A minimum of 7 credits in international agriculture and rural development (IARD) are required. The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 422). Students are expected to complete an overseas field experience of a minimum of six weeks. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

International Studies Minor
Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build "global competencies." The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements
1. Four courses with significant international content, as recommended by students' major departments (two should be from CALS).
2. One semester of IARD 480 Global Seminar.
3. The foreign language requirement for the international studies minor is identical to that of the College of Arts and Sciences (see p. 427).
4. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the International Programs Office, 255-3811.

Landscape Architecture
Landscape architecture focuses on the art of landscape design as an expression of the cultural values and processes of the environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence
(Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

Master of Landscape Architecture
Advanced Degree Program
The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Minor for Nonmajors
Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society's relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits
- LA 360 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
- LA 261 Fieldwork in Urban Archaeology (4 credits)
- LA 262 Laboratory in Landscape Archaeology (3 credits)
- LA 263 American Indians, Planners, and Public Policy (3 credits), offered alternate years
- LA 282 Photography and the American Landscape (3 credits)
- LA 418 Audio Documentary: Stories from the Land (3 credits)
- LA 483 Seminar in Landscape Studies (3 credits)
- LA 497 Independent Study (1 -5 credits)
- LANAR 524 History of European Landscape Architecture (3 credits)
- LANAR 525 History of American Landscape Architecture (3 credits)
- LA 545 The Parks and Fora of Imperial Rome (3 credits)
- LA 569 Archaeology in Preservation Planning and Design (3 credits)
- LA 580 Landscape Preservation: Theory and Practice (3 credits)
  + Distribution elective

Natural Resources
As the number of humans living on the Earth surpassed six billion at the start of the 21st century, knowing how to conserve and manage well the Earth's remaining biological resources and natural environments takes on increasing importance and urgency. The field of natural resources sits squarely at the interface of science and policy, applied to these important conservation and environmental challenges. This is a biologically based major that focuses on the interface of nature (species, populations, communities, and ecosystems) with the human institutions involved in environmental conservation and management. The major's focus on biological resources (e.g., fisheries, wildlife, forests, and wetlands) includes issues of conservation and restoration of scarce species and their habitats, sustainable harvest of species of economic importance, management of invasive species and overabundant species, population dynamics in aquatic and terrestrial environments, ecosystem and watershed management, and mitigating the effects of human-induced changes on the environment.

The mission of the Department of Natural Resources, home of the major, is "to develop knowledge and facilitate learning to improve society's stewardship of natural resources and the environment." A commitment to
undergraduate education is a vital component of that mission. For more information see www.dnr.cornell.edu. The curriculum emphasizes the biology and ecology of natural systems, as well as the social science/human aspect of conservation challenges. The major allows students flexibility to pursue a variety of paths to understand the scientific, ethical, and societal basis for management of fish and wildlife populations and their habitats, conservation biology, and the development of environmental and conservation careers through the application of ecological principles and knowledge of societal needs.

The Future for Natural Resources Majors

Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between humans and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, either as natural resources professionals or as informed citizens.

Career opportunities in natural resources are diverse. The major prepares students for graduate school, consulting positions in the private sector, or roles in the public and private for-profit (e.g., environmental consulting, nongovernmental organizations) sectors. Many students ultimately pursue graduate studies in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting) sectors. Many students ultimately pursue graduate studies in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting) sectors. Many students ultimately pursue graduate studies in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting) sectors.
plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placement in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Sage Hall, Kingborg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, seminars rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, B21 Sage Hall, 255-4410, aandnscornell.edu.

The minor in nutrition and health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 115 Nutrition, Health, and Society plus 9 credits of 200-level or above didactic NS courses. Enrollment is limited in some courses. Please check www.nutrition.cornell.edu/undergrad/ncalmsn.html for details.

Plant Sciences

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their primary interest in research. Others have a secondary interest in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments, and other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those choosing to go on for graduate degrees, are encouraged to take advantage of the many opportunities that are available. Students who are planning to enter the workforce immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant science faculty members also encourage students to avail themselves of the opportunities to work and or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas) and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Tioga County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

Crop science is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop sciences (a program tally at least 6 credits in plant protection, weed science, entomology, and plant pathology), and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

Enology and viticulture. The College of Agriculture and Life Sciences offers a curriculum in viticulture and enology existing undergraduate B.S. degree programs in plant sciences and food science.

Students with primary interest in viticulture and secondary interest in enology (V/E) may enroll in the plant sciences degree program, with a concentration in viticulture and a specialization in enology. For these students, plant sciences will be their "major," and their required courses in enology (offered within the food science program) will constitute a "minor" in food science with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will have "major" in food science (with a concentration in enology) and "minor" in plant sciences (with a concentration in Horticulture).

Students in either track must take the same courses during their two to four years, and must satisfy the core degree-program requirements of their major and minor programs, as well as the general requirements of the college. The curriculum consists of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students are expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major. Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

Horticulture. Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants grown in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and tea. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses and a "major" in plant sciences major, plus the following courses:

HORT 101 Horticultural Science and Systems (4 credits)

HORT 400 Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 400 level (6 credits)
One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisors.

Plant biology stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with their advisor, each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, molecular cell biology, biochemistry, ethnomycology, and further courses in plant growth, genetics, systems, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

Plant genetics and breeding relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PL BR 201, 403, 404, and BIOPL 245. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

Plant pathology is the study of plant diseases caused either by microorganisms or by chronic exposure to toxic elements in air and water. At the very least, specialists in the field must learn how to identify plant diseases and to design management strategies that will limit their overall impact. However, by employing contemporary tools from molecular biology, plant pathologists are also well positioned to answer fundamental questions about the nature of host–pathogen interactions and the genes that control them. Use of these new tools has already led to rapid deployment of disease-resistant crop varieties and it promises to offer much more in the future. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in the field. However, graduates may also be employed as representatives with agribusiness firms, Cooperative Extension educators, state or federal regulatory agents, and laboratory technicians. Suggested courses beyond the plant sciences core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.

Plant protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Science of Earth Systems (SES)

During the past several decades, with the increasing concerns about issues such as air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the basic study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the 21st century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but includes collaboration with other departments across the university. The SES curriculum includes a strong preprofessional component, emphasizing the importance of chemistry and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, biogeochemistry, and Earth's interior. These classes emphasize the interconnectedness of the Earth system. The selection of upper-level concentration courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Areas of concentration include biogeochemistry, geological sciences, and ocean sciences. Students may work with faculty advisors to develop other individually tailored concentrations.

The SES major provides a strong preparation for graduate school in any one of the Earth science fields, such as atmospheric sciences, geology, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the U.S. degree will have many options in a wide variety of environmentally oriented earth resource careers in both the public sector and the private sector. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the students with the basic tools needed in upper-level science classes.

a. MATH 191-192 (or MATH 111-112)

b. PHYS 207-208 (or PHYS 112-213)

c. CHEM 207-208 or 207-257

d. BIO G 101/103-102/104, or 105-106, or BIO G 109/110

2. Required Introductory Course:

EAS 220 The Earth System

These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each course crosses traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.

EAS 301 Evolution of the Earth System

EAS 303/NTRES 303 Biogeochemistry

EAS 304 Interior of the Earth

EAS 305 Climate Dynamics

4. Concentration Courses

Four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen during the junior year or before in consultation with an SES advisor whose interests match those of the student. Four concentrations are defined for the major: biogeochemistry, geological sciences, ocean sciences, and climate dynamics (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's advisor and upon approval of the SES curriculum committee. Examples include soil science, hydrology, and planetary science.

5. Field/observational/laboratory Experience

Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include Courses in the Hawaii Environmental Semester program.

Courses given by the Shoals Marine Laboratory:

EAS 200 (Meteorological Observations and Instruments)

EAS 352 (Synoptic Meteorology I)

EAS 417 (Field Mapping in Argentina)

EAS 437 (Geophysical Field Methods)

EAS 491 and/or 492 (Undergraduate Research, total 3 credits) with appropriate choice of project

Field courses taught by another college or university (3-credit minimum).

For more information, contact Professor Bryan Isaac, Department of Earth and Atmospheric
The environmental core consists of six required in the freshman year, provides a broad understanding of the environment, encompassing earth, biotic, and human behavior. SNES 101, Environmental Biology, is an example of such a course. This core recognizes that knowledge of the environment encompasses the basic sciences, and an introduction to the relationships between the biophysical and social sciences.

Concentrations include agro-ecosystem science, environmental biology, environmental economics, environmental information science, and sustainable development.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes inter- and multidisciplinary work, independent thinking and analysis, and development of competency in writing and speaking.

The SNES major is an excellent preparation for careers in governmental or non-governmental organizations responsible for environmental evaluation and policy, professional programs in law, business, and social sciences. Many of these courses (listed below) also contribute to completion of CALS distribution requirements.

### Foundation Courses

The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences. Many of these courses (listed below) also contribute to completion of CALS distribution requirements.

- **two semesters of college-level biology**
- **two semesters of college-level calculus**
- **four semesters of college-level chemistry and physics (at least one semester of each)**
- **one semester of college-level statistics**
- **DEA 150 Introduction to Human-Environment Relationships**
- **NTRES 201 Environmental Conservation**

The freshman and sophomore years are designed to provide a strong scientific basis for future advanced study and to become engaged in environmental studies through DEA 150 and NTRES 201. Depending on student interest and available time, other courses in environmental study may be taken as electives early in the schedule. Advanced placement credit will be accommodated in the program through consultation with the student’s faculty advisor.

### Environmental Core

The environmental core consists of six courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. SNES 101, Environmental Biology, in the freshman year, provides a unifying overview of the goals, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

**Biotic Systems:**

- **BioEE 261** Ecology and the Environment
- **Colloquium Series:** SNES 200 Environmental Sciences Colloquium
- **Earth Systems:** CSS 365 Environmental Chemistry: Soil, Air, and Water
- **Economic Systems:** AEM 250 Environmental and Resource Economics
- **Environmental Science:** SNES 101 Intro to the Science and Management of Environmental and Natural Resources
- **Social Systems:** D SOC 324 (S&TS/SOC 324) Environment and Society

**Programs of Study**

Programs of study that focus in one or more areas of environmental science have been established to provide disciplinary expertise sufficient for entry-level professional proficiency. Each student in the major will be required to take four courses at the 300 level or above in at least one program of study.

Programs of study may not replace or duplicate current majors. Rather, they provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Programs of study include:

- **Agroecosystem Science**
- **Environmental Biology**
- **Environmental Economics**
- **Environmental Information Science**
- **Sustainable Development**

For more information about this major, see http://snes.eas.cornell.edu, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw38@cornell.edu.

**Special Programs in Agriculture and Life Sciences**

**Interdisciplinary Studies.** The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students may plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for a special program must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

**Description of Courses**

Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

**Minor in American Indian Studies**

**Required Courses**

- AIS 100 Introduction to American Indian Studies I: Indigenous North America to 1890
- AIS 101 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

**Electives (Group A, Arts and Humanities)**

- AIS 195 Colonial Latin America
- AIS 236 Native Peoples of the Northeast
- AIS 239 Seminar in Iroquois History
- AIS 260 Introduction to Native American Literature
- AIS 266 Introduction to Native American History
- AIS 364 Politics of "Nations Within"
- AIS 386 Contemporary American Indian Fiction of the United States
AIS 404 Race and Ethnicity in Latin America
AIS 430 Native American Philosophies
AIS 486 American Indian Women's Literature
AIS 490 New World Encounters, 1500–1800

(GROUP B, SOCIAL AND NATURAL SCIENCES)

AIS 230 Cultures of Native North America
AIS 235 Archaeology of North American Indians
AIS 311 Social Movements
AIS 340 Contested Terrain: Hawaii
AIS 348 Iroquois Archaeology
AIS 353 Anthropology of Colonialism
AIS 400 Critical Approaches to American Indian Studies
AIS 404 Race and Ethnicity in Latin America
AIS 490 New World Encounters, 1500–1800

AIS 100(1100) Introduction to American Indian Studies I: Indigenous North America to 1890 (CA) (HA) (D)
AIS 101(1110) Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America (CA) (HA)

Spring. 3 credits. T. Richardson.
Interdisciplinary exploration of contemporary issues in American Indian Country north of Mexico after 1890. Examines Indian sovereignty, nationhood, agency, and engagement through time using the perspectives of American Indian Studies. Course materials are drawn from the humanities, social sciences, and expressive arts.

AIS 195(1950) Colonial Latin America (also HIST 195(1950)) (CA) (HA)
Fall. 4 credits. S–U or letter grades. K. Graubart.

AIS 230(2370) Cultures of Native North America (also ANTHR 230(2730)) (CA) (HA) (D)
Fall. 3 or 4 credits. Staff.

AIS 235(2375) Archaeology of North American Indians (also ANTHR 235(2235)) (CA) (HA) (D)
Spring. 3 credits. K. Jordan.

AIS 260(2800) Survey of American Indian Literatures in the United States (also ENGL 260(2800)) (LA) (CA) (D)

AIS 266(2660) Introduction to Native American History (also HIST/AM ST 266(2660)) (CA) (HA)
Spring. 4 credits. J. Parmenter.

AIS 269(2690) Native American Literature (also ENGL 269(2690)) (CA) (LA)
Spring. 4 credits. J. Parmenter.

AIS 311(3110) Social Movements (also D SOC/LSP 311(3110)) (D)
Fall. 3 credits. Prerequisites: D SOC/SOC 101 or permission of instructor. S–U or letter grades. Next offered 2010–2011. A. Gonzales.

Social movements are collective efforts by relatively powerless groups of people to change society. Typically conceptualized as political activity outside the institutional framework, social movements are "politics by other means." This course examines the transnational dimensions of social movements to assess the implications of globalization for political mobilization and the ways that social movement actors engage the global political process to effect social change. Under what circumstances do movements emerge? How do global processes shape both domestic and transnational political mobilization? How do movements internally organize and choose political tactics and strategies to achieve their goals? How have social movements changed history, identities, society, and politics? This course addresses these and related questions through an examination of indigenous peoples' movements in the United States, Canada, and Latin America.

AIS 340(3400) Contested Terrain: Hawaii (also SOC 342(3420)) (CA) (SB)
Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history. M. M. Hamahata.

This course, offered in conjunction with Earth and Atmospheric Sciences' program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions is incorporated to address contemporary issues of sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/hawaii/ regarding the status of this course.

AIS 348(3480)/430(4380) Iroquois Archaeology (also ANTHR 348(3480)/430(4380)) (CA) (HA)

AIS 353(3530) Anthropology of Colonialism (also ANTHR 353(3530)) (CA) (SB) (D)
Fall. 4 credits. A. Simpson.

AIS 364(3640) Politics of "Nations Within" (also GOVT 364(3640)) (SB) (KA) (LA) (D)
Spring. 4 credits. Letter grades only. Offered alternate years. B. Hendrix.

AIS 386(3860) Contemporary American Indian Fiction (also ENGL 386(3860)) (CA) (LA) (D)
Fall. 4 credits. Next offered 2010–2011. Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove's Cogewea, a novel of the allotment era, students read works by a range of Native fiction writers from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn (that respond critically to U.S. federal Indian policy).

AIS 400(4000) Critical Approaches to American Indian Studies (also AIS 600(6000)) (CA) (HA)
Fall. 4 credits. Prerequisite: advanced undergraduates or graduate students; permission of instructor. Course requirements differ at 400 and 600 levels. S–U or letter grades. A. Simpson.

This course is an interdisciplinary survey of the literature in Native American Studies. Readings from this course engage themes of indigeneity, coloniality, power, and "resistance." The syllabus is formed from some of "classic" and canonical works in Native American Studies but also requires an engagement with marginal writings and theoretical and historical contributions from scholars in other disciplines.

AIS 404(4040) Race and Ethnicity in Latin America (also HIST 404(6041)) (CA) (HA)

AIS 430(4300) Native American Philosophies (also ENGL/AM ST 430(4300)) (KA) (LA)
Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2009–2010. E. Cheyfitz.

This course will focus on American Indian, Native Alaskan, and Native Hawaiian social, spiritual, legal, political, aesthetic, scientific, environmental, and historical thought from the pre-invasion period before 1521 to the present as it is contained in both oral narratives and written texts (nonfiction, fiction, and poetry).

AIS 460(4600) Field and Analytical Methods in American Indian Archaeology (also ANTHR/ARKEO 460(4600)) (SB) (HA)
Spring. 6 credits. Prerequisite: permission of instructor. K. A. Jordan.
This course uses historic-period American Indian sites in the Finger Lakes region to provide hands-on instruction in archaeological field, laboratory, and analytical methods. Students will analyze museum artifacts, engage in field survey and excavation. Readings treat field and laboratory methodology, research design, culture history, and material culture typologies.

Seminar examining the responses of indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge document-based histories.

[AIS 475(4750) Governmentality, Citizenship, and Indigenous Political Theory (also ANTH 475(4750)] (CA) (KCM) Spring. 4 credits. A. Simpson. 

For description, see AIS 475.

For description, see ENGL 486.

[AIS 490(4900) New World Encounters, 1500 to 1800 (also HIST 490(4990, AM ST 499(4990)] (CA) (MA) (D) Spring. 4 credits. Next offered 2008–2009 J. Parmenter. 

For description, see HIST 490.

[AIS 497(4970) Independent Study Fall or spring. 1–4 credits. Staff. Topic and credit hours TBA between faculty member and student. The American Indian Program office must approve independent study forms.

[AIS 600(6000) Critical Approaches to American Indian Studies (also AIS 400(4000)] (D) Fall. 4 credits. A. Simpson. 

For description, see AIS 400.

[AIS 601(6010) American Indian Studies Proseminar Fall and spring. 1 credit. Staff. Graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloquium format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

[AIS 635(6350) Indigenous Peoples and Globalization (also D SOC/LAT A 635(6350)] (D) Fall. 3 credits. A. Gonzalez. 

Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with these pressures. Globalization, whether under the auspices of the World Trade Organization and regional economic agreements such as the NAFTA or the decentralization of social and political arrangements contemporaneous with modernization or the expansion of communication technology and its impact on traditional knowledge systems, have had profound social, cultural, and economic impacts on indigenous peoples. At issue are the lands, resources, traditional knowledge, intellectual and cultural property, and indigenous struggles for recognition and self-determination.

For description, see ENGL 661.

[AIS 671(6710) Law and Literature in the Antebellum United States (also ENGL 671(6710)] Spring. 4 credits. E. Cheyfitz. 

For description, see ENGL 671.

Department of Statistical Science 

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the CIS section of this catalog.

Environmental Toxicology 

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Stocking Hall, or at toxicology.cornell.edu.

TOX 370(3700) Pesticides and the Environment (also ENTO M 370(3700)] Fall. 2 credits. Prerequisites: BIO G 101–102 or equivalent. Offered even-numbered years. J. G. Scott. 

For description, see ENTO M 370.

TOX 437(4370) Eukaryotic Cell Proliferation (also BIOBM 437(4370)] Fall. Variable credit; students may take lec for 2 credits, or lec and disc for 3 credits.

Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIO G 101–102 or 105–106 and BIOBM 330 or 331/332. Recommended: BIOGD 281 and BIOBM 452. S. Lee. 

For description see BIOBM 457.

TOX 490(4900) Insect Toxicology and insecticidal Chemistry (also ENTO M 490(4900)] Spring. 3 credits. Prerequisite: general chemistry course. Offered odd-numbered years. J. G. Scott. 

For description, see ENTO M 490.

TOX 597(5970) Risk Analysis and Management (also CEE 597(5970)] Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 304, ENGRD 270, IILRST 210, BTRY 261 or AEM 210); two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Steidinger. 

For description, see CEE 597.

TOX 610(6100) Introduction to Chemical and Environmental Toxicology (also BIOMI 610(6100)] Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. A. G. Hay. 

For description, see BIOMI 610.

TOX 611(6110) Molecular Toxicology (also NS 611(6110)] Spring. 3 credits. Prerequisites: TOX 610 or permission of instructors. Offered alternate years. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp. 

For description, see NS 611.

TOX 698(6980) Current Topics in Environmental Toxicology (also NS 700(7000)] Fall, spring. 1 to 3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor.

TOX 699(6990) Environmental Toxicology Journal Club (also BIOMI 699(6990)] Spring only. 1 credit. Requirement for env. tox. students until post-A exam. A. G. Hay.

TOX 701(7010) Mouse Pathology and Transgenesis (also VTBMS 701(7010)] Spring only. 1 credit. Prerequisites: basic course in histology (BIOAP 413 or equivalent) highly recommended, or permission of instructor. Letter grades only. A. Nikitin. 

For description, see VTBMS 701.

TOX 702(7020) Seminar in Toxicology (also NS 702(7020)] Fall or spring. 1 credit. For description, see NS 702.

TOX 713(7130) Cell Cycle Analysis (also VTBMS 713(7130)] Spring. 1 credit. S-U grades only. Offered alternate years. A. Yen. 

For description, see VTBMS 713.

TOX 890(8900) Master's Thesis and Research Fall/spring. Credit TBA. Prerequisites: graduate standing in field or permission of instructor. A. Yen. 

For description, see VTBMS 890.
TOX 990(9900) Doctoral Thesis and Research
Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

FD SC 621(6210) Food Lipids

NONDEPARTMENTAL COURSES

ALS 100(1000) College and Career Exploration in the College of Agriculture and Life Sciences
Summer. 1 or 3 credits. Prerequisite: high school juniors or seniors. Letter grades only. Staff.
This program is a great opportunity to explore possible majors, careers, and research opportunities in Cornell's world-class College of Agriculture and Life Sciences (CALS) while earning college credit. The one-week program, for 1 credit, will consist of students attending presentations by admissions, career, and student services offices, talk with faculty members, visits of students, visit labs and research facilities; enjoy field trips; participate in team projects; and write several short papers. You'll also focus on two of CALS's four priority areas. The three-week program, for 3 credits, combines the one-week program with two additional weeks of in-depth, hands-on exploration into the two subject areas you selected during the first week.

ALS 101(1101) Transition to and Success at Cornell
Fall. 1 credit. Prerequisite: entering students in CALS. Letter grades only. Staff and CALS Career Development Office. Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, student panels, and assignments that explore Cornell's history, academic opportunities, services, and organizations are used. Emphasizes the role of Agriculture and Life Sciences in the future of all related careers.

ALS 124(1340) Emergency Medical Technician
Fall and spring. 3 credits each semester. Two-semester course; students enroll in fall semester only. Recommended: basic or advanced first aid. S-U or letter grades. D. A. Grossman, R. Kniffen, and A. E. Gantert. Intensive 140-hour course taught throughout the fall and spring semesters. Includes training in the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, the use of medical antishock trousers, and defibrillation. Students qualify for the New York State E.M.T. Certification Exam upon successful completion of the course.

ALS 135(1350) Advanced Emergency Medical Technician, Critical Care
Fall and spring; two-semester course. 4 credits each semester. Prerequisite: current certification as N.Y.S. Basic E.M.T. or have applied for reciprocity. S-U or letter grades. D. Grossman and staff. Includes topics such as emergency pharmacology, patient assessment, advanced cardiac life support, emergency hypoperfusion management, and basic trauma life support. Uses classroom, lab, hospital, and field sessions to teach skills such as intubation, emergency IV access, electrocardioversion and defibrillation, and patient assessment and pharmacological intervention. Requires extensive out of classroom (exceeds 140 hours) time.

ALS 392(3920) New York State Government Affairs (also PAM 392[3920])
Spring. 15 credits. Prerequisite: junior or senior standing, minimum GPA of 2.2. W. Rosen. For description see PAM 392.

ALS 400(4000) Internship
Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S-U grades only.
Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Requires participation in any structured learning activities associated with the internship.

ALS 476(4760) Environmental Stewardship in the Cornell Community I
Fall. 1 credit. Prerequisite: freshmen and new students. S-U or letter grades. R. Sherman. This two-semester course is an opportunity for you to become involved with the Cornell Sustainable Campus initiative by designing and implementing a project that promotes environmental stewardship on campus. During the fall semester, we will explore concepts of sustainability, meet with student leaders of various campus organizations who are promoting Cornell’s mission of sustainability, and learn about what has been done and what is being done to achieve a more environmentally friendly campus. In addition, each student will identify a potential project and conduct preliminary work that lays the groundwork for the spring semester course (ALS 477). Note: You are not required to take ALS 477 if you take ALS 476, and you can take ALS 477 without taking ALS 476.

ALS 477(4770) Environmental Stewardship in the Cornell Community II
Spring. 2-4 credits, variable. L. M. Repenning, plus faculty advisor. Each student undertakes an original project to improve the environment at Cornell while working with a faculty advisor and the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present their 1-page project report orally at a public forum. (Note: If students prefer to take 1 or 2 credits of independent research in a department in the College of Agriculture and Life Sciences, this course can be arranged, and the 1-page project report can be arranged.) Assistance in finding a faculty advisor is provided. May be taken more than once.

ALS 494(4940) Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits max. S-U or letter grades.
The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 499(4991/4992) Honors Project I and II (also B&SOC/S&TS/HE 499[4991/4992])
Fall and spring (yearlong). 8 credits (register for 8 credits each semester; total credits awarded is 8). Prerequisite: biology & society seniors and permission of department, overall GPA of 3.3. Apply in 306 Rockefeller Hall.
Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 500(499B) Politics and Policy: Theory, Research, and Practice (also AM ST 501[499B], GOVT 406[4998], GOVT 500[4998])
Students in CALS must register for ALS 500. S. Jackson and staff. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate the chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office, M101 McGraw Hall, or online at ciw.cornell.edu.

ALS 580(5800) International Teaching Assistant Development Program
Course 3
Fall or spring. 2 credits. Prerequisite: EDUC 579. ITADP staff. Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants address English-language issues relating to phonemes, grammar, and suprasegmentals. Activities in these areas target communicative functions such as presenting concepts, initiating and sustaining conversation, and interpreting information in academic settings.

ALS 581(5810) International Teaching Assistant Development Program
Course 4
Fall or spring. 2 credits. Prerequisite: ALS 580. ITADP staff. Specifically designed for international graduate students who have completed ALS 580 and who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions.
Participants develop skills in self-monitoring, critical listening and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

**APPLIED ECONOMICS AND MANAGEMENT**

Courses by Subject

Agribusiness management: 302, 403, 404, 405, 427, 608, 708
Statistics, quantitative methods, and analytical economics: 210, 410, 411, 412, 415, 417, 419, 711, 712, 713, 714, 717
Policy and international trade: 230, 335, 430, 431, 432, 435, 434, 630, 635, 636, 730, 735
Environmental and resource economics: 250, 450, 455, 651, 655, 750
Economics of development: 464, 660, 667, 762, 765
Consumer economics: 670
General, contemporary issues, research, and other: 101, 200, 380, 494, 497, 498, 499, 694, 698, 699, 700, 800, 900, 901

AEM 101(1101) Introduction to Applied Economics and Management
Fall. 1 credit. Prerequisite: required of and limited to freshmen in AEM. S-U grades only. D. A. Grossman and A. M. Novakovic.

The purpose of this course is to acquaint first-year students in AEM with their new department and better enable them to make academic and early career decisions. A cross-section of faculty will lead discussions that introduce most of the major academic subjects taught in AEM. In addition, there are guest presenters on topics such as career planning, student organizations, course planning, and ethics and academic integrity. There are several homework assignments.

AEM 120(1200) Foundations of Entrepreneurship and Business
Fall. 2 credits. P. D. Perez.

Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. Includes lectures, selected guest appearances by successful entrepreneurs, and intensive use of IT-based learning and presentation tools.

AEM 121(1210) Entrepreneurship Speaker Series
Fall. 1 credit. M. P. D. Perez.

Seminars and guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the Entrepreneurship and Personal Enterprise program at Cornell, with a view to inform and inspire students. Evaluation includes attendance and written feedback on lectures. Intended as a companion to AEM 120 but may be taken independently.

AEM 122(1220) Entrepreneurship in the Life Sciences
Spring. 1 credit. W. Lesser.

Seminars and guest lectures by faculty members and entrepreneurs engaged in the study and practice of entrepreneurship in the life sciences. Emphasis on the process of turning scientific discovery into business opportunity and success. Evaluation includes attendance and written feedback on lectures. Intended as a follow-up to AEM 120 and AEM 121 but may be taken independently.

AEM 200(2000) Contemporary Controversies in the Global Economy
Fall. 3 credits. Prerequisite: ECON 101. Recommended: sophomore status or equivalent. Offered 2008-2009. C. Barrett.

Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies that regularly attract attention in the international press and among key private and public sector decision-makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals worldwide, controls on commercial and humanitarian distribution of genetically modified foods, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

AEM 210(2100) Introductory Statistics
Spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Two evening prelims. C. van Es.

Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Includes an introduction to Minitab, a statistical software package.

AEM 220(2200) Introduction to Business Management (D)
Spring, summer. 3 credits. Two evening prelims. P. D. Perez.

Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration to current issues such as technology and its impact on operations, globalization, ethics, quality, and entrepreneurship. Guest speakers are an important part of the course.

AEM 221(2210) Financial Accounting
Fall, spring, summer. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. J. Little.

Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

AEM 222(2220) Business Management Case Analysis
Spring. 1 credit. Requirement for and limited to AEM majors. P. D. Perez.

Offers students teams the opportunity for hands-on application of general business management concepts through discussion and written analysis of a series of cases. Case topics are closely coordinated with both the content and sequencing of material presented in AEM 220.

AEM 230(2300) International Trade and Finance (also ECON 230(2300))
Fall. 3 credits. Prerequisites: ECON 101 or equivalent. Recommended: ECON 102 or equivalent. S-U or letter grades. One evening prelim. D. R. Lee.

One-semester introduction to international economic principles and issues. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 430 and ECON 361-362.

AEM 240(2400) Marketing
Fall, summer. 3 credits. E. W. McLaughlin.

Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization's strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lectures and current marketing applications from various companies are presented and analyzed.

AEM 241(2410) Marketing Plan Development
Fall. 2 credits. Requirement for and limited to AEM majors. D. J. Perosio.

Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.
AEM 250(2500) Environmental and Resource Economics  
Spring. 3 credits. S-U or letter grades. G. Poe.  
Introduces fundamental economic principles and the "economic approach" to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subiects include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 302(3020) Farm Business Management  
Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 405 and 427. W. A. Knoblauch.  
Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings and machinery.

AEM 320(3200) Business Law I (also NBA 560[5600])  
Fall and summer. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman.  
Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 321(3210) Business Law II (also NBA 561[5610]) (D)  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing, business law course or permission of instructor. D. A. Grossman.  
The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM 322(3220) Internet Strategy  
Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen.  
Explores the impact of new technologies on business processes and industries. Focuses particularly on the effects of information and communication technologies (ICT). The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities. Uses tools similar to those managers face on a regular basis.

AEM 323(3230) European Business Institutions  
Spring. 1 credit. Prerequisites: ECON 101 and AEM 220. A. Leiponen.  
This course examines the institutional environment of business in Europe on different levels including national and supranational (EU) power structures, forms of business organization and governance, and culture and values. As a result of this course, students will be able to understand and be sensitive to the drivers of business behavior and performance in a foreign, particularly European, context.

AEM 334(3340) Women, Leadership, and Entrepreneurship (D)  
Fall. 1 credit. Prerequisite: junior or senior standing. D. Streeter.  
Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners) in their business careers. Topics include status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 335(3350) International Technology Marketing of Biotechnology  
Spring. 3 credits. Prerequisites: ECON 101 and BIO G 109 or equivalents. S-U or letter grades. W. H. Lesser.  
Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (heath and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 336(3360) Intermediate Accounting I  
Fall. 3 credits. Prerequisites: AEM 221 and 323. Staff.  
Includes an overview of Generally Accepted Accounting Principles, balance sheet valuation and income measurement. Other topics include accounting for pensions, earnings per share and special financial reporting issues.
AEM 342(3420) Integrated Marketing Communication
Fall. 3 credits. Prerequisite: introductory marketing course; junior or senior standing. Staff. Focuses on decisions regarding communication plans and execution in companies that market consumer products and services. Course also explores the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face problems likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

AEM 405(4050) Agricultural Finance
Spring. 4 credits. Prerequisite: AEM 302 or equivalent. C. Turvey. Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital financing, entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

AEM 594(5940) Consumer Behavior
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. B. Wansink. Focuses on the use of data for understanding the problems and strategies associated with consumer psychology. Students learn to conduct research on consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

AEM 346(3460) Dairy Markets and Policy
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; ECON 101 or equivalent. S-U or letter grades. A. Novakovic. Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introduction to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

AEM 414(4140) Behavioral Economics
Fall. 3 credits. Prerequisite: AEM 210 or equivalent. C. van Es. Focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

AEM 417(4170) Decision Models for Small and Large Businesses
Fall. 3 credits. Prerequisite: junior or senior standing (priority given to AEM majors); AEM 210 or equivalent. No F; credit in weeks labs are held. C. L. van Es. Focuses on economic and statistical models of decision analysis and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sections focus on implementing decision models with computers.

AEM 419(4190) Strategic Thinking
Spring. 3 credits. Prerequisite: PAM 200 or ECON 313. S-U or letter grades. Next offered 2008-2009. N. H. Chau. The art of thinking strategically puts outdoing one's adversary at the core of the decision-making process, while anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals, managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars, and the arms race).
Introduces the basic conceptual frameworks and analytical tools used in investment analysis. These tools are then applied to a variety of financial applications, both theoretical and empirical. Topics include: forward and futures, portfolio theory, CAPM, options, financial management, and selected advanced topics. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 421(4210) Derivatives and Risk Management
Fall. 3 credits. Prerequisites: AEM 210 and 324 or equivalent; recommended: ECON 313 or equivalent and a calculus course; familiarity with calculus and probability and statistics. Priority given to AEM students. S-U or letter grades. H. Daouk. Covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. A portion of this course involves the use of a spreadsheet or other computer programs.

AEM 422(4220) Estate Planning (also NBA 562(5620))
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. S-U grades only. D. A. Grossman. Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

AEM 423(4230) Contemporary Topics in Applied Finance
Fall. 3 credits. Prerequisites: ECON 101, MATH 111 or equivalent, AEM 210 or equivalent, AEM 324. Letter grades. V. Bogan. Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency as well as newer issues such as technology and financial markets.

AEM 424(4240) Management Strategy
Fall and spring. 3 credits. Prerequisite: AEM seniors in business. Fall, G. Blalock; spring, D. Simon. Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on the consideration of how and why strategic decisions should be made.

AEM 425(4250) Small Business Management Workshop
Fall. 4 credits. Prerequisite: senior standing. AEM 325 or NBA 300 and permission of instructor. Cost of term project: approx. $100 per team. D. Streurer. Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff members at arranged times during the semester.

AEM 426(4260) Fixed-Income Securities
Fall. 3 credits. Prerequisites: MATH 111 or equivalent, AEM 210 or equivalent, AEM 324. Letter grades. V. Bogan. This course focuses on fixed-income securities including corporate bonds, default-free bonds, and mortgage-backed securities. In addition to the analysis of specific types of fixed-income securities, there will be an examination of the tools used in bond portfolio management.

AEM 427(4270) Agribusiness Strategy
Fall. 3 credits. Prerequisite: AEM 220 or 502. Staff. Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 428(4280) Valuation of Capital Investment
Spring. 3 credits. Prerequisites: AEM 210 and 324 or equivalent. D. T. C. Ng. Focuses on the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm, forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 429(4290) International Finance
Spring. 3 credits. Prerequisites: AEM 210 and 324. S-U or letter grades. D. T. C. Ng. Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 430(4300) International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101–102 or equivalents and intermediate microeconomics course. S-U or letter grades. N. H. Chau. Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 431(4310) Agricultural and Food Policy
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; ECON 301, 313, or equivalent. S-U or letter grades. A. Novakovic. Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. Explores methods of policy analysis, and students learn to critique policies and write policy briefs.

AEM 432(4320) Public Private Sector Economics Linkages
Spring. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney. The government agency and the individual business enterprise are two of the most powerful institutions in modern society. This course looks at the economic interfaces between government and business. The shifting and complicated relationships between them exert great influence on the changing performance of the economy and on the lives of citizens. These relationships range from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on public support of its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy, the business-government relationship is constantly changing and the line between public and private sectors frequently shifts. Future managers are constantly confronted with issues that relate to government-business interfaces.

AEM 434(4340) Government Policy Workshop (also CRP 418(4180), FGSS 420(4200))
Spring. 4 credits. S-U or letter grades. M. E. Warner. For description, see CRP 418.

AEM 435(4350) Political Economy of the WTO
Spring. 3 credits. Prerequisite: intro microeconomics. H. deGorter. The politics of the WTO and trade policy are explored. We examine what the WTO is, how it operates, how much power it really has, why it was created, incentives for governments to cooperate. How WTO rules affect domestic politics and foreign policy goals and how WTO rules and agreements are enforced. We also debate the effect of trade on growth and poverty.

AEM 437(4370) Innovation Strategy
Spring. 3 credits. Prerequisites: AEM 220 and ECON 101. A. Leiponen. Explores innovation and technological change. Studies how technological change...
While the principles are applicable to any when to outsource, and how to market—all involve case studies of local high-tech startup companies. Provides a framework for examining the effectiveness of marketing strategies in companies. A sound marketing strategy is essential for consolidation, new technologies, and health incomes economies to access industrial markets. Approaches the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 442(4420) Emerging Markets Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 240 and PAM 200 or ECON 313. R. D. Christy. Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Approaches the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 443(4430) Food-Industry Strategy Fall. 3 credits. Prerequisite: AEM juniors, seniors, and graduate students; AEM 240 or 448; or permission of instructor. Next offered 2008–2009. Staff. Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, and health concerns add to their challenges and opportunities.

AEM 444(4440) Marketing Strategy and Brand Management Fall. 3 credits. Prerequisite: AEM 240; junior or senior standing. Staff. A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic role of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 445(4450) Food Policy for Developing Countries [also NS 445(4450)] Fall. 3 credits. Prerequisites: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. P. Pinstrup-Andersen. Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, prices, aid, trade, and conflict, and ethics. A social entrepreneurship approach based on case studies and active participation by students will be used.

AEM 446(4460) Food Marketing Colloquium Fall. 1 credit. Prerequisite: junior or senior standing; extensive course work in food industry management and marketing. D. J. Persorio. The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A field trip may be taken. Students participate in research topics on various aspects of the food industry.

AEM 447(4470) Food Marketing Colloquium Spring. 1 credit. Open to Food Marketing Fellows only: D. J. Persorio.

AEM 448(4480) Food Merchandising Spring. 3 credits. Prerequisite: junior or senior standing; AEM 240. D. J. Persorio. Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers.

AEM 449(4490) Global Marketing Strategy (D) Spring. 3 credits. Prerequisite: junior, senior, graduate standing; marketing course. Staff. Examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. Includes case analysis and discussion.

AEM 450(4500) Resource Economics [also ECON 450(4500)] Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and familiarity with Excel. J. M. Conrad. Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 451(4510) Environmental Economics [also ECON 409(4090)] Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course, and calculus. S-U or letter grades. G. L. Poe. Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Examines property rights/institutional perspectives and ecological economic concepts.

AEM 455(4550) Sustainability, Business and the Environment Fall. 3 credits. Prerequisites: ECON 101 and 102 or equivalent and calculus course. Next offered 2009 or 2010. Staff. Seminar giving an inside perspective on implementation and evaluation of environmental policy in a business or organization. Examines the effectiveness of the new market-based green policies; analyze the operational significance of sustainability in a business context; and come to understand the economic basis for government’s role in environmental protection. Uses HBS case studies; each seminar participant prepares a case study of environmental management in a business or organization. Makes extensive use of guest speakers from finance, electricity, forest products, construction and manufacturing.

AEM 464(4640) Economics of Agricultural Development [also ECON 464(4640)] Fall. 3 credits. Prerequisite: ECON 101–102 or permission of instructor. R. D. Christy. Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topics include the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Uses examples from a wide variety of developing countries to illustrate the basis for economic analysis.

AEM 494(4940) Undergraduate Special Topics in Applied Economics and Management Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 497(4970) Individual Study in Applied Economics and Management Fall or spring. Variable credit. S-U or letter grades. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff. Used for special projects designed by faculty members.

AEM 498(4980) Supervised Teaching Experience Fall or spring. 1–4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.
AEM 499(4990) Undergraduate Research
Fall, spring, or summer. 1–4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U or letter grades. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 605(6050) Agricultural Finance
Fall. 3 credits. Prerequisite: AEM 324 or 405 or equivalent B. A. Gloy. Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, risk management, corporate finance, and financial intermediaries.

AEM 608(6080) Production Economics (also ECON 408[4080])
Fall. 3 credits. Prerequisite: ECON 313 and MATH 111 or equivalents. L. W. Tauer. Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production response over time and under risk.

AEM 611(6110) Global Modeling
Spring. 3 credits. Prerequisite: graduate micro theory course T. D. Mount and R. N. Bossert. Taught over Internet by Tom Mount at Purdue University. Teaches how to use a global general equilibrium model (GTAP) for research on trade and environment policies. Weekly assignments start with the components of a single-country model and end with a full global model. A final project and the assignments are the primary course requirements.

AEM 612(6120) Applied Econometrics
Fall. 1 credit. Corequisite: AEM 411. D. Just. Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 411, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 630(6300) Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 430[4300])
Spring. 4 credits. Prerequisites: AEM 608 or ECON 513, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter. The first half of the course surveys the theory of welfare economics as a foundation for public policy. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocations. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optimality. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 632(6320) Open Economy Analysis: Theory and Applications
Spring. 3 credits. Prerequisites: ECON 313/314 or permission of instructor. S-U or letter grades. N. Chau and S. Kyle. Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economies. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 634(6340) Government Policy Workshop [also CRP 618(6180), FGS 620(6200)]
Spring. 4 credits. S-U or letter grades. M. E. Warner. For description, see CRP 618.

AEM 640(6400) Analysis of Agricultural Markets (also ECON 440[4400])
Fall. 3 credits. Prerequisites: AEM 411 and 415 or equivalents. Offered even-numbered years. H. M. Kaiser. Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

AEM 641(6410) Commodity Futures Markets
Spring, weeks 8–14. 2 credits. Prerequisites: AEM 411 and 415 or equivalents. Recommended: AEM 640. W. G. Tomek. Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

AEM 642(6420) Globalization, Food Safety, and Nutrition (also NS 642[6420])
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pinstrup-Andersen. Directed readings course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect food and nutrition, and how nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

AEM 651(6510) Environmental and Resource Economics
Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. W. D. Schulze. Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models, and contingent evaluation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

AEM 655(6550) Electric Systems Engineering and Economics (also ECE 551[5510])
Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount and R. Thomas. For description, see ECE 551.

AEM 660(6600) Agroecosystems, Economic Development, and the Environment
Spring. 3–4 credits. Prerequisite: graduate standing. Open to graduate students outside economics, additional sec for AEM 655. D. R. Lee. Examines selected topics in agricultural and economic development, technology assessment, ecosystem management, and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 667(6670) Topics in Economic Development (also ECON 770[7770])
Spring. 3 credits. Targeted to second- and third-year graduate students. Prerequisite: basic first-year courses in ECON or AEM or permission of instructor. S-U or letter grades. R. Kanbur. Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM 670(6700) Economics of Consumer Demand (also PAM 609[5090])
Fall. 3 credits. Prerequisites: ECON 311 or 313 and two semesters of calculus. S-U or letter grades. C. K. Ranney. Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, dualities; complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be introduced.
AEM 694(6940) Graduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.

AEM 698(6980) Supervised Graduate Teaching Experience
Fall or spring. 1–4 credits; max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Undergraduates should enroll in AEM 498. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U or letter grades. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 699(6990) M.P.S. Research
1–6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 700(7000) Individual Study in Applied Economics and Management
Fall or spring. Prerequisite: graduate standing. S-U or letter grades. Credit, class hours, and other details TBA with faculty member. Staff. Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

[AEM 708(7080) Advanced Production Economics]
Fall. 3 credits. Prerequisite: AEM 608, 710 or equivalents. Highly recommended: ECON 609. Offered alternate years; next offered 2008–2009. R. N. Boisvert. Covers theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, and factor substitution. Emphasizes developments in flexible functional forms, duality, and dynamic adjustment models. Gives considerable emphasis to empirical specification and estimation. Discusses other topics (risk, supply response, and household production functions) based on student interest.

AEM 710(7100) Econometrics I
Spring. 3 credits. Prerequisite: matrix algebra and statistical methods courses at level of ILRST 311 or ECON 619. H. Daouk. Provides (together with AEM 712) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures. For description, see ECON 417. R. N. Boisvert.

AEM 711(7110) Econometrics II
Fall. 3 credits. Prerequisite: AEM 710 or equivalent. T. D. Mount. Coverage beyond AEM 710 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 712(7120) Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 417. R. N. Boisvert. Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 713(7130) Dynamic Optimization
Spring. 3 credits. Prerequisite: ECON 609 and ECON 617. Letter grades only. J. M. Conrad. Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 714(7140) Experimental Economics
Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. G. L. Poe. The objective of this course is to provide a graduate-level survey of the two prevailing contemporary themes in environmental economics: the measurement of the demand for environmental resources as input into benefit-cost analyses, and the design of incentive-based, cost-effective policy instruments to achieve environmental goals. Core topics include market failure, conceptual foundations for valuing changes in environmental quality, empirical applications of non-market valuation methods, and cost-effective market mechanism design for reducing pollution. Additional topics include information asymmetries, mechanism design for non-point source pollution, and international/global environmental issues.

AEM 735(7350) Public Finance: Resource Allocation and Fiscal Policy (also ECON 735[7350])
Spring. 4 credits. Prerequisite: ECON 609. R. Kanbur. For description, see ECON 735.

AEM 744(7440) Advanced Consumer Research
Fall. 3 credits. Prerequisite: graduate standing; priority given to CALS Ph.D. students, especially in AEM, nutritional science, or food technology. B. Wansink. Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 750(7500) Resource Economics
Fall. 3 credits. Prerequisites: ECON 609 and ECO 718, or AEM 713. J. M. Conrad. Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 751(7510) Environmental Economics
Spring. 4 credits. Prerequisites: ECON 609 and graduate-level econometrics course. S-U or letter grades. G. L. Poe. Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks, and product/factor markets analysis. Emphasizes empirical research.

AEM 762(7620) Microeconomics of International Development
Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. Next offered 2006–2009. C. B. Barrett. Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks, and product/factor markets analysis. Emphasizes empirical research.

AEM 765(7650) Development Microeconomics Graduate Research Seminar
Spring. 1–3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett. Graduate students and the instructor present draft research proposals, papers, and
preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others’ work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 800(8900) Master’s-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master’s program.

AEM 900(9900) Graduate-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For Ph.D. students only before a ‘A’ exam has been passed.

AEM 901(9910) Doctoral-Level Thesis Research
Fall or spring. 1-9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For Ph.D. candidates after a ‘A’ exam has been passed.

ANIMAL SCIENCE

AN SC 100(1000) Domestic Animal Biology I
Fall. 4 credits. S-U or letter grades. W. B. Currie.

Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals. Laboratory exercises include animal handling, examining aspects of anatomy, and small group discussions of contemporary biotechnologies. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

AN SC 105(1050) Contemporary Perspectives of Animal Science
Spring. 1 credit. Prerequisite: freshmen, sophomores, or first-year transfer standing. D. E. Bauman.

A forum to discuss the students’ career planning and the contemporary and future role of animals in relation to human needs.

AN SC 110(1100) The Animals That Sustain Us: Lecture

Teaches the importance of the symbiosis between humans and domestic animals and how animal enterprises can be ethically, environmentally, and economically sound.

AN SC 111(1110) The Animals That Sustain Us: Lab

Teaches students to restrain and care for several species of domestic animals, including cats, dogs, sheep, cattle, goats, fish, and horses. Other species may be added according to student interest. Associated with AN SC 110 but may be taken separately.

AN SC 112(1120) Sustainable Animal Husbandry
Summer. 3 credits. S-U or letter grades. D. L. Brown.

Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems faced to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, goats, poultry, aquaculture, camels, horses, draft animals, animal systems modeling, Third World limited resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

AN SC 150(1500) Domestic Animal Biology II
Spring. 4 credits. S-U or letter grades. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology and physiology of growth, defense mechanisms, reproduction, and lactation to the study of the production and care of domestic animals. Uses fresh tissues and organs from dead animals along with preserved specimens in laboratories, exercises, and demonstrations. Uses a colony of Japanese quail for growth exercises, behavior, and data collection.

AN SC 204(2040) Sophomore Seminar: Domestic Animal Issues
Fall. 3 credits. S-U or letter grades. D. Brown.

Expression of discoveries, opinions, and solutions to problems in the area of domestic animal science and industry take on an extremely wide variety of forms. These expressions may include the peer-reviewed journal article, summaries of scientific work for the public, applications for science, film, music, cowboy poetry, investigative journalism, web pages, online discussion groups, computer models, and the conference. Topics used as points of reference for students and related to media and its connection to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutrient value, inspection, and sanitation. Laboratory exercises include anatomy, meat-animal systems modeling, Third World limited resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

AN SC 212(2120) Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. D. J. R. Cherney.

Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

AN SC 215(2150) Exotic Avian Husbandry and Propagation
Fall. 2 credits. Limited to 100 students. Prerequisite: AN SC 251, 351, 354, and 355. D. M. Galton.

Introduction to the background and scientific principles relating to exotic avian production. Laboratories are designed to provide an understanding of exotic avian production.

AN SC 250(2500) Dairy Cattle Principles
Fall. 3 credits. Prerequisite for AN SC 251, 351, 354, and 355. S-U or letter grades. D. M. Galton.

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of dairy cattle production.

AN SC 251(2510) Applied Dairy Cattle Genetics
Spring. 2 credits. Prerequisite: AN SC 250. S-U or letter grades. D. M. Galton.

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economic traits to be used to improve genetic progress and herd performance.

AN SC 265(2650) Horses
Fall. 3 credits. Prerequisite: AN SC 100 and 150 or permission of instructor. S-U or letter grades. C. Collyer.

Selection, management, feeding, breeding, and training of light horses.

AN SC 290(2900) Meat Science (also FD SC 290(2900))
Fall. 2 or 3 credits. Lab fee: $15. D. Shaw.

Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutrient value, inspection, and sanitation. Laboratory exercises include anatomy, meat-animal systems modeling, Third World limited resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

AN SC 304(3040) The Animals That Sustain Us: Lecture

Teaches the importance of the symbiosis between humans and domestic animals and how animal enterprises can be ethically, environmentally, and economically sound.

AN SC 311(3110) The Animals That Sustain Us: Lab

Teaches students to restrain and care for several species of domestic animals, including cats, dogs, sheep, cattle, goats, fish, and horses. Other species may be added according to student interest. Associated with AN SC 310 but may be taken separately.

AN SC 312(3120) Sustainable Animal Husbandry
Summer. 3 credits. S-U or letter grades. D. L. Brown.

Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems faced to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, goats, poultry, aquaculture, camels, horses, draft animals, animal systems modeling, Third World limited resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

AN SC 350(3500) Domestic Animal Biology III
Spring. 4 credits. S-U or letter grades. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology and physiology of growth, defense mechanisms, reproduction, and lactation to the study of the production and care of domestic animals. Uses fresh tissues and organs from dead animals along with preserved specimens in laboratories, exercises, and demonstrations. Uses a colony of Japanese quail for growth exercises, behavior, and data collection.

AN SC 351(3510) Domestic Animal Biology IV
Spring. 4 credits. S-U or letter grades. W. R. Butler and staff.

Second of a two-semester sequence (150/250) applying the basic biology and physiology of growth, defense mechanisms, reproduction, and lactation to the study of the production and care of domestic animals. Uses fresh tissues and organs from dead animals along with preserved specimens in laboratories, exercises, and demonstrations. Uses a colony of Japanese quail for growth exercises, behavior, and data collection.

AN SC 354(3540) Domestic Animal Surgery
Spring. 3 credits. Prerequisite: AN SC 351. D. M. Galton.

Introduction to surgical care and surgery of domestic animals, with emphasis on the study of surgical-anatomical, surgical techniques, and the surgical aspects of animal production and husbandry and propagation.
all-day field trip to a commercial meat plant may be taken.

**AN SC 300(3000) Animal Reproduction and Development**

Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent or one year introductory biology. J. E. Parks.

Computational anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity. Emphasizes on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

**AN SC 301(3010) Animal Reproduction and Development Lab**

Spring. 1 credit. Limited to 30 students per lab. Pre- or corequisite: AN SC 300. J. E. Parks.

Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

**AN SC 305(3050) Farm Animal Behavior (also BIOAP 312/3120)**

Spring. 2 credits. Prerequisites: one year introductory biology and introductory animal physiology (AN SC 100 and 150 or equivalent or BIOAP 311). Recommended: at least one animal production course or equivalent experience. S-U or letter grades. P. Perry.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

**AN SC 310(3100) Introduction to Animal Welfare**

Fall. 2 credits. S-U or letter grades. Staff.

Animal welfare issues will be discussed, mainly for farm animals, but companion animals will also be considered. Both animal specific and general areas of animal welfare will be discussed. This course will provide much of the background needed for Cornell to field a team and participate in the U.S. National Animal Welfare Judging contest in the spring.

**AN SC 341(3410) Biology of Lactation**

Spring. 2 credits. Prerequisite: AN SC 100-150 or animal physiology course. Offered alternate years; next offered 2008–2009. Y. R. Boisclair.

Comprehensive study of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context, but examples from other mammals, including humans, are used.

**AN SC 351(3510) Dairy Herd Management**

Spring. 4 credits. Prerequisite: AN SC 250 or permission of instructor. Recommended: AEM 392, D. M. Galton.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**AN SC 354(3540) Dairy Cattle Herd Health**

Fall. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter grades. K. Osborn.

Application of scientific principles to practical herd management with emphasis on herd health and animal well-being. Laboratory emphasizes practical applications of herd health management including on farm herd health analysis.

**AN SC 355(3550) Dairy Cattle Nutrition**

Spring. 3 credits. Prerequisite: AN SC 250 or permission of instructor. Letter grades only. T. R. Overton.

Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

**AN SC 360(3600) Beef Cattle**

Spring. 3 credits. Offered even-numbered years. M. L. Thonney.

Emphasizes the management of reproduction, nutrition, and selection in beef cattle enterprises. Laboratories acquaint students with management skills through computerized simulations and working with cattle.

**AN SC 380(3800) Sheep**

Emphasizes the breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

**AN SC 400(4000) Livestock in Tropical Farming Systems**

Spring. 3 credits. Prerequisite: upperclass standing. R. W. Blake.

Comprises analyses of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and methods of management. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, and decision making. Principles, field study, independent study projects and classroom interactions facilitate problem-solving to improve welfare of rural households.

**AN SC 401(4010) Dairy Production Seminar**

Spring. 1 credit. Prerequisite: senior standing. T. R. Overton.

Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

**AN SC 402(4020) Seminar in Animal Sciences**

Fall. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S-U or letter grades. S. Quirk.

Reports of undergraduate research and honors projects. Students present oral reports of their work for class discussion.

**AN SC 410(4100) Nutritional Physiology and Metabolism**

Fall. 3 credits. Prerequisites: biochemistry and physiology courses. R. E. Austic and D. E. Bauman.

Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

**AN SC 411(4110) Applied Cattle Nutrition**

Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: AN SC 100 and 212 (or equivalent). Highly recommended: AN SC 355. M. E. Van Amburgh.

Integrates concepts of cattle nutrition and farm nutritional management to help students understand and appreciate factors influencing the performance of cattle under diverse conditions. Topics covered include: the effect of environment on maintenance costs; the nutrient requirements for various stages of growth, lactation, and pregnancy; rumen function, feed composition and chemistry, nutrient partitioning and the environmental impacts of cattle and how to minimize them. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to analyze the information presented in lectures. Spreadsheet and case studies are used in lab and there are field trips to farms to evaluate the nutritional management.

**AN SC 412(4120) Whole-Farm Nutrient Management (also CSS 412/4120)**

Spring. 2 or 4 credits. Prerequisite: junior, senior, or graduate standing; AN SC 411. Offered as two modules. Enrollment in Module 1 for first half of semester required (2 credits). Consists of crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester is optional (additional 2 credits); builds on crop and manure nutrient management planning module by integrating agronomic nutrient management planning with herd nutrient management planning. Work on case studies outside lab. M. E. Van Amburgh and Q. M. Ketterings.

Provides students with an understanding of the concepts underlying whole farm nutrient management planning to improve profitability while protecting water and air quality. Students learn and apply concepts in the development of a Comprehensive Nutrient Management Plan (CNMP) that is required for a Concentrated Animal Feeding Operation plan to meet environmental regulations. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning
exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

AN SC 450(4500) Advanced Spanish for Dairy Producers
Fall. 3 credits. Prerequisite: AN SC 450 or permission of instructor. S-U or letter grades.

Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce, and upward mobility of that workforce depends on knowledge of the Spanish-speaking dairy workforce. This is the second course of a two-sequence program that will further develop the students' skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.

AN SC 470(4700) Merchandizing Beef Cattle
Fall. 2 credits. S-U or letter grades.

Introduction to the merchandizing of replacement beef heifers. Topics of study will include budgeting, advertising, animal preparation, cataloging, clerking and reporting. Students will gain practical knowledge through lecture as well as hands on experience by planning, organizing and conducting a sale of bred beef heifers from the Empire Heifer Development Program.

AN SC 494(4940) Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: undergraduate standing, S-U or letter grades.

Topics of study will include budgeting, advertising, animal preparation, cataloging, clerking and reporting. Students will gain practical knowledge through lecture as well as hands on experience by planning, organizing and conducting a sale of bred beef heifers from the Empire Heifer Development Program.

AN SC 603(6030) Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603(6030))
Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years; next offered 2008-2009. X. G. Lei and C. C. McCormick.

Emphasizes metabolism, gene regulation, antioxidation, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Discusses effective approaches to improve global mineral nutrition by agriculture and food systems.

AN SC 606(6060) Ruminant Nutrition: Microbial Ecology and Forage Chemistry
Spring. 4 credits. Prerequisites: AN SC 212, biochemistry course; senior or graduate standing or permission of instructor. S-U or letter grades. Offered alternate years. P. Hulten.

Provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

AN SC 610(6100) Animal Science Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing. S-U grades only. X. G. Lei.

Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

AN SC 619(6190) Field of Nutrition Seminar (also NS 619(6190))
Fall and spring. 0 credits. No grades given.

For description, see NS 619.
Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research on ongoing projects and recent peer-reviewed publications of high significance.

AN SC 621(6210) Reproductive Physiology/Endocrinology Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. W. R. Butler and staff.

Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

AN SC 622(6220) Seminar in Animal Metabolism
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Y. R. Boisclair and D. E. Baumann.

Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research on ongoing projects and recent peer-reviewed publications of high significance.

AN SC 694(6940) Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades.

Related Courses in Other Departments
Introductory Animal Physiology (BIOAP 311)
Animal Physiology Experimentation (BIOAP 319)
Milk Quality (FD SC 351)
Agriculture in the Developing Nations (IARD 602)
Lipids (NS 602)
Basic Immunology Lectures (BIO G 305)

BIological and Environmental Engineering

Lecturers: C. L. Anderson, T. J. Cook, L. D. Goch, P. E. Hillman

BEE 110(1030) Introduction to Metal Fabrication Techniques
Spring. 3 credits. Limited to 20 students per lab. Letter grades only. T. J. Cook.

Emphasis is on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of constructional steel, sheet metal work, soldering, pipe fitting, forging, controlling distortion, oxy-acetylene torch cutting, welding and brazing, carbon steel arc welding, arc cutting and use of the carbon arc torch.

BEE 132(1040) Introduction to Wood Construction
Fall. 3 credits. Limited to 16 students per lab. Letter grades only. T. J. Cook.

Principles and practice of wood construction. Covers site selection and preparation, drainage, soil testing, development, footers and foundations, concrete work and block construction, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods and joinery, fasteners and their application. Each student plans and constructs an approved carpentry project (fine furniture to architectural details).

BEE 151(1510) Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per lab and rec. No previous programming experience assumed. Pre- or corequisite: MATH 191 or equivalent. Letter grades only. C. L. Anderson.

Introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

BEE 200(1200) The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 150.

Prerequisite: BEE majors or permission of instructor. Letter grades only. J. A. Bartsch.

Forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE 222(2220) Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 192, BIO G 110, PHYS 213, and chemistry course completed concurrently. Letter grades only. J. B. Hunter.

Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 251(2510) Engineering for a Sustainable Society (also ENGRD 251(2510))
Fall. 3 credits. Pre- or corequisite: MATH 293. Letter grades only. B. A. Ahner.

Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic principles of chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 251 or BEE 260 according to their academic plan.

BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

BEE 260(2600) Principles of Biological Engineering (also ENGRD 260(2600))
Fall. 3 credits. Pre- or corequisite: MATH 293. Letter grades only. J. B. Hunter.

Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or BEE 260 according to their academic plan.

BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

BEE 299(3299) Sustainable Development: A Web-Based Course
Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S-U or letter grades. N. R. Scott.

Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable communities, and industrial ecology and life cycle analysis.
BEE 305(3050) Principles of Navigation (also NAV S 301[3050])
Spring. 4 credits. Three classes each week (lec-rec-project work). Letter grades only. LT. G. C. Gebrimedin. Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Also briefly discusses electronic navigation systems.

BEE 310(1050) Advanced Metal Fabrication Techniques
Spring. 1 credit; 2-credit option available. Prerequisite: BEE 110 or permission of instructor. Letter grades only. T. J. Cook. Principles and practices beyond the scope of BEE 110. Includes out-of-position, low-hydrogen, high-carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc, and oxy cutting of metals are covered. Planning, development, and fabrication of a project is required for the 2-credit option.

BEE 331(3310) Bio-Fluid Mechanics
Fall. 4 credits. Prerequisites: ENGRD 202 and Engineering math sequence. Letter grades only. K. G. Gebremedhin. Properties of Newtonian and non-Newtonian fluids; hydrostatic and dynamic forces; principles of continuity, conservation of mass, energy and momentum and their applications; laminar and turbulent flows and boundary layer; introduction to Navier Stokes; dimensional analysis and similarity; blood flow in the cardiovascular system; gas exchange in the pulmonary system; blood flow and sodium transport in the kidney.

BEE 350(3500) Biological and Environmental Transport Processes
Fall. 3 credits. Pre- or corequisites: MATH 293 and fluid mechanics course. Letter grades only. A. R. B. Datta. Focuses on understanding the principles of heat and mass transfer in the context of biological, biomedical, and environmental systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

BEE 362(3620) Fundamentals of Tissue Engineering
Spring. 3 credits. Limited to 25 students; priority given to graduating seniors. Prerequisite: biochemistry, BEE 350. Letter grades only. R. C. Gorewit. Biochemical and physiological fundamentals of tissue engineering. Cell technology, cell function in constructs and sources of cells for tissue engineering. Biomaterials, including functional requirements, biomimetics and substrates, and bioartificial construct technology. Diffusion and transport processes in engineered tissue, manufacture and scale-up of products, regulation and FDA approval of engineered products. Examples include cartilage, bone, skin, cardiovascular and neural tissues.

BEE 365(3650) Properties of Biological Materials
Spring. 3 credits. Satisfies BEE laboratory experience requirement. Pre- or corequisite: ENGRD 202. Letter grades only. J. A. Bartsch. Mechanics and structural properties of biological materials; mechanical testing of animal, plant, and food products. Laboratory exercises involve quasistatic and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials.

BEE 368(3680) Biotechnology Applications: Animal Bioreactors
Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. C. Gorewit. Introduces students to the biotechnological applications of animals, their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals; growth factors, anti-tumor proteins, antibodies, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

BEE 371(3719) Physical Hydrology for Ecosystems
Spring. 3 credits. Prerequisite: MATH 192 or permission of instructor. Letter grades only. Offered alternate years; next offered 2008-2009. F. S. Spencer and T. T. Walter. This is an introduction to fundamental hydrology emphasizing physical hydrological processes and the roles of interactions among hydrology, ecology, biogeochemistry, and human activities. This course focuses on surface and near surface processes and introduces deeper, groundwater-hydrology. A broad range of specific topics is covered; e.g., the hydrologic cycle, environmental hydrology, runoff generation, physical and biophysical vadose zone processes, erosion and sediment transport, and eco-hydrological systems.

BEE 401(4019) Renewable Energy Systems
Spring. 3 credits. Prerequisite: college physics (also M&AE 401[4019]). L. D. Alblight. Introduces energy systems with emphasis on quantifying costs and designing/optimizing renewable energy systems to convert environmental inputs into useful forms of energy. Covers energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

BEE 427(4270) Water Sampling and Measurement
Fall. 3 credits. Satisfies BEE laboratory experience requirement. Prerequisites: fluids or hydrology course and MATH 191. Letter grades only. J. D. Geohring and T. S. Steenhuis. Get wet and muddy with this course on water measurement sampling methods where science and engineering technologies are integrated to quantify, characterize and analyze environmental engineering problems. This field-based lab course focuses on quantification of surface and subsurface water flow and quality, utilizing various measurement equipment and analytical techniques. Quality assurance protocols and interpretation of watershed contaminants are addressed.

BEE 435(4350) Principles of Aquaculture
Spring. 4 credits. Satisfies both BEE laboratory experience and BEE capstone design requirement. Satisfies College of Engineering technical writing requirement when co-registered in BEE 493. Prerequisites: MATH 294, introductory computing, two semesters of physics, statistics or permission of instructor. Letter grades only. A. K. Datta. Bioinstrumentation applications are emphasized in this laboratory-based course. Electronic instruments from sensor to computer are considered. Static and dynamic characteristics of components are examined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. A variety of biological applications of instrumentation are discussed.

BEE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also M&AE 453[4530])
Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisites: BEE 350 or equivalent. Letter grades only. A. K. Datta. Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using industry-standard physics-based computational software high-end personal computer. Covers biomedical processes and industrial food processing applications of heat and mass transfer. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major component of the course (no final exam).
BIOLOGICAL AND ENVIRONMENTAL ENGINEERING 69

BEE 454(4540) Physiological Engineering
Fall. 3 credits. Satisfies BEE laboratory experience requirement. Prerequisites: differential equations, 2 semesters of physics, and microbiology, statistics. Letter grades only. D. J. Aneshansley. This course examines engineering measurements of biological systems and mathematical models of animal physiology. Membrane transport, sensory organs (vision, hearing), and interacting systems (respiratory and cardio-vascular systems) are investigated in laboratory experiments and problem sets associated with the laboratories. Engineering mathematics (differential equations, Fourier transforms, and Laplace transforms) are used to model and analyze physiological systems. Laboratories include wet laboratory measurements of red blood cell volume, reaction times and nerve conduction, sound production and analysis, color and spatial frequency tests of human vision, construction of a temperature controlled pacemaker circuit, use of telemetry to monitor heart rate during exercise, and design of a spirometer to measure respiratory function.

BEE 459(4590) Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. Next offered 2008–2009. A. J. Baumann. Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to lab-on-a-chip and fabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, analyze biosensors published in literature, and theoretically design a biosensor based on criteria discussed in class. Undergraduate students work together in teams of two to three. Meets concurrently with BEE 659. BEE 659 students work independently on individual biosensor projects.

BEE 464(4640) Bioseparation Processes
Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 192, BEE 200 or equivalent, or permission of instructor. Next offered 2008–2009. S-U or letter grades. J. B. Hunter. Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

BEE 471(4710) Introduction to Groundwater (also EAB 471(4710))
Spring. Prerequisites: MATH 293, fluid mechanics or hydrology course. S-U or letter grades. Field trips. L. M. Cathles and T. S. Steenhuis. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulicities, soil water, and solute transport.

BEE 473(4730) Watershed Engineering
Fall. 3 credits. Satisfies BEE capstone design requirement when co-registered in BEE 496. Satisfies College of Engineering technical writing requirement when co-registered in BEE 493. Satisfies BEE laboratory experience requirement. Prerequisite: fluid mechanics or hydrology course. Letter grades only. M. T. Walter. This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design. Assignments are generally representative of real-life engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.

BEE 474(4740) Water and Landscape Engineering Applications
Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisites: fluids or hydrology course or permission of instructor. Letter grades only. T. S. Steenhuis and L. D. Gehringer. This course will focus on how water moves in soil and the implications for design of drainage and irrigation systems in the landscape. The course addresses aspects of soil physics, flow in porous media, water quality and water supply or disposal in regard to drainage and irrigation applications. Emphasis is on problem solving of actual situations, and a major site-design project is required.

BEE 475(4750) Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only. D. A. Haith. Applications of mathematical modeling, simulation, and optimization to environmental modeling management. Rate and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives for solid waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

BEE 476(4760) Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction, collection and transport systems, waste-to-energy combustion, sanitary landfills; composting, recycling, and materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

BEE 478(4780) Ecological Engineering
Spring. 3 credits. Satisfies BEE capstone design requirement when co-registered in BEE 496. Prerequisite: junior-level environmental quality engineering course or equivalent. Letter grades only. W. J. Jewell. Ecological engineering is the language of sustainable living. Waste management with natural systems, the most advanced form of this new engineering field. Case studies include constructed wetlands, hydraulic applications of plants in resource-recovery waste management systems, soil restoration, phytoremediation, and bioremediation of toxic wastes. Refineries to create energy-independent communities, sustainable drinking water systems, carbon sequestration, and zero polluting farms are future sustainable living topics that also solve some of society's larger problems.

BEE 481(4791) LRFD-Based Engineering of Wood Structures (also CEE 481(4791))
Spring. 3 credits. Satisfies BEE capstone design requirement when co-registered in BEE 496. Prerequisite: ENGRD 202. Letter grades only. K. G. Gebremedhin. Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; designs of beams, columns, frames, arches, bridges, diaphragms; connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 484(4840) Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Saperski. The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 487(4870) Sustainable Energy Systems
Fall. 3 credits. Satisfies BEE capstone design requirement. Intended for upper-level undergraduates and graduate students. Prerequisites: BEE 350 and thermodynamics course. Letter grades only. N. R. Scott and L. D. Albright. Offers a system approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

BEE 489(4980) Engineering Entrepreneurship, Management, and Ethics
Spring. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing, ENGRD 270 or CEE 304 or equivalent highly recommended. Letter grades only. M. B. Timmons and R. Evans.
The course focuses on how to start a new company centered on engineering or biological technologies. Course objectives include covering entrepreneurship principles, fund-raising, negotiation, financial calculations (internal rate of return, time value of money, financial statements), legal structures of businesses, project management, and to develop an awareness of issues related to professional ethics, and technical writing and communication. Majority of work done in teams including a complete business plan that is presented to angel investors. Business plans must require less than $100K in startup funding and may result in actual investment by the angel investor group.

BEE 493(4930) Technical Writing for Engineers
Fall or spring. 1 credit. Meets College of Engineering technical writing requirement when taken concurrently with BEE 473 in fall or BEE 450 in spring. Letter grades only. Staff.
Covers communication skills necessary for oral and written technical project reports. Also considers outlines, style, audience, and general presentation mechanics.

BEE 494(4940) Special Topics in Biological and Environmental Engineering
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered twice under this number. Each 494 has a unique course ID for enrollment.

BEE 494(4940) Baja SAE (also MAAE 490, section 58)
Fall, spring. 1-4 credits. Prerequisite: permission of instructor. No evening prelims. Letter grades only. L. Collins.
Design and build off-road vehicle for Society of Automotive Engineers competition.

BEE 494(4940) Introduction to Atmospheric Chemistry
Fall. 3 credits. Engineers must take for letter grade. Prerequisites: one year of chemistry, one year of calculus, one year of calculus-based physics or permission of instructor. S-U or letter grades. P. Hess.
Quantitative discussion of the basic processes that control the composition of the earth's atmosphere and the relationship of these processes to air pollution and climate change.

BEE 495(4950) BEE Honors Research
Fall or spring. 1-6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff.
Intended for students pursuing the research honors program in BEE.

BEE 496(4960) Capstone Design in Biological and Environmental Engineering
Fall or spring. 1 credit. Corequisite: one approved upper-level course (BEE 435, 473, 478, 491 only). Staff.
Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 497(4970) Individual Study in Biological and Environmental Engineering
Fall and spring. 1-4 credits. Prerequisite: written permission of instructor and appropriate ability and training for work proposed, normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to your project advisor. Staff.
Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 498(4980) Undergraduate Teaching Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff.
The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 499(4990) Undergraduate Research Fall and spring. 1-4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff.
Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided, that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE 501(5010) Bioengineering Seminar (also BME 501(5010))
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. L. Lipson.
To give you, the engineer-in-training, a broad overview of different aspects of medical and biomedical engineering including business, legal, and clinical issues. To give the students a working knowledge of how abstractions are written and revised.

BEE 520(5900) M.P.S. Project
Fall and spring. 1-6 credits. Requirement for each M.P.S. candidate in field. Letter grades only. BEE graduate faculty.
Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.
systems for sugars and amino acids; phloem transport; ABC-type transporters]

BEE 651(6510) Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOM 290 or BIOM 351 or permission of instructor. Laboratory fee: $25. A. Ahner. Examines ways in which organisms may be used to remove or metabolize pollutants in the environment, including bacterial degradation of organics and phytoremediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. Examines the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.

BEE 655(6550) Thermodynamics and Its Applications
Fall. 3 credits. Prerequisite: MATH 293 or equivalent; for undergraduates, permission of instructor. Letter grades only. Offered alternate years. Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organizations).

BEE 659(6590) Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisite: Biochemistry course and permission of instructor. Letter grades only. Next offered 2008--2009. A. J. Baeumner. For description, see BEE 459.

BEE 671(6710) Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisite: Four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Letter grades only. Offered alternate years; next offered 2008-2009. J.-Y. Parlange. Encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques. Analyzes both homogeneous and heterogeneous soils.

BEE 672(6720) Drainage
Spring. 4 credits. Prerequisites: BEE 471 or BEE 473. Letter grades only. Offered alternate years; next offered 2008-2009. T. S. Steenhuis and L. D. Geohring. Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage. Critically reviews drainage design as it relates to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and matrix flow on water quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

BEE 674(6740) Ecophylogeny
Spring. 3 credits. Prerequisite: ecology or hydrology course. Offered alternate years. Letter grades only. M. T. Walter. The objective of this course is to investigate novel topics that involve the interactions between physical hydrological processes and ecosystem processes, including the impacts of human activities on the ecologically diverse system. The course is designed to encourage students from historically disparate disciplines to collaboratively combine their unique skills and insights to answer multidisciplinary ecological questions. This course will consider a broad range of topics and systems most appropriate to student interests. Through course work we will clarify the current understanding of various topics, identify knowledge gaps, develop hypotheses, and test them quantitatively by creating models and analyzing available data. The goal of this course is to identify and verify the basic principles of ecophylogeny and become familiar and comfortable with a range of quantitative tools and approaches for answering ecophylogenetic questions.

BEE 687(6870) The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. L. P. Walker. Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 694(6940) Graduate Special Topics in Biological and Environmental Engineering
Fall or spring. 4 credits max. S-U or letter grades. BEE graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number. Each 694 has a unique course ID number.

BEE 697(6970) Graduate Individual Study in Biological and Environmental Engineering
Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U or letter grades. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

BEE 700(7010) Seminar Series
Spring. 1 credit. S-U or letter grades. J. C. March and M. T. Walter. Presentation and discussion of research and special developments pertinent to biological and environmental engineering and related fields.

BEE 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 740[6430])
Spring. March 24--May 16. 2 credits. Prerequisite: graduate standing or permission of instructor. D. D. Bowman. In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

BEE 750(7000) Orientation to Graduate Study
Fall, first seven weeks. 1 credit. Prerequisite: new graduate students in BEE-S-U grades only. D. J. Aneshansley. Introduction to BEE research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

BEE 754(7540) Water and Culture in the Mediterranean: A Crisis (also D SOC 694[6840])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructors. S-U or letter grades. T. S. Steenhuis, G. Holst-Warhaft, et al. The course addresses the crisis of water in the Mediterranean region, through case studies situated in watershed basins, especially those of the Nile and Litany Rivers. It focuses on attitudes, conflicts, and relationships of local people toward water, expressed in culture, sanitation, environmental laws, and agricultural practices.

BEE 760(7600) Nucleic Acid Engineering (also BME 760[7600])
Spring. 2 credits. Prerequisite: graduate standing. S-U or letter grades. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine are introduced. A design project and formal project presentation are required.

BEE 771(7710) Soil and Water Engineering Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, and M. T. Walter. Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.
The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see "Biology & Society" under the College of Arts and Sciences.

BIOMETRY AND STATISTICS

The Department of Biological Statistics and Computational Biology in Statistical Science offers the following courses in Biometry and Statistics. Students under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 301(3010) Biological Statistics I (also NTRES 313[3130], STBTRY 301[3010])

Fall and summer. 4 credits. Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in a statistical computing environment.

BTRY 302(3020) Biological Statistics II (also NTRES 413[4130], STBTRY 302[3020])

Spring. 4 credits. Prerequisites: BTRY 301 or 601. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactors analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in a statistical computing environment.

BTRY 310(3100) Statistical Sampling (also ILRST 310[3100], STBTRY 310[3100])

Fall. 3 credits. Prerequisites: two semesters of statistics. Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

BTRY 407(4070) Principles of Probability and Statistics (also STBTRY 407[4070])

Fall. 4 credits. Cannot be taken for credit after completion of BTRY 408/409 or MATH 471/472 sequence. Prerequisites: one year of calculus. Course is prerequisite for upper-division statistical genomics courses. Recommended: some knowledge of multivariate calculus and statistics. A one-semester version of the BTRY 408/409 sequence. Topics include: combinatorial probability, conditional probability and independence, random variables (and their moments), standard distributions (multinomial, Poisson, normal, gamma, beta, etc.) and their properties. The second half of the course focuses on parametric inference using maximum likelihood and Bayesian approaches. Computational methods are emphasized using the R programming language. The course is a prerequisite for upper-division statistical genomics courses.

BTRY 408(4080) Theory of Probability (also STBTRY 408[4080])

Fall. 4 credits. Prerequisites: MATH 111, 112, at least concurrent enrollment in 213 or 222 or equivalents. Recommended: at least one introductory course in statistical methods. Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introduction or as foundation for a course in statistical theory.

BTRY 409(4090) Theory of Statistics (also STBTRY 409[4090])

Spring. 4 credits. Prerequisites: BTRY 408 or equivalent and at least one introductory statistics course. Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 408. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

BTRY 410(4100) Multivariate Analysis (also ILRST 410[4100], STBTRY 410[4100])

Spring. 4 credits. Prerequisites: BTRY 301, some knowledge of matrix algebra. S-U or letter grades. Application of classical multivariate methods to data from a variety of fields using a statistical software package. Topics include the multivariate normal distribution, multivariate regression and MANOVA; principal components and factor analysis; canonical correlation; discriminant analysis and clustering.

BTRY 421(4210) Matrix Computation

Fall. 4 credits. Prerequisite: calculus course. Next offered 2008-2009. Introductory course in matrix computations that reviews linear algebra (vector spaces, linear independence) and emphasizes a matrix approach to solving systems (LU-factorization, QR-decomposition, SVD, Schur complements) and the role of the condition number of a matrix. Discusses positive definite matrices, eigenvalues, and their applications in mathematical modeling and statistics.

BTRY 482(4820) Statistical Genomics (also STBTRY 482[4820])

Fall. 4 credits. Prerequisites: MATH 111. Highly recommended: at least one previous course in statistical methods and one in biology. Next offered 2008-2009. A course on the statistical analysis of genetic, molecular, and genomic data. The first module of the course presents a thorough treatment of important probability distributions and the concepts of likelihood and Bayesian inference. We then focus on how statistical models are applied for linkage analysis, basic Quantitative Trait Locus mapping, analysis of pedigrees,
molecular population genetics and genomics, and phylogenetic inference. Meets concurrently with BTRY 682.

**BTRY 483(4830) Quantitative Genomics and Genomics (also STBTRY 483(4830))**
Fall. 4 credits. Prerequisites: Introductory statistics or equivalent. S-U or letter grades.
A rigorous treatment of analysis techniques used to understand complex genetic systems. This course will cover both the fundamentals and advances in statistical methodology used to analyze disease, agriculturally relevant, and evolutionarily important phenotypes. Topics will include mapping quantitative trait loci (QTLs), application of microarray and related genomics to gene mapping, and evolutionary quantitative genetics. Analysis techniques will include association mapping, interval mapping, and analysis of pedigrees for both single and multiple QTL models. Application of classical inference and Bayesian analysis approaches will be covered and there will be an emphasis on computational methods. Meets concurrently with BTRY 683.

**BTRY 484(4840) Computational Genomics (also STBTRY 484(4840))**
Fall. 4 credits. Highly recommended: at least one previous course in statistical methods and at least one in algorithms. A rigorous treatment of important computational principles and methods for the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstructions, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 684.

**BTRY 494(4940) Undergraduate Special Topic in Biometry and Statistics (also STBTRY 494(4940))**
Fall or spring. 1-3 credits. S-U or letter grades.
Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 495(4950) Statistical Consulting (also STBTRY 495(4950))**
Fall and spring. 2-3 credits. Pre- or corequisites: BTRY 302 or 602 and 409 and permission of instructor. S-U or letter grades.
Participation in the Department of Biological Statistics and Computational Biology consulting service; faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

**BTRY 496(4960) Statistical Consulting II (also STBTRY 496(4960))**
Fall and spring. 1 credit. Prerequisites: BTRY 302 or 602, and 409 and 495. S-U grades only.
Participation in the newly formed Cornell Statistical Consulting Unit: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of literature and selected consultations encountered during previous weeks. Offered alternate years.

**BTRY 497(4970) Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497(4970))**
Fall and spring. 1-3 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 498(4980) Undergraduate Supervised Teaching (also STBTRY 498(4980))**
Fall and spring. 2 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 499(4990) Undergraduate Research (also STBTRY 499(4990))**
Fall or spring. 1-3 credits. Prerequisite: BTRY 601 or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Courses of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 601(6010) Statistical Methods I (also STBTRY 601(6010))**
Fall and summer. 4 credits. Prerequisite: Introductory statistics or equivalent. S-U or letter grades. Offered alternate years. Modern applications in statistics often require intensive computational methods developed by "off-the-shelf" computer packages. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, computer intensive methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for solving problems in statistical inference and estimation.

**BTRY 602(6020) Statistical Methods II (also STBTRY 602(6020))**
Spring. 4 credits. Prerequisite: BTRY 601 or equivalent.
Continuation of BTRY 601. Focuses on regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria, principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes computer applications and interpretation of statistical techniques. Practical applications are implemented using a modern, widely available statistical package.

**BTRY 603(6030) Statistical Methods III: Categorical Data (also ILR 411(4110), STBTRY 603(6030))**
Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Meets concurrently with BTRY 602.

**BTRY 604(6040) Statistical Methods IV: Applied Design (also STBTRY 604(6040))**
Spring. 4 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Meets concurrently with BTRY 603.

**BTRY 607(6070) Principles of Probability and Statistics (also STBTRY 607(6070))**
Fall. 4 credits. Prerequisite: one year of calculus. Recommended: some knowledge of multivariate statistics.

**BTRY 652(6520) Computational Intensive Statistical Inference (also STBTRY 652(6520))**
Spring. 4 credits. Prerequisites: ORIE 670 and at least one course in probability or letters grades. Offered alternate years. Modern applications in statistics often require intensive computational methods. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, computer intensive methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for solving problems in statistical inference and estimation.

**BTRY 682(6820) Statistical Genomics (also STBTRY 682(6820))**
Fall. 4 credits. Prerequisite: MATH 111. Highly recommended: at least one previous course in statistical methods and one in biology. Next offered 2008-2009.
A course on the statistical analysis of genetic, molecular, and genomic data. The first module of the course presents a thorough treatment of important probability distributions and the concepts of likelihood and Bayesian inference. We then focus on how statistical models are developed for linkage analysis, basic Quantitative Trait Locus mapping, analysis of pedigrees, molecular population genetics and genomics, and phylogenetic inference. Meets concurrently with BTRY 482.
BTRY 683(6830) Quantitative Genomics and Genetics (also STBTRY 683[6830])
Spring. 4 credits. Prerequisites: introductory statistics course or equivalent. S-U or letter grades.
A rigorous treatment of analysis techniques used to understand complex genetic systems. This course will cover both the fundamentals and advances in statistical methodology used to analyze disease, agriculturally relevant, and evolutionarily important phenotypes. Topics will include mapping quantitative trait loci (QTLs), application of microarray and related genomic data to gene mapping, and evolutionary quantitative genetics. Analysis techniques will include association mapping, interval mapping, and analysis of pedigrees for both single and multiple QTL models. Application of classic inference and Bayesian analysis approaches will be covered and there will be an emphasis on computational methods. Meets concurrently with BTRY 483.

BTRY 684(6840) Computational Genomics (also STBTRY 684[6840])
Fall. 4 credits. Highly recommended: at least one previous course in statistical methods and at least one in algorithms.
A rigorous treatment of important computational algorithms and methods for the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, phylogeny reconstruction, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 484.

BTRY 689(6890) Topics in Population Genetics and Genomics (also STBTRY 689[6890])
Fall. 1 credit. May be repeated for credit. Prerequisite: BTRY 682 or permission of instructor.
This course is a graduate seminar on current topics in population genetic data analysis. Topics this semester may include: detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for association mapping; efficient methods for disease gene mapping; use of comparative genomic data for population genetic inference. Readings will be chosen primarily from current literature.

BTRY 694(6940) Graduate Special Topics in Biometry and Statistics (also STBTRY 694[6940])
Fall or spring. 1-3 credits. S-U or letter grades.
Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697(6970) Individual Graduate Study in Biometry and Statistics (also STBTRY 697[6970])
Fall, spring, or summer. 1-3 credits. S-U or letter grades.
Individualized tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.
COMM 130(1300) Visual Communication (SBA)  
Spring. 3 credits. C. Scherer.  
Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print, and interactive media develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 131(1310) Writing about Communication  
Fall. 3 credits. Corequisite: COMM 130. L. Van Buskirk and staff. Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and analytically. Assignments focus on visual communication theories explored in COMM 130 as well as ideas from COMM 101.

COMM 201(2010) Oral Communication (D)  
Fall, spring, or summer. 3 credits. Limited to 20 students per sec (fall and spring) or 15 students per sec (summer). Priority given to juniors and seniors, then sophomores. Fluency in spoken English assumed. Sections meet beginning first class of insertion; may precede lecture. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren, T. Russo, and staff. Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203(2030) Argumentation and Debate (D)  
Fall, spring, and summer. 3 credits. S. Nelson. Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, policy analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Prepares students to work with a great range of opinion and evidence. Emphasizes different viewpoints, including those of different cultures. Assumptions are interrogated.

COMM 220(2300) Contemporary Mass Communication (SBA) [D]  
Fall or summer. Staff. The processes and effects of mass communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues.

COMM 245(2450) Psychology of Social Computing [also INFO 245(2450)] (SBA)  
Fall. 3 credits. J. Hancock and staff. Course focuses on understanding online communication through principles of cognitive and social psychology, and aspects of the Internet that defy traditional psychological assumptions. Topics include impression formation and management, deception and trust, group dynamics, social support, "Internet addiction," online pornography, and organizational impacts of new communication technology.

COMM 263(2630) Organizational Writing  
Fall, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior, senior, or graduate standing; college-level writing course. L. Van Buskirk and staff. Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective written presentation of detailed content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 272(2720) Principles of Public Relations and Advertising  
Summer. 3 credits. Not open to freshmen. Staff. Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; strategies for media selection and message execution. Introduction to research and regulation.

COMM 276(2760) Cases in Communication and Social Influence (SBA)  
Spring. 3 credits. Prerequisite: COMM 101. P. McLeod. Social influence is one of the most basic and important functions of communication. This course introduces communication majors to the focus area of Communication and Social Influence (CSI). Through case studies, exercises and field projects the course will address issues ranging from influence between individuals to influence at national and international levels.

COMM 282(2820) Research Methods in Communication Studies (SBA)  
Fall. 3 credits. Pre- or corequisite: sophomore standing. C. Yuan. The course covers social scientific methods to solve communication research problems empirically. Topics include basic principles of social scientific research, random sampling, questionnaire design, experimental research design, focus group techniques, content analysis, and basic descriptive and inferential statistics. Students will also learn basic data manipulation, presentation and analysis techniques using SPSS and EXCEL.

COMM 284(2840) Sex, Gender, and Communication [also FGSS 284(2840)] (D) (SBA)  
Fall. 3 credits. Not open to freshmen. L. Van Buskirk. Explores the personal, career, social, and economic implications of male and female gender categories. Topics include theories of male and female gender roles, social structures, personal relationships, and gender concerns in the workplace.

COMM 285(2850) Communication in Life Sciences [also SATS 285(2851)] (SBA)  
Spring. 3 credits. B. Lewenstein. Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define scientifically based social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301(3010) Business and Professional Presentation  
Fall and spring. 3 credits. Prerequisite: COMM 201; second-semester sophomore, junior, or senior standing. Staff. The study and practice of written and oral communication skills used in formal and informal organizations. These skills include interviews; informative, persuasive, and special-occasion speeches; reports; discussions; and PowerPoint presentations. Students study and practice the organizational, analytical, and presentational skills needed in contexts suited to their own business and professional career goals.

COMM 303(3030) Speech and Debate Practicum  
Fall and spring. 2 credits. Prerequisite: Program in Speech and Debate members; permission of instructor; completion of one year in program. Next offered 2008–2009. S. Nelson. Students learn how to prepare for CEDA (Cross Examination Debate Association) debate, Lincoln-Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of 8 credits.

COMM 316(3100) Communication and Decision Making in Groups (SBA)  
Spring. 3 credits. Prerequisite: junior or senior standing; priority given to COMM majors. P. McLeod. This course will provide students with a greater understanding of information sharing, persuasion, and decision development in small work groups. Through practical exercises, class discussions and lectures, students will learn firsthand how tools such as decision structuring processes can affect group performance. The course will be taught in an interactive hands-on format that emphasizes application of tested theory.

COMM 320(3200) New Media and Society [also INFO 320(3200)] (CA)  
Spring. 3 credits. T. Gillespie. This course builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. We investigate how mass media frames our experience of the world and shapes our political involvement in it, and at
how mass media intersects with our sense of identity and role in culture.

COMM 345[3450] Human–Computer Interaction Design (also INFO 345[3450]) (SBA)
Spring. 3 credits. G. Gay and staff. Gives students insights into the design of computer interfaces and software from the user's point of view. Students come to understand how hardware and software design influence the interaction between people and computer users. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 349[3490] Media Technologies (also S&TS 349[3491]) (CA)
Spring. 3 credits. Offered odd-numbered years. T. Gillespie. Our efforts to communicate, share culture, and drive social agendas depend on the tools we’ve developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, television, radio, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.

COMM 352(3520) Science Writing for the Mass Media (also S&TS 352[3521])
Fall and spring. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. B. Lewenstein and staff. How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and features stories for newspapers and magazines, with excursions into web sites, blogs, and other media.

COMM 353(3530) Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 260, COMM/S&TS 352, ENGRC 350, or permission of instructor. B. Lewenstein. Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 376(3760) Planning Communication Campaigns (SBA)
Fall. 3 credits. Pre- or corequisites: COMM 282 or equivalent social research course and one semester of introductory statistics. K. McCormick. Provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

COMM 398(3980) Issues in Teaching Communication (KCM)
Fall and spring. 3 credits. Pre- or corequisite: junior or senior standing, present or past undergraduate teaching assistant for COMM course. K. Berggren. Seminar bringing together novice educators to discuss ideas, experiences, and practices. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405(4050) Community Service Practicum
Fall and spring. 1 credit; may be repeated once for credit. Meets one hour weekly. S. Nelson. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410(4100) Organizational Communication: Theory and Practice (D) (CA)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; COMM 101 or permission of instructor. C. Yuan. Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today's business environment. Examines formal and informal communication networks.

COMM 420(4200) Public Opinion and Social Process (SBA)
Spring. 3 credits. Prerequisite: COMM 282. Offered even-numbered years. T. Gillespie. The course provides a scientific and applied overview of the concept of "public opinion" and its implications for macrosocial processes. The concept's historical development in fields such as political science, social psychology, and communication science is reviewed, followed by a closer look at what is meant by "measuring" public opinion. For example, is public opinion measured by polling across individual opinions, or are there macro-level dynamics of public opinion that go beyond what individuals in a society think?

COMM 421(4210) Communication and the Environment (SBA)
Spring. 3 credits. Offered odd-numbered years. Staff. Students investigate how values, attitudes, social structure, and communication affect perceptions of environmental risk and public opinion about the environment. A primary focus is on the impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422(4220) Psychology of Television (and Beyond) (SBA)
Fall. 3 credits. Prerequisites: introductory psychology or HHD 120 or COMM 101 or 220. Next offered 2008-2009. M. Shapiro. Survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and emotion.

COMM 428(4280) Communication Law
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. D. Grossman. This course deals with the law governing communication media. Topics include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 429(4290) Copyright in the Digital Age (also INFO 429[4290]) (CA)
Fall. 3 credits. Offered odd-numbered years. T. Gillespie. This course looks at recent legal and cultural battles about digital copyright, to investigate how participation in a digital world is structured: who speaks, what they can say, who hears, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture and power.

COMM 440(4400) Advanced Human–Computer Interaction Design (also INFO 440[4400]) (SBA)
Fall. 3 credits. Prerequisite: COMM/INFO 245 or permission of instructor. G. Gay and staff. Focuses on the design of computer interfaces and software from the user’s point of view. The goal is to teach the interface design that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 445(4450) Seminar in Computer-Mediated Communication (also INFO 445[4450]) (SBA)
Fall and spring. 3 credits. Prerequisite: COMM/INFO 245. Next offered 2009-2010. J. Hancock and staff. Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflec
Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 456(4560) Community Involvement in Environmental Decisions (SBA)
Spring. 3 credits. Prerequisite: junior or senior standing and permission of instructor. Offered odd-numbered years. K. McComas.
Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision making process. Through selected readings and course activities, this class will examine both traditional and contemporary methods of community involvement. When evaluating the methods, the class will discuss how social structures work to define criteria for success.

COMM 466(4660) Public Communication of Science and Technology (also S&TS 466(4660)(SBA))
Spring. 3 credits. Prerequisite: COMM 260, 285, or 352, ENGRSC 250, or permission of instructor. Offered even-numbered years. B. Lewenstein.
Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Examines the contexts in which PCST occurs, looks at motivations and constraints of those involved in producing information about science for nontechnical audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.

COMM 476(4760) Communication Fellows Program
Spring. 2 credits. Prerequisites: correlation of fellows selected based on goals and academic preparation; permission of instructor. Fee for three-day trip: $150. Staff.
Series of lecture/seminars and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers.

COMM 480(4800) Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Prerequisite: undergraduate standing; requirements met for honors program. Staff.
Students who have successfully completed COMM 382 register for no more than 3 credits. Students who have not completed an advanced research methods course may register for up to 6 credit hours.

COMM 486(4860) Risk Communication (SBA)
Fall. 3 credits. C. Schoer.
Examination of the theories and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Focuses on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

COMM 494(4940) Special Topics in Communication (D)
Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S-U or letter grades. Major topics outside of the discipline not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496(4960) Communication Internship
Fall or spring. Work component and variable. 1 credit; may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren.
Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organization. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 hours is at the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator.

COMM 497(4970) Individual Study in Communication
Fall or spring. 1–3 credits; may be repeated once for a total of 6 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). Staff.
This course provides an opportunity for individual study under faculty supervision. Students investigate how values, attitudes, and beliefs are socially constructed, and how communication affects social structure and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass communication advertising campaigns/public relations/public information, and interpersonal communication.

COMM 498(4980) Communication Teaching Experience
Fall or spring. 1–3 credits; may be repeated twice for a total of 6 credits. Prerequisite: junior standing and permission of instructor. Staff.
This course is designed to permit graduate students who supervise work and assign grades to develop teaching skills. The course includes the development of a comprehensive syllabus, written exams, and oral examinations. Students register using an independent study form (available in 140 Roberts Hall).

COMM 499(4990) Independent Research
Fall or spring. 1–3 credits; may be repeated once for a total of 6 credits. Prerequisite: junior standing and permission of instructor. Staff.
Independent research is open to students who have completed a laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 610(6100) Seminar in Social Networks
Spring. 3 credits. Prerequisite: graduate standing. Next offered 2008–2009. C. Yuan.

COMM 618(6180) Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. Staff.
Focuses on theories of communication's influence on persuasion and attitude change. Familiarizes students with a variety of social psychological theories of attitude change and persuasion. Also applies those theories to a variety of communication situations including mass communication advertising campaigns, public relations/public information, and interpersonal communication.

COMM 621(6210) Advanced Communication and the Environment
Fall or spring. 1–3 credits; may be repeated twice for a total of 6 credits with different topics. R. D. Colie.
Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 421; graduate students should enroll in COMM 621.

COMM 622(6220) Advanced Psychology of Television (and Beyond)
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. Next offered 2008–2009. M. Shapiro.
Survey of knowledge about how people mentally process television and other audiovisual communication technologies—including movies, video games, virtual reality, and the Internet. Topics include why people watch, what happens mentally when they watch, how people understand and mentally process media, and how media psychologically influence beliefs, attitudes, thinking, and communication.
are extension, social marketing, and development support communication.

COMM 640(6400) Human-Computer Interaction Design (also INFO 640(6400))
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. G. Gay and staff.
Graduate-level readings and research supplementing COMM/INFO 440. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that 'serve human needs' while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interaction, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 645(6450) CMC Graduate Seminar (also INFO 645(6450))
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2008-2009. J. Hancock and staff.
Graduate-level readings and research supplementing COMM/INFO 445. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance their experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 650(6500) Language and Technology (also INFO 650(6500))
Spring. 3 credits. J. Hancock and staff.
Graduate-level readings and research supplementing COMM/INFO 450. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 680(6800) Studies in Communication
Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor. Staff.
Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 681(6810) Advanced Communication Theory
Spring. 3 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. M. Shapiro.
Development of, and contemporary issues in, communication theory. Discusses the interaction of communication and society, social groupings, and mental processing.

COMM 682(6820) Methods of Communication Research
Fall. 3 credits. Recommended: familiarity with basic statistical concepts. P. McLeod.
Analyzes methods of communication research based on a social science foundation. Goals will be to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

COMM 683(6830) Qualitative Research Methods in Communication
COMM 684(6840) Theories and Methods of Small Group Research
The main objective of this course is to prepare doctoral students to conduct independent empirical research relevant to small groups within organizations. We will examine theoretical foundations and special methodological issues of research in this area. We will focus on task-oriented groups, incorporating research from social psychology, sociology and organizational behavior. Class sessions will consist of discussion and 'hands-on' practice of data collection and analysis methods.

COMM 685(6850) Risk Communication
Spring. 3 credits. K. Comumas and C. Scherer.
Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories of risk communication.

COMM 691(6910) Seminar: Topics in Communication
Fall and spring. 0 credits. S-U grades only. Staff.
Some weeks students from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students present thesis (project) proposals to faculty members and peers.

COMM 694(6940) Special Topics in Communication
Fall, spring, or summer. 1-3 credits, variable. Prerequisite: permission of instructor. S-U or letter grades.
Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

COMM 781(7810) Seminar in Psychology of Communication
Spring. 3 credits. Prerequisite: COMM 680 and 681 or equivalent graduate-level theory in psychology or social psychology. Letter grades. Offered odd-numbered years. M. Shapiro.
Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

COMM 794(7940) Seminar in Communication Issues
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Letter grades only.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797(7970) Graduate Independent Study
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Letter grades only.
Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798(7980) Communication Teaching Laboratory
Fall and spring. 1-3 credits each semester, may be repeated once. Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. (Students must use faculty member's section number to register.) Letter grades only. Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799(7990) Graduate Research
Fall, spring, or summer. 1-3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor. Letter grades only.
Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800(8900) Master's-Level Thesis Research
Fall or spring. 1-6 credits, may be repeated for max. of 6 credits. Prerequisite: permission of committee chair. S-U grades only.
Thesis research for M.S. (communication) students.

COMM 901(9900) Doctoral-Level Dissertation Research
Fall or spring. 1-9 credits; may be repeated for max. of 9 credits. Prerequisites: completion of "A" exam; permission of committee chair. S-U grades only.
Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

Courses by Subject
Crop Science: 311, 312, 315, 317, 403, 414, 420, 444, 455, 608, 611, 612, 613, 614, 642, 690, 691, 920, 921

Topics in soil science, crop science, or development. Discussions on selected topics transgenic crops as a tool for agricultural departmental course. This course should not be offered more than twice under this curriculum committee, and the same course is not offered more than twice under this number. Offerings vary by semester, and this number.

CSS 499(4990) Undergraduate Research
Fall or spring. Credit TBA. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 696(6960) Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S-U grades only. Staff. Covers current research and selected topics in the crop and soil sciences and related fields.

CSS 698(6980) Agroecological Perspectives for Sustainable Development
Fall and spring. 2 credits. S-U grades only. Staff. Agroecological perspectives for sustainable development.

Crop Sciences

CSS 311(3110) Grains and Nutricultcals
Fall. 4 credits. Prerequisite: CSS 260 or BIOPL 241 or permission of instructor. One or two field trips during lab periods. R. L. Obendorf.

CSS 312(3120) Forage Crops
Spring. 4 credits. Prerequisite: introductory crop and/or soil science course. Recommended: animal nutrition course. G. W. Pick.

CSS 315(3150) Weed Biology and Management
Fall. 4 credits. Prerequisite: introductory course in biology or botany. A. DiTommaso.

CSS 494(4940) Biotechnology and Development (also GOVT 430[4303])
Spring. 2 credits. Sec. 2. S-U or letter grades. J. E. Thies and R. J. Herrera.

Of all the technological solutions to agronomic problems that have been proposed in the last few decades, none has created the level of backlash and controversy as those involving genetic biotechnology. Social protest and activist movements arise from ethical, cultural, religious, economic, environmental and political stances with regard to the use of transgenic technologies, particularly in agricultural development in poor countries. In this course, we will explore the roots of these controversies and follow the logic and economics of their development and deployment. We will try to identify the fundamental underpinnings of various arguments for and against the use of transgenic crops as a tool for agricultural development. Discussions on selected topics and associated directed readings will be led by the course coordinators and invited speakers. Students will be assessed on their participation in discussions and on a written position paper in the subject area.

CSS 494(4940) Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits max. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 497(4970) Individual Study in Crop and Soil Sciences
Fall or spring. 1–6 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Topics in soil science, crop science, or environmental information science are arranged at the beginning of the semester for individual study or for group discussions.

CSS 498(4980) Teaching Experience in Crop and Soil Sciences
Fall or spring. 1–5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course. This course should not be taken by teaching assistants.

CSS 403(4030) Traditional Agriculture in Developing Nations (also IARD 403[4030])
Fall. 1 credit. S-U grades only. P. Hobbs. Half the world's arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

CSS 414(4140) Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 414[4140])
Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. P. Hobbs.

Characterizes and discusses traditional shifting cultivation; lowland rice-based systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

CSS 426(4260) Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 426[4260])
Fall. 2 credits. K. W. Murdock, L. E. Buck, and P. Hobbs. For description, see HORT 426.

CSS 444(4440) Integrated Pest Management (also ENTRM 444[4440])
Fall. 4 credits. Prerequisites: biology course or permission of instructor. J. E. Losey and A. DiTommaso. For description, see ENTRM 444.

CSS 455(4550) Minimal Nutrition of Crops and Landscape Plants (also HORT 455[4550])
Spring. 3–5 credits. Prerequisite: CSS 260 and BIOPL 242, or equivalent. Offered alternate years. H. C. Wien and staff. Modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed.
by others on agronomic crops, vegetables, floriculture, and fruit crops. Each module carries 1 credit; a minimum of 3 credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, and are able to diagnose deficiencies by symptoms and tissue tests and devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

**CSS 608(6080) Water Status in Plants and Soils**
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years. T. L. Setter. This is a lecture and lab course that introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, soil water content analyzers, sap flow instrumentation, and abscisic acid analysis with ELISA.

**CSS 610(6100) Physiology of Environmental Stresses**
Fall. 3 credits. Prerequisite: plant physiology course or permission of instructor. R. L. Olendorf. Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world’s major food and feed seeds. Illustrations extend the principles to other situations, industrial uses, and food systems for improved health.

**CSS 612(6120) Seed Biology**
Fall. 3 credits. Prerequisite: plant physiology course or permission of instructor. R. L. Olendorf. Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world’s major food and feed seeds. Illustrations extend the principles to other situations, industrial uses, and food systems for improved health.

**CSS 613(6130) Physiology and Ecology of Yield**
Spring. 3 credits. Prerequisite: plant physiology course (BIOPL 242 or 342) or permission of instructor. T. L. Setter. Study of environmental constraints on crop-plant productivity from the perspective of key biological processes. Examines acclimation responses and genetic adaptation for temperature, light, water, compacted soil, and mineral-limited nutrient environments. Topics include photosynthesis and nitrogen assimilation, phloem translocation and partitioning, canopy-scale influences on solar radiation use efficiency, regulation of growth processes in leaf, root, and floral/fruit/grain sinks in response to environment; seed set; water transport and stomatal regulation; root architecture and function, behavior in water-limited situations. Students will develop an ability to identify processes that are in need of improvement through optimization of crop cultural practices or genetic change.

**CSS 614(6140) Weed Ecology and Management**
Spring. 3 credits. Prerequisite: CSS 315 or equivalent. Offered alternate years; next offered 2008–2009. A. DiTommaso. Examination of plant ecological principles governing weed population dynamics and weed-plant competitive interactions in different crop and noncrop ecosystems. Explores the application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interference, invasive weed biology, biological weed control, and site-specific weed management.

**CSS 642(6420) Mineral Nutrition: From Plants to Humans (also BIOPL 642(6420))**
Spring. 3 credits. Prerequisite: BIOPL 341 or equivalent. Offered odd-numbered years, next offered 2008–2009. O. Vatamaniiuk, L. V. Kochian, and R. M. Welch. This course focuses on the biophysical, biochemical, molecular and physiological processes by which plants absorb mineral nutrients from the soil, translocate, and utilize them for growth and development. Selected lectures will focus on the relation between the nutrient status of plants and human nutrition and health. Students will be also exposed to state-of-the-art techniques that are used for analyses of mineral status of plants.

**CSS 691(6910) Special Topics in Crop Science**
Fall or spring. 1–6 credits. S-U or letter grades. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 820(8200) Master’s-Level Thesis Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduates faculty. Thesis research for M.S. candidates.

**CSS 920(9200) Graduate-Level Thesis Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduates faculty. Thesis research for Ph.D. students before “A” exam has been passed.

**CSS 920(9210) Doctoral-Level Dissertation Research in Crop Science**
Fall or spring. Credit TBA. S-U grades only. Graduates faculty. Dissertation research for Ph.D. candidates after “A” exam has been passed.

**Environmental Information Science**

**CSS 397(3970) Environmental Microbiology (also BIOMI 397[3970])**
Spring. 3 credits. Prerequisite: BIOEE 261 or BIOMI 290 or CSS 260 or permission of instructor. Offered alternate years. L. Madsen. Discusses the biology, behavior, and function of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**CSS 410(4100) The GMO Debate: Environmental Impacts**
Spring. 3 credits. Prerequisite: BIO G 109 or equivalent. D. Buckley and P. Hobbs. This course covers issues pertaining to the agricultural use of genetically modified organisms with emphasis on evaluating their environmental impact. Students will learn to critically evaluate the risks associated with the use of GMOs. We will examine the types of GMOs in use and in development, how they are made, and their potential impacts on the environment including gene flow, non-target effects, horizontal gene transfer, biodiversity effects and the implications of changes in farming practices and chemical inputs.

**CSS 411(4110) Resource Inventory Methods (also CEE 411[4110])**
Spring. 3 credits. Prerequisite: permission of instructor. A. Lembo. Survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasizes using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

**CSS 420(4200) Geographic Information Systems**
Fall. 4 credits. Prerequisite: CSS 411 or permission of instructor. A. Lembo. Principles and applications of geographic information systems for the characterization and assessment of agricultural and environmental resources. Emphasizes methods for accessing, updating, analyzing, and mapping spatial data and information. Considers needs assessment, coordinate systems, spatial and attribute database design and maintenance, modeling and analysis, and Internet map servers.

**CSS 465(4650) Global Positioning System**
Fall, first five Fri. of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. Spring, last five Fri. of semester. 1 credit. Prerequisite: CSS 411 or 420, or equivalent, or permission of instructor. A. Lembo. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization, field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration.

**CSS 485(4850) Problem Solving in Environmental and Agroecosystem Science I**
Fall. 4 credits. Prerequisite: senior standing, CSS 260 or equivalent. P. Baveyes. Capstone experience for seniors, centering on the multidisciplinary analysis of a specific, non-graded (e.g., a brownfield in Ithaca in fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. Involves field trips, in-depth discussions of data assembled before the course, gathering of relevant scientific information, and group presentations at the end of the term.
with experience in writing and reviewing grant proposals, by culminating in the creation of short research proposals to be reviewed by the class in the style of an NSF panel.

**CSS 675(6750) Modeling the Soil-Plant-Air System (also EAS 675[6750])**  
Spring, 3 credits. Prerequisites: CSS 483 or equivalent. Offered alternate years; next offered 2008-2009. S. J. Riha.  
Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale.  
Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

**CSS 694(6940) Special Topics in Environmental Information Science**  
Fall or spring. 1-6 credits. S-U or letter grades. Staff.  
Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

**CSS 850(8600) Master's-Level Thesis Research in Environmental Information Science**  
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.  
Thesis research for master's students.

**CSS 960(9600) Graduate-Level Dissertation Research in Environmental Information Science**  
Fall or spring. TBA. S-U or letter grades. Staff.  
Dissertation research for Ph.D. students before "A" exam has been passed.

**CSS 961(9610) Doctoral-Level Dissertation Research in Environmental Information Science**  
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.  
Dissertation research for Ph.D. candidates after "A" exam has been passed.

**Soil Science**

**CSS 260(2600) Soil Science**  
Fall. 4 credits. S-U or letter grades. J. Russell-Anelli.  
Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil characterization, testing, mapping, classification, GIS, and land evaluation. (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. (3) unit on soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

**CSS 362(3620) Soil Morphology**  
Fall. 1 credit. Prerequisite: undergraduate standing. Recommended for sophomores and juniors. One all-day field trip required. Next offered 2008-2009. J. Russell-Anelli.  
Presents the principles for field identification of soil properties, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.

**CSS 363(3630) Soil Genesis, Classification, and Survey**  
Fall. 4 credits. Prerequisite: CSS 260. One all-day field trip required. J. Russell-Anelli.  
Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

**CSS 365(3650) Environmental Chemistry: Soil, Air, and Water**  
Spring. 3 credits. Prerequisites: CHEM 207-208 or CHEM 206. M. B. McBride.  
Overview of the chemical processes that control the fluxes, concentrations, and bioavailability of nutrients and pollutants in soil, air, and water. Gives particular attention to soil's function as a filter for contaminants. Describes the historical and environmental contamination by xenobiotics and heavy metals, with emphasis on behavior and properties of pollutants that pose the greatest risk to human and ecological health.

**CSS 372(3720) Nutrient Management in Agroecosystems**  
Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. Graduate students should enroll in CSS 472. J. Lehmann.  
Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

**CSS 412(4120) Whole-Farm Nutrient Management (also AN SC 412(4120))**  
Spring. 2- or 4-credit option. Prerequisite: AN SC 411; junior, senior, or graduate standing. Offered as two modules. Enrollment in Module 1 for first half of semester requires 4 credits; consists of crop and manure nutrient management planning; no prerequisites for CALS students. Enrollment in Module 2 for second half of semester optional (additional 2 credits). M. E. VanAmbrugh and Q. M. Ketterings.  
For description, see AN SC 412.

**CSS 421(4210) Soil and Water Management**  
Fall. 4 credits. Prerequisite: CSS 260. S-U or letter grades. M. van Es.  
Introduces students to the principles of soil and water interactions and the effects of human intervention. Examines soil hydrology, soil erosion and conservation, water and soil quality, contaminant movement, soil health, tillage, and soil compaction. Discusses case
I studies and policy approaches from both the United States and abroad.

**CSS 466(4660) Soil Ecology (also HORT 466/4660)**

Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor.

J. E. Thies.

Discover the wonder of life underground. In this course, you will study the amazing multifunctionality of the soil and the functions of soil biota in both managed and unmanaged ecosystems. The fundamental principles and features of biologically-mediated processes in the soil and the functions of soil biota will be highlighted. Special topics include: beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Laboratory focuses on multiple activities and traditional methods for assessing the abundance, activity, and diversity of soil organisms.

**CSS 471/4710 Properties and Appraisal of Soils of the Tropics**

A. VanWambeke.

Examines the conditions in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and preservation of the environment are examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course pays special attention to salt-affected soils, paddy rice cultivation, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems. The course is available on a compact disk in Mann Library.

**CSS 472(4720) Nutrient Management and Research in Agroecosystems**

Spring. 4 credits. Prerequisite: CSS 260 or permission of instructor. J. Lehmann.

Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way nutrient management can be improved without creating environmental hazards. Gives students hands-on training in analytical procedures and expand knowledge in discussion and through oral as well as poster presentations. The laboratory experiments conclude with a final paper.

**CSS 483(4830) Environmental Biophysics (also EAS 483/4830)**

Spring. 3 credits. Prerequisite: CSS 260 or equivalent or permission of instructor.

S. J. Ihara.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Covers energy budgets; soil heat flow; water movement in saturated and unsaturated soils; evaporation; rain; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Considers applications to agronomic and environmental problems and instrument design and use through discussion and problem sets.

**CSS 663(6630) Pedology**

Spring. 3 credits. Prerequisite: CSS 361 or permission of instructor. Offered alternate years; next offered 2008–2009.

J. Russell-Anelli.

Weathering, reactions, and processes of soil genesis; soil and the functions of soil biota in both managed and unmanaged ecosystems will be highlighted. Special topics include: beneficial symbioses, biological control of plant pathogens, biogeochemistry of unique habitats, bioremediation and composting of organic wastes, among others. Laboratory focuses on multiple activities and traditional methods for assessing the abundance, activity, and diversity of soil organisms.

**CSS 666(6660) Applied Plant-Microbe Interactions**

Fall. 4 credits. Prerequisite: CSS 466 or equivalent or permission of instructor. Offered alternate years; next offered 2008–2009.

J. E. Thies.

This is a discussion and laboratory-based course that focuses on the nature of microbial interactions with plants, and concentrates largely on bacterial and fungal associations. Students will investigate symbiotic, associative, endophytic, and pathogenic interactions. The main aim of this subject is to help the students improve their professional practice within the content area and the literature, present research reports, write and review proposals, conduct a small independent-research project, and report on the outcomes in conference and journal formats. Class discussion and laboratory exercises will explore the nature of the rhizosphere and phyllosphere environments as a habitat for microorganisms and the ecology of the organisms residing there through readings in the primary literature. In laboratory, all students will conduct an independent research project, aligned with their interests, in which they develop testable hypotheses and conduct experiments using relevant, modern methods.

**CSS 667(6670) Advanced Soil Physics**

Spring. 3 credits. Prerequisites: one year of college physics and CSS 483 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008–2009.

Staff.

Acquaints students with advanced topics in soil physics in a number of areas, including the statics and thermodynamics of soil water, the physics of swelling-shrinking soils, the transport of water and solutes in heterogeneous soils, the measurement of soil physical parameters, and the effect of spatial/temporal heterogeneity of soils on their physical characteristics. The format of the course, based in most years on weekly, individual tutorials, allows different topics to be covered, depending on the interests of the students. If a group of students expresses interest, the course also can involve reflection on the detailed design of one or more laboratory or field experiments related to soil physics.

**CSS 669(6690) Organic Matter—Soils, Sediments, and Waters**

Spring. 3 credits. Prerequisites: CSS 260 and CHEM 357–358 or equivalent.

J. M. Duxbury.

Discussion of the recent concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

**CSS 671(6710) Soil Chemistry**

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years; next offered 2008–2009.

M. B. McBride.

Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange; mineral-solution equilibria; and adsorption reactions of silicate clays, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

**CSS 672(6720) Nutrient Cycling in Natural and Managed Ecosystems**

Fall. 3 credits. Prerequisite: CSS 372 or NTRES 321 or BIOEE 478, or permission of instructor. Offered alternate years; next offered 2008–2009.

J. E. Thies.

Covers nutrient cycling in soil and the interface between the soil and the biosphere, atmosphere, and hydrosphere. Examines the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems, including pollution in watersheds. Students develop independent projects, present a research proposal, and conduct field research that culminates in a presentation and paper in publishable format.

**CSS 684(6840) Topics in Soil Microbial Ecology**

Seminar and discussion course dealing with current topics in soil microbial ecology including. Community ecology and diversity, microbial biogeochemistry, plant-microbe interactions, microbial feedbacks on plant communities, gene exchange and evolution in soils, soil microbial genomics, and relationships between structure and function of microbial communities in soil systems.

**CSS 693(6930) Special Topics in Soil Science**

Fall, spring, or summer. 1–6 credits. S-U or letter grades.

Study of topics in soil science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

**CSS 696(6960) Seminar: Organic Inputs in Tropical Soils and Agroforestry (also NTRES/IARD 696/6960)**

Fall, spring. 1 credit sec. 2. S-U grades only. E. Fernandes and L. Fisher.

A variety of speakers present seminars on agroecological perspectives for (primarily international) sustainable development. Students are required to prepare a synopsis of each seminar.

**CSS 880(8880) Master’s-Level Thesis Research in Soil Science**

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Thesis research for master's students.

**CSS 980(9800) Graduate-Level Dissertation Research in Soil Science**

Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Dissertation research for Ph.D. students before "A" exam has been passed.

CSS 981(9810) Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.

Dissertation research for Ph.D. candidates after "A" exam has been passed.

DEVELOPMENT SOCILOGY

D SOC 101(1101) Introduction to Sociology (SBA) (KCM) (D)
Prereq: one year of high school credit. Fall, T. Hirschl; spring. Students may not take both D SOC 101 and SOC 101 for credit. A. Gonzales. Introduction to theory and research in sociology. Demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. Provides "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

D SOC 111(1201) Development Sociology First-Year Writing Seminar (SBA)
Fall, spring. 3 credits. Staff. The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

D SOC 112(1200) Development Sociology First-Year Writing Seminar (SBA)
Fall, spring. 3 credits. Staff. The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

D SOC 201(2010) Population Dynamics (also SOC 202(2202)) (SBA)
Spring. 3 credits. Limited to 35 students. ALS students must enroll in D SOC 201. S-U or letter grades. D. Brown. This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and immigration) and social and economic issues. Discussions will cover special topics related to population growth and spatial distribution, including marriage and family formation, population aging, changing roles and statuses of women, labor force participation, immigration, urban growth and urbanization, resource allocation, and the environment.

D SOC 205(2050) International Development (also SOC 208(2208)) (SBA) (HA) (D)
Spring. 3 credits. Limited to 74 students. F. McMichael. Examines new questions concerning development models in the post-Cold War era from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, the course examines Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

D SOC 207(2070) Problems of Contingent Society (also SOC 207(2070)) (SBA)
For description, see SOC 207.

D SOC 209(2090) Social Inequality (also SOC 208(2208)) (SBA)
For description, see SOC 208.

D SOC 215(2150) Introductory Organizations (also SOC 215(2150)) (SBA)
For description, see SOC 215.

D SOC 220(2200) Sociology of Health of Ethnic Minorities (also LSP 220(2200)) (D)
Fall. 3 credits. Limited to 15 students. S-U or letter grades. P. A. Parra. Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

D SOC 222(2220) Controversies About Inequality
For description, see SOC 222.

D SOC 275(2750) Immigration and a Changing America (D) (SBA) (HA)
Spring. 3 credits. S-U or letter grades. D. Gurik. Immigration helped America become the nation that it is today. While many experts thought that immigration's contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no signs of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration history and the immigrants are having on the American economy and society today. It looks in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

D SOC 301(3010) Theories of Society and Development (SBA) (KCM)
Spring. 3 credits. Limited to 30 students. Prerequisites: development sociology or sociology course. S-U or letter grades. F. Makki. Introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic social upheavals of the industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

D SOC 305(3050) Education, Inequality, and Development (SBA)
Spring. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enyegue. The main goal of this course is to examine the functions of education institutions, as they affect individual welfare, inequality, and development. It begins with a review of basic definitions and measures of education, inequality, and development, and then examines the individual and societal functions of education, from theoretical perspectives drawn from sociology, economics, and demography. The insights from these various perspectives are examined critically. The course also reviews studies that have examined how investments in education appear to affect selected outcomes.

D SOC 315(3150) Social Indicators and Introduction to Social Science Research (SBA)
Fall. 3 credits. P. Eloundou-Enyegue. This course is an introduction to social science research. It reviews the general process through which social scientists derive credible answers to important questions about social change and social influences on individual behavior. It covers all steps in the research process, from the formulation of a research question to the final presentation of findings. The course is designed as a preparation for future work in social science research, but it is also intended for students who simply want to sharpen their capacity to evaluate the claims made by researchers. The course combines theory and application. A real-life research project on campus is used to apply the concepts and ideas from the textbook and lectures.

D SOC 314(3140) Spatial Thinking, GIS, and Related Methods (SBA) (KCM)
Spring. 4 credits. Letter grades only. J. Francis. Everything occurs in space. Knowing where organizations are located and events occur in space provides clues for understanding social order and processes not revealed by traditional social analysis techniques. At the same time, spatial thinking and methods are becoming increasingly used in the social sciences. The purpose of this course is to introduce the undergraduate to both aspects of spatial patterns, trends, and themes but also to methodologies for bridging spatial considerations into their research. The course will provide a practical introduction to GIS via lab assignments.

D SOC 324(3240) Environment and Society (also S&T S 324(3241), SOC 324(3240)) (SBA)
Fall and spring. 3 credits. Fall. C. Geisler; spring. G. Gillespie.
The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental education. The secondary objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate relationships of substantive and theoretical issues.

D SOC 331(3310) Environmental Governance
For description, see NTRES 331.

D SOC 336(3360) Rural Areas in Metropolitan Societies (SBA)
Spring. 3 credits. Prerequisite: social science course. D. Brown.
Analyzes the changing structure and role of small towns and rural areas in developed nations. Foci on patterns of rural communities and populations to major trends, including increased societal differentiation and complexity, increased societal interdependence, and rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural development. Students participate in group research projects in rural communities.

D SOC 340(3400) Agriculture, Food, and Society (SBA) (KCM)
Fall. 3 credits. S/U or letter grades. G. W. Gilsies.
Changing food and agricultural systems reflect the development patterns and social organization of an increasingly global society. Sociological questions include: What are major trends? What drives them? What benefits and costs accrue to people, communities, and ecosystems? How can we evaluate issues in such a way as to promote problem-solving? What development strategies might better manifest shared values?

D SOC 355(3550) Latinos, Law, and Identity
Fall. 3 credits. Prerequisite: D SOC 101 or permission of instructor. R. Mize.
Critical exploration of the critical justice movement and Latina/o identities. Legal cases, federal and state laws, and constitutional issues that impact Latina/os residing in U.S. highlighted. Theoretical contributions of law and society, critical race theory, Law and Latina/o, and outsider jurisprudence perspectives applied to precedent-setting cases and current attempts at marginalizing/empowering Latina/o communities.

D SOC 370(3700) Comparative Social Inequality (also D SOC 371[3710]) (D) (SBA)
Fall. 3 credits. Prerequisite: introductory social science course. R. Mize.
Reviews both classical and contemporary issues in the comparative study of social inequality. Examines the determinants and consequences of internal and international migration in developed and developing nations. Multilevel and multidisciplinary approaches are emphasized. Public policy implications of the volume and composition of migration for origin and destination communities are examined. Techniques and measurement issues are discussed.

D SOC 421(4210) Theories of Reproduction (also D SOC 421[4210]) (D) (SBA)
Spring. 4 credits. S/U or letter grades. A. Basu.
Examines the contentious debate of what makes women have any, few, and many children. It covers theories about the place of reproduction in the history and future of humanity. The course also looks at theories about the place of the state in women's lives.

D SOC 430(4300) Human Migration: Internal and International
Fall. 3 credits. Prerequisite: pre-demography course or permission of instructor. D. Brown.
This course analyzes the determinants and consequences of internal and international migration in developed and developing nations. Multilevel and multidisciplinary approaches are emphasized. Public policy implications of the volume and composition of migration for origin and destination communities are examined. Techniques and measurement issues are discussed.

D SOC 432(4320) Environmental Strategies
For description, see NTRES 431.

D SOC 438(4380) Population and Development (also D SOC 437[4370])
Spring. 3 credits. Prerequisite: permission of instructor. D. Gurak.
Examines major historical and recent demographic transitions in mortality, fertility, age structure, and composition and explores the relationships between these transitions and the social, economic, and cultural changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

D SOC 463(4630) Islam in Africa and Its Diaspora
For description, see AS&RC 463.

D SOC 481(4810) Global Conflict and Terrorism (SBA) (KCM)
Spring. 3 credits. C. Geisler.
Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic prepared by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the reading assignments.

D SOC 494(4900) Special Topics in Development Sociology (SBA)
Fall or spring. 4 credits max. S/U or letter grades.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 497(4901) Independent Study in Development Sociology (SBA)
Fall or spring. 3 credits. May be repeated for credit. Students must register in 140 Roberts Hall. S/U or letter grades.

D SOC 560(5600) Analytical Mapping and Spatial Modeling
Fall. 4 credits. J. Francis.
The goal of the course is to introduce students in the social sciences and related fields to geographic information systems and spatial statistics as a set of tools to complement traditional analysis methods. Spatial relationships have become increasingly recognized as important in socioeconomic, political, and demographic
analysis. Recent research in these fields has demonstrated that understanding spatial relationships, in addition to other factors that account for differences and similarities between people and organizations, significantly increase our explanatory power. The first part of the course focuses on various features of GIS that are most useful to social scientists in their endeavors. The second part of the course introduces spatial statistics that further this understanding as well as control for spatial autocorrelation when it exists.

D SOC 603(6030) Classical Sociological Theory
Fall. 4 credits. Prerequisite: graduate standing. M. J. Pfeffer.
Reviews the mainstreams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanations in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

D SOC 608(6080) Sociological Theories of Development
Spring. 3 credits. Prerequisite: D SOC 603 or permission of instructor. F. Makki.
Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

D SOC 609(6090) Demographic Techniques (also PAM 606(6060))
Spring. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U or letter grades. K. Joyner.
Introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

D SOC 612(6120) Population and Development in Asia
Spring. 3 credits. Prerequisite: graduate standing. L. Williams.
This graduate course considers issues surrounding population growth and distribution, and economic development in Asia. Case studies pertaining to Southeast Asia are highlighted. Specific topics include shifting fertility patterns with social change, labor migration patterns within and between countries, and gender differences in mortality over the life course. Evolving gender roles in the family, labor force, and broader social context are also examined.

D SOC 615(6150) Qualitative Research Methods
Fall. 3 credits. Letter grades only. L. Williams.
Seminar introducing students to a number of qualitative research methods in the social sciences. Discusses field observation, archival research, in-depth individual interviews, and focus group interviews. Assesses the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate). We discuss choice of research questions and issues of feasibility in research plans. Highlights ethical considerations.

D SOC 617(6170) Foundations in Social Research: Comparative Epistemologies
Fall. 3 credits. Letter grades only. S. Feldman.
Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

D SOC 619(6190) Quantitative Research Methods
Spring. 4 credits. Prerequisite: statistics course. Letter grades only. D. Gurak.
Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social/demographic data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

D SOC 621(6210) Foundations of Environmental Sociology
Spring. 3 credits. Prerequisite: graduate standing. C. Geisler.
Foundations of environmental sociology provide graduate students with a broad survey of the literature in this disciplinary specialty area. Students review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

D SOC 629(6300) Human Migration: Internal and International
Prerequisite: graduate standing. For description, see D SOC 430.

D SOC 632(6320) Environmental Governance
For description, see NTRES 331.

D SOC 638(6380) Population and Development
For description, see D SOC 438.

D SOC 663(6630) Islam in Africa and its Diaspora
For description, see AS&RC 463.

D SOC 694(6800) Special Topics in Development Sociology
Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

D SOC 719(7190) Logistic Regression and Spatial Linear Regression
Spring. 4 credits. J. D. Francis.
This course will cover two topics, logistic regression and spatial linear regression. The course opens with a brief review of multiple regression theory and procedures. Then a little more than half the semester is devoted to logistic regression modeling. Spatial linear regression will be covered in five weeks of the semester. As both of these techniques are based on maximum likelihood procedures, some time will be devoted to an overview of maximum likelihood procedures.

D SOC 800(8900) Master's-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for master's students.

D SOC 872(8720) Development Sociology
Prerequisite: master's and doctoral degree candidates, permission of graduate field member concerned. S-U or letter grades. Graduate faculty.

D SOC 900(7900) Graduate-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: D SOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for Ph.D. students only before "A" exam has been passed.

D SOC 901(8900) Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: D SOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for Ph.D. candidates after "A" exam has been passed.

Related Courses in Other Departments

Population Dynamics (SOC 205)
Gender Relations, Gender Ideologies, and Social Change (FGSS 524)
EARTH AND ATMOSPHERIC SCIENCES

General Courses

EAS 121(1121) Introduction to MATLAB [also CIS 121(1121)]
Fall, spring. 2 credits. Corequisite: CIS 121 or equivalent. Letter grades only. A. M. Wysocki.

EAS 150(1500) FORTRAN Applications in Earth Science
Spring, seven-week course. 2 credits. Prerequisite: EAS 121 or equivalent. Letter grades only. A. M. Wysocki.

EAS 196(1960) Internship Experience
Fall or spring. 1–2 credits. S-U grades only. Staff. See individual units for requirements.

EAS 498(4980) Teaching Experience in Earth Science
Fall, spring. 1–4 credits. S-U grades only. Students must register using independent study form. Staff. The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science

EAS 131(1310) Basic Principles of Meteorology
Fall. 3 credits. M. W. Wysocki.

EAS 233(2330) Basic Meteorology Lab
Fall. 1 credit. Corequisite: EAS 131.

EAS 250(2500) Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger.

EAS 260(2680) Climate and Global Warming
Fall. 3 credits. Prerequisite: basic college math. S-U or letter grades. A. T. DeGaetano.

EAS 296(2960) Forecast Competition
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks.

EAS 305(3050) Climate Dynamics
Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. K. H. Cook.

EAS 314(3140) Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

EAS 321(3210) Synoptic Meteorology I
Fall. 3 credits. Prerequisites: one year each of calculus and physics. A. T. DeGaetano.

EAS 334(3340) Microclimatology
Spring. 3 credits. Prerequisite: physics course. D. S. Wilks.

EAS 352(3520) Synoptic Meteorology II
Fall. 3 credits. Prerequisites: one year each of calculus and physics. A. T. DeGaetano.

EAS 447(4470) Physical Meteorology
Fall. 3 credits. Corequisites: EAS 341 and 342. E. K. Vizy.

EAS 456(4560) Mesoscale Meteorology
Spring. 3 credits. Prerequisites: EAS 341 and 342. E. K. Vizy.

EAS 472(4720) Synoptic Meteorology I
Fall. 3 credits. Prerequisites: EAS 341 and 342. E. K. Vizy.

EAS 494(4940) Physical Meteorology
Fall. 3 credits. Prerequisites: one year each of calculus and physics. A. T. DeGaetano.

EAS 534(5340) Advanced Atmospheric Dynamics
Spring. 3 credits. Prerequisites: EAS 472 and E. K. Vizy.

General Courses

EAS 212(1121) Introduction to MATLAB [also CIS 121(1121)]
Fall, spring. 2 credits. Corequisite: CIS 121 or equivalent. No programming experience assumed. Staff. For description, see CIS 121.

EAS 150(1500) FORTRAN Applications in Earth Science
Spring, seven-week course. 2 credits. Prerequisite: EAS 121 or equivalent. Letter grades only. A. M. Wysocki.

EAS 196(1960) Internship Experience
Fall or spring. 1–2 credits. S-U grades only. Staff. See individual units for requirements.

EAS 498(4980) Teaching Experience in Earth Science
Fall, spring. 1–4 credits. S-U grades only. Students must register using independent study form. Staff. The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science

EAS 131(1310) Basic Principles of Meteorology
Fall. 3 credits. M. W. Wysocki.

EAS 233(2330) Basic Meteorology Lab

Fall. 3 credits. Prerequisites: EAS 341. Corequisite: EAS 342. M. W. Wysocki.
EARTH AND ATMOSPHERIC SCIENCES

(EAS 457/4570) Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: EAS 341 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Next offered 2008–2009.
M. W. Wysocki.

(EAS 470/4700) Weather Forecasting and Analysis
Spring. 3 credits. Prerequisites: EAS 352 and 451. M. W. Wysocki.
Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student's knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

(EAS 483/4830) Environmental Biophysics (also CSS 483/4830)
Spring. 3 credits. Prerequisite: CSS 260 or equivalent or permission of instructor.
S. R. A.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Covers energy budgets; soil heat flow; water movement in saturated and unsaturated soils; evapotranspiration; and water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum. Considers applications to agronomic and environmental problems and instrument design and use through discussion and problem sets.

(EAS 484/4840) Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisites: MATH 294. D. L. Hysell.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

(EAS 487/4870) Introduction to Radar Remote Sensing (also ECE 487/4870)
Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent, or permission of instructor. D. L. Hysell.
Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric science, and astronomy. Space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

(EAS 494/4940) Special Topics in Atmospheric Science (graduate level)
Fall or spring. 8 credits max. S-U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.

(EAS 497/4970) Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. S-U grades only. Students must register using independent study form. Staff.
Topics are arranged at the beginning of the semester for individual study or for group discussions.

(EAS 499/4990) Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Students must register using independent study form. Staff.
Independent research on current problems in atmospheric science.

(EAS 542/5420) Numerical Methods in Atmospheric Modeling
Spring. 3 credits. Prerequisite: partial differential equations and introductory numerical methods or permission of instructor. S-U or letter grades.
N. Mahowald.
Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principles of the numerics in these models, including finite difference, spectral methods, and subgrid parameterizations. Included will be a discussion of numerical stability and verification of models.

(EAS 594/5940) Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisite: MATH 294. D. L. Hysell.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms. Students in EAS 594 will be expected to complete and present a substantial class project to be negotiated with the instructor.

(EAS 648/6480) Air Quality and Atmospheric Chemistry (also M&A 6480)
Fall. 3 credits. Prerequisites: freshmen chemistry, fluid mechanics or equivalent, thermodynamics. S-U or letter grades.
K. M. Zhang.
Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change.

(EAS 652/6520) Advanced Atmospheric Dynamics (also ASTRO 652/6520)
Spring. 3 credits. Prerequisites: EAS 341 and 342 or equivalents. Next offered 2008–2009.
S. J. Colucci.

(EAS 666/6660) Applied Multivariate Statistics
D. S. Wilks.

(EAS 675/6750) Modeling the Soil-Plant-Air System (also CSS 675/6750)
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Next offered 2008–2009.
S. J. Ria.

(EAS 692/6920) Special Topics in Atmospheric Science
Fall or spring. 1–6 credits. S-U or letter grades. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

(EAS 711/7110) Upper Atmospheric and Space Physics
Fall or spring. 1–6 credits. Seminar course.
D. L. Hysell.

(EAS 850/8500) Master's-Level Thesis Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Thesis research for atmospheric science master's students.

(EAS 950/9500) Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S-U or letter grades. Graduate faculty.
Dissertation research for atmospheric science Ph.D. students only before "A" exam has been passed.

(EAS 951/9510) Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S-U or letter grades. Graduate faculty.
Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been passed.

Science of Earth Systems

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural
laboratory for earth and environmental sciences courses that may be applied to the SES major include EAS 240, 322, and 351. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.

EAS 101(1101) Introductory Geological Sciences (To Know Earth)
Fall 3 credits. C. Andronicos.
Designed to enhance an appreciation of the physical world for nonscientists and science majors. Emphasizes natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Covers interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Examines water, mineral, and fuel resources and environmental concerns.

EAS 108(1108) Earth in the News
Summer 3 credits. S. L. Losh.
Introduction to physical geography and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use; geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 109(1109) Dinosaurs
Fall 1 credit. J. L. Cisne.
Introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various biological and geological disciplines contribute to understanding dinosaurs and their world.

EAS 119(1109) Fossil Preparation
Fall 1 credit. Prerequisite: EAS 109 or related EAS course. W. Allmon and J. Cisne.
Hands-on experience in the preparation and curation of fossils in laboratories at the Paleontological Research Institution (PRI). Students provide their own transportation to the Museum of the Earth via public transit or other means. Activities include preparation and study of vertebrate, invertebrate, and plant specimens; sorting of bulk material such as field collections and mastodon dung, and curation of prepared specimens.

EAS 122(1120) Earthquake! (also ENGR 122)
Spring. 3 credits. L. Brown.
Explores the science of natural hazards and strategic resource. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 154(1540) Introductory Oceanography—Lecture (also BIOE 154[1540])
Fall, summer. 3 credits; optional 1-credit lab offered as EAS/BIOE 155. S-U or letter grades. M. Monger and C. H. Greene; summer: B. C. Monger.
Intended for both science and nonscience majors. Cover the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn broadly how the Earth works (physically, chemically, and biologically) in a single nonquantitative class.

EAS 155(1550) Introductory Oceanography—Laboratory (also BIOE 155[1550])
Laboratory course covering topics presented in EAS/BIOE 154.

EAS 170(1700) Evolution of the Earth and Life (also BIO G 170[1700])
Spring. 3 credits. J. L. Cisne.
Earth systems and their evolution: Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; preceding for ongoing global change: dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

EAS 213(2130) Marine and Coastal Geology
Summer. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. T. Jordan, S. Riha, and W. Allmon.
Life activities on the physical and chemical environment, and are altered by that environment. This interaction very long times constitutes a co-evolution of earth and life. Course uses modern systems, tens of thousand year old systems, and hundreds of million year old systems to illustrate principles, methods of reconstructing deep history, and the context of natural change inherent to life and earth.

EAS 303(3030) Introduction to Biogeochemistry [also NTRES 303(3030)]
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, and biology and/or geology course. L. A. Derry and J. Yavitt.
Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the ocean.
Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

EAS 304(3040) Interior of the Earth
Fall, spring. 3 credits. Prerequisite: EAS 220 or permission of instructor. C. Andronicos.
This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large scale tectonics. Interaction between thermal, deformation, melt generation and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geologic techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.
EAS 322(3220) Biogeochemistry of the Hawaiian Islands
Fall. 4 credits. Prerequisites: enrollment in EES semester in Hawaii; EAS 220, EAS 303. Green L. Derry.
Field-oriented study of biogeochemical processes and ecosystem interactions across the Hawaiian Islands. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is structured around field projects, carried out both as groups and individually.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOL 350(3500))
Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOEE/EAS 154) or permission of instructor. Alternate years. Cathles L. W. Howarth.
Lecture course covering the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on a global scale and works down to the scale of individual organisms. Topics include global patterns of ocean circulation; global patterns of ocean production; climate variability and the role of the ocean in global climate change; the El Niño/Southern Oscillation; ecosystem dynamics of the open ocean and coastal environments.

EAS 351(3510) Marine Ecosystems Field Course (also BIOL 351(3510))
Spring. 4 credits. Prerequisite: EAS 240. Recommended: oceanography course. C. Greene, B. Mounger, and C. D. Harvell.
Covers the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on ocean-basin to regional scales and work down to the smaller scales relevant to individual organisms. Introduces students to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental biology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 353(3530) Physical Oceanography
Fall. 3 credits. Prerequisites: MATH 112 or 192, or one year of physics, or permission of instructor. Offered alternate years; next offered 2008-2009. B. C. Monger.

EAS 401(4010) Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Prerequisites: Introductory college level geology, physics and chemistry, and math through differential equations or permission of instructor. L. Cathles.
The earth's energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the earth's atmospheric evolution, rifting, mantle convection, and hydrologic cycle. The processes of resource accumulation are described in terms of simple, fundamental chemical and physical principles.

EAS 404(4040) Geodynamics
Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years; next offered 2008-2009. J. Phripps Morgan.

EAS 405(4050) Active Tectonics
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 246/488. Offered alternate years. R. Lohman.
Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

EAS 415(4150) Geomorphology
Fall. 3 credits. B. L. Isacks.
A study of terrestrial landscapes as constructed by Earth's internal tectonic processes and modified by climate. Laboratory exercises include computer analyses of satellite images and digital elevation models and student reviews of papers from the rapidly growing literature on a key focus of modern geomorphology, the interactions of tectonics and climate.

EAS 417(4170) Field Mapping in Argentina
Summer. 3 credits. Prerequisite: introductory EAS course and EAS 426 or EAS 304. S. Mahlbarg Kay.
Field mapping course in Argentina that fulfills field requirement for majors in several earth sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variably deformed sedimentary, metamorphic and igneous rocks. The course further proceeds to the tectonic processes of the central Andes with emphasis on comparable processes in the U.S. Exercises are done in combination with students and faculty of the University of Buenos Aires.

EAS 425(4250) European Discovery of Impacts and Explosive Volcanism
Spring. 2 credits. Prerequisites: junior, senior, or graduate students with a background in geology and permission of instructor. One two-hour meeting per week plus field trip during spring break. Offered alternate years, next offered 2008-2009. J. Phripps Morgan.

EAS 426(4260) Structural Geology
Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. Offered alternate years. R. W. Allmendinger.
The nature and origin of deformed rocks at microscopic to global scales. The course begins with a review of elementary principles of continuum mechanics and continues with a discussion of deformation mechanisms commonly observed in earth materials. The geometry, kinematics, and mechanics of faults, folds, are then addressed and the class ends with a description of the tectonic setting of structural families such as thrust belts, rift provinces, and zones of strike slip deformation. A weekend field trip to a region of spectacular folding and thrusting provides an opportunity to apply the concepts learned in lecture.

EAS 434(4340) Exploration Geophysics
Fall. 3 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent. Offered alternate years; next offered 2008-2009. L. D. Brown.

EAS 437(4370) Geophysical Field Methods (also ARKEO 437(4370))
Fall. 3 credits. Prerequisites: PHYS 213 or 208, or permission of instructor. Offered alternate years. L. D. Brown.
Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasizes seismic, ground penetrating radar, gravity, and magnetic techniques. Analyzes and interprets field surveys carried out at the beginning of the semester.

EAS 440(4400) Seminar on the Intergovernmental Panel on Climate Change Report
Fall. 2 credits. Prerequisites: senior or higher standing. Offered alternate years. N. Mahowald.
The IPCC report has already received substantial public attention, and it will impact environmental and economic decisions for years to come. The course will focus on reading, understanding, and evaluating the IPCC report (2007 version). Students will lead a discussion, write a background paper on one or more chapters of the report, and participate in discussions led by other students.

EAS 453(4530) Mineralogy
Fall. 4 credits. Prerequisite: EAS 101 or 220 and CHEM 207 or permission of instructor. S. Mahlbarg Kay.
Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, and the introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent project of electron microprobe (EPMA) and x-ray facilities.

EAS 454(4540) Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 453. Offered alternate years; next offered 2008-2009. R. W. Kay.

EAS 455(4550) Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 192 or equivalent. Recommended: EAS 304. Offered alternate years. W. M. White.
The Earth from a chemical perspective. Covers the formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and solar system; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; water chemistry and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems; and ore deposition.
EAS 458(4580) Volcanology
Fall. 3 credits. Prerequisite: EAS 304 or equivalent. Offered alternate years; next offered 2008–2009. R. W. Kay.

EAS 460(4600) Late Quaternary Paleoclimatology
Fall. 4 credits. Offered alternate years; next offered 2008–2009. M. Goman.

EAS 461(4610) Paleoclimate: Since the Last Ice Age
Fall. 3 credits. Prerequisites: EAS 220 or permission of instructor. Offered alternate years. M. Goman.

Climate change is becoming increasingly important in the 21st century. In order to understand modern climate change it is helpful to understand past climate changes and variability. This course examines changes and variability in climate for the last 21,000 years. It will focus on the causes, extent, and evidence for climate change. Material covered will include theory for orbital scale climate change, millennial and decadal scale changes, as well as extreme climate events and historic scale changes recorded in the terrestrial, ice, and oceanic records.

EAS 462(4620) Marine Ecology (also BIOEE 462(4620))
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 261. Offered alternate years; next offered 2008–2009. C. D. Harvell and C. H. Greene.

For description, see BIOEE 462.

EAS 471(4710) Introduction to Groundwater Hydrology (also BEE 471(4710))
Spring. 3 credits. Prerequisite: MATH 293, fluid mechanics or hydrology course. Offered alternate years. T. S. Steenhuis and L. M. Cathles.

Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and clean-up methods. Includes description of transport of pesticides, nutrients, and toxics through the unsaturated zone and aquifer processes. Students will also learn about other types of modeling, in both theoretical and practical applications. Includes short field trips.

EAS 475(4750) Special Topics in Oceanography
Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

EAS 476(4760) Sedimentary Basins
Spring. 3 credits. Prerequisite: EAS 301 or permission of instructor. Offered alternate years. T. Jordan.

The focus is on the physical characteristics of sedimentary basins, which host fossil fuels and groundwater, and can potentially store CO2. Topics include lithosphere mechanics and plate tectonic activity that cause subsidence, environments of deposition, and the textures, composition, and architecture of sedimentary rocks. Course objective is to learn to predict properties of rock where they cannot be directly sampled.

EAS 478(4780) Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 375 or permission of instructor. Offered alternate years; next offered 2008–2009. T. E. Jordan.

EAS 479(4790) Paleobiology (also BIOEE 479[4790])
Spring. 4 credits. Prerequisites: one year of introductory biology, BIOEE 274 or 373 or EAS 301, or permission of instructor. Offered alternate years. W. D. Allmon.

Surveys the major groups of organisms and their evolutionary patterns. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 481(4810) Senior Survey of Earth Systems
Spring, fall. 2 credits. J. Ciske and R. Kay. Weekly seminar for seniors in the Science of Earth Systems major on current topics in Earth system science. Readings, presentations, and discussions will focus on results from the recent literature. Students will learn how to analyze a scientific paper, and exploration of connections across the subspecialties in the field. The course will serve as both a review of key concepts, and a vehicle to explore developing concepts in the field.

EAS 484(4840) Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisites: MATH 294. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include linear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 487(4870) Introduction to Radar Remote Sensing (also ECE 487[4870])
Fall. 3 credits. Prerequisite: PHYS 208 or 213 or equivalent, or permission of instructor. D. L. Hysell.

Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 488(4880) Geophysics and Geotectonics
Spring. 3 credits. Prerequisites: MATH 192 (or 112) and PHYS 208 or 213. Offered alternate years. M. Pritchard.

Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 491-492(4910-4920) Undergraduate Research
Fall, spring. 1 to 4 credits. Fill out form at 2124 Snee Hall. Staff (B. L. Isacks, coordinator).

Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 496(4960) Internship Experience
Fall, spring. 2 credits. Prerequisite: EAS 240. S-U grades only. Limited to 75 students. Students must register using independent study form. Staff.

EAS 500(5000) Design Project in Geophysics
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geophysics option. May continue over two or more semesters. Next offered 2008–2009. L. M. Cathles.

EAS 502(5020) Case Histories in Geophysical Data Analysis

EAS 505(5050) Fluid Dynamics in the Earth Sciences
Spring. 3 credits. Prerequisites: MATH through 294, PHYS through 208/214 or permission of instructor. L. Cathles and M. Wysocki.

The Earth System provides many fascinating examples of fluid dynamic phenomena that are also of societal importance. Turbulent convection in the outer core generates the Earth's magnetic field. The viscous mantle (outer half of the Earth) is slowly but vigorously convecting, and consequently the Earth's surface is dynamic. Viscosity is not important in the oceans and atmosphere, but the flow there is fast enough for the rotation of the Earth to become a dominant control. Electromagnetic effects again dominate in the solar wind and magnetosphere. This course will investigate the Earth using fluid dynamics. For students in the Earth Sciences it will provide an opportunity to learn the insights that can be provided by fluid dynamics. For students who know fluid dynamics from other fields it will provide some spectacular applications and an opportunity to learn about the Earth System in a different and unusually fundamental way.
[EAS 522(5220)] Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 426 and permission of instructor. Offered alternate years; next offered 2008–2009.
R. W. Allmendinger and C. Andronicos.

[EAS 524(5240)] Advanced Structural Geology II
Fall. 3 credits. Prerequisites: EAS 426 and permission of instructor. Offered alternate years.
R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces. Concentrates on thrust belts, rift provinces, or strike-slip provinces. Covers techniques of balanced cross sections.

[EAS 553(5530)] Advanced Petrology
Fall. 3 credits. Prerequisite: EAS 454. Offered alternate years.
R. W. Kay.
Magmas and metamorphism in the context of plate tectonics; major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks; temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks; application of experimental studies to natural systems.

[EAS 575(5750)] Planetary Atmospheres (also ASTRO 575[6575])
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2008–2009. P. Gierasch.

[EAS 577(5770)] Planetary Surface Processes (also ASTRO 577[6577])
Spring. 3 or 4 credits. Offered alternate years; next offered 2008–2009. J. Bell.

[EAS 578(5780)] Planet Formation and Evolution (also ASTRO 578[6578])
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2008–2009. J. L. Hyse.

[EAS 584(5840)] Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisites: MATH 294. D. L. Hysell.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.
Students in EAS 584 will be expected to complete and present a substantial class project to be negotiated with the instructor.

[EAS 628(6280)] Geology of Orogenic Belts
Seminar
Spring. 3 credits. Prerequisite: permission of instructor. S. M. Kay.
Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.

[EAS 641(6410)] Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years; next offered 2008–2009.
L. A. Derry.

[EAS 656(6560)] Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years; next offered 2008–2009. W. M. White.

[EAS 693(6930)] Special Topics in Geological Sciences
Fall or spring. 1–3 var. credits. S–U or letter grades. Staff.
Study of specialized advanced topics in the Earth Sciences through readings from the scientific literature, seminars, and discussions.

[EAS 700–799(7000–7990)] Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in earth and atmospheric sciences. Topics change from semester to semester. Contact appropriate professor for more information.

[EAS 722(7220)] Advanced Topics in Structural Geology
R. W. Allmendinger.

[EAS 731(7310)] Advanced Topics in Remote Sensing and Geophysics
M. Pritchard.

[EAS 733(7330)] Advanced Topics in Geodynamics
J. Phipps Morgan.

[EAS 750(7550)] Satellite Remote Sensing in Biological Oceanography
Summer. B. C. Morgen.

[EAS 751(7510)] Petrology and Geochemistry
R. W. Kay.

[EAS 755(7550)] Advanced Topics in Tectonics and Geochemistry
J. Phipps Morgan.

[EAS 757(7570)] Current Research in Petrology and Geochemistry
S. Mahburg Kay.

[EAS 762(7620)] Advanced Topics in Paleobiology
W. D. Allmon.

[EAS 771(7710)] Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

[EAS 773(7730)] Paleobiology
J. L. Caene.

[EAS 775(7750)] Advanced Topics in Oceanography
C. H. Greene.

[EAS 780(7800)] Earthquake Record Reading
Fall. M. Barazangi.

[EAS 781(7810)] Exploration Geophysics
L. D. Brown.

[EAS 793(7930)] Andes-Himalaya

[EAS 795(7950)] Low Temperature Geochemistry
L. A. Derry.

[EAS 796(7960)] Geochemistry of the Solid Earth
W. M. White.

[EAS 797(7970)] Fluid-Rock Interactions
L. M. Cathles.

[EAS 799(7990)] Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EDUCATION

EDUC 220(2200) Community Learning and Service Partnership (CLASP)
Fall only. 2 credits. Prerequisite: permission of instructor. Must commit to taking EDUC 221 the following spring. S-U or letter grades. A. Wilson.
In this service-learning course, students partner with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students are introduced to the field of adult basic education and the principles of the Community Learning and Service Partnership (CLASP). Seminars examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 221 the following spring semester.

EDUC 221(2210) Community Learning and Service Partnership (CLASP)
Spring only. 2 credits. Prerequisites: EDUC 220 and permission of instructor. S-U or letter grades. A. Wilson.
Continues the field experience and curriculum begun in EDUC 220. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students receive in-service training and support. Seminars examine the impact of gender, race, and social class on learning and educational opportunity.

EDUC 240(2400) The Art of Teaching (CA)
Fall and spring. 3 credits. B. Heath-Camp.
Exploratory course designed for students of all backgrounds and interests who have a desire to learn more about teaching. Teaching takes place in a variety of contexts from the family to the workplace and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and occupational areas, and from school-based to nonformal situations. The course work and
EDUC 271(2710) Social and Political Context of American Education (NA) (SBA) (D)
Fall. 3 credits. Disc. J. Sipple.
Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 271.1(2710.1) Social and Political Context of American Education Optional Section
Fall. 1 credit. Optional sec for 1 credit. Must be taken with EDUC 271 Social and Political Context of American Education. J. Sipple.

EDUC 311(3110) Educational Psychology (also HD 311(3110)) (KCM) (CA) (D)
Fall. 4 credits. Prerequisite: PSYCH 101 or permission of instructor. S-U or letter grades. Additional disc sec TBA. D. Schrader.
Educational psychology is the application of psychological concepts to educational settings. This course examines the dynamic interaction between people as teachers and learners, schools as social and learning environments, and the sociocultural contexts that influence learning. The focus is on those interactions in cognitive, epistemic, social, moral, and personal domains in educational contexts.

EDUC 331(3310) Careers in Agriculture, Extension, and Adult Education
Fall. 3 credits. Letter grades only. G. Applebee.
Designed to examine program development, methodologies, leadership, evaluation, and implementation in three areas of teaching: adult education, cooperative extension, and agricultural education. The course provides an historical perspective and an introduction to the organization and scope of programs. Students examine career opportunities and characteristics of the professions addressed. Course activities include a class project, field observations, and experiences during arranged times.

EDUC 335(3350) Youth Organizations (CA)
Fall. 3 credits. T. Park.
Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Requires field experience with a recognized youth organization.

EDUC 380(3800) Independent Honors Research in Social Science
Fall or spring. 1-4 credits. max. 6 credits may be earned in honors program. Prerequisite: requirements for honors program met. S-U or letter grades. Staff.

EDUC 404(4040) Learning and Teaching I
Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. J. Trumbull.
Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on students' understandings of pupils and classroom structures.

EDUC 405(4050) Learning and Teaching II
Spring. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. B. Crawford.
Important part of a sequence of courses and experiences intended to lead to excellence in science, agricultural science, and mathematics teaching. Prospective teachers develop understanding and skills in effective planning, instruction, and assessment of students studying agriculture science, mathematics, and science in middle and high school. The course is intended to integrate theory and practice associated with learning and teaching in school classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

EDUC 420(4200) Field Experience
Fall or spring. 1-4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grade. S-U or letter grades. Staff. Students may be in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 441(4410) Language, Literacy, and Schooling
Spring. 3 or 4 credits. Lab TBA. T. Park.
Foundation for literacy activities in secondary education. Examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a research project based on fieldwork.

EDUC 451(4510) Multiculturalism and Education (also AM ST/LSP 451(4510)) (D)
Fall. 3 credits. Letter grades. S. Villenas.
This course explores research on race, ethnicity, and language in American education. It examines historical and current patterns of minority school achievement and the cultural premises undergirding educational practices in diverse communities and schools. Policies, programmatic, and pedagogical responses to diversity, including multicultural and bilingual education, are addressed.

EDUC 452(4520) Multicultural Issues in Secondary Education (D)

EDUC 459(4590) Educational Innovations in Africa and the Diaspora (also AS&RC 459(4601)) (D)
Fall. 3 credits. 4 in College of Arts and Sciences. N. Assie-Lumumba.
Deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora. After introducing the concepts and theories of innovation and innovations and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. Selected case studies, in the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction in Nigeria, science education also in Nigeria, Ujamaa and education for self-reliance in Tanzania, classroom action research in Lesoto, Information Communication Technologies (ICTs) in African higher education with a focus on African Virtual Universities (AVU), the application of the Global Development Learning Network (GDLN) in Côte d'Ivoire, and Online learning in South Africa.

EDUC 463(4630) Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Summer. 3 credits. S-U or letter grades. N. Assie-Lumumba.
Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also eLearning programs designed in industrial countries for developing countries.

EDUC 494(4940) Special Topics in Education
Fall, spring, or summer. 4 credits max. Prerequisite: permission of instructor. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 497(4970) Individual Study in Education
Fall, spring, or summer. 1-3 credits. S-U or letter grades. Students must register using independent study form (available in H0 Roberts Hall). Staff. A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.
EDUC 498(4980) Undergraduate Teaching Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career. Prerequisite: GPA of at least 2.7. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 499(4990) Undergraduate Research Fall, spring, or summer. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Prerequisite: junior or senior standing; GPA at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff. Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 502(5020) Education and Development in Africa (also AS&RC 502[5020]) Spring. 3 credits; 4 in College of Arts and Sciences. S-U or letter grades. N. Assié-Lumumba. Examines the relationship between education and individual and national development. Besides human capital theory, different paradigms of development, including modernization and dependency theories, and Third World Forum, are examined. Issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development; and the issues related to employment, national migration and international brain drain, language, equity in access, output, and outcomes, based on social class, ethnicity, race, gender, and nationality. Finally, the information and communication technologies (ICTs), indigenous knowledge systems, and the role of higher education in the national, regional, and international contexts and cooperation are discussed.

EDUC 503(5030) Diversity in the Classroom (D) Fall, spring, or summer. 1 credit for each seminar. Prerequisite: admission to CTE program. S-U or letter grades. Disc TBA. S. Villenas. Builds on knowledge of literacy and diversity gained from course work and field activities in the CTE program. Students review literacy development, cultural diversity, learning style preferences, fieldwork experiences, and strategies for accommodating difference in teaching.

EDUC 532(5320) Educational Programs in Agricultural Science Fall. 3 credits. W. Camp. Overview of the organization and planning processes necessary to operate a successful agricultural science education program in the public schools. Topics include local needs assessments, agricultural advisory boards, community-partnering strategies, program planning, course development, sequencing instruction, and professional development. Fieldwork provides experience with New York agricultural education students, teachers, and programs.

EDUC 535(5350) Youth Organizations for Agricultural Science Education Spring. 3 credits. Prerequisite: senior or graduate standing. Agricultural Science Education. Letter grades only. T. Park. Provides future agriculture educators a comprehensive overview of the components of an agriculture education program including supervised agricultural experience (SAE) and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA organization, structure, and functions on national, state, and local levels.

EDUC 544(5440) Curriculum and Instruction Spring. 3 credits. S-U or letter grades. B. Heath-Camp. The focus of this curriculum and instructional planning course is on the concepts and principles for developing curriculum and the processes of delivering curriculum. Experiences will be designed to assist in identifying the educational needs of clients/students, selecting curriculum content, designing curricula, and delivering the curriculum.

EDUC 571(5710) Social and Political Context of American Education (HA) (SBA) (D) Fall. 3 credits. Prerequisites: admission to Cornell Teacher Education Program or permission of instructor. J. Sipple. Examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

EDUC 578(5780) International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Practicum Fall and spring. 2 credits. S-U grades only. TBA. ITADP staff. Designed for first-time international teaching assistants from countries in which English is not the first language and who have completed EDUC 578. The ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

EDUC 579(5790) Further Training for International Teaching Assistants Fall, spring. 6 credits. Prerequisite: EDUC 578. S-U or letter grades. Lee, three contact hours per week. ITADP staff. Designed for international teaching assistants from countries in which English is not the first language and who have completed EDUC 578, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

EDUC 601(6010) Secondary Agriculture, Science, and Mathematics Teaching Practicum Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program. S-U grades only. D. Trumbull, B. Crawford, W. Camp, and T. Park. Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 602(6020) Practicum Seminar Fall or spring. 9 credits. Prerequisite: EDUC 601 or permission of instructor. J. Sipple. Begins with full-day sessions of intensive consideration of classroom practice relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use theories to develop and evaluate teaching materials and practices. Students also complete an extensive portfolio documenting their work.

EDUC 614(6140) Gender, Context, and Epistemological Development (also FGSS 624[6240]) (D) Fall. 3 credits. S-U or letter grades. Offered alternate years; next offered 2008–2009. D. Schrader. This seminar explores concepts of personal epistemological development and how social context and gender influence how we know and how we think. We examine the dynamic interactions between individuals’ view of the nature of knowledge, method, and its awareness of thought processes and strategies, and social contexts of education and real life.

EDUC 616(6160) Moral Psychology and Education (also FGSS 606[6060]) Fall. 3 credits. Prerequisites: EDUC 311, graduate standing or permission of instructor. S-U or letter grades. Offered alternate years. D. Schrader. This seminar examines questions of the psychological development of knowing what is right, just, good, and of value. We study moral development from cognitive-developmental, social-contextual, normative, and gendered perspectives. Topics vary by semester but include the relationship between judgment and action, moral education, social aggression, moral leadership, and integrity.

EDUC 617(6170) Psychology of Adolescence in Case Study (also FGSS 618[6180]) Spring. 3 credits. Prerequisite: any one of the following: EDUC 311, HD 617, or permission of instructor. S-U or letter grades. D. Schrader. Adolescent psychological development is examined from the perspective of the individual subject and the researcher. Using a
Agriculture and Life Science

EDUC 620(6200) Internship in Education
Fall or spring. 1-6 credits. S-U or letter grades. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. Staff. Opportunity for practical experience in educational professions development.

[EDUC 621(6210) Work-Experience Coordinator Certification Course I Summer. 3 credits. Prerequisite: EDUC 622. S-U or letter grades. Next offered 2008-2009. Staff. First of two-course sequence designed to meet state certification requirements for Coordinator of Diversified Cooperative Work Experience programs.]

[EDUC 622(6220) Work-Experience Coordinator Certification Course II Summer. 3 credits. Prerequisite: EDUC 621. Next offered 2008-2009. Staff. Second of two-course sequence designed to meet state certification requirements for Coordinator of Diversified Cooperative Work Experience programs.]

EDUC 633(6330) Program Planning in Adult and Extension Education
Spring. 3 credits. S-U or letter grades. Offered alternate years. A. Wilson. Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 647(6470) Innovative Teaching in the Sciences
Spring. 3 credits. S-U or letter grades. B. Crawford. This seminar on innovative ways to teach is designed for doctoral and master's-level students in education, sciences, math, and possibly other disciplines, including extension and outreach. Readings will include issues of gender and underrepresented populations in science, math and engineering. Students will design inquiry-based instruction in their field.

EDUC 651(6510) Anthropology and Education
Spring. 3 credits. Letter grades. Lec. S. Villenas. A study of schooling and education from anthropological perspectives and ethnographic methodology. Participants examine teaching and learning in families, communities, and schools as cultural processes. Some topics include the differential school achievements of racial/ethnic minorities, school reform efforts, youth culture and identities, and literacy in adult learning spaces.

EDUC 661(6610) Administration Leadership and Organizational Change
Fall. 3 credits. J. Sipple. Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 662(6620) Evaluation Design
Spring. 3 credits. Prerequisite: survey of research methods (or other graduate level class in research methods), statistics. S-U grades only. M. Constanis. This course is designed to introduce graduate students to the principles and practices of program evaluation. It addresses practical realities and political features of a range of evaluation designs that may be used to support decision making in educational, social, and community-based programs. Students who enroll in the class will become familiar with the technical characteristics, practical realities, and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class discussions, and assignments will support the development of the proposal.

EDUC 664(6640) Methods for Interpretive Research
Spring. 3 credits. Prerequisites: course in research methods/research design. S-U or letter grades. D. Trumbull. Course addresses the assumptions undergirding interpretive research and explores key methodological approaches to gathering and analyzing evidence. These approaches attend to the complex interactions between the researcher, the researched, and the context. Students carry out an actual study for the course, allowing them to experience doing actual research.

EDUC 668(6680) Narrative Inquiry in Social Science and Action Research
Spring. 3 credits. S-U or letter grades. S. Peters. Provides an introduction to the theory and practice of narrative inquiry in action-oriented social science research. It includes a range of theoretical and practical topics related to narrative inquiry, including an approach that combines seminar and workshop formats. Course readings also include papers on narrative inquiry.

EDUC 671(6710) American School Reform: Organizational and Sociological Perspectives
Spring. 3 credits. S-U or letter grades. J. Sipple. For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K-12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 680(6800) Foundations of Adult and Extension Education
Fall. 3 credits. Limited to 20 students. S-U or letter grades. Offered alternate years. A. Wilson. Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual controversies, philosophical issues, and current research directions through a seminar approach.

EDUC 681(6810) Democracy, Science, and Education
Spring. 3 credits. S-U or letter grades. S. Peters. Explores the actual and potential connections between democracy, science, and education. The first half of the course examines several different models and theories of democracy. Attention is focused on how the nature and practice of citizenship and politics are conceptualized under each of these models, and the implications of these conceptualizations for the political and civic education roles and work of teachers, scientists, adult educators, community development practitioners, and community organizers. The second half of the course involves a critical examination of the roles that scientific methods, expertise, technologies, and knowledge do, might, and/or should play in addressing social problems.

EDUC 682(6820) Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grades only. S. Peters. Offers an opportunity for students to engage in a critical study of the purposes and practices of professional organizers and educators in community and economic development initiatives. The course places a special focus on the civic or democratic dimensions of educational practice. Civic practice in community education and development is viewed in relation to the craft of "educational organizing" as a vehicle for social learning and collective action. Key philosophies and traditions of educational organizing are studied and analyzed in their historical, cultural, social, and political context, with an eye toward implications for contemporary practice in a broad range of settings.

EDUC 683(6830) Adult Education and Globalization: Comparative Perspectives
Fall. 3 credits. S-U or letter grades. M. Kroma. Examines the interconnections between particular economic and political systems as key to understanding the relationships of adult education to society. Employing a critical framework, the course explores emerging local, regional and national responses to adult education. Students are planting seeds of change and creativity in ways that are nurturing new forms of educational life in the context of globalization. Particular attention is paid to modes of social analyses that explore the relationship between adult education and social structural factors, including gender, race and class, to inform a sense of place and social location.
EDUC 685(6850)  Training and Development: Theory and Practice  
(also IARD 685[6850])  
Spring. 4 credits. S-U or letter grades.  
M. Kroma.  
Prepares professionals to design, administer and facilitate training programs responsive to the challenges of sustainability in our world system. Focuses on the theory and practice of training for the development of human resources in small farm agriculture, rural health and nutrition and literacy. Through in-depth discursive critiques of selected readings, students develop insights into the range of methods and strategies employed in situation analysis, the analysis of socioeconomic, sociocultural, and sociopolitical contexts of training programs, facilitation of participatory training programs for the development of human resources in small holder agriculture, rural health and nutrition, and community building. The specific role of training/education in larger change-promoting systems is also explored. The course is appropriate for persons likely to be playing professional roles as educator-trainers, scientists, administrators, and sociologists in rural and agricultural development programs in international as well as domestic contexts.

EDUC 694(6940)  Special Topics in Education  
Fall, spring, or summer. 1-3 credits.  
Prerequisite: permission of instructor. S-U or letter grades.  
Topics TBA.

EDUC 700(7000)  Directed Readings  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For study that predominantly involves library research and independent study.

EDUC 701(7010)  Empirical Research  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For study that primarily involves collection and analysis of research data.

EDUC 702(7020)  Practicum  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For study that predominantly involves field experience in community settings.

EDUC 703(7030)  Teaching Assistantship  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 704(7040)  Research Assistantship  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 705(7050)  Extension Assistantship  
Fall, spring, or summer. 6 credits, variable.  
Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff.  
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 718(7180)  Adult Learning and Development  
Spring. 3 credits. R. Caffarella.  
Seminar provides an opportunity for students to review and critique the seminal and current scholarly work in learning in adulthood. Emphasis is placed on three ways of framing adult learning: psychological, social, and cultural. Specific content areas, which vary by semester, are also explored (for example, transformational learning, experiential learning, intelligence and aging, non-western perspectives of learning, spiritual learning). Implications of this knowledge are relevant to the practice of educating adults in formal and non-formal settings, such as educational institutions, community-based-setting, healthcare, and the workplace, and through informal learning situations are also discussed.

EDUC 783(7830)  Farmer-Centered Research and Extension (also IARD 783[7830])  
Fall. 3 credits. S-U or letter grades.  
M. Kroma.  
Forum for discussion and critical analyses of participatory research and extension approaches in agriculture and natural resource management in the complex and diverse environments characteristic of many developing countries. Theoretical and philosophical arguments that underpin participatory research and extension, as well as current tools and techniques for facilitating participation and social learning are examined. Case studies and individual projects related to farmer-centered research and extension provide a focus for analyses. The course also explores and pays special attention to the challenges and opportunities related to institutionalization of participatory research and extension for sustainable agriculture and natural resource management.

EDUC 800(8900)  Master's-Level Thesis Research  
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S-U or letter grades. Times TBA. Staff.  
Doctoral or other research and development projects for Ph.D. students.

ENTOMOLOGY  

Courses by Subject

Apiculture: 260, 264  
Behavior: 215, 315, 325, 394, 471, 662  
Conservation: 344  
Ecology: 359, 452, 345, 456, 470, 672, 757  
Introductory courses: 201, 210, 212, 215, 241  
Medical and veterinary entomology: 210, 352, 355  
 Morphology: 322  
Outreach: 335, 336  
Pathology: 465, 670  
Pest management: 241, 277, 420, 441, 443, 444, 477, 644, 670  
Physiology, development, and toxicology: 370, 394, 400, 483, 490, 685  
Systematics: 331, 332, 333, 440, 453, 634, 635, 655  

Note: Class meeting times are accurate at the time of publication. If changes occur, the department will provide new information as soon as possible. Check the web site for updates.

ENTOMOLOGY  
201(2010)  Alien Empire: Bizarre Biology of Bugs  
Spring. 2 or 3 credits. S-U or letter grades.  
Optional field trips, required lab demonstrations. B. N. Danforth.  
Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects by examining their evolutionary history, anatomy, development, feeding habits, life-history strategies, behavior, and their interactions with humans (both positive and negative) through history. Optional field trips and one open lab provide hands-on opportunities for examining these amazing animals. The 3-credit option will involve an additional class meeting per week.

ENTOMOLOGY  
210(2100)  Plagues and People  
Fall. 2 or 3 credits. Prerequisites: introductory biology or permission of instructor. Offered alternate years. L. C. Harrington.

Human diseases transmitted by insects and related forms (arthropods) have affected human lives and society through history. This course focuses on the pathogens, parasites, and arthropods causing human plagues. Those plagues that have had the greatest impact on human culture and expression are emphasized. Lectures are supplemented with readings and films. Also addresses emerging diseases, bioterrorism, and future plagues.  
Students taking the course for 3 credits.
participate in readings, presentations/discussions each week (on Fridays), weekly readings quizzes, and have a comprehensive final project.

**ENTOM 212(2120) Insect Biology**
Fall. 4 credits. Prereq. or coreques: BIO G 101–102 or equivalent. Lect, lab. Fee: $40. J. P. Sanderson.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. Requires a collection of morphological, behavioral, and taxonomic categories.

**ENTOM 215(2150) Spider Biology: Life on a Silken Thread**
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. Lect. L. S. Rayor.

Introduction to the fascinating world of spiders. Explores evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders’ unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

**ENTOM 241(2410) Insect Pest Management for Practitioners**
Spring. 3 credits. Limited to 18 students. Prereqs: BIO G 101–102 or equivalent. Lectlab, demonstration; optional field trip, optional disc session offered for 1 credit, A. Hajek and J. Nypor.

The purpose of this course is for students to learn about the looming problems caused by invasive species, and current methods of biological control against invaders and other pests. These topics are obviously grounded in biology; however, they have social, economic, and philosophical links. Many research projects on invasive species and biological control are conducted on Cornell campus; examples of research will be provided, including talks by guest lecturers. Subjects covered will include basic concepts of biological invasion and biological control. The Insect Pest Fit well together because one of the first lines of defense against invasive species is use of biological control agents. Invasive species impact agriculture but also increasingly affect and permanently change natural systems. Natural enemies used for biological control that will be discussed include predators, parasitoids, pathogens, herbivores and antagonists to control vertebrate, invertebrate, and microbial pests and weeds.

**ENTOM 315(3150) Spider Biology**
Fall. 3 credits. Prerequisite: introductory biology or permission of instructor. Letter grades only. Lect. L. S. Rayor.

In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 215 (2 credits). Students in ENTOM 315 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biological majors in the Insect Biology Program of Study should take ENTOM 315 rather than ENTOM 215. Students may not take both ENTOM 215 and 315 for credit.

**ENTOM 325(3250) Insect Behavior [also BIONB 325(3250)]**
Spring. 3 credits. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. L. S. Rayor.

Learn the skills to do effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry-based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively multimedia presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

**ENTOM 335(3350) Naturalist Outreach Practicum**
Fall. 1–2 credits, variable. Prerequisite: ENTOM 335. S-U or letter grades. L. S. Rayor.

Students enrolled in the Naturalist Outreach Practicum will serve as members of the Naturalist Speakers Bureau to provide lively multimedia presentations on the ecology and behavior of organisms to second through H.S. classrooms throughout the region. With feedback from peers and instructors, students develop their own science-based presentation, display materials, and teacher resource guides. For students who have already taken Naturalist Outreach Practicum (ENTOM 335) who wish to continue doing scientific outreach. This course can be taken twice.

**ENTOM 377(2770) Invasive Species and Natural Enemies**
Spring. 2–3 credits. S-U grades optional. Lect., lab, demonstration; optional field trip, optional disc session offered for 1 credit. A. Hajek and J. Nypor.

The purpose of this course is for students to learn about the looming problems caused by invasive species and current methods of biological control against invaders and other pests. These topics are obviously grounded in biology; however, they have social, economic, and philosophical links. Many research projects on invasive species and biological control are conducted on Cornell campus; examples of research will be provided, including talks by guest lecturers. Subjects covered will include basic concepts of biological invasion and biological control. The Insect Pest Fit well together because one of the first lines of defense against invasive species is use of biological control agents. Invasive species impact agriculture but also increasingly affect and permanently change natural systems. Natural enemies used for biological control that will be discussed include predators, parasitoids, pathogens, herbivores and antagonists to control vertebrate, invertebrate, and microbial pests and weeds. The evolutionary history of the Holometabola has been greatly informed by its attributes of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

**ENTOM 333(3330) Maggots, Grubs, and Cutworms: Larval Insect Biology**
Fall. 3 credits. Prerequisites: ENTOM 212 or permission of instructor. S-U or letter grades. Offered alternate years. J. K. Lihberg.

The evolutionary history of the Holometabola has been greatly informed by its attributes of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

**ENTOM 332(3320) Insect Phylogeny and Evolution Laboratory**

Introduction of the diversity, phylogeny, evolution, and fossil history of insects. Includes lab practice in insect morphology, insect diversity, and phylogenetic analysis. Entomology undergraduates wishing to count this course toward their Group A requirement are required to take the laboratory, as well as the lecture for a total of 4 credits.
ENTOM 344(3440) Insect Conservation Biology
Spring. 3 credits. Prerequisite: entomology or conservation biology course or permission of instructor. S-U or letter grades. Lec. Offered alternate years. J. E. Harrington.
In-depth look at the concepts and issues surrounding the conservation of insects and other invertebrates. Topics include sampling rare populations; insect conservation genetics; the role of phylodynamics in determining conservation priorities; refuge design; saving individual species; plus the unique political, social, and ethical aspects of insect conservation and preservation of their ecological services (i.e., pollination, decomposition, pest suppression, and insectivore food sources).

ENTOM 352(3520) Medical and Veterinary Entomology
Diseases resulting from arthropod-borne pathogens (such as malaria, West Nile virus, dengue, and yellow fever) cause considerable human and animal suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. The goal is to encourage an understanding of evolutionary and ecological issues associated with disease transmission. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.

ENTOM 353(3530) Lab in Medical and Veterinary Entomology
Fall. 1 credit. Prerequisites: ENTOM 352 at the same time or have taken another Medical/Veterinary Entomology course. S-U or letter grades. Next offered 2008–2009. L. C. Harrington.
The laboratory compliments the lecture course, ENTOM 352. Includes field trips, collection and identification and arthropods of medical/veterinary importance, and hands-on experience with modern laboratory research methods.

ENTOM 369(3690) Chemical Ecology (also BIOEE/BIONB 369(3690))
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. Lec. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.
For description, see BIOEE 369.

ENTOM 370(3700) Pesticides, the Environment, and Human Health (also TOX 370(3700))
Fall. 2 credits. Prerequisites: BIO G 101–102 or equivalent. Lec. Offered alternate years; next offered 2008–2009. J. G. Scott.
Survey of the ecological types of pesticides, their uses, properties, and effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

ENTOM 400(4000) Insect Development (also BIOED 402(4020))

ENTOM 420(4200) Grape Pest Management (also PL PA 420[4200])

ENTOM 440(4400) Phylogenetic Systematics (also BIOPL 440(4400))
Spring. 4 credits. Prerequisites: intro biology or permission of instructor. Lec and lab. Next offered 2008–2009. K. Nixon.
For description, see BIOPL 440.

ENTOM 444(4440) Integrated Pest Management (also CSS 444[4440])
Fall. 4 credits. Prerequisite: ENTOM 212 or equivalent and PL PA 241 or equivalent. S-U or letter grades. Offered alternate years; next offered 2008–2009. P. A. Weston and G. W. Hudson.
For students preparing for careers in horticulture, urban forestry, pest management, and related areas. Emphasizes theoretical aspects of horticulture/science education. Deals with the nature, diagnosis, assessment, and management of insect and disease pests on trees and shrubs in forests, urban landscapes, Christmas tree plantations, and other examples of active pest management is practiced.

ENTOM 444(4440) Integrated Pest Management (also CSS 444[4440])
Fall. 4 credits. Prerequisite: introductory biology or permission of instructor. Lec. J. E. Losey and A. DiTommaso.
Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

ENTOM 453(4530) Principles and Practice of Historical Biogeography (also BIOPL 453[4530])
Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U or letter grades. Lec. lab. Offered alternate years; next offered 2008–2009. J. K. Liebherr and M. Luckow.
Survey of techniques in historical biogeography and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Presents geological and paleontological aspects of biogeography and discusses large-scale biogeographic patterns. Labs focus on computer applications and discussion of controversial issues.

ENTOM 455(4550) Insect Ecology (also BIOEE 455[4550])
Fall. 4 credits. Recommended: ENTOM 212 or BIOEE 261 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008–2009. J. S. Thaler.
Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Stresses the importance of understanding the basic and abiotic environment stressed. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.

ENTOM 463(4630) Invertebrate Pathology
Fall. 4 credits. Prerequisites: one year introductory biology. S-U or letter grades.
Lecture presents principles of pathology as applied to invertebrates. Topics include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases, and use of pathogens for control. Lab involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunocassay, density gradient centrifugation, soil extraction, and computer simulation.

ENTOM 470(4700) Ecological Genetics (also BIOEE 480(4800))
Spring. 3 credits. Prerequisites: BIOEE 278 or permission of instructor. S-U or letter grades. Offered alternate years. B. P. Lazzaro.
Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measuring adaptation in natural populations, detecting the effects of population demographics in determining the genetic basis of quantitative traits. Draws examples from primary research on animals and plants to illustrate experimental techniques and methods of data analysis on single-locus, multi-locus and genome-wide scales.

ENTOM 483(4830) Insect Physiology (also TOX 490[4900])
Fall. 4 credits. Prerequisite: ENTOM 212 or permission of instructor. Lec. lab. Offered alternate years; next offered 2008–2009. C. Gilbert.
Introduction to the often unique ways in which insects have met their basic needs. Examines each organ system with emphasis on basic principles and specific examples. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.

ENTOM 490(4900) Toxicology of Insecticides (also TOX 490[4900])
Spring. 3 credits. Prerequisite: general chemistry course. S-U or letter grades. Lec. Offered alternate years; next offered 2008–2009. J. G. Scott.
History, metabolism, and mechanism of action of genetically modified, synthetic, and naturally occurring insecticides. Discusses insecticide resistance, resistance management, and new approaches to insect control with genetically modified organisms.

ENTOM 494(4940) Special Topics in Entomology
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not to be offered more than twice under this number.

ENTOM 497(4970) Individual Study in Entomology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form available in 140 Roberts Hall. Staff.

ENTOM 498(4980) Undergraduate Teaching
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must...
register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**ENTOM 634(6340) Special Topics in Systematic Entomology**
Fall or spring; on demand. 2-4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

**[ENTOM 655(6550) Nomenclature Seminar**
Spring. 1 credit. S-U or letter grades. Lec. Next offered 2008-2009. J. K. Liebherr. This seminar will expose you to the rules of zoological nomenclature supported by the International Trust for Zoological Nomenclature. These rules will be viewed in the context of necessary principles for any system that encodes names of biological entities. The class benefits from our outstanding Comstock Memorial Library, from which we will view examples of important entomological works to gain an understanding of how the International Code for Zoological Nomenclature has been implemented.

**ENTOM 662(6620) Insect Behavior Seminar**
Spring. 2 credits. Prerequisites: permission of instructor or ENTOM 212 and BIONB 221 or equivalents. S-U or letter grades. Offered alternate years. C. Gilbert.

**[ENTOM 670(6700) Seminar on Biological Control**
Fall. 1 credit. Prerequisite: ENTOM 277, 440, or 465 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009. A. E. Hajek. Upper-level seminar series in biological control covering topics chosen by participating students and faculty. Weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focusing on a central theme for the semester.

**ENTOM 685(6850) Seminar in Insect Physiology**
Spring. 1 credit. Prerequisite: permission of instructor. Entomology 212 or equivalent. S-U or letter grades. Offered alternate years; next offered 2008-2009. C. Gilbert.

**ENTOM 707(7070) Individual Study for Graduate Students**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

**ENTOM 709(7090) Teaching Entomology**
Credit TBA. Staff. Teaching entomology or for extension training.

**ENTOM 757(7570) Spatial Population Ecology (also BIOEE 757(7570))**
Spring. 1 credit; may be repeated for credit. Limited enrollment. Letter grades; S-U grades by permission only. S. van Nouhuys. For description see, BIOEE 757.

**ENTOM 767(7670) Current Topics in Entomology**
Fall and spring. 1 credit. Requirement for first- and second-year entomology graduate students. S-U grades by permission only. A. Hajek and B. N. Danforth. After the Jugatae seminar, the students taking the course discuss the seminar and additional papers with the speakers from 4:30 to 5:30 in 2123 Comstock Hall.

**ENTOM 800(8000) Master's-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 800 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff. Research at the master's level.

**ENTOM 900(9000) Doctoral-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOM 900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff. Research at the doctoral level.

**Jugatae Seminar**
Fall and spring. Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

**FD SC 101(1010) Science and Technology of Foods**
Fall. 1 credit. S-U grades only. J. H. Hotchkiss and staff. Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

**FD SC 102(1020) Exploring Food Processing**
Spring. 1 credit. S-U grades only. Five field trips. Staff. Series of seminars on current technological and regulatory developments in food science. Field trips to five commercial food manufacturing/processing plants are used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, is required.

**FD SC 104(1040) Wines and Vines (also HORT 104(1040))**
Spring. 2 or 3 credits. Lec and lab required for undergraduate enology and viticulture students. Lec. (2 cr.) limited to 60 students; lab (1 cr.) limited to 30 students. Priority given to enology and viticulture students. Letter grades only. K. Arnink and I. Merwin. An introduction to the study of grape cultivation, fermentation biology, wine composition, and sensory perception. Topics include winemaking history, viticultural regions, current vineyard and winery practices, wine chemistry and microbiology, and sensory evaluation of wine flavors. Wines are used to illustrate the components and processes that determine wine sensory properties.

**FD SC 150(1500) Food Choices and Issues**
Spring. 2 credits. S-U or letter grades. R. B. Gravani and D. D. Miller. The goal of this course is to help students develop improved strategies for making healthier food choices. Concepts and principles that form the bases for current dietary guidelines and food safety regulations are discussed. Topics include the U.S. food system, relationships between diet and health, food processing and safety, and selected contemporary issues relating to nutrition, food quality, and safety. Students conduct nutritional analyses of their diets using a computer software program.

**FD SC 200(2000) Introduction to Physicochemical and Biological Aspects of Food (also NS 345(3450))**
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. J. H. Hotchkiss and R. S. Parker. Comprehensive introduction to the physical, chemical, and nutritional properties of foods and to the principles and practice of food
science and technology. Topics include chemistry and functionality of commodities and ingredients, chemical and physical phenomena that affect food quality, techniques of processing and preservation, microbiology and fermentation, food safety, and regulation.

FD SC 210(2100) Food Analysis
Spring. 3 credits. Limited to 24 students. Prerequisite: CHEM 208 or equivalent. Lec, lab. A. Orta-Ramirez.
Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Discusses gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry.

FD SC 250(2500) Kosher and Halal Food Regulations (D)
Spring. 2 credits. Prerequisite: at least sophomore standing. S-U or letter grades. J. M. Regenstein.
Comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. Examines the kosher food laws, their origin, and their application in modern food processing. Describes the nature of the kosher supervision industry in America. Also examines Halal laws and explores the interactions between the two communities. Reviews current food-related issues in both communities, including recent court decisions. May also consider some aspects of ethnic foods.

FD SC 290(2900) Meat Science (also AN SC 290(2900))
Fall. 2 or 3 credits; lec only—2 credits; lec plus lab—3 credits; lab cannot be taken without lec. Letter grades only. D. E. Shaw.
Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also studies properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation. Lab exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants may be taken.

FD SC 321(3210) Food Engineering Principles
Fall. 3 credits. Prerequisites: FD SC 200 and introductory physics. Letter grades only. S. S. H. Rizvi.
Introduces the engineering principles underlying food processes and equipment. Topics include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, refrigeration and psychrometrics.

FD SC 340(3400) Microbiology and Technology of Winemaking
Fall. 2-3 credits; 2 credits for lec, additional credit for lab. Limited to 30 students (lec), 20 students (lab). Prerequisite: microbiology or permission of instructor. Priority given to enology or viticulture students for whom lab is required. Letter grades only. R. Mira de Orduña.
This course provides a systematic overview of the microbiological technological and organizational fundamentals of winemaking considering differences among winemaking regions.

FD SC 351(3510) Milk Quality
Fall. 1 credit. Prerequisite: AN SC 250 or equivalent or permission of instructor. Letter grades only. M. Wiedmann.
Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FD SC 394(3940) Applied and Food Microbiology (also BIOMI 394(3940))
Fall. 3 credits. Prerequisites: BIOMI 290-291. C. Ramirez.
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Reviews issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FD SC 395(3950) Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. Letter grades only. A. Orta-Ramirez.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FD SC 396(3960) Food Safety Assurance
Spring. 2 credits. Prerequisite: BIOMI 290 or permission of instructor. Offered alternate years; next offered 2008-2009. R. B. Gravani.
Provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the hazards in foods, good manufacturing practices, prerequisite programs, Hazard Analysis Critical Control Point (HACCP) concept, and the application of current technologies in reducing the risk of foodborne illnesses. Uses case studies and class projects to demonstrate and apply the key principles discussed.

FD SC 400(4000) Current Topics in Food Science and Technology
Spring. 1 credit. S-U grades only. S. J. Mulvaney and staff.
Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FD SC 401(4010) Concepts of Product Development
Spring. 2 credits. Prerequisite: FD SC 200 or equivalent. Letter grades only. Offered alternate years; next offered 2008-2009. J. H. Hotchkiss.
Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, market testing, market research, and patents.

FD SC 402(4020) Agriculture in Developing Nations I (also IARD 402(4020))
Fall. 2 credits. T. W. Tucker and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec). Acquaints students with the major issues and problems in international agriculture and rural development and demonstrates how problems in development are being addressed in the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a standalone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 602), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

FD SC 405(4050) Managing Food Waste Without Trashing the Environment
Spring. 2 credits. Prerequisite: FD SC 200 or equivalent. Letter grades only. Lec, lab. Offered alternate years; next offered 2008-2009. J. M. Ramirez.
Examines the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, state-wide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

FD SC 406(4060) Dairy and Food Fermentations
Fall. 2 credits. Prerequisite: BIOMI 290. Letter grades only. M. Wiedmann.
Lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.
Discusses the chemical and physical properties of water, proteins, lipids, and other food components and additives in the context of their interactions and functional roles in foods.

FD SC 418(4180) Food Chemistry II
Fall. 3 credits. Prerequisite: FD SC 417. S-U or letter grades. J. M. Regenstein.
Discusses the chemical composition of several food groups (meats, fruits, vegetables, and dairy) and describes the chemical reactions and changes that take place during processing and storage, as well as their effects on the quality and nutritional characteristics of these foods.

FD SC 419(4190) Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: BIBOIM 330 or 331. Corequisites: CHEM 257 or equivalent. J. W. Brady.
Deals with the chemical properties of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

FD SC 423(4230) Physical Principles of Food Preservation and Manufacturing
Fall. 3 credits. Prerequisite: FD SC 321. Letter grades only. S. J. Mulvaney.
Emphasizes the fundamentals of principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FD SC 425(4250) Unit Operations and Dairy Foods
Spring. 3 credits. Prerequisites: FD SC 321, 394, 417, 418, and 423. Letter grades only. J. W. Brady.
Combined lecture-laboratory course focusing on principles and practices relevant to the dairy processing industry. Stress is on the quality and nutritional characteristics of milk and other dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FD SC 430(4300) Understanding Wine and Beer
Spring. 3 credits. Prerequisites: CHEM 257 or equivalent. J. H. Hotchkiss.
Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples of wines and beers to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma, the microbiology of fermentation and spoilage, the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques, and the effects of brewing raw materials and processing procedures on beer quality.

FD SC 440(4400) Wine and Grape Flavor Development
Spring. 3 credits. Limited to 30 students. Prerequisites: FD SC 104 and CHEM 257. C. I. Moraru.
This course will use a (bio)-chemical approach to make connections between the chemical and physical changes that occur in wine processing and their impact on wine quality. Topics include materials properties of wines, heat processing, freezing, concentration, and drying. Selected wines serve as case studies for more complex manufactured foods.
course may be repeated for credit.

FD SC 499(4990) Undergraduate Teaching Experience
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U grades only. Staff.

Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion group experience. Students meet with a discussion group.

FD SC 599(5990) Research for Lausanne Exchange Students
Fall/spring. 10 credits max. Prerequisite: Permission of instructor. S-U or letter grades. Staff.

Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FD SC 600(6000) Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Requirement for all graduate students in field of food science and technology, highly recommended for graduate students minoring in food science and technology. Staff.

Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FD SC 602(6202) Agriculture in Developing Nations II (also IARD 602[6202])
Spring. Field trips to Gulf Region of Mexico (sec. 1) and India (sec. 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and 602 permission of instructors. Cost of field study trip (including airfare, local transportation, and lodging; some merit and need based financial aid may be available): approx. $2,500. R. W. Blake, T. E. Acree, and T. E. Acree. Offered alternate years. R. W. Blake, T. E. Acree, and T. E. Acree.

Agriculture in developing nations. Topics include field trips to Gulf Region of Mexico (sec. 1) and India (sec. 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and 602 permission of instructors. Cost of field study trip (including airfare, local transportation, and lodging; some merit and need based financial aid may be available): approx. $2,500. R. W. Blake, T. E. Acree, and T. E. Acree.

The department teaches "trial" courses under this number. Offerings vary by semester, and the number will be approved by the department. Offerings vary by semester, and the number will be approved by the department.

FD SC 607(6070) Advanced Food Microbiology
Spring. 2 credits. Prerequisites: BIOM 290, FD SC 394. Letter grades only. Offered alternate years. M. Wiedmann.

Explores advanced topics in food microbiology. Focuses major emphasis on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas covered include microbial ecology of foods, rapid detection and typing of foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

FD SC 608(6080) Chemometric Methods in Food Science
Fall. 2 credits. Prerequisites: basic statistics and chemistry course or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009. K. J. Sieber.

Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

FD SC 616(6160) Flavors—Analysis and Applications

Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. Surveys taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FD SC 620(6200) Food Carbohydrates (also NS 620[6200])
Spring. 2 credits. Prerequisite: qualified seniors and graduate students, BIOM 330 or equivalent. Offered alternate years. B. A. Lewis and J. W. Brant.

Consider the chemistry of carbohydrates, including sugars, starches,pectins,hemicelluloses,gums, and other complex carbohydrates. Emphasizes the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FD SC 621(6210) Food Lipids
Fall. 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years; next offered 2008-2009. R. H. Liu.

Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, emulsions, and functional foods associated with lipids.

FD SC 622(6220) Nutraceuticals and Functional Foods
Fall. 2 credits. Prerequisites: biochemistry course equivalent to BIOM 330 and one year college biology or permission of instructor. Letter grades only. Offered alternate years. R. H. Liu.

Covers nutraceuticals and functional foods, natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Also discusses biomarkers, safety and efficacy testing, and regulations for nutraceuticals and functional foods.

FD SC 664(6640) Food Polymer Science: Principles and Applications
Spring. 2 credits. Prerequisites: introductory chemistry and physics. Offered alternate years. S. J. Mulvaney.

Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry. Emphasizes unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other biopolymers relevant to food systems.

FD SC 665(6650) Food and Bioprocessing Systems

Fundamental and quantitative analyses of current and emerging techniques used in the processing of foods and related biological materials. Topics include thermal processes, extrusion, supercritical fluids processing, membrane separation, high-pressure processing, pulsed electric field processing, ultraviolet and pulsed light treatment.

FD SC 694(6940) Special Topics in Food Science
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department.

Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety; food chemistry; packaging; food engineering. Interested
students should contact the designated instructor(s) for each semester.

**FD SC 690(6980) Graduate Teaching Experience**
Fall and spring. 1 to 3 credits. S-U. grades only. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

**FD SC 800(8000) Master’s-Level Thesis Research**
Fall or spring. Credit TBA; max. 12. Prerequisite: master’s candidates; permission of Special Committee chair. S-U grades only. Graduate faculty.

**FD SC 900(9000) Graduate-Level Thesis Research**
Fall or spring. Credit TBA; max. 12. Prerequisite: doctoral students who have not passed “A” exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

**FD SC 901(9010) Doctoral-Level Thesis Research**
Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed “A” exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

**HORTICULTURE**

**HORT 101(1110) Horticultural Science and Systems**
Fall. 4 credits. I. A. Merwin.
Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

**HORT 102(1120) Hands-On Horticulture**
The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest management, and flower arrangement. There is one Saturday field trip at the end of the semester to visit gardens in the local area.

**HORT 104(1040) Introduction to Wines and Vineyards**
Spring. 2–3 credits. Letter grades only. K. J. Annink and I. A. Merwin.
For description, see FD SC 104.

Fall. 2-3 credits. Fee for materials: $35. M. Eames-Sheavly.
Experiential survey course, two distinct units: plants used in art; plants as a subject of art. Unit 1: sculpture methods, such as turfworks, tree sculpture, Unit 2: drawing, botanical illustration, watercolor/pastel painting. Required: attendance, critical reflection in journals; original, creative final project. Optional third credit: pursue proficiency in drawing.

**HORT 215(2150) Sophomore Seminar: Nonfiction Adventure Writing**
Classroom discussion, adventures in the field and lab provide raw material for writing individual narratives.
Sponsored by the John S. Knight Institute’s Sophomore Seminars Program.

**HORT 220(2200) Practicing Sustainable Land Care**
Fall – Spring. 2–3 credits. 1 additional credit for student projects by permission of instructor. Offered odd-numbered years. L. E. Drinkwater.
Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production. Covers concepts from biological and environmental sciences (i.e., ecology, soil science, horticulture) and includes hands-on activities in organic agriculture, agroforestry, and ecosystem restoration. Classes are held at Dilmun Hill Organic Farm and the MacDaniels Nut Grove.

**HORT 235(2350) Plants and Human Well-Being (CA) (HA)**
Spring. 3 credits. Offered even-numbered years. J. M. Mt. Pleasant and S. M. Skelly.
Examines the beneficial effects of plants on human cultures, communities and individuals. Areas of focus include: impacts of community gardens, green space, and farmer’s markets; use of plants for pollution control, economic development, conflict resolution, and tourism; how plants benefit individuals, in terms of adult cognition, K–12 education, mental health, and personal empowerment.
Laboratories include field trips and exercises to allow students to analyze and evaluate plant-based initiatives in many phases of contemporary life.

**HORT 240(2400) Exploring the Small Farm Dream**
Spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. J. Green and A. Rangarajan.
Explore opportunities and challenges involved in starting up and managing a small farm. Weekly class discussion with innovative farmers and others. Topics include diversified farming, high-value horticulture, grass-based farming, agroforestry, dairy and livestock opportunities, community-supported agriculture, farm business planning, access to land, marketing strategies, juggling jobs, family-farming, and more.

**HORT 243(2430) Taxonomy of Cultivated Plants**
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Offered even-numbered years; next offered 2008–2009. M. A. Luckow.
For description, see BIOL 243.

**HORT 300(3000) Herbaceous Plant Materials**
Fall. 3 credits. Cost of field trip: $75. W. B. Miller.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

**HORT 310(3100) Production and Marketing of Greenhouse Crops**
Spring. 4 credits. Prerequisites: HORT 101 and any other horticulture course; junior standing preferred. Letter grades only. Cost of required three-day field trip: approx. $130. Offered odd-numbered years; next offered 2008–2009. W. B. Miller.

**HORT 317(3170) Seed Science and Technology (also CSS 317(3170))**
Fall. 3 credits. Prerequisite: BIOL 241 or equivalent course approved by instructor. Letter grades only. Offered odd-numbered years. A. G. Taylor, Geneva Experiment Station.
Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment. Information is applicable to various kinds of agricultural and horticultural seeds. Hands-on laboratory experience.

**HORT 330(3300) Golf and Sports Turf Management I**
Spring. 3 credits. Prerequisite: CSS 260 or permission of instructor. Letter grades only. F. S. Rossi and A. M. Petrovic.
Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses. Case study projects are a major aspect of the course.

**HORT 340(3400) Golf and Sports Turf Management Techniques**
Fall. 4 credits. Prerequisite: HORT 330. Letter grades only. F. S. Rossi.
A course designed to provide hands-on learning of essential turfgrass management skills including mower set-up, sprayer calibration, calibration mathematics, budget development, etc.

**HORT 391(3910) Woody Plant Identification and Use I**
Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.
Modular course of HORT/LA 491 covering the identification of approximately 200 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site
assessment, soil modification, design, plant specifications and landscape establishment principles and techniques should take HORT/LA 491 or the 491-492 sequence.

HORT 392(3920) Woody Plant Identification and Use II
Spring. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk. Module of HORT/LA 492 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 391 (fall module) need not be taken before taking HORT 592 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 400(4000) Principles of Plant Propagation
Spring. 3 credits. Prerequisites: BIOL 242 and 244 or another plant physiology course or permission of instructor. K. W. Mudge. Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 420(4200) Nursery-Crop Production
Fall. 3 credits. Prerequisite: HORT 400 or permission of instructor. Cost of field trips: $75. Offered odd-numbered years. K. W. Mudge. Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

HORT 425(4250) Postharvest Biology of Horticultural Crops
Fall. 3 credits. Offered odd-numbered years. S. Gan. Study of the physiological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts. Discusses the theoretical principles and fundamental processes underlying these changes. Also covers strategies and practical handling requirements/conditions for storage, transportation, and quality monitoring of harvested horticultural crops.

HORT 426(4260) Practicum in Forest Farming as an Agroforestry System
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. Offered even-numbered years; next offered 2008-2009. K. W. Mudge, P. Hobbs, and L. E. Buck. Students actively take part in the restoration of a 70-year-old nut grove. Outdoor activities are integrated with readings via an online discussion board.

HORT 435(4350) The Care of Woody and Herbaceous Plants in the Landscape
Fall. 3 credits. Prerequisites: HORT 300 and 491 or permission of instructor. Cost of required field trip: $75. Letter grades only. Offered even-numbered years; next offered 2008-2009. T. H. Whittow. Study of the practices involved in the maintenance of ornamental plants in the landscape. Labs have a hands-on focus.

HORT 440(4400) Restoration Ecology
Fall. 5 credits. Prerequisite: upper division or graduate standing and permission of instructor. Letter grades only. Lec, lab, plus several weekends. Next offered 2008-2009. T. H. Whittow. Draws concepts from ecology, hydrology, soil science, and conservation biology and applies them in these both principle and practice to the evolving field of restoration ecology.

HORT 442(4420) Barry Crops: Culture and Management
Fall. 3 credits. Offered even-numbered years; next offered 2008-2009. M. P. Pritts. Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, and blueberries, and of cultural practices that influence productivity, fruit quality, and pest damage.

HORT 443(4430) Viticulture and Vineyard Management—I
Fall. 3 credits. Prerequisites: BIO G 101/103, 102/104, BIOL 241, CSS 260, BIOL 242/244 or equivalents. Letter grades only. J. E. Vanden Huevel, M. C. Griffinet, and A. N. Lakeo. First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors affecting production and quality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

HORT 444(4440) Viticulture and Vineyard Management—II
Spring. 3 credits. Prerequisite: HORT 443 and PL BR 225 or equivalent. Letter grades only. J. E. Vanden Huevel, B. I. Reisch, P. Cousins, and C. Owens. Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine, and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 445(4450) Ecological Orchard Management
Spring. 3 credits. Prerequisite: introductory biology. Recommended: previous horticulture/plant science courses. S-U or letter grades. Offered even-numbered years. I. A. Mervin. The ecology and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology, orchard renovation and design systems; nutrition, irrigation, and freeze protection practices; tree pruning and training; post-harvest fruit storage; marketing and economic spreadsheet models; monitoring and decision-making systems for integrated pest management; and efficient use of orchard equipment. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 449(4490) Green Signals and Triggers—The Plant Hormones (also BIOL 449(4490))
Spring. 2 credits. Prerequisites: introductory biology and BIOL 242 or 342 or permission of instructor. S-U or letter grades. Offered even-numbered years. P. J. Davies. For description, see BIOL 449.

HORT 450(4500) Principles of Vegetable Production
Fall. 3 credits. Prerequisite: HORT 101, CSS 260, or equivalent. Letter grades only. Two Sat. field trips; students responsible for cost of their meals. Offered even-numbered years; next offered 2008-2009. R. B. Bellinder and S. Reiners. Commercial vegetable production from variety selection to postharvest. Topics include: crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production.

HORT 455(4550) Mineral Nutrition of Crops and Landscape Plants (also CSS 452/4550)
Spring. 3-5 credits. Prerequisite: CSS 260 and BIOL 242, or equivalent. Offered even-numbered years. H. C. Wien and staff. Modular course on principles of plant mineral nutrition and nutrient management. A mandatory module on principles is followed by others on agronomic crops, vegetables, turf, flowers, and fruit crops. Each module carries 1 credit; a minimum of 3 credits must be taken in one semester. By the end of the course, students understand the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 460(4600) Crop Improvement
Fall. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even-numbered years. D. W. Wolfe. Course utilizes the basic principles of plant population biology, environmental physiology, and ecology to evaluate the management, productivity, and environmental impact of various cropping systems. Emphasis is on agricultural systems, but the role of plant-plant interactions and biodiversity in succession and productivity of natural ecosystems will also be discussed.

HORT 462(4620) Physiology of Vegetables and Flowers
Spring. 4 credits. Prerequisite: BIOL 242 or equivalent. Offered odd-numbered years; next offered 2008-2009. H. C. Wien. Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants.

HORT 466(4660) Soil Ecology (also CSS 466/4660)
Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 260 or permission of instructor. J. E. Thies. For description, see CSS 466.
HORT 480(4800) Plantations Lecture Series  
Fall, 12 weeks, 6 lec. 1 credit. S-U grades only. Meets alternate W evenings. D. A. Rakow.
Covers a range of subjects related to the plant and natural sciences, and human-cultural themes. On non-lecture Wednesdays, the class meets to discuss content from the previous week. Students are required to write a reaction paper for each lecture.

HORT 485(4850) Public Garden Management  
Spring, 3 credits. Prerequisites: HORT 300; HORT 491 or 492. Cost of two-and-a-half-day field trip to botanical gardens and arboretum: approx. $85. Offered even-numbered years. D. A. Rakow and S. M. Skelly.
Explores the history of public gardens, types of contemporary public gardens, and the operation of public gardens including botanical gardens and arboretum. Includes separate units on: administration and business management of gardens, collections curation, collections design, educational programs, research, and management of landscapes and natural areas.

HORT 490(4900) Golf and Sports Turf Management II  
Spring, 2 credits. Prerequisite: HORT 330. P. S. Rossi.
Designed for students familiar with turfgrass science and a strong interest in the design, construction, and maintenance of golf courses and sports fields. This course focuses on current and emerging issues concerning the scientific, economic and environmental aspects of golf courses and sports fields.

HORT 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 491[4910])  
Fall, 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructor. N. L. Bassuk and P. J. Trowbridge.
Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details are produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 492[4920])  
Spring, 4 credits. Limited to 48 students. Prerequisite: passing grade in HORT/LA 491; horticulture or landscape architecture majors or permission of instructors. N. L. Bassuk and P. J. Trowbridge.
Second half of course focusing on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites, and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

HORT 494(4940) Special Topics in Horticulture  
Fall or spring, 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

HORT 495(4950) Undergraduate Seminar—Current Topics in Horticulture  
Fall and spring. 1 credit. May be taken four times for 1 credit per semester. Graduate students should enroll in HORT 500. S-U grades only. L. Cheng.
Undergraduate participation in weekly departmental seminar series.

HORT 496(4960) Internship in Horticulture  
Fall or spring. Variable credit. Prerequisite: permission of student's advisor in advance of participation in internship programs. S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. Staff.

HORT 497(4970) Individual Study in Horticulture  
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Individual study in horticultural sciences under the direction of one or more faculty members. Staff.
Cooperative Extension county offices throughout the state is required.

HORT 615(6150) Quantitative Methods in Horticultural Research
Spring, weeks 1–7. 2 credits. Prerequisite: BTRY 601, 602, or permission of instructor. S-U grades only. Offered even-numbered years. D. W. Wolfe.

Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature. Explores other quantitative methods. Topics include approaches to controlling and analysis of variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 617(6170) Advanced Analytical Methods for Plant Systems
Spring, 2 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Offered odd-numbered years; next offered 2008–2009. L. Cheng.

Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills.

HORT 618(6180) Breeding for Pest Resistance (also PL BR 618(6180))
Fall. 2 credits. Prerequisites: BIOGD 281, and PL BR 403 or equivalents. Highly recommended: introductory plant pathology and/or entomology course.

For description, see PL BR 618.

HORT 625(6250) Advanced Postharvest Biology

Sec 01 Advanced Postharvest Physiology. 1 credit. (12 lec). S. Gan.

Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts.

Sec 02 Plant Senescence (also BIOPL 483.06). 1 credit. (12 lec). S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research.

HORT 635(6350) Tools for Thought
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. Next offered 2008–2009. T. H. Whitlow.

Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 640(6400) New Directions in Public Horticulture

Designed to introduce students to a range of current issues facing public gardens through a set of required readings. Discussions based on readings and personal experiences.

HORT 645(6450) Advanced Viticultural Topics
Spring. 2 credits. Prerequisite: HORT 443 or equivalent. Letter grades only.

In-depth lecture/discussion of complex topics of viticulture that have important impacts on fruit composition and wine quality. Topics include crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

HORT 694(6940) Special Topics in Horticulture
Fall or spring. 4 credits max. S-U or letter grades.

The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts.

Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 700(7000) Graduate Teaching Experience
Fall or spring. Variable credit. Prerequisite: permission of instructor; graduate standing. Undergraduates should enroll in HORT 498. S-U or letter grades.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800(8000) Thesis Research, Master of Science
Fall or spring. Variable credit. S-U grades only.

HORT 900(9000) Thesis Research, Doctor of Philosophy
Fall or spring. Variable credit. S-U grades only.

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

IARD 300(3000) Perspectives in International Agriculture and Rural Development
Fall. 2 credits. R. Nelson, R. Herdt, and L. Harrington.

Forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

IARD 402(4020) Agriculture in Developing Nations I (also FD SC 402(4020))
Fall. 2 credits. T. W. Tucker and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India and Thailand sec).

Students interested in international agriculture and rural development and to demonstrate how programs in development are being addressed in the Gulf Region of Mexico, India, and Thailand.

The emphasis is on regional contexts for sustainable agricultural development and focuses on development challenges in Latin America and Asia through cases in developing countries.

IARD 403(4030) Traditional Agriculture in Developing Countries (also CSS 403(4030))
Fall. 1 credit.

S-U grades only. P. Hobbs.

Today, perhaps more than half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices that allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries.

This course examines traditional systems from several disciplinary points of view.

IARD 404(4040) Crop Evolution, Domestication, and Diversity (also PL BR/BIOL 404(4040))
Spring. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor.

S-U or letter grades. S. Kresovich.

Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use today. The lectures/discussions in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species.

IARD 405(4050) Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PL BR 405(4050))
Spring. 2 credits. Prerequisite: senior or graduate standing. S-U or letter grades.

A. F. Krattiger and S. Kowalski.

For description, see PL BR 612.

IARD 414(4140) Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 414(4140))
Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course or permission of instructor.

P. Hobbs.

Characterization and discussion of traditional shifting cultivation, lowland rice-based
systems, upland cereal-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the effect of tropical cropping systems on the environment.

IARD 480(4800) Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/FD SC 480(4800))
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. Letter grades. J. Lassoie and D. Miller.
For description, see NTRES 480.

IARD 494(4940) Special Topics in International Agriculture (also IARD 684(6840))
Fall, spring, summer. 1–3 credits. S-U or letter grades. Staff.
The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 496(4960) International Internship
Fall, spring. 1–6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S-U or letter grades. Staff.
International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting.

IARD 497(4970) Independent Study
IARD Fall and spring. 1–3 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff.
Provides students with the opportunity to observe agricultural development in tropical Mexico or Asia and to promote interdisciplinary exchange among faculty, staff, and their Mexican, Indian, and Thai counterparts. A two-week field-study trip in January (three weeks for the India/Thailand section) is followed by discussions, written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions of the Gulf Region of Mexico, India, and Thailand.

IARD 602(6020) Agriculture in Developing Nations II (also FD SC 602(6020))
Spring, field trips to Gulf Region of Mexico (sec 1) and India/Thailand (sec 2) during Jan. intersession. 3 credits. Prerequisites: IARD 402 and (or) permission of instructor. Cost of field-study trip (airfare, local transportation, and lodging; some merit and need-based financial aid may be available): approx. $2,800 for Mexico section and $4,600 for India/Thailand section. R. W. Tucker and C. F. Nicholson (Mexico); K. V. Raman and W. R. Coffman (India).
Designed to provide students with an opportunity to observe agricultural development in tropical Mexico or Asia and to promote interdisciplinary exchange among faculty, staff, and their Mexican, Indian, and Thai counterparts. A two-week field-study trip in January (three weeks for the India/Thailand section) is followed by discussions, written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions of the Gulf Region of Mexico, India, and Thailand.

IARD 603(6030) Planning and Management of Agriculture and Rural Development (also GOVT 692(6927))
Spring. 4 credits. N. T. Uphoff and T. W. Tucker.
Reviews experience and approaches in agricultural and rural development in a range of developing countries, with particular attention to contemporary issues of participatory, institutional, capacity-building, civil society, social capital, and empowerment. Case studies from Africa and Latin America.

IARD 694(6940) Graduate Special Topics in IARD
Fall or spring. 1 credit. S-U grades only. L. Fisher, L. Buck, and S. DeGloria.
A variety of special presentations on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 695(6950) International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. S-U grades only. N. Uphoff.
For M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 699(6990) International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S-U grades only. S. C. Kyle.
Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 783(7830) Farmer-Centered Research and Extension (also EDUC 783(7830))
Fall. 3 credits. S-U or letter grades. M. Kroma and T. Tucker.
Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. Major contribution of farmer-centered research and extension is its potential to legitimate people's knowledge by enhancing their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.
Related Courses in Other Departments

In addition to international agriculture and rural development (IARD) courses, many other courses have an international focus. The following are suggested relevant courses:

**Applied Economics and Management**
- International Trade and Finance (AEM 230)
- International Trade Policy (AEM 430)
- Food Marketing Colloquium (AEM 446/447)
- Global Marketing Strategy (AEM 449)
- Seminar on International Trade Policy: Agriculture, Resources, and Development (AEM 730)

**Agriculture and Life Sciences**
- Global Seminar (NTRES 480/FD SC 480/ IARD 480)

**Animal Science**
- Livestock in Tropical Farming Systems (AN SC 400)
- Tropical Forages (AN SC 403)

**Asian Studies**
- Southeast Asia Seminar: Country Seminar (ASIAN 601)

**Biological and Environmental Sciences**
- The Healing Forest (BIOL 348)
- Global Seminar (NTRES/FD SC 480/ IARD 480)

**City and Regional Planning**
- Seminar in International Planning (CRP 671)
- Seminar in Project Planning in Developing Countries (CRP 675)

**Crop and Soil Science**
- Properties and Appraisal of Soils of the Tropics (CS 471)
- Tropical Cropping Systems (CSS/IARD 314)

**Development Sociology**
- Comparative Issues in Social Stratification (D SOC 370)
- Education, Inequality, and Development (D SOC 305)
- International Development (D SOC 205)
- Population Dynamics (D SOC 201)
- Social Indicators, Data Management, and Analysis (D SOC 213)
- Sociological Theories of Development (D SOC 606)

**Education**
- Farmer-Centered Research and Extension (EDUC/IARD 783)

**Natural Resources**
- Global Ecology and Management (NTRES 322)
- Environmental Governance (NTRES 331)
- International Conservation: Communities and the Management of the World's Natural Resources (NTRES 434)
- Seminar in Ecoregion (NTRES 694)

**Nutritional Science**
- Nutritional Problems in Developing Nations (NS 306)
- Integrating Food Systems and Human Needs (NS 380)
- National and International Food Economics (NS 457)
- International Nutrition Problems, Policy, and Programs (NS 680)

**Plant Breeding**
- Plants, Genes, and Global Food Production (PL BR 201)
- Crop Evolution, Domestication, and Diversity (PL BR 404)
- *includes overseas travel

**INFORMATION SCIENCE**

**INFO 204(2040)** Networks (also CS 285/2850, ECON 204/2040, SOC 204/2120) (SBA)
- Spring, 4 credits.
- For description, see ECON 204.

**INFO 214(2140)** Cognitive Psychology (also COGST/PSYCH 214/2140) (KCM)
- Fall, 4 credits. Limited to 175 students.
- Prerequisite: sophomore standing.
- Graduate students: see INFO 614, PSYCH 614, or COGST 501.
- For description, see PSYCH 214.

**INFO 230(2300)** Intermediate Design and Programming for the Web (also CS 230/2300)
- Spring, 3 credits. Prerequisite: CS/INFO 130 or equivalent.
- For description, see INFO 230 in CIS section.

**INFO 245(2450)** Psychology of Social Computing (also COMM 245/2450) (SBA)
- Fall, 3 credits.
- For description, see COMM 245.

**INFO 292(2921)** Inventing an Information Society (also AM ST 292/2980, ECE/ENGRG 298/2980, HIST 292/2920, S&T 292/2921)

**INFO 295(2950)** Mathematical Methods for Information Science
- Fall, 4 credits. Corequisite: MATH 231 or equivalent.
- For description, see INFO 295 in CIS section.

**INFO 320(3200)** New Media and Society (also COMM 320/3200) (CA)
- Spring, 3 credits.
- For description, see COMM 320.

**INFO 330(3300)** Data-Driven Web Applications (also CS 330/3300)
- Fall, 3 credits. Prerequisites: CS/ENGRD 211.
- For description, see INFO 330 in CIS section.

**INFO 345(3450)** Human-Computer Interaction Design (also COMM 345/3450) (SBA)
- Spring, 3 credits.
- For description, see COMM 345.

**INFO 349(3491)** Media Technologies (also COMM 349/3490, S&T 349/3491) (CA)
- Spring, 3 credits.
- For description, seeCOMM 349.

**INFO 355(3551)** Computers: From the 17th Century to the Dot.com Boom (also S&T 355/3551)
- Fall, 4 credits.
- For description, see S&T 355.

**INFO 356(3561)** Computing Cultures (also S&T 356/3561) (CA)

**INFO 366(3660)** History and Theory of Digital Art (also ART H 366/3660) (CA)
- Fall, 4 credits.
- For description, see ART H 366.

**INFO 372(3700)** Explorations in Artificial Intelligence (also CS 372/3700)
- Spring, 3 credits. Prerequisites: MATH 111 or equivalent, information science approved statistics course, and CS/ENGRD 211 or permission of instructor.
- For description, see INFO 372 in CIS section.

**INFO 387(3871)** The Automatic Lifestyle: Consumer Culture and Technology (also S&T 387/3871)
- For description, see S&T 387.
INFO 415(4150) Environmental Interventions (also 5 HUM 415)  
Fall. 4 credits.  
For description, see 5 HUM 415.

INFO 429(4290) - Copyright in the Digital Age (also COMM 429[4290])  
(CA)  
Fall. 3 credits.  
For description, see COMM 429.

INFO 430(4300) - Information Retrieval  
(also CS 430[4330])  
Fall. 3 credits. Prerequisite: CS/ENGRD 211 or equivalent.  
For description, see INFO 430 in CIS section.

INFO 431(4302) - Web Information Systems  
(also CS 431[4310])  
Spring. 3 credits. Prerequisites: CS/ENGRD 211 and some familiarity with web site technology.  
For description, see INFO 431 in CIS section.

INFO 435(4350) - Seminar on Applications of Information Science  
(also INFO 635[6350])  
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS/ENGRD 211 or equivalent; experience in using information systems.  
For description, see INFO 435 in CIS section.

INFO 440(4400) - Advanced Human-Computer Interaction Design (also COMM 440[4400])  
(SBA)  
Fall. 3 credits. Prerequisite: COMM/INFO 245.  
For description, see COMM 440.

INFO 444(4414) - Responsive Environments (also ART H 444[4414])  
(CA)  
Spring. 4 credits. For offering information, see ART H 444.  
For description, see ART H 444.

INFO 445(4450) - Seminar in Computer-Mediated Communication (also COMM 445[4450])  
(SBA)  
Fall. 3 credits. Prerequisite: COMM/INFO 245.  
For description, see COMM 445.

INFO 447(4470) - Social and Economic Data (also ILRLE 447[4470])  
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.  
For description, see INFO 447 in CIS section.

INFO 450(4500) - Language and Technology (also COMM 450[4500])  
(SBA)  
Spring. 3 credits. Prerequisites: COMM 240 or 245 or permission of instructor.  
For description, see COMM 450.

INFO 490(4900) - Independent Reading and Research  
Fall, spring. 1-4 credits.  
Independent reading and research for undergraduates.

INFO 491(4910) - Teaching in Information Sciences, Systems, and Technology  
Fall. Spring. Variable credit.  
Involves working as a TA in a course in the information science, systems, and technology major.

INFO 515(5150) - Culture, Law, and Politics of the Internet  
Fall. 4 credits.  
For description, see INFO 515 in CIS section.

INFO 530(5300) - The Architecture of Large-Scale Information Systems  
(also CS 530[5300])  
Spring. 4 credits. Prerequisite: CS/INFO 350 or CS 432.  
For description, see INFO 530 in CIS section.

INFO 614(6140) - Cognitive Psychology  
(also COGST 614, PSYCH 614[6140])  
Fall. 4 credits.  
For description, see PSYCH 614.

INFO 630(6300) - Advanced Language Technologies (also CS 674[6740])  
Fall or spring. In 2007–2008, offered in fall. 3 credits. Prerequisite: permission of instructor. Neither INFO/CS 430 nor CS 474 are prerequisites.  
For description, see CS 674 in CIS section.

INFO 634(6341) - Information Technology in Sociocultural Context (also S&TS 634[6341])  
INFO 635(6350) - Seminar on Applications of Information Science (also INFO 435[4350])  
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS/ENGRD 211 or equivalent; experience in using information systems. Undergraduates and master's students should enroll in INFO 435; Ph.D. students should enroll in INFO 635.  
For description, see INFO 635 in CIS section.

INFO 640(6400) - Human-Computer Interaction Design (also COMM 640[6400])  
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.  
For description, see COMM 640.

INFO 645(6450) - Seminar in Computer-Mediated Communication (also COMM 645[6450])  
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2009–2010.  
For description, see COMM 645.

INFO 648(6484) - Speech Synthesis by Rule (also LING 648[6648])  
Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor.  
For description, see LING 648.

INFO 650(6500) - Language and Technology (also COMM 650[6500])  
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.  
For description, see COMM 650.

INFO 658(6850) - The Structure of Information Networks (also CS 685[6850])  
Fall. 4 credits. Prerequisite: CS 482.  
For description, see INFO 685 in CIS section.

INFO 709(7090) - IS Colloquium  
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 747(7400) - Social and Economic Data (GR-RDC) (also ILRLE 740[7400])  
Spring. 4 credits. Limited to Ph.D. and research master's students.  
For description, see INFO 747 in CIS section.

INFO 790(7900) - Independent Research  
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.  
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 990(9900) - Thesis Research  
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.  
Thesis research for post-A exam Ph.D. students.

LANDSCAPE ARCHITECTURE  

LA 141[1410] - Grounding in Landscape Architecture  
Fall. 4 credits. Limited to 15 students.  
Letter grades only. Fee for required drafting equipment plus materials for projects: approx. $250.  
Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drawing, and model making to understand design principles of the changing landscape.

LA 142(1420) - Grounding in Landscape Architecture  
Spring. 4 credits. Limited to approx. 20 students. Prerequisite: freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. $250.  
Applies fundamentals of landscape design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 201(2010) - Medium of the Landscape  
Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. $200; field trip: approx. $250.  
Studio course emphasizing the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 202[2020] - Medium of the Landscape  
Spring. 5 credits. Prerequisite: LA 201 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250.  
Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.
LA 215(2150) Writing Seminar: Engaging Places
Fall. 4 credits. Lect. A. Hammer.
Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture's biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing: how do we represent the complexity of a place and our relation to it?

LA 252(2520) Daily Life and Cultural Landscapes (CA)
Fall. 3 credits. J. Zorn.
Surveys the common and not-so-common daily activities of the world of ancient Israel and its neighbors in Mesopotamia, Egypt, and Canaan. Many courses cover aspects of ancient political history or ancient literature, but these often focus on the activities of members of social elites, at the expense of the activities of more average citizens. The focus of this course on ancient technologies provides a broader spectrum, spanning all social classes. Material to be covered includes topics such as food production and processing, pottery production, metallurgy, glass making, cloth production and personal adornment, implements of war, medicine, leisure time (games and music), and others.

LA 261(2610) Fieldwork in Urban Archaeology (also CRP/ARKEO 261[2610]) (CA) (LA)
Fall. 4 credits. Three 8-hr. Sat. field labs required; students choose three Sat. from seven offered. S. Baughs.
Urban archaeologists study American Indian, colonial, and 19th-century sites that now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620])
Spring. 3 credits. Recommended: LA 261 or ARKEO 261 or permission of instructor. S. Baughs.
Various American Indian civilizations and European cultures have altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282(2820) Photography and the American Landscape (CA) (LA)
Fall. 3 credits. A. A. Hammer.
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. Engages participants in the art and science of design. The studio focuses on site-scale projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 315(3150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. M. Adelman.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316(3160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor. M. Adelman.
Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318(3180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.
Emphasizes detail design and use of landscape materials in project implementation. Explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, studio problems, and development of drawings leading to construction documentation for project-scale site design.

LA 360(3600) Pro-Industrial Cities and Towns of North America (also ARKEO 360[3600], CRP 360[3600], CRP 360(E86)[3600(6660)], LA 666[6660]) (CA) (LA)
Spring. 3 credits. S. Baughs.

LA 401(4010) Urban Design Studio
Fall. 5 credits.
Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Uses slides and videos to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.

LA 282(2820) Photography and the American Landscape (CA) (LA)
Fall. 3 credits. A. A. Hammer.
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. Engages participants in the art and science of design. The studio focuses on site-scale projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 315(3150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. M. Adelman.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316(3160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor. M. Adelman.
Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318(3180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.
Emphasizes detail design and use of landscape materials in project implementation. Explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, studio problems, and development of drawings leading to construction documentation for project-scale site design.

LA 360(3600) Pro-Industrial Cities and Towns of North America (also ARKEO 360[3600], CRP 360[3600], CRP 360(E86)[3600(6660)], LA 666[6660]) (CA) (LA)
Spring. 3 credits. S. Baughs.

LA 401(4010) Urban Design Studio
Fall. 5 credits.
Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Uses slides and videos to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.

LA 282(2820) Photography and the American Landscape (CA) (LA)
Fall. 3 credits. A. A. Hammer.
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. Engages participants in the art and science of design. The studio focuses on site-scale projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 315(3150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. M. Adelman.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316(3160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 315 or permission of instructor. M. Adelman.
Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 318(3180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.
Emphasizes detail design and use of landscape materials in project implementation. Explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, studio problems, and development of drawings leading to construction documentation for project-scale site design.

LA 360(3600) Pro-Industrial Cities and Towns of North America (also ARKEO 360[3600], CRP 360[3600], CRP 360(E86)[3600(6660)], LA 666[6660]) (CA) (LA)
Spring. 3 credits. S. Baughs.

LA 401(4010) Urban Design Studio
Fall. 5 credits.
Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madaba map) that pertain to Jerusalem. Uses slides and videos to illustrate the natural features, human-built monuments, and artifacts that flesh out the textual material, providing a fuller image of the world's most prominent spiritual and secular capital.
LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 481(4810))
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required.
Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk.
Focused on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details are produced to implement these practices.

LA 492(4920) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 482(4820))
Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 491. Preregistered. Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk.
Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites; select appropriate trees, shrubs, vines and ground covers for a given site. Designs for specific sites are followed by written specifications, and graphic details are produced to implement these proposals. Students are engaged in a hands-on manner in soil remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. LA 491 and 492 constitute an integrated course.

LA 494(4940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits, may be repeated for credit. S/U or letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 495(4950) Green Cities: The Future of Urban Ecology (also CRP 384(384)/3840(3840))
Fall. 4 credits. R. Young. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of "green cities" in terms of transportation, renewable energy, solid waste management, recycling, land use, and the built environment.

LA 497(4970) Individual Study in Landscape Architecture
Fall or spring. 1–5 credits, may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S/U or letter grades.
Work on special topics by individuals or small groups.

LA 498(4980) Undergraduate Teaching
Fall or spring. 1–2 credits. Prerequisite: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 499(4990) Undergraduate Research
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding undergraduates to carry out independent research in landscape architecture under the supervision of faculty. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 501(5010) Composition and Theory
Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Basic principles of conventional and unconventional processes that form "places" in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 502(5020) Composition and Theory
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505(5050) Landscape Representation I
Fall. 3 credits. Corequisite: LA 501 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modeling, composite drawings, and visual books.

LA 506(5060) Graphic Communication II
Spring. 3 credits. Prerequisite: LA 505. Corequisite: LA 502 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modeling, composite drawings, and visual books.

LA 524(5240) History of European Landscape Architecture*
Fall. 3 credits. L. Mirin.
*Offered through College of Architecture, Art, and Planning.

LA 525(5250) History of American Landscape Architecture*
Spring. 3 credits. L. Mirin.
*Offered through College of Architecture, Art, and Planning.

LA 545(5450) The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor. K. Gleason. Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient forums and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.

LA 560(5650) Archaeology in Preservation Planning and Site Design (also CRP 569(5690))
Spring. 3 credits. Offered alternate years; next offered 2008–2009. S. Baugher.

LA 582(5820) Photography and the American Landscape
Fall. 3 credits. A. Hammer. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditional surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 590(5900) Theory Seminar
Fall. 3 credits. Prerequisites: senior or graduate standing. A. K. Krall. This seminar is organized around foundational texts and theoretical debate germane to landscape architecture. Topics may include, but not be limited to, environmental perception, issues of language and representation, pertinent debate in cultural geography, developments in ecological design, landscape urbanism, infrastructure, etc. Weekly readings, discussion, short papers.

LA 584(5840) Graduate Teaching
Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour).
The integration of site history, ecology, and landscape, requiring students to also register for restoration, sustainable design, and landscape design. Explores theories of landscape design and planning are critically important factors and their relationship to contemporary construction technology. Focuses on the expression of design solutions formulated in final year of study. Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 615(6150) Site Engineering I
Spring. 3 credits. Prerequisite: permission of instructor. M. Adleman. Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616(6160) Site Engineering II
Fall. 2 credits. Prerequisite: LA 615 or permission of instructor. M. Adleman. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 618(6180) Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge. Emphasizes detail design and use of landscape materials in project implementation. Explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. Includes lectures, short studio problems, and the development of drawings leading to construction documents for one or more comprehensive projects.

LA 668(6680) Pre-Industrial Cities and Towns of North America (also CRP 666(6660)(D)
Spring. 3 credits.

LA 680(6800) Graduate Seminar in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. Prerequisite: graduate standing and letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Includes seminar topics and group study not considered in other courses.

LA 694(6940) Special Topics in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. S-U or letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555(5550))
Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. $250; required field trip: approx. $250. Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Investigates issues of urbanism and applies them to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Introduces three-dimensional computer modeling and digital design media as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702(7020) Advanced Design Studio
Spring. 5 credits. Capstone studio providing the opportunity to explore issues in contemporary landscape architecture and to integrate related fields. Topics include: the influences of culture, history, and criticism, as well as interpretations of engineering and representation.

LA 800(8000) Master's Thesis in Landscape Architecture
Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

NATURAL RESOURCES 111

NTRES 101(1010) Intro to the Science and Management of Environmental and Natural Resources (also SNES 101(1010))
Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environmental Systems, or other "environmental cluster" areas in CALS. J. Lassoie and E. Madsen. This course provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth's ecological and environmental systems. Case studies, guided readings, multi-media presentations, discussions, and field and laboratory exercises are used to introduce students to the interdisciplinary framework of understanding the complexities of such systems within the text of modern society. Active student participation in all phases of the course is expected.

NTRES 102(1020) Science Fiction and Environment
Summer. 3 credits. S-U or letter grades. R. J. McNeil. This course is intended to be primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in, environmental studies. Science fiction short stories and two books will be used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles which may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

NTRES 201(2010) Environmental Conservation
Spring. 3 credits. T. Fahey. Our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

NTRES 210(2100) Introductory Field Biology
Fall. 4 credits. Limited to 60 students. Prerequisite: sophomore or junior standing with advisor in natural resources or permission of instructor, BIO G 101 and 102 or equivalent. Cost of two required overnight weekend field trips: approx. $12. T. A. Gavin and T. Smith. Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of these events.
NTRES 323(3230) Nature and Culture
(HA) (CA)
Spring. 3 credits. S-U or letter grades.
J. Tantillo.
We will examine the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, will be introduced.

NTRES 303(3030) Introduction to Biogeochemistry (also EAS 303(3030))
Fall. 4 credits. Prerequisite: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry. For description, see EAS 303.

NTRES 310(3100) Applied Population Ecology
Fall. 3 credits. Prerequisite: completion of calculus (MATH 106, 111, or equivalent). Highly recommended background in biology or ecology. Letter grades only. E. Cooch.
In-depth analysis of the ecological factors influencing the fluctuation and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer exercises will be used to reinforce concepts presented in lecture.

NTRES 311(3110) Fish Ecology, Conservation, and Management
Spring. 3 credits. Prerequisites: none. Recommended: NTRES 210, BIOEE 261, or equivalent. E. Mills, L. Rudstam, and R. Jackson.
Covers basic principles of fish ecology at the individual, population, and community level, particularly as they relate to interactions between fish and their environment and the implications of human activities to these relationships. Emphasizes the application of ecological principles to the conservation and management of fisheries resources and aquatic habitats. Extensive use of current literature and case studies will provide context for principles covered.

NTRES 312(3121) Fish Ecology Laboratory
Spring, four field trips TBA. 1 credit. Prerequisite: NTRES 311. E. Mills, L. Rudstam, and R. Jackson.
Four field trips are planned to provide hands-on experiences in fish ecology and management. They include a one-weekend Great Lakes experience aboard the USGS Lake of the Woods vessel during the salmon run, a one-weekend Lake Erie experience aboard the USGS Lake Michigan vessel during the walleye run, and a one-weekend Lake Ontario experience aboard the USGS Lake Ontario vessel during the shad run. Activities include demonstrations of various fish sampling gears and sample analysis techniques. Each student is required to keep a written journal describing activities and concepts learned from each field trip that will be turned in at the end of the semester.

NTRES 313(3130) Biological Statistics I (also BTRY 301(3010))
Fall. 4 credits. Prerequisite: one semester of calculus. P. Sullivan.
Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, confidence intervals, Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 314(3140) Conservation of Birds
Summer. 2 credits. Prerequisite: NTRES 210 or permission of instructor. C. R. Smith.
A course for majors and non-majors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural practices, habitat management, tropical deforestation, and community and landscape-level management. Global climate change, and the economic importance of bird study as an outdoor recreational activity.

NTRES 315(3141) Conservation of Birds Laboratory
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying the songbird population.

NTRES 322(3220) Global Ecology and Management
Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.
The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climate change.

NTRES 324(3240) Ecological Management of Water Resources
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. J. Schram.
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 325(3250) Forest Management and Maple Syrup Production
Spring. 3 credits. Letter grades only. Offered alternate even-numbered years. P. J. Smallidge.
Practical, field-oriented course emphasizing principles and practices of ownership and multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.

NTRES 326(3260) Applied Conservation Ecology
Spring. 3 credits. Prerequisite: BIOEE 261 or permission of instructor. S. Morreale.
Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation biology and evolutionary theory. Tools include field sampling techniques, resource needs, habitat mapping, spatial referencing, GIS, measures of biodiversity, and automated techniques for studying soil, stream, and forest biota and related physical factors.

NTRES 330(3300) Natural Resources Planning and Management
Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber.
Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 331(3310) Environmental Governance (also S&TS/B&SOC/D SOC 331(3311) (SBA))
Spring. 3 credits. S. Wolf.
Considers the question of environmental governance, defined as the assemblage of social institutions that regulate natural resource use and shape environmental outcomes. Participants explore the roles of public policy, market exchange, and collective action in resource (mis)management. Introduces theoretical concepts from a variety of social science perspectives to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) highlight scope for institutional innovation. Course details at www.dnr.cornell.edu/saw44/ntres331.html.

NTRES 332(3320) Introduction to Ethics and Environment (KCM)
Fall. 4 credits. J. Tantillo.
Introduction to ethics, aesthetics, and epistemology as related to the environment. Asks the question "How should I live?" and explores the implications of different answers to that question for our treatment of nature.
Also examines the various approaches to ethics theory, the relations between art, literature, religion, and mortality, the
objective nature of value judgments; and the subjective nature of nature.

**NTRES 410(4100) Conservation Biology: Concepts and Techniques**
Fall. 4 credits. Limited to 30 students. Prerequisite: juniors, seniors, or graduate students; NTRES 310 or equivalent. Recommended: NTRES 210, E. G. Cook and T. A. Gavin.

Thorough analysis the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasizes analysis of variation and maintenance of biological diversity, and focuses on principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.

**[NTRES 411(4110) Quantitative Ecology and Management of Fisheries Resources](#)**
Spring. 4 credits. Prerequisites: NTRES 313 recommended or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009. J. P. Sullivan.

Examines the dynamics of marine and freshwater fisheries resources with a view toward analysis, and decision making within a quantitative framework. Growing pressure on fisheries' resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries' issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

**NTRES 412(4120) Wildlife Population Analysis: Techniques and Models**
Spring. 3 credits; two-week intensive course (9 a.m. to p.m. labs) in Jan. with follow-up meetings during spring semester. Prerequisites: NTRES 310 (or equivalent or permission of instructor), college-level math or statistics course. Lect./Lab. E. Cook.

This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics. The course will focus on exploration of a selection of the tools needed for modern wildlife conservation and management, including (particularly) analysis of mark-recapture data, population viability analysis, computer analysis, decision theory, and matrix modeling.

**NTRES 413(4130) Biological Statistics II**
(also BTRY 302(3020))
Spring. 4 credits. Prerequisite: NTRES 313 or BTRY 301. Staff.

Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

**NTRES 420(4200) Forest Ecology**
Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey.

Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include forest ecology, biogeography of forests, ecology of forest trees; disturbance, succession and community analysis, primary productivity; and nutrient cycling.

**NTRES 421(4210) Forest Ecology Laboratory**
Fall. 1 credit. Corequisite: NTRES 420. \(\text{Offered alternate years} \) S-T or letter grades. T. J. Fahey.

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

**NTRES 422(4220) Wetland Ecology and Management—Lecture**
Fall. 3 credits. Prerequisite: BIOEE 261. L. M. Beers.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Considers current regulations, protection programs, and management strategies.

**NTRES 422(4221) Wetland Ecology and Management—Laboratory**
Fall. 1 credit. Optional. Corequisite: NTRES 422. One weekend field trip required. B. L. Bedford.

Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling, trends vegetation, soils, and water; and methods of wetland identification and delineation.

**[NTRES 424(4240) Landscape Impact Analysis](#)**
Spring. 3 credits. Prerequisites: junior standing; one introductory and one advanced course in ecology or equivalents. Offered alternate years; next offered 2008-2009. B. L. Bedford.

Presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. Explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

**[NTRES 426(4260) Practicum in Forest Farming as an Agroforestry System](also HORT/CSS 426[4260])**
Fall. 2 credits. Offered alternate years; next offered 2008-2009. K. W. Mudge, J. F. Burslem and P. Hobbs.

Students actively take part in the development and management of a 70-year-old nut grove originally planted at Cornell in the 1930s. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include all or most of the following: temperate-nut harvest and variety evaluation, mushroom culture, small-fruited and fruit-tree culture, medicinal-herb culture, site evaluation and planning, and field trips to other managed sites. Outdoor activities are integrated with selected readings via an online discussion board.

**NTRES 428(4280) Principles and Practices of Applied Wildlife Science**
Spring. 3 credits. Prerequisites: NTRES 310 or equivalent or permission of instructor. S-U or letter grades. Offered alternate even-numbered years. M. E. Richmond, R. A. Malecki, and P. D. Curtis.

The course covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science will be discussed. The application of basic science and the scientific method will be integrated into community agency-based problem-solving. Issues and approaches to management of terrestrial and wetland wildlife will be discussed with emphasis on technical, logistical, analytical, and communication skills.

**NTRES 430(4300) Environmental and Natural Resources Policy Processes**
Spring. 3 credits. Prerequisites: junior standing; special application process. Lect., Wash., D.C., during Jan. 11-day winter session; three two-hour orientation sessions in fall semester and four two-hour sessions in Feb. and March. Fee approx. $450. Applications available by Oct 11. Applications available by contacting mapl00@cornell.edu or at www.dnr.cornell.edu/teaching/ugrad/courses/. B. A. Knuth.

Intensive field-based exploration of the environmental policy process and its conceptual framework. Defining environmental problems; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; discussion with about 20 prominent Washington policymakers who appear as guest panelists. Self-selected research topic requires conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

**NTRES 431(4310) Environmental Strategies (also D SOC 432(4320)) (SBA)**
Spring. 3 credits. S. Wolf.

Research-oriented seminar focused on conservation of natural resources in the contemporary political and institutional environment. We study opportunities to mobilize market mechanisms and competitive strategies of firms to harmonize economic and environmental demands on ecological systems. Through production of a portfolio of analyses of real-world integrated environmental management schemes, students will come to understand the mechanics of this general class of environmental policy tools and develop a critique as to why the market does not represent a comprehensive approach to sustainability. Course details at www.dnr.cornell.edu/saw/44/ntres/431.html.
Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

[NTRES 611(6110) Quantitative Ecology and Management of Fisheries Resources]
Spring and spring. Prerequisite: NTRES 313 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008–2009. P. J. Sullivan. Taught in conjunction with NTRES 411 (see description above). Students taking the course for graduate credit are asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

Fall. 3 credits, two-week intensive course in Jan. Prerequisites: NTRES 310 (or equivalent or permission of instructor), college-level math and statistics course. E. Cooch. For description, see NTRES 412.

[NTRES 614(6140) Fish and Wildlife Ecology Seminar]
Fall and spring. 1 credit. Prerequisite: permission of instructor. Check with department for availability. Staff. Discussion of individual research, current problems, and current literature in fish and wildlife ecology. Offering varies by semester and subject to availability.

[NTRES 616(6160) Forest Science and Management Seminar]
Fall. 1 credit. Prerequisite: upper-level undergraduate or graduate standing. J. B. Yavitt. Reviews current literature, student research, and selected topics of interest. Topics include biogeography, ecology, and human use of forests located in boreal, temperate, and tropical environments.

[NTRES 620(6200) Principles and Practices of Applied Wildlife Science]
Spring. 3 credits. Prerequisites: NTRES 310 or equivalent; permission of instructor. S-U or letter grades. Offered alternate even-numbered years. M. E. Richmond, R. A. Malecki, and P. D. Curtis. For description, see NTRES 428.

[NTRES 630(6300) Writing for the Biological Sciences]
Spring. 2 credits. Prerequisites: graduate students in writing phase of their thesis or dissertation or involved in preparation of manuscripts for submission to scientific journals. S-U or letter grades. Offered alternate odd-numbered years. R. A. Malecki and M. E. Richmond. This course is designed for graduate students interested in learning to convey scientific information in a clear and concise manner. Attention is given to format requirements for theses and manuscripts, submission and editorial policies of scientific journals, construction of sentences and paragraphs, grammar, punctuation, word usage, development of figures and tables, and use of literature. Come prepared to write, rewrite, and edit.

[NTRES 631(6310) Environmental Governance (also D SOC 632(6320))]
Spring. 4 credits. S. Wolf. For description, see NTRES 331. Students taking the course for graduate credit are required to read supplemental materials, undertake more complex research assignments, and participate in seminar discussion section.

[NTRES 634(6340) International Conservation: Communities and the Management of the World's Natural Resources]
Fall. 3 credits, variable. Prerequisite: graduate standing. Letter grades only. Offered alternate odd-numbered years. J. P. Lasslie. For description, see NTRES 434. Students taking the course for graduate credit will be required to identify and critically review additional literature and participate in a one-hour discussion seminar per week (TBA).

[NTRES 670(6700) Spatial Statistics]
Spring. 3 credits. Prerequisites: BTRY 601 and 602. Highly recommended: introductory GIS course. S-U or letter grades. Offered alternate years. P. J. Sullivan. Develops and applies spatial statistical concepts and techniques to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 620.

[NTRES 694(6940) Special Topics in Natural Resources]
Fall or spring. 4 credits max. S-U or letter grades. This department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

[NTRES 698(6980) Agronomic Perspectives for Sustainable Development (also IARD/CSS 698(6980)]
Fall and spring. 1 credit. S-U grades only. L. Buck, L. Fisher, and S. DeGloria. For description, see IARD 696.

[NTRES 699(6990) Graduate Individual Study in Natural Resources]
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. NTRES graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

[NTRES 780(7800) Graduate Seminar in Ornithology (also BIOEE 780(7800))]
Fall or spring. 1 credit. S-U grades only. Undergraduate must have permission of instructor. J. Dickinson, I. Lovette, A. Dohnt, and D. Winkler. Group intensive study of current research in ornithology. Topics vary from semester to semester. Course may be repeated for credit.

[NTRES 800(8900) Master's Thesis Research]
Fall and spring. Credit TBA. Prerequisite: graduate students working on master's thesis research. S-U grades only.

[NTRES 900(9900) Graduate-Level Thesis Research]
Fall and spring. Credit TBA. Prerequisite: Ph.D. students before "A" exam has been passed. S-U grades only.

[NTRES 901(9910) Doctoral-Level Thesis Research]
Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates after "A" exam has been passed. S-U grades only.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Environmental and Society (D SOC 324, 340, 410)
Environmental Law, Ethics, and Philosophy (S&TS 206; CRP 380, 433, 444, 451, 455, PHIL 241, 246, 247, 381)
Human Systems and Communication (COMM 260, 285, 352, 421)
Public Policy and Politics (GOVT 427, 428; 6&SOC 461)
Resource Economics (AEM 250, 450, 451)
Spatial Data Interpretation (CSS 411, 420, 465, 620, 660)

PLANT BREEDING AND GENETICS

PL BR 201(2010) Plants, Genes, and Global Food Production
Fall. 3 credits. May be used for partial fulfillment of CALS distribution requirement Physical and Life Sciences. Prerequisite: one year introductory biology or permission of instructor. S. McCouch. Introduction to plant breeding; offers a sense of the importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers examples of how breeding objectives are realized and raises
questions about the environmental, social, and economic consequences of intensive food production systems. Emphasizes the connection between the genetics of plants, modern scientific research, and the potential to respond to the growing human demand for food, fiber, fuel, and environmental sustainability.

PL BR 225(2250) Plant Genetics
Spring. 3 or 4 credits; 2 credits if taken after BIOGD 281. Prerequisites: one year of introductory biology or equivalent; permission of instructor only for students who have taken BIOGD 281. S. Naithani. Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance; linkage analysis; polyplody; analysis of nuclear, chloroplast and mitochondrial genomes; pollination controls, and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PL BR 299(2990) Introduction to Research Methods in Plant Breeding and Genetics
Fall, spring, or summer. 1-3 credits, variable. S-U grades only. Staff. Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

PL BR 300(3000) Introduction to Genomics
Fall. 3 credits. Prerequisites: BIOGD 281, PL BR 225, S-U or letter grades. S. Naithani and M. Devare. This course will introduce students to the developments in the field of genomics, and cover concepts and research methods used to accumulate and analyze genomic data, functional and structural homology, and gene expression. The course includes hands-on computer lab sessions to familiarize students with the use of databases and visits to genomics facilities.

PL BR 401(4010) Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. E. D. Earle. Provides broad coverage of techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Examples include horticultural, agronomic, and endangered species. Genetic modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

PL BR 402(4020) Plant Tissue Culture Laboratory
Fall. 1 credit. Limited enrollment. Pre- or corequisite: PL BR 401 or permission of instructor. E. D. Earle. Provides hands-on experience in plant tissue culture and complements PL BR 401. Lab work includes cell, tissue, and organ culture techniques related to plant propagation, genoplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

PL BR 403(4030) Genetic Improvement of Crop Plants
Fall. 3 credits. Prerequisites: BIOGD 281, PL BR 225, or other standard genetics course and course in crops or horticulture. V. Gracen. Genetic enhancement of crop value to humans began with domestication and continues with farmers' variety development and scientifically trained plant breeders' applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PL BR 404(4040) Crop Evolution, Domestication and Diversity (also BIOPL/IARD 404(4040))
Fall. 2 credits. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor. S-U or letter grades. S. Kresovich. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addresses underlying ethical, legal, and social issues affecting conservation and use.

PL BR 405(4050) Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 405(4050))
Spring. 2 credits. Prerequisite: senior or graduate standing. S-U or letter grades. A. F. Krattiger and S. Kowalski. Covets statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and negotiation. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

PL BR 406(4060) Methods of Plant Breeding Laboratory
Fall. 2 credits. Pre- or corequisite: PL BR 403 or equivalent. S-U or letter grades. M. E. Sorrells. Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PL BR 446(4460) Plant Cytogenetics Laboratory
Spring, two-week module. 1 credit. S-U grades only. Prerequisite: genetics course or permission of instructor. Check with department for further information. K. N. Watanabe. Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.

PL BR 482 Plant Biotechnology (also BIOPL 482.5)
Spring. 1 credit. Prerequisite: BIOPL 483.1 or permission of instructor. S-U or letter grades. 12 lec. E. D. Earle. Deals with current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PL BR 483.1 Concepts and Techniques in Plant Molecular Biology (also BIOPL 483.1, PL PA 463.01)
Fall, eight weeks. 2 credits. Prerequisites: see BIOPL 483, S-U or letter grades. Two lec and one day of disc per week. S. McCouch, J. Giovannoni, and J. Rose. For description, see BIOPL 483.1.

PL BR 483.3 Plant Genome Organization (also BIOPL 483.3)
Fall. 1 credit. Prerequisite: BIOPL 483.1. S-U or letter grades. Offered alternate years; next offered 2008-2009. S. D. Tanksley. For description, see BIOPL 483.3.

PL BR 483.5 Molecular Breeding (also BIOPL 483.5)
Fall. 1 credit. S-U or letter grades. Offered alternate years. S. Tanksley. For description, see BIOPL 483.5.

PL BR 494(4940) Special Topics in Plant Breeding
Fall or spring. 4 credits max. S-U or letter grades. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL BR 496(4960) Internship in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6; minimum 60 on-the-job hours per credit granted. Prerequisites: junior or senior in plant breeding; minimum GPA of 3.0 in plant breeding courses; permission of advisor and enrollment during pre-enrollment period of semester before internship. S-U grades only. Students must attach to their course enrollment materials a CALS
null
A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete's foot, histoplasmosis, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and in human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.

**PL PA 319(3190) Mushrooms of Field and Forest**
Fall. 2 credits. Letter grades only. K. T. Hodge.
Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoon lab field trips. During the evening labs, students use keys and microscopes to identify mushrooms they've collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

**PL PA 394(3940) Circadian Rhythms**
Fall. 2 credits: optional 3rd-credit lab. Prerequisite: 200-level biology. S-U or letter grades. K. Lee.
Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

**PL PA 409(4090) Principles of Virology**
Fall. 3 credits. Prerequisites: BIOMD 290, 291 or permission of instructor. Recommended: BIOMD 330-332, 432. Letter grades only. G. R. Whittaker and S. G. Lazarowitz.
For description, see BIOMD 409.

**PL PA 411(4110) Plant Disease Diagnosis**
Fall. 3 credits. Limited to 18 students. Prerequisites: PL PA 301 or equivalent and permission of instructor. Staff.
Teaches a method of diagnosing plant diseases caused by infectious and noninfectious agents with emphasis on application of contemporary laboratory techniques and effective use of the literature. After seven weeks of formal lecture and laboratory sessions, students spend the rest of the semester working on their own to determine the causes of plant diseases on samples that have either been received by the Plant Disease Diagnostic Lab or that have been prepared by instructors.

**PL PA 419(4190) Agricultural Application of Plant Disease Concepts**
Fall. 2 credits. Eight sessions. Prerequisite: PL PA 301 and permission of instructor. S-U or letter grades. H. S. Aldwinckle and J. P. Nyrop.
Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable fields, crops, and a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. This course is taught at Geneva. Free transportation available.

**PL PA 420(4200) Grape Pest Management**
Fall. 3 credits. Prerequisite: PL PA 301, ENTOM 241, or permission of instructors. S-U or letter grades. W. Wilcox, E. G. English-Loeb, and A. Landers.
The course emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratories emphasize field illustrations of classroom concepts. Team taught by a plant pathologist, entomologist, and agricultural engineer.

**PL PA 443(4430) Pathology and Entomology of Trees and Shrubs**
Fall. 4 credits. Limited to 30 students. Prerequisites: PL PA 301 or equivalent, ENTOM 212 or equivalent. Offered every numbered year, next offered 2008-2009. G. W. Hudler.
For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.

**PL PA 448(4480) Evolution and Ecology of Symbiotic Associations**
Spring. 2 credits. Prerequisites: BIO G 101-102 or equivalent. Letter grades only. T. Parshley.
Symbiosis, a living together of two organisms in close associations, encompasses a spectrum of interactions ranging from mutually detrimental to mutually beneficial. We are going to focus on a selection of ecologically important symbiotic interactions, consider their evolutionary origins, and explore conditions that would favor their establishment and maintenance.

**PL PA 462.1(4620.1) Molecular Plant-Pathogen Interactions I**
Spring. 1 credit. Jan. 22-Feb. 16 (12lec). Prerequisites: BIOMD 281, BIOMD 330 or 331, and BIOMD 483.1. A. R. Collmer and B. G. Tuenge (odd years); S. G. Lazarowitz and G. B. Martin (even years).
Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. The beginning spring alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apoptotic responses that limit infection, and RNA interference, and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

**PL PA 462.2(4620.2) Plant Biotechnology**
Spring. 1 credit. J. J. Giovannoni, S. R. McCouch, and J. Rose.
Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides; produce useful products; or have improved nutritional and food processing characteristics. Discusses regulatory and social issues relating to plant biotechnology.

**PL PA 463(4630) Plant Molecular Biology**
Fall. 1-5 credits. Prerequisite: BIOMD 281, BIOMD 330 or 331.
Sec 01 Concepts and Techniques in Plant Molecular Biology (also BIOMD/PL BR 483.1)
For description, see BIOMD 483.1.

**PL PA 464(4640) Molecular Plant-Microbe Interactions**
Spring. 1 credit. Jan. 21-Feb. 15 (12lec). Prerequisites: BIOMD 281, BIOMD 330 or 331, and BIOMD 483.1 or equivalents. S-U or letter grades. Offered every numbered years. S. C. Wierans.
For description, see BIOMD 482, sec 2.

**PL PA 470(4700) Professional Skills in Plant Science**
Fall. 2 credits. S-U or letter grades. E. B. Nelson.
Provides students who are aspiring to careers as research plant scientists with an overview of the art and science of the profession. Topics include (1) what it means to be a scientist and plant pathologist; (2) preparation required of graduate students in plant pathology programs; (3) ethical considerations important to plant pathologists; (4) how to seek funding to support research activities; (5) managing the scientific literature; (6) funneling curiosity into scientific inquiry; and (7) how to read a scientific paper. Students in related disciplines (e.g., horticulture, plant breeding, plant biology) also benefit from concepts presented in this course.

**PL PA 494(4940) Special Topics in Plant Pathology**
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
PL PA 497(4970) Independent Study
Fall or spring. 1-5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).
An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.
PL PA 498(4980) Teaching Experience
Fall or spring. 1-5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).
Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.
PL PA 499(4990) Undergraduate Research
Fall or spring. 3-5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).
Opportunity for research experience under the direction of a faculty member.
PL PA 601(6010) Concepts of Plant Pathology
Spring. 3 credits. Prerequisites: PL PA 301 or equivalent. S-U or letter grades. A. R. Collmer.
Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphasis on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.
PL PA 602(6020) Biology of Plant Pathogens
Spring. 3 credits. Prerequisite: PL PA 301. Recommended: PL PA 601 as corequisite. W. E. Fry and K. L. Perry.
Biological and ecology of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Model plant pathogens are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PL PA 601 to provide students with a comprehensive treatment of pathogen-host interactions at all levels from molecular to ecological. Laboratory periods are used for hands-on demonstration of pathogen diagnosis and manipulation or to discuss current literature relevant to lecture topics.
PL PA 606(6060) Molecular Plant Virology (also BIOMI 650[6500])
Spring, 7 weeks, first half of semester. 1 credit. Prerequisites: BIOMI 409 or equivalent or permission of instructor. S-U or letter grades. Offered odd-numbered years; next offered 2008-2009. S. G. Lazarowitz.
Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Topics include virus replication strategies, cell-to-cell and systemic movement, host defense responses and virus counterstrategies, and engineered resistance.
PL PA 608(6080) Genomics of Bacterium-Host Interactions (also BIOMI 608[6080])
Fall, second half of semester. 1 credit. Prerequisite: BIOMI 290 or equivalent or permission of instructor. S-U or letter grades. Offered even-numbered years; next offered 2008-2009. A. R. Collmer and S. C. Winans.
Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools. Prerequisites: V. enterococca, Pseudomonas syringae, Raistonia solanacearum, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium meliloti.
PL PA 625(6250) Evolution and Ecology of Mutualisms
Fall. 1 credit. S-U grades only. T. Pawlowska.
Mutualisms are mutually beneficial interactions between species. Despite their ubiquity, the understanding of evolution and ecology of mutualisms is surprisingly limited. We are going to explore the conceptual framework explaining the establishment and maintenance of mutualisms and examine whether the empirical findings from various interactions support the theoretical predictions.
PL PA 638(6380) Filamentous Fungal Genomics and Development (also BIOGD 638[6380])
Spring, last four weeks of semester. 1 credit. Prerequisites: BIOGD 281 or equivalent. S-U or letter grades. Offered odd-numbered years; next offered 2008-2009. B. G. Turgeon.
Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Fusarium graminearum, Magnaporthe grisea, and Ustilago maydis and from well-known genetic model organisms Aspergillus nidulans and Neurospora crassa.
PL PA 642/6420 Special Topics in Plant Pathology (also BIOGD 642/6520)
Special Topics Series
Unless otherwise indicated, the following description applies to PL PA 642-652. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.
PL PA 642(6420) Pathogen Population Biology
Fall. M. G. Milgroom.
PL PA 644(6440) Current Topics in Oomycete Biology
Fall. E. B. Nelson.
PL PA 645(6450) Plant Virology
Fall. S. M. Gray.
PL PA 647(6470) Phytobacteriology Research Updates
Fall and spring. S. V. Beer.
Emphasizes current research in phytobacteriology undertaken in laboratories at Cornell.
PL PA 649(6490) Fungal Biology
Spring. 1 credit. Recommended: some background in mycology or plant pathology. K. T. Hodge and B. G. Turgeon.
Weekly meeting to discuss current scientific articles on the biology of fungi. Primarily directed at graduate students, but undergraduates, postdocs, staff, and guests who have an interest in fungi are welcome.
PL PA 650(6500) Diseases of Vegetable Crops
Fall. 1 credit. S-U grades only. J. W. Lorbeer and T. A. Zitter.
PL PA 652(6520) Field Crop Pathology
Spring. 1 credit. W. G. C. Bergstrom.
PL PA 660(6600) Special Topics in Plant Disease Management
Fall and spring. 1 credit. S-U grades only. C. D. Smart.
Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. Offered only at the Geneva campus. Students provide their own transportation.
PL PA 661(6610) Diagnostic Lab Experience
Fall and spring. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S-U grades only. Requires 3 hours per week per credit hour. T. A. Zitter.
For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnositic Laboratory (plant pathology department) under supervision of the diagnostician.
PL PA 681(6810) Plant Pathology Seminar
Fall and spring. 1 credit. Requirement for all plant pathology majors. S-U grades only. B. G. Turgeon.
PL PA 682(6820) Graduate Student Research Updates
Spring and fall. 1 credit. Requirement for all Plant Pathology graduate students. S-U grades only. S. C. Winans and H. Aldwinckle.
Weekly graduate student seminar series. Guests with an interest in plant pathology research are welcome to attend. Courses meet simultaneously in Geneva and Ithaca and are linked by teleconference.
PL PA 694(6940) Special Topics in Plant Pathology
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
I

120

viruses) and plants at the molecular level.

This colloquium consists of a series of lectures on an annually changing theme central to the Environmental Sciences, which poses biophysical, economical and political challenges to modern society. Participants will become familiar with contemporary issues of environmental degradation and opportunities for their mitigation. The colloquium is mandatory for SNES majors and is open to the public.

FACULTY ROSTER

Ahner, Beth A., Ph.D., Massachusetts Inst, of Technology. Assoc. Prof., Biological and Environmental Engineering

Aldwinckle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)

Aneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering

Aubert, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering

Aubin, Antje J., Ph.D., U. of Stuttgart (Germany). Assoc. Prof., Biological and Environmental Engineering

Bain, Mark B., Ph.D., U. of Massachusetts. Assoc. Prof, Natural Resources

Barbano, David M., Ph.D., Cornell U. Prof., Food Science

Barrett, Christopher B., Ph.D., U. of Wisconsin. Prof., Applied Economics and Management

Bartsch, James J., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering

Batt, Carl A., Ph.D., Rutgers U. Prof., Food Science

Baugh, Sherene, Ph.D., SUNY, Stonybrook. Assoc. Prof., Landscape Architecture

Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science

Baveye, Philippe C., Ph.D., U. of California, Riverside. Assoc. Prof., Crop and Soil Sciences

Beer, Steven V., Ph.D., U. of California, Davis. Prof., Plant Pathology

Bellinder, Robin R., Ph.D., Virginia Polytechnic Inst. and State U. Prof., Horticulture

Bergstrom, Gary C., Ph.D., U. of Kentucky. Prof., Plant Pathology

Bjorkman, Thomas N., Ph.D., Cornell U. Assoc. Prof., Horticultural Sciences (Geneva)

Blake, Robert W., Ph.D., North Carolina State U. Prof., Animal Science

Blossey, Bernd, Ph.D., Christian-Albrechts U. (Germany). Assoc Prof, Natural Resources

Boschutz, Yves R., Ph.D., Cornell U. Assoc. Prof., Animal Science

Booij, Katrijn J., Ph.D., U. of California, Davis. Prof., Food Science

Booth, James, Ph.D., U. of Kentucky. Prof., Biological Statistics and Computational Biology

Bradly, John W., Jr., Ph.D., SUNY, Stonybrook. Prof, Food Science

Brown, Dan L., Ph.D., Cornell U. Assoc. Prof., Animal Science

Brown, David L., Ph.D., U. of Wisconsin. Professor, Development Sociology

Brown, Susan K., Ph.D., U. of California, Davis. Prof., Horticultural Sciences (Geneva)

Buckley, Daniel H., Ph.D., Michigan State U. Asst. Prof., Crop and Soil Sciences

Bury, Thomas J., Ph.D., U. of California, Berkeley. Prof., Plant Pathology (Geneva)

Bustamante, Carlos D., Ph.D., Harvard U. Assoc. Prof., Biological Statistics and Computational Biology

Butler, Walter R., Ph.D., Purdue U. Prof., Animal Science

Caffarella, Rosemary S., Ph.D., Michigan State U. Prof., Education

Caldereau, Nicholas W., Ph.D., Ohio State U. Assoc. Prof, Entomology

Camp, William G., Ph.D., Georgia State U. Prof., Education

Chase, Larry E., Ph.D., Pennsylvania State U. Prof., Animal Science

Chau, Ho Yan, Ph.D., Johns Hopkins U. Assoc. Prof., Applied Economics and Management

Cheng, Lailiang, Ph.D., Oregon State U. Assoc. Prof., Horticulture

Cherney, Jerome H., Ph.D., U. of Minnesota. Prof., Crop and Soil Sciences

Christy, Ralph D., Ph.D., Michigan State U. Prof., Applied Economics and Management

Coffman, W. Ronnie, Ph.D., Cornell U. Prof., Plant Breeding

Collmer, Alan R., Ph.D., Cornell U. Prof., Plant Pathology

Colucci, Stephen J., Ph.D., SUNY, Albany. Prof., Earth and Atmospheric Sciences

Constas, Mark A., Ph.D., Cornell U. Assoc. Prof., Education

Cook, Evan G., Ph.D., Queen's U. (Canada). Assoc. Prof., Natural Resources

Cook, Kerry H., Ph.D., North Carolina State U. Prof., Earth and Atmospheric Sciences

Cooke, J. Robert, Ph.D., North Carolina State U. Prof. Emeritus, Biological and Environmental Engineering

Cox, William J., Ph.D., Oregon State U. Prof. Crop and Soil Sciences

Crawford, Barbara A., Ph.D., U. of Michigan. Assoc. Prof., Education

Currie, W. Bruce, Ph.D., Macquarie U. (Australia). Prof., Animal Science

Curtis, Paul D., Ph.D., North Carolina State U. Assoc. Prof., Natural Resources

SCIENCE OF NATURAL AND ENVIRONMENTAL SYSTEMS

SNES 101(1010) Intro to the Science and Management of Environmental and Natural Resources (also NTRES 101(1010))

Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environment Systems, or other "environmental cluster" areas in CALS. J. Lassoie and E. Madsen.

For description, see NTRES 101.
ADMINISTRATION
Mohnsen Mostafavi, dean
W. Stanley Taft, associate dean
Peter Turner, assistant dean of administration and finance
TBA, chair, Department of Architecture
TBA, chair, Department of Art
William Goldsmith, chair, Department of City and Regional Planning
Deborah Durnam, director, admissions
Carol Cooke, director, alumni affairs and development
M. Susan Lewis, director, Office of Diversity and Inclusiveness
Margaret N. Webster, director, visual resources facility
Jayne A. LeGro, registrar

FACULTY ADVISORS
Architecture students are assigned faculty advisors and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty advisor for the first year. After the first year, students may select their advisors. Students are required to have an advisor throughout their program in their area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisors.

All students in the college are invited to share concerns and seek advice from the volunteer student advisors (FARS) at any time.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the bachelor of architecture, four-year programs in art and architecture lead to the bachelor of fine arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the bachelor of science. Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Cafe, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 202,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 50,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the center of the eternal city near such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an
understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program office, 149 East Sibley Hall.

New York City Program
The College of Architecture, Art, and Planning has recently expanded to include an off-campus base in downtown Manhattan near Union Square. The facility provides bright, expansive studio and seminar space for both short-term and semester-long use by all three AAP departments.

In this new space, the college can engage New York City artists, architects, urban theorists, and other practitioners to meet with students and faculty members. The facility is also an ideal base for the study of urban policy, for museum and gallery visits, or for exposure to a wealth of architectural history and practice. Through all of these functions, this program adds an invaluable urban component to the AAP experience.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drawing rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college to be retained for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Scholastic Standards
Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average of at least C+ (2.3). The record of each student who falls below the standard will be reviewed by the college's Academic Records Committee for appropriate action, among those described below:

1. The student is issued a Warning. This means the student's performance is not up to expectations. Unless improvement is shown in the subsequent semester, the student may be placed on Final Warning or given a Required Leave of Absence from the college.

2. The student is issued a Final Warning. This indicates the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a Required Leave of Absence from the college.

3. The student is placed on a Required Leave of Absence. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college dean, chair of the Academic Records Committee, 129 Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department and include an official transcript to request credit for courses taken. A return to study in the college after a required leave of absence is at the discretion of the college's Academic Records Committee. Requests for spring semester return must be made by November 15 and requests for fall semester return must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a Required Withdrawal. The student may not reregister in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance in the subsequent semester is deemed to be grossly deficient.

It is necessary to have a cumulative grade point average of at least 2.0 (C) for graduation.

Leaves of Absence
The College of Architecture, Art, and Planning adopted the following leave of absence policy effective in the fall of 2006:

Leaves of absence will be of four types:

1. Personal leaves of absence may be granted for a variety of reasons. The student may request a personal leave of absence no later than the third week of class in the affected term. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student's academic status is subject to review at the time of the leave and upon the student's return.

2. Conditional leaves of absence may be granted for students desiring to take a leave but who are not in good academic standing or who are disabled by an illness or injury. Students on leave of absence who wish to return to study must submit a letter from the student's department and to the ARC asking to return. The request will be reviewed and approved first by the department. The recommendation of the department will be forwarded to the college ARC for its review and action. If the student request to the ARC is approved first by the department results in a "no pass" outcome, the student may appeal in writing to the Academic Records Committee within two weeks of receipt of the department decision. The final decision will be made by the Academic Records Committee. No appeals will be considered following the decision of the ARC.

It is expected that the department and college committees will review and act on requests to return to study and for requests to return to study in the fall term and by January 5 for requests to study in the spring term.

3. Voluntary leaves of absence for medical reasons may be granted by the college upon the recommendation of the Counseling and Psychological Services (CAPS) or Gannett Health Services. They are usually no less than six months in duration. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student's academic status is subject to review at the time of the leave and upon the student's return.

4. Required leaves of absence for academic reasons. The ARC may vote for a required leave if the student is not making satisfactory progress in the degree program (defined by completion of 12 academic credits and 2.3 GPA each term unless there are special circumstances). The department may set conditions for completion of work, new and incomplete course work, community service or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student's academic status is subject to review at the time of the leave and upon the student's return.

Students on leave types 2 and 4 may not attend any classes at Cornell through the School of Continuing Education and Summer Sessions. Students on leave type 3 may not register for classes at Cornell unless they obtain the permission of the department, the college ARC, and a recommendation from CAPS or Gannett Health Services.

Students who desire to return from any of these leaves shall follow a two-tiered approach. They shall write a letter to their department and to the ARC asking to return to study in the following academic semester (summers may be considered for potential return). The request will be reviewed and approved first by the department. The recommendation of the department will be forwarded to the college ARC for its review and action. If the student request to the ARC is approved first by the department results in a "no pass" outcome, the student may appeal in writing to the Academic Records Committee within two weeks of receipt of the department decision. The final decision will be made by the Academic Records Committee. No appeals will be considered following the decision of the ARC.

It is expected that the department and college committees will review and act on requests to return to study and for requests to return to study in the fall term and by January 5 for requests to study in the spring term.
ARCHITECTURE COURSES
Course offerings in the college of Architecture, Art and Planning are listed under the various departments. Courses are identified with standard abbreviation followed by a three-digit number.

For the entering class of 2007, all new students in the college of AAP will be required to complete a 1-credit, interdisciplinary course offered in the fall semester.

AAP 111(1101) The World We Make
Fall and spring. 1 credit. S-U grades. Staff. This course offers AAP first-year students an introduction to the subjects, theories, and methodologies of the disciplines of art, planning, architecture, and landscape architecture. Examples drawn from a range of historical periods as well as contemporary practice highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap.

ARCHITECTURE

Professional Degree Programs
Cornell offers two professional degrees in architecture: the undergraduate bachelor of architecture and the graduate master of architecture. These degrees count toward the professional registration requirements established by the various states, the National Architectural Accrediting Board, and the National Council of Architectural Registration Boards.

B. Arch.
The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student’s ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequence of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental control, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these disciplines. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year’s work for the bachelor of architecture degree to the post-professional M. Arch. II program. Some students are then able to complete the requirements for the master’s degree in one additional year.

M. Arch.
Cornell’s graduate professional program is normally three and one-half years long and is intended for students who already have a bachelor’s degree in any subject. Information on this professional graduate program may be found on the architecture web site (www.architecture.cornell.edu).

Note on Professional Accreditation
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Master’s degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

The NAAB grants candidacy status to new programs that have developed viable plans for achieving initial accreditation. Candidacy status indicates that a program should be accredited within six years of achieving candidacy, if its plan is properly implemented.

Rome Program
The program offers the opportunity for students from Cornell and other universities to spend one or two semesters of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, art, city and regional planning, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

New York City Program
The goals of the Architecture Program in New York City are to introduce the students to the best of contemporary practice while enabling students to benefit from trans-disciplinary activities achieved by working with the students of other departments and exposure to a multiplicity of practices including art and engineering. Students have the opportunity to establish connections with significant practices outside of the studio through internships.

Overlap Program
For qualified students, the department offers an option that combines the final semester of the undergraduate program with the first semester of the post-professional master of architecture program. In the fall of the fourth undergraduate year, interested students petition the department to substitute ARCH 711 for ARCH 502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not begin until the fall following their 501 studio semester and, once enrolled, may not transfer back into the ARCH 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply 9 credits of free electives from their B.Arch. curriculum toward the requirements of the master’s degree.

**Free**
- Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college. One of these must be AAP 111. Total credits 176

### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B. Arch. and B.F.A. in architecture candidates only:

- Architecture, Culture, and Society 342 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 261, 262, 263, 264, 361, 362, 363, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 181, 182, distribution requirements (9 credits), plus 7 credits

(including a 4-credit seminar course) in this area.

**Theory of Architecture** 231, 232, distribution requirements (6 credits), plus 6 credits in this area.

**Visual Representation** in Architecture 151, 152, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a concentration request form to the Architecture Department office. For a course to count toward a concentration, the student must receive a grade of C or better.

### Transfer Students

Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a non-professional undergraduate degree may apply to the professional M. Arch. I program.

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer semesters, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

### Alternative Programs

**Bachelor of Fine Arts**

After completing the first four years of requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a bachelor of science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture...
and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission requirements.** Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B. Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission or by March 31 for fall admission.

Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

**Curriculum.** A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Advisor and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 300-level courses in architectural history; ARCH 380 through 399
2. 12 credits in 600-level architectural history seminars: ARCH 681 through 699; or 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only
3. One 300-, 400-, or 600-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's advisor
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honors program.** Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

**Dual-Degree Options**

Students can earn both the B.S. and B. Arch. degrees either simultaneously or sequentially. Students who have transferred into the B. Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a master's degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

**Concentration in Architecture for Nonmajors**

A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Nonmajors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this concentration should complete a concentration form, which is available in the architecture department office. This form, when validated by the architecture department and the AAP college registrar, serves as evidence of completion of the concentration requirements. Students should consult their individual college registrars for information about whether their home college recognizes and notes such concentrations on transcripts or diplomas.

The curriculum for students in the Concentration in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

**Required courses.** A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example, ARCH 110 Introduction to Architecture Design Studio (offered summer only) 3 credits or ARCH 103 Elective Design Studio (offered fall only, not offered every year) 6 credits

(Arch 103 may substitute for ARCH 110; students who complete ARCH 103 must take all other course requirements for the concentration.)

ARCH 151 Drawing I (fall only) 2 credits
ARCH 181 or 182 History of Architecture I or II (ARCH 181, fall; ARCH 182, spring) 3 credits

**Departmental elective courses.** A minimum of 6 credits, including two departmental elective courses, are required.

**Professional Master of Architecture**

**Mission Statement**

Consistent with the broader mission of the Department of Architecture, the Master of Architecture program is dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program is committed to the view that the nature of contemporary practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context. The program places the question of practice at the center of the learning process. It posits alternative models and methods of research and seeks to empower the student's sense of inquiry, responsibility, and creativity as she or he formulates her or his unique professional trajectory. The program aims in particular to engage the unique strengths and needs of the graduate student: her or his maturity, commitment to architecture, and the wealth and variety of academic and life experiences she or he brings to the discipline. The pedagogy sets skills and knowledge essential to the profession in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture in the 21st century.

ARCHITECTURE 129

Sequence Courses

ARCH 101(1101) Design I  
Fall, spring. 6 credits. Prerequisite: department students. Staff. 
Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102(1102) Design II  
Spring. 6 credits. Prerequisite: department students; ARCH 101 and 151. Staff.  
Continuation of ARCH 101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202(2101-2102) Design III and IV  
Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 151-152, for ARCH 201, ARCH 102 and 152, for 202, ARCH 201. Corequisite: ARCH 231-232. Staff.

ARCH 301-302(3101-3102) Design V and VI  
Fall and spring. 6 credits each semester. Prerequisites: department students; for ARCH 301, ARCH 202, for 302, ARCH 301. Staff.

ARCH 401-402(4101-4102) Design VII and VIII  
Fall and spring. 6 credits each semester. Prerequisites: department students; for ARCH 401, ARCH 302 and 302; for 402, ARCH 401. Staff.

Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 501(5101) Design IX  
Fall or spring. 6 credits. Prerequisite: department students; ARCH 402. Corequisite: ARCH 510. Staff.

Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 502(5902) Design X—Thesis  
Fall or spring. 8 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to Overlap Program are exempt from thesis requirement. Prerequisite: ARCH 501 and 510. Staff.

Graduate Courses

ARCH 511(5111) Core Design Studio I  
Fall. 6 credits. 
Introduction to fundamental concepts of architectural design and representation, including preliminary notions of space, program, context. Emphasis on interpretive, analytical, and generative uses of drawing and physical modeling in the design process.

ARCH 512(5112) Core Design Studio II  
Spring. 6 credits. Prerequisite: ARCH 511. 
Continuation of subjects developed in the first term. Emphasis on interpretive, analytical, and generative uses of digital media.

ARCH 513(5113) Core Design Studio III  
Fall. 6 credits. Prerequisite: ARCH 512. 
Focus on issues of program and architectonics in the design of a complex building type in context; introduction to site planning.

ARCH 514(5114) Core Design Studio IV  
Spring. 6 credits. Prerequisite: ARCH 513. 
Focus on architecture's expanded sites: social, cultural, material, and/or environmental considerations of building in a complex urban landscape.

ARCH 515(5115) Core Design Studio V: Integrative Design Practices  
Fall. 6 credits. (New York City). 
Prerequisites: ARCH 514, 562, 564, 661, 662, 663. 
Focus on the development of architectural ideas in constructed, material form. The studio explores emergent topics and constructive methods in contemporary architectural practice. Design study includes the creation of a comprehensive set of representations that describes an architectural project in detail. Students work in collaborative groups and in consultation with advisors drawn from professional practice to develop a project that engages a complex range of topical areas, including: structural and environmental systems, building envelope systems, materiality and construction, life-safety planning, and sustainability.

ARCH 516(5116) Vertical Design Studio  
Spring. 6 credits. Prerequisite: ARCH 515. 
Open to professional and post-professional M. Arch. students. The vertical studios are topical in nature, and engage contemporary issues in architectural practice and research.

ARCH 711(7111) Design B: Topics Studio  
Fall. 6 credits. Staff. Exploration of themes, methods, and technologies in contemporary design.

ARCH 712(7912) Design A: Topics Studio  
Spring. 6 credits. Staff. Graduate vertical research studio.

ARCH 801(8901) Thesis or Research in Architectural Design  
Fall or spring. 9 credits. Prerequisite: ARCH 701—704. Staff.

Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 802(8902) Thesis or Research in Urban Design  
Fall or spring. 9 credits. Prerequisite: ARCH 701—704. Staff.

Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 811(8911) Proseminar in Design Research  
Spring. 3 credits. Prerequisites: ARCH 531 and 532. 
ARCH 811 offers a synthesis of design and research methods for the development of an independent thesis proposal. Course work includes exposure to different theories and practices of design inquiry, explorations of critical positions for individual development, and preparation of a document encapsulating research leading to a thesis proposition. Successful completion of the course, which includes approval of the thesis document, is a prerequisite for advancement into ARCH 812: Independent Design Thesis.
ARCH 812(8912) Independent Design Thesis
Fall. 9 credits. Prerequisites: ARCH 811, 4101.
An independent design project on a topic selected and developed by the student and researched in ARCH 811. Marking the transition between academic and professional practices, the thesis project is an opportunity for each student to define an individual position with regard to the discipline of architecture.

ARCH 813(8913) Design C: ADR Project
Summer. 9 credits. Staff.
Development of a design project in the student's territory of investigation.

Elective Design Courses
ARCH 103-104(1103-1104) Elective Design Studio
103, fall; 104, spring. 6 credits each semester. Prerequisite: nonarchitecture students; for ARCH 103, permission of instructor; for ARCH 104, ARCH 103 and permission of instructor. Staff.
ARCH 200, 300, 400, 500(2100, 3100, 4100, 5100) Elective Design Studio
Fall, spring, or summer. 6 credits. For transfer students and students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Staff.
Nonsequence design used as temporary placement of transfer students, off-campus foreign programs for third-year students (Summer in Rome) and for incompletes in design sequence. In some cases students must petition to convert elective design into sequence design.

ARCH 503(5103) Design IXa
Fall and spring. 6 credits. Limited to department students. Prerequisites: ARCH 402 and passing, but nonadvancing, grade in ARCH 501.
Structured studio for those needing to retake ARCH 501. The course operates within the fourth-year design studios.

ARCH 504(5104) Design Xa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 503 and passing, but nonadvancing, grade in ARCH 502.
A structured studio for those studying to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars
ARCH 110(1110) Introduction to Architecture: Design Studio
Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Staff.
Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 111(1111) Concentration in Architecture: Design Studio
Summer only. 3 credits. Subject to enrollment. Prerequisite: non-architecture students. Not offered every year. Staff.
Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.

ARCH 303(3103) Special Problems in Architectural Design
Fall or spring. Variable credit, max. 3. Does not count for degree sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff.
Independent study.

ARCH 306(3106) Praxis: Community Design Workshop (also ARCH 606[6106])
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.
Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 313(3113) Furniture Design
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.
Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 510(5110) Thesis Proseminar
Fall and spring. 3 credits. Prerequisite: ARCH 402. Staff.
Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 521(5201) Professional Practice
Fall or spring. 3 credits. Staff.
Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 522(5202) Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 521. Staff.
Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 605(6105) Special Problems in Design
Fall and spring. Variable credit, max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff.
Independent study.

ARCH 606(6106) Praxis: Community Design Workshop (also ARCH 306[3106])
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. F. Davis.
For description, see ARCH 306.

ARCH 610(6110) Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff.
A companion seminar developing themes explored in Arch 711.

ARCH 611-612(6111-6112) Urban Housing Developments
611, fall; 612, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students; permission of instructor. Not offered every year. Staff.

Architectural Theory
ARCH 130(1300) An Introduction to Architecture: Lectures
Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S-U or letter grades. Not offered every year. Staff.
Survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.
ARCH 131(1301) An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 151 is not a prerequisite for ARCH 152. Staff. Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from contemporary Cornell campus.

ARCH 231(2301) Architectural Analysis I
Fall. 2 credits. Corequisite: for architecture students, ARCH 201. Staff. Introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote understandings of the ways in which architecture can connote and denote. Readings focus on symbolic content. Readings focus on examples from numerous parts dominated by the general character of the whole. The general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. The latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 334(3304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634(6304))
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells. Field and figure relationships (intersection of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. The latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 337(3307) Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit, max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 338(3308) Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic TBA.

Spring. 3 credits. Not offered every year. L. Mirin. Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese as an architectural manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431(4301) Theory of Architecture
Fall or spring. 3 credits. Prerequisite: upper-level students. Not offered every year. Staff. Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, plazas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435(4305) Architecture and Representation
Fall or spring. 3 credits. Prerequisite: degree candidates in architecture. Successful completion of ARCH 231-232. Not offered every year. Staff. Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 531(5301) Theories and Analyses of Architecture I
Fall. 3 credits. Introduces students to influential critical and creative themes in modern architecture. Topics cover influential 20th-century discourses and theories prior to the 1960s, the questions and contexts that they engage, and their implications for contemporary thinking and design. Discussions and assignments aim at developing critical and graphical readings of both works and writings.

ARCH 532(5302) Theories and Analyses of Architecture II
Spring. 3 credits. Prerequisite: ARCH 531. Continuation of ARCH 531 focusing on themes in architectural discourse, design, and theory from the 1960s to the present, and their creative/critical implications.

ARCH 536(6301) Design Research
Fall. 3 credits. Staff. Introduction to themes of inquiry in contemporary architecture, including critical motives in research, topical "problems," and materials and tactics of investigation.

ARCH 634(6304) Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334(3304))
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells. For description, see ARCH 334.

ARCH 635(6305) Theory and Criticism in Architecture
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 637(6307) Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.
special emphasis on sub-Saharan Africa, India, and the United States. Topics include the idealizational and formal relationships between folk and monument traditions in complex societies; the structure of the ideal social order and its refraction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 647-648(6401-6402) Architecture in Its Cultural Context I and II
647, fall; 648, spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered every year.
B. MacDougall.

ARCH 649(6409) Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form.
B. MacDougall.
Independent study.

Visual Studies

ARCH 151(1501) Drawing I: Freehand Drawing
Fall. 2 credits. Staff.
Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 152(1502) Drawing II: Drawing Systems
Spring. 2 credits. Prerequisite: ARCH 151 or permission of instructor. Staff.
Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, paraline projection, shade and shadow, and perspective.

ARCH 253(2503) Drawing III: Digital Media in Architecture
Fall or spring. 2 credits. Prerequisite: ARCH 152 or permission of instructor. Letter grades only.
Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

ARCH 450(4508) Special Investigations in Visual Representation I
Fall or spring. Variable credit; max. 3. May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 459(4509) Special Topics in Visual Representation I
Fall or spring. 4 credits. Prerequisite: permission of instructor. Staff.
Independent study.

ARCH 551(5511) Techniques in Visual Representation I: Analog-Freehand and Constructed Drawing
Fall. 3 credits. Focus on freehand drawing and sketching as vehicles for design thinking and perception. Observational, analytical, and transformational exercises develop creative productivity in freehand drawing, line drawing, and orthographic projection.

ARCH 552(5512) Techniques in Visual Representation II: Analog/Digital Constructed Drawing
Spring. 3 credits. Prerequisite: ARCH 551 or approved equivalent.
Develops understanding of, and proficiency in projective drawing, including paraline and perspective representation in both analog and digital forms. Students are also introduced to a variety of digital representation applications, including modeling, rendering, and animation.

ARCH 558(5608) Special Investigations in Visual Representation II
Fall or spring. Variable credit; max. 4.
Prerequisites: permission of instructor and approved independent study form.
Staff. Independent study.

ARCH 658(6508) Special Investigations in Visual Representation II
Fall or spring. Variable credit; max. 4.
Independent study.

ARCH 665(6505) Architectural Science and Technology

Structures

ARCH 263(2603) Structural Concepts
Fall. 4 credits. Prerequisite: MATH 111 or approved equivalent. M. Cruvellier.
Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264(2604) Structural Elements
Spring. 3 credits. Prerequisite: ARCH 263.
J. Ochshorn or staff.
Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 363(3603) Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 264. M. Cruvellier.
Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 364(3604) Vertigo Structures (also ARCH 664[6604])
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.
For description, see ARCH 364.

ARCH 365(3605) Bridge Design (also ARCH 665[6605])
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

ARCH 366(3606) Working Drawings (also ARCH 666[6606])
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 463(4603) Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 265, 264, and 363 or permission of instructor. Not offered every year. Staff.
Topics TBA.

ARCH 473(4609) Special Investigations in Structures
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form.
Staff.
Independent study.

ARCH 563(5603) Structural Concepts
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.
For description, see ARCH 363.

ARCH 654(6504) Structural Elements
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.
For description, see ARCH 264.

ARCH 663(6603) Structural Systems
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. Staff.
For description, see ARCH 363.

ARCH 664(6604) Vertigo Structures (also ARCH 364[3604])
Fall or spring. 3 credits. Prerequisite: ARCH 563 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.
For description, see ARCH 364.

ARCH 665(6605) Bridge Design (also ARCH 365[3605])
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. Staff.
For description, see ARCH 365.

Construction

ARCH 262(2602) Building Technology, Materials, and Methods
Fall. 3 credits. J. Ochshorn.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 367(3607) Working Drawings (also ARCH 667[6607])
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year.
J. Ochshorn.

ARCH 465(4605) Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 262 or permission of instructor. Not offered every year.
Staff.
Topics TBA.
ARCH 475(4604) Special Investigations in Construction
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 562(5602) Building Technology, Materials, and Methods
Fall or spring. 3 credits. Prerequisite: M.Arch I students or permission of instructor. Staff. For description, see ARCH 262.

ARCH 667(6607) Working Drawings (also ARCH 367[3607])
Fall or spring. 3 credits. Prerequisite: ARCH 262 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation
ARCH 261(2601) Environmental Systems I—Site Planning
Spring. 3 credits. Staff. Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361(3601) Environmental Systems II—Thermal Environmental Systems
Fall. 3 credits. Prerequisites: ARCH 261. Corequisite: ARCH 301. R grade only. Staff.

ARCH 461(4601) Ecological Literacy and Design (also DEA 422[4220])
Spring. 3 credits. Letter grades only. Cost of field trips: approx. $25. J. Elliott. Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental systems and to construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://instructc. cit. cornell. edu/courses/dea/422/ARCH.

ARCH 464(4619) Special Topics in Environmental Systems and Conservation
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 474(4618) Special Investigations in Environmental Systems and Conservation
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 661(6601) Environmental Systems II—Thermal Environmental Systems
Fall. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. R grade only. Staff. For description, see ARCH 361.

ARCH 662(6602) Environmental Systems III—Building Systems Integration
Spring. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. For description, see ARCH 362.

Computer Applications
ARCH 374(3704) Computer Graphics I (also CS 465[4620])
Fall. 4 credits. Prerequisite: CS/ENGRD 211. Staff. For description, see CS 465.

ARCH 476(4706) Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 374 or 379 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 477-476(4707-4708) Special Projects in Computer Graphics
Not offered every year.

ARCH 479(4709) Advanced Computer Graphics: Virtual Reality (also ARCH 679[6709])
Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson. For description, see ARCH 479.

Graduate Courses
ARCH 678(6709) Advanced Computer Graphics: Virtual Reality (also ARCH 479[4701])
Fall. 3 credits. Prerequisite: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson. For description, see ARCH 479.

ARCH 761-762(7701-7702) Architectural Science Laboratory
761, fall; 762, spring. 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg. Projects, exercises, and research in the architectural sciences.

ARCH 763-764(7903-7904) Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff. Independent study.

Architectural History
The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

Sequence Courses
ARCH 181(1801) History of Architecture I
Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.

ARCH 182(1802) History of Architecture II
Spring. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.

The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.
ARCH 182(1602) History of Architecture II
Spring. 3 credits. Requirement for first-year architecture students, open to all students in other colleges interested in the history of the built domain; may be taken independently of ARCH 181. Staff. The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives
ARCH 380(3800) History of Theory
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Staff. This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381(3801) From Utopia to the Ghetto: Urban Form
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky. Significant developments in European urban design from 1500 to 1600. Particular attention is given Italy and Spain. Focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions contextualize the city within a larger cultural framework. This course considers how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and patronage of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several 20th-century urban plans and built projects.

ARCH 382(3802) The Cinematic City
Fall. 3 credits. Prerequisite: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky. Examines the relationship between cinematic forms of mass media and architecture. Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

Fall or spring. 3 credits. Prerequisite: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky. Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giedion) and political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World's Fair, department stores, museums, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 384(3804) The Urban Landscape of Renaissance Rome: 1450 to 1600
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Lasansky. Exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important training ground for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of Antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment; and how its topography and natural resources of the city’s location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 385(3805) Magnificent Utility: Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. C. Otto. Architecct and artists with revolutionary attitudes about form, space, light, and the arts into practice during the course of the 17th century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and the Dutch Republic, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 386(3806) The Architecture of India and its Interpretation
Spring. 3 credits. Not offered every year. B. MacDougall. Surveys the architectural record of ancient and medieval India with an emphasis on stupas and temple traditions. Devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination with explaining Indian ethnicity and history over two centuries. Attempts to evaluate the claims made by the historian James Ferguson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 387(3807) 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisite: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods. Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities. Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other are revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 388(3808) Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods. Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism. Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giedion) and political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World’s Fair, department stores, museums, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 390(3810) American Architecture and Building I (also AM ST 390(3810))
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods. Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities. Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other are revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 391(3811) American Architecture and Building II (also AM ST 391(3811))
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods. Continuation of ARCH 390 but may be taken independently. An account of American
architecture, building, and responses to the environment from the post–Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392(3812) Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. M. Woods. Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 393(3813) The Cumulative City
ARCH 394(3804) Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. C. F. Otto. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the more recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 395(3815) History of the Present—Contemporary Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: ARCH 181–182 or permission of instructor. C. F. Otto. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the more recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 396(3816) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 397(3817) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 398(3818) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 399(3819) Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Staff. Topics TBA.

Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 682 to 699 TBA before the start of the semester.

ARCH 680(6800) Seminar in Historiography
Fall. 4 credits. Requirement for first- and second-year graduate students in History of Architecture and Urbanism Program. Prerequisite: permission of instructor. Staff. Examines historiographic and methodological issues in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

ARCH 682(6802) Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 683(6803) Seminar in History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 684(6804) Seminar in Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 686(6806) Seminar in 17th- and 18th-Century Architecture and Urbanism
ARCH 688(6808) Seminar in 20th-Century Architecture and Urbanism
ARCH 689(6809) Seminar in History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 690(6810) Seminar in American Architecture, Building, and Urbanism
ARCH 692(6812) Seminar in 19th-Century Architecture, Building, and Urbanism
ARCH 696(6816) Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
Specific Course Requirements have completed an introductory course in from the required curriculum. To the department before the act. No program will be permitted to deviate student in the first year of the B.F.A. petition.

Students are expected to take an average course load of 16 credits per semester during the first or second semester of their first or second year (see B.F.A. curriculum), students must take two studios at the 200 or 300 level, a minimum of two "out of college" studio electives (OCE studio) of 3–4 credits each, ART 481 Pre-Thesis in Combined Media and ART 482 Thesis in Combined Media.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty advisor and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome program. Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

Bachelor of Fine Arts Degree Requirements Credits and Distribution The B.F.A. degree requires 130 academic credits. A minimum of 59 are taken in the Department of Art.

Curriculum Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

Specific Course Requirements By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 26–27 credits in one of the studio areas of electronic imaging, painting, photography, printmaking, or sculpture. Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved project course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in electronic imaging and printmaking)

- Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2); 373/374 (1 of 2); 471, 472 (senior thesis)
- Painting: ART 121, 221, 321, 322, 421, 422 (senior thesis)
- Photography: ART 161, 261, 263/264 (1 of 2); 461, 462 (senior thesis)
- Printmaking: ART 131/132/133 (2 of 3); 231/232/233 (1 of 3); 331
- Sculpture: ART 141, 241, 341, 442 (senior thesis)

Dual Concentration

Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:

- First Area of Concentration
  - Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2); 373/374 (1 of 2); 471/472 23
  - Painting: ART 121, 221, 321, 322, 421, 422 23
  - Photography: ART 161, 261, 263/264/265/266 (1 of 4), 461, 462 23
  - Printmaking: ART 131/132/133 (2 of 3); 231/232/233 (1 of 3); 331 22
  - Sculpture: ART 141, 241, 341, 441, 442 23

- Second Area of Concentration
  - Electronic Imaging: ART 171; 271/234 (1 of 2); 272/273 (1 of 2); 373/374 (1 of 2) 15
  - Painting: ART 121, 221, 321, 322 15
  - Photography: ART 161, 261, 263/264 15
  - Printmaking: ART 131/132/133 (2 of 3); 231/232/233 (1 of 3); 331 14
  - Sculpture: ART 141, 241, 341, 342 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance. Students must file an approved "area of concentration" form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 200 or 300 level, a minimum of two "out of college" studio electives (OCE studio) of 3–4 credits each, ART 481 Pre-Thesis in Combined Media and ART 482 Thesis in Combined Media.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Bachelor of Fine Arts Degree Requirements Credits and Distribution The B.F.A. degree requires 130 academic credits. A minimum of 59 are taken in the Department of Art.

Curriculum Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

Specific Course Requirements By the end of the second year, students must have completed an introductory course in
A candidate for the B.F.A. degree at Cornell is required to spend the last two semesters of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two semesters.

Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

For those students matriculating in fall of 2007:

Students are required to take AAP 111 The World We Make; ART 111 Introductory Art Seminar; ART 121 Introductory Painting; Art 151 Drawing I; ART 141 Introductory Sculpture; Art History elective; and a first-year writing seminar during the fall semester of the freshman year. ART 131/132/133 Introductory Printmaking; Art 152 Drawing II; Art History elective; and an additional first-year writing seminar must be taken during the spring semester of the freshman year. Two 300-level courses in theory and criticism must be taken sometime between the sophomore and senior years.

Courses that will fulfill the theory and criticism requirement (Note: Offerings may vary from year to year. Check the current course catalog):

- ARCH 447
- ART 170
- ART 311
- ART 312 (Rome students only)
- ART H 367, 370, 377, 422, 463, 464, 466, 494, 571, 594
- ENGL 395
- GERST 660
- GOVT 375
- AS&RC 304, 503
- ANTHR 320, 322, 453
- THETR 376

The M.F.A. Program
The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs. Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar (ART 611, 612, 623, 624). Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art or for their major and/or undergraduate study. Undergraduate course work to be applied toward this requirement will be evaluated by the director of graduate studies. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work, completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information
Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

Guidelines for Independent Study
A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

Courses in Theory and Criticism

**AAP 111(1101) The World We Make**
Fall and spring. 1 credit. S-U grades. Staff. For description, see p. 126.

**ART 111(1101) Introductory Art Seminar**
Fall. 1 credit. Permission: B.F.A. students. S-U grades only. Staff. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

**ART 170(1700) Visual Imaging in the Electronic Age**
Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, and artistic practice, including digital art, cyber-feminism, globalization, museums, and museology, architecture and environment is a key element.

**ART 209(2009) Site-Specific Processes**

**ART 214(2104) Art and the Multicultural Experience**
Fall. 3 credits. R. Dalton. Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

**ART 311(3101) Issues in Contemporary Art**
Fall or spring. Lab fee: $35. Staff. Students will be exposed to the ideas, issues, and methods of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course combines lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and in encouraging understanding of the connections between the conceptual and the technical in art making.

**ART 312(3102) Modern Art in Italy**
Fall or spring. 3 credits. Staff. Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting.

**ART 317(3107) History of Art in Rome: Early Christian to the Baroque Age**
4 credits. Rome Program. Not offered every year. Staff. General survey of the early Christian period to the fantastic vision of Piranesi in the 18th century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

**ART 318(3108) History of Art in Rome: Renaissance in Rome and Florence**
Not offered every year. Staff. Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

**ART 419(4109) Independent Study/Supervised Readings in Art**
Fall, spring, or summer. 4 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

Graduate Studio and Theory Courses

**ART 570(5700) Theory Seminar**
Fall and spring. 4 credits. Priority given to AAP and History of Art graduate students. Staff. Introduces students to art, art history, and architecture to diverse theoretical texts of relevance to the three fields. Readings include classic texts in post-structural theory and more recent writings in new areas of theory and artistic practice, including digital art, cyber-feminism, globalization, museums and museology, architecture in/as visual space, biotechnology and artificial life, as well as issues in cognitive science and human-computer interaction and space and embodiment. Occasionally this seminar focuses on a single topic of convergence for these diverse areas.

**ART 611(6101) Professional Skills for the Visual Artist**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. This seminar helps fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

**ART 612(6102) Recent Practice in the Visual Arts**
Fall. 3 credits. Prerequisite: M.F.A. students. Staff. This seminar is designed to provide graduate students with an overview of recent visual artwork. Students study work from a wide range of artists who have received significant recognition within the visual arts community.
Reviews of major exhibitions such as "Documenta," "La Biennale di Venezia," and the "Whitney Biennial" are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

**ART 613(6103) Online Publication for the Visual Artist**
Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally each student learns to create a home page on the web.

**ART 614(6104) Contemporary Theory in the Visual Arts**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 623(6203) Contemporary Theory and Visual Culture**
Fall. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar exploring selected writings on current issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

**ART 624(6204) Current Criticism in the Visual Arts**
Spring. 3 credits. Prerequisite: M.F.A. students. Staff.
Seminar designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

**Graduate Studio Courses**

**ART 701-702(7010-7020) Graduate Studio I and II**
Fall, 701; spring, 702. 9 credits. Prerequisite: first-year MFA students. Staff. Required for all MFA students. Course instructor is the chair of student's Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

**ART 801-802(8010-8020) Graduate Studio III and IV**
Fall, 801. Spring, 802. Second-year MFA students. 9 credits. Staff. Required for all MFA students. Course instructor is the chair of student's Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

**Undergraduate Studio Courses in Drawing**

<table>
<thead>
<tr>
<th>Course</th>
<th>Fees for all drawing courses: $25</th>
</tr>
</thead>
<tbody>
<tr>
<td>ART 151(1501) Drawing I</td>
<td>Fall, spring. 3 credits. Staff. General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.</td>
</tr>
<tr>
<td>ART 152(1502) Drawing II</td>
<td>Spring. 3 credits. Prerequisite: ART 151. Staff. General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 151 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.</td>
</tr>
<tr>
<td>ART 158(1508) Conceptual Drawing</td>
<td>Summer, six-week session. 3 credits. Staff. Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.</td>
</tr>
<tr>
<td>ART 159(1509) Life and Still-Life Drawing</td>
<td>Summer, six-week session. 3 credits. Staff. Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.</td>
</tr>
<tr>
<td>ART 251(2501) Drawing III</td>
<td>Fall. 3 credits. Prerequisite: ART 152. Staff. Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Emphasis is on critical, conceptualization, and the exploration of materials are stressed.</td>
</tr>
<tr>
<td>ART 252(2502) Advanced Drawing Workshop</td>
<td>Fall or spring. 3 credits. Prerequisite: ART 251. Corequisite: BFA pre-thesis studio. Staff. This advanced studio workshop focuses on the use of drawing for the development and refinement of complex visual expression. Using both traditional and nontraditional drawing approaches, students work to clarify their conceptual concerns and develop a pertinent visual vocabulary. This course begins with assignments structured to identify the conceptual and formal considerations central to each student's individual artistic intentions. Once identified, these artistic intentions become the basis for a rigorous investigation. The resulting body of work informs and supports advanced thesis work across the visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.</td>

**Undergraduate Studio Courses in Electronic Imaging**

<table>
<thead>
<tr>
<th>Course</th>
<th>Fees</th>
</tr>
</thead>
<tbody>
<tr>
<td>ART 234(2304) Large-Format Digital Printing</td>
<td>Fall and spring. 4 credits. Prerequisite: ART 171. Staff. Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, Quarkxpress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.</td>
</tr>
<tr>
<td>ART 271(2701) Electronic Imaging in Art</td>
<td>Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff. Focuses on techniques of computer animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.</td>
</tr>
<tr>
<td>ART 272(2702) Digital Video and Sound</td>
<td>Fall or spring. 4 credits. Prerequisite: ART 171. Not offered every year. Staff. Studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.</td>
</tr>
</tbody>
</table>
| ART 273(2703) Computer Animation (also CIS 565[5640]) | Fall. 4 credits. D. Greenberg. Focuses on techniques of computer animation. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material
ART 373(3703) Advanced Projects in Time-Based Art
Fall. 4 credits. Prerequisites: ART 170 and one of the following: ART 272, 273, 254 or permission of instructor. Letter grades only. Staff.
This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key frame-based animation, layered animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public spaces.

ART 374(3704) Interactive Digital Media
Spring. 4 credits. Prerequisites: ART 171 and one of the following: ART 272, 273, 234 or permission of instructor. Letter grades only. Staff.
This is a project-centered studio course designed to encourage students to integrate computer-aided and time-based media (video, sound, motion graphics, and text) using physical materials and space. The course will challenge students to develop a theoretical understanding of the relationship between body and technology in a social and cultural context. Students will use digital technologies to create projects using interactive CD-ROM/web art, sensor and micro-controller aided interactive video and sound installations, real-time performance, and public space. The course encourages integrative approaches to studio production.

ART 471(4701) Pre-Thesis in Electronic Imaging
Fall and spring, 6 credits. Prerequisites: ART 171, 234 or 271, 272 or 273, 373 or 374. Staff.
For information, please call department.

ART 472(4702) Thesis in Electronic Imaging
Fall and spring, 6 credits. Prerequisite: ART 471. Staff.
For information, please call department.

Undergraduate Studio Courses in Painting

Fees for painting courses (121, 221, 321, 322, 421, 422, 429): $40

ART 121(1201) Introductory Painting
Fall, spring, or summer, 3 credits. Staff. Studies the language of painting through color, form, materials, and techniques.
Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 221(2201) Painting II
Fall or spring, 4 credits. Prerequisite: ART 121 or permission of instructor. Staff.
Continuation of the study of aspects of pictorial composition initiated in ART 121, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 321(3201) Painting III
Fall or spring, 4 credits. Prerequisite: ART 221 or permission of instructor. Staff. Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 322(3202) Painting IV
Fall or spring, 4 credits. Prerequisite: ART 321 or permission of instructor. Staff. Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 421(4201) Pre-Thesis in Painting
Fall or spring, 6 credits. Prerequisite: ART 322. Staff.
Advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

ART 422(4202) Thesis in Painting
Fall or spring, 6 credits. Prerequisite: ART 421. Staff.
Focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the semester.

ART 429(4209) Independent Studio in Painting
Fall, spring, or summer, 4 credits, variable. Prerequisites: juniors in good academic standing and permission of instructor. Staff.
Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

Undergraduate Studio Courses in Photography

Darkroom fees for photography courses:
- Black-and-white courses: $135
- Color courses: $215
- Additional black-and-white course taken the same semester: $55
- Additional color course taken the same semester: $135

ART 161(1601) Pre-Thesis in Photography
Fall, spring, or summer, 3 credits. Prerequisite: ART 170 or ARCH 251, or permission of instructor. Staff.
Independent studio in photography that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

ART 169(1609) Color Photography
Summer, three-week session only. 3 credits. Staff.
Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261(2601) Photography I
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
Continuation of Photography I, concentrating on black-and-white photographic processes, history and theory of creative practice, and individual projects.

ART 263(2603) Color Photography
Fall and summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
Studies course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264(2604) Photo Processes
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
Studies course in alternative and nonsilver photographic processes. Emphasis is on camera skills, basic techniques and processes, image content, and creative use of photo processes.

ART 265(2605) Studio Photography
Fall or spring, 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. Staff.
Course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 361(3601) Photography III
Fall, spring, or summer, 4 credits. Prerequisite: ART 161, 261, or permission of instructor. Staff.
Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461(4601) Pre-Thesis in Photography
Fall or spring, 6 credits. Prerequisite: ART 261, 263. Staff.
Studio course intended for photography majors and other qualified students.

ART 462(4602) Thesis in Photography
Fall or spring, 6 credits. Prerequisite: ART 461. Staff.
Studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 469(4609) Independent Studio in Photography
Fall, spring, or summer, 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in photography that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
Fees for printmaking courses:

**ART 131(1301) Introductory Intaglio**
Fall and spring. 3 credits. Staff. Basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 132(1302) Introductory Graphics**
Fall and spring. 3 credits. Staff. Introduces the two-dimensional thought process and the language of vision. Students explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

**ART 133(1303) Introductory Lithography**
Fall and spring. 3 credits. Staff. Study of the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of擦版, wash, and transfer drawing are studied.

**ART 134(1304) Expanded Print Forms**
Spring. 3 credits. Prerequisite: one of the following: ART 131, 132, 133, 161, 171, 251, or permission of instructor. Staff. Intensive experimental studio designed to introduce students to various ideas and processes of making artists' books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography/ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital publication as an expanded print form helps students investigate how the book is reinvented or reshaped within an electronic context.

**ART 231(2301) Intaglio II**
Spring. 4 credits. Prerequisite: ART 131. Staff. Studio course in advanced etching techniques. Refinement of processes and ideas through the uses of àquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

**ART 232(2302) Advanced Screen Printing**
Spring. 4 credits. Prerequisite: ART 133. Staff. Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photo lithography using kodakith and computer-generated transparencies.

**ART 233(2303) Lithography II**
Spring. 4 credits. Prerequisite: ART 131. Staff. Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 234(2304) Large-Format Digital Printing**
Fall and spring. 4 credits. Prerequisites: ART 161, 171, and one of the following: ART 131, 132, 133, 134 or permission of instructor. Staff. Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfer, and photo mechanical processes. Students use appropriate software, including Adobe Photoshop, Quarkxpress, Final Cut Pro, and Adobe illustrator to draw from both still and video base sources. Students work with large format inkjet printers.

**ART 331(3301) Printmaking III**
Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Staff. Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 332(3302) Printmaking IV**
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Staff. Continuation and expansion of ART 331.

**ART 431(4301) Pre-Thesis in Printmaking**
Fall or spring. 6 credits. Prerequisite: ART 332. Staff. Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 432(4302) Thesis in Printmaking**
Fall or spring. 6 credits. Prerequisite: ART 431. Staff. Advanced printmaking project to demonstrate creative ability and technical proficiency.

**ART 439(4309) Independent Studio in Printmaking**
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in printmaking that allows the student the opportunity to pursue special interest not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**ART 731-732(7301-7302), 831-832(8301-8302)**
Graduate Printmaking

**ART 741-742(7401-7402), 841-842(8401-8402) Graduate Sculpture**

Fees for sculpture courses:

**ART 141(1401) Introductory Sculpture**
Fall, spring, or summer. 3 credits. Staff. Series of studio programs introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

**ART 241(2401) Sculpture II**
Fall or spring. 4 credits. Prerequisite: ART 141 or architecture design studio, or permission of instructor. Staff. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze-casting foundry.

**ART 341(3401) Sculpture III**
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Staff. Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

**ART 342(3402) Sculpture IV**
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Staff. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 441(4401) Pre-Thesis in Sculpture**
Fall or spring. 6 credits. Prerequisite: ART 432. Staff. Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through bimonthly group discussions and individual criticism. Students complete a body of work through an approved statement of purpose and proposed schedule.

**ART 442(4402) Thesis in Sculpture**
Fall or spring. 6 credits. Prerequisite: ART 441. Staff. Advanced sculpture project to demonstrate creative ability and technical proficiency culminating in a cohesive B.F.A. thesis exhibition.

**ART 449(4409) Independent Studio in Sculpture**
Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate their results.

**ART 741-742(7401-7402), 841-842(8401-8402) Graduate Sculpture**

Fees for sculpture courses:

**ART 141: $50**
241, 341, 342, 343, 441, 442: $75

**ART 441(1401) Introductory Sculpture**
Fall, spring, or summer. 3 credits. Staff. Series of studio programs introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Special Studio Courses

ART 109(1109) Internship Practicum
Fall, spring, and summer. Variable credit. S-U grades only. Students serving as interns with art-related businesses or institutions may receive 1 academic credit upon receipt of a letter from the internship sponsor confirming successful performance of internship responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements.

ART 155(1550) Drawing Rome
Winter. 3 credits. Letter grades only. The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome: its public spaces, churches, museums, archaeological zones, and the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done on site. This course is scheduled to be taught initially during the Summer 2006 Art Studio and Creative Writing Workshop in Rome. Course meets four weeks, 5X per week.

ART 372(3702) Special Topics in Art Studio
Fall, spring, or summer. 4 credits, variable. Exploration of a particular theme or project.

ART 372.20(3702.20) Special Topics in Art History
Spring. 4 credits, variable. Prerequisite: Rome Program participants. Staff. Topic TBA.

ART 378(3709) Independent Studio in Rome
Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; junior in good academic standing and written permission of instructor. Staff. Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 389.30(3809.30) Independent Study/Cornell in NYC
Fall, spring, or summer. 4 credits variable. Prerequisite: student in good academic standing and written permission of instructor on an approved independent study form. Staff. Independent study or studio allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 391(3901) Media Arts Studio I (also ARCH 459/659/4509/6509; FILM/ DANCE 391(3910))
Fall. 3 credits. Prerequisites: FILM 277 or 377; junior standing and permission of instructor. Lab fee: $50. Staff. For description, see FILM 391.

ART 392(3902) Media Arts Studio II

ART 400(4000) Rome Studio
Fall or spring. 4 credits. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Lab fee: $60; additional fees for photography and printmaking. Staff. Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

ART 479(4709) Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 481(4801) Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in pre-thesis course in their primary area of concentration. Lab fee: $70. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482(4802) Thesis in Combined Media
Fall or spring. 6 credits. Prerequisites: ART 481 and written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in thesis course in their primary area of concentration. Lab fee: $70. Staff. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489(4808) Independent Studio in Combined Media
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Lab fee: $70. Staff. An independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a bachelor of science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Advanced Placement Credit

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences or in the groups Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR) currently utilized by the College of Arts and Sciences, provided that they must complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences.
(SBA). Grades of S-U courses cannot be applied to the distribution requirements. **Basic Degree Requirements for students in the graduating classes of 2007-2009** URS requirements for graduation include (a) eight semesters of residence; (b) 120 credits; (c) General Education Requirements consisting of writing seminars, qualification in one foreign language, and a series of distribution requirements; (d) required courses for the major; (e) area requirements for the major; (f) free electives; (g) a minimum of 34 courses; and (h) completion of the university requirement of two 1-credit nonacademic courses in physical education. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement. More specifically these requirements include:

1. **General Education**
   a. First-year writing seminars: two courses. Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.
   b. Foreign language: three courses or qualification in one foreign language.
   c. Distribution Requirements: nine courses. Students must take a total of nine courses for the distribution requirement: four courses (of 3 or more credits each) from Groups 1 and 2 specified below, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4 specified below, at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow previously established College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

   **Group 1: Physical and biological sciences**
   (two to three courses required)

   **Group 2: Quantitative and formal reasoning**
   (one to two courses required)

   **Group 3: Social sciences and history**
   (two to three courses required)

   **Group 4: Humanities and the arts**
   (two to three courses required)

   URS students will be provided a complete listing of courses in Groups 1 through 4 based on requirements previously established for the College of Arts and Sciences. Note: The Arts and Science distribution requirement was changed for entering freshmen in the class of 2007. Rather than selecting courses from Groups 3 and 4, Arts and Sciences students are required to complete five courses in at least four of the following five categories: Cultural Analysis (CA), Historical Analysis (HA), Knowledge, Cognition, and Moral Reasoning (KCM), Literature and the Arts (LA), and Social and Behavioral Analysis (SBA). Social science and humanities courses are marked individually by category, and any given department may offer courses that fall into distinct categories. URS students are encouraged to select their Group 3 and Group 4 courses from four of these five categories.

   URS students may not apply college credit earned before entering Cornell as a freshman to satisfy any distribution course requirement. However, they may petition to have that credit counted toward the 120 total credits required for graduation.

2. **Required Courses for the Major: seven courses**
   CRP 100 The American City (fall, 3 credits)
   CRP 101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)
   CRP 106 URS First-Year Seminar (spring, 1 credit)
   CRP 200 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
   CRP 201 People, Planning and Politics in the City (spring, 3 credits)
   ECON 101 Microeconomics (fall or spring, 3 credits)

3. **Area Requirements: six CRP courses**
   a. Design and Land Use (one course from designated list of courses)
   b. Urban History, Society, and Politics (one course from designated list of courses)
   c. Environment (one course from designated list of courses)
   d. Regional Development and Globalization (one course from designated list of courses)
   e. Methods for Planning and Urban Studies (one course in Qualitative/Field Methods from designated list of courses)
   f. Methods for Planning and Urban Studies (one course in Quantitative Methods from designated list of courses)

   **Basic Degree Requirements for students in the graduating class of 2010**

   Students in the Class of 2010 must meet the same requirements as those specified for the classes of 2007-2009 except that they must also complete AAP 111 The World We Make (fall, 1 credit) under required courses for the major.

   **Basic Degree Requirements for students in the graduating classes of 2011 and beyond**

   Students in the classes of 2011 and beyond must meet the same requirements as those specified for the class of 2010 except that they must complete their Distribution Requirements (under General Education Requirements) in accord with the Distribution Requirements established for the College of Arts and Sciences: i.e., requirements specifying minimum number of courses and acceptable courses in Physical and Biological Sciences (PBS), Mathematics and Quantitative Reasoning (MQR), Cultural Analysis (CA), Historical Analysis (HA), Knowledge, Cognition, and Moral Reasoning (KCM), Literature and the Arts (LA), and Social and Behavioral Analysis (SBA).

   - Nine (9) credits of required core courses:
     CRP 100 The American City (3 credits)
     CRP 101 The Global City: People, Production, and Planning in the Third World (3 credits)
     CRP 200 The Promise and Pitfalls of Contemporary Planning (3 credits)
   - Nine (9) credits of elective department courses at the 300 level or higher.

   **Honors Program**
   Each year a few well-qualified juniors may join the honors program. Each honoree develops and writes an honors thesis under the guidance of his or her faculty advisor.

   **Urban Studies Concentration (non-URS majors)**
   The Urban and Regional Studies concentration has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

   To complete the Urban and Regional Studies (URS) concentration, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above, as follows:

   1. Nine (9) credits of required core courses:
      CRP 100 The American City (3 credits)
      CRP 101 The Global City: People, Production, and Planning in the Third World (3 credits)
      CRP 200 The Promise and Pitfalls of Contemporary Planning (3 credits)
   2. Nine (9) credits of elective department courses at the 300 level or higher.

   **Off-Campus Opportunities**
   Cornell in Washington Program. Students in good standing may earn degree credits in the Cornell in Washington Program through coursework and an off-campus externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the policy process and public policy. Students also select one or two other seminars from such fields as government,
these seminars, which provide credit toward architectural history, natural resources, and experience of living and learning in a foreign country. The department encourages students to explore these opportunities.

Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad programs are continually being developed, and programs are available in many countries. The department encourages URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome, Italy. Students in good standing can earn degree credits through courses taken with Cornell faculty members assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and planning. Interested URS students are urged to contact the College of Architecture, Art, and Planning for further information. A similar degree option is available from the College of Agriculture and Life Sciences.

URS students to explore these opportunities. Cornell Abroad. Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad programs are continually being developed, and programs are available in many countries. The department encourages URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome, Italy. Students in good standing can earn degree credits through courses taken with Cornell faculty members assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and planning. Interested URS students are urged to contact the College of Architecture, Art, and Planning for further information. A similar degree option is available from the College of Agriculture and Life Sciences.

Additional Degree Options
Linked degree options. Urban and regional studies students may earn both a bachelor of science degree and a master of regional planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual-degree options. A student accepted in Cornell's College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual-degree program. Cornell students interested in pursuing the dual-degree program should contact the department at the beginning of each semester according to the information that follows.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application. Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of admission. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14853-4488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation. Prospective transfer students should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply. Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may consult Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.

The Graduate Program in City and Regional Planning
There are five graduate degree programs in the city and regional planning department. The master of regional planning program (M.R.P.) stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. The master of professional studies of international development (M.P.S./I.D.) degree is administered jointly with the College of Agriculture and Life Sciences.

The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage. The master of science (M.S.) or master of arts (M.A.) degrees in regional science is the study of regional economics, politics, and cultural interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

Off-Campus Opportunities
Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies
CRP 100(1100) The American City Fall. 3 credits. S-S.1 or letter grades for out-of-department students only. W. W. Goldsmith. Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.
CRP 101(1101) The Global City: People, Production, and Planning in the Third World  
Spring. 3 credits. S-U or letter grades for out-of-department students only. N. Kadva.  
Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 106(1106) URS First-Year Seminar  
Spring. 1 credit. S-U grades only. N. Kadva.  
Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

Fall. 3 credits. Prerequisite: CRP 100. K. Reardon.  
Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 201(2010) People, Planning, and Politics in the City  
Spring. 3 credits. Prerequisites: CRP 100 and 101. J. Forester.  
Seminar examining various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and other questions.

CRP 261(2610) Fieldwork in Urban Archaeology (also LA 261[2610])  
Fall. 4 credits. S. Baughn.  
For description, see LA 261.

CRP 293(2930) Inequality, Diversity, and Justice (also GOVT 293[2935], SOC 293[2930], PHIL 193[1930])  
Fall. 4 credits. R. Miller.  
For description, see PHIL 193.

CRP 309(3090) Community Development Seminar (also CRP 509[5090])  
Spring. 3 credits. Letter grades. K. Reardon.  
Introduction to the theory, method, and practice of contemporary community development. Topics include: the role of community-based organizations in the planning profession; the planning profession in addressing different challenges facing contemporary planners; and the interaction between community-based organizations and the local government.

CRP 318(3180) Politics of Community Development (also CRP 518[5180])  
Spring. 3 credits. Letter grades. Staff.  
Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 321(3210) Introduction to Quantitative Methods for the Analysis of Public Policy  
Spring. 3 credits. Not offered every year. Staff.  
Introduction to the role and use of quantitative methods in the study of urban and regional issues. Focuses on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also considered.

CRP 327(3270) Regional Economical Impact Analysis (also CRP 627[6270])  
Fall. 3 credits. Letter grades. Staff.  
A central concern of practicing planners and economic development professionals is how different events affect the regional economy of concern. Some events are the result of policy choices, such as the closing of a military base or an increase in the local sales tax. Some are the result of exogenous economic forces such as out-migration of population, disasters, natural-floods and hurricanes. This course defines the context, a regional economy, for such analysis, and then presents analytical tools for estimating economic impacts. The major tool covered in depth is regional input-output. Most of the course is devoted to understanding and applying IMPLAN, a software and data system for performing regional input-output analysis at the county level.

CRP 328(3280) Overview: Quantitative Methods in Policy Planning (also CRP 528[5280])  
Fall or spring. 3 credits. S-U or letter grades. Staff.  
Introduces students to the basic tools that are used in policy analysis. The goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

CRP 330(3300) Neighborhood Planning Workshop (also CRP 530[5300])  
Spring. 4 credits. Letter grades. K. Reardon.  
Offers students the opportunity to collaborate with local residents, leaders, and officials in the development of revitalization plans that address the critical environmental, economic, and social challenges confronting their neighborhoods. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

CRP 331(3310) Social Justice and the City: Preparation for Urban Fieldwork  
Spring. 3 credits. Prerequisite: Urban Scholar status or permission of instructor. Letter grades only. R. Kiely.  
Students are introduced to the sociological, economic, historical, and cultural issues of urban America. Topics include: urban realities and micro and macro policies affecting housing, education, immigration, health, legislation, legal affairs, community development, and organizing in a large urban setting. In preparation for field-based learning and research experiences, the challenges of experimental education, public scholarship, and reflective practice will also be addressed.

CRP 332(3320) Post-fieldwork Writing Seminar in Urban Policy (also CRP 522[5220])  
Fall. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Semester. Programs or permission of instructor(s). S-U or letter grades. R. Kiely.  
Designed to enhance students' research, writing, analytical, and organizational skills for producing policy-oriented articles that examine vital issues confronting the urban poor. Students will build on prior fieldwork with nonprofit organizations and public agencies.

CRP 343(3430) Affordable Housing Policy and Programs (also CRP 643[6430])  
Fall. 3 credits. S-U or letter grades. R. Pendall.  
Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers, rental assistance, housing choice, and much more. Lectures, debates, short papers, and term paper.

CRP 354(3540) Introduction to Environmental Planning (also CRP 554[5540])  
Fall. 3 credits. S. Schmidt.  
Introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying, and risk analysis.

CRP 360(3600) Pre-Industrial Cities and Towns of North America (also LA 260[2600]/LA 266[2600], CRP 666[6660])  
Fall or spring. 3 credits. Prerequisite permission of instructor. M. Tomlan.
American city. Emphasizes factors in urban reform movement, and intellectual and growth, the process of urbanization, the CRP 365(3650) Gender and Globalization (also FGSS 360[3600])

Fall. 3 credits. J. J. Atti.

For description, see FGSS 360.

CRP 368(3860) The History of Urban Form in America (also CRP 688[6880])

Fall or spring. 3 credits. Letter grades. M. Tomlan.

Covers the history of city planning in America from colonial times to the early 20th century, including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

CRP 370(3700) The Regional Question: The Case of Italy

Spring. 4 credits. Pre-requisite: Rho Program participants: majors in urban and regional studies. Staff.

The "regional problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy's integration into the European Union affects is considered and is affected by its regional issues will be considered.

CRP 372(3720) 20th-Century Italy: Politics and Society

Spring. 3 credits. S-U or letter grades for out-of-department students only. Staff.

Comprehensive survey of Italian society today, starting with Italy's geography and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community, small and large urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

CRP 376(3760) Latin American Cities (also CRP 678[6760])

Fall. 3 credits. B. Lynch.

This course offers students an opportunity to understand urban dynamics in a rapidly changing region of the world. We ask how colonial powers, the nation-state, and global economic forces have shaped Latin American urban landscapes and the patterns of daily life in the city. The first part of this course explores the social, political, and spatial rural-urban flows, socio-spatial segregation, housing environment and employment. The second half of the course focuses on responses to these social and economic transformations; violence and repression, coping strategies, social movement, and transmigration.

CRP 377(3770) The City in Brazil (also CRP 687[6870])

Summer. 3 credits. S-U or letter grades. W. Goldsmith.

Students are taught in Brazil by professors from Cornell and the Instituto de Pesquisa e Planejamento Urbano e Regional (IPURU), at the Federal University of Rio de Janeiro. Students will live in three Brazilian cities, on site with local scholars, top city officials, and activists. In Belém, at the mouth of the Amazon River, the focus is on the environment and development. In Brasília, the focus is on modernist planning of the new national capital with its signature Plano Piloto, the separation of satellite cities, and migration from the Brazilian Northeast. In Rio de Janeiro, the focus is on housing, transportation, and the informal economy in the context of metropolitan growth and decline.

CRP 378(3780) Recycling and Resource Management (also CRP 578[5780])

Spring. 3 credits. S-U or letter grades. Not offered every year. R. Young.

Advanced resource-recycling and management systems are critical to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed-loop resource-management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling-program development, the course provides students with comprehensive exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

CRP 380(3800) Environmental Politics

CRP 381(3810) Principles of Spatial Design and Aesthetics (also CRP 581[5810])

CRP 384(3840) Green Cities (also CRP 584[5840], LA 495[4950])

Fall. 4 credits. S-U or letter grades. Not offered every year. R. Young.

For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the theory and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economies are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

CRP 386(3860) Planning for Sustainable Transportation (also CRP 686[6860])

Spring. 3 credits. S-U or letter grades. Staff.

Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with auto-dominated systems, and key challenges to development sustainable transportation systems; and (3) looks at regulatory, design, and market-based approaches to reducing automobile dependency, introducing creative sustainable solutions from around the world.

CRP 390(3900) Professional Planning Colloquium (also CRP 790[7850])

Fall. 1 credit. Staff.

Visiting lecturers address problems and opportunities in the practice of planning. Students will investigate the structural changes taking place in the New York regional economy and the impact these changes have on the urban and regional structure of the city. This background information will be used to identify the major environmental, economic, and social policy issues.
confronting local civic leaders. Special attention will be given to policy questions that affect economic growth, income and wealth distribution among social groups, environmental sustainability, and citizen participation in policy-making.

CRP 395.05(3850) Remaking of New York City: Identity Formation, Image Making, and Community Building in the City's Newest Immigrant Communities
Fall. 3 credits. Letter grades only. Offered every semester. C. Beck.
Students will learn about the history, culture, politics, and social life of NYC's newest immigrant communities through an immersion in the contemporary art, poetry, stories, and dance being produced by its many residents. Weekly visits to the studios, galleries, and performance spaces of these communities will be a central aspect of this experientially based course.

CRP 395.09(3850) The Asian American Urban Experience: Past, Present, and Future (also CRP 629.09(5850), AAS 380(3800))
Fall. 3 credits. C. Lai.
The seminar examines the histories and geographies of urban Asian American communities. We begin with an introduction to key geographical terms and spatial theories and then use them to analyze different Asian ethnic communities throughout North America. This includes an investigation of 19th and early 20th-century segmented ethnic enclaves on the West Coast and the East Coast as well as an examination of postwar Asian American communities in suburbs.

CRP 395.14(3850) The Museum and the Public (also CRP 669.14(5850))
Spring. 3 credits. J. Chusid.
Evaluates different types of museums (art, science, history, arboretum etc), and their constantly evolving missions in contemporary societies. The material is addressed through site visits, lectures by faculty and guests, readings, and a team semester-long project. Issues covered include the nature of collections, the nature of the audience; the purpose and role of museums; political and cultural questions about collecting, public interpretation, governance and management; and the core ethical and intellectual values and positions implied or expressed by the institutions. Students will also undertake a comprehensive planning project for a local museum, to be presented to the client at the end of the semester.

CRP 395.17(3850) Property and Expropriation (also CRP 629.17(5850), AAS 394(3940))
Fall. 3 credits. C. Lai.
This seminar examines past and present day seizure of land, resources, and ways of life as well as resistance against such seizures. We begin with an examination of colonial conquest and the expropriation of the English commons in the 17th and 18th centuries and conclude with contemporary anti-globalization struggles against privatization. Our reading will come from social history, political geography, and ethnic studies.

CRP 395.18(3850) Suburbia (also CRP 659.18(5850))
Fall. 3 credits. Open to juniors, seniors, and graduate students. A. Forsyth.
Cultural commentators love to hate suburbia but the suburbs, with parts of metropolitan areas expanding around the globe. Readings, films, and lectures will cover topics including suburban history, design, planning, ecology, social organization, politics, and culture. Students will use photography, mapping, discussions, and brief papers to develop their own views of suburbia.

CRP 395.19(3850) Health and Cities (also CRP 659.19(5850))
Spring. 3 credits. Open to juniors, seniors, and graduate students. A. Forsyth.
Focusing on the relationship between planning, urban design, and public health, the course covers a range of issues facing urban areas, from water quality and social capital to physical activity. Readings, discussions, brief papers, and a community-based project will help students bridge the gap between the emerging research base on health and design and the realities of improving health in particular places and communities.

CRP 395.23(3850) Community Urban Design Workshop (also CRP 659.23(5850))
Spring. 4 credits. Open to upper-level undergraduates and graduate students. A. Forsyth.
Small area planning gives an opportunity to combine urban design techniques and participatory neighborhood planning approaches. Working with community residents and other stakeholders, students will create a physical plan that reflects community values and culture, planning and development realities, and local history and landscape. Course emphasizes communication and implementation. Significant fieldwork required.

CRP 395.24(3850) European Cities and Sustainable Development (also CRP 649.24(5850))
Spring. 3 credits. S. Schmidt.
This course will examine sustainable development as practiced in European cities and regions. Focus on how these initiatives and situations compare with the United States. Topics include: The historical and institutional context for sustainable urban development in Europe; land use, transportation; Green urban health; the course covers a range of issues facing urban areas, from water quality and social capital to physical activity. Readings, discussions, brief papers, and a community-based project will help students bridge the gap between the emerging research base on health and design and the realities of improving health in particular places and communities.

CRP 404(4040) Urban Economics (also CRP 504(5040))
Spring. 4 credits. Prerequisite: microeconomics course. K. Donaghy.
Analyzes urban phenomena from an economic point of view. View examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

CRP 408(4080) Introduction to Geographic Information Systems (GIS) (also CRP 508(5080))
Spring. 4 credits. S. Schmidt.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other fields such as government, economics, natural resources, and sociology. Some of the exercises covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 412(4120) Devolution, Privatization, and the New Public Management (also CRP 612(6120), AEM 433(4330)/633(6330), FGSS 411/611(4110/6110))
Fall. 4 credits. Prerequisite: ECON 101 or equivalent. S-U or letter grades. Offered every other year. M. Warner.
Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including exchange roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 416(4160) European City: The Public Sphere and Public Space
Spring. 4 credits, variable. Enrollment may be limited by instructor. Prerequisites: junior or senior standing. Rome Program participants. S-U or letter grades for nonmajors. Staff.
Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? How do publicservices do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhoods services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?
Addresses conceptual issues underlying social welfare provision, comparing the United States with other industrialized countries. The second part examines how economic change and government policy affect social provision in the United States.

CRP 448(4480) Social Policy and Social Welfare (also CRP 548[5480])
Spring. 4 credits. Not offered every year.
S. Christopherson
Addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different perspectives are reflected in a set of current social-welfare controversies. The first part of the course introduces principles that guide the development of social policy, including fairness and justice. Various conceptions of society are examined with reference to their influence on the nature and extent of social-welfare provision, comparing the United States with other industrialized countries.

CRP 449(4490) Student-Faculty Research
Fall or spring. 4 credits, variable.
Prerequisite: undergraduate in Urban and Regional Studies Program. S-U grades only.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 452(4520) Honors Thesis Research
Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been accepted as honors students by department faculty. Each selected student works with his or her thesis advisor.

CRP 453(4530) Environmental Aspects of International Urban Planning (also CRP 682[6830])
Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.
B. Lynch
This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

CRP 457(4570) Community Service Fieldwork
Fall or spring. 4 credits, variable.
Prerequisite: permission of instructor.
Staff.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

CRP 459(4590) Legal Aspects of Land Use Planning (also CRP 559[5590])
Spring. 4 credits.
R. Booth
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 474(4740) Urban Transformations in the Global South (also CRP 674[6740])
Fall or spring. 4 credits. S-U or letter grades. W. Goldsmith
Economic globalization and the post-colonial political order are continually reshaping urban societies and landscapes in the global South, often by relegating everyday life to the margins and shrouding it in illegality. This course focuses on the spatial, social, and political dimensions of urban transformations, paying particular attention to such topics as competition among cities for international capital and its implications for sociospatial organization; dynamic interrelations between informality in labor markets and in housing urban environmental challenges and municipal efforts to address them; and issues related to governance, social movements, and new formulation of citizenship.

CRP 477(4770) Issues in African Development (also CRP 677[6770])
Fall and spring. 1 credit. S-U grades only.
M. Ndulo
Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 490(4900) Professional Practice Seminar: New York City
Fall. 12 credits, variable. Offered in New York City. K. Reardon
Students will work with program faculty in devising a detailed learning plan that identifies the new knowledge, skills, and capacities they seek to gain through their New York City-based professional internship experience. Students will be placed in public, private, and non-profit organizations where they will engage in challenging professional activities designed to assist them in acquiring these new competencies. Students will participate in a weekly reflective seminar where they will systematically reflect upon their field-based learning experiences to prepare themselves to complete a detailed learning portfolio and capstone project through which they can demonstrate their mastery of the theoretical, conceptual, methodological, and policy content identified in their individualized learning plans.

CRP 497(4970) Independent Study
Fall or spring. 4 credits, variable.
Prerequisite: junior or senior standing; permission of instructor.
Staff.

Graduate Courses and Seminars
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upper-level undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504(5040) Urban Economics (also CRP 404[4040])
Spring. 4 credits. Not offered every year.
Prerequisite: microeconomics course.
K. Donaghy.
For description, see CRP 404.

CRP 508(5080) Introduction to Geographic Information Systems (GIS) (also CRP 408[4080])
Spring. 4 credits. S. Schmidt.
For description, see CRP 408.

CRP 509(5090) Community Development Seminar (also CRP 399[3990])
Spring. 3 credits.
K. Reardon.
For description, see CRP 399.

CRP 512(5120) Public and Spatial Economics for Planners
Spring. 3 credits. No prior knowledge of economics necessary.
I. Azis.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public/nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513(5130) Introduction to Planning Practice and History
Fall. 4 credits.
J. Forest
Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs.
Topics are analyzed from the perspective of the public economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 517(5170) Economic Development: Firms, Industries, and Regions (also CRP 417[4170])
Fall. 4 credits.
S. Christopherson.
For description, see CRP 417.
CRP 518(5180) Politics of Community Development (also CRP 318/3180)
Spring. 3 credits. P. Clavel.
For description, see CRP 318.

CRP 519(5190) Urban Theory and Spatial Development
Spring. 3 credits. W. Goldsmith.
Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 520(5200) Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. Not offered every year.
Introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

CRP 521(5210) Mathematical Foundation for Planning Analysis
Fall. 1 credit. Meets for two hours, once each week, for approximately half the semester. Prerequisite: permission of department. S-U grades only. Not offered every year.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis.

CRP 522(5220) Post-Fieldwork Writing Seminar in Urban Policy (also CRP 332/3320)
Spring. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Seminar. Programs or permission of instructor(s). S-U or letter grades. R. Kiely.
For description, see CRP 532.

CRP 523(5230) Quantitative Methods in Planning Analysis
Fall. 3 credits. D. Funk.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 524(5240) Land-Use Planning [CRP 523(5230)]
Spring. 3 credits. S-U or letter grades. Fee for case studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 525(5250) Real Estate Development Process Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 526(5260) Real Estate Marketing and Management Fall. 3 credits. R. Abrams.
Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 527(5270) Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.S.P./R.E. students. S-U grades only. D. Funk.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 528(5280) Overview: Quantitative Methods in Policy Planning (also CRP 328/3280)
Fall and spring. 3 credits. S-U or letter grades. Staff.
For description, see CRP 328.

CRP 529(5290) Mathematics for Planners
Fall. 4 credits. variable. S-U or letter grades. Not offered every year.
Covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include matrix algebra, set theory, functions, differentiation, and integration.

CRP 530(5300) Neighborhood Planning Workshop (also CRP 330/3300)
Spring. 4 credits. K. Reardon.
For description, see CRP 350.

CRP 532(5320) Real Estate Development Process
Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 533(5330) Real Estate Marketing and Management
Fall. 3 credits. R. Abrams.
Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 537(5370) Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S-U grades only. D. Funk.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 544(5440) Resource Management and Environmental Law (also CRP 444/4440, NTRES 444/4440)
Spring. 4 credits. R. Booth.
For description, see CRP 444.

CRP 546(5460) Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester.
Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547(5470) American Indians, Planners, and Public Policy (also CRP 363/3630, LA 263/264(2630/2640))
Spring. 4 credits. Not offered every year. S. Christopherson.
For description, see CRP 448.

CRP 551(5510) Environmental Law (also CRP 451/4510)

CRP 552(5520) Land-Use Planning
Fall. 3 credits. R. Pendall.
Covers surveys, analyses, and planning techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasizes residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553(5530) Land-Use Regulations
Spring. 3 credits. R. Pendall.
This seminar covers the essentials of "smart growth," zoning, and subdivision, and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 554(5540) Introduction to Environmental Planning (also CRP 354/3540)
Fall. 3 credits. S. Schmidt.
For description, see CRP 354.

CRP 555(5550) Urban Systems Studio (also LA 701/7010)
Fall. 5 credits. Prerequisite: permission of instructor. R. Trancik.
Application of urban design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical-design interventions involving the street, square, block, garden, and park systems. Topics include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital-design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 556(5560) Design in Real Estate Development
Spring. 3 credits. S-U or letter grades. H. Richardson.
Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 557(5570) City Planning Design Studio
Spring. 4 credits. Prerequisite: design courses or permission of instructor. Staff.
Series of individual and team small-area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558(5580) City and Regional Planning Workshop
Fall or spring. 4 credits. variable. S-U or letter grades. Staff.
CRP 559(5590) Legal Aspects of Land Use Planning (also 459(4590))
Spring. 4 credits. R. Booth. For description, see CRP 459.

CRP 560(5600) Documentation for Preservation
Fall. 3 credits. M. Tomlan. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561(5610) Historic Preservation Planning Workshop: Surveys and Analyses
Fall. 4 credits. Staff. Covers techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.

CRP 562(5620) Perspectives on Preservation
Fall. 3 credits. J. Chusid. Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563(5630) Problems in Contemporary Preservation Practice
Spring. Variable credit. J. Chusid. Review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564(5640) Building Materials Conservation
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Chusid. Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

CRP 565(5650) Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. Staff. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 566(5660) Planning and Preservation Practice
Fall. 1 credit. Prerequisite: graduate standing in CRP or M.P.S./R.E. or permission of instructors. S-U grades only. R. Pendall and M. Tomlan. Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large Eastern U.S. cities.

CRP 567(5670) Measured Drawing
Spring. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation. J. Chusid. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569(5690) Archaeology in Preservation Planning and Site Design (also LA 569(5690))
Spring. 3 credits. R. Young. For description, see CRP 378.

CRP 578(5780) Recycling and Resource Management (also CRP 378(3780))
Spring. 3 credits. S-U or letter grades. R. Young. For description, see CRP 378.

CRP 581(5810) Principles of Spatial Design and Aesthetics (also CRP 381(3810))
CRP 584(5840) Green Cities (also CRP 386(3860), LA 495(4950))
CRP 595(5950) Special Topics (also CRP 385(3850))
CRP 605(6050) Urban Public Finance
CRP 607(6070) GIS Applications Workshop
CRP 610(6100) Revolusion, Privatization, and the New Public Management (also CRP 412(4120), AEM 433/633(4330/6330), FGSS 411/611[4110/6110])
CRP 616(6160) Gender and International Development (also FGSS 614(6140))

The four main objectives are to (1) analyze the location of women in development processes and to understand the centrality of gender in each case; (2) examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity; (3) reflect upon the linkages between the global economy and the macro and micro processes of development from a gender perspective; and (4) provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 615(6150) Current Issues and Debates on NGOs
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. N. Kudva. This seminar examines a range of topics that are key to understanding NGO actions: their effectiveness at service provision, advocacy, their political role in constructing social capital and strengthening civil society; their relationship with the state and with donor agencies; and issues related to organizational design for success. The intention is to gain a broad-based understanding of the role and development of NGOs. The emphasis throughout will be to critically evaluate the literature, research, and accounts on NGOs as both institutional actors in the development arena and as bounded organizations at the local level: a task that is complicated by the heterogeneity of contexts and organizational types.

CRP 621(6210) Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. D. Lewis. Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 627(6270) Regional Economical Impact Analysis (also CRP 327(3270))
Fall. 3 credits. Letter grades. Staff. For description, see CRP 327.

CRP 629.09(5850) The Asian American Urban Experience: Past, Present, and Future (also CRP 395.09(3950), AAS 380(3800))
Fall. 3 credits. C. Lai. For description, see CRP 395.09.

CRP 629.17(5850) Property and Expropriation (also CRP 395.17(3950), AAS 395.17(3950))
Fall. 3 credits. C. Lai. For description, see CRP 395.17.

CRP 632(6320) Methods of Regional Science and Planning I
Spring. 4 credits, variable. Staff. Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.
CITY AND REGIONAL PLANNING

CRP 635(6350) Workshop: State Economic Development Strategies
Fall or spring. 4 credits. S-U or letter grades. S. Christopherson.
The purpose of the workshop is twofold: (1) to provide students with research tools useful in developing state-level economic-development strategies; and (2) to provide a critical understanding of the primary economic-development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

[CRP 637(6370) Regional Development Planning: An International Perspective]
[CRP 638(6380) Planning and the Global Knowledge Economy: Sustainability Issues]

CRP 642(6420) The Micro-Politics of Participatory Planning Practices
Spring. 4 credits, variable. J. Forester.
This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identity, historical trauma and working-through, and more. The approach taken can be called a "critical pragmatism." Practitioners' oral histories are used to investigate the challenges of participatory planning practices.

CRP 643(6430) Affordable Housing Policy and Programs (also CRP 343[3430])
Fall. 3 credits. S-U or letter grades. R. Pendall.
For description, see CRP 343.

CRP 649.24(6490) European Cities and Sustainable Development (also CRP 395.24[3850])
Spring. 3 credits. S. Schmidt.
For description, see CRP 395.24.

CRP 655(6550) Real Estate Project Workshop
Spring. 4 credits. Prerequisite: permission of instructor. Fee for mandatory field trip. D. Chiazza and H. Richardson.
Students are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field is addressed, including property feasibility, marketing, planning, design, and legal constraints and concerns. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 656(6560) Real Estate Transactions and Deal Structuring (also LAW 577[5772])
Spring. 3 credits. S-U or letter grades. D. Funk.
Real estate transactions and deal structuring will examine real estate deals through a practitioner's perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operations; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, analysis of financing techniques, and consequences when deals go bad, including workouts and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/developer, SPV, joint venture partner/investor, and owner. The course will include assignments and exercises where students analyze real estate transactions, prepare and negotiate documents, and present transactions and deals to review entities.

CRP 657(6570) Real Estate Law
Spring. 3 credits. Letter grades. A. Klaussner.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important housing considerations pertaining to property rights, contracts, and public controls on the use of land: Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 658(6580) Residential Development
Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson.
Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

CRP 659.18 (5850) Suburbs (also CRP 395.18 [3850])
Fall. 3 credits. Open to juniors, seniors, and grad students. A. Forsyth.
For description, see CRP 395.18.

CRP 659.19 (5858) Health and Cities (also CRP 395.19 [3850])
Spring. 3 credits. Open to juniors, seniors, and grad students. A. Forsyth.
For description, see CRP 395.19.

CRP 659.23 (5850) Community Urban Design Workshop (also CRP 395.23 [3850])
Spring. 4 credits. Open to upper-level undergrad/grads. A. Forsyth.
For description, see CRP 395.23.

CRP 661(6610) Seminar in American Urban History (also CRP 361[3610])
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.
For description, see CRP 361.

CRP 662(6620) Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 561. M. Tomlan.
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 663(6630) Historic Preservation Law
Spring. 3 credits. Offered alternate years. Staff.
Covers laws of historic district and landmark designation; tools for preservation (e.g., police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

CRP 664(6640) Economics and Financing of Neighborhood Conservation and Preservation
Spring. 3 credits. Offered every other year. Staff.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665(6650) Preservation Planning and Urban Change
Fall. 3 credits. M. Tomlan.
Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

[CRP 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360[3600], LA 360[3600], LA 260[2600], LA 6800[6800])]

CRP 668(6680) The History of Urban Form in America (also CRP 368[3680])
Fall or spring. 3 credits. M. Tomlan.
For description, see CRP 368.

CRP 669.14 (5850) The Museum and the Public (also CRP 395.14 [3850])
Fall. 3 credits. J. Chusid.
For description, see CRP 395.14.

CRP 670(6700) Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Staff.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671(6710) Seminar in International Planning
Spring. 1 credit. S-U or letter grades. W. Goldsmith.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief
evaluation of the series at the end of the semester.

CRP 672(6720) International Institutions
Spring. 3 credits. L. Beneria. Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 674(6740) Urban Transformations in the Global South (also CRP 474(4740))
Fall or spring. 4 credits. S-U or letter grades. W. Goldsmith. For description, see CRP 474.

CRP 675(6750) Workshop on Project Planning in Developing Countries
Fall. 4 credits. D. Lewis. Examines the problems and issues involved in preparing project proposals for presentation to and funding agencies. Topics include technical design, financial feasibility, social-impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 676(6760) Latin American Cities (also CRP 376(3760))
Fall. 3 credits. B. Lynch. For description, see CRP 376.

CRP 677(6770) Issues in African Development (also CRP 477(4770))
Fall or spring. 1 credit. S-U grades only. M. Ndulo. For description, see CRP 477.

CRP 683(6830) Environmental Aspects of International Urban Planning (also CRP 453(4530))
Fall. 4 credits. B. Lynch. For description, see CRP 453.

CRP 686(6860) Planning for Sustainable Transportation (also CRP 386(3860))
Spring. 3 credits. S-U or letter grades. W. Goldsmith. Staff. For description, see CRP 386.

CRP 687(6870) The City in Brazil (also CRP 377(3770))
Summer. 3 credits. Letter grades optional. W. Goldsmith. For description, see CRP 377.

CRP 689(6890) Sustainable Panama: An Interdisciplinary Workshop Course on the Future of the Panama Canal Metropolitan Landscape (also CRP 395(3950))
Winter. 4 credits. R. Trancik. For description, see CRP 395 (section 1).

CRP 689.09(6890) Strategic Conservation Planning Workshop
Fall. 4 credits. Graduate workshop open to juniors and seniors. O. Amundsen. Planners, natural resource specialists, and landscape architects are frequently called upon to create and implement land conservation plans. This interdisciplinary workshop course seeks to train the next generation of professionals in the theoretical frameworks, methods and techniques for undertaking regional land conservation planning efforts. As these planning efforts are highly individualized and technical, an applied approach will be taken with students working on an actual regional conservation plan for a client. The course links planning principles with the on-the-ground application of GIS technology, demographic analysis, land use planning, greenways development, and regulatory controls. The class will address the role of land conservation in communities facing social equity issues, wrestle with the complexities of public involvement in a planning process and debate the merits of voluntary programs vs. regulatory approaches to land conservation.

CRP 700(7050) Professional Planning Colloquium I (also CRP 390(3900))
Fall. 1 credit. Staff. For description, see CRP 390.

CRP 701(8910) Master's Thesis in Regional Science
Fall or spring. 12 credits, variable. S-U or letter grades. Hours TBA. Regional Science faculty. Staff.

CRP 702(8920) Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits. S-U or letter grades. Staff.

CRP 704(7940) Planning Internships
Fall, spring, or summer. 12 credits, variable. Staff.

CRP 705(8950) Master's Thesis in Preservation Planning
Fall or spring. 6 credits, variable. Staff.

CRP 706(7960) Professional Writing and Publishing (Colloquium)
Fall or spring. 2 credits. S-U grades only. Not offered every year. Staff. Individual and group projects culminating in the production of a professional journal.

CRP 707(7970) Graduate Independent Study
Fall or spring. 4 credits, variable. Prerequisites: graduate student standing, permission of instructor. Staff. For description, see department coordinator, 106 West Sibley Hall.

CRP 800(8000) Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. S. Christopherson. Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

CRP 801(8010) Advanced Seminar in Urban and Regional Theory II

CRP 830(8300) Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. 4 credits, variable. S-U grades only. Staff. Provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890(8900) Planning Research Seminar I
Fall or spring. 2 credits. Staff. Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892(9920) Doctoral Dissertation
Fall or spring. Variable. Staff.

Special Topic Courses
Fall or spring. Variable credit. Staff. Typical topics are:

CRP 609(6090) Urban and Regional Theory

CRP 619(6190) Planning Theory and Politics

CRP 629(6290) Quantitative Methods and Analysis

CRP 639(6390) Regional Development Planning

CRP 649(6490) Social-Policy Planning

CRP 659(6590) Urban Development Planning

CRP 669(6690) History and Preservation

CRP 679(6790) Planning and Developing Regions

CRP 689(6890) Environmental Planning

CRP 699(6990) Regional Science

CRP 719(7190) Planning Theory and Politics
LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 497, 524, and 525.

LA 141[1410] Grounding in Landscape Architecture
Fall. 4 credits.

LA 142[1420] Grounding in Landscape Architecture
Spring. 4 credits.

LA 201(2010) Medium of the Landscape
Fall. 5 credits.

LA 202(2020) Medium of the Landscape
Spring. 5 credits.

LA 215(2150) Writing Seminar: Engaging Places
Fall. 4 credits.

LA 252(2520) Daily Life in Ancient Israel
Spring. 3 credits.

LA 261(2610) Fieldwork in Urban Archaeology (also CRP 261[2610])
Fall. 4 credits.

LA 262(2620) Laboratory in Landscape Archaeology (also ARKEO 262[2620])
Spring. 3 credits.

LA 263(2630) American Indians, Planners, and Public Policy (also CRP 363/547[3630/5470], LA 547[5470])

LA 266(2660) Jerusalem through the Ages
Fall. 3 credits.

LA 282(2820) Photography and the American Landscape
Fall. 3 credits.

LA 301(3010) Integrating Theory and Practice I
Fall. 5 credits.

LA 315(3150) Site Engineering I
Spring. 3 credits.

LA 316(3160) Site Engineering II
Fall. 2 credits.

LA 318(3180) Site Construction
Spring. 5 credits.

LA 360(3600) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 666[6660])
Spring. 3 credits.

LA 401(4010) Advanced Synthesis: Project Design
Fall. 5 credits.

LA 402(4020) Integrating Theory and Practice II
Spring. 5 credits.

LA 403(4030) Directed Study: The Concentration (also LA 603[6030])
Fall or spring. 1 credit.

LA 410(4100) Computer Applications in Landscape Architecture
Fall or spring. 3 credits.

LA 412(4120) Professional Practice
Spring. 3 credits.

LA 418(4180) Audio Documentary: History/Stories from the Land
Spring. 3 credits.

LA 486(4860) Placemaking by Design: Theory Seminar
Fall. 3 credits.

LA 491(4910) Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 491[4910])
Fall. 4 credits.

Spring. 4 credits.

LA 494(4940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 495(4950) Green Cities (also CRP 384/584[3840/5840])
Fall. 4 credits.

LANAR 497(4970) Individual Study in Landscape Architecture
Spring. 1–5 credits; may be repeated for credit. S-U or letter grades. L. J. Mirin.

Work on special topics by individuals or small groups.

LA 498(4980) Undergraduate Teaching
Fall or spring. 1–2 credits.

LA 499(4990) Undergraduate Research
Fall or spring. 1–5 credits.

LA 501(5010) Composition and Theory
Fall. 5 credits.

LA 502(5020) Composition and Theory
Spring. 5 credits.

LA 505(5050) Graphic Communication I
Fall. 3 credits.

LA 506(5060) Graphic Communication II
Spring. 3 credits.

LANAR 524(5240) History of European Landscape Architecture
Fall. 3 credits. L. Mirin.

Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525(5250) History of American Landscape Architecture
Spring. 3 credits. L. Mirin.

Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

LA 545(5450) The Parks and Fora of Imperial Rome
Spring. 3 credits.

[LA 569(5690) Archaeology in Preservation Planning and Site Design (also CRP 569[5690])
Spring. 3 credits. Next offered 2008–2009.]

LA 580(5800) Landscape Preservation: Theory and Practice
Fall. 3 credits.

LA 582(5820) Photography and the American Landscape Architecture
Fall. 3 credits.

LA 590(5900) Theory Seminar
Fall. 3 credits.

LA 598(5980) Graduate Teaching
Fall or spring. 1–2 credits.

LA 601(6010) Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: graduate standing.
LA 602(6020) Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: Graduate standing.

LA 603(6030) Directed Study: The Concentration (also LA 403[4030])
Fall or spring. 1 credit.

LA 615(6150) Site Engineering I
Spring. 3 credits.

LA 616(6160) Site Engineering II
Fall. 2 credits.

LA 618(6180) Site Construction
Spring, weeks 8–15. 5 credits.

[LA 666(6660) Pre-Industrial Cities and Towns of North America (also CRP 360/666[3600/6660], LA 260[2600])]

LA 680(6800) Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits.

LA 694(6940) Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

LA 701(7010) Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555[5550])
Fall. 5 credits.

LA 702(7020) Advanced Design Studio
Spring. 5 credits.

LA 800(8000) Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.

FACULTY ROSTER
Ashkin, Michael, M.F.A., The School of the Art Inst. of Chicago. Asst. Prof., Art
Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning
Baugh, Sherene, Ph.D., SUNY, Stony Brook. Visitor, City and Regional Planning
Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning
Bertoia, Roberto, M.F.A., Southern Illinois U. Assoc. Prof., Art
Blum, Zevi, B. Arch., Cornell U. Prof. Emeritus, Art
Booth, Richard S., J.D., George Washington U. Prof., City and Regional Planning
Bowman, Stanley J., M.F.A., U. of New Mexico. Prof. Emeritus, Art
Chi, Lily H., Ph.D., McGill U. (Canada). Assoc. Prof., Architecture
Christopherson, Susan M., Ph.D., U. of California, Berkeley. Prof., City and Regional Planning
Chusid, Jeffrey, M.Arch., U. of California, Berkeley. Assoc. Prof., City and Regional Planning
Clavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning
Colby, Victor E., M.F.A., Cornell U. Prof. Emeritus, Art
Crump, Ralph W., B. Arch., Cornell U. Prof. Emeritus, Architecture
Cruvellier, Mark R., M.Eng., Ph.D., McGill U. (Canada). Assoc. Prof., Architecture
Curry, Milton S. F., M. Arch., Harvard U. Assoc. Prof., Architecture
Czarnianski, Stan, Ph.D., U. of Pennsylvania. Prof. Emeritus, City and Regional Planning
Dalton, Raymond, Ph.D., Purdue U. Sr. Lect., Art
Daly, Norman, M.A., Ohio State U. Prof. Emeritus, Art
Donaghy, Kiernan, Ph.D., Cornell U. Prof., City and Regional Planning
Drennan, Matthew P., Ph.D., New York U. Prof. Emeritus, City and Regional Planning
Forester, John, Ph.D., U. of California, Berkeley. Prof., City and Regional Planning
Forstyh, Ann, Ph.D., Cornell U. Prof. and City and Regional Planning
Goehner, Werner H., M. Arch., Cornell U. Prof., Architecture
Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning
Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture
Hascup, George E., B. Arch., U. of California, Berkeley. Prof., Architecture
Hubbell, Kent L., M.F.A.S., Yale U. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof. Emeritus, City and Regional Planning
Kiey, Richard, Ph.D., Cornell U. Visiting Asst. Prof., City and Regional Planning
Kord, Victor, M.F.A., Yale U. Prof. Emeritus, Art
Kudva, Neema, Ph.D., U. of California, Berkeley. Asst. Prof., City and Regional Planning
Lai, Clement, Ph.D., U. of California, Berkeley. Asst. Prof., City and Regional Planning
Lasansky, D. Medina, Ph.D., Brown U. Assoc. Prof., Architecture
Lewis, David B., Ph.D., Cornell U. Prof., City and Regional Planning
Locey, Jean N., M.F.A., Ohio U. Prof., Art
Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning
MacDougall, Bonnie G., Ph.D, Cornell U. Assoc. Prof., Architecture
Mikus, Eileen, M.A., U. of Denver. Prof. Emeritus, Art
Miller, John C., M. Arch., Cornell U. Prof. Emeritus, Architecture
Mostafavi, Mohsen, AADipl, Architectural Assoc., School of Arch., London (England)
Olpawala, Porus, Ph.D., Cornell U. Prof., City and Regional Planning
Ostendarrp, Carl, M.F.A., Yale School of Art
Otto, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M. Arch., Cornell U. Assoc. Prof., Architecture
Parn, Maria Y., M.F.A., San Francisco Art Inst. Asst. Prof., Art
Pearman, Charles W., B. Arch., U. of Michigan. Prof. Emeritus, Architecture
Pendall, Rolf, Ph.D., U. of California, Berkeley. Assoc. Prof., City and Regional Planning
Perles, Barry A., M.F.A., Ohio U. Assoc. Prof., Art
Poleskie, Stephen F., B.S., Wilkes Coll. Prof. Emeritus, Art
Reardon, Kenneth, Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Reps, John W., M.R.P., Cornell U. Prof. Emeritus, City and Regional Planning
Richardson, Henry W., M.R.P., Cornell U. Prof., Architecture
Saltzman, Sid, Ph.D., Cornell U. Prof. Emeritus, City and Regional Planning
Schacht, Marco L., M. Arch., Harvard U. Arthur L. and Isabel B. Wiesenherger Prof.
Emeritus, Architecture
Schmidt, Stephan, Ph.D., Rutgers U. Asst. Prof., City and Regional Planning
Shaw, John P., M. Arch., Massachusetts Inst. of Technology. Prof. Emeritus, Architecture
Simitch, Andrea, B. Arch., Cornell U. Assoc. Prof., Architecture
Spector, Buzz, M.F.A., U. of Chicago. Prof., Art
Squier, Jack L., M.F.A., Cornell U. Prof. Emeritus, Art
Stein, Stuart W., M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning

Warner, Mildred, M.S., Cornell U. Assoc. Prof., City and Regional Planning
Weiss, Jerry A., B. Arch., U. of Texas. Prof., Architecture
Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture
Zisswicic, John, M. Arch., Cornell U. Assoc. Prof., Architecture
The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by more than 15 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/?p=38.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.biology.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, lecture tapes, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole, Mass., or aboard the schooner Robert C. Seamans or brigantine Corwith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIO G 109–110, 105–106, or 101 and 103 plus 102 and 104, or 107–108.

For Students in the College of Arts and Sciences, all biology ("BIO") courses can be used toward fulfillment of the biological sciences distribution requirement. Please see the Arts and Sciences "Distribution Requirements" section of this catalog for further details. The following courses are especially suitable for the distribution requirement because they have no prerequisite: BIO G 101-104, 105-106, 107-108, 109-110, 176; BIOAP 212; BIOEE 154, 207, 275; BIOGD 184; BIOMI 192; BIONB 111; BIOPL 240, 241.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIO G 109–110, 101 and 103 plus 102 and 104, 105–106 or 107–108 or from specified courses in chemistry or physics. Switching between BIO G 109–110 and either BIO G 101–104 or 105–106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIO G 101–104 but allowed in BIO G 105–106.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86–23, revised 1996; see p. 7. Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253-3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor’s discretion, be asked to sign copies of this statement (USE OF ANIMALS . . . ) at the first meeting of the course.*

ADVANCED PLACEMENT

For information on credit for advanced placement in biological sciences, see wwwbiology.cornell.edu/advising/ap.html.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall. Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year.

Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology advisor and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U grades only or if the student's advisor grants permission.

1. Introductory biology for majors
   (one year): BIO G 101 and 103 plus 102 and 104, or 105–106. BIO G 107–108, offered during the eight-week Cornell summer session for 6 credits, also satisfies the introductory biology requirement for majors.

2. General chemistry: CHEM 207–208 or 215. Students who, via advanced placement, take only CHEM 208 or only 215 should be aware that some professional and graduate schools require 8 credits of general chemistry.
These students may wish to take both CHEM 215 and 228 or 215 and 216. Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.

3. College mathematics (one year): one semester of calculus (MATH 106, 111, 191, or their equivalents) plus one semester selected from the following:
   a. a second semester of calculus (MATH 112, 192, or their equivalents).
   b. a course in finite mathematics (MATH 105).
   c. a course in statistics (BTRY 301, MATH 171, AEM 210, ILR 212, PSYCH 350, PAM 210, ECON 319, ECON 321, SOC 301).

4. Organic chemistry: CHEM 257 and 258, or 357–358 and 301, or 359–360 and 251, or 359–360 and 301.

7. Biochemistry: BIOBM 330, or 331 and 332, or 333.

8. Evolutionary biology: BIOEE 278 or BIOPL 448. Note: BIOPL 241 Botany is a prerequisite course to BIOPL 448.

9. A program of study selected from the outline below.

Although not required for the biological sciences major, a course in statistics is recommended for all biology students. Students should consult their faculty advisors when choosing appropriate courses in statistics.

Note: Core courses cannot count toward the program of study requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology advisor. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (300 or higher). Because biology is an experimental science, most programs of study require one or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIO G 499). The possible programs of study and their requirements are listed below:

1. Animal Physiology: BIOAP 311
   Introductory Animal Physiology, BIOAP 316 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.
   a. Lecture courses: BEE 454 Physiological Engineering; AN SC 300 Animal Reproduction and Development; AN SC 410 Nutritional Physiology and Metabolism; AN SC 427 Fundamentals of Endocrinology; BFO G 305 Basic Immunology; BOPM 214 Biological Basis of Sex Differences; BIOAP 458 Mammalian Physiology; BIOAP 475 Mechanisms Underlying Mammalian Developmental Defects; BIOAP 489 Mammalian Embryology; BIOBM 407 Nature of Sensing and Response; Signal Transduction in Biological Systems; BIOBM 457 Eukaryotic Cell Proliferation; BIOBM 485 Developmental Biology; BIOGD 400 A Genomics Approach to Studying Life; BIOGD 401 Genomic Analysis; BIOGD 483 Molecular Aspects of Development; BIOGD 610 Genomes as Chromosomes; BIOGD 612 Overview of Model Genetic Organisms; BIONB 322 Hormones and Behavior; BIONB 325 Neurodegenerative-Molecular Aspects; BIONB 326 The Visual System; BIONB 492 Sensory Function, NS 331 Physiological and Biochemical Bases of Human Nutrition.
   b. Laboratory courses: BEE 454 Physiological Engineering; AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transmission Electron Microscopy for Biologists; BIOAP 413 Histology: The Biology of the Tissues; BIONB 319 Animal Physiology Laboratory; BIOBM 416 Cellular Physiology and Genomics Laboratory; BIOBM 440 Laboratory in Biochemistry and Molecular Biology; BIONB 491 Principles of Neurophysiology.

2. Biochemistry: BIOBM 440 Laboratory in Biochemistry and Molecular Biology; physical chemistry (CHEM 287–288 or 389–390 or 389–288); 6 credits of organic chemistry (CHEM 357–358 or CHEM 359–360); plus one of the following two alternatives. Students wanting to maximize their background in chemistry should take CHEM 300 Quantitative Chemistry and CHEM 301 Honors Experimental Chemistry I. Students wanting to gain further depth in biochemistry and related disciplines should take BIOBM 432 Survey of Cell Biology and either CHEM 300 Quantitative Chemistry and CHEM 252 Elementary Experimental Organic Chemistry. Students choosing the first alternative are encouraged to take BIOBM 452.

Notes:

- CHEM 288 is designed for biologists. Five hours of biochemistry are recommended (331 and 332, or 350 and 334 or 353 and 354). Students interested in graduate work in biochemistry should take PHYS 207-208 and should consider taking CHEM 389–390 and its prerequisites. They should be sure to complete CHEM 207–208 or 215–216 during their freshman year.

- Biology majors in the College of Agriculture and Life Sciences who select the biochemistry program are allowed to take up to 64 credit hours in the endowed colleges because of the high number of required endowed courses for this program of study.

3. Computational Biology: Computation has become essential to biological research. Genomic databases, protein databanks, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that are transforming almost all of biology.

Problems investigated by computational biologists include topics such as Chromosomes; BIOGD 385 Molecular Aspects of Development; BIOGD 610 Genomes as Chromosomes; BIOGD 612 Overview of Model Genetic Organisms; BIONB 322 Hormones and Behavior; BIONB 325 Neurodegenerative-Molecular Aspects; BIONB 326 The Visual System; BIONB 492 Sensory Function, NS 331 Physiological and Biochemical Bases of Human Nutrition.

b. Laboratory courses: BEE 454 Physiological Engineering; AN SC 301 Animal Reproduction and Development; BIO G 401 Introduction to Scanning Microscopy; BIO G 403 Transmission Electron Microscopy for Biologists; BIOAP 413 Histology: The Biology of the Tissues; BIONB 319 Animal Physiology Laboratory; BIOBM 416 Cellular Physiology and Genomics Laboratory; BIOBM 440 Laboratory in Biochemistry and Molecular Biology; BIONB 491 Principles of Neurophysiology.

Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional course work in mathematics and computer programming, a "bridging" course aimed at connecting biology to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in more rigorous courses in the physical and mathematical sciences and may wish to take additional courses in these areas.

Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is increasing demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems. The program is also an excellent preparation for graduate study in any area of biology or computational biology.
Required Courses for Program of Study in Computational Biology

a. One course in computer programming (CS 100 Introduction to Computer Programming or BEE 151 Introduction to Computing)

b. One additional course in mathematics (MATH 221 Linear Algebra and Calculus; or MATH 231 Linear Algebra; or MATH 294 Engineering Mathematics II; or MATH 420 Differential Equations and Dynamical Systems; or BTRY 408 Theory of Probability; or BTRY 421 Matrix Computation)

c. A bridging course, i.e., a course in mathematical modeling applied to biology, such as BIOL 322 Dynamic Models in Biology; BIOEE 460 Theoretical Ecology; CS 321/BIOBM 321, Numerical Methods in Computational Molecular Biology; BTRY 362 Introduction to Statistical Genomics and Bioinformatics; BTRY 494 Quantitative Genetics, or CS 428 Introduction to Computational Biophysics)

d. One course from the following list of advanced courses:

4. Ecology and Evolutionary Biology

BIOEE 261 Ecology and the Environment. Effective fall semester 2005, new students must also complete 10 credits from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list.

b. Organisms: BIOEE 274 The Vertebrates: Structure, Function, and Evolution; BIOEE 373 Biodiversity and Ecology of the Marine Invertebrates or BIOG 364 Marine Invertebrate Zoology; BIOEE 450 and 451 Mammalogy, lec and lab; BIOEE 470 and 472 Herpetology, lec and lab; BIOEE 475 Ornithology; BIOEE 476 Biology of Fishes; ENTOM 212 Insect Ecology; BIOPL 241 Introductory Botany; BIOPL 448 Plant Evolution and the Fossil Record; PL PA 309 Fungi; BIOG 449 Seaweeds, Plankton, and Seagrass.

c. Ecological and Evolutionary Processes: BIOEE 265 Field Ecology; BIOEE 265 Tropical Field Ecology and Behavior; NS/ANTHR 275 Biology and Evolution; BIOEE/BION/ENTOM 569 Chemical Ecology; BIOEE/EAS 350 Dynamics of Marine Ecosystems; BIOEE/MA 362 Dynamic Models in Biology; BIOEE 446 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOEE/ENTOM 455 Insect Ecology; BIOEE/NTRES 456 Stream Ecology; BIOEE 457 and 459 Limnology: Ecology of Lakes, lec and lab; BIOEE/EAS 462 Marine Ecology; BIOEE 466 and 468 Physiological Plant Ecology, lec and lab; BIOEE/HORT 473 Ecology of Agricultural Systems; NTRES 420 Forest Ecology; BIOSM 413 Research in Marine Biology; NTRES 422 and 423 Wetland Ecology and Management, lec and lab; BIOM 418 Microbial Ecology; CSS/HORT 460 Soil Ecology; BIOPL 241 Evolutionary Systematics; BIOPL 447 Molecular Systematics; BIOPL/ENTOM 453 Principles and Practice of Historical Biogeography; BIOEE/EAS 479 Paleobiology; BIOGD 484 Molecular Evolution.

Note: Students also are encouraged to gain experience in some aspect of field biology through course work at a biological field station and can apply up to 6 credits in the place of courses from lists (b) or (c). For example, students may apply 6 credits from the following courses taken at the Shoals Marine Laboratory (BIOSM): BIOSM 308 Marine Biology; BIOSM 309 Climates and Ecosystems; BIOSM 310 Marine Symbiosis; BIOSM 374 Field Ornithology; BIOSM 377 Diversity of Fishes, BIOSM 477 Marine Vertebrates; and BIOG courses in lists b and c. The Ecology and Evolutionary Biology program offers a specialization in Marine Biology and Oceanography (for a description, see “Courses in Marine Science”). The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses (Fundamentals in Tropical Biology and Field Research in Tropical Biology), that can count as two 3-credit courses toward the concentration. Six credits can be applied from the 15-week fall “Semester in Environmental Science” program offered by the Woods Hole Marine Biological Laboratory.

5. General Biology: The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–9 on pages 155–156. These 13 credits must include:

a. One course from each of three different programs of study in biology. Only those courses that can be listed as fulfilling a program of study requirement are acceptable without permission of advisor.

b. A course with a laboratory.

c. A minimum of two upper-level (300 and above) courses of 2 or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 413 Histology could count in all three areas: as a course in the Animal Physiology program of study, as an upper-level course, and as a course with a lab.
6. Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385 Developmental Biology; BIOGD 400 A Genomics Approach to Studying Life; BIOGD 401 Genomics Analysis; BIOGD 450 Vertebrate Development; BIOGD 480 Seminar in Developmental Biology; BIOGD 481 Population Genetics; BIOGD 482 Human Genetics and Society; BIOGD 483 Advanced Developmental Biology; BIOGD 485 Advanced Molecular Evolution; BIOGD 486 Advanced Eukaryotic Genetics; BIOGD 487 Human Genetics; BIOGD 489 Mammalian Embryology; BIOGD 490 Manipulating the Mouse Genome; BIOGD 610-624 Genomics Modules; BIOGD 640 Stem Cell Biology; BIOGD 682 Fertilization and the Early Embryo; BIOGD 684 Advanced Topics in Population Genetics; BIOGD 687 Developmental Genetics; BIOGD 689 Cellular Basis of Development; BIOMI 420 Microbial Genomics; BIOMI 485 Bacterial Genetics; ENTOM 400 Insect Development; BIOAP 475 Mechanisms Underlying Mammalian Developmental Defects, BIONB 493 Developmental Neurobiology; BIONB 495 Molecular and Genetic Approaches to Neuroscience; BIOMI 414 Bacterial Sensation and Sensescence; BIOMI 439 Molecular Basis of Human Disease; NS 608 Epigenetics; BIOMI 633 Biosynthesis of Macromolecules, BIOBM 639 The Nucleus; BIOBM 453 Speciation; PL BR 403 Genetic Improvement of Crop Plants; PL BR 606 Advanced Plant Genetics; BIOP 343 Molecular Biology and Genetic Engineering of Plants; BIOP 482 Plant Molecular Biology II; BIOP 483 Plant Molecular Biology I; BIOP 641 Laboratory in Plant Molecular Biology. Up to 5 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499 Independent Undergraduate Research in Biology; with approval from the faculty advisor.

7. Insect Biology: ENTOM 212 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.

Group a: ENTOM 322 Insect Morphology; ENTOM 331 Insect Phylogeny and Evolution; ENTOM 335 Larval Insect Biology; ENTOM 400 Insect Development; ENTOM 453 Insect Ecology; ENTOM 483 Insect Physiology

Group b: ENTOM 315 Spider Biology; ENTOM 321 Insect Behavior; ENTOM 344 Insect Conservation Biology; ENTOM 352 Medical and Veterinary Entomology; ENTOM 369 Chemical Ecology; ENTOM 370 Pesticides, Environment, and Human Health; ENTOM 384 Insect Chemical Rhythms; ENTOM 445 Entomology and Pathology of Trees and Shrubs; ENTOM 444 Integrated Pest Management; ENTOM 452 Herbivores and Plants; ENTOM 453 Principles and Practice of Insect Biotechnology; ENTOM 456 Stream Ecology; ENTOM 463 Invertebrate Pathology; ENTOM 470 Ecological Genetics; ENTOM 477 Biological Control; ENTOM 490 Insect Toxicochemistry

8. Microbiology: Students in the Microbiology program of study must complete BIOM 290 General Microbiology, Lab; BIOM 291 General Microbiology, BIOM 314 Bacterial Genetics; BIOM 414 Bacterial Diversity; BIOM 416 Bacterial Physiology; BIOM 418 Microbial Ecology; BIOM 485 Bacterial Genetics. Additional approved courses are included in the list below. Students are invited to complete their requirements in one of three areas of interest (these are only recommended areas of interest; students can design their own course list as long as they meet the requirements described above): (a) Prokaryotic Biology; (b) Molecular Microbiology and Biotechnology; and (c) Pathogenic Microbiology. Courses acceptable to the program of study that cover topics related to a particular area of interest are: Prokaryotic Biology: BIOM 391 Advanced Microbiology; BIOM 414 Bacterial Diversity; BIOM 416 Bacterial Physiology; and BIOM 418 Microbial Ecology. Molecular Microbiology and Biotechnology: BIOM 391 Advanced Microbiology Laboratory; BIOM 416 Bacterial Physiology; BIOM 420 Microbial Genomics; BIOM 485 Bacterial Genetics; and BIOM 394 Applied and Food Microbiology. Pathogenic Microbiology: BIOM 404 Pathogenic Bacteriology and Mycology; BIOM 409 Viruses and Disease; BIOM 417 Medical Parasitology, and BIOM 485 Bacterial Genetics.

9. Molecular and Cell Biology: CHEM 357-358 or 359-360; BIOBM 432 Survey of Cell Biology; BIOBM 440 Laboratory in Biochemistry and Molecular Biology, or BIONB 430 Experimental Molecular Neurobiology; BIOBM 350 Advanced Molecular Genetics; and at least 9 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list: BIOBM 416 Cellular Physiology and Genomics Laboratory; BIOM 401 Genomic Analysis; BIOBM 434 Applications of Molecular Biology; BIOBM 435-436 Undergraduate Seminar in Biochemistry; BIOBM 457 Regulation of Cell Proliferation, Senescence, and Death; BIOM 439 Molecular Basis of Human Disease; BIO G 305 Immunology; BIOBM 385 Developmental Biology; BIOGD 400 A Genomics Approach to Studying Life; BIOGD 461 Development and Evolution; BIOGD 484 Molecular Evolution; BIOGD 486 Advanced Eukaryotic Genetics; BIOGD 487 Bacterial Genetics; BIOGD 490 Manipulating the Mouse Genome; BIOM 109 Principles of Virology; BIOM 240 Microbial Genomics; BIOM 485 Bacterial Genetics; BIONB 425 Molecular Neurophysiology; BIOM 495 Molecular and Genetic Approaches to Neurosciences; BIOMI 434 Molecular Biology and Genetic Engineering of Plants; BIOP 347 Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOP 444 Plant Cell Biology. Students graduating in spring 2008 or earlier may include BIOM 290 General Microbiology, LeC, and BIONB 222 Neuroscience and Behavior II: Introduction to Neuroscience. Graduate-level courses such as BIOBM 631 Protein Structure and Function, BIOBM 663 Biosynthesis of Macromolecules, BIOBM 674 Development and Evolution; and BIOM 639 The Nucleus are also acceptable by permission of advisor. Five hours of biochemistry are recommended (BIOM 331 animal, 332, or 350 and 334, or 350 and 334). CHEM 207-208 or 215-216 should be completed in the freshman year.

10. Neurobiology and Behavior: The two-semester introductory course sequence Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (4 credits) and 7 credits. The 7 additional credits must include at least one advanced course from the BIONB offerings. “Topics” courses (BIONB 420 and 7206) are also acceptable by permission of advisor. Independent study in Neurobiology and Behavior I and II (BIONB 221 and 222) is designed for majors who have completed their requirements in one of the above areas. Students must take the 1-credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the BIONB advisors in charge of the two courses.

11. Nutrition: NS 351 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 additional credit hours required in A&S if those credits fulfill major requirements. Note: Students who declare the program of study in Neurobiology and Behavior after taking BIOM 221 or 222 must take the 1-credit discussion section in BIONB 221 and 222. To arrange this, the student should consult the instructors in charge of the two courses.

12. Plant Biology: Students choose one area of study from the following two options: Option (a) Botany: Students are required to take BIOP 241 Introductory Botany. Students should then choose, with the advice of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOP 242 and 244 Plant Function and Growth, Leak, and Lab, BIOP 245 Taxonomy of Cultivated Plants; BIOP 245 Plant
The Major in Biological Sciences

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to choose courses of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking either all three biology core course requirements (listed below) or two biology core course requirements and 5 or more biology credits from the lists of approved program of study courses (found in Courses of Study) or from the following list of courses:

AN SC 300, 301, 410, 420, 427

BEE 454

BTRY 382, 482/482

CS 426, 626, 627

CSS 421

EAS 350, 479

NS 222, 315, 331, 332, 341, 347, 361, 421, 431, 441, 452, 455, 475, 602, 603, 614

NTRES 305, 310, 411, 412, 418, 419, 608, 670

PL BR 401, 402, 403, 606

PL PA 309, 319

Biology core courses

1. Biochemistry: BIOBM 330, 333, or 331-332, one year of general chemistry and organic chemistry lecture (CHEM 257 or 357-358) are prerequisites

2. Evolutionary biology: BIOE 278 or BIOPL 448

3. Genetics: BIOGD 281

Notes:

• BIO G 499 Independent Research may not be used to fulfill any requirement for the minor. No course substitutions are allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.

• External transfer students must complete the core biology courses at Cornell. Students who are fulfilling the minor requirements under Option 2 must complete a minimum of one program of course work and a minimum of 3 credits at Cornell.

• All courses for the minor must be taken for a letter grade unless a course is offered S-U only.

Applications for the minor are located in 216 Stimson Hall. See Bonnie Cornella or Wendy Aquadro for academic advising and for certifying completion of the minor.

Independent Research and Honors Program

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.bio.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIO G 299, an S-U course designed to introduce students to research. After the first semester, students enroll in BIO G 499. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the program of studies in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced undergraduates the opportunity for original science research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Biology majors planning on graduating with honors must apply to the Biology Honors Program in the spring of their junior year. Applications and information are available in the Office of Undergraduate Biology, 216 Stimson Hall, or at www.bio.cornell.edu/research/honors.html. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 5.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIO G 499 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis;
complete all major requirements; and maintain a 3.00 Cornell cumulative and science GPA through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project. Students interested in staying for the summer also are encouraged to apply to the Cornell Honors Scholars Program.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at wwwbiology.comell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee, which meets monthly during the academic year. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or see an academic advisor in the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the multidisciplinary program biology and society should see “Special Programs and Interdisciplinary Studies” in the “College of Arts and Sciences” section of this catalog.

TRANSFERRING CREDIT

Biology majors are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell. External transfer students are limited to transferring one core biology course and one course of up to 3 credits toward their program of study. See the Office of Undergraduate Biology for approval procedures.

Students who matriculated to Cornell as freshmen and Study Abroad students may transfer program of study courses at the discretion of their academic advisors. Study Abroad students must obtain approval from the Office of Undergraduate Biology, Director of Advising, to transfer biology core courses.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIO G)

Three introductory biology course sequences are taught during the academic year: BIO G 101–104, 105–106, and 109–110; and one during the eight-week Biosemester: BIO G 107–108. BIO G 101–104, 105–106, and 107–108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing “one year of introductory biology” as a prerequisite. BIO G 109–110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing “one year of introductory biology” as a prerequisite. Students can earn a maximum of 6 credits in introductory biology (including advanced placement credits).

BIO G 101-102(1101-1102) Biological Sciences, Lectures

101, fall; 102, spring; 2 credits each semester.

Corequisite: BIO G 103 (fall) or 104 (spring).

Prerequisite: for 102, passing grade (D or better) in 101 or permission of instructor. May not be taken for credit after BIO G 105–106 or 109–110. S–U or letter grades by permission of instructor. First lec of fall semester, F Aug. 24. No admittance after second week of classes. Evening prelims: fall, Sept. 20 and Oct. 30. Spring, Feb. 21 and Apr. 1. Fall, staff; spring, staff.

Designed for students who intend to specialize in biological sciences. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and disciplines of plant and animal systems are integrated.

BIO G 103-104(1103-1104) Biological Sciences, Laboratory

103, fall; 104, spring; 2 credits each semester.

Corequisite: BIO G 101 (fall) or 102 (spring).

Prerequisite: for 104, passing grade (D or better) in 103 or permission of instructor. Students registered for lab courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. S–U or letter grades by permission of instructor. K.-c. Chen.

Designed to provide lab experience with major biological phenomena to support an understanding of the major concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, recent methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, students dissect a doubly pithed frog (pithing is done by the staff). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIO G 105-106(1105-1106) Introductory Biology

105; fall, 106; spring, 4 credits each semester. 2 credits by permission of instructor. Limited to 200 students. Taking 105–106 in sequence preferred but not required. May not be taken for credit after BIO G 101–104 or 109–110. No admittance after first week of classes. First lec of fall semester R Aug. 23, 9:05; additional study and lab. D. Campbell.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in the fall semester. The spring semester covers development, ecology, evolution, behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of pre dissected specimens, students who object to dissections should take BIO G 101–104.

The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam. Web site: instruct1.cit.comell.edu/courses/biog105.

BIO G 107-108(1107-1108) General Biology

Summer, 8-week session; 107, weeks 1–4; 108, weeks 5–8. 4 credits each. 107–108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school.

Prerequisite: one year of college or permission of instructor; for BIO G 108, a grade of D or better in the prerequisite courses (BIO G 101, 103, 105, or 107). Fee for weeks 1–4: $25; for weeks 5–8, $25.

Staff.

Designed for students who plan further study in biology. 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.
BIO G 109(110)-110(1109-1110) Biological Principles
109, fall; 110, spring. 3 credits each semester includes lecture and lab. Limited to 190 students. Prerequisite survey course, not appropriate for major in biological science or premed requirement. Both BIO G 109 and 110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills the Biology Sciences distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in content BIO G 109 may not be taken after BIO G 102 or 106, or equivalent, and BIO G 110 may not be taken after BIO G 101, 105, or equivalent. Note: This course may not satisfy prerequisite for upper-level courses in biology. Letter grades only. Prelims: (in class), Sept. 21 and Oct. 31; spring (evening), Feb. 21 and Apr. 3. H. Greene, R. Wayne, E. Balko, and staff.

Offered: A comprehensive knowledge of biology as part of a general education. Broad goals of the course encompass an understanding of the complexity and workings of the natural world and the interdependence of how our bodies and those of other animals and plants work. Fall: biological diversity, genetics, evolution, ecology, behavior, and conservation biology; Spring: human physiology, plant development, genetics and engineering, infectious diseases, and human health. Laboratory sessions (6 labs per semester) are used for problem-solving experiments, demonstrations, discussions, and dissections (preserved vertebrate, invertebrate, and plant materials); for those students who object to dissection, alternative materials are available for study without grade penalty. Testing on dissection labs involves identification of important structures in real organisms.

BIO G 112(1120) Issues in Social Biology: from Diet to Diseases, DNA to Deforestation
Spring. 3 credits. S-U or letter grades. P. J. Davies.

An analysis of current issues of biological relevance and the biological science behind these issues. Topics will include issues such as food and nutrition, antioxidants, organic produce, disease prevention, alternative enhancers, genetic testing, cancer, stem cells and animal cloning, genetically modified crops, bacteria and antibiotics, viruses, risk, statistics and epidemiology, photosynthesis and global warming, extinction and overpopulation, invasive species, resource over-utilization. The topics will vary according to current issues.

BIO G 125(1250) Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIO G 170(1700) Evolution of the Earth and Life (102(1109-1110))
Spring. 3 credits. S-U or letter grades. J. L. Gans.

For description, see EAS 170.

Fall, spring, or summer. 1–3 credits. Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S-U or letter grades by permission of instructor. Staff.

Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 299(2990) Introduction to Research Methods in Biology
Fall, spring, or summer. Variable credit. max. 3 suggested. S-U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology, 216 Stimson Hall. Applications available in OUB and at www.bio.cornell.edu. Add deadline is three days before university deadline. Amy Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable. Intended for students who are new to undergraduate research. Students enrolled in BIO G 299 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIO G 305(3050) Basic Immunology
Fall. 3 credits. Highly recommended: basic courses in microbiology, biochemistry, and genetics. S-U or letter grades. Lec. J. A. Marsh.

For description, see VETMI 315.

BIO G 400(4000) Undergraduate Seminar in Biology
Fall or spring. Variable credit. 1–3 assigned for individual seminar offerings; may be repeated for credit. S-U or letter grades. Staff.

Specialized seminars on topics of interest to undergraduates presented by biology faculty including visiting faculty.

[BIO G 401(4610) Introduction to Scanning Electron Microscopy]
[BIO G 463(4630) Transmission Electron Microscopy for Biologists]
Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 8 students; minimum of 4. Prerequisites: BIOAP 313, BIOL 345 or 443, S-U or letter grades.

Two sec: 01, 1 credit, weeks 1–5; 02, 3 credits, weeks 5–12. Students may register for one or both sec. Fee may be charged. Lec, lab. Next offered 2008–2009. Staff.

Section 01 covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02 covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials, this section studies chemical fixatives, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and related imaging techniques. There are two additional weeks at the end of each section.

BIO G 404(4040) Planning for Graduate Study in Biology
Fall. 1 credit. S-U grades only.

For students who plan to pursue a graduate degree leading to a research career. Selected topics include information on academic and industrial research careers, selecting appropriate graduate programs, and options for funding. Features faculty, graduate student, and outside speakers. Students write and receive feedback on personal statements.

BIO G 406(4080) Presentation Skills for Biologists
Spring. 1 credit. S-U grades only. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program. L. Southard and G. Hess.

Covers oral and written communication skills used in presenting research to other scientists. Topics include organization and writing of scientific papers, presentation tips for research seminars, and preparation and oral skills using Microsoft Power Point. All students present a 10-minute seminar on their research and evaluate other presentations.

BIO G 410(4100) Teaching High School Biology
Fall. 3 credits. Prerequisite: one-year introductory biology course; permission of instructor. S-U or letter grades. Offered alternate years. L. Southard.

Gives students the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content and then work in teams with high school teachers to develop their curriculum. The final part of the course includes practice presentations and teaching at regional high schools.

BIO G 431(4310) Frontiers in Biophysics
Fall, full day of, S. Sept. 15. 9 A.M. – 11 P. M., Racker Room, Biotechnology Bldg. 0.5 credit. S-U grades only. G. Feigenson and staff.

Overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates considering a career in biophysics and for graduate students interested in biophysics research opportunities at Cornell.

BIO G 450(4500) Light and Video Microscopy for Biologists
Fall. 3 credits. Limited to 12 students. Prerequisites: one-year introductory biology and permission of instructor. Lec. lab. R. O. Wayne.

Students learn the relationship between reality and the image using polarizing light, fluorescence, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contrast, fluorescence, polarization, interference, differential interference and modulation contrast microscopes. They build
upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

BIO G 498(4990) Teaching Experience
Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor. Staff.

BIO G 499(4990) Independent Undergraduate Research in Biology
Fall, spring, or summer. Variable credit. S-U or letter grades. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 12 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIO G 499, 498) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester of BIO G 299 or equivalent or permission of instructor and Office of Undergraduate Biology.

For students with previous undergraduate experience in biological research at Cornell. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.comell.edu. Add deadline is three days before university deadline. Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

BIO G 600(6000) Graduate Seminar in Biology
Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U or letter grades. Staff.

Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

BIO G 663(6630) Nanobiotechnology (also A&EP 663[6630])
Fall. 3 credits. Letter grades only. H. Hoch. For description, see A&EP 663.

BIO G 705(7050) Advanced Immunology Lectures (also VETMI 705[7050])
Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Offered alternate seven years. Lec. Coordinator: J. A. Marsh. For description, see VETMI 705.

BIO G 706(7060) Immunology of Infectious Diseases (also VETMI 710[7100])
Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S-U or letter grades. Offered odd alternate years; next offered 2008-2009. Coordinator: E. Denkers. For description, see VETMI 710.

ANIMAL PHYSIOLOGY (BIOAP)

[BIOAP 214(2140) Biological Basis of Sex Differences (also B&SOC 214(2141), FGSS 214(2140))
Fall. 3 credits. Prerequisite: one year introductory biology. S-U or letter grades. Offered alternate years; next offered 2008-2009. J. E. Fortune. Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction. Current evidence on the effects of gender on nonreproductive aspects of life is discussed. Provides students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 311(3110) Introductory Animal Physiology, Lectures (also VTBMS 346[3460])
Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S-U or letter grades by permission of instructor. Evening preims. E. Loew. Emphasizes the principles of animal physiology. Emphasis on the underlying physico-chemical mechanisms.

BIOAP 312(3120) Farm Animal Behavior (also AN SC 305[3050])
Spring. 2 credits. Prerequisites: one year introductory biology, and introductory animal physiology (AN SC 100 and 150 or equivalent is sufficient or BIOAP 311). Recommended: at least one animal production course or equivalent experience. S-U or letter grades. P. Perry and K. A. Houpt. For description, see AN SC 305.

BIOAP 316(3160) Cellular Physiology
Spring. 3 credits. Pre- or corequisite: BIOBM 330 or 331 and 332 or 333. Evening preims. A. Quaroni. Comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

BIOAP 319(3190) Animal Physiology Experimentation
Fall. 4 credits. Limited to 40 students per sect. Pre- or corequisite: BIOAP 311 or permission of instructor. For pre-med, pre-vet, juniors and seniors and graduate students interested in biomedical science. E. R. Loew, N. A. Lorr, and staff. Student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes. Physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection, and real-time computer recording and analysis. Experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal and reproductive function and their regulation by the nervous and endocrine systems.

BIOAP 412(4130) Histology: The Biology of the Tissues
Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOBM 330 or 331, or equivalents. S-U or letter grades. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (particularly mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes dynamic interrelations of structure, composition, and function in cells and tissues.

BIOAP 416(4160) Cell Physiology and Genomics Laboratory
Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 316 or BIOBM 432 or permission of instructor. N. A. Lorr, H.-H. Chuang, and staff. A laboratory course introducing modern methods and instrumentation in cell physiology and genomics. Students learn: (1) cell culture and imaging by fluorescent microscopy, (2) isolation and manipulation of RNA and DNA, in vitro transcription, (3) transformation, transfection, and microinjection, (4) protein electrophoresis, western blotting, and immunocytochemistry, (5) electrophysiology using Xenopus oocyte expression system and Ussing chambers; and (6) analysis of gene expression using RT-PCR, real time PCR, and microarray analysis. Students will conclude the course with an experiment of their own design.

BIOAP 425(4250) Gamete Physiology and Fertilization (also AN SC 425[4250])
Fall. 2 credits. Prerequisite: AN SC 200 or equivalent. Offered alternate years. Lec. J. E. Parks. For description, see AN SC 425.

BIOAP 427(4270) Fundamentals of Endocrinology (also AN SC 427[4270])
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Lec. P. A. Johnson. For description, see AN SC 427.
The course offers a treatment of selected topics in vertebrate and human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course concluding lectures aim to illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the deepest roots of their molecular etiology. Weekly problem sets count 50 percent of the final grade.

BIOAP 475(4750) Mechanisms Underlying Mammalian Developmental Defects (also NS 475[4750])
Spring. 3 credits. Prerequisites: BIOBM 330, 331–332, or 333 (may be taken concurrently). Offered alternate years. D. Noden and P. Stover. Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

BIOAP 489(4890) Mammalian Embryology (also BIOGD 489(4890))
Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years. D. Noden. Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOAP 619(6190) Lipids (also NS 602(6020))
Fall. 2 credits. Next offered 2008–2009. A. Belliveau. For description, see NS 602.

BIOAP 710-718(7100-7180) Special Topics in Physiology
Fall or spring. 1 or 2 credits per topic; may be repeated for credit. Enrollment in each topic may be limited. S-U or letter grades by permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOAP 711(7110) Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. K. A. Houpt.

BIOAP 714(7140) Cardiac Electrophysiology
Fall. 1 credit. S-U grades only. Offered alternate years. R. Gilmour. Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasizes nonlinear dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 715(7150) Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. K. A. Houpt. Emphasizes physiological assessment of stress.

BIOAP 720(7200) Animal Physiology and Anatomy Seminar
Spring and fall. 1 credit each semester. Prerequisite: admission to graduate field of physiology. M. Roberson. Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 757(7570) Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and strong interest in reproductive biology. S-U or letter grades. Offered alternate years. J. E. Fortune, P. A. Johnson, and staff. Team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and gamete transport; pregnancy; parturition; lactation; aging; reproductive technology. Student participation in the form of discussions and/or presentations.

Related Courses in Other Departments
Advanced Work in Animal Parasitology (VETMI 737)
Animal Reproduction and Development (AN SC 300)
Comparative Insect Morphology (ENTOM 322)
Developmental Biology (BIOGD 385)
Fundamentals of Endocrinology (AN SC 427)
Research in Marine Biology (BIOSM 413)
Sensory Function (BIONB 492)
Teaching Experience (BIO G 498)
Undergraduate Research in Biology (BIO G 499)

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 123(1230) Orientation Lectures in Molecular Biology and Genetics (also BIOGD 132(1320))
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U or letter grades by permission of instructor. Six professors discuss their research and promising new areas for research in the future.

BIOBM 330-332(3300-3320) Principles of Biochemistry
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year, and lectures (333) during the summer. Individualized instruction is offered to a maximum of 250 students each semester. Lectures are given fall semester (331), spring semester (332), and summer (333).

BIOBM 330(3300) Principles of Biochemistry, Individualized Instruction
Fall or spring. 4 credits. Prerequisites: one year introductory biology and one year general chemistry and CHEM 257 or 357–358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 334. May not be taken for credit after BIOBM 331, 332, or 333. S-U or letter grades. Evening prelims: fall, Sept. 27 and Oct. 30, spring, Feb. 21 and Apr. 1. J. E. Blankenship, P. C. Hinkle, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOBM 331(3310) Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 257 or 357–358 (CHEM 257 or 357 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades by permission of instructor. Lee; evening prelim Oct. 18. G. W. Feigerson.

The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332(3320) Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year introductory biology and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U or letter grades by permission of instructor. C. B. Tye. Comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technologies, genomics, and proteomics.

BIOBM 333(3330) Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer, eight-week session. 4 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 257, or 357–358, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 330, 331, or 332. H. Nivison.

Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.
BIOM 334(3340) Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: BIOG 351-352 (BIOBM 352 may be taken concurrently) or Corequisite: BIOBM 330. J. E. Blankenship, P. C. Hinkle, and staff.
Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOM 432(4320) Survey of Cell Biology
Spring. 3 credits. Prerequisite: BIOBM 350, 333, or 331, and previous or concurrent registration in 352, or equivalent. Recommended: BIOGD 281, Lec. Evening prelims Mar. 4 and Apr. 17. V. M. Vogt. Survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 435, 485, and BIOBM 652, 656, and 659.

BIOM 434(4340) Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332. Recommended: BIOBM 432 S-U or letter grades. Lec. Next offered 2008-2009. S. Ely. Lecture topics emphasize transgenic animal and plant systems that constitute marketed or near-market applications such as production of pharmaceuticals, milk, edible and nucleic acid vaccines, gene therapy, and high-tech agricultural products. Additional nontransgenic topics will include cancer treatments and relevant aspects of the human genome projects. An overview of human immunology and its relationship to drug development will be provided. Students will also explore relevant scientific literature.

BIOM 435-436(4350-4360) Undergraduate Biochemistry
Fall or spring. 1 credit. may be repeated. Prerequisites: upperclass standing; BIOBM 330, 333, or 331-332, or written permission of instructor. S-U grades only. D. Wilson. Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOM 437(4370) Regulation of Cell Proliferation, Senescence, and Death (also BIOG/TOX 437(4370))
Spring. Variable credit; students may take 2 credits and discontinue for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisite: BIO G 101-102 or 105-106 and BIOBM 350 or 351-352. Recommended: BIOBM 281 and BIOBM 432. S-U or letter grades. S. Lee. Covers a wide spectrum of issues related to cell proliferation in eukaryotes. Topics include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research results and discussion in depth during discussion section.

BIOM 438(4380) The RNA World
Spring. 3 credits. Prerequisites: BIOBM 330 or 331-332 or 333, or permission of instructor. A. Ke. Part of the discussion about "the RNA world" stems from the recognition that RNA is ancient and that the evolution of life as we know it depended upon RNA evolving both informational and catalytic capabilities. This course explores these ideas but more generally provides a comprehensive introduction to RNA biology. Many of the most interesting topics in the RNA biology, such as the mechanism of the RNA interference and its widespread applications, will be covered in detail. Other topics require consideration of essential RNA-protein complexes such as ribosomes, spliceosomes, telomerase, and signal recognition particles. Classical experiments as well as up-to-date research are covered in this course. A portion of each class is devoted to discussion and questions.

BIOM 439(4390) Molecular Basis of Human Disease (also BIOGD 439(4390))
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 350, 331-332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 432 or BIOAP 310) and physiology (e.g., BIOAP 311 or 458). S-U or letter grades. Lec. W. L. Kraus. This course examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hormone insensitivity syndromes, inborn errors of metabolism, gene fusions resulting in hybrid proteins, gene amplification, gene inactivation, disruption of signaling pathways, disruption of metabolic pathways, and the molecular actions of infectious agents and environmental toxins. Examples of diseases are selected to emphasize various aspects of genomics, molecular biology, cell biology, physiology, immunology, and endocrinology that have been presented in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of the lecture periods will be devoted to discussion and practice questions.

BIOM 440(4400) Laboratory in Biochemistry and Molecular Biology
Fall, spring (three-week sessions). 3 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOBM 330 or 333 or 331-332 (at least one of 331-332 completed but one may be taken concurrently). S. Ely and H. Nivison. Experiments in cellular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

BIOM 444(4430) Experimental Molecular Neurobiology (also BIONB 430(4300))
Spring. 4 credits. Limited to 12 students. Lecture only. Offered alternate years; next offered 2008-2009. D. L. Deitcher. For description, see BIOM 430.

BIOM 450(4500) Principles of Chemical Biology (also CHEM 450(4500))
Fall. 3 credits. Prerequisites: CHEM 357-358 or 359-360 or equivalent. Offered 2008-2009. T. P. Beggley. For description, see CHEM 450.

BIOM 483(Sec 04)(4530) Molecular Aspects of Plant Development I (also BIOPL 483.4)
Fall. 1 credit. 12 lec TBA. Next offered 2008-2009. J. B. Narasimhal. For description, see BIOPL 483.4.

BIOM 485(4850) Bacterial Genetics (also BIONB/BIOGD 485(4850))
Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOBM 190 and BIOBM 300 or 331 and 332 or 333. Lec. E. Peters. Presentations on the basic principles of protein structure, dynamics, and function. Specific topics include protein folding, stability, dynamics, evolution, folded conformations, structure prediction, molecular recognition, and basic enzyme kinetics.

BIOM 633(6330) Biosynthesis of Macromolecules
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332 and organic chemistry. Recommended: physical chemistry course. S-U or letter grades. Lec. L. Nicholson. Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOM 636(6360) Functional Organization of Eukaryotic Cells
Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332 and 432, or equivalents. Lec. W. J. Brown. Aims to provide an integrated view of eukaryotic cell organization as elucidated by biochemical, molecular, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOBM 437, 632, and 639 this course provides broad coverage of the cell biology subject area.

BIOM 638(6380) Macromolecular Interactions and Cell Function

BIOM 639(6390) Molecular Neurobiology (also BIONB 639(6390))
Fall, spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331-332 and 432, or equivalents. Lec. J. P. Potier. Lectures focusing on the principles of protein-protein and protein-nucleic acid interactions that underlie cellular processes such as signal transduction, intracellular traffic, gene regulation, and cell development. The emphasis throughout is on the structural basis of these processes as related to cell function. Some specific topics are signal amplification, nuclear import and export, transcription by RNA polymerases, RNA processing and export, and translation of mRNAs.
BIOBM 639(6390) The Nucleus
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331-332, or equivalent. Recommended: BIOGD 281. Lec. Next offered 2008-2009. J. T. Lis. Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cell biological levels and, together with BIOBM 437, 652 and 660, provides broad coverage of the cell biology subject area.

BIOBM 641(6410) Laboratory in Plant Molecular Biology (also BIOPL 641(6410))
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson and K. Van Wijk. For description, see BIOPL 641.

BIOBM 730(7300) Protein NMR Spectroscopy (also VETMM 707(7070))
Spring. 2 credits. Prerequisites: CHEM 389 and 390, or 287 and 288, or permission of instructor. S-U or letter grades. Offered alternate years. Lect. L. K. Nicholson and R. E. Oswald. Students acquire the tools necessary for understanding multidimensional NMR of proteins. NMR fundamentals and schemes for magnetization transfer, water suppression, decoupling, and others are presented.

BIOBM 732-737(7320-7370) Current Topics in Biochemistry
Fall or spring. 0.5 or 1 credit for each topic, may be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331-332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the course and time roster published at the beginning of the semester. See the department mini-courses web site, www.mbh.cornell.edu/cals/mbh/about/courses-mini-courses.cfm.

BIOBM 738(7380) Macromolecular Crystallography (also CHEM 788(7880))
Fall. 3 credits. Prerequisite: BIOGD 281 or equivalent. Lec. S. E. Pollock. For description, see CHEM 788.

BIOBM 751(7510) Ethical Issues and Professional Responsibilities
Spring. 1 credit. Prerequisite: graduate students beyond first year. S-U grades only. Organizational meeting first W of semester. S. P. Weisblat. Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

BIOBM 830(8300) Biochemistry Seminar
Fall or spring. 0 credits. Prerequisite: graduate students in Biochemistry, Molecular, and Cell Biology. Lec open to everyone. V. Vogt. Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

BIOBM 831(8310) Advanced Biochemical Methods I
Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab and disc. Organizational meeting first F of semester. T. C. Hulferaker. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOBM 832). Students must enroll separately for each half.

BIOBM 832(8320) Advanced Biochemical Methods II
Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab. V. Vogt. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

BIOBM 833(8330) Research Seminar in Biochemistry
Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular, and cell biology. S-U grades only. Lab. W. Kraus and V. Vogt. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 836(8360) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I
Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular, and cell biology. S-U grades only. Sem and disc. G. P. Hess. Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular and cell biology.

BIOBM 838(8380) Methods and Logic in Biochemistry, Molecular and Cell Biology, Part II
Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genetics and development. S-U grades only. D. Shalloway. Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)

BIOEE 154(1540) Introductory Oceanography, Lectures (also EAS 154(1540))
Fall. 3 credits. Optional 1-credit laboratory offered as BIOEE/EAS 155. S-U or letter grades. B. C. Monger. For description, see EAS 154.

BIOEE 155(1550) Introductory Oceanography, Laboratory (also EAS 155(1550))
Fall. 1 credit. Corequisite: BIOEE/EAS 154. S-U or letter grades. B. C. Monger. For description, see EAS 155.

BIOEE 207(2070) Evolution (also HIST 287(2870), S&TS 287(2871))
Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 278. Does not meet evolutionary biology requirement for biological sciences major. S-U or letter grades. W. H. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIOEE 281(2810) Ecology and the Environment
Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S-U or letter grades. Fall: B. F. Chabot, A. A. Dhondt, and staff. Summer: one weekend field trip. A. T. Vavrek. Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are examined through classroom lectures and discussion and through a series of lab and field experiences in natural habitats around Ithaca and in the Adirondack Forest Preserve. Ecological principles are applied extensively to current environmental problems and issues.

BIOEE 286(2860) Field Ecology
Fall. 3 credits. Pre- or corequisite: BIOEE 281. Letter grades only. One weekend field trip. A. Kessler.
Field exercises designed to give students direct experience with fieldwork, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of various vertebrates, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

**BIOEE 264(2640) Tropical Field Ornithology**
Winter, Jan. 3-17, 2008, two-week, full-time course. 3 credits. Limited to 12 students. Minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S-U or letter grades. Daily fieldwork, disc, reading, and individual project. Cost of tuition covers airfare, food, and lodging. A. A. Dhondt. Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

**BIOEE 265(2650) Tropical Field Ecology and Behavior**
Winter, field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. Letter grades only. J. I. Lovette and D. Rubenstein. Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Most in-country costs (e.g., ground transportation, room, board) are covered by course tuition, but students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

**BIOEE 267(2670) Introduction to Conservation Biology**
Fall. 3 credits. Intended for both science and nonscience majors. May not be taken for credit after NTRES 410. Completion of BIOEE 267 not required for NTRES 410. S-U or letter grades. One Sat. a.m. field trip. Offered alternate years. J. W. Fitzpatrick. Broad exploration of biological concepts and practices related to conserving the earth’s biodiversity; integrates ecological, evolutionary, behavioral, and genetic principles important for understanding conservation problems of the 21st century. Topics include species and ecosystem diversity, values of biodiversity, causes of extinction, risks facing small populations, simulation modeling, design of nature preserves, the Endangered Species Act, species recovery, ecosystem restoration and management, and past and future human impacts on the planet.

**BIOEE 274(2740) The Vertebrates: Structure, Function, and Evolution**
Spring. 4 credits. Prerequisite: one year introductory biology Fee: $25. S-U or letter grades. B. A. McArthur. Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and interactive live animal demonstrations.

**BIOEE 278(2780) Evolutionary Biology**
Fall or spring, 3- or 4-credit option option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. (Students may not preregister for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; first-semester freshmen by permission of instructor. S-U or letter grades. One all-day Sat. field trip. Evening prelins: spring, Feb. 28 and Apr. 1. Fall, M. A. Geber; spring, K. R. Zamudio. Considers explanations for patterns of diversity and for different modes of organism adaptations to the environment. Topics include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelins.

**BIOEE 350(3500) Dynamics of Marine Ecosystems (also EAS 350(3500))**
Fall. 3 credits. Limited to 25 students. Prerequisites: one year of calculus and semester of oceanography (i.e., BIOEE/EAS 154), or permission of instructor. S-U or letter grades. Offered alternate years. C. H. Greene and R. W. Howarth. For description, see EAS 350.

**BIOEE 351(3510) Marine Ecosystems Field Course (also EAS 351(3510))**
Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester of calculus and two semesters of biology or permission of instructor. Letter grades only. G. H. Greene, C. D. Harvell, and C. M. Monger. For description, see EAS 351.

**BIOEE 362(3620) Dynamic Models in Biology (also MATH 362(3620))**
Spring. 4 credits. Prerequisites: two semesters introductory biology (BIO G 101-102, 105-106, 107-108, 109-110 or equivalent) and completion of mathematics requirements for Biological Sciences major or equivalent. S-U or letter grades. Offered alternate years. S. P. Ellner and J. M. Guckenheimer. Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format covering a broad range of current applications across the regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

**BIOEE 363(3630) Field Methods in Ornithological Research**
Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: introductory biology or equivalent, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S-U or letter grades. D. W. Winkler. Detailed, hands-on experience with the methods commonly used in ornithological field research, focusing on different methodologies used to obtain data on ornithological structure and function, life history characteristics, and behavior. While being immersed in an ongoing, intensive research program in the Ithaca area, students learn about the types of evolutionary and ecological questions that can be addressed through use of different research methodologies, experimental design, and basic statistical analysis techniques.

**BIOEE 369(3690) Chemical Ecology (also BIONB/ENTOM 369(3690))**
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. A. Kessler, A. Agrawal, G. Jander, and J. S. Thaler. Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microorganisms. Studies chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include: plant defenses, microbial warfare, communication in marine organisms, and human phenophores.

**BIOEE 371(3710) Human Paleontology (also ANTHR 371(3710))**
Fall. 4 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 101 or permission of instructor. Letter grades only. Occasional field trips. K. A. R. Kennedy. Broad survey of the fossil evidence for human evolution with special attention to skeletal anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

**BIOEE 372(3730) Biodiversity and Biology of the Marine Invertebrates**
Fall (but course must be taken previous summer at Sholes Marine Laboratory [SML]), three-week, full-time course. 5 credits (students enroll during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because of course only. Letter grades only. Daily and evening lectures, lab, and fieldwork. Total cost for room, board, and overhead at SML $1,200. Offered alternate years. C. D. Harvell. Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and the history of invertebrates. SML exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field
excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

[BIOEE 451(4510) Mammalogy, Laboratory] Spring. 1 credit. Limited to 16 students. Pre- or corequisite: BIOEE 450. Letter grades; S-U grades by permission only. Fee: $15. Travel to Cornell University Museum of Vertebrates (CUMV) at the Laboratory of Ornithology is necessary. One all-day field trip may be scheduled. Offered alternate years; next offered 2008–2009. B. A. McGuire.

[BIOEE 453(4530) Speciation] Spring. 4 credits. Limited to 40 students. Prerequisites: BIOEE 278 and BIOGD 281 or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008–2009. J. S. Thaler.

[BIOEE 461(4610) Stream Ecology] Fall. 4 credits. Limited to 40 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. Field project with lab papers. One Sat. field trip. Offered alternate years. A. S. Flecker and C. E. Kraft. For description, see NTRES 450.

[BIOEE 457(4570) Limnology: Ecology of Lakes, Lectures] Spring. 3 credits. Prerequisites: BIOEE 261 or written permission of instructor. Recommended: introductory chemistry. Letter grades; S-U grades by permission only. Offered alternate years. N. G. Haiston, Jr. Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right and for gaining perspective on ecological and evolutionary processes in general.

[BIOEE 458(4580) Community Ecology] Spring. 4 credits. Prerequisites: BIOEE 261, 278, or permission of instructor. S-U or letter grades. Offered alternate years. M. A. Geber and A. Agrawal.

Intersection between ecology and evolution of species interactions. Covers historical and current views on community structure and diversity. Topics include impacts of species interactions on ecology and evolution of community players, multispecies webs and natural selection in complex communities. Approach is empirical and methodological.

[BIOEE 459(4590) Limnology: Ecology of Lakes, Laboratory] Spring. 2 credits. Pre- or corequisite: BIOEE 457. Letter grades; S-U grades by permission only. One weekend field trip. Fee for field trip: $15. Offered alternate years. N. G. Haiston, Jr. and staff. Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Emphasis on understanding the freshwater environment, on experimentation, and on understanding ecological processes within lakes. Optional vertebrate dissection (fish) during one laboratory exercise and during a portion of the weekend field trip.

[BIOEE 460(4600) Theoretical Ecology] Spring. 4 credits. Limited enrollment. Prerequisites: completion of Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 260/453/475, NTRES 310/411, BIOND 422) or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008–2009. S. P. Ellner.

[BIOEE 464(4640) Macroevolution] Spring. 4 credits. Limited to 35 students. Prerequisite: BIOEE 278 or permission of instructor. Interested graduate students strongly encouraged to preregister. Letter grades; S-U grades by permission only. Offered alternate years. A. R. McCune.

Advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include phylogeny reconstruction, patterns and processes of speciation, the origin of evolutionary novelty, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

[BIOEE 466(4660) Physiological Plant Ecology, Lectures] Spring. 3 credits. Limited to 30 students. Prerequisite: BIOEE 261 or introductory plant physiology. Letter grades; S-U grades by permission only. Offered alternate years; next offered 2008–2009. J. P. Sparks.

Specific topics change each year. Topic for fall 2007: Evolution and religion. How can evolutionists prepare for teaching biological evolution in a nation where the great majority of people either disbelieve in evolution or believe that purposive causes direct evolution.

[BIOEE 473(4730) Ecology of Agricultural Systems] Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 261 or permission of instructor. S-U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. Next offered 2008–2009. L. E. Drinkwater and A. G. Power.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead animal material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York.
**BIOLOGICAL SCIENCES - 2007-2008**

**BIOEE 476(4760) Biology of Fishes**  
Fall. 4 credits. Limited to 24 students. Recommended: BIOE 274 or equivalent experience in vertebrate zoology. Letter grades. S-U grades by permission only. Small lab fee may be required. Two field trips. Offered alternate years; next offered 2008-2009. A. R. McCune.]

**BIOE 477(4770) Marine Invertebrates Seminar**  
Fall. 1 credit. Prerequisite: BIOE 373 or permission of instructor. S-U grades only. Offered alternate years. C. D. Harvell and J. G. Morin. Discussions and directed readings center on current research themes in invertebrate biology. Designed as an on-campus companion course to the field-based BIOE 373 Biology of the Marine Invertebrates. Students write individual research essays based on projects done in the field.

**BIOE 478(4780) Ecosystem Biology**  
Spring. 4 credits. Prerequisite: BIOE 261 or equivalent. S-U or letter grades. Offered alternate years following fall semester. Offered 2008-2009. C. L. Goodale and R. W. Howarth.

**BIOE 479(4790) Paleobiology (also EAS 479(4790))**  
Spring. 4 credits. Prerequisite: one year introductory biology for majors and either BIOE 241, 273, or permission of instructor. S-U or letter grades. Offered alternate years. W. D. Allmon. For description, see EAS 479.

**BIOE 490(4900) Ecological Genetics (also ENTOM 470(4700))**  
Spring. 3 credits. Prerequisite: BIOE 278 or permission of instructor. S-U or letter grades. B. P. Lazzaro. For description, see ENTOM 470.

**BIOE 494(4940) Topics in Marine Biology**  
Spring. 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates; S-U or letter grades. Offered alternate years. J. G. Morin and M. J. Shulman. Seminar courses on selected topics in marine biology, may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**BIOE 650(6500) Field Studies in Ecology and Evolutionary Biology**  
Fall or spring. Variable credit. Prerequisites: BIOE 261, taxon-oriented course, and permission of instructor. Letter grades; S-U grades by permission only. Lec and field trips TBA. Estimated costs: TBA. Staff. Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**[BIOEE 471A(471A0) Tropical Field Ecology]**  
Spring. 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater ecosystems. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing. TBA. Offered alternate years; next offered 2008-2009. C. D. Harvell, J. P. Sparks, and N. G. Haukson, Jr.

**Sec 02 Graduate Field Course in Ecology**  
Spring. 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years. J. P. Sparks. Designed to give graduate students experience in defining questions and designing field investigations. The course is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems, including sand pine scrub, cattle ranches, cypress swamps, and the everglades.

**BIOE 661(6610) Environmental Policy (also AILS 661(6610), BA/SOC 461(4611))**  
Fall and spring. 3 credits each semester. Students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only. D. Pimentel. Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

**BIOE 666(6660) Principles of Biogeochemistry**  
Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S-U or letter grades. Offered alternate years. R. W. Howarth and C. L. Goodale. Lectures cover the basic principles of biogeochemistry, focusing on the interactions between the biotic and abiotic components of biogeochemical cycles. Emphasis is on understanding the relationships between biogeochemical processes and ecosystem function. Topics include carbon, nitrogen, phosphorus, sulfur, and trace elements. The class visits several ecosystems, including sand pine scrub, cattle ranches, cypress swamps, and the Everglades. Construction of experimental databases will be used to test hypotheses. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**BIOE 675(6750) Current Topics in Plant Molecular Ecology**  
Fall. 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009. A. Kessler.

**BIOE 750-760(7590-7600) Special Topics in Evolution and Ecology**  
Fall or spring. 1-3 credits; may be repeated for credit. Limited enrollment. Letter grades; S-U grades by permission only. Staff. Independent or group-intensive study of special topics of current interest. Content varies each semester.

**BIOE 761(7610) Microsatellite DNA: Techniques**  
Fall. 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail M. S. Bogdanowicz (msb31) by end of Aug. if interested. S-U grades only. Fee: TBA. R. G. Harrison and S. M. Bogdanowicz. Construct and screen microsatellite DNA libraries for microsatellite loci. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.

**BIOE 764(7640) Plant-Insect Interactions Seminar**  
Fall or spring 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. A. Agrawal, J. S. Thaler, and A. Kessler. Group-intensive study of current research in plant-insect interactions. Topics vary from semester to semester, but include: chemical defense, coevolution, insect community structure, population regulation, biocontrol, trirophic interactions, and mutualism.

**BIOE 767(7670) Current Topics in Ecology and Evolutionary Biology**  
Fall. 4 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades only. P. P. Feeny. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**BIOE 770-775(7700-7705) Workshop in Biogeochemistry**  
Fall or spring. 1-3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOE 668. S-U grades only. Staff. Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

**BIOE 780(7800) Graduate Seminar in Ornithology (also NTRES 780[7800])**  
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. I. J. Lovette, A. A. Dhondt, D. W. Winkler, and J. L. Dickinson.

Group intensive study of current research in ornithology. Topics vary from semester to semester.
BIOEE 999(9990)  M.S. Thesis Research
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S-U or letter grades. E&EB field faculty. Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOEE 999(9990)  Ph.D. Dissertation Research
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S-U or letter grades. E&EB field faculty. Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

BIOGD 132(1320) Orientation Lectures in Molecular Biology and Genetics (also BIOBM 132(1320))
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lec. Staff. For description, see BIOBM 132.

BIOGD 290(2000) Lectures in Genetics
Fall, spring, or summer (eight-week session). 3 credits. Lec component of BIOGD 281. Open to students majoring in biological sciences; may not be used to fulfill requirements for biological sciences major. Prerequisites: one year introductory biology or equivalent, or permission of instructor. Lec. Highly recommended: problem-solving sessions. T. D. Fox, R. J. MacIntyre, and D. Nero. For description, see BIOGD 281.

BIOGD 281(2810) Genetics
Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lec, labs. Highly recommended: problem-solving sessions. T. D. Fox, R. J. MacIntyre, and D. Nero.

General study of the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, gene linkage and recombination, gene structure, gene and chromosome mutations, gene expression, and the manipulation of genes.

BIOGD 282(2820) Human Genetics
Spring. 2 or 3 credits; 2 credits if taken after BIOGD 281. Prerequisite: one year introductory biology or equivalent. S-U or letter grades. Lec. M. L. Goldberg.

BIOGD 385(3850) Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281. Lec. K. Liu.

BIOGD 394(3940) Circadian Rhythms (also ENTOM/BIONB/PL PA 394(3940))
Fall. 2–3 credits. Prerequisite: ENTOM 212 or BIOGD 281 or BIONB 221 or 222 or permission of instructor. S-U or letter grades. Lec. K. Lee.

This course will explore the fundamental feature of living organisms found in all kingdoms: how the cellular 24-hour biological clock operates and influences the biological activities. The course will cover fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators of model organisms including cyanobacteria, fungi, insects, plants, and mammals. One-credit (optional) lab module offered in conjunction with lec.

BIOGD 400(4000) A Genomics Approach to Studying Life
Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 281 or 330 or 333 or 331/332 or permission of instructor. S-U or letter grades. Lec. J. Schimenti.
Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including evolution, complex systems, genetics and gene: phenotype relationships. Includes periodic, in-depth discussions of landmark or timely genomics papers.

BIOGD 401(4010) Genomic Analysis
Spring. 3 credits. Prerequisites: BIOGD 400 or permission of instructor. Lec. T. P. O'Brien.
Overview of approaches and tools used in genomics research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include high-throughput DNA sequencing and genotyping, genetic mapping of simple and complex traits, RNA expression profiling, proteomics, genome modification and transgenesis, and computational genomics.
BIOGD 437(4370) Regulation of Cell Proliferation, Senescence, and Death (also BIOBM/TOX 437(4370))

Spring. Variable 2 credits; students may takelec for 2 credits or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisites: BIO G 101-102 and BIOBM 330 or 331/332. Recommended: BIOGD 281 and BIOGB 432. S-U or letter grades. S. Lee.

For description, see BIOBM 447.

BIOGD 439(4390) Molecular Basis of Human Disease (also BIOBM 439(4390))

Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 330, 331/332, or 333) and genetics (e.g., BIOGD 281) or permission of instructor. Recommended: cell biology (e.g., BIOBM 330 or BIOAP 310) and physiology (e.g., BIOAP 311 or 458). S-U or letter grades. Lec. W. L. Kraus.

For description, see BIOBM 449.

BIOGD 400(4000) A Genomics Approach to Studying Life

Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 281 or 330 or 333 or 331/332 or permission of instructor. S-U or letter grades. Lec. J. Schimenti.

Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including evolution, cloning, stem cells, complex systems, genetics and gene-phenotype relationships. Includes periodic, in-depth discussions of landmark or timely genomics papers.

BIOGD 440(4400) Stem Cell Biology: Basic Science and Clinical Applications

Spring. 3 credits. Limited to 50 students. Prerequisites: BIOBM 432 or BIOGD 385 or permission of instructor. S-U grades by permission of instructor. Lec, disc. T. Timbar.

This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOGD 450(4500) Vertebrate Development

Fall. 3 credits. Prerequisites: BIOGD 281, and either BIOBM 432 or BIOGD 385. S-U or letter grades. M. J. Garcia-Garcia.

This course explores the developmental mechanisms employed by vertebrate organisms. It includes the detailed analysis of the genetic, molecular, and cellular events underlying development in frogs, fish, mice, and humans. Course readings include original research articles. Students are encouraged to participate in class discussions.

BIOGD 452 Molecular Biology of Plant Organelles (also BIOPL 482, Sec 5)

Spring. 1 credit. Prerequisites: BIOPL 483 Sec 1 or BIOGD 281 and permission of instructor. S-U or letter grades. M. R. Hanson and D. B. Stern.

For description, see BIOPL 482, Sec 5.

[BIOGD 461(4610) Development and Evolution]

This course explores the molecular and genetic pathways and mechanisms that regulate animal development, and how they are modified through evolution to result in the dazzling array of forms and functions seen in the animal kingdom.

[BIOGD 481(4810) Population Genetics]

Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation.

Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of natural and domesticated populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482(4820) Human Genetics and Society

Fall. 4 credits. Limited to 24 students. Prerequisite: biological sciences majors; priority given to seniors studying genetics and molecular and cell biology and biochemistry: BIOGD 281 and BIOBM 330 or 333 or 331 and 332. R. A. Calvo. Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over time scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and organization of genomes from microbes to higher eukaryotes including humans, and the relationship between molecular evolution at the nucleotide sequence level and the evolution of developmental pathways and systems.

BIOGD 485(4850) Bacterial Genetics (also BIOMI/BIOBM 485(4850))

Fall. 2 credits. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 332 or 333. Lec. J. E. Peters.

For description, see BIOMI 485.

BIOGD 486(4860) Advanced Eukaryotic Genetics

Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 333 and 332. S-U or letter grades. E. F. Alani.

Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied functional system, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, oxygen resistance in plants, and human genetics.

BIOGD 487(4870) Human Genomics

Fall. 3 credits. Prerequisite: BIOGD 281. Lec. A. G. Clark.

Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. stresses the role of statistical inference in interpreting genomic information. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as homozygosity mapping, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

BIOGD 489(4890) Mammalian Embryology (also BIOAP 489(4890))

Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years; next offered 2009-2010. D. M. Noden.

Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOGD 490(4900) Manipulating the Mouse Genome (also NS 490(4900))

Fall. 2 credits. Course meets during first half of semester (R 1:25-3:20; Aug. 25-Oct. 4) and provides background information for VTBMS 701/TOX 701 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both courses must register for them separately. Prerequisites: BIOGD 281 and BIOBM 330, 332, or 333 or NS 320. Letter grades only. P. D. Soloway.

Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies.
in mammals. This course explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are the uses of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

BIOGD 608(6080) Epigenetics (also NS 608[6080])
Fall. 2 credits. Prerequisites: BIOGD 281 and BIOBM 330, 332, or 335 or NS 320. Letter grades only. Planned W F 11:15–12:05; occasional evening meetings for student presentations. P. D. Soloway. Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. These changes include covalent modifications to DNA itself or to proteins bound to DNA as well as noncovalent remodeling of chromatin. The course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is disrupted. Reading materials are from current literature, and participation in class discussion is required.

BIOGD 610(6100) Genomes as Chromosomes
Fall. 3 credits. Limited to 15 students. Prerequisites: BIOGD 281 and BIOBM 330 or 332 or 331/332 or equivalent by permission of instructor. Letter grades only. T. P. O'Brien and P. E. Cohen. The eukaryotic genome is partitioned into discrete structural units, the chromosomes. The course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosome, such as genes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

BIOGD 611(6110) Genome Maintenance Mechanisms
Fall. 1 credit. Meets only during second half of semester beginning Oct. 15. Limited to 25 students. Prerequisites: BIOGD 281, as well as BIOBM 330, or 333, or 331/332 (or equivalents). S-U or letter grades. R. Weiss. The course focuses on the molecular mechanisms utilized by eukaryotic cells to preserve genomic integrity. Topics to be discussed include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addressed will be how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, especially cancer.

BIOGD 612(6120) Overview of Model Genetic Organisms
Spring. 1 credit. Limited to 20 students. Prerequisites: BIOGD 281 or 400 or permission of instructor. S-U or letter grades. J. Schimenti and staff. Presents the features of various model organisms and their relatives merits for conducting various types of genomics/genetics research. Model systems discussed include: yeast, Arabidopsis, Drosophila, C. elegans, zebrafish, and mice.

BIOGD 613(6130) Genomics and Society
Spring, weeks 10–13. 1 credit. Prerequisite: BIOGD 281 or BIOGD 400 or permission of instructor. S-U or letter grades. Disc. S. Kresovich and S. Tanley. A multidisciplinary examination of four to six selected topics that relate to the applications of biological insights derived from genomic analysis. Technical, scientific, ethical, political, legal, and social aspects of each topic will be considered from various perspectives.

BIOGD 620(6200) Evolutionary Genomics of Bacteria
Spring. 1 credit. M. Stanhope. Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course will include lectures, discussion of relevant scientific literature, and hands-on bioinformatics sessions.

BIOGD 638(6380) Filamentous Fungal Genomics and Development (also PL PA 638[6380])
Spring, last four weeks of semester. 1 credit. S-U or letter grades. Prerequisite: BIOGD 281 or equivalent, or permission of instructor. Lect. Offered alternate years; next offered 2008–2009. B. G. Turgeon. For description, see PL PA 638.

BIOGD 682(6820) Fertilization and the Early Embryo
Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332, 330 or 333; and BIOGD 385 or permission of instructor. Lect. Offered alternate years. M. F. Wolfner. We explore the latest molecular/cell/genetic findings about the biology of gametes, fertilization and early development—and their application to fertility modulation, "cloning" and stem cells.

BIOGD 687(6870) Developmental Genetics
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and BIOGD 385 or equivalents. S-U or letter grades. Lec TBA. Offered alternate years; next offered 2008–2009. K. J. Kemphues. Course focuses on methods of genetic analysis of fruitflies, nematodes, mice, and fish to understand mechanisms of development. No text. Lectures and problems from literature.

BIOGD 689(6890) Cellular Basis of Development
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281, 385, and either BIOBM 330 or 331–332. Lect. S-U or letter grades. Next offered 2010–2011. J. Liu. Focuses on the integration of different cellular processes in various developmental contexts. Topics include cell polarity, cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.

BIOGD 780(7800) Current Topics in Genetics and Development
Fall or spring. 1 credit. May be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S-U grades only, by permission of instructor. Seminar TBA. Staff.

BIOGD 781(7810) Problems in Genetics and Development
Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.

BIOGD 782-783(7820–7830) Current Genetics/Development Topics
Spring. 0.5 or 1 credit for each topic; may be repeated for credit. S-U grades only. Lect. and seminars on specialized topics. Staff.

BIOGD 784(7840) Introduction to Quantitative Analysis
Fall. 1 credit. Lect. grades only. E. Alani (organizer), A. Clark, C. Bustamante, and M. Goldberg. The goal of this course is to introduce bioinformatic and probability/statistical tools at an intuitive level that will be meaningful to first-year graduate students in Genetics and Development.

BIOGD 785(7850) Research Seminar in Genetics and Development
Fall and spring. 1 credit. Requirement for, and limited to second-, third-, and fourth-year graduate students in genetics and development. S-U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOGD 787(7870) Seminar in Genetics and Development
Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S-U grades only. Sem. TBA. Staff. Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

Plant Molecular Biology I (BIOPL 483)
BIOMI 394(3940) Applied and Food Microbiology (also FD SC 394[3940])
Spring. 2 credits. Prerequisites: BIOMI 290, 291, and 305. Offered alternate even-numbered years;

Genomic information is revolutionizing biology. This course discusses the impact of
genomic information on the study of microbial physiology, evolution, and biotechnology.
Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and
applications (genome-wide analysis of transcription, functional genomics).

BIOMI 431(4310) Medical Parasitology
(also VETMI 431[4310])
Fall. 2 credits. Prerequisites: zoology and biology courses. D. Bowman.
For description, see VETMI 431.

BIOMI 482(4640)[Sec 02] Molecular Plant-Microbe Interactions (also BIOL 482, Sec 02, PL PA 464(4640))
Spring. 1 credit. Prerequisites: BIOMI 281, BIOMI 330 or 331 or 333, and BIOMI 483 (sec 01) or equivalents. S-U or letter grades. Offered alternate even years.
S. C. Winans.
For description, see BIOL 482, Sec 02.

BIOMI 485(4850) Bacterial Genetics (also BIOLG/BIOM 485[4850])
Fall. 2 credits. Prerequisite: BIOMI 281. Recommended: BIOMI 290 and BIOMI 330 or 331 or 332 or 333. J. E. Peters.
Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 610(6100) Introduction to Chemical and Environmental Toxicology (also TOX 610[6100])
Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades. A. Hay.
Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxic agents. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.
BIOMI 651(6080) Genomics of Bacterium-Host Interactions (also PL PA 606(6080))
Fall, second half of semester. 1 credit. Prerequisites: BIOMI 250 or equivalent or permission of instructor. S-U or letter grades. Offered alternate even years; next offered 2008-2009. A. Collmer and S. Winans. For description, see PL PA 606.

BIOMI 690 Prokaryotic Biology
Fall and spring. 4 weeks/8lec. 1 credit per sec to be offered.

Sec 1 Microbial Structure and Function
Fall. J. F. Shapleigh. Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

Sec 2 Environmental Microbiology
Fall. E. L. Madsen. Core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. Discusses the crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere.

Sec 3 Microbial Physiology/Diversity
Fall. S. H. Zinder. Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

Sec 4 Microbial Genetics
Spring. J. D. Helmann. Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

Sec 5 Microbial Pathogenesis
Spring. S. C. Winans. Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogenesis and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 699(8990) Toxcolgy Journal Club Sec 01—Environmental Toxcolgy (TOX 6990)
Spring. 1 credit. Required for toxicology students until post A exam. A. G. Hay.

BIOMI 725(7250) Mechanisms of Microbial Pathogenesis (also VETMI 725(7250))
Spring. 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOMI 404, 409, 417, or equivalent. Highly recommended: completion of two of the three courses. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker. For description, see VETMI 725.

BIOMI 740(6430) Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BBE 740[6430])
Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman. For description, see VTMED 740.

BIOMI 791(7910) Advanced Topics in Microbiology
Fall or spring. 1 credit, may be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, S. C. Winans; Sec 02 Environmental Microbiology, E. R. Angert. Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 796(7960) Current Topics in Microbiology
Fall and spring. 0.5 or 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lect. Staff. Lectures and seminars on special topics in microbiology.

BIOMI 797(7970) Scientific Communication Skills
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S-U grades only. Staff. The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.

BIOMI 798(7980) Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S-U grades only. Staff. All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

BIOMI 799(7990) Microbiology Seminar
Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.

NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 111(1110) Brain Mind and Behavior (also PSYCH/COGST 111[1110])
Spring, 3 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. Planned M W F 9:05. E. Adkins-Regan and R. R. Hoy. For description, see COGST 111.

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior
Fall, 3, 4, or 5 credits; 4 credits with one disc per week; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 222. S-U or letter grades. Planned M W F 12:20; disc TBA. P. W. Sherman and staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 221(2210) Neurobiology and Behavior I: Introduction to Behavior
Summer, six-week session. 3 or 4 credits; 4 credits with one disc per week. Limited to 30 students. Prerequisite: one year introductory college biology. S-U or letter grades. Course fee: none. Planned M-F TBA. Staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.
BIONB 222(2220)  Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits; 4 credits with disc and written projects; 4-credit option required of graduate neurobiology and behavior. Limited to 15 students per disc; priority given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U or letter grades. Planned M W F 12:10; disc TBA. C. D. Hopkins and staff.
General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurotransmitters, motor systems, sensory systems, learning, memory, and behavior. Some discussion sections include dissections of preserved brains.

BIONB 231(2310)  Sophomore Seminar: Topics in Cognitive Studies [also PSYCH 231/331(2310/3310), COGST 531(5310)]
Spring. 4 credits. 231 limited to 15 students. Planned M W 2:55-4:10. S. Edelman.
For description, see PSYCH 231.

BIONB 321(3210)  State of the Planet
Spring. 2 or 3 credits (3-cr. option includes disc sec). Prerequisites: none. S-U grades only. Planned M W F 9:00-9:55; disc TBA. T. A. Eisner and M. L. Zeeman.
This interdisciplinary course is intended for any student with concern for the global crises we collectively face. During this course you will be introduced to current data and engaged in analysis of those data, establish a global context for your specialized education, and be provided with a toolbox to bring awareness, analysis and action to your lives and careers beyond graduation.

BIONB 322(3220)  Hormones and Behavior [also PSYCH 322(3220)]
Fall. 3 credits. Limited to 60 students. Prerequisites: junior or senior standing, any one of the following: PSYCH 223 or BIONB 221 or 222 or one year introductory biology plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 722. Planned M W F 11:15. E. Adkins-Regan.
For description, see PSYCH 322.

BIONB 323(3230)  Methods in Animal Behavior
Fall. 4 credits. Limited to 24 students. Prerequisite: BIONB 221. Letter grades only. Offered alternate years. Planned M W 1:25-4:25. S. L. Vehrencamp and C. Botero.
This course provides hands-on experience with modern methods for studying animal behavior both in the field and in the laboratory. In-depth class projects will be complemented with a series of shorter workshops and demonstrations. Topics include animal sound recording, field videography, radio-tracking, animal color analysis, capture/marking methods, odor analysis, measuring dominance hierarchies, and behavioral statistics.

BIONB 324(3240)  Biopsychology Laboratory [also PSYCH 324(3240)]
Fall. 4 credits. Limited to 18 students. Prerequisites: junior or senior standing; PSYCH 223 or, BIONB 221 or 222, and permission of instructor. Planned T R 1:25-4:25. Letter grades only. Next offered 2008-2009. T. J. DeVoogd.
For description, see PSYCH 324.

BIONB 325(3250)  Insect Behavior [also ENTOM 325(3250)]
Spring. 3 credits. Limited to 55 students. Prerequisite: ENTOM 212 or BIONB 221. Intended for juniors, seniors, and beginning graduate students. S-U or letter grades. Planned T R 10:10-11:25. Offered alternate years; next offered 2008-2009. L. S. Bayor.
For description, see ENTOM 325.

BIONB 326(3260)  The Visual System
Spring. 4 credits. Limited to 25 students. Prerequisite: BIONB 222 or BIOAP 311 or permission of instructor. S-U or letter grades. Planned M W F 10:10; disc TBA. Offered alternate years. H. C. Howland.
The visual system of vertebrates is discussed in breadth and depth as well as some aspects of invertebrate vision. Topics include the optics and anatomy of eyes, retinal neurophysiology, structure and function of higher visual centers, ocular mobility, and ocular and visual system development.

BIONB 327(3270)  Evolutionary Perspectives on Human Behavior
Socratically taught, discussion-based course dealing with evolutionary perspectives on human behavior.

BIONB 328(3280)  Biopsychology of Learning and Memory [also PSYCH 332/3320]
Spring. 3 credits. Limited to 65 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 222. S-U or letter grades. Graduate students, see PSYCH 632. Planned M W F 11:15. Next offered 2008-2009. T. J. DeVoogd.
For description, see PSYCH 328.

BIONB 329(3290)  Ecology of Animal Behavior [also BIOSM 329/3290]
Summer. 4 credits. Limited to 12 students. Prerequisite: one year introductory college biology. Recommended: ecology, psychology, or behavior course; S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details and an application, contact SML office, G14 Simson Hall. Daily lab, lec, and fieldwork for two weeks. Next offered summer 2009. SML faculty. For description, see BIOSM 329.

BIONB 330(3300)  Introduction to Computational Neuroscience [also PSYCH/COGST/BME 330(3300)]
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIONB 222 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009. C. Linster.
Covers the basic ideas and techniques involved in computational neuroscience. Surveys neural dynamics of networks of cells, neural coding, learning, memory models, sensory coding.

BIONB 331(3310)  Human Sociobiology
Spring. 3 credits. Limited to 100 students. Prerequisite: BIONB 221 or PSYCH 223 or permission of instructor. S-U or letter grades. Planned M W 2:55-4:10. B. Barclay. Lecture-based course drawing on research in evolutionary biology and animal behavior to investigate various aspects of human social behavior. Findings are presented from areas such as evolutionary psychology, anthropology, human behavioral ecology, and evolutionary game theory. Topics may vary slightly from year to year, but include mating, cooperation (with kin and nonkin), conflict and aggression, parental behavior, cost signaling, and culture.

BIONB 369(3690)  Chemical Ecology [also BIOEE/ENTOM 369/3690]
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one course in introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. Planned M W F 11:15. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.
For description, see BIOEE 369.

BIONB 392(3920)  Drugs and the Brain
Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 222 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry, S-U or letter grades. Planned T R 10:10-11:25; disc TBA. Offered alternate years. R. M. Harris-Warrick.
Introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia, and depression. Includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

BIONB 394(3940)  Circadian Rhythms [also BIOGD/ENTOM/PL PA 384(3840)]
Fall. 2 or 3 credits. Prerequisite: 200-level biology course; S-U or letter grades. Planned T 10:10-11:00; additional lab R 1:25-4:25 for S-U option. K. Lee.
For description, see PL PA 394.

BIONB 396(3960)  Introduction to Sensory Systems [also PSYCH 396/696(3960/6960)]
Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior; S-U or letter grades. Planned T R 10:10-11:25. Offered alternate years, next offered 2008-2009. B. P. Halpern.
For description, see PSYCH 396.
BIONB 412(4130) Molecules of Social Behavior and Emotion
Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. Planned T R 10:10–11:25. Offered alternate years.
D. P. McCobb.
Active-learning course with specific topics to be determined by students. Focuses on molecular, neural, and endocrine mechanisms underlying innate and learned behavior patterns, and their relationship to social, ecological, and evolutionary context. Neurotransmitters, hormones and receptors governing such behaviors as parental care, territoriality, cooperativity, courtship, and stress responses are examples of topics of interest. Format includes library research, oral and written presentations, teamwork, and peer review.

BIONB 420(4200) Topics in Neurobiology and Behavior
Fall or spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S-U or letter grades. Staff.
Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

BIONB 421(4210) Effects of Aging on Sensory and Motor Systems
Fall. 3 or 4 credits; 4-credit option involves term paper or creation of relevant web site. Limited to 35 students. Prerequisites: introductory course in biology or psychology, plus second course in perception, neuroscience, cognitive science, or biopsychology. Planned T R 10:10–11:25. B. P. Halpern.
For description, see PSYCH 431.

BIONB 422(4220) Modeling Behavioral Evolution
Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S-U or letter grades. Planned T R 2:55–4:10; computer lab TBA. Offered alternate years. H. K. Reeve.
Intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 423(4230) Cognitive Neuroscience
Fall. 4 credits. Limited to 20 students. Prerequisites: introductory biology, biopsychology, or neurobiology (e.g., PSYCH 223 or BIONB 221), and introductory course in perception, cognition, or language (PSYCH 102, 209, 214, or 215 essential). S-U or letter grades. Graduate students, see PSYCH 625. Planned M W F 9:05. One lab in sheep brain dissection. Offered alternate years. B. L. Finlay.
For description, see PSYCH 425.

BIONB 424(4240) Neuroethology
Fall. 3 credits. Limited to 50 students. Prerequisites: BIONB 221 or 222, or one year of calculus, course in probability or statistics, and permission of instructor. Letter grades only. Planned MW 10:10. Offered alternate years. C. D. Hopkins.
Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they evolve? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared with a specialized look at just a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology, including exotic senses, amazing motor programs, and surprising integration.

BIONB 425(4250) Molecular Neurophysiology
Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 222 or permission of instructor. S-U or letter grades. Planned T R 2:55–4:10. Offered alternate years. D. P. McCobb.
Focuses on ion channels, the primary proteins generating cellular electrical signals in nerve cells and other cells (e.g., muscle, heart, glands). Reviews the latest electrophysiological and molecular genetic experiments. Diversity of electrophysiology deriving from channel structure and expression pattern is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Format includes written and oral presentations, reviewing scientific literature in selected areas, and proposing new experiments.

BIONB 426(4260) Animal Communication
Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 221. Letter grades only. Planned T R 2:55–4:10; disc TBA. Offered alternate years. J. W. Bradbury and S. L. Vehrencamp.
Communication is the "glue" that holds societies together. This course explores how and why animals communicate. Topics include the role of the environment in shaping animal signals, whether animals tell the truth to each other, why some bird songs are simple and others complex, and what kinds of signals might be exchanged between species.

BIONB 427(4270) Animal Social Behavior
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOEE 261 or 278, and permission of instructor. Letter grades only. Planned T R 2:30–4:25. Offered alternate years; next offered 2008–2009. P. W. Sherman.
Writing-intensive advanced course for upper-division students. Lectures, discussions, student presentations examine topics in animal behavioral ecology (e.g., animal sociobiology, Darwinian medicine).

BIONB 428(4280) Clinical Neurobiology
Fall. 3 credits. Limited to 20 students. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330 or 331; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S-U or letter grades. Planned M W 2:30–4:25. Offered alternate years; next offered 2008–2009. B. R. Booker.
This course focuses on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neuropsychiatric diseases (e.g., Alzheimer's disease, depression, ADHD).

BIONB 429(4290) Offense and Taste: Structure and Function
Spring. 3 or 4 credits; 4-credit option requires term paper. Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: one 300-level course in biopsychology or equivalent. Planned T R 10:10–11:25. Offered alternate years; next offered 2008–2009. B. P. Halpern.
For description, see PSYCH 429.

BIONB 430(4300) Experimental Molecular Neurobiology
Fall. 4 credits. Limited to 12 students. Corequisite: BIOBM 440 lab. Letter grades only. Planned T all day; disc TBA. Offered alternate years; next offered 2008–2009. D. L. Deitcher.
Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, DNA sequencing, and protein interactions. Emphasis on molecular techniques to study neurobiological problems.

BIONB 431(4310) Genes and Behavior
Spring. 3 credits. Limited to 50 students. Prerequisite: BIONB 222. S-U or letter grades. Planned T R 2:55–4:10. Offered alternate years. J. R. Fetch. Our genes influence how we behave. This lecture course explores the current understanding of how genes influence the behavior of a variety of animals, including humans. Topics include the genetic basis of hearing, movement, memory, intelligence, sexual behavior, aggression, sleep, and diseases of behavior. The focus is on the unprecedented insight that modern molecular and genetic tools are providing into the genetic basis of behavior.

BIONB 442(4420) Instrumentation for Biology
Fall. 4 credits. Limited to 12 students. Prerequisite: one semester of calculus. Letter grades only. Planned T R 8:40–9:55, lab W 1:25–4:25. B. R. Land.
Introduction to biological electronics, computer interfacing techniques, and data reduction. Gives a basic understanding of the techniques for using electrical recording combined with a computer in a biological context. Examples are drawn from practical neurobiological instrumentation problems and the electronic basis of neural circuitry.

**BIONB 444(4440) Neural Computation**
Spring. 3 credits. Limited to 10 students. Prerequisites: BIONB 222 or permission of instructor. S-U or letter grades. Planned T R 2:30-3:20, lab T R 3:55-4:25. Offered alternate years; next offered 2008-2009. T. A. Cleland.
Lecture and computer lab course covering the biophysical mechanisms underlying neural computation and information coding by neurons and networks.

**BIONB 470(4700) Biophysical Methods**
(also A&EP/VETMM 470(4700))
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: knowledge of cellular biology. Letter grades only. Planned M W 2:55-4:10, T. M. Deitcher.
For description, see A&EP 470.

**BIONB 491(4910) Principles of Neurophysiology**
(also BME 491[4910])
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U or letter grades for graduate students by permission of instructor. Planned M W 10:10; lab planned M or T 12:20-4:25. B. R. Johnson.
Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resistance to fatigue and synaptic transmission. Invertebrate preparations are used as model systems. See instruct.cit.cornell.edu/courses/bionb491/index.html.

**BIONB 492(4920) Sensory Function**
(also PSYCH 492/692[4920/6920])
Spring. 4 credits. Limited to 25 students. Prerequisite: 300-level course in biopsychology, or BIONB 222, or BIOAP 311, or knowledge of elementary physics, chemistry, and behavior. S-U or letter grades. Graduate students only. Planned M W F 10:10. Offered alternate years; next offered 2008-2009. H. C. Howland and B. P. Halpern.
For description, see PSYCH 492.

**BIONB 493(4930) Developmental Neurobiology**
Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 222 or permission of instructor. S-U or letter grades by permission of instructor. Planned M W 2:55-4:10. Offered alternate years. R. Booker.
Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? What are the cues such as hormones and developmental genes in neural development discussed. Readings are taken from original journal articles.

**BIONB 494(4940) Brain Evolution and Behavior**
Spring. 3 credits. Limited to 50 students. Intended for juniors, seniors, and graduate students. Prerequisites: BIONB 222 or equivalent. S-U or letter grades. Planned T R 2:55-4:10. Offered alternate years. A. H. Bass.
Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

**BIONB 495(4950) Molecular and Genetic Approaches to Neuroscience**
Fall. 3 credits. Limited to 25 students. Prerequisites: junior, senior, or graduate standing; BIONB 222 and BIOBM 330 or 332. Letter grades only. Planned M W 2:55-4:10. Offered alternate years; next offered 2008-2009. T. A. Cleland.
Focuses on how molecular and genetic approaches have led to major advances in neuroscience: Lectures, student presentations, and discussions examine research articles.

**BIONB 496(4960) Bioacoustic Signals in Animals and Man**
Fall. 3 credits. Limited to 12 students. Prerequisites: junior, senior, or graduate standing; one year introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U or letter grades. Planned M W 9:05; lab TBA. Offered alternate years; next offered 2008-2009. C. W. Clark and R. R. Hoy.
Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems.

**BIONB 720(T200) Seminar in Advanced Topics in Neurobiology and Behavior**
Fall or spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. Staff and students. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Department of Neurobiology and Behavior.

**BIONB 721(T210) Introductory Graduate Survey in Neurobiology and Behavior**
Fall. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Planned W 4:00-6:00. D. L. Deitcher and R. Booker.
Lectures, readings, and discussion introduce first-year graduate students to the research activities of the faculty in the graduate field of neurobiology and behavior. Class meets weekly for two hours. Students also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal is prepared in consultation with one or more relevant faculty members.

**Related Courses in Other Departments**

**Evolutionary Perspectives on Behavior** (PSYCH 535)
**Biopsychology of Normal and Abnormal Behavior** (PSYCH/NS 361)
**Developmental Biopsychology** (PSYCH 422)
**Evolution of Human Behavior** (PSYCH 326)
**Topics in Biological Anthropology** (ANTHR 490)
**Primate Behavior and Ecology** (ANTHR 390)
**Teaching Experience** (BIO G 498)
**The Brain and Sleep** (PSYCH 440/640)
**Undergraduate Research in Biology** (BIO G 499)

**OTS Undergraduate Semester Abroad Programs**
Shoals Marine Laboratory Program
Spider Biology (ENTOM 215)

**Navigation, Memory, and Context: What Does the Hippocampus Do?** (PSYCH 423/623)

**PLANT BIOLOGY (BIOPL)**

**BIOPL 240(2400) Green World/Blue Planet**
Fall. 3 credits. S-U or letter grades. Lect. T. Silva.
Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

**BIOPL 241(2410) Introductory Botany**
Fall. 3 credits. Lect. Lab. K. J. Niklas.
Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

**BIOPL 242(2420) Plant Function and Growth Lectures**
Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function; suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: one year introductory biology and/or BIOPL 241. Corequisite for plant science undergraduates (and highly recommended for other science majors). BIOPL 244. Recommended: one year.
PLANT BIOLOGY 177

INTRODUCTORY CHEMISTRY. MAY NOT BE TAKEN FOR CREDIT AFTER BIO 242 EXCEPT BY WRITTEN PERMISSION OF INSTRUCTOR. S.U. OR LETTER GRADES.

EVENING PRELIMS. P. J. DAVIES.

HOW PLANTS FUNCTION AND GROW. EXAMPLES DEAL WITH CROP PLANTS OR HIGHER PLANTS WHERE POSSIBLE, THOUGH NOT EXCLUSIVELY. TOPICS INCLUDE CELL STRUCTURE AND FUNCTION; PLANT METABOLISM, INCLUDING PHOTOSYNTHESIS; LIGHT RELATIONS IN CROPS; PLANT-WATER RELATIONS; WATER UPTAKE, TRANSPORT, AND TRANSPERSION; IRRIGATION OF CROPS; SUGAR TRANSPORT; MINERAL NUTRITION; GROWTH AND DEVELOPMENT—HORMONES, RESPONSES TO LIGHT, FLOWERING, FRUITING, DORMANCY, AND ABSCISSION; STRESS; TISSUE CULTURE; AND GENETIC ENGINEERING OF PLANTS.

BIOPL 243(2430) TAXONOMY OF CULTIVATED PLANTS (ALSO HORT 243(2430))

Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 246. Lec. Lab. Offered alternate years; next offered 2008–2009. M. A. Luckow.

Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOPL 244(2440) PLANT FUNCTION AND GROWTH, LABORATORY

Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOPL 242. May not be taken for credit after BIOPL 244. Disc and lab; students must take lab and disc on same day. T. Silva.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

BIOPL 245(2450) PLANT BIOLOGY

Summer; six-week session. 3 credits. Limited to 24 students. Lec. Lab. T. Silva.

Introductory botany including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

BIOPL 247(2470) ETHNOBOTANY

Fall. 3 credits. S-U or letter grades. Lec. disc. Offered alternate years; next offered 2008–2009. Staff.

Consideration of the principles, methods, and issues of ethno botany: emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.
nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

[BIOPL 482 Plant Molecular Biology II] Spring. 1-6 credits; 1 credit per sec. Prerequisites: BIOGD 281 and BIOBM 330 or 332, or equivalents. Recommended: BIOBM 331 or 332.

Sec 01 Molecular Plant-Pathogen Interactions I and II (also PL PA 462.1) 1 credit. 12 lec. A. R. Miller, S. G. Lazarowitz, G. Martin, and B. G. Turgeon.

[BIOPL 449(4490) Growth Signals and Triggers—The Plant Hormones (also HORT 449(4490)) Spring. 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOPL 242 or 342) or permission of instructor. S-U or letter grades. Offered alternate years. P. D. Davies.

Study of plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

[BIOPL 452(4520) Systematics of Tropical Plants] Fall. 3 credits. Prerequisite: BIOPL 243 or 248. Letter grades only. 12 lec. K. C. Nixon.

The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

[BIOPL 453(4530) Principles and Practice of Historical Biogeography (also ENTOM 453(4530))] Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U or letter grades. 12 lec. K. C. Nixon.

Topics on the evolution of plant distribution and the processes that give rise to the various organelles. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

[BIOPL 447(4470) Molecular Systematics] Fall. 3 credits. Prerequisites: BIOEE 278 or BIOPL 243 or 330, or BIOBM 332, or written permission of instructor. S-U or letter grades. Offered alternate years. J. J. Doyle.

Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of

Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanism of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

[BIOPL 440(4400) Phylogenetic Systematics (also ENTOM 440(4400))] Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec. lab. Offered alternate years, next offered 2008-2009.

K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.
among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

Sec 05 Molecular Biology of Plant Organelles (also BIOGD 452)
1 credit. S-U grades by permission of instructor. 12 lec. M. R. Hanson and D. B. Stern.
Plants contain three different genomes—in the nucleus, chloroplasts, and mitochondria. This course examines the organization, expression, and evolution of plant organelle genomes. Special topics include RNA editing and stability, effects of organelle mutations on plant reproduction and photosynthesis, and chloroplast transformation for expression of useful foreign proteins.

Sec 06 Plant Biotechnology (also PL BR 482.6, PL PA 462.2)
1 credit. S-U or letter grades. 12 lec. F. D. Earle.
Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Sec 07 Plant Cell Walls: Structure to Proteome
1 credit. S-U or letter grades. 12 lec. Offered alternate years. J. Rose.
Examines the structure and function of plant cell walls, their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include wall biosynthesis, wall structure and composition, regulation of cell expansion and differentiation, defense against pathogens and signaling, the apoplast as a metabolically active subcellular compartment, and analytical techniques from biochemistry to proteomics.

Sec 08 Plant Imaging
1 credit. 4 weeks. Limited to 12 students. Priority given to graduate students. S-U or letter grades. Offered alternate years; next offered 2008–2009. R. Turgeon.
At some point, most research projects involve structural analysis. This may necessitate hand sectioning, in situ hybridization, electron microscopy, confocal imaging, or any of a host of other possibilities. The key to success is having a proper foundation so that the correct choice of procedures can be made. This course provides an overview of the theory of practical light and electron microscopy focusing on plant tissue preparation, hand and microscope sectioning, staining, optical techniques, histochemistry, and the localization of macromolecules. Students will gain an appreciation of the potentials and limitations of available methods and learn how these methods can be combined to answer specific research questions. The course will consist of six lectures and four two-hour labs, plus a short project.

BIOPL 483 Plant Molecular Biology I
Fall. 1–5 credits; 1 credit per sec. Prerequisites: BIOGD 281 and BIOBM 330 or 332, or equivalents. Recommended: BIOBM 331. S-U or letter grades. Coordinator: J. B. Nasrallah.
Series of four-week modules on specialized topics.

Sec 01 Concepts and Techniques in Plant Molecular Biology (also PL PA 463.01, PL BR 483.01)
Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 483 (fall) and BIOPL 482 (spring) series. The course is divided into three sections: (1) Gene discovery: covers genetic, molecular, and genomics approaches to the isolation of plant genes; (2) Gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of transgenic plants; (3) Analysis and characterization of proteins and metabolites: includes proteomics approaches to the analysis of plant proteins, protein-protein interactions, and metabolic profiling through emerging metabolomic techniques. This course consists of two lectures and one day of discussion per week. Course material is coordinated with BIOPL 641 (fall) Emphasis is on understanding techniques and approaches appropriate for different experiments and objectives.

Sec 02 Proteomics in Plant Biology
1 credit. S-U or letter grades. 12 lec. K. van Wijk.
Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phosphorilation mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

Sec 03 Plant Genome Organization and Function (also PL BR 483.3)
1 credit. 12 lec. Offered alternate years; next offered 2008–2009. S. D. Tanksley.
Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/teleomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

Sec 04 Molecular Aspects of Plant Development (also BIOBM 483.4)
Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Approaches include cell-cell signalling in the establishment of pattern and functional differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. The module is coordinated with BIOPL 482, Sec 02 (Molecular Plant-Microbe Interactions).

Sec 05 Molecular Breeding (also PL BR 483.5)
1 credit. 12 lec. Offered alternate years. S. D. Tanksley.
Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

Sec 06 Plant Senescence (also HORT 625.2)
1 credit. S-U or letter grades. (12 lec.) S. Gan.
Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

BIOPL 641(6410) Laboratory in Plant Molecular Biology (also BIOBM 641(6410))
Fall. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, H. Wang, T. Brutnell, G. Jander, J. Hua, M. Scanlon, and K. van Wijk.
Includes selected experiments on gene expression, biolistic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

BIOPL 642(6420) Plant Mineral Nutrition (also CSS 642(6420))
Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Lec. Offered alternate years; next offered 2008–2009. J. V. Kochian and R. M. Welsh.
Detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental conditions (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

BIOPL 647(6470) Systematic Biology Journal Club
Fall or spring. 1 credit; may be repeated for credit. Intended for graduate students and advanced undergraduates in systematic biology. S-U grades only. Disc TBA. Bailey Hortorum staff.
Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

BIOPL 649(6490) Solute Transport in Plants (also CSS 649(6490))
Fall. 3 credits. Letter grades only. Lec. Offered alternate years; next offered 2008–2009. R. M. Sparksnick.
For description, see BEE 649.
BIOPL 654(6540) Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Lec. Offered alternate years. M. A. Luckow. Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOPL 656(6560) Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years. K. J. Niklas. Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOPL 740(7400) Plant Biology Seminar
Fall and spring. 0 credits (no official registration). Requirement for graduate students doing work in plant biology. W. L. Crepet. Lectures on current research in plant biology, presented by visitors and staff.

BIOPL 741(7410) Problems in Plant Cell and Molecular Biology
Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc. Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOPL 742(7420) Current Papers in Plant Biology
Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S-U grades only. Sem. Staff.

BIOPL 743(7430) Faculty Research in Plant Cell and Molecular Biology
Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc. TBA. Staff. Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOPL 744(7440) Graduate Research in Plant Cell and Molecular Biology
Fall or spring. 1 credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students in Plant Cell and Molecular Biology. Sem. Staff. Each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation.

BIOPL 745(7450) Seminar in Systematic Botany
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Sem. Bailey Hortorium staff. Seminar with student presentations of current topics in systematics.

BIOL 746(7460) Seminar in Systematic Botany: Student Research
Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorium staff. Student-led seminar presentation based on his or her thesis research or a related topic.

BIOL 749(7490) Graduate Research in Botany
Fall or spring. Variable credit; may be repeated for credit. S-U or letter grades. Staff. Similar to BIO G 499 but intended for graduate students who are working with laboratory members on an individual basis.

COURSES IN MARINE SCIENCE
Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology offered through the Office of Undergraduate Biology, the undergraduate specialization in ocean sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Simson Hall, or at www.sml.cornell.edu.

Undergraduate Specialization in Marine Biology and Oceanography
Biological sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1. BIOEE 154 The Sea: An Introduction to Oceanography

2. BIOSM 364 Field Marine Science or BIOSM 375 Field Marine Biology and Ecology and at least one 400-level BIOSM field course at the Shoals Marine Laboratory

3. BIOE 462 Marine Ecology

Undergraduate Specialization in Ocean Sciences
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1. BIOE 373 Biology of the Marine Invertebrates

2. BIOE 457 Limnology

3. BIOE 462 Marine Ecology

4. BIOE 478 Ecosystem Biology

5. BIOE 490 Topics in Marine Biology

6. BIOSM 377 Diversity of Fishes

7. BIOSM 310 Marine Symbiosis

8. BIOSM 309 Climates and Ecosystems

9. BIOSM 329 Ecology of Animal Behavior

10. BIOSM 364 Field Marine Science

11. BIOSM 365 Underwater Research

12. BIOSM 374 Field Ornithology

13. BIOSM 375 Field Marine Biology and Ecology

14. BIOSM 413 Research in Marine Biology

15. BIOSM 449 Seaweeds, Plankton and Seagrass

16. BIOSM 376 Marine Invertebrate Zoology (Note: Not same as BIOEE 373)

17. BIOSM 477 Marine Vertebrates

18. EAS 375 Sedimentology and Stratigraphy

19. EAS 455 Geochemistry

20. EAS 475 Special Topics in Oceanography

21. EAS 479 Paleobiology
The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biodiversity, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education. The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the laboratory's 47-foot research vessel, John M. Kingman, or the 36-foot research vessel, John B. Heiser. Field experience is an integral component of all courses, using Appledore's extensive intertidal and subtidal zones, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their teaching ability in the field. In addition, there are numerous guest lecturers including engineers, coastal planners, and specialists from private industry, government, and the academic community. The Ihaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

**BIOSM 111(1110) A Marine Approach to Introductory Biology**

Summer. 9 credits. Prerequisite: score of 4 or higher on AP Biology Exam (which fulfills introductory biology requirement for biology majors). W. E. Bemis and J. B. Heiser. A four-week course for pre-freshmen at Shoals Marine Lab on Appledore Island in the Gulf of Maine including daily fieldwork, boat trips, outdoor adventure, and practices for sustainable living. Intensive lectures, laboratory, and fieldwork occur in a learning environment emphasizing individual skill building, project design and execution, and collaboration with faculty and peers. We explore four major themes—ecology, behavior, development, and genomics—using examples from evolution. Social issues discussed range from global environmental change to sustainable fisheries, emerging infectious diseases, and stem cell research.

**BIOSM 123(1230) Ocean Sciences**

Summer. 4 credits. Prerequisite: permission of instructor. Letter grades only: D. Taylor. An inquiry-based, hands-on introduction to marine biology using the rocky intertidal and open sea as a natural laboratory. Students will learn the skills necessary for success in science courses: understanding disciplinary discourse; reading scientific papers critically; generating scientific hypotheses; designing experiments and interpreting data using basic statistics; and constructing, presenting and understanding data in graphs and tables. Students will learn and apply these skills to field exercises centered on textbooks, primary literature, lectures, seminars and discussions.

**BIOSM 160(1600) The Oceanography of the Gulf of Maine**

Summer. 4 credits. Limited to 24 students. Special two-week course offered aboard a SEA vessel, U.S. Coast Guard Auxiliary, Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lectures, labs, and fieldwork for 14 days. SML faculty. Oceanographic studies have become an integral component of all high school programs all around the country; however, opportunities to apply this coursework to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island's rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose MES students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

**BIOSM 204(2040) Biological Illustration**

Summer. 2 credits. Special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily sessions for one week. SML faculty. General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. Provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

**BIOSM 210(2100) Boats for Biologists**

Summer. 2 credits. S-U or letter grades. W. E. Bemis. Marine and freshwater biologists rely on boats—small and large—for transportation, environmental sampling, data collection, and other tasks. This course offers biologists at all stages of their careers a chance to learn basic boat handling, piloting, navigation, and continue sampling and in situ work with vessels to pursue their opportunities for research and education. This course meets all certification requirements for basic small boat handling by state-specific agencies and National Association of Boating Law Administrators.
BIOSM 225(2250) Sustainability in the 21st Century
Summer. 4 credits. W. E. Bemis.
Students will consider the challenges of institutionalizing sustainability. Through guest lectures and hands-on projects, students will grapple with challenges inherent to the field, devising strategies to enhance sustainability on Appledore Island. Topics include: systems thinking, food and fisheries, engineering and energy, and climate science.

BIOSM 276(2760) Seabird Conservation
Summer. 2 credits.
Combines lectures from specialists (e.g., ecologists and wildlife veterinarians) with a variety of field-based activities related to seabird ecology and conservation. Topics will include: seabird identification, behavioral studies, censuses, techniques, population threats (e.g., fisheries bycatch, pollution), and restoration. A field trip to a nearby seabird restoration island will be included.

BIOSM 308(3080) Field Microbial Ecology
Summer. 4 credits. Prerequisite: introductory biology or permission of instructor. E. A. Zettler.
The microbial world dominates the biosphere in terms of biomass, diversity, and metabolic flexibility. This course will introduce students to collecting, observing, and identifying live representatives of these fascinating microbial organisms including bacteria, protists, fungi, and microscopic animals. Taxonomy and ecology of the basic groups of microorganisms will be covered while students learn to collect and identify organisms in the field for observation, experimentation, and isolation.

BIOSM 309(3090) Coastal Ecology and Biloclimes
Summer. 4 credits. Prerequisite: one year college-level biology; background preferred in physics/physical geography.
S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.

Study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including light, temperature, atmospheric moisture, precipital wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

BIOSM 310(3100) Marine Symbiosis
Summer. 4 credits. Prerequisite: one full year college-level biology.
Recommended: background in microbiology or cell biology. S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec and fieldwork for two weeks. SML faculty.

Introduction to the concept of symbiosis as applied to marine organisms, with an emphasis on microbial symbionts. Students develop the ability to analyze symbioses using a comprehensive set of criteria, including duration, propagation, specificity, integration and modes of interaction. Morning lectures are followed by afternoons collecting, preparing and studying live specimens. Each student learns to use a variety of light microscopic techniques, and contributes, through fieldwork and by written reports, to a comprehensive survey of symbiotic associations on and around Appledore Island.

BIOSM 312(3120) Biology of the Lobster
Summer. 2 credits. Prerequisite: one year of college level biology. J. Factor.
An introduction to the biology of the American lobster, Homarus americanus. The course will include an overview of this ecologically and economically important species, as well as several major topics in depth, each taught by a lobster biology expert in that field. Topics may include life history, larval development and metamorphosis, anatomy, physiological adaptation, fisheries and fishing methods, feeding mechanisms, ecology, and behavior. Course will include lecture, laboratory, discussion, and the natural field environment of Appledore Island.

BIOSM 320(3200) Functional Morphology of Marine Organisms
Summer. 4 credits. Prerequisite: one year introductory biology. Recommended: introductory university biology, general zoology, and general botany. F. Fish.
A study of the structure, form, and function of morphological adaptations in marine plants and animals as examined through a mechanical and ecological perspective. The course will investigate the biomechanics of marine organisms through lecture, laboratory demonstrations, and independent research projects.

BIOSM 328(3280) Ecology of Animal Behavior (also BIONB 329(3290))
Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details and an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty.
The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major substrates of behavior, including sensory, social behavior, foraging, predator avoidance, and sensory mechanisms. Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 364(3640) Field Marine Science (FMS)
Summer. 8 credits. Prerequisite: one full year college-level biology. S-U or letter grades. Special four-week course offered twice each summer at Shoals Marine Laboratory (SML), located on an island offshore Portsmouth, N.H. Students may not take FMS after taking FMBE (BIOSM 375). For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for four weeks. SML faculty.
Introduction to marine science, marine biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territory, sexual selection, breeding biology, and survival. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 375(3750) Field Marine Biology and Ecology (FMBE)
Summer. 8 credits. Prerequisite: one full year college-level biology. S-U or letter grades. Special four-week course offered at Shoals Marine Laboratory (SML), located on an island offshore Portsmouth, N.H. For more details or an application, contact SML office, G-14 Stimson Hall. Daily lec, lab, and fieldwork for four weeks. SML faculty.
Designed for students seeking an introduction to the marine sciences and marine ecology, FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 364).

**BIOSM 376(3760) Marine Invertebrate Zoology**

Summer. 6 credits. Prerequisite: one year introductory biology and permission of instructors. Students may not take BIOSM 376 or BMSC 373, S-U or letter grades. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. Offered alternate years; offered summer 2008. SML faculty. Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasizes the evolution of form and function, and the ecology, behavior, physiological, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an excellent venue for the study of freshly collected and in situ representatives of most of the major phyla.

**BIOSM 377(3770) Diversity of Fishes**

Summer. 6 credits. Prerequisite: one full year college-level biology. Recommended: background in vertebrate biology. S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, fieldwork for two weeks. SML staff. Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course emphasizes the diversity of fishes in two aspects, diversity of evolutionary solutions to problems faced by fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and oëtology of teleost fishes and identification of local species. Each student selects a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

**BIOSM 410(4100) The Herring Gull’s World**

Summer. 2 credits. Prerequisite: introductory biology. T. Seeley, P. Sherman, and J. Shellman Sherman. An introduction to the study of animal behavior in the field by focusing on the behavior of the herring gulls nesting on Appledore Island. Topics will include natural selection and behavior, levels of analysis, animal communication, territoriality, kin recognition, community, and mating systems. The Herring Gull’s World, the classic book of Nobel Laureate Niko Tinbergen, will be read and discussed. Methods of measuring behavior and designing experiments will be taught, and students will conduct individual research projects.

**BIOSM 413(4130) Research In Marine Biology**

Summer. 6 credits. Prerequisite: one year college-level biology. Recommended: experience in ecology or physiology. S-U or letter grades. Special three-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty. Introduction to the physiological and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in situ functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

**BIOSM 448(4480) Forensic Science for Marine Biologists**

Summer. 2 credits. Prerequisite: satisfactory completion of college-level course in biology, ecology, or marine science. W. Lord. Forensic science represents the unique merging of scientific insight and the law. Forensic Science for Marine Biologists provides a field-oriented introduction to the forensic science domain and the utilization of marine biology within the justice system. Students receive comprehensive instruction concerning the recognition, documentation, collection, and preservation of physical evidence. Additionally, students develop practical incident response, scene management, and forensic team skills.

**BIOSM 449(4490) Seaweeds, Plankton, and Seagrass: The Ecology and Systematics of Marine Plants**

Summer. 4 credits. Prerequisite: BIOSM 364 or one year introductory biology. S-U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. SML faculty. Overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

**BIOSM 458(4580) Sharks: The Biology, Evolution, and Conservation of Sharks and Rays**

Summer. 2 credits. Prerequisite: vertebrates or comparative anatomy and ichthyology or permission of SML director. J. Morrissey and W. E. Bemis. The last 30 years have produced an explosion of new information on the biology of the approximately 1,000 living species of sharks, skates, rays, and chimaeras, which collectively make up the group Chondrichthyes. This course will cover advanced topics in the evolution, diversity, anatomy, functional morphology, neurobiology, sensory systems, behavior, reproduction, development, and conservation of cartilaginous fishes.

**BIOSM 472(4720) Molecular Systematics**

Summer. 4 credits. Prerequisite: one year introductory biology, genetics and/or cell biology with laboratory components. Recommended: evolutionary biology, ecology vertebrate/invertebrate zoology. A. Shedlock. An introduction to basic concepts in systematic biology, evolutionary genetics, molecular ecology, and conservation biology emphasizing the natural history of marine organisms. Students integrate field sampling techniques, taxonomy, and curation of specimens from Appledore Island and surrounding waters with molecular diagnostics completed in the laboratory. Standard methods for DNA purification, amplification, sequencing, and genealogy are used to address questions about population structure, kinship, and species phylogeeny.

**BIOSM 477(4770) Marine Vertebrates**

Summer. 6 credits. Prerequisites: vertebrate biology course. S-U or letter grades. Special three-week course offered at Shoals Marine Laboratory (SML). For more details or an application, consult SML office, G14 Stimson Hall. Daily lec, lab, and fieldwork for three weeks. SML faculty. Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics include systematics of fishes of the Gulf of Maine; elasmobranch physiology; interpretation of life history and parameters from otolith microstructure; teleost skeletomuscular structure and function; population biology and the contemporary Gulf of Maine fishery; Mesozooic marine reptiles; the biology of sea turtles in cold water; coloniality in sea birds; avian adaptations to life at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**BIOSM 495(4950) Research Methods in Marine Biology**

Summer. 1 credit. Corequisite: BIOSM 499 or permission of instructor. Primarily for undergraduates. Special eight-week course offered at the Shoals Marine Laboratory (SML). For more details or an application, contact SML office, G14 Stimson Hall. Weekly sem for eight weeks. SML faculty. Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

**BIOSM 499(4990) Research In Biology**

Summer. Variable credit; 2 credits per seven days on site. For more details and an application, contact SML office, G14 Stimson Hall.

Section A: Independent Biological Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.
Research Experiences for Undergraduates (REU)

0 credits. The National Science Foundation (NSF) Research Experiences for Undergraduates (REU) program provides support for undergraduates to pursue supervised, independent research projects at the Shoals Marine Laboratory. Nine students are selected from a competitive, national pool to participate in the eight-week summer program. For more information, contact SML office, G14 Stimson Hall, or view SML's web site at www.sml.cornell.edu.

BIOSM 650(6500) Field Marine Ecology and Environmental Science for Teachers
Summer. 2 credits. Prerequisites: one-year college-level biology. Recommended teaching experience. A special one-week course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall. Daily lectures and fieldwork for one week. SML faculty.

Intended for teachers of grades 6-12 but also open to undergraduate junior and senior students interested in teaching. Teachers develop hands-on, experiential approaches to the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also are included. Fieldwork is emphasized, with numerous excursions to the rocky intertidal and off-shore ocean sampling. Lectures focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

BIOSM 699(6990) Research in Biology for Teachers
Summer. 2 credits per week. Prerequisite: BIOSM 650. Special course offered at Shoals Marine Laboratory (SML), located on an island off Portsmouth, N.H. For more details or an application, contact SML office, G14 Stimson Hall.

Opportunity for teachers who have taken BIOSM 650 to return to Shoals to pursue in greater depth a topic of their choosing under the direction of the BIOSM 650 faculty.

SEA Semester
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year.

SEA Basic Semester
BIOSM 366(3660) SEA Introduction to Oceanography
3 credits. Corequisites: BIOSM 367 and 368. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field.

Students develop individual projects to be carried out at sea.

BIOSM 367(3670) SEA Introduction to Maritime Studies
3 credits. Corequisites: BIOSM 366 and 368. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368(3680) SEA Introduction to Nautical Science
3 credits. Corequisites: BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

BIOSM 369(3690) SEA Practical Oceanography I
4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370(3700) SEA Practical Oceanography II
4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372(3720) SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of a sailing oceanographic research vessel. Group research projects are completed.

SEA Oceans and Climate Semester
BIOSM 368(3680) SEA Introduction to Nautical Science
Fall, spring. 3 credits. Prerequisite: 3 lab science courses or permission of instructor. SML faculty.

This course examines the role of the oceans in the climate system, addressing topics such as the global carbon cycle, the thermohaline circulation, and aspects of global change including warming and sea level rise.

BIOSM 379(3790) SEA Ocean Science and Public Policy (HA)
Fall, spring. 3 credits. SEA faculty.

This course seeks to provide students with a fundamental understanding of the intersection between climate change and governmental policy and the interrelationship between science and governmental policy. After an introduction to the development of maritime law and sovereignty on the high seas, students will examine why societies funded oceanic research.

BIOSM 380(3800) SEA Oceanographic Field Methods
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 378. SEA faculty.

This course introduces students to all aspects of oceanographic fieldwork. Students learn practical skills in the operating principles and safe deployment of oceanographic instrumentation. Skills acquired enable students to carry out an independent research project.

BIOSM 381(3810) SEA Independent Research in Oceans and Climate
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 378. SEA faculty.

This course provides upper-level study focused on oceanography and climate, including the design and completion of an independent research project that is comparable in scope to an undergraduate senior research thesis.

SEA: Documenting Change in the Caribbean Semester
BIOSM 362(3620) SEA Maritime History and Culture (CA) (HA)
Fall, spring. 4 credits. SEA faculty.

In this course, students will explore political, cultural, and social changes in the Caribbean since just before Europeans arrived at the end of the 15th century. Student will see how the physical nature of the region has influenced patterns of settlement and development and the impact of European expansion.
This course is designed to explore the interaction of ecological factors in ocean, coastal and island environments; the impact of human actions on those environments; and the need for local, regional, and international responses and strategies to mitigate and manage that impact.
Other Teaching Personnel
Blankenship, James E., M.S., Cornell U. Sr. Lec., Molecular Biology and Genetics
Calvo, Rita A., Ph.D., Cornell U. Sr. Lec., Molecular Biology and Genetics
Chen, Kuei-chiu, Ph.D., New York U., Lec., Neurobiology and Behavior
Ely, Susan, Ph.D., Tufts U. Lec., Molecular Biology and Genetics
Hester, Laurel, Ph.D., U. Michigan, Lec., Neurobiology and Behavior
Looy, Nancy, Ph.D., U. of Oregon, Lec., Physiology
Muirhead, Betty A., Ph.D., U. of Massachusetts, Sr. Lec., Ecology and Evolutionary Biology
Merkel, Susan, M.S., Cornell U. Sr. Lec., Microbiology
Nivison, Helen T., Ph.D., U. of California, Davis, Lec., Molecular Biology and Genetics
Rehkugler, Carole M., M.S., Cornell U. Sr. Lec., Microbiology
Silva, Thomas, Ph.D., Cornell U. Sr. Lec., Plant Biology
Southard, Laurel E., M.S., Tulane U. Lec., Undergraduate Biology

Joint Appointees
Baldwin, Ian T., Adjunct Prof., Max Planck Inst. for Chemical Ecology/Ecology and Evolutionary Biology
Bloom, Stephen E., Prof., Veterinary/Microbiology and Immunology
Bradbury, Jack, Prof., Neurobiology and Behavior/Library of Natural Sounds
Brunell, Thomas, Prof., Plant Breeding/Plant Biology
Doye, Jeffrey J., Prof., Plant Biology (Bailey Hortorium)/Plant Biology General
Foote, Robert H., Jacob Gould Schurman Prof. Emeritus, Animal Science/Physiology
Giovannoni, James G., Adjunct Asst. Prof., USDA Science and Education Administration/Plant Biology
Hanson, Maureen, Prof., Molecular Biology and Genetics/Plant Biology
Hruzinska, Grazyna, Prof., Food Science and Technology/Geneva/Plant Biology Ithaca
Jahn, Margaret M., Assoc. Prof., Plant Breeding/Plant Biology
Jander, Georg, Adjunct Asst. Prof., Boyce Thompson Institute/Plant Biology
Kochian, Leon V., Adjunct Prof., USDA Science and Education Administration/Plant Biology
Korf, Richard P., Prof. Emeritus, Plant Pathology/Plant Biology (Bailey Hortorium)
Kresovich, Stephen, Prof., Plant Breeding/Plant Biology
Liebherr, James K., Assoc. Prof., Entomology/Plant Biology (Bailey Hortorium)
McCleary, Polley A., Prof., Information Technologies/Ecology and Evolutionary Biology
McCoug, Susan R., Assoc. Prof., Plant Breeding/Plant Biology
Pimentel, David, Prof. Emeritus, Entomology/Ecology and Evolutionary Biology
Rossman, Michael J., Adjunct Prof., Purdue U./Molecular Biology and Genetics
Stern, David B., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Tankersley, Steven, Prof., Plant Breeding/Liberty Hyde Bailey Prof., Plant Biology
Thaler, Jennifer S., Assoc. Prof., Entomology/Ecology and Evolutionary Biology
Thompson, John F., Adjunct Prof., USDA Science and Education Administration/Plant Biology
Vehrencamp, Sandra, Prof., Neurobiology and Behavior/Library of Natural Sounds
Wang, Haiyang, Adjunct Asst. Prof., Boyce Thompson Inst./Plant Biology

College of Arts and Sciences
Adkins-Regan, Elizabeth, Ph.D., U. of Pennsylvania, Prof., Neurobiology and Behavior
Aquadro, Charles F., Ph.D., U. of Georgia, Prof., Molecular Biology and Genetics/Ecology and Evolutionary Biology
Bass, Andrew H., Ph.D., U. of Michigan, Prof., Neurobiology and Behavior
Blackler, Antonie W., Ph.D., U. of London (England), Prof., Molecular Biology and Genetics
Buxton, Ronald, Ph.D., Princeton U. Assoc. Prof., Neurobiology and Behavior
Brecher, Anthony P., Ph.D., Leeds U. (England), Prof., Molecular Biology and Genetics
Brown, William, Ph.D., U. of Texas Health Science Center, Dallas, Prof., Molecular Biology and Genetics
Clark, Andrew G., Ph.D., Stanford U. Prof., Molecular Biology and Genetics/Ecology and Evolutionary Biology
Chuang, Huai-hu, Ph.D., U. of California, Asst. Prof., Molecular Physiology
Deitcher, David, Ph.D., Harvard Medical School. Assoc. Prof., Neurobiology and Behavior
Ellner, Stephen P., Ph.D., Cornell U. Prof., Ecology and Evolutionary Biology
Feigenson, Gerald W., Ph.D., California Inst. of Technology. Prof., Molecular Biology and Genetics
Fei, Joseph R., Ph.D., U. of Michigan, Prof., Neurobiology and Behavior
Finlay, Barbara, Ph.D., Massachusetts Inst. of Technology. Prof., Psychology
García García, María J., Ph.D., U. Autonoma de Madrid Spain. Asst. Prof., Molecular Biology and Genetics
Gebek, Monica A., Ph.D., U. of Utah Assoc. Prof., Ecology and Evolutionary Biology
Gibson, Quentin H., Ph.D./D.Sc., Queen's U. (Northern Ireland). Greater Philadelphia Professor Emeritus in Biological Sciences, Molecular Biology and Genetics
Goodale, Christine L., Ph.D., U. of New Hampshire College. Assoc. Prof., Ecology and Evolutionary Biology
Greene, Harry W., Ph.D., U. of Tennessee. Prof., Ecology and Evolutionary Biology
Hairston, Nelson G., Jr., Ph.D., U. of Washington. Prof., Molecular Biology and Genetics
Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology
Heppel, Leon A., Ph.D., U. of California, Berkeley. Prof. Emeritus, Molecular Biology and Genetics
Hess, George P., Ph.D., U. of California, Berkeley. Prof., Molecular Biology and Genetics
Hinkley, Peter C., Ph.D., New York U. Prof., Molecular Biology and Genetics
Howland, Howard C., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Biomedical Sciences
Hoy, Ronald R., Ph.D., Stanford U. Merksamer Prof. Neurobiology and Behavior
Huffaker, Tim C., Ph.D., Massachusetts Inst. of Technology. Prof., Molecular Biology and Genetics
Ke, Ailong, Ph.D., Johns Hopkins U. School of Medicine. Asst. Prof., Molecular Biology and Genetics
Kennedy, Kenneth A. R., Ph.D., U. of California, Berkeley. Prof. Emeritus, Ecology and Evolutionary Biology
Lee, Siu Sylvia, Ph.D., Bailer Coll. of Medicine. Asst. Prof., Molecular Biology and Genetics
Leonard, Samuel L., Ph.D., U. of Wisconsin. Prof. Emeritus, Molecular Biology and Genetics
Linster, Christine, Ph.D., Pierre and Marie Curie U. Assoc. Prof., Neurobiology and Behavior
Liu, Jun Kelly, Ph.D., Cornell U. Asst. Prof., Molecular Biology and Genetics
McColl, David, Ph.D., U. of Iowa. Assoc. Prof., Neurobiology and Behavior
Macdonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof. Emeritus, Molecular Biology and Genetics/Program on Science, Technology, and Society
Nicholson, Linda, Ph.D., Florida State U. Assoc. Prof., Molecular Biology and Genetics
Power, Alison G., Ph.D., U. of Washington. Prof., Ecology and Evolutionary Biology/Science and Technology Studies
Provine, William B., Ph.D., U. of Chicago. Charles A. Alexander Professor of Biological Sciences, Ecology and Evolutionary Biology/History
Schimenti, John C., Ph.D., U. of Cincinnati. Prof., Molecular Biology and Genetics

Bzeiendhout, Abraham, D.V.Sc., U. of Pretoria (South Africa), Sr. Lec., Biomedical Sciences
ADMINISTRATION
Robert Constable, dean
Juris Hartmanis, senior associate dean
Jennifer Woford, assistant dean for educational programs

INTRODUCTION
Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the major in Information Science, and interdisciplinary programs in computational biology, computational science and engineering, game design, and computing in the arts. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit. Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu/, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS
Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology
The program of study in computational biology is part of the biological sciences major offered through the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and information sciences. It is designed for students who want to emphasize basic biological science.

The concentration in computational molecular biology is offered by the Department of Computer Science to students enrolled in the College of Arts and Sciences and the College of Engineering. It provides core training in computer science and biology. It is designed for students who want to emphasize computational science.

The concentration in statistical genomics is offered by the Department of Biological Statistics and Computational Biology to students enrolled in the College of Agriculture and Life Sciences. It provides training in statistics, biology, and computer science. It is designed for students who want to emphasize statistics and bioinformatics.

The concentration in mathematical biology is offered by the Department of Mathematics and is open to students enrolled in the College of Arts and Sciences. It provides training in mathematics, biology, and computer science. It is designed for students who want to emphasize mathematics.

Computational Science and Engineering
Computational science and engineering is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control.

Computer Science
All CIS programs have connections to disciplines in the arts, computer science, the social sciences, the humanities, and the physical sciences. Tracks are available for students across colleges, and the Master of Science program includes information science at Cornell is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control.

Game Design
The undeniable popularity of games draws the attention of academia, industry, and even the government on areas of design, development, and social impact. The game industry, like the film industry, is an unmistakable force in entertainment. Like filmmaking, game design can thrive and evolve only with the support of a strong academic foundation. The Game Design minor is offered by the Department of Computer Science for students who anticipate that game design will have a prominent role to play in their academic and professional career. Overwhelming interest also sparked the creation of the Game Design Initiative at Cornell University (GDIAC) in 2003. This organization is a group of students, faculty, alumni, and community members who are devoted to the establishment of game design as an academic discipline. All students are welcome to participate in GDIAC. Students across colleges should check with their college advising office to determine whether they are eligible to pursue the official program of study.

Information Science
Information science at Cornell is an interdisciplinary program that studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called "human-centered systems" because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks; information discovery; knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of collecting, preserving, and distributing information; information system design; cognition and learning; social informatics; and cultural studies of computation.
The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in information science, systems, and technology (ISSST), which is offered by the Department of Computer Science and the School of Operations Research and Information Engineering. For details about the IS and ISSST majors, please refer to the respective colleges.

The minor/concentration in information science is available to students in all undergraduate colleges.

**Statistical Science**

The university-wide Department of Statistical Science coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Students interested in graduate study in statistics and probability can apply to the graduate field of statistics or to one of the other graduate fields of study that offer related course work. Students in the field of statistics plan their graduate programs with the appropriate director of graduate studies, 301 Malott Hall.

The department offers a Master of Professional Studies (MPS) in applied statistics, with an emerging track in bioinformatics, for students pursuing careers in business, industry, and government. The MPS program has three main components: a two-semester core course, STSCI 501 and 502, covering a wide range of statistical applications, computing, and consulting; an in-depth statistical analysis MPS project supported by the core course; and required course work, including a two-semester course sequence in mathematical probability and statistics, and elective course work selected from offerings in this and other departments at Cornell.

The department offers an undergraduate major and minor in biometry and statistics through the Department of Biological Statistics and Computational Biology in the College of Agriculture and Life Sciences. It also offers a minor in Engineering Statistics through the School of Operations Research and Information Engineering in the College of Engineering. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the undergraduate coordinator (301 Malott Hall, 255-8066).

Statistics courses offered by the departments listed in the section on courses will fulfill distribution requirements in many of the colleges.

A statistical consulting service is offered by the faculty of DSS and the Cornell Statistical Consulting Unit (CSCU), 255-1926. There is no charge to members of the Cornell community for using the Statistical Consulting Service. It provides guidance to researchers in a broad variety of fields on designing experiments, collecting and analyzing data, and drawing appropriate conclusions from the results of their studies. Statistical computing consulting is also available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, biostatistics, economic and social statistics, epidemiology, manufacturing statistics, reliability control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

**The Information Science Concentration/Minor**

A concentration/minor in information science is available to students in the Colleges of Agriculture and Life Sciences (CALS); Architecture, Art, and Planning (AAP); available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations (ILR). Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student’s college and, in a few cases, a student’s major. All students interested in pursuing the information science concentration/minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. Students are also referred to www.infosci.cornell.edu/ugrad/concentrations.html for the most up-to-date description of the concentration and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The concentration/minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate concentration/minor are as follows. All courses must be chosen from the course lists below. In addition, a letter grade of at least C is required; S-U courses are not allowed.

Note: Course credits from institutions other than Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 270 or CEE 304. Hotel students must use H ADM 201.

- **Statistics**: one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.

**Information Systems** (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 130. CS 211 may not be used by students who are required to take it for their major.

**Elective**: one additional course from any component area. Hotel students must take three courses in this category, from the following: H ADM 374, 574, and 476 or 575. (Engineering students and all Computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisors to make sure there are no special departmental restrictions or requirements.)

**Statistics**

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:
- ENGRD 270 Basic Engineering Probability and Statistics
- CEE 304 Uncertainty Analysis in Engineering

Hotel students must take:
- H ADM 201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:
- MATH 171 Statistical Theory and Application in the Real World
- H ADM 201 Hospitality Quantitative Analysis
- AEM 210 Introductory Statistics
- HADM 210 Introduction to Statistics
- ENGRD 270 Basic Engineering Probability and Statistics
- BTRY 301 Statistical Methods I
- SOC 301 Evaluating Statistical Evidence
- CEE 304 Uncertainty Analysis in Engineering
- ILRST 312 Applied Regression Methods
- ECON 319 Introduction to Statistics and Probability
- PSYC 350 Statistics and Research Design

**Human-Centered Systems**

- COGST 101 Introduction to Cognitive Science
- PSYCH 205 Perception
- INFO 214 Cognitive Psychology
- INFO 245 Psychology of Social Computing
- PSYC 280 Introduction to Social Psychology
**Social Systems**

- INFO 204 Networks
- S&Ts 250 Technology in Society
- INFO 292 Inventing an Information Society
- ECON 301 Microeconomics
- SOC 304 Social Networks and Social Processes
- ECON 313 Intermediate Microeconomic Theory
- INFO 320 New Media and Society
- AEM 322 Technology, Information, and Business Strategy
- INFO 349 Media Technologies
- INFO 350 Computers: From the 17th Century to the Dot.com Boom
- INFO 356 Computing Cultures
- INFO 366 History and Theory of Digital Art
- ECON 368 Game Theory
- INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
- S&Ts 411 Knowledge, Technology, and Property
- 5 HUM 415 Environmental Interventions
- ECON 419 Economic Decisions Under Uncertainty
- COMM 428 Communication Law
- INFO 429 Copyright in the Digital Age
- OR&IE 435 Introduction to Game Theory
- S&Ts 438 Minds, Machines, and Intelligence
- INFO 444 Responsive Environments
- INFO 447 Social and Economic Data
- H ADM 474 Strategic Information Systems
- ECON 476/477 Decision Theory I and II
- H ADM 489 The Law of the Internet and E-Commerce
- INFO 515 Culture, Law, and Politics of the Internet

*Only one of ECON 301 and 313 can be taken for IS credit. Only one of OR&IE 435 and ECON 368 can be taken for IS credit. Only one of AEM 322 and H ADM 474 may be taken for IS credit.*

**Information Systems**

- INFO 130 Introductory Design and Programming for the Web
- INFO 172 Computation, Information, and Intelligence
- CS 211 Computers and Programming
- INFO 230 Intermediate Design and Programming for the Web
- CIS 300 Introduction to Computer Game Design
- INFO 330 Data-Driven Web Applications
- LING 424 Computational Linguistics
- INFO 430 Information Retrieval
- INFO 431 Web Information Systems
- CS 432 Introduction to Database Systems
- CS 465 Introduction to Computer Graphics
- CS 472 Foundations of Artificial Intelligence
- LING 474 Introduction to Natural Language Processing
- OR&IE 474 Statistical Data Mining I
- CS 478 Machine Learning
- OR&IE 480 Information Technology
- OR&IE 481 Delivering OR Solutions with Information Technology
- OR&IE 483 Application of Operations Research and Game Theory to Information Technology
- CS 501 Software Engineering
- CS 513 System Security
- CS 530 Architecture of Large-Scale Information Systems
- ECE 562 Fundamental Information Theory
- CS 578 Empirical Methods in Machine Learning and Data Mining

INFO 130 may not be taken for information science credit by Engineering students. Computer science majors may not use INFO 130 or 230. CS 211 may not be taken for information science credit by majors for which it is a required course, e.g., Computer Science (CS) and Operations Research and Engineering (ORE).

**COMPUTING AND INFORMATION SCIENCE (CIS) COURSES**

**CIS 121(1121) Introduction to MATLAB (also EAS 121(1121))**
Fall, spring. 2 credits. Corequisite: MATH 111, 191, or equivalent. No programming experience assumed. Introduction to programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

**CIS 122(1002) Application of FORTRAN in the Earth and Environmental Sciences (also EAS 150(1500))**
Spring. 2 credits. Prerequisite: CIS/EAS 121 or equivalent. For description, see EAS 150.

**CIS 165(1610) Computing in the Arts (also ART 175, CS 165(1610), ENGR 165(1610), MUSIC 165(1665), PSYCH 165(1650))**
Fall. 3 credits. For description, see CIS 165.

**CIS 167(1620) Visual Imaging in the Electronic Age (also ARCH 450(4500), ART 170(1700), CS/ENGR 167(1620))**
Fall. 3 credits. For description, see ART 170.

**CIS 190(1900) Service Learning in Computing: Collaborative Environments**
Fall. 4 credits. Prerequisites: none—no programming experience necessary. Service-learning course. Combines an introduction to aspects of computing technology (hardware, software, interactive design, usability, social conventions, and security) with serving as online mentors to at-risk middle school students in after-school CYFair (CyberYouthFair) programs. These programs focus on participatory, project-based learning using collaborative virtual environments. Students receive hands-on training and practice for the mentoring that they will do.

**CIS 300(3000) Introduction to Computer Game Design**
Fall, spring (spring only beginning 2008-2009). 4 credits. Prerequisites: students generally choose one field (art, music, programming, writing), although working in multiple areas is encouraged; artists should have taken ART 251 or have equivalent experience; musicians should have programming experience (CS 100, CS/INFO 130 or equivalent) and MUSIC 120; programmers must have completed CS/ENGRD 211 and have experience with, or the ability to learn quickly, C++; writers should have programming experience (CS 100, CS/INFO 130 or equivalent) and ENGL 280/281 or equivalent experience. Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, musicians, and writers collaborate to produce an original computer game.

**CIS 400(4002) Advanced Projects in Game Design**
Fall, spring. 3 credits. Prerequisites: CIS 300 and permission of instructor. Project-based follow-up course to CIS 300. Students work in a multidisciplinary team to develop an original computer game or an application that explores innovative game technology. Students have the goal of submitting their work to a contest or conference. Grading is based on completion of project plans and documentation.
teamwork, presentations and demonstrations, class participation, and quality of final projects. Instructional meetings are arranged based on student and instructor schedules.

CIS 490(4999) Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

CIS 504(5040) Applied Systems Engineering (also CEE 504[5040], ECE 512[5120], M&E 591[5910], OR&IE 512[5120], SYSEN 510[5100])
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. For description, see SYSEN 510.

CIS 505(5050) Systems Analysis Architecture, Behavior, and Optimization (also CEE 505[5050], ECE 513[5130], M&E 592[5920], OR&IE 513[5130], SYSEN 520[5200])
Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 504, ECE 512, M&E 591, OR&IE 512, or SYSEN 510). For description, see SYSEN 520.

CIS 565(5640) Computer Animation (also ART 273[2703], CS 565[5640])
Fall. 4 credits. Prerequisite: none. For description, see ART 273.

CIS 566(5642) Advanced Animation (also ART 372, CS 566[5642])
Spring. 4 credits. Prerequisite: none. For description, see ART 372.

[CIS 576(5846) Decision Theory I (also ECON 476[4768]4460[4460]6760)]
Fall. 4 credits. Prerequisite: mathematical sophistication. Next offered 2008–2009. For description, see ECON 476.

[CIS 577(5847) Decision Theory II (also ECON 477[4777]4770[4770])]
Spring. 4 credits. Prerequisite: mathematical sophistication. Next offered 2008–2009. For description, see ECON 477.

CIS 629(6209) Computation Methods for Nonlinear Systems (also PHYS 682[7682])
Fall. 4 credits. Enrollment may be limited. For description, see PHYS 682.

CIS 790(7999) Independent Research
Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member. Independent research or master of engineering project.

CIS 797(7970) Topics in CIS/IGERT Seminars
Fall, spring. 1 credit. S-U grades only. Discusses diverse topics in nonlinear systems. The seminar is oriented to the requirements for the IGERT Program in Nonlinear Systems, a National Science Foundation-supported graduate training program. Includes a mixture of student, faculty, and visitor presentations and development of plans for internships and student projects.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS. Its courses are an integral part of CIS's several educational programs.

The following web site can be consulted for updates made after the publication of Courses of Study: www.cornell.edu/courses/listofcourses/index.html.

CS 099(119) Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: freshman standing. Credit may not be applied toward engineering degree. S-U grades only.

Designed for students who intend to take CS 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take CS 100 should not take this course.

[CS 100H(1113) Introduction to Computer Programming—Honors]
Fall or spring. 4 credits.

CS 100J(1110) Introduction to Computing Using Java
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience. Programming and problem solving using Java. Emphasizes principles of software development, style, and testing. Topics include object-oriented concepts, procedures and functions, iteration, arrays, strings, algorithms, exceptions, GUIs (graphical user interfaces). Weekly labs provide guided practice on the computer, with staff present to help. Assignments use graphics and GUIs to help develop fluency and understanding.

CS 100M(1112) Introduction to Computing Using MATLAB
Fall, spring. 4 credits. Corequisite: MATH 111, 151, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

CS 100R(1114) Introduction to Computing Using MATLAB and Robotics
Fall and/or spring. 4 credits. Prerequisite: some programming experience. Honors-level introduction to computer science using camera-controlled robots using MATLAB. Emphasis is on modular design of programs and on fundamental algorithms. Extensive laboratory experiments with cameras and robots, including Sony Aibo. Example projects include controlling a robot by pointing a light stick and making a robot recognize simple colored objects.

CS 101J(1130) Transition to Object-Oriented Programming
Fall, spring, summer. 1 credit. Prerequisite: one course in programming. Introduction to object-oriented concepts using Java. Assumes programming knowledge in a language like MATLAB, C, C++, or Fortran. Students who have learned Java but were not exposed heavily to OO are welcome.

CS 101M(1132) Transition to MATLAB and scientific computing. Covers the MATLAB environment, assignment, conditions, iteration, scripts, functions, arrays, scientific graphics, and vectorized computation. Assumes programming knowledge in a language like Java, C, C++, or Fortran.

CS 113(1123) Introduction to C
Fall, spring, usually weeks 1–4. 1 credit.
Prerequisite: CS 100 or equivalent programming experience. Credit granted for both CS 115 and 213 only if 113 taken first. S-U grades only. Brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. CS 213 (C++ Programming) includes much of the material covered in 113. Students planning to take CS 213 normally do not need to take 113.

CS 114(1124) Unix Tools
Fall, usually weeks 5–8. 1 credit.
Prerequisite: CS 100 or equivalent programming experience. Recommended: knowledge of at least one programming language. S-U grades only. Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

CS 130(1300) Introductory Design and Programming for the Web (also INFO 130[1300])
Fall. 3 credits. Prerequisite: none. No computer background necessary. For description, see INFO 130.

CS 165(1610) Computing in the Arts (also ART 175, CIS 165[1610], ENGR 165[1610], MUSIC 165[1465], PSYCH 185[1601])
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts. Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on behind the software used for art and music. It looks at ways of breaking things apart and sampling and ways of putting things together and reassembling, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 171+ and MUSIC 120+.
Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS 114 or equivalent. S-U grades only.
Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take CS 114 first.

CS 215(2004) Introduction to C#
Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS/ENGRD 211 or equivalent experience. S-U grades only. Introduces students to building applications in the .NET environment using the C# language.

CS 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])
Spring, 3 credits. Pre-requisite: CS 130 or equivalent knowledge.
For description, see INFO 230.

CS 280(2800) Discrete Structures
Fall, spring, 3 credits. Pre- or corequisite: CS 100 or permission of instructor.
Covers the mathematics that underlies most of computer science and discrete mathematics; basic mathematical induction; logical proof, propositional and predicate calculus, combinatorics and discrete mathematics; basic probability theory; basic number theory; sets, functions, and relations; partially ordered sets; and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

CS 285(2850) Networks (also ECON 204[2040], INFO 204[2040], SOC 209[2090])
Spring, 4 credits. Prerequisites: none. For description, see ECON 204.

CS 305(3050) Creative Problem-Solving in Computer Science
Spring, 3 credits. Prerequisites: CS 211 and 280.

CS 312(3110) Data Structures and Functional Programming
Fall, spring. 3 credits. Prerequisite: CS 211 and 280.

CS 314(3420) Computer Organization (also ECE 314[3140])
Spring, 4 credits. Prerequisite: CS 211 or ENGRD 230. Should not be taken concurrently with CS 312.
Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, datapath design, memory hierarchies including caches and virtual memory, I/O devices, and bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

CS 316(3410) Systems Programming
Fall. 4 credits. Prerequisite: CS 211 or equivalent programming experience. Should not be taken concurrently with CS 312.
Introduction to systems programming, computer organization, and the hardware/software interface. Topics include representation of information, machine and assembly languages, processor organization, memory management, input/output mechanisms, and basic network programming. Also covered are techniques for analyzing program performance and optimization.

CS 321(3510) Numerical Methods in Computational Molecular Biology (also BIOL/BIOS 321[3210], ENGRD 321[3210])
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and linear algebra (e.g., MATH 221 or 294 or BTRY 417); CS 100 or equivalent and some familiarity with iteration, arrays, and procedures; knowledge of discrete probability and random variables at the level of CS 280.

CS 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])
Spring, summer. 3 credits. Prerequisites: CS 100 and MATH 221 or 294, knowledge of discrete probability and random variables at the level of CS 280.
Introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

CS 324(3740) Computational Linguistics (also COGST 424[4240], LING 424[4240])
Fall or spring. 4 credits. Prerequisites: LING 203. Recommended: CS 114. Labs involve work in Unix environment.
For description, see LING 424.

CS 330(3300) Data-Driven Web Applications (also INFO 330[3300])
Fall. 3 credits. Prerequisite: CS/ENGRD 211. CS majors may use only one of the following toward their degree: CS/INFO 330 or CS 433.
For description, see INFO 330.

CS 372(3700) Explorations in Artificial Intelligence (also INFO 372[3720])
Spring, 3 credits. Prerequisite: CS 111 or equivalent, statistics course, and CS/ENGRD 211 or permission of instructor.
CS 381[3810] Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: CS 280 or permission of instructor. Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

[CS 400[4150] The Science of Programming
Fall. 3 credits. Prerequisite: CS 211.]

[CS 411(4110) Programming Languages and Logics
Fall. 4 credits. Prerequisite: CS 312 or permission of instructor. Next offered 2008-2009. Introduction to the theory, design, and implementation of programming languages. Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.]

CS 412(4120) Introduction to Compilers
Spring. 3 credits. Prerequisites: CS 312 or permission of instructor and CS 314 or 316. Corequisite: CS 413. Introduction to the specification and implementation of modern compilers. Topics include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages. The course entails a substantial compiler implementation project.

CS 413(4121) Practicum in Compilers
Spring. 2 credits. Corequisite: CS 412. Compiler implementation project related to CS 412.

CS 414(4440) Operating Systems
Fall, spring, summer. 3 credits. Prerequisite: CS 314 or 316. Corequisite: CS 415. Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

CS 415(4441) Practicum in Operating Systems
Fall, spring. 2 credits. Corequisite: CS 414. Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

CS 416(4420) Computer Architecture
[also ECE 475(4750)]
Fall. 4 credits. Prerequisites: ENGRD 230 and CS/ECE 314. For description, see ECE 475.

CS 419(4450) Computer Networks
Spring. 4 credits. Prerequisite: CS 414 or permission of instructor. Introduction to computer networks with an emphasis on fundamentals. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, and security. Fundamentals of layered protocols and techniques for protocol design and implementation. Course material is supplemented by network measurement projects, protocol simulations, and a substantial protocol implementation project running over sockets that requires use of C or C++.

CS 421(4210) Numerical Analysis and Differential Equations (also MATH 425[4250])
Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. For description, see MATH 425.

CS 422(4220) Numerical Analysis: Linear and Nonlinear Problems (also MATH 426[4260])
Spring. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course.

CS 426(4520) Introduction to Bioinformatics
Spring. 4 credits. Prerequisites: CS/ENGRD 211, 280. Overview of the goals, tools, and techniques used in bioinformatics, a field that applies ideas from computer science, mathematical modeling, and statistics in order to make sense of the huge datasets that typify modern biology. Topics include a brief introduction to molecular biology, DNA sequencing, sequence alignment and multiple alignment, similarity searches and their statistics, phylogeny, gene regulation and motif finding, gene finding, and genome rearrangements. Much of the course is devoted to an in-depth study of the algorithms behind popular computational tools such as Smith-Waterman, BLAST, CLUSTALW, Genscan, and MEME.

[CS 426(4510) Introduction to Computational Biophysics
Fall. 3 credits. Prerequisite: CS 100, CHEM 211 or equivalent, MATH 221, 293, or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOMB 330.]

CS 430(4300) Information Retrieval (also INFO 430[4300])
Fall. 3 credits. Prerequisite: CS 211 or equivalent. For description, see INFO 430.

CS 431(4302) Web Information Systems (also INFO 431[4302])
Spring. 3 credits. Prerequisites: CS 211 and some familiarity with web site technology. For description, see INFO 431.

CS 432(4320) Introduction to Database Systems
Fall. 3 credits. Prerequisites: CS 312 or CS 211, 212, and permission of instructor. Introduction to modern database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction management, recovery, database design, XML, and XQuery. The course focuses on the design and internals of modern database systems.

CS 433(4321) Practicum in Database Systems
Fall. 2 credits. Pre- or corequisite: CS 432. CS majors may use only one of the following toward their degree: CS/INFO 330 or CS 433. Students build part of a real database system in C++.

CS 465(4620) Introduction to Computer Graphics (also ARCH 374[3704])
Fall. 4 credits. Prerequisite: CS/ENGRD 211.
Introduction to the principles of computer graphics in two and three dimensions. Topics include digital images, filtering and anti-aliasing, 2-D and 3-D affine geometry, ray tracing, perspective and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require some Java programming. May be taken with or without concurrent enrollment in CS 466.

CS 466(4621) Computer Graphics Practicum
Fall. 2 credits. Pre- or corequisite: CS 465. Provides CS 465 students with hands-on experience in computer graphics programming on modern graphics hardware. A semester-long project involves building a substantial interactive 3D system. The course uses Java and OpenGL for code development.

CS 472(4700) Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: CS/ENGRD 211 and CS 280 (or equivalent). Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

CS 473(4701) Practicum in Artificial Intelligence: Robotics and Embodied AI (also M & A E 473[4730])
Fall. 2 credits. Fulfills senior design requirement for M & A E students. Limited enrollment. Prerequisites: statistics and probability (ENGRD 270, CEE 304, or equivalent), CS/ENGRD 211 (or permission of instructor). Pre- or corequisite: CS 472. Term project. Lab fee. Hands-on introduction to application of AI and machine learning techniques in robotics. Deliberative, reactive and behavior-based architectures. Motion and path planning, mapping, navigation, locomotion, and manipulation. Real-time programming of sensors and actuators and implementation in a physical robotic system.

CS 474(4740) Introduction to Natural Language Processing (also COGST 474[4740], LING 474[4744])
Fall or spring. 4 credits. Prerequisite: CS 211. Next offered 2008-2009. Computationally oriented introduction to natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.]
COMPUTING AND INFORMATION SCIENCE (CIS) - 2007-2008

CS 475(4702) Artificial Intelligence: Uncertainty and Multi-Agent Systems
Spring. 4 credits. Prerequisites: CS/ENGRD 211 and CS 280 or equivalent. Next offered 2008-2009.
A key issue in the design of intelligent systems is how to deal with uncertain or incomplete information, as obtained, for example, through sensory input. The first half of this course focuses on how to represent and reason with uncertain information. The second half covers the study and design of multi-agent systems. Topics include Bayesian networks, Markov random fields, exact and approximate probabilistic inference methods, Markov Chain Monte Carlo methods, connections to statistical physics and information science, adversarial reasoning and planning in multi-agent systems, and game theoretic notions underlying multi-agent systems. This course complements CS 472, but is given as a self-contained unit.

CS 478(4860) Applied Logic (also MATH 486[4860])
Spring. 4 credits. Prerequisites: MATH 222 or 294, CS 280 or equivalent (e.g., MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic: Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

CS 487(4830) Introduction to Cryptography
Fall. 4 credits. Prerequisites: CS 280 (or equivalent), CS 381 (or mathematical maturity), or permission of instructor. Introductory course in cryptography. Topics include one-way functions, encryption, digital signatures, pseudo-random number generation, zero-knowledge and basic protocols. Emphasizes fundamental notions and constructions with proofs of security based on precise definitions and assumptions.

CS 490(4999) Independent Reading and Research
Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

CS 501(5150) Software Engineering
Spring. 4 credits. Prerequisite: CS 211 or equivalent experience programming in Java or C++. Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered include professionalism, project management, and the legal framework for software development.

CS 513(5430) System Security
Fall. 4 credits. Prerequisites: CS 414 or 419 and familiarity with JAVA, C, or C++ programming languages. Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

CS 514(5410) Intermediate Computer Systems
Spring. 4 credits. Prerequisite: CS 414 or permission of instructor. Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have covered state-of-the-art software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in CS 490 or 790.

CS 516(5420) Parallel Computer Architecture (also ECE 572[5720])
Fall. 4 credits. Prerequisite: ECE 475. For description, see ECE 572.

CS 519(5450) Advanced Computer Networks (also CS 619[6450])
Fall or spring. 4 credits. Prerequisite: CS 419 or permission of instructor. Next offered 2008-2009. Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice-over IP, header compression, security, and high-performance networking environments (fast, slow, big, long). Emphasizes both research and the latest standards. A project with research content is required. (CS 519 is for M.Eng. students; CS 619 for Ph.D. students.)

CS 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530[5300])
Spring. 4 credits. Prerequisite: CS/INFO 330 or CS 432. For description, see INFO 530.

CS 585(5640) Computer Animation (also ART 273[2703], CIS 565[5640])
Fall. 4 credits. Prerequisites: none. For description, see ART 273.

CS 586(5642) Advanced Animation (also ART 372[3702], CIS 566[5642])
Spring. 4 credits. Prerequisites: none. For description, see ART 372.

CS 587(5643) Physically Based Animation for Computer Graphics
Spring. 4 credits. Prerequisites: CS/ENGRD 322 and/or CS 465 or permission of instructor. Offered alternate years; next offered 2008-2009. Modern computer animation and interactive digital entertainment are making increasingly sophisticated use of tools from scientific and engineering computing. This course introduces students to common physically based modeling techniques for animation of virtual characters, fluids and gases, rigid and deformable solids, and other systems. Aspects of interactive simulation and multi-sensory feedback are also discussed. A hands-on programming approach is taken, with an emphasis on small interactive computer programs.

CS 569(5620) Interactive Computer Graphics
Spring. 4 credits. Prerequisite: CS 465. Methods for interactive computer graphics, targeting applications including games, visualization, design, and immersive environments. Topics include programming graphics processing units (GPUs), shading models, advanced texturing, shadow algorithms, advanced lighting, hierarchical acceleration structures, and animation.

CS 572(5722) Heuristic Methods for Optimization (also CEE 509[5090], ORIE 533[5340])
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 211 or 322 or CEE/ENGRD 241, or graduate standing, or permission of instructor. For description, see CEE 509.

CS 578(5780) Empirical Methods in Machine Learning and Data Mining
Fall. 4 credits. Prerequisites: CS 280 and 312 or equivalent. This implementation-oriented course presents a broad introduction to current algorithms
and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning algorithms, for understanding and exploring their differences, and for exploring the conditions under which each is most appropriate.

**CS 611(6110) Advanced Programming Languages**  
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

**CS 612(6120) Advanced Compilers and Program Analyzers**  
Spring. 4 credits. Prerequisite: CS 412 or permission of instructor. Compiler optimizations for parallelism and locality; code scheduling, software pipelining, loop transformations. Advanced program analyses: data dependence analysis, inter-procedural dataflow analysis, flow-insensitive analysis, pointer and heap analysis. Safety checking, error detection, and program correctness.

**CS 614(6410) Advanced Systems**  
Fall or spring. 4 credits. Prerequisite: CS 414 or permission of instructor. Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**CS 615(6460) Peer-to-Peer Systems**  
Spring. 4 credits. Recommended: CS 614.

**CS 619(6450) Research in Computer Networks**  
Fall. 4 credits. Prerequisite: CS 419 or permission of instructor. Next offered 2008–2009. Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice over IP, header compression, security, and extreme networking environments (fast, slow, big, long). The emphasis is on both research and the latest standards. A project with research content is required. CS 619 is for Ph.D. students; CS 519 is for M.Eng. students.

**CS 621(6210) Matrix Computations**  
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

**CS 622(6220) Numerical Optimization and Nonlinear Algebraic Equations**  
Spring. 4 credits. Prerequisite: CS 621.

**CS 624(6240) Numerical Solution of Differential Equations**  
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 421 or 621) and differential equations, and knowledge of MATLAB.

**CS 626(6510) Computational Molecular Biology**  
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

**CS 628(6522) Biological Sequence Analysis**  
Fall. 4 credits. Prerequisites: none. Typically concentrates on one topic in biological sequence analysis, providing an in-depth analysis of the algorithmic and statistical challenges in that area. The selected topics vary from year to year.

**CS 632(6320) Database Management Systems**  
Spring. 4 credits. Prerequisite: CS 432 or graduate standing. Next offered 2008–2009. Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

**CS 633(6322) Advanced Database Systems**  
Spring. 4 credits. Prerequisite: CS 632 or permission of instructor. Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

**CS 664(6670) Machine Vision**  
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent. Offered spring 2008. Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

**CS 665(6620) Advanced Interactive Graphics**  
Fall or spring. 4 credits. Prerequisites: CS 465 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming. Covers advanced topics in realistic rendering with a focus on interactive techniques. Topics include light transport and global illumination rendering using the modern graphics pipeline, rendering with complex scenes, shadow algorithms, perception for rendering, and image-based rendering.

**CS 667(6630) Physically Based Rendering**  
Fall or spring. 4 credits. Prerequisites: CS 465 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus. Advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry, light transport and global illumination, rendering with participating media; advanced models for material properties; and physical measurement of light sources, images, and materials.

**CS 671(6762) Introduction to Automated Reasoning**  
Fall or spring. 4 credits. Prerequisite: CS 611 and graduate standing or permission of instructor.

**CS 672(6700) Advanced Artificial Intelligence**  
Spring. 4 credits. Prerequisites: CS 472 or permission of instructor. Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

**CS 673(6724) Integration of Artificial Intelligence and Operations Research**  
Spring 3 credits.

**CS 674(6740) Natural Language Processing (also INFO 630[6300])**  
Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 430 nor CS 474 are prerequisites. Offered fall 2007. Graduate-level introduction to technologies for the computational treatment of information in human-language form, covering modern natural-language processing (NLP) and/or information retrieval (IR). Possible topics include latent semantic analysis (LSI), click-through data for web search, language modeling, text categorization and clustering, information extraction, computational syntactic and semantic formalisms, grammar induction, and machine translation.

**CS 677(6764) Reasoning about Knowledge**  
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.

**CS 677(6766) Reasoning about Uncertainty**  
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2008–2009. Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversariness,
Advanced topics in computing and information science (CIS) - 2007-2008

Conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.

CS 678(6780) Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 478 or equivalent, or CS 578 or equivalent, or permission of instructor. Extends and complements CS 478 and 578, giving in-depth coverage of new and advanced methods in machine learning. In particular, we present open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

CS 681(6820) Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 482 or graduate standing. Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, and randomized reducibilities. Also covers topics such as parallel algorithms and efficient data structures.

CS 682(6810) Theory of Computing
Spring. 4 credits. Prerequisites: CS 381 and CS 482 or 681 or permission of instructor. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

CS 683(6822) Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisite: CS 681 or permission of instructor. An advanced treatment of important topics in the design of discrete algorithms. Topics may include randomization, approximation algorithms, online algorithms, learning theory, spectral methods, and techniques from the theory of metric spaces. The course will emphasize algorithmic problems in a range of areas including networks, electronic markets, and large datasets.

CS 684(6840) Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 482. No prior knowledge of game theory or economics assumed. Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multicast pricing.

CS 685(6850) The Structure of Information Networks [also INFO 685(6850)]
Fall or spring. 4 credits. Prerequisite: CS 482. For description, see INFO 685.

CS 686(6860) Logics of Programs
Fall or spring. 4 credits. Prerequisites: CS 682, and MATH 481 or MATH/CS 486. Next offered 2008-2009.

CS 687(6830) Cryptography
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs). Graduate introduction to cryptography. Topics include encryption, digital signatures, pseudo-random number generation, zero-knowledge, and basic protocols. Emphasizes fundamental concepts and proof techniques.

CS 709(7090) Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only. Weekly meeting for the discussion and study of important topics in the field.

CS 714(7410) Topics in Systems
Fall or spring. 3 credits. Prerequisite: permission of instructor.

CS 715(7192) Seminar in Programming Logics
Fall, spring. 4 credits. Prerequisites: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

CS 717(7430) Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: CS 612 or permission of instructor.

CS 718(7690) Computer Graphics Seminar
Fall, spring. 3 credits.

CS 719(7190) Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: CS 611 or permission of instructor. S-U grades only.

CS 726(7590) Problems and Perspectives in Computational Molecular Biology
Fall or spring. 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only. Weekly seminar series discussing timely topics in computational molecular biology. Addresses methodological approaches to sequence and structure analysis, function prediction, study of evolutionary relationships, and analysis of large biological systems. Statistical and deterministic computational approaches are covered, and specific and detailed biological examples are discussed. In each topic, one or two representative papers are selected that made significant advances in this field. The lectures are given by faculty and students. We try to bridge these disciplines by pairing students and faculty from complementary backgrounds.

CS 732(7320) Topics in Database Systems
Fall, spring. 4 credits. S-U grades only.

CS 733(7390) Database Seminar
Spring. 1 credit. Prerequisite: CS 633 or permission of instructor. S-U grades only.

CS 750(7726) Evolutionary Computation and Design Automation [also M & AE 650(6500)]
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2008-2009. Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

CS 754(7490) Systems Research Seminar
Fall, spring. 1 credit. S-U grades only.

CS 764(7670) Visual Object Recognition
Spring. 3 credits.

CS 772(7790) Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

CS 775(7794) Seminar in Natural Language Understanding
Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

CS 785(7850) Seminar on Information Networks [also INFO 785(7850)]
Fall. 4 credits. Prerequisites: CS 485 or 685 or permission of instructor. For description, see INFO 785.

CS 786(7860) Introduction to Kleene Algebra
Spring. 4 credits. Prerequisite: CS 381. Recommended: CS 482 or 681, CS 682, elementary logic (MATH 481 or 681), algebra (MATH 432).

CS 789(7890) Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor, S-U grades only.

CS 790(7999) Independent Research
Fall, spring. Prerequisite: permission of a computer science advisor. Independent research or master of engineering project.

CS 990(9999) Thesis Research
Fall, spring. Prerequisite: permission of a computer science advisor. S-U grades only. Doctoral research.
The World Wide Web is both a technology effective web sites, students need technical and a pervasive and powerful resource in our design, and methods for visual layout and usability issues on the web, user-centered study how web sites are deployed and used, use of technologies such as XHTML, skills in all three of these areas through the use of technologies such as XHTML. Cascading StyleSheets, and PHP. Students study how web sites are deployed and used, usability issues on the web, user-centered design, and methods for visual layout and information architecture. Through the web, this course provides an introduction to the interdisciplinary field of information science.

[INFO 172(1700) Computation, Information, and Intelligence (also COGST 172(1700), CS 172(1700), ENGR 172(1700))]
Fall. 3 credits. Prerequisites: some knowledge of differentiation; freshman standing or permission of instructor for students who have completed equivalent of CS 100. Next offered 2008–2009.
For description, see CS 172.

INFO 204(2040) Networks (also ECON 204(2040), SOC 204(20120))
Spring. 4 credits.
For description, see ECON 204.

INFO 214(2140) Cognitive Psychology (also COGST/PSYCH 214(2140))
Fall. 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students, see INFO/PSYCH 614, or COGST 501.
For description, see PSYCH 214.

INFO 230(2300) Intermediate Design and Programming for the Web (also CS 230(2300))
Spring. 4 credits. Prerequisite: INFO/CS 130 or equivalent knowledge.
Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). CS 130 concentrates almost exclusively on the client side. The main emphasis in CS 230 is learning about server-side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web site development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

INFO 245(2450) Psychology of Social Computing (also COMM 245(2450))
Fall. 3 credits.
For description, see COMM 245.

INFO 292(2921) Inventing an Information Society (also AM ST 292(2980), ECE/ENGRT 298(2980), HIST 292(2920), S&T 292(2921))
Spring. 3 credits; may not be taken for credit after ECE/ENGRT 198. Next offered 2008–2009.
For description, see ENGRT 298.

INFO 295(2950) Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 231 or equivalent.
Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, limits, summata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 320(3200) New Media and Society (also COMM 320(3200)(CA))
Spring. 3 credits.
For description, see COMM 320.

INFO 330(3300) Data-Driven Web Applications (also CS 330(3300))
Fall. 3 credits. Prerequisite: CS/ENGRT 211.
Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query languages, data modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

INFO 345(3450) Human-Computer Interaction Design (also COMM 345(3450))
Spring. 3 credits.
For description, see COMM 345.

INFO 349(3491) Media Technologies (also COMM 349(3490), S&T 349(3490))
Spring. 3 credits.
For description, see COMM 349.

INFO 355(3551) Computers: From the 17th Century to the Dot.com Boom (also S&T 355(3551))
Fall. 4 credits.
For description, see S&T 355.

[INFO 356(3561) Computing Cultures (also S&T 356(3561))]
INFO 360(3650) History and Theory of Digital Art (also ART H 360(3650)) (CA)
Fall. 4 credits.
For description, see ART H 360.

INFO 372(3720) Explorations in Artificial Intelligence (also CS 372(3700))
Spring. 3 credits. Prerequisites: MATH 111 or equivalent, an information science-approved statistics course, and CS 211 or permission of instructor.
How do computers solve tasks as diverse as playing chess or backgammon, controlling autonomous space missions such as NASA's Deep Space One, plan the route for a driverless car as in the Darpa Grand Challenge race, perform content-based selection of music programs, or solve Sudoku, the latest puzzle craze? This course introduces students to a range of computational modeling approaches and solution strategies using examples from AI and Information Science. We cover different formalisms such as logical representations, constraint-based languages, mathematical programming, and multi-agent approaches (including adversarial games). Emphasis is on modeling, not on algorithms, but efficiency issues (complexity) are highlighted as part of the modeling approaches. Students also learn about the tradeoffs in modeling choices.

[INFO 387(3871) The Automatic Lifestyle: Computers, Culture and Technology (also S&T 387(3871))]
For description, see S&T 387.

INFO 415(4150) Environmental Interventions (also S HUM 415)
Fall. 4 credits.
For description, see S HUM 415.

INFO 429(4290) Copyright in the Digital Age (also COMM 429(4290))
Fall. 3 credits.
For description, see COMM 429.

INFO 430(4300) Information Retrieval (also CS 430(4300))
Fall. 3 credits. Prerequisite: CS/ENGRT 211 or equivalent.
Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

INFO 431(4302) Web Information Systems (also CS 431(4302))
Spring. 3 credits. Prerequisites: CS 211 and some familiarity with web site technology. Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

INFO 435(4350) Seminar on Applications of Information Science (also INFO 635(6390))
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 211 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 435, Ph.D. students should register for INFO 635.
This course brings together the interdisciplinary themes of information science—technological, sociological, legal, economic, and political—through a series of
INFO 440(4400) Advanced Human-Computer Interaction Design [also COMM 440(4400)]
Fall. 3 credits. Prerequisites: COMM/INFO 445.
For description, see COMM 440.

INFO 444(4144) Responsive Environments [also ART H 444(4144)] (CA)
Spring. 4 credits.
For description, see ART H 444.

INFO 447(4470) Social and Economic Data [also ILRLE 447(4470)]
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.
Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American Community Survey. The course is appropriate for upper-level undergraduate, professional master’s, and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

INFO 450(4500) Language and Technology [also COMM 450(4500)]
Spring. 3 credits. Prerequisite: COMM 240 or 245 or permission of instructor.
For description, see COMM 450.

INFO 490(4900) Independent Reading and Research
Fall. Independent reading and research for undergraduates.

INFO 491(4910) Teaching In Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a T.A. in a course in the information science, systems, and technology major.

INFO 515(5150) Culture, Law, and Politics of the Internet
Fall. 4 credits.
Explores the culture, law, and politics of the Internet. Highlighted for course include: net neutrality, free speech, Internet governance, domain naming, intellectual property, DMCA compliance, privacy and security, and the development of institutional as well as national policy for the Internet.

INFO 530(5300) The Architecture of Large-Scale Information Systems [also CS 530(5300)]
Spring. 4 credits. Prerequisite: INFO/CS 530 or CS 432.
Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, J2EE, Servlets, XML, and SOAP.

INFO 614(6140) Cognitive Psychology [also COGST 614(6140), PSYCH 614(6140)]
Fall. 4 credits.
For description, see PSYCH 614.

INFO 620(6300) Advanced Language Technologies [also CS 674(6740)]
Fall or spring (for 2007-2008, offered in fall). 3 credits. Prerequisites: permission of instructor. Neither INFO/CS 420 nor CS 471 are prerequisites.
For description, see CS 674 in CIS section.

INFO 635(6390) Seminar on Applications of Information Science [also INFO 438(4380)]
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 211 or equivalent, and experience using information systems. Undergraduates and master’s students should register for INFO 435; Ph.D. students should register for INFO 635.
For description, see INFO 435.

INFO 640(6400) Human-Computer Interaction Design [also COMM 640(6400)]
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication [also COMM 645(6450)]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 645.

INFO 648(6648) Speech Synthesis by Rule [also LING 648(6648)]
Spring. 4 credits. Prerequisite: LING 401, 419, or permission of instructor.
For description, see LING 648.

INFO 650(6500) Language and Technology [also COMM 650(6500)]
Spring. 3 credits.
For description, see COMM 650.

[INFO 651(6602) Critical Technical Practices]

INFO 685(6850) The Structure of Information Networks [also CS 685(6850)]
Fall or spring. 4 credits. Prerequisite: CS 482.
Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

INFO 709(7090) IS Colloquium
Fall. 1 credit.
For staff, visitors, and graduate students interested in information science.

INFO 747(7400) Social and Economic Data (GR-RDC) [also ILRLE 740(7400)]
Spring. 4 credits. Prerequisite: Ph.D. and research master’s students.
Teaches all the basics required to acquire and transform raw information into social and economic data. Covers legal, statistical, computing, and social science aspects of the data “production” process are covered. Major emphasis is placed on U.S. Census data that are accessible from the Census Bureau’s Research Data Center network. This version of the course has been specially prepared for graduate students who are planning to use RDC-based data or are seriously considering it. RDC-based data products covered include the new Longitudinal Employer-Household Dynamics (LEHD) micro data; the Longitudinal Business Database (LBD) and its precursor the Longitudinal Research Database (LRD); internal versions of the Survey of Income and Program Participation (SIPP); Current Population Survey (CPS), American Community Survey (ACS), American Housing Survey (AHS), the 1990 and 2000 Decennial Census of Population and Housing; the Employer Business Register (EBR and SSEL); the Censuses and Annual Surveys of Manufactures, Mining, Services, Retail Trade, Wholesale Trade, Construction, Transportation, Communications, and Utilities; Business Expenditures Survey; Characteristics of Business Owners; and others. Students are introduced to the new NSF-sponsored Virtual Research Data Center. Core topics include: basic statistical principles of populations and sampling frames; acquiring data via samples, censuses, administrative records, and transaction logging; law, economics, and statistics of data privacy and confidentiality protection; data linking and integration techniques (probabilistic record linking; multivariate statistical matching); data imputation techniques, and analytic methods for complex linked data sets.

INFO 790(7900) Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.
DEPARTMENT OF STATISTICAL SCIENCE

301 Malott Hall
255-8066

M. T. Wells, chair (301 Malott Hall, 255-4388; R. L. Strawderman, director of graduate studies; J. A. Bunge, director of professional programs; T. Apanasovich, Tatiyana, Dept, of Statistical Science; Abowd, John, Information Science Program; Constable, Robert, Dept, of Computer Science; Caruana, Rich, Dept, of Computer Science; Bailey, Graeme, Dept, of Computer Science; Bustamante, Carlos, Computational Biology Program; Birman, Kenneth, Dept, of Computer Science; Blume, Lawrence, Information Science Program; Booth, James, Dept, of Biological Statistics and Computational Biology; Bunge, John, Dept, of Statistical Science; School of Industrial and Labor Relations; Buntscher, Martin, Computer Science Field; School of Electrical and Computer Engineering; Caruana, Rich, Dept, of Computer Science; Clark, Andrew, Computational Biology Program; Dept, of Molecular Biology and Genetics; Constable, Robert, Dept, of Computer Science; Demers, Alan, Dept, of Computer Science; DiCiccio, Thomas, Dept, of Statistical Science; School of Industrial and Labor Relations; Durrett, Richard, Dept, of Statistical Science; Dept, of Mathematics; Dynkin, Eugene, Dept, of Statistical Science; Dept, of Mathematics

This is an introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportion, ANOVA, multiple linear regression, contingency tables, and logistic regression.

Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science. Prerequisite: enrollment in M.P.S. program. Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.

STSCI 501(5010) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.

STSCI 502(5020) Applied Statistical Analysis

Letter grades only. Topics include, but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

STSCI 600(6000) Statistics Seminar

Fall and spring. 1 credit. Pre- or corequisite: BTRY 409 or permission of instructor. S-U grades only.

The School of Continuing Education and Summer Sessions (SCE) provides outstanding educational opportunities throughout the year for people of all ages and interests.

We present programs in a wide variety of formats and time frames on campus, online, and around the world.

Join us to prepare for your future, enhance your studies, improve your job skills, or simply have fun learning something new!

For information about the following programs, write B20 Day Hall, Ithaca, NY 14853-2801; call 607-255-4987; e-mail cusce@cornell.edu; or fax 607-255-9697; unless indicated otherwise below. You may also visit us on the web at www.sce.cornell.edu.

CONTINUING EDUCATION

INFORMATION SERVICE
This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 607-255-4987; e-mail cusce@cornell.edu; or fax 607-255-9697.

CORNELL IN WASHINGTON PROGRAM
Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation's capital. For information, write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-4601; call 607-255-4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

DISTANCE LEARNING
Need a flexible schedule? Have a full-time job? Planning to travel during winter break or during the summer? Don't let any of these stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away.

Distance learning courses may include a web-based component, videotapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but students have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl/.

For faculty members interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to the course. Services are tailored to individual needs and ongoing support is available. Visit www.sce.cornell.edu/dl/ to see what's possible.

CyberTower features three online program series, with new offerings added every month:

- **Study Rooms** contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty and fellow CyberTower users.
- **Forums** are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month's featured guest.
- **Views and Reviews** are brief, unashbashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news.

To explore CyberTower, simply log on to cybertower.cornell.edu and follow the registration instructions. It's all free and is a great way to see what Cornell has to offer.

EXECUTIVE AND PROFESSIONAL PROGRAMS
The school presents short, high-level professional updates on campus, online, and in locations worldwide. These courses are taught by Cornell faculty and senior research staff in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, call 607-255-7259; e-mail cusp@cornell.edu; fax 607-255-8942; or visit www.sce.cornell.edu/exec/.

EXTRAMURAL STUDY
Cornell students whose studies have been interrupted may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff, faculty, "townies," and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school’s Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you'd like to take advantage of Cornell's extensive course offerings but don't need college credit, you may register through the Visitors Program and receive a 90 percent discount on tuition.

For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 607-255-4987; e-mail cusce@cornell.edu; fax 607-255-9697; or visit www.sce.cornell.edu/exmu/.
SPECIAL PROGRAMS
If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, call 607 255-7259; e-mail cusp@cornell.edu; fax 607 255-8942; or visit www.sce.cornell.edu/sp/

On-Campus Special Programs Roster
AEM Certificate in Business Management
Architecture
Asian Studies Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
Biological Sciences Undergraduate Research Program
CCMR Institute for Chemistry Teachers (CICT)
CNS Institute for Physics Teachers (CIFT)
Cornell Institute for Biology Teachers (CIBT) Education
Engineering Cooperative Education Program
English for International Students and Scholars
Freshman Summer Start
Industrial and Labor Relations: Strategic Corporate Research
Intensive Arabic Program
Landscape Architecture: Site Grading
Leadership Program for Veterinary Students
Nanobiotechnology Institute for Teachers
Prefreshman Summer Program
Satellite Remote Sensing Applications in Biological Oceanography
School of Hotel Administration Executive Education Programs
Teaching Writing
Telluride Association Summer Program

Off-Campus Special Programs Roster
Archaeology in Israel
Architecture: Modernism in North America and Western Europe
Art in Edinburgh, Scotland
Art in the Modern World
Art Studio and Creative Writing Workshop in Rome, Italy
Dance in Rome, Italy
Dance Out in the World
Etruscan Archaeology in Italy
Field Mapping in Argentina
Human Ecology: Urban Semester Program—Fieldwork in Diversity, Professional Practice, and Service: The Culture of Medicine/Community and Public Service/Business and Finance
Investment Management Program
Latin American Studies: Quechua/Brazilian Cities
Marine Science: Shoals Marine Laboratory, Maine
Prelaw Program in New York City
Summer in Washington

Campus to Careers
The job market’s tough. The economy’s tight. You’ve been thinking it’s time to get serious about your future . . . .
The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classroom and careers. No matter what your major is, you can:
• Expand your career opportunities
• Strengthen your résumé and skills
• Develop professional contacts
• Take focused, intensive classes
• Learn from distinguished professors, alumni, practitioners, and executives
• Study in Washington, D.C., New York City, or on the Cornell campus in Ithaca
• Enrich your personal, academic, and professional life
For more information, visit www.sce.cornell.edu/sp/.

Winter Session
Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy smaller classes and to concentrate on intensive study. Winter session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 607 255-4987; e-mail cusce@cornell.edu; fax 607 255-9697; or visit www.sce.cornell.edu/ws/. If a course also is offered through distance learning, the course title will be followed by DL.

Winter Session Course Roster
AEM 240 Marketing DL
AM ST 202 Popular Culture in the United States, 1945 to Present DL
ARCH 338 Special Topics in the Theory of Architecture I (off campus)
ART 372 Special Topics in Art Studio (off campus)
ARCH 397 Special Topics in the History of Architecture and Urbanism (off campus)
ART H 260 Introduction to Art History: The Modern Era
AS&RC 131–132 Swahili (off campus)
BIOEE 264 Tropical Field Ornithology (off campus)
BIOEE 265 Tropical Field Ecology and Behavior (off campus)
CHEM 461 Introduction to Organic Research
COMM 263 Organizational Writing
COMM 272 Principles of Public Relations and Advertising DL
CRP 395/659 Special Topics (off campus)
ECON 101 Introductory Microeconomics DL
ECON 102 Introductory Macroeconomics
ENGL 280 Creative Writing
ENGL 288 Expository Writing
GOVT 161 Introduction to Political Philosophy DL
GOVT 314 Prisons DL
OR&E 350 Financial and Managerial Accounting
FSAD 332 Designers as Entrepreneurs

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
Cornell's award-winning programs for high school students offer one-, three-, four-, and six-week programs for talented sophomores, juniors, and seniors from around the world. Participants live on our beautiful campus, take college classes with leading Cornell faculty, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, call 607 255-6203; e-mail summer_college@cornell.edu; fax 607 255-6665; or visit www.summercollege.cornell.edu.
CORNELL UNIVERSITY SUMMER SESSION

Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes.

Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And, all with time left over for travel or a summer job.

Summer Session offers the practical benefits of fulfilling requirements, accelerating your degree, gaining personal and professional growth, or easing your fall/spring course load. It’s also the perfect time to take advantage of the area’s stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad.

However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, call 607 255-4987; e-mail cusce@cornell.edu; or visit our web site at www.cornell.edu.

Summer Session Course Roster

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www. summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by DL.

African Studies

AS&RC 111-112 Elementary Arabic
AS&RC 113-212 Intermediate Arabic
AS&RC 131-132 Swahili
AS&RC 205 African Cultures and Civilizations

American Studies

AM ST 124 Democracy and Its Discontents: Political Traditions in the United States
AM ST 202 Popular Culture in the United States, 1945 to Present DL
AM ST 301 America’s Changing Faces

Animal Science

AN SC 112 Sustainable Animal Husbandry

Anthropology

ANTHR 213 The Hip-Hop Generation and Post-Civil Rights Black Politics
ANTHR 220 Field Course in Iroquois Archaeology

ANTHR 255 Great Empires of the Andes
ANTHR 315 Art in the Modern World
ANTHR 399 Women in Asia: Sex and Gender in Cross-Cultural Perspective

Applied Economics and Management

AEM 200 Contemporary Controversies in the Global Economy
AEM 220 Introduction to Business Management
AEM 221 Financial Accounting
AEM 224 Principles of Finance
AEM 225 AEM Certificate in Business Management
AEM 240 Marketing DL
AEM 320 Business Law I

Archaeology

ARKEO 100 Ancient Peoples and Places
ARKEO 220 Field Course in Iroquois Archaeology
ARKEO 236 Archaeology in Italy
ARKEO 255 Great Empires of the Andes

Other field study opportunities are usually available through this department.

Architecture

ARCH 110 Introduction to Architecture: Design Studio
ARCH 130 An Introduction to Architecture: Lectures

Consult the Department of Architecture office for a complete list of summer design offerings including foreign study opportunities.

Art

ART 101 Art as Experience
ART 121 Introductory Painting
ART 141 Introductory Sculpture
ART 151-152 Drawing I and II
ART 155 Drawing in Rome
ART 157 Observation and Conception: Drawing
ART 161 Photography I
ART 168 Black-and-White Photography
ART 169 Color Photography
ART 171-172 Electronic Imaging in Art

INDEPENDENT STUDY

Have a special interest you'd like to pursue? Want to do research and get credit for it? Need a particular course to graduate on time? Consider independent study.

Independent study encompasses courses of your own design, special topics courses, undergraduate research, or any regular course from the fall and spring semesters not being offered. If you can find a professor willing to supervise your study, all you need to do is pick up the application for independent study (available on the web at www.summer.cornell.edu or from the Summer Session office) and register in B20 Day Hall at least two weeks prior to beginning the independent study course. Also, please let the Summer Session office know if there are courses you would like to see offered next summer (call 607 255-4987 or e-mail cusce@cornell.edu).

Theatre, Film, and Dance

Film Studies

FILM 324 Film Animation Workshop: Experimental and Traditional Animation on the Oxberry

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, and the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research. Cornell programs and centers of interest in engineering include the following:

Center for Applied Mathematics. This cross-disciplinary center administers a graduate program.
Center for Nanoscale Systems. The mission of this National Science Foundation Nanoscience and Technology Center is to develop innovative nanoscale systems to revolutionize information technology and to further nanoscience technology. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.
Center for Radiophysics and Space Research. This interdisciplinary unit facilitates research in astronomy and the space sciences.
Cornell Theory Center. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.
Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
Cornell Nanoscale Science and Technology Facility (part of the National Science Foundation-funded National Nanofabrication Users Network). This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.
Cornell Waste Management Institute. This research, teaching, and extension program within the Center for Environmental Research addresses the environmental, technical, and economic issues associated with solid waste.
Institute for the Study of the Continents. This interdisciplinary organization promotes research in deep seismic exploration of the structure, composition, and evolution of the continents.
W. M. Keck Foundation in Nanobiotechnology. Facilities of this program include tools for nanoscale diagnostics of biomaterials.
Laboratory of Plasma Studies. A center for research in plasma physics.
Cornell Center for Materials Research. An interdisciplinary center, with substantial support from the National Science Foundation, that performs state-of-the-art materials research and provides sophisticated scientific measurement and characterization equipment.
National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.
Multidisciplinary Center for Earthquake Engineering Research. A facility established by the National Science Foundation and a group of universities to study response and design of structures in earthquake environments.
Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.
National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. This resource develops novel measurement and optical instrumentation for solving biophysical problems.
Network for Earthquake Engineering Simulation (NEES). A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.
Power Systems Engineering Research Center. A National Science Foundation cooperative center between university and industry in which research is centered on power systems and infrastructure networks.
Program of Computer Graphics. This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.
Program on Science, Technology, and Society. This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.
Alliance for Nanomedical Technologies. The alliance brings together collaborative teams of academic scientists and industrial affiliates to explore the design and fabrication of novel nanomedical devices.

The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.).

General academic information concerning the B.S. degree is given below under "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described under "Engineering Majors."

Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S.

M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science.

UNDERGRADUATE STUDY
Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:

* biological engineering (BE)
† chemical engineering (ChemE)
‡ civil engineering (CE)
§ computer science (CS)
electrical and computer engineering (ECE)
engineering physics (EP)
environmental engineering (EnVE)

independent major (IM)

information science, systems, and technology (ISST)—with options in information science and management science

materials science and engineering (MS&E)

mechanical engineering (ME)

operations research and engineering (ORE)

science of earth systems (SES)

Criteria for affiliation with the majors are described under "Affiliation with a Major." The majors are described under "Undergraduate Engineering Majors."

Most of the majors have a corresponding minor, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, and information science. See the main section, "Engineering Minors."

The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

To major in biological engineering, students normally enroll in the College of Agriculture and Life Sciences for the first three years and jointly in that college and the College of Engineering for the final year. However, students initially enrolled in the College of Engineering may affiliate with the biological engineering major and complete the degree solely within Engineering.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major). Contact a faculty member in the graduate field of nuclear science and engineering who is most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer.

R. W. Kay, and V. O. Kostroun.

Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2007-2008 edition of the Engineering Undergraduate Handbook.)

6. Computing

7. Introduction to engineering (ENGRD) 3

8. Two engineering distributions (ENGRD) 6-8

9. Liberal studies distribution (6 courses min.) ≥ 18

10. Advisor-approved electives 6

11. Major program

a. Major-required courses ≥ 30

b. Major-approved electives 9

c. Courses outside the major 9

12. Two semesters of physical education in the freshman year and demonstration of proficiency in swimming (university requirement)

From 124 to 134 credits are required for graduation, depending on the major (see "Engineering Majors").

*Technical-writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 191, 192, 293 or 294 (depending on the major) and a major-specific math course. At least C- must be attained in these courses, if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Courses that are taken a second time to meet this or any requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students must attain at least C- in each math prerequisite of a physics course before taking the physics course (e.g., C- in MATH 191 before taking PHYS 112 and C- in MATH 192 before taking PHYS 213). The following substitutions are allowed for PHYS 213- CHEM 1, CS, CS. ISST, and SES majors:

CHEM 208, BE, and EnVE majors: CHEM 257 or 357. ORE majors: CHEM 208, CS 280, or MATH 304, 311, or 336.

Chemistry

CHEM 209 is required. The content is the same as that of CHEM 207, but Engineering students are expected to take 209.

Typically, CHEM 209 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213, and 214) first may postpone CHEM 209 until the sophomore year.

Students considering chemical engineering must take CHEM 209 in the fall of their freshman year and CHEM 208 in the spring semester. Students considering chemical engineering should take the CHEM 209-208 sequence.

Computing

Students learn about computing using two programming languages by taking one of two sequences: (1) CS 100 and CS 101M or (2) CS 100M (BE majors take CS 101M instead) and CS 101J. The first course is taken in the first year. The second course, a 1-credit S-U course, is taken as soon as possible thereafter but no later than the fourth semester.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from over 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP/ for more information.

1. ENGR 350 or 355

2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing will satisfy the technical-writing requirement.

3. An officially designated Writing-Intensive (W-I) engineering course:

   • ENGRD/ABEP 264
   • CHEM 432
   • MS&E 403 and 404 (both)
   • MS&E 405 and 406 (both)
   • M&AE 427
   • BEE 450 with co-registration in BEE 493
   • BEE 475 with co-registration in BEE 493
   • BEE 489

4. ENGR 302, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCB's Subcommittee on Technical Writing, the instructor may have students co-register in ENGR 302, which may be taken more than once with different courses by permission of the engineering instructor.

5. COMM 260, 263, or 352, taught by the Department of Communication (in the College of Agriculture and Life Sciences).

6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCB's Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Introduction-to-Engineering Course

An introduction-to-engineering course (designated ENGRC) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.
Engineering Distribution

Two engineering distribution (ENGRD) courses (6-8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. **Scientific computing**
   - ENGRD 320 Computers and Programming
   - ENGRD 340 Engineering Computation
   - ENGRD 321 Numerical Methods in Computational Molecular Biology
   - ENGRD 322 Introduction to Scientific Computation

2. **Materials science**
   - ENGRD 261 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   - ENGRD 262 Electronic Materials for the Information Age

3. **Mechanics**
   - ENGRD 202 Mechanics of Solids
   - ENGRD 203 Dynamics
   - Majors in Engineering Physics may substitute AE&EP 333 for ENGRD 203.

4. **Probability and statistics**
   - ENGRD 270 Basic Engineering Probability and Statistics
   - Majors in Electrical and Computer Engineering may substitute ECE 310 for ENGRD 270.
   - Majors in Engineering Physics may substitute ECE 471 for ENGRD 270.
   - Majors in Civil Engineering, Biological Engineering, and Environmental Engineering may substitute CEE 304 for ENGRD 270.

5. **Electrical sciences**
   - ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers
   - ENGRD 230 Introduction to Digital Logic Design
   - ENGRD 264 Computer-Instrumentation Design

6. **Thermodynamics and energy balances**
   - ENGRD 219 Mass and Energy Balances
   - ENGRD 221 Thermodynamics

7. **Earth and life sciences**
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - ENGRD 251 Engineering for a Sustainable Society
   - ENGRD 260 Principles of Biological Engineering

8. **Biology and chemistry**
   - ENGRD 252/AE&EP 252 The Physics of Life
   - CHEM 389 Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

- Biological Engineering: ENGRD 202
- Chemical Engineering: ENGRD 219
- Civil Engineering: ENGRD 202
- Computer Science: ENGRD 211 (co-enrollment in CS 212 highly recommended)
- Electrical and Computer Engineering: ENGRD 230
- Environmental Engineering: ENGRD 202
- Geological Sciences: ENGRD 201
- Information Science, Systems, and Technology: ENGRD 270
- Materials Science and Engineering: ENGRD 261 or ENGRD 262
- Mechanical Engineering: ENGRD 202

Some majors require additional distribution courses after affiliation.

**Liberal Studies Distribution**

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a truly liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two of the six courses must be at the 200 level or higher.

Besides courses classified as liberal studies distribution in Arts and Sciences, Engineering classifies appropriate courses in other colleges as meeting the various categories. To view these courses, visit www.engineering.cornell.edu/student-services/academic-advising/index.cfm, which contains a complete listing of acceptable courses in each group. A list of courses is also available in Engineering Advising, 167 Olin Hall.

**Group 1. Cultural Analysis (CA)**

Courses in this area study human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to the production and performance of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and analyzing. They encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

**Group 5. Social and Behavioral Analysis (SBA)**

Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Group 6. Foreign Languages (not literature courses)**

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

**Electives**

- **Advisor-approved electives:** 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of the engineer, advisors generally accept the following as approved electives:
  
1. One introduction-to-engineering course (ENGR)
2. Engineering distribution courses
3. Courses stressing written or oral communication
4. Upper-level engineering courses
5. Advanced courses in mathematics
6. Rigorous courses in the biological and physical sciences
7. Courses in business, economics, or language (when they serve the student's educational and academic objectives
8. Courses that expand the major or another part of the curriculum.
9. Up to 6 credits of advisor-approved electives may come from ROTC courses at the 300 level or higher.
• Major-approved electives: 9 credits

• Outside-the-major electives: 9 credits of courses outside the major to ensure breadth of engineering studies

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the "Science and Technology Studies" undergraduate area of concentration (see "Interdisciplinary Centers and Programs"). These courses may provide students with important perspectives on their studies and their future careers.

Engineering Advising
Entering first-year students are assigned a faculty advisor (who may or may not be in their intended major), who remains their advisor until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising in Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general advising and counseling. Other student services offices located in Olin Hall are Engineering Learning Initiatives and Diversity Programs in Engineering (DPE), which are primary resources for counseling, support, tutoring, and networking opportunities.

First-Year Requirements
During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:
• MATH 191 and 192
• Two of: CHEM 209, 208, PHYS 112, 213, 214* (or the Honors equivalent)
• CS 100
• Two first-year writing seminars
• One introduction to engineering (ENGRI) course
• Two physical education courses

*Students with an interest in pre-med (or other health-related careers), chemical engineering, or the science-of-earth-systems option in geological sciences should enroll in the CHEM 209–208 sequence during their first year.

Affiliation with a Major
Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation form. To affiliate, students must (1) make good progress toward completing required courses in the common curriculum, (2) have a GPA ≥ 2.0, and (3) have satisfied the major's course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

<table>
<thead>
<tr>
<th>Major</th>
<th>Courses and Minimum Grade Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biological Engineering</td>
<td>At most one grade below C– in math and science courses and CS 100 or its equivalent.</td>
</tr>
<tr>
<td>Chemical Engineering</td>
<td>At most one grade below C– in chemistry, math, physics, and chemical engineering courses. GPA ≥ 2.2 in math, science, and engineering courses.</td>
</tr>
<tr>
<td>Civil Engineering</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 202 (or ENGRD 251, for students who do not take ENGRD 202 before affiliation).</td>
</tr>
<tr>
<td>Computer and Engineering</td>
<td>At least C– in all completed CS and math courses. GPA ≥ 2.5 in MATH 212, 213, and 280. GPA ≥ 2.5 in MATH 192 and CS 280. Visit the CS undergraduate office web site for alternative affiliation criteria.</td>
</tr>
<tr>
<td>Electrical and Computer</td>
<td>At least C– in all required math courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Engineering</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Independent Major</td>
<td>GPA ≥ 2.0.</td>
</tr>
<tr>
<td>Information Science</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Systems, and Technology</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Science of Good</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Environmental Engineering</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>Materials Science</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
<tr>
<td>and Engineering</td>
<td>GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 251.</td>
</tr>
</tbody>
</table>

Operations Research and Engineering
At least C– in ENGRD 270. GPA ≥ 2.0 in math, science, and engineering courses (both overall and in the semester immediately before affiliation). GPA ≥ 2.0 in ENGRD 270 and all required math courses at the 200 level or above that have been taken thus far.

Science of Earth Systems
Good academic standing in the College of Engineering.

Students must be affiliated or conditionally affiliated with a major by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual-Degree Program
The dual-degree program, intended for superior students, allows both a bachelor of science and either a bachelor of arts (B.A.) or bachelor of fine arts (B.F.A.) degree to be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual-degree program in their second or third year. For information, contact the appropriate coordinators of dual-degree programs at 55 Goldwin Smith Hall (for Arts and Sciences), B-1 West Sibley Hall (for Architecture, Art, and Planning), and Engineering Advising, 167 Olin Hall.

Double Major in Engineering
The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject area offered by a school or department of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should
include engineering design and synthesis as well as ethics, and innovation. See the discussion of this major in "Undergraduate Engineering Majors."

**Engineering Minors**

Most of the majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, and information science. See "Engineering Minors."

**Engineering Communications Program**

424 Hollister Hall, 255-8558, www.engineering.cornell.edu/ECP

The Engineering Communications Program (ECP), created in 1987 at the urging of the College of Engineering faculty and employers of Cornell engineers, provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean's Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students' work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

**Diversity Programs in Engineering**

146 Olin Hall, 255-6403

The Diversity Programs in Engineering (DPE) office operates programs at the undergraduate, graduate, and faculty levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities, women, and other underrepresented groups in Engineering. DPE serves as a resource center for academic support, career placement, graduate school preparation, and overall student success.

The office participates in a university-wide pre-freshman summer program for admitted students, coordinates two summer program initiatives for high school students, Curie (www.engineering.cornell.edu/curie) and CATALYST (www.engineering.cornell.edu/catalyst), and also provides specialized instruction, in collaboration with Engineering Advising, in three Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

The DPE office sponsors networking events throughout the academic year that allow company representatives from all over the United States to meet students from diverse populations. Summer internships and permanent jobs frequently result from these events.

In addition, the DPE office coordinates various trips, recreational activities, seminars, lectures, and workshops on a wide range of topics that are relevant to academic and extracurricular life in the university setting.

**Engineering Learning Initiatives**

The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, cooperative learning, research opportunities, and leadership development.

*Academic Excellence Workshops (AEWs)* offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour cooperative learning sessions. Designed to enhance student understanding, they feature peer-facilitated small group work on problems at a level of course material.

*Undergraduate Research Grants* offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students may apply for funding to cover student stipend and expense costs for the fall, spring, and summer terms.

*Tutors-on-Call*, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

*LeaderShape*, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a week-long retreat held in May of each year.

**Engineering Cooperative Education and Career Services**

201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices

This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers visit the office to recruit technical interns and graduates; additional job opportunities are posted electronically through CornellTrak. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in engineering-related organizations before they graduate. By supplementing course work with carefully monitored, paid positions, Co-op students can explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering an equivalent of five semesters before starting the first work term. (Exceptions may be made for transfer students and others pursuing an accelerated curriculum.) Students majoring in computer science or biological engineering, but not registered in the College of Engineering, are also eligible. In most cases, a GPA of 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semester course work on campus during the summer after sophomore year and begin the first Co-op work term the following fall. They complete the sixth semester back on campus with their classmates, and then return to their Co-op employer (but not necessarily to the same department or location) the following summer to complete a second work term. Students then spend the senior year back on campus, graduating on schedule with their class. Students who have flexible course curriculums may prefer to complete one 28-week spring/summer or summer/fall Co-op work term during the junior year.

**International Programs**

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today's engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years. Currently, the college has study abroad agreements with École Centrale Paris, France; Cantabria, Spain; and the Hong Kong University of Science and Technology and is also working with IIT Kanpur, India, and the National University of Singapore. The college is working to facilitate study abroad in Dresden, Germany; and Guadalajara, Mexico. Students who plan to study abroad apply through Cornell Abroad. The Cornell Abroad program description is located in the Introductory section of the undergraduate catalog. For information, visit the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See "Master of Engineering Degrees" for details.

**Lester Knight Scholarship Program**

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See "Master of Engineering Degrees" for details.
**Advanced Placement Credit**

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB).
4. Cornell's departmental placement examinations, given during orientation week before the beginning of fall-semester classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from a different area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

**Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams**

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

**Mathematics**: MATH 191, 192 are required.

- First-semester math (MATH 191). AP credit may be earned by:
  - a score of 4 or 5 on the CEEB BC exam, or
  - a passing score on the Cornell departmental exam for first-semester math.

- First-year math (through MATH 192). AP credit may be earned by:
  - a passing score on the Cornell departmental exam for first-year math.

**Physics**: PHYS 112 and 213 are required.

- PHYS 112. AP credit may be earned by:
  - a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
  - a score of 5 on the CEEB B exam with successful completion of a high-school-level calculus course, or
  - a passing score on the Cornell departmental exam for PHYS 112.

- PHYS 213. AP credit may be earned by a score of 5 on the Electricity and Magnetism portion of the AP C exam.

- PHYS 116, 217, and 218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 217 or 218 are strongly advised to start with PHYS 116. Even for a student with a 5 on both Physics C AP tests, 116 will not be boring. Students may not simultaneously receive credit for PHYS 116 and AP credit for PHYS 112, or credit for PHYS 217 and AP credit for PHYS 213. For advice or more information, contact the departmental representative at 255-5016.

**Chemistry**: CHEM 209 is required.

- CHEM 209. AP credits may be earned by:
  - a score of 5 on the CEEB AP exam, or
  - a passing score on the Cornell departmental exam for chemistry.

**Note**: Students who obtain AP credit for CHEM 209 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 215. The AP credit for PHYS 116 and AP credit for CHEM 209 and then elect to take CHEM 215 will also receive academic credit for CHEM 209. Students may want to discuss this option with their faculty advisor.

**Computing**: CS 100J or CS 101M, together with CS 101M or CS 101J, are required. AP credit may be earned for CS 100J by:

- a score of 5 on the CEEB A or a score of 4 or 5 on the AB exam, or
- a passing score on the Cornell departmental exam for CS 100J.

**Biology**: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- 8 credits will be offered to students who receive a 5 on the CEEB AP exam; or
- 4 credits will be offered to students who receive a 4 on the CEEB AP exam.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

**First-year writing seminar**: Two first-year writing seminars are required.

- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

**Liberal studies distribution**: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

**Languages**: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam (in any language), the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

**Advanced Placement Credit and Credit for International Credentials**

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

**General Certificate of Education Advanced Level Examination (GCE "A")**

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

**Language**: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam (in any language), the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits. Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

**International Baccalaureate (IB) Higher Level Examination**

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

**Subject** | **Marks** | **Credit**
---|---|---
Biology | A or B | 8 credits
Chemistry | A | 8 credits (CHEM 209 and 208)
| B | 4 credits (CHEM 209)
Mathematics | A, B, or C | 4 credits (MATH 191)
Physics | A or B | 4 credits for PHYS 112, 4 additional credits for PHYS 213 are granted to a combination of grades of A or B and a minimum of 4 Advanced Placement (or advanced standing) credits in mathematics.

**International Baccalaureate (IB) Higher Level Examination**

**Subject** | **Marks** | **Credit**
---|---|---
Biology | 7 | 8 credits
| 6 | 6 credits
Chemistry | 6 or 7 | 4 credits (CHEM 209)
Computer | 6 or 7 | 4 credits (CS 100)
Physics | 6 or 7 | 4 credits (PHYS 112)
Mathematics: No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing Exam during orientation.

**Note**: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering.
such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

**General Policies for Advanced Placement**

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.

2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-semester classes must be requested in a written petition to the college’s Committee on Academic Standards, Petitions, and Credit (AS PAC).

A more detailed description of the college’s policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

**General Policies for Transfer Credit**

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. Forms are available from Engineering Advising or the Registrar’s office and should be submitted before enrollment in the course to be transferred. An official transcript from the offering institution (bearing the institutional seal and Registrar’s signature) must be sent to the Engineering Registrar’s office before official transfer credit will be awarded.

- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (AS PAC) in Engineering Advising.

- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the “Advanced Credit” section.

- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.

- At most 72 total transfer credits (transfers both before and after matriculation) may be used to meet graduation requirements.

- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college’s regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students as well as the Engineering Undergraduate Handbook, both available from Engineering Advising, 167 Olin Hall.

**Transfer Credit for Transfer Students**

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the departments and/or engineering students. Students must complete the transfer credit award process by the end of their first semester at Cornell, or their registration will be blocked for the next semester until the process is completed.

**Academic Standing**

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this means depends on the major.

Engineering students not yet affiliated with a major must meet the following standards at the end of each semester to be considered in good academic standing. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (AS PAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 100 level do not count)
2. At least C- in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

**Academic Progress**

The total number of credits required for graduation range from 124 to 134, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits. Because math is pivotal to the study and practice of engineering, students must earn at least C- in their four required math courses. If at least C- is not attained, the course must be repeated immediately. Failure to achieve at least C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

**Dean's List**

Dean’s List citations are presented each semester to engineering students who have exemplary academic records. The dean of the college determines the criteria for this honor. For 2007–2008, the requirement is a semester GPA ≥ 3.4 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S/U). Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean’s List status receive certificates from the engineering registrar’s office, and the honor is noted on the transcript.

**Graduating with Distinction and Honors**

**Graduating with Distinction**

Meritious students graduating with a B.S. degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

- Cum laude will be awarded to engineering students with a GPA ≥ 3.5. Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell; in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.

- magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).

- Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

**Note:** All GPA calculations are minimums and are not rounded.
Major Honors Program

To be eligible to enter a major honors program, a student must be on track to graduate with distinction. A student must be in the program for at least two semesters before graduation. If the student’s major has specified additional requirements and the requirements for (1) distinction, (2) Bachelor of Science degree, and (3) major honors program are fulfilled, the faculty of the major may recommend that the student graduate with the additional diploma and transcript notation of “With Honors.”

S-U Grades

Many courses may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of at least C– in a course will receive a grade of S; those earning less than C– receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S-U grade option under the following conditions:

• The course in question must be offered with an S-U option.
• The student must previously have completed at least one full semester of study at Cornell.
• The proposed S-U course must count as either a liberal studies distribution or an advisor-approved elective in the engineering curriculum.
• Students may enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option.

(Additional courses offered “S-U grades only” may be taken in the same semester as the elected S-U course.)

The choice of grading option for any course is made initially during the pre-enrollment period and may be changed until the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option. (Grading options may be changed online for most courses. A properly completed add/drop form must be used to change a grade option for a permission-only course.)

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the Office of Engineering Advising, who can provide information on credit evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The Internal Transfer Division office is responsible for assisting students with the transfer process. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising, 167 Olin Hall. It is preferred that students approach their college and decide that they are completing affiliation criteria for the desired major. Transfer students who would enter the college must be accepted by a major as part of the admission process.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an advisor in Engineering Advising, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be given a “conditional leave.” This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

A leave of absence generally is not granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested. If a leave is recommended after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (as indicated on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. Courses taken during a leave to satisfy Cornell degree requirements must be approved and evaluated through a formal transfer petition. (See previous section, “Transfer Credit,” for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Medical leave: Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are granted for at least six months and up to two years with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing will also be subject to review both at the time the leave is granted and upon the student’s return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student’s return by one semester (or, in unusual circumstances, one year).

Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefits of a leave of absence or permission for study in absentia, is deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission
to one of the other six colleges at Cornell. The intracuniversity transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

**Required withdrawal:** Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

**ENGINEERING MAJORS**

This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0. Most majors have a higher GPA requirement and may have other requirements.

**Honor Program within Majors**

Many of the engineering majors supplement the major with an honors program.

**Eligibility**

The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. To enter an honors program, the student must be on track to graduate with distinction, and a student who does not stay on track to graduate with distinction is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Procedures**

An applicant to the honors program in a major must have an honors advisor. A faculty member from that major who will supervise the honors program and direct the research or project. The honors advisor need not be the student's advisor in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors advisor.

Students must complete a written application no later than the beginning of the first semester of their senior year. Each major may place further constraints on timing.

**Major-Specific Information**

Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

**BIOLOGICAL ENGINEERING**

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Biological and environmental engineering (BEE) programs address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, engineering, statistics, programming, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering design.

Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, sustainable energy, and waste management and disposal. Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in chemistry and biology. Throughout the curriculum, emphasis is placed on communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have pursued careers in consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers who have studied biology, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Biological Engineering major is designed to educate the next generation of engineers to meet these challenges.

The academic requirements* for students majoring in Biological Engineering are outlined below.

**Basic Subjects**

**Credits**

- MATH 191**, 192, 293, 294
- Calculus for Engineers and Engineering Mathematics
  - PHYS 112, 213
  - CHEM 209* General Chemistry
  - CHEM 257 or 357* Organic Chemistry
  - BEE 151 Introduction to Computer Programming or CS 100M, and CS 101J
  - Biological Sciences*
    - Introductory (BIO G 101-104 recommended)
    - Biological science course(s) at or above 200 level
    - Biochemistry and Microbiology recommended

**Major-required courses**

- BEE 200 The BEE Experience or ENGRG 150 (counted as an approved elective)
- BEE 260 Biological Engineering Analysis or 251 Environmental Engineering Analysis
- BEE 350 Biological and Environmental Transport Processes
- BEE 222 or ENGRD 221 Thermodynamics
- ENGRG 270 or CEE 304 Engineering Statistics and Probability
- BEE 351 or CEE 351 Fluid Mechanics
- Major-approved Engineering Electives (must include minimum of 9 credits of BEE courses, one course must be a BEE Capstone course and one course must be an approved lab experience course)**

Concentration courses (three courses, minimum of 9 credits, chosen from one of the following BE concentrations): Biomedical Engineering, Bioprocess Engineering, or Bio-Environmental Engineering.**

Engineering electives (Engineering courses at 200 level or above to bring the total of required plus engineering electives to 46 credits)

- Liberal studies (two first-year writing seminars and six liberal studies electives)
- Advisor-approved electives
- Total (minimum)

*Basic accredited curriculum. Engineering minors may be accommodated by course selection in the major plus additional electives as outlined in the engineering undergraduate handbook. Information on preprofessional study for medicine, dentistry, and veterinary
**Chemical Engineering**

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 208 during the freshman year. The program for the last three years is as follows:

**Semester 3**

<table>
<thead>

*Every student must complete one of the following options for the biology elective: (1) CHEM 288 Biomolecular Engineering: Fundamentals and Applications. (2) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam. (3) 4 credits of a pre-med. biology sequence: BIO G 101 Biological Sciences, Lec (fall, 2 credits) and BIO G 103 Biological Sciences, Lab (fall, 2 credits), BIO G 102 Biological Sciences, Lec (spring, 2 credits) and BIO G 104 Biological Sciences, Lab (spring, 2 credits), BIO G 105 Introductory Biology (fall, 4 credits), BIO G 106 Introductory Biology (spring, 4 credits), BIO G 107 General Biology (summer, first half of eight-week session, 4 credits) or BIO G 108 General Biology (summer, second half of eight-week session, 4 credits). (4) 3 credits of microbiology: BIOM 290 General Microbiology (fall, spring, or summer six-week session, 3 credits). (5) 4 credits of biotechnology: BIOM 330 Principles of Biochemistry, Individual Instruction (fall or spring, 4 credits) or BIOM 331 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (summer six-week session, 4 credits). (6) 5 credits of biochemistry: BIOM 331 Principles of Biochemistry: Proteins and Metabolism (fall, 3 credits) and BIOM 332 Principles of Biochemistry: Molecular Biology (spring, 2 credits).**

**Civil Engineering**

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

While it is not necessary to do so, students may concentrate in environmental engineering, environmental fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

**Admission Requirements**

Students planning to affiliate with this major must complete ENGRD 202 Mechanics of Solids (or, for students following the Environmental Concentration, ENGRD 251) with at least a C-. It is strongly recommended that ENGRD 202 be taken as an engineering distribution during the first semester of the sophomore year.
**Engineering Distribution Courses**

Majors are required to take ENGRD 202 Mechanics of Solids as an engineering distribution course. For the second engineering distribution course, one of the following is recommended:

ENGRD 261 Introduction to Mechanical Properties of Materials for students interested in structural engineering and geotechnical engineering.

ENGRD 221 Thermodynamics for students interested in fluid mechanics and hydraulics/hydrology.

ENGRD 211 Computers and Programming for students interested in transportation.

ENGRD 251 Engineering for a Sustainable Society for students interested in environmental engineering.

**Major Program**

Students may substitute CHEM 208 or CHEM 257 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum. (Students interested in the Environmental Concentration should follow the course requirements for the Environmental Engineering Major and should refer to the CEE Undergraduate Handbook for requirements specific to CE majors. CE majors should take CEE 341.)

<table>

</tbody>
</table>

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRG or approved communications courses. If the technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional advisor-approved elective must be taken.

*ENGRD 203 and ENGRD 320 can be used to satisfy a major requirement. If a student elects to use one of these courses as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

**Students may substitute CEE 372 or CEE 471 for either CEE 351 or 361, if they also complete either CEE 473 or 474. However, CEE 372 or CEE 471 then counts as a core course only and not as a CEE design course or major-approved elective. Students may also substitute CEE 461 for CEE 351 if they also take two of these three courses: CEE 463, 464, and 465. However, then CEE 461 counts as a core course only and not as a CEE design course or major-approved elective.

**Civil Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400 Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 470 Peer Teaching in Engineering or CEE 401 Undergraduate Teaching in CEE (1-3 credits per semester).

3. Advanced or graduate courses at the 500 level or above.

**Procedures**

Application to the program shall be a registration form for CEE 400 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. The program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

**COMPUTER SCIENCE**

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- MATH 191, 192, and 294
- three courses in introductory computing; either CS 100J, CS 101M, CS 211 or CS 100M, CS 100J, CS 211
- a 1-credit project (CS 212)
- a seven-course computer science core (CS 280, 312, 314, or 316; one of 321, 322, 421, 422, or 428; 381, 414, and 482)
- two 400+ level computer science electives, +3 credits each, totaling at least 6 credits (CS 490 not allowed)
- a computer science project course (CS 413, 415, 419, 433, 466, 475, 501, 514, or 664)
- a math elective course (e.g., ENGRD 270, MATH 293, MATH 300+, T&AM 310)
- two 300+ level courses (major-approved electives) that are technical in nature and total at least 6 credits
- a three-course specialization in a topic area other than computer science, all numbered 300 level or greater

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Inteligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

**Computer Science Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one CS course (at least 3 credit hours) at or above the 500 level with a grade of A- or better (no seminars)

2. at least two 3-credit semesters of CS 490 (independent research), with grades of A- or better each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read "HONORS TRACK". Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982, or visit www.cs.cornell.edu/ugrad for more information on eligibility.
ELECTRICAL AND COMPUTER ENGINEERING

Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision; power systems, control, optimization, numerical and space-state methods; communications, computer networks, information theory and coding, signal processing, electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics, electromagnetics, radiophysics, space sciences, plasmas.

Students planning to affiliate with ECE must take ECE/ENGRD 230 as an engineering distribution course. Prospective majors are encouraged, but not required, to take ENGRD 210 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 210, ECE 220, ECE/ENGRD 230, and ECE 315 are taught in both the fall and spring semesters.

Course Credits

Major-required courses
ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers 4
ECE 220 Signals and Information 4
ECE/ENGRD 230 Introduction to Digital Logic Design 4
ECE 303 Electromagnetic Fields and Waves 4
ECE/CS 314 Computer Organization 4
ECE 315 Introduction to Microelectronics 4
ECE 320 Networks and Systems 4

Major-approved electives (29-credit minimum in the following categories)

Advanced ECE electives† (six lecture courses) 9
Outside ECE electives 9

Total minimum major credits 53

ECE 310 should be taken to satisfy the major requirement of probability and statistics requirement. Alternatively, a student may take either ENGRD 270 or TAM 310.

†These electives must include two 400-level courses in Electrical and Computer Engineering culminating design experience (CDE) courses and at least two additional courses at the 400 level or above. The remaining electives may not include independent project courses, such as ECE 391, 392, 491, or 492, and must be at the 300 level or above in Electrical and Computer Engineering.

Courses that meet the CDE requirement are described in the Engineering Undergraduate Handbook. The list is dynamic and changes frequently. An updated list of courses that meet the CDE requirements will be posted each semester on the bulletin board outside 222 Phillips Hall. All courses must have a college-level prerequisite.

‡Must include one course at the 300 level or above (see Electrical and Computer Engineering Web Handbook for details).

Undergraduate concentration is achieved through the various Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

Academic Standards

Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.3 every semester.
2. At least C– in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 294, PHYS 214, and two of ENGRD/ECE 210, ECE 220, and ENGRD/ECE 230 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

Electrical and Computer Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

Students must apply during the first three weeks of the sixth semester. They must achieve a B or better in the three required courses taken for honors designation.

Honors Seminar

Prospective honors students must take an honors seminar in the spring semester of their junior year, for a letter grade and 2 credits. The honors seminar consists of a weekly series of introductory research lectures by ECE faculty members. Each honors seminar enrolee will write two short papers on topics covered in the lecture series. Many ECE faculty members will give a lecture or series of lectures as part of the honors seminar.

Honors Project

A student in the honors program is required to accumulate at least 3 credit hours from a senior-year honors project with an ECE faculty member, consisting of either design, research, or directed reading at the 400 level. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

Additional Course Work

At least 3 credit hours are required of advanced (senior level) ECE course work that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE major.

The requirement for at least 9 credits over and above the 130 credits required for a B.S. degree means that an honors degree requires 139 credit hours.

ENGINEERING PHYSICS

Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may tailor their physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine or are in the realm of various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics.

The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/A&EP 110 Lasers and Photonics; ENGR/A&EP 102 Introduction to Nanoscience and Nanoengineering; ENGRD 242/A&EP 252 Physics of Life; ENGRD/A&EP 264 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330 Modern Experimental Optics (a junior/senior course); and A&EP 363 Electronic Circuits (a sophomore/junior course); PHYS 410 Advanced Experimental Physics; and A&EP 438
Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 112 or 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the technical writing requirement with the engineering distribution course ENGRD 264. EP students need to take only one engineering distribution course, since A&EP 333, taken in the junior year, counts as the second one. EP students are advised to take A&EP 363 (taking ECE 210 and 230, 4 credits each, can satisfy A&EP 363. Count ECE 210 as an approved elective and ECE 230 as A&EP 363) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A- in MATH 192 may wish to explore accelerating their math requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>A&amp;EP 333 Mechanics of Particles and Solid Bodies</td>
<td>4</td>
</tr>

</tr>
<tr>
<td>Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (300 or above).</td>
<td></td>
</tr>
<tr>
<td>Total major credits=58 credit hours minimum</td>
<td></td>
</tr>
</tbody>
</table>

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing their individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 410 required for the B.S. degree in EP can be satisfied by completing PHYS 330 or PHYS 331 or A&EP 410. The remaining 2 credits of PHYS 410 can then be satisfied by taking PHYS 400 for 2 credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330 or A&EP 410. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP PHYS 330 or PHYS 410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the students with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Variations in the programs are described in a special brochure available from the School of A&EP, Clark Hall. Students are advised to consult with their EP advisor, a professor active in their area of interest, or with the associate director of the school.

Electives need not be all formal course work: qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active. The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

Academic Standing

Students are expected to pass every course in which they are registered, to earn at least C- in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester.

Engineering Physics Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section 'Engineering Majors' as well as the following requirements.

1. At least 8 credits of major-approved electives at the 400 level or higher with at least A- in each, not counting credits given for item 2.
2. Two semesters of A&EP 490 or an equivalent course, with at least 2 credits the first semester and 4 credits the second. The student will complete an independent research project or senior thesis under the supervision of an engineering or science faculty member. The level of work required for successful completion is to be consistent with the amount of academic credit granted.

Procedures

Before enrolling in A&EP 490 or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the project or thesis and an honors advisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies. The proposed project or thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. A copy of the final report is to be given to the chair of the A&EP Honors Committee. The final research project course grade will be assigned by the faculty supervisor after consultation with the chair of the Honors Committee. At least A- is required for successful completion of the honors requirement.

ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

The Environmental Engineering major is available in Civil and Environmental Engineering and Biological and Environmental Engineering.

Students matriculating in the College of Engineering (COE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to affiliate with this major will be taking the following courses:

Mathematics-science core requirements

<table>

*Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.
Major Courses

**BIO G 109 Introductory Biology** (students may also use BIO G 101-103 or BIO G 105 or BIO G 107, to satisfy the biology requirement) 3-4

**ENGRD 202 Mechanics of Solids** 4

**ENGRD 320 Engineering Computation (formerly ENGRD 241)** 3

**ENGRD 221 Thermodynamics** 3

**CEE 304 Uncertainty Analysis in Engineering** 4

**CEE 331 Fluid Mechanics** 4

Earth Science (one from the following list): 3-4

**CEE 341 Introduction to Geotechnical Engineering and Analysis**

or

**EAS 201 (ENGRD 201) Introduction to the Physics and Chemistry of the Earth**

or

**EAS 303 Introduction to Biogeochemistry**

or

**CSS 365 Environmental Chemistry: Soil, Air, and Water**

or

**BEE 371 Physical Hydrology for Ecosystems**

**CEE 351 Environmental Quality Engineering** 3

**CEE 451 Microbiology for Environmental Engineering** 3

Laboratory Course (one from the following list): 3-4

**CEE 453 Lab Research in Environmental Engineering**

or

**BEE 427 Water Sampling and Measurement**

or

**BEE 473 Watershed Engineering**

or

**CEE 437 Experimental Methods in Fluid Dynamics**

**BEE 475 Environmental Systems Analysis** 3-4

**Engineering Economics** 3-4

**CEE 323 Engineering Economics and Management**

or

**BEE 489 Engineering Entrepreneurship, Management, and Ethics**

Electives

Technical communications course (ENGRC 335 or 350, COMM 260, 263, or 552 in liberal studies category; or BEE 493 taken with BEE 473 or BEE 493 taken with BEE 450; or BEE 489) 4-5

Three Environmental design electives chosen from the list of approved courses 9-credit minimum;

Two major-approved engineering electives to complete total credit requirement 6

Two approved electives 6

Total credits (minimum) 126

**SCIENCE OF EARTH SYSTEMS**

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. Natural hazards such as earthquakes, hurricanes, and volcanic eruptions can alter the course of history with little prior warning. As the human population grows, understanding the earth and its resources becomes progressively more important to both future policymakers and ordinary citizens, who must find new sources of energy and sustain the quality of our environment.

Because the human need to understand the earth is so pervasive and the earth system is so multifaceted, the major covers the spectrum of modern earth sciences, including the structure, composition, and evolution of our planet; the planetary processes producing weather and climate; and processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment.

The major is built on a rigorous introduction to this broad spectrum plus a concentration chosen by the student to obtain expertise in an area of interest and relevance to the student's career plans.

The major prepares students for a number of career paths including further graduate study in geology, geophysics, geochemistry, biogeochemistry, atmospheric sciences, ocean sciences, hydrology, or environmental science and engineering. Careers dealing with energy and mineral resources, natural hazards, weather and climate, ocean sciences, or environmental sciences are possible in academic research groups, governmental agencies, and the private sector. The major also prepares students for careers in environmental policy, law or medicine, science in the media, and K-12 science teaching.

Requirements for the Major

The Engineering College Science of Earth Systems major has the same requirements as the Science of Earth Systems major in other Cornell undergraduate colleges. The major includes strong preparation in mathematics, physics, chemistry, and biology. A second semester of chemistry (CHEM 208 or CHEM 257) is required with PHYS 214 optional. Two semesters of biology are required (either BIO G 101/103-102/104 or BIO G 109-110). A second semester of biology can be replaced by CHEM 257 if CHEM 208 is also selected.

A required introductory course in earth science is satisfied by EAS 220. The core courses emphasize the interconnectedness of the earth system, and are founded on the most modern views of the planet as an interactive and ever-changing system. Each course crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.

**EAS 301 Evolution of the Earth System**

**EAS 303 Biogeochemistry**

**EAS 304 Interior of the Earth**

**EAS 305 Climate Dynamics**
The concentration is achieved by completion of four intermediate to advanced-level courses (300 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses may be required depending on the student's area of specialization. The concentration courses build depth and provide the student with a specific expertise in some facet of earth system science. Four defined areas of specialization include geology, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also design other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with the student's advisor and with approval of the Director of Undergraduate Studies. For concentrations beyond the four first named, approval by the SES Curriculum Committee is needed.

Exposure to the basic observations of earth science, whether directly in the out-of-doors, or indirectly by the many advanced techniques of remote sensing of our planet, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Three credits of appropriate course work are required. Possibilities include the following:

- Courses in the Hawaii Environmental Semester Program;
- Courses given by the Shoals Marine Laboratory;
- EAS 250 Meteorological Observations and Instruments;
- EAS 352 Synoptic Meteorology I; or
- EAS 417 Field Mapping in Argentina
- EAS 437 Geophysical Field Methods; or
- EAS 491 and/or EAS 492 Undergraduate Research with appropriate choice of project; or
- Field course or courses taught by another college or university (e.g. Semester at Sea).

Students should discuss with their faculty advisor whether the fourth core course listed above or the course used to fulfill the observation/field requirement may also be used to satisfy the concentration.

For more information contact Professor Bryan Isacks, Department of Earth and Atmospheric Sciences, bli1@cornell.edu, or visit www.eas.cornell.edu.

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Science of Earth Systems major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Science of Earth Systems major include EAS 240, 322, and 351. The B.S. program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii.

Science of Earth Systems Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the requirements of an honors thesis involving research (EAS 491-492 or 499, 2 or more credits each) of breadth, depth, and quality. A written proposal of the honors project must be accepted by the student's advisor and the director of undergraduate studies early in the first semester of the student's senior year.

INDEPENDENT MAJOR
Offered by the Independent Major Committee
Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. With the exception of certain faculty-sponsored programs, this major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY
Offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demand a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both CS and ISST or ORIE and ISST.

Engineering distribution courses
Majors are required to take ENGRD 270 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 211 Computers and Programming is required for the major and is recommended as the second engineering distribution course.

Requirements for the information science option:
1. Three courses from Information Systems (Area II below).
2. One course from Mathematical Modeling in IT (Area III).
3. Three electives, all from either Human-Centered Systems (Area V) or Social Systems (Area VI).
4. Two electives from any of the six areas (INFO 490 may be used to fulfill one of these electives).

Requirements for the management science option:
1. Four courses from Mathematical Models in Management Science (Area I).
2. Three electives, one from each of:
   - Information Systems (Area II)
   - Mathematical Modeling in IT (Area III)
   - Information Technology Management Solutions (Area IV)
3. Two electives from any of the six areas (INFO 490 may be used to fulfill one of these electives).

Area I. Mathematical Models in Management Science
- OR&IE 350 Financial and Managerial Accounting
- OR&IE 361 Introductory Engineering Stochastic Processes I
- OR&IE 480 Information Technology
- OR&IE 580 Simulation Modeling and Analysis

Area II. Information Systems
- CS 419 Computer Networks
- INFO 430 Information Retrieval
- INFO 431 Web Information Systems
- CS 432 Introduction to Database Systems
- CS 465 Introduction to Computer Graphics
- CS 472 Foundations of Artificial Intelligence
- CS 474 Introduction to Natural Language Processing
- CS 501 Software Engineering
- CS 513 System Security
- INFO 530 Architecture of Large-Scale Information Systems
- CS 578 Empirical Methods in Machine Learning and Data Mining

Area III. Mathematical Modeling in IT
- INFO 372 Explorations in Artificial Intelligence
- OR&IE 431 Discrete Models
- OR&IE 474 Statistical Data Mining I
- CS 478 Machine Learning
- OR&IE 483 Applications of Operations Research and Game Theory to IT
- ECE 562 Fundamental Information Theory

Area IV. IT Management Solutions
- OR&IE 481 Delivering OR Solutions with Information Technology
- OR&IE 518 Supply Chain Management

Area V. Human-Centered Systems
- PSYCH/COGST 342 Human Perceptions: Applications to Computer Graphics, Art, and Visual Display*
- INFO 345 Human-Computer Interaction Design
- PSYCH 347 Psychology of Visual Communications
- PSYCH 380 Social Cognition*
- PSYCH 413 Information Processing: Conscious and Unconscious
- PSYCH 416 Modeling Perception and Cognition*
- INFO 440 Advanced Human-Computer Interaction Design
- INFO 445 Seminar in Computer-Mediated Communication
- INFO 450 Language and Technology
- DEA 470 Applied Ergonomic Methods
*Students who take PSYCH 342 or 416 may also count their prerequisite, PSYCH 205 or 214. Students who take PSYCH 380 may also count PSYCH 280. At most one of these 200-level prerequisites can be counted.

Area VI. Social Systems
- INFO 204 Networks
- SOC 304 Social Networks and Social Processes
- INFO 320 New Media and Society
- AEM 322 Technology, Information, and Business Strategy*
- INFO 349 Media Technologies
- INFO 355 Computers: From the 17th Century to the Dot.com Boom
- INFO 356 Computing Cultures
- INFO 366 History and Theory of Digital Art
- ECON 368 Game Theory (Formerly ECON 467)*
- INFO 387 The Automatic Lifestyle: Consumer Culture and Technology
- S&TS 411 Knowledge, Technology, and Property
- INFO 415 Environmental Interventions
- ECON 419 Economic Decisions Under Uncertainty
- INFO 429 Copyright in the Digital Age
- INFO 435 Seminar on Applications of Information Science
- OR&IE 435 Introduction to Game Theory*
- S&TS 438 Minds, Machines, and Intelligence
- INFO 444 Responsive Environments
- INFO 447 Social and Economic Data

H ADM 474 Strategic Information Systems*
ECON 476/477 Decision Theory I and II
H ADM 489 The Law of the Internet and E-Commerce
INFO 515 Culture, Law, and Politics of the Internet
*Only one of ECON 368 and OR&IE 435 may be taken for ISST credit. Only one of AEM 322 and H ADM 474 may be taken for ISST credit.

Information Science, Systems, and Technology Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.
1. 4 credit hours of ISST course work at or above the 500 level (no S-U courses; no seminars or 2-credit courses)
2. 6 credit hours of INFO 490 independent study and research with an ISST faculty member, spread over at least two semesters, with at least A- each semester or
3. 3 credit hours of INFO 490 independent study and research with an ISST faculty member and 3 credit hours of INFO 491 teaching experience, both with grades of at least A-

The ISST research is expected to result in a programming project or a written report (or both).
Any 500- or 600-level course taken to fulfill the honors requirements may not be counted toward fulfillment of the associated primary or secondary option requirements.

Procedures
Each program must be approved by the appropriate co-director of the ISST major, and any changes to the student's program must also be approved.
The B.S. degree with honors is granted to
6. One additional technical elective outside
4. Three application-related electives in at
3. Two materials-related electives covering
2. Three application-related electives in at
1. The 9 credits (giving a total of 141) of
2. Senior honors thesis (MS&E 405/406) with
M&A 429 Supervised Senior Design Experience
Electives
Students should utilize the flexibility provided by the major-approved electives, advisor-
approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (300+) M&E courses. Of these three, two must be a concentration of M&A's upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
Biomechanics, M&A 464, 466
Engineering materials, M&A 312, 313, 455, 464, 470, 513
Mechanical systems and design, M&A 378*, 409, 415, 417, 470, 477, 478, 479, 514
Thermo-fluids engineering, M&A 425, 449, 453, 501, 543

*Students who took M&A 378 as a required course (see above) may not use it again as a major-approved elective.

One major-approved elective must be a senior design elective involving M&A 429
"Supervised Senior Design Experience." One way to satisfy this requirement is to take a 3+ credit section of M&A 429, directed by a faculty member as an individual or team exercise. The other option is to take a senior design elective course (M&A 400, 423, 425, 470, 479, or 489) along with the corresponding 1-credit section of M&A 429.

One of the major-approved electives must be an approved upper-level math course taken after MATH 294. The course must include some statistics. Currently, the approved courses are T&M 210, ENGRD 270, CEE 304, and ENGRD 320.

One of the major-approved electives, the "technical elective," may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted. Advisors may approve such courses as advisor-approved electives.

*M&A 498 may not be used as a major-approved elective.

Advisor-approved electives
To maximize flexibility (i.e., the option for study abroad, co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester.

M&A 429 Supervised Senior Design Experience
Electives
Students should utilize the flexibility provided by the major-approved electives, advisor-
approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (300+) M&A courses. Of these three, two must be a concentration of M&A's upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
Biomechanics, M&A 464, 466
Engineering materials, M&A 312, 313, 455, 464, 470, 513
Mechanical systems and design, M&A 378*, 409, 415, 417, 470, 477, 478, 479, 514
Thermo-fluids engineering, M&A 425, 449, 453, 501, 543

*Students who took M&A 378 as a required course (see above) may not use it again as a major-approved elective.

One major-approved elective must be a senior design elective involving M&A 429
"Supervised Senior Design Experience." One way to satisfy this requirement is to take a 3+ credit section of M&A 429, directed by a faculty member as an individual or team exercise. The other option is to take a senior design elective course (M&A 400, 423, 425, 470, 479, or 489) along with the corresponding 1-credit section of M&A 429.

One of the major-approved electives must be an approved upper-level math course taken after MATH 294. The course must include some statistics. Currently, the approved courses are T&M 210, ENGRD 270, CEE 304, and ENGRD 320.

One of the major-approved electives, the "technical elective," may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted. Advisors may approve such courses as advisor-approved electives.

*M&A 498 may not be used as a major-approved elective.

Advisor-approved electives
To maximize flexibility (i.e., the option for study abroad, co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester.
Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 300 or above or co-listed in an academic department are allowed as AA electives. Students must document AA electives approved before M&E affiliation within a month of registration as an M&E student. The faculty encourages students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

**Other considerations**

It is recommended that humanities, arts, and social sciences electives include studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

The Sibley School encourages its students to spend a junior year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by M&A 427.

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

**Preparation in Aerospace Engineering**

There is no separate undergraduate accredited program in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering minor or concentration, for example spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example, electrical and computer engineering, engineering physics, or the physical sciences. Other subjects recommended as preparation for aerospace engineering include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

**OPERATIONS RESEARCH AND ENGINEERING**

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

This major provides a broad education in the techniques and tools needed to analyze and design complex systems and an introduction to the technical and professional areas of operations research and industrial engineering. The major prepares students for a wide range of occupations involving operations research, industrial engineering, entrepreneurship, information technology, operations management, consulting, financial engineering, financial services, and management.

The foundation of the major is the development of basic skills in calculus, statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take OR&IE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, or financial engineering.

Because of the wide range of career goals among ORE students, the major is designed with a minimum of required courses and a large number of required electives. Students should consult with their major advisor to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 270 (Basic Engineering Probability and Statistics) after completing MATH 192; MATH 294 should be completed before or concurrently with ENGRD 270. ORE affiliates are required to complete MATH 191, 192, and 294 (or their equivalent).

Each student should consult with their major advisor to select courses that will provide the most appropriate preparation for their future program of study in ORE. The following considerations should be borne in mind:

1. MATH 293 (differential equations) is essential for advanced study in financial engineering. Also, MATH 293 is a prerequisite for PHYS 214, thus students who do not take MATH 293 must plan to take CHEM 208.
2. CS 280 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.
3. MATH 304 covers fundamentals of formal proof techniques; this material is strongly recommended for students who intend advanced (PhD-level) study in Operations Research or a related field.

Early consultation with a faculty member or the director of undergraduate studies can be helpful in making appropriate choices.

The required courses for the ORE major and the typical terms in which they are taken are as follows:

**Semester 2 or 3**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 211 Computers and Programming</td>
<td>3</td>

<tr>
<td>Humanities/social sciences elective</td>
<td>3</td>
<td></td>
</tr>
</tbody>
</table>

*It is highly recommended that OR&IE 312 be taken in semester 4. If the student's schedule does not permit this, the course may be taken in semester 6 or 8.

The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, ILROB 121, and 175, H ADM 115, ENGR 235 (which also satisfies the technical writing requirement), and others.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

**Minimum credits**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 580 Monte Carlo Simulation</td>
<td>2</td>

</tbody>
</table>
Available OR&IE electives are as follows:
Manufacturing and distribution systems:
OR&IE 416, 451, 480, 481, 483, 518, 525, and 562 and JGSM MBA 641
Optimization methods: OR&IE 431, 432, 434, 435, 436, 437, and 533
Applied probability and statistics: OR&IE 462, 464, 474, 476 (2 credits), 561, 563, 574, 575 (2 credits), 576 (2 credits), and 577
Financial engineering: OR&IE 468, 473, 567, 568, 569, and 573

Academic Standing
The student in the major should obtain a passing grade in every course; at least C- in ENGRD 211 and 270, OR&IE 312, 320, 321, 350, 360, 361, 580, and 581; a GPA of 2.0 each semester, a GPA of 2.0 for ORE major courses, and satisfactory progress toward completion of the degree requirements. Each student's performance is reviewed at the conclusion of each semester.

If at least C- is not earned in a required course, the course must be repeated within one year before the next course in the sequence may be taken (OR&IE 321 and 361, in particular). Failure to achieve at least C- in the second attempt will generally result in withdrawal from the major.

Operations Research and Engineering Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:
1. Advanced courses in OR&IE at the 500 level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 490 ORIE Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490 Teaching in OR&IE or ENGRG 470 Undergraduate Engineering Teaching.

Procedures
Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

ENGINEERING MINORS
The engineering minor is a supplement to the B.S. degree majors in the college, including the independent major. It recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight

seminars at Cornell. However, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor requires:
• successful completion of all requirements for a B.S. degree in engineering.
• enrollment in an engineering major that approves participation in the minor.
• satisfactory completion of six courses (at least 18 credits) in a college-approved minor.

Students may apply for certification of an engineering minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor appears on the Cornell transcript following graduation.

The College of Engineering offers minors in the following areas (offering units are indicated in parentheses):
Aerospace Engineering (M&AE)
Applied Mathematics (T&AM)
Biological Engineering (BEE)
Biomedical Engineering (BME)
Civil Infrastructure (CEE)
Computer Science (CS)
Electrical and Computer Engineering (ECE)
Engineering Management (CEE)
Engineering Statistics (OR&IE)
Environmental Engineering (BEE/CEE)
Geological Sciences (EAS)
Game Design (CS)
Industrial Systems and Information Technology (OR&IE)
Information Science (INFO)
Materials Science and Engineering (MS&E)
Mechanical Engineering (M&AE)
Operations Research and Management Science (OR&IE)

Additional information on specific minors can be found below, in the Engineering Undergraduate Handbook, in the undergraduate major office of the department or school offering the minor and in Engineering Advising.

MINOR: AEROSPACE ENGINEERING
Offered by: Sibley School of Mechanical and Aerospace Engineering
Administrated by M&AE associate director, 108 Upson Hall, 255-3573, np18@cornell.edu
Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu
Students should consult the M&AE web site (www.mae.cornell.edu) for the most up-to-date list of majors eligible to participate in the Aerospace Engineering minor. Mechanical Engineering majors may participate in this minor. Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in Mechanical Engineering before taking courses toward the minor.

The aerospace engineering minor develops the engineering analysis and design skills necessary for creating and understanding aerospace vehicles and their subsystems. The minor includes diverse topics relevant to applications both in the earth’s atmosphere (e.g., aerodynamics) and in space (e.g., spacecraft thermal systems or orbital mechanics). Students in this minor will take at least four core aerospace courses, along with up to two supporting courses in engineering fundamentals or courses with applicability to aeronautics and spacecraft.

Academic Standards: A grade of at least C- in each course. If a course is offered only S-U, a grade of S is acceptable.

Requirements:
Six courses from the lists below, each worth at least 3 credits, must be completed. No substitutions will be accepted from other departments at Cornell or elsewhere.

Rules for selecting courses:
1. Rules for ME majors:
   a. Select at least four courses from group A, of which you must choose M&AE 305 or M&AE 360 (or both).
   b. Select at most two courses from group B.
   c. Use at most four courses to satisfy both the Aerospace Minor and the Aerospace Engineering Minor.

Group A: Core Aerospace Engineering
M&AE 305 Intro to Aeronautics
M&AE 360 Spacecraft Engineering
M&AE/ECE 415 GPS: Theory and Design

*M&AE 429 Supervised Senior Design Experience, with Aerospace Focus or M&AE 490 Special Investigations in Mechanical and Aerospace Engineering, with Aerospace Focus
M&AE 423/523 Intermediate Fluid Dynamics
M&AE 505 Dynamics of Flight Vehicles
M&AE 507 Spacecraft Design

*M&AE 420 and 490 require a form signed by the project advisor, stating that the project focuses on aerospace and is suitable as a core aerospace course for the minor. M&AE 420 or 490 must be worth 3 credits or more. Students are restricted to at most one M&AE 420 or one M&AE 490 counting toward the minor (may not count both M&AE 420 and M&AE 490 toward the minor).

Group B: Courses Applicable to Aerospace Engineering
MINOR: BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.

Educational objectives of the minor:

Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses beyond MATH 294, to be chosen as follows:

a. At most one course from any one of the groups 1, 2, 3, or 4.

b. At least three courses from groups 5 and 6.

c. At most one 200-level course.

d. At most one course that is offered by the student's major department.

1. Analysis

T&AM 310 Introduction to Applied Mathematics I

MATH 321 Manifolds and Differential Forms

MATH 420 Differential Equations and Dynamical Systems

A&EP 321 Mathematical Physics I

2. Computational Methods

ENGRD 322 Introduction to Scientific Computation

ENGRD 320 Engineering Computation

OR&IE 320 Optimization I

CS 421 Numerical Analysis

3. Probability and Statistics

ENGRD 270 Basic Engineering Probability and Statistics

OR&IE 360 Engineering Probability and Statistics II

ECE 310 Introduction to Probability and Random Signals

CEE 304 Uncertainty Analysis in Engineering

MATH 471 Basic Probability

4. Applications

A&EP 333 Mechanics of Particles and Solids

CHEM 323 Fluid Mechanics

CEE 331 Fluid Mechanics

CEE 371 Modeling of Structural Systems

CS 280 Discrete Structures

CS 285 Networks

ECE 320 Networks and Systems

ECE 425 Digital Signal Processing

MS&E 303 Thermodynamics of Condensed Systems

M&AE 323 Introductory Fluid Mechanics

5. Advanced courses

Only one of these three may be chosen:

T&AM 311 Introduction to Applied Mathematics II

MATH 422 Applied Complex Analysis

A&EP 322 Mathematical Physics II

Only one of the following two may be chosen:

ECE 411 Random Signals in Communications and Signal Processing

OR&IE 361 Introductory Engineering Stochastic Processes I

Only one of the following two may be chosen:

CS 381 Introduction to Theory of Computing

CS 481 Introduction to Theory of Computing

Only one of the following two may be chosen:

M&AE 323 Introductory Fluid Mechanics

T&AM 570 Intermediate Dynamics

Also, you may choose from:

CS 428 Introduction to Computational Biophysics

CS 482 Introduction to the Design of Algorithms

OR&IE 321 Optimization II

OR&IE 431 Discrete Models

OR&IE 435 Introduction to Game Theory

OR&IE 462 Introductory Engineering Stochastic Processes II

OR&IE 568 Financial Engineering with Stochastic Calculus I

OR&IE 569 Financial Engineering with Stochastic Calculus II

T&AM 578 Nonlinear Dynamics and Chaos

6. Mathematics courses

Any 300+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:

a. MATH 323 or 420, if any course from group 1 is chosen

b. MATH 471, if any course from group 3 is chosen

c. MATH 422, if T&AM 311 or A&EP 322 is chosen from group 5

d. Only one of the following may be chosen:

MATH 332 Algebra and Number Theory

MATH 335 Introduction to Cryptology

MATH 336 Applicable Algebra

T&AM 610 Methods of Applied Mathematics I

T&AM 611 Methods of Applied Mathematics II

MINOR: APPLIED MATHEMATICS

Offered by the Department of Theoretical and Applied Mathematics

Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.tam.cornell.edu/Undergrad.html

All engineering undergraduates are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements

At least six courses beyond MATH 294, to be chosen as follows:

a. At most one course from any one of the groups 1, 2, 3, or 4.

b. At least three courses from groups 5 and 6.

c. At most one 200-level course.

d. At most one course that is offered by the student's major department.

1. Analysis

T&AM 310 Introduction to Applied Mathematics I

MATH 321 Manifolds and Differential Forms

MATH 420 Differential Equations and Dynamical Systems

A&EP 321 Mathematical Physics I

2. Computational Methods

ENGRD 322 Introduction to Scientific Computation

ENGRD 320 Engineering Computation

MATH 335 Introduction to Cryptology

MATH 336 Applicable Algebra

T&AM 610 Methods of Applied Mathematics I

T&AM 611 Methods of Applied Mathematics II

MINOR: BIOLOGICAL ENGINEERING

Offered by the Department of Biological and Environmental Engineering

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.

Educational objectives of the minor:

Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C in each course in the minor and a GPA ≥ 2.0 in all courses in the minor.

Requirements

At least six courses beyond MATH 294, with at least three courses and 9 credits taught in BEE as follows:

BEE 350 Biological and Environmental Transport Processes (3 credits); required

I. Biology Foundation (at least one but no more than two courses)

BIOBM 330 or 331–332 Biochemistry

BIOMI 290 Microbiology

BIONB 222 Neurobiology

II. Biological Engineering Core (at least one but no more than two courses)

BEE 260 Principles of Biological Engineering

**MINOR: BIOMEDICAL ENGINEERING**

Offered by the Department of Biomedical Engineering (BME)

Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/undergraduate/biomedminor.cfm

All undergraduates in the College of Engineering, College of Arts and Sciences, College of Human Ecology, and College of Agriculture and Life Sciences are eligible to participate in this minor. Students may participate in only one of these areas of interest: the biological engineering minor or the biomedical engineering minor.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The discipline includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest in the minor with the biomedical engineering undergraduate minor coordinator in 120 Olin Hall. On the form you will be asked to choose a BME faculty advisor that you can participate in only one of these areas of interest: the biological engineering minor or the biomedical engineering minor.

A 4 on AP biology exam and ENGRI 131
A 4 on AP biology exam and BIO G 105 or BIO G 104
BIO G 101, 102, 103, and 104 Biological Sciences
BIO G 105 and 106 Introductory Biology
BIO G 107 and 108 General Biology
BIO G 110 and ENGRI 131 Biological Principles and Introduction to Biomedical Engineering

**Category 2. Advanced biology**

BIOAP 311/VTBM 356 Introductory Animal Physiology Lectures
BIOBM 330 Principles of Biochemistry, Individualized Instruction
BIOBM 331 Principles of Biochemistry, Proteins and Metabolism
BIOBM 332 Principles of Biochemistry, Molecular Biology
BIOBM 333 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology
BIOGD 281 Genetics
BIONB 222 Neurobiology and Behavior II. Introduction to Neurobiology
BIONM 290 General Microbiology Lectures

**Category 3. Molecular and cellular biomedical engineering**

A&EP 252/ENGRI 252 The Physics of Life
BEE 360/BME 360 Molecular and Cellular Bioengineering

BEE 494 Fundamentals of Tissue Engineering
MINOR: CIVIL INFRASTRUCTURE
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering are eligible to participate in this minor. The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

Academic standards: At least C in each course in the minor

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Required course: ENGRD 202 Mechanics of Solids
2. Additional courses: choose any five (groupings are for information only)*

Geotechnical engineering
CEE 341 Introduction to Geotechnical Engineering
CEE 440 Foundation Engineering
CEE 441 Retaining Structures and Slopes
CEE 444 Environmental Site and Remediation Engineering

Structural engineering
CEE 371 Structural Modeling and Behavior
CEE 372 Intermediate Solid Mechanics
CEE 471 Fundamentals of Structural Mechanics
CEE 472 Introduction to the Finite Element Method
CEE 473 Design of Concrete Structures
CEE 474 Design of Steel Structures
CEE 478 Structural Dynamics and Earthquake Engineering

Other related courses
CEE 595 Construction Planning and Operations
*Other CEE courses may be approved by petition in advance

MINOR: COMPUTER SCIENCE
Offered by the Department of Computer Science
Contact: 303 Upson Hall, 255-0982, www.cs.cornell.edu

Students affiliated with all engineering majors except Computer Science are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Academic standards: At least C in each course in the minor

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Required courses
   CS/ENGRD 211 Computers and Programming
   One of the following:
   CS 321 Numerical Methods in Computational Molecular Biology,
   CS/ENGRD 322 Introduction to Scientific Computing,
   CS 421 Numerical Analysis and Differential Equations, or
   CS 422 Numerical Analysis: Linear and Nonlinear Problems
   CS 428 Introduction to Computational Biophysics.
   CS/ECE 314 Computer Organization, or
   CS 316 Systems Programming
2. Additional courses
   Three CS courses numbered 300 or higher with the following exceptions:
   CS 490 and seminars are excluded
   CS 280 is allowed
   Cross-listed courses cannot be applied to the minor unless taken under the CS rubric, with the sole exception of ECE 314. All qualifying courses must be taken at Cornell for a letter grade. No substitutions allowed.

MINOR: ELECTRICAL AND COMPUTER ENGINEERING
Offered by the School of Electrical and Computer Engineering
Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor, but MS&E students must receive prior written approval from both MS&E and ECE, via petition. This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.5 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Two of the following:
   ECE/ENGRD 210 Introduction to Circuits for Electrical and Computer Engineers
   ECE 220 Signals and Information
   ECE/ENGRD 230 Introduction to Digital Logic Design
2. Two of the following:
   ECE 303 Electromagnetic Fields and Waves
   ECE/CS 314 Computer Organization
   ECE 315 Introduction to Microelectronics
   ECE 320 Networks and Systems
3. One other ECE course at the 300 level or above (3-credit minimum)
4. One other ECE course at the 400 level or above (3-credit minimum)

MINOR: ENGINEERING MANAGEMENT
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors are eligible to participate in this minor. CEE students may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective. ORIE students have some specific restrictions and requirements as noted below.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

Academic standards: At least C in each course in the minor.
Requirements
At least six courses (> 18 credits), chosen as follows:

1. Required courses (3):
   CEE 323 Engineering Economics and Management
   or OR&IE 451 Economic Analysis of Engineering Systems
   OR&IE 350 Financial and Managerial Accounting
   CEE 304 Uncertainty Analysis in Engineering
   or ENGRD 270 Basic Engineering Probability and Statistics
   or ECE 310 Introduction to Probability and Random Signals

2. Additional courses—choose any three:
   CEE 406 Civil Infrastructure Systems
   CEE 492 Engineers for a Sustainable World: Engineering in International Development
   CEE 593 Engineering Management Methods
   CEE 594 Economic Methods for Engineering and Management
   CEE 595 Construction Planning and Operations
   CEE 596 Management Issues in Forensic Engineering
   CEE 597 Risk Analysis and Management
   CEE 598 Introduction to Decision Analysis
   NBA 507 Entrepreneurship for Scientists and Engineers
   or M&AE/ENGRI 461/OR&IE 452 Entrepreneurship for Engineers
   or BEE 489 Engineering Entrepreneurship, Management and Ethics

1 OR&IE students must substitute NCC 556 or NBA 500 for OR&IE 350
2 T&M 310 cannot be substituted for CEE 304
3 Other courses approved by petition in advance
4 This course is not accepted for OR&IE students

MINOR: ENVIRONMENTAL ENGINEERING
Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Students majoring in biological engineering or civil engineering are eligible if they are not following the environmental concentration offered by those majors. Eligible civil engineering majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be stewards and managers of our nation's resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (> 18 credits), chosen from the following groups, with at least one course from each group.

Group A. Environmental engineering processes:
BEE/ENGRD 251 Engineering for a Sustainable Society
CEE 351 Environmental Quality Engineering
CEE 451 Microbiology for Environmental Engineering
CEE 452 Water Supply Engineering
CEE 453 Laboratory Research in Environmental Engineering
CEE 454 Sustainable Small-Scale Water Supplies
CEE 455 AquaClara: Sustainable Water Supply Project
BEE 476 Solid Waste Engineering
BEE 478 Ecological Engineering
CEE 444 Environmental Site and Remediation Engineering
BEE 492 Engineers for a Sustainable World
BEE 651 Bioremediation
CEE 653 Water Chemistry for Environmental Engineering
CEE 656 Physical/Chemical Process
CEE 657 Biological Processes
CEE 658 Biodegradation and Biocatalysis

Group B. Environmental systems
ENGR/CEE 113 Sustainability Design for Appledore Island (*may count only if taken before the junior year)
BEE 475 Environmental Systems Analysis
CEE 597 Risk Analysis and Management
CEE 562 Environmental Quality Systems Engineering

Group C. Hydraulics, hydrology, and environmental fluid mechanics
CEE 331 Fluid Mechanics (CHFM 323 or M&AE 323 may be substituted for CEE 331)
CEE 332 Hydraulic Engineering
BEE 371 Physical Hydrology for Ecosystems
BEE 471 Introduction to Groundwater
CEE 432 Hydrology
CEE 436 Case Studies in Environmental Fluid Mechanics
CEE 437 Experimental Methods in Fluid Dynamics
BEE 473 Watershed Engineering
BEE 474 Water and Landscape Engineering Applications
CEE 651 Computational Simulation of Transport in the Environment
CEE 653 Flow in Porous Media and Groundwater
MINOR: GAME DESIGN
Offered by the Department of Computer Science
See: gdiac.cis.cornell.edu/courses.php
To complete the Game Design minor, the student must take at least six (6) courses (18-credit minimum) chosen as follows:
Required Courses: Complete the following two courses:
• CIS 300 Digital Game Design
• CIS 400 Advanced Projects in Game Design
Additional Courses: Choose four of the following courses:
• CIS 300 Digital Game Design
• CIS 400 Advanced Projects in Game Design
• INF 200 Introduction to Game Design
• CS 211 Object-oriented Programming and Data Structures
• PSYCH 342 Human Perception: Graphics, Art, and Visual Display
• INF 345 Human-Computer Interaction Design
• CS 419 Computer Networks
• COM 422 Psychology of Media and Beyond
• INF 440 Advanced Human-Computer Interaction Design
• CS 465 Introduction to Computer Graphics
• CS 472 Foundations of Artificial Intelligence
• ECE 476 Digital Systems Design Using Microcontrollers
• CIS 565 Computer Animation
• CS 567 Physically Based Animation for Computer Graphics
• CS 569 Interactive Computer Graphics
Academic Standards:
• A letter grade of at least C is required for each course in the minor.
• CS students may not count CS courses toward the completion of this minor.

MINOR: SCIENCE OF EARTH SYSTEMS
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu
Students affiliated with all majors except science of earth systems are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. EAS 220 The Earth System
2. At least two of these courses:
   - EAS 301 Evolution of the Earth System
   - EAS 303 Introduction to Biogeochemistry
   - EAS 304 Interior of the Earth
   - EAS 305 Climate Dynamics
3. Additional EAS courses at the 300 level or higher. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MINOR: INFORMATION SCIENCE
Offered by the Department of Information Science, Systems, and Technology
Students affiliated with all majors except Information Science are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses for the minor; S-U courses are not allowed.

Requirements
Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the BS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:
• Statistics: one course (must be ENGRD 270 or CEE 304)
• Information systems (primarily computer science): two courses
• Human-centered systems (human computer interaction and cognitive science): one course
• Social systems (social, economic, political, cultural, and legal issues): one course
• Elective: one additional course from either human-centered systems or social systems

Statistics
An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

ENGRD 270 Basic Engineering Probability and Statistics
Materials properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related areas with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. **ENGRD 261 Mechanical Properties of Materials:** From Nanodevices to Superstructures, or ENGRD 262 Electronic Materials for the Information Age
2. Two of:
   - MS&E 206 Atomic and Molecular Structure of Matter
   - MS&E 301 Materials Chemistry
   - MS&E 303 Thermodynamics of Condensed Systems
   - MS&E 304 Kinetics, Diffusion, and Phase Transformations
   - MS&E 305 Electronic, Magnetic, and Dielectric Properties of Materials
   - MS&E 402 Mechanical Properties of Materials, Processing, and Design
3. Three electives chosen from:
   - Any MS&E course at the 300 level or above.
   - Selected courses in materials properties and processing (at the 300 level or above) from A&EP, CHEM, CEE, ECE, M&AE, PHYS, and CHEM, as approved by the MS&E undergraduate major coordinator.

---

**MINOR: MECHANICAL ENGINEERING**

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.me.cornell.edu

Students affiliated with A&E, BEE, CEE, CHEM, CS, EAS, ECE, ENVE, ISST, MS&E, and OR&E are eligible to participate in this minor. Students intending to earn a minor in mechanical engineering should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in mechanical engineering before taking courses toward the minor.

**Academic standards:** At least C– in each course in the minor.

**Requirements**

At least six courses (≥18 credits) from among the following: M&AE courses at the 200 level or above; ENGRD 202 Mechanics of Solids; ENGRD 203 Dynamics.

**Rules for selecting courses:**

1. The selection of courses must satisfy the following three requirements.
   a. At least two courses must be numbered above 300.
   b. At least one course must be either (i) numbered above 500 or (ii) numbered
MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE
Offered by the School of Operations Research and Information Engineering
Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu
Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

Operations research and management science aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of the area, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to give a broad knowledge of these fundamentals, rather than to train the student for a specific area.

Academic standards: At least C- in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (> 18 credits), chosen as follows:
1. At least three of these courses:
   - ENGRD 270 Basic Engineering Probability and Statistics
   - OR&E 320 Optimization I
   - OR&E 321 Optimization II
   - OR&E 360 Engineering Probability and Statistics II
   - OR&E 361 Introduction to Engineering Stochastic Processes I
   - OR&E 580 Monte Carlo Simulation
   - OR&E 581 Discrete-Event Simulation
2. Any OR&E courses at the 300 level or higher (including those in 1).

MASTER OF ENGINEERING DEGREES
The following one-year (30-credit) professional master of (M.Eng.) degrees are offered (giving also the administering unit)

M.Eng. (Aerospace): mechanical and aerospace engineering
M.Eng. (Biological and Environmental): biological and environmental engineering
M.Eng. (Biomedical): biomedical engineering
M.Eng. (Chemical): chemical and biomolecular engineering
M.Eng. (Civil and Environmental): civil and environmental engineering
M.Eng. (Computer Science): computer science
M.Eng. (Electrical): electrical and computer engineering
M.Eng. (Engineering Mechanics): theoretical and applied mechanics
M.Eng. (Engineering Physics): applied and engineering physics
M.Eng. (Geological Sciences): earth and atmospheric sciences
M.Eng. (Materials): materials science and engineering
M.Eng. (Mechanical): mechanical and aerospace engineering
M.Eng. (OR&IE): operations research and information engineering
M.Eng. (Systems): systems engineering

These degrees are discussed below because the curricula are integrated with the undergraduate majors.

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:
- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on www.engr.cornell.edu/grad.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester in both programs, finishing up their B.S. degree and also doing their first semester of the M.Eng. program.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it when beginning the M.Eng. portion. For further details, visit Engineering Advising (167 Olin Hall), the M.Eng. office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers two options or categories of financial support:
- Undergraduate Knight Scholarship
- Alumni Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng., M.B.A.) as well as an application to participate in the Knight Scholarship Program.
MASTER OF ENGINEERING (AEROSPACE)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu
The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, nonequilibrium flows, combustion, dynamics and control, and computational fluid dynamics.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the M&AE Master of Engineering committee. An individual student’s curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry. All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the M&AE master of engineering chair.

Check with the M&AE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering minors.

MASTER OF ENGINEERING (AGRICULTURAL AND BIOLOGICAL)
Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu
This degree is intended primarily for students who plan to enter engineering practice. The program is planned as an extension of an undergraduate major in biological and environmental engineering but can accommodate graduates of other engineering disciplines. The required 30 credits of courses are intended to strengthen the students’ fundamental knowledge of engineering and develop their design skills. Of the 30 credits, 3 to 9 are earned for an engineering design project that culminates in a written and oral report.

Students may concentrate in one of the following areas: biological engineering, energy, environmental engineering, environmental management, food processing engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student’s interests and design project. Courses in technical communication, math, biology, and the physical sciences may also be taken as part of a coherent program. Students can qualify for the Dean’s Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas.

MASTER OF ENGINEERING (BIOENGINEERING)
Offered by the Department of Biomedical Engineering
Contact: 361 Olin Hall, 255-2737, www.bme.cornell.edu
Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biotechnology to dominate engineering knowledge and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in BME will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. in BME with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The three areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science. A knowledge of molecular- and cellular-biological engineering and engineering analysis of physiological systems at the level of BME 301, 302, 401, and 402 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

MASTER OF ENGINEERING (CHEMICAL)
Offered by the School of Chemical and Biomolecular Engineering
Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu
This degree is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, math, chemistry, physics, and business administration. Some courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described at the beginning of the section “Master of Engineering Degrees.”

Specific requirements include
1. 12 credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEME 711, 731, and 751 and the remainder in chemical and biomolecular engineering applications (partial list: CHEME 480, 481, 484, 520, 543, 572, 631, 640, and 661).
2. A minimum of 3 credits of an individual or group project, CHEME 565.
3. Knowledge of business practices and techniques for pollution abatement and control. This knowledge may have already been acquired by students as undergraduates. If not, then CHEME courses (e.g., CHEME 572 and 661) or other courses covering these topics are required.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL)
Offered by the School of Civil and Environmental Engineering
Contact: 219 Hollister Hall, 255-7560, www.cee.cornell.edu

The Master of Engineering degree is a course work and project-oriented program. It is normally completed in two semesters of intensive study. Thirty credit hours are required, consisting of course work in a major concentration and a supporting area, as well as a design project.

Students may focus their studies in one of seven major subject areas: civil infrastructure systems, environmental and water resource systems engineering, environmental fluid mechanics and hydrology, environmental engineering, geotechnical engineering, structural engineering, and transportation systems engineering. Courses in supporting areas come from many disciplines, including architecture, computer science, economics, engineering management, historic preservation, materials science, microbiology and operations research to name just a few.

MASTER OF ENGINEERING (ELECTRICAL)
Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 223 Phillips Hall, 255-8414, www.ece.cornell.edu/aca-meng@cornell.edu
The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING (ENGINEERING MANAGEMENT)
The M.Eng. program in Engineering Management is designed for engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action.

A student’s program of study is designed individually in consultation with an academic advisor and then submitted to the school’s Professional Degree Committee for approval.

For the M.Eng. program in Engineering Management, the requirements are:

1. Three core courses: These include: CEE 590 Project Management, CEE 593 Engineering Management Methods, and CEE 591 Management Project.
2. Two focus courses, from a list that includes CEE 594, CEE 596, CEE 597, CEE 598, and CEE 690.
3. Two managerial breadth courses, including one in finance/accounting and one focused on behavior.
4. Three disciplinary or functional electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master of Engineering and Master of Business Administration degrees. See the beginning of the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING (ENGINEERING MECHANICS)
Offered by the Department of Theoretical and Applied Mechanics
Contact: 212 Kimball Hall, 255-0988, www.tam.cornell.edu/meng@cornell.edu
This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries such as the finite element method. Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: T&AM has many laboratories related to research areas and courses of study for the M.Eng. program:

- Ultrasonic and Materials Characterization Laboratory—Wolfgang Sachse
- Bio-robotics and Locomotion Laboratory—Andy Ruina
- Granular Flow Research Laboratory—Jim Jenkins
- Composites Laboratory—Leigh Phoenix and Petru Petrina
- Fracture Mechanics Laboratory—Leigh Phoenix and Petru Petrina
- Dynamics Laboratory—Alan Zebrander
- Mechanics Laboratory—Dan Mittler
- Mechanics of Solids Laboratory—Dan Mittler
- Biological Fluid Dynamics Laboratory—Jane Wang

Course Work: (project 10-12 credit hours)

Current Interesting Projects

1. Animal, Human and Robotic Locomotion—Andy Ruina
2. Dynamical Systems—Richard Rand
3. Stress Rupture Testing of High-Performance Fibers and Yarns—S. Leigh Phoenix
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—K. Bingham Gady
5. Fracture and Reliability—Hui, Phoenix, Zebrander
MASTER OF ENGINEERING
(ENGINEERING PHYSICS)

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5196, www.aep.cornell.edu

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanotechnology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering. Those who have majored in an engineering discipline generally seek to strengthen their physics base.

Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C- in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (400) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

MASTER OF ENGINEERING
(GEOLICAL SCIENCES)

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The one-year M.Eng. (Geological Sciences) degree program provides future professional geologists or engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Individual programs are developed within the established options: geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student's background. No courses may be required in some categories, and the categories can be adjusted to the student's interest and needs. Alternatives to numerical modeling in the geohydrology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over a third of the program (12 of 30 credits) and must constitute at least 3 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature. The project topic can be drawn from a student's nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geohydrology would normally involve groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.
MASTER OF ENGINEERING (MATERIALS SCIENCE AND ENGINEERING)
Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu
Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling) beyond the MS&E undergraduate requirements.

MASTER OF ENGINEERING (MECHANICAL)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu
The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. Candidates may concentrate on any of a variety of special areas, including biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the M&A&E Master of Engineering committee. An individual student's curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the M&A&E master of engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Check with the M&A&E graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems manufacturing minors.

MASTER OF ENGINEERING (NUCLEAR)
Offered by the Nuclear Engineering Program
Contact: 312 Rhodes Hall, 255-1453, www.gradschool.cornell.edu/academics_research/fields/nuc-sci.html
The two-semester curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate concentrations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) math, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. Complete course descriptions and degree requirements are described in the college's introductory section.

MASTER OF ENGINEERING (OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING)
Offered by the School of Operations Research and Information Engineering
Contact: 201 Rhodes Hall, 255-9128, www.orie.cornell.edu
This professional degree program stresses applications of operations research. The centerpiece of the program is a team-based project on a significant real-world problem.

The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems and methods in manufacturing, information, finance, and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate major in OR&IE who wish to broaden their practical knowledge of the field; Cornell undergraduates in other math-based areas who want to broaden their exposure to OR&IE; and qualified non-Cornellians with strong backgrounds from other programs in the United States and abroad.

Undergraduates majoring in engineering may be interested in a program that can lead, in the course of six years, to B.S., M.Eng., and M.B.A. degrees. See "Master of Engineering Degrees."

Graduates with a technical background may be interested in the possibility of completing both an M.Eng. and an M.B.A. program within a period of two years, possibly with intervening work experience. These possibilities incorporate the Johnson Graduate School of Management (JGSM) "Accelerated MBA" (Formerly Twelve-Month Option).

For admission, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration the entering student must also have completed OR&IE 360/560 and a basic finance course.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several concentrations and minors within the program. The concentrations include applied operations research, financial engineering, information technology, strategic operations (which incorporates the Semester in Strategic Operations at JGSM), and data mining and analytical marketing. Minors include systems engineering and manufacturing. The concentrations and the strategic operations concentration are offered jointly with various other Cornell departments and schools and they provide the opportunity to interact on projects and in class with students in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and offers the broadest choice of elective courses and career alternatives, in business and elsewhere.

For information about the manufacturing minor, contact the Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; about the Semester in Strategic Operations, 304 Sage Hall, 255-4691; about systems engineering, 280 Rhodes Hall, 254-8989; and for others, 201 Rhodes Hall, 255-9128. For students lacking an undergraduate degree in operations research equivalent to Cornell's, the financial engineering concentration, which is highly specialized, requires additional prerequisites and takes three semesters to complete. This permits an industry internship in the summer between semesters. For the other concentrations and minors, the typical study plans are as follows:

1. For matriculants with preparation comparable to that provided by the undergraduate major in operations research and engineering:...
Additional program requirements are hospitals, firms, and service organizations such as described in the project requirement can be met in a variety of ways. Common elements in all project experiences include working as part of a faculty member on a regular basis, and oral presentations. The Systems Engineering Program emphasizes the fundamentals of requirements analysis, systems architecture, product development, project management, optimization, simulation, and systems analysis. The program's strength in these areas helps promote an understanding of the systems process throughout an organization and prepares students to transition from designing and managing independent engineering components and projects to creating integrated solutions that meet customer needs.

The M.Eng. (Systems Engineering) program is designed for students with a solid disciplinary background who want to specialize in Systems Engineering. It requires a minimum of 30 credit hours. Students must complete the following required courses:

- Applied Systems Engineering (3 credits)
- Systems Architecture, Behavior, and Optimization (3 credits)
- Project Management (CEE 590) (4 credits)
- Systems Engineering Design Project (6-8 credits)

Approved electives account for the remaining credits to reach the minimum of 30 credits required for the degree and are to be chosen from the following areas:

- Systems Applications
- Systems Management (at most one course)
- Courses that enrich the understanding of generic methods to design and analyze systems including courses in simulation, feedback and control, decision-making, or risk analysis.
- Systems Applications
- Courses that provide depth in the design and operation of specific systems such as power, communication, software, manufacturing, or transportation.
- Systems Management (at most one course):
- Courses that enhance student understanding of the management activities and processes which are necessary to successfully design and operate systems.

In addition to the Master of Engineering degree in Systems Engineering, the Systems Engineering Program offers a second course of study: the minor in Systems Engineering. The SE minor is designed for students who want a concentration in Systems Engineering as part of the Master of Engineering degree in another engineering discipline.

### ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools. Courses are identified with a standard abbreviation followed by a three-digit number.

- Engineering Communications ENGR
- Engineering Distribution ENGRD
- Engineering General Interest ENGRG
- Engineering Introductions ENGRI
- Biological and Environmental Engineering BEE
- Applied and Engineering Physics A&EP
- Chemical and Biomolecular Engineering CHEM
- Civil and Environmental Engineering CEE
- Computer Science CS
- Computing and Information Science CIS
- Earth and Atmospheric Sciences EAS
- Electrical and Computer Engineering ECE
- Information Science INFO
- Materials Science and Engineering MS&E
- Mechanical and Aerospace Engineering M&AE
- Nuclear Science and Engineering NS&E
- Operations Research and Information Engineering OR&IE
- Systems Engineering SYSEN
- Theoretical and Applied Mechanics T&AM

### ENGINEERING COMMON COURSES

#### Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

**ENGR 334(3340) Independent Study in Engineering Communications**

1-3 credits, variable. Letter grades. TBA with instructor. Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications of more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, and reading and writing about problems in engineering practice, and writing about technical topics for the public.

**ENGR 335(3350) Communications for Engineering Managers (LA)**

Fall, spring. 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.
Fall, spring. 4 credits. Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor. All students must take a lab section. Staff.
Covers the principles of statics, force systems, and equilibrium; frames; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shear force, bending moment, thermal stress, stretching, bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

ENGRD 203(2030) Dynamics (also T&M 203[2030])
Fall, spring. 3 credits. Prerequisite: ENGRD/TEMA 212, co-registration in MATH 293, or permission of instructor. All students must take a lab and a section. Staff.
Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations. Laboratory experiments demonstrate basic principles of dynamics.

ENGRD 211(2110) Object-Oriented Programming and Data Structures (also CS 211[2110])
Fall, spring, summer. 3 credits. Prerequisite: CS 100J, CS 101J, or CS 100H or CS 100M if completed before fall 2007, or equivalent course in Java or C++. Intermediate programming in a high-level language and computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

ENGRD 219(2190) Mass and Energy Balances (also CHEM 219[2190])
Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. B. Daniel.
Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

ENGRD 221(2210) Thermodynamics (also M&AE 221[2210])
Fall, spring, may be offered summer. 3 credits. Prerequisite: MATH 192, Calculus for Engineers, and PHYS 112, Physics I, Mechanics. Staff.
Premises the definitions, concepts, and laws of thermodynamics. Topics considered include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and to broader environmental issues.

ENGRD 230(2300) Introduction to Digital Logic Design (also ECE 230[2300])
Fall, spring. 4 credits. Prerequisite: CS 100. Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGRD 251(2510) Engineering for a Sustainable Society (also BEE 251[2510])
Fall. 3 credits. Pre- or corequisite: MATH 295.
Case studies of contemporary environmental issues including pollution distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy, environment, and water-based problems. Students are introduced to the basic principles of environmental engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGRD 260(2600) Principles of Biological Engineering (also BEE 260[2600])
Fall. 3 credits. Pre- or corequisite: MATH 295.
Focuses on the integration of biological systems with engineering, math, and physical principles. Students learn how to formulate equations for biological systems and practice it in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications, such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 251 or BEE 260 according to their academic plan. BEE students who complete both BEE 251 and BEE 260 receive engineering credit for only one of these courses.

ENGRD 261(2610) Mechanical Properties of Materials: From Nanodevices to Superstructures (also M&AE 261[2610])
Fall. 3 credits. S. Sase.
Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. The relationship of the elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials is explored. Effects of time and temperature on materials properties are discussed. This course emphasizes considerations for design and optimal performance of materials and engineered objects.
ENGRD 262(2620) Electronic Materials (for the Information Age (also MS&E 262(2620))
Spring. 3 credits. Prerequisite: MATH 192. Corequisite: PHYS 213 or permission of instructor. G. M. Mali.
ENGRI 210(2101) Introduction to Nanotechnology (also CHEME 210(2101), ORIE 210(2101)) Spring. 3 credits. J. J. Bisogni. Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGRI 112(1120) Introduction to Chemical Engineering (also CHEME 112(1120)) Fall. 3 credits. J. J. Bisogni. Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRI 113(1130) Sustainability Design for Appledore Island Spring. 3 credits. J. J. Bisogni. The course introduces students to a sustainability environment, Appledore Island, as an example of how sustainability is addressed in the design of basic components of the built environment: energy, water supply and waste treatment. Students will present innovative designs for sustainable systems to the engineering staff of Appledore Island. Students learn how to design: reservoirs to provide water during droughts; aqueducts to transport water; and water treatment plants to prevent waterborne diseases. The course includes field trips, building a computer-controlled miniature water treatment plant, and exploring new technologies for making safe drinking water.

ENGRI 115(1101) Engineering Applications of Operations Research Fall. 3 credits. Not open to ORIE upper-class majors.
ENGR 116(1160) Modern Structures (also CEE 116(1160))  
Fall. 3 credits. A. Ingraffea.  
Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry loads using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantify loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGR 117(1170) Introduction to Mechanical Engineering (also M&AE 117(1170))  
Fall. 3 credits. T. McKeon.  
Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGR 118(1180) Design Integration: DVDs and iPods (also T&M 118(1180))  
This course examines the broad range of systems and engineering technologies required to build today's remarkable music/data and video sources.

ENGR 119(1190) Biomaterials for the Skeletal System (also MS&E 119(1190))  
Fall. 3 credits. D. Grubb.  
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and mimicking, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 122(1220) Earthquake! (also EAS 122(1220))  
Spring. 3 credits. L. Brown.  
Explores the science of natural hazards and strategic resources. Covers techniques for locating and characterizing earthquakes, and assesses the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical and social importance of such resources. Includes seismographic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGR 126(1260) Introduction to Signals and Telecommunications  
Spring. 3 credits.  
Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as video sources. Introduction to the problems and methods of signal processing and frequency-division multiplexing. Discussions of practical applications focus on areas such as video sources.
transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists by Arfken and Mathematical Physics by Butkov.

A&EP 322(3220) Mathematical Physics II

Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson's Equations, variational form techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists by Arfken and Mathematical Physics by Butkov.

A&EP 324(3240) Maple Supplement to Mathematical Physics 321 and 322
Spring. 1 credit. R. V. E. Lovelace. A broad introduction to the use of Maple in applications to problems of mathematical physics similar to those covered in A&EP 321 and 322. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFT's), and group theory. Gives an introduction to LaTeX.

A&EP 330(3330) Modern Experimental Optics (also PHYS 330[3300])
Fall. 4 credits. Limited enrollment. Prerequisite: PHYS 214 or equivalent. E. Bodenschutz. Practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience. Practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

A&EP 333(3330) Mechanics of Particles and Solid Bodies
Fall. Summer. 4 credits. Prerequisites: PHYS 110 or 116 and co-registration in A&EP 321 or equivalent or permission of instructor. Staff. Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of Classical Dynamics by Marion and Thorton.)

A&EP 355(3550) Intermediate Electromagnetism
Fall. Summer; first half of semester. 2 credits. Prerequisite: PHYS 215 or 217 and co-registration with A&EP 321, or permission of instructor. Intermediate-level course on electromagnetic theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace's equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

A&EP 356(3560) Intermediate Electrodynamics

A&EP 361(3610) Introductory Quantum Mechanics
Fall. Summer; second half of semester. 2 credits. Prerequisites: PHYS 215 or 217 and co-registration with A&EP 321, or permission of instructor. Introductory course on the theory of quantum mechanics. Topics include waves, Schrödinger's equation and the concept of the wavefunction, simple potentials, and the harmonic oscillator model. Emphasis is on developing an intuitive understanding of quantum mechanics.

A&EP 362(3620) Intermediate Quantum Mechanics
Spring. 4 credits. Prerequisites: PHYS 361 or 316 and co-registration with A&EP 322 or permission of instructor. Continuation of A&EP 361 covering more advanced material in quantum mechanics. Topics include operator formalism and matrix representation, angular momentum and spin, the hydrogen atom, techniques for solving Schrödinger's equation including perturbation theory, two- and three-level systems, interaction with radiation, and identical particles.

A&EP 363(3630) Electronic Circuits (also PHYS 360[3600])
Fall. Spring, 4 credits. Prerequisites: PHYS 208 or 217 and permission of instructor. No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded. Lect. 2 hrs. Lab. E. Kirkland; spring, J. Alexander. Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 423(4230) Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester physics sequence, familiarity with quantum mechanics (A&EP 361 or PHYS 316) and one year junior-level mathematics. Staff. Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Introductory Statistical Mechanics by Bowley and Sanchez.

A&EP 434(4340) Continuum Physics

A&EP 438(4380) Computational Engineering Physics
Spring. 3 credits. Prerequisites: CS 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; co-registration in 361 permitted. Staff. Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required in C or optionally C++, FORTRAN, or Pascal. Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 444(4440) Quantum and Nonlinear Optics
Spring. 4 credits. Prerequisites: A&EP 356, 361, or equivalent. Staff. Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

A&EP 450(4500) Introductory Solid State Physics (also PHYS 454[4540])
Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 443, A&EP 361, or CHEM 793. Staff. Introduction to the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel or Solid State Physics by Ashcroft and Mermin.
A&EP 470(4700) Biophysical Methods
(also BION 470(4700))
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended courses: 464 or equivalent. Focus on the application of quantum mechanical principles to biological systems. Topics include the behavior of proteins, membranes, and microorganisms. Special emphasis on the role of quantum effects in biological processes.

A&EP 484(4840) Introduction to Controlled Fusion: Principles and Technology
(also ECE/NS&E 484(4840), M. AE 459(4590))
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

A&EP 490-491(4900-4910) Independent Study in Engineering Physics
Fall, spring. Credit TBA.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 or equivalent.
Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the basic fundamental understanding underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 571(5710) Biophysical Methods
Advanced Laboratory
Spring, first three weeks of Jan, or TBA during spring semester. 3 credits. Prerequisite: A&EP 470 highly recommended but qualified students who have not taken A&EP 470 also accepted. Letter or S/U grades. M. Lindau.
Offered to graduate students in the engineering, physics, chemistry and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

(also ECE 582(5820))
Spring. On demand. 4 credits. Prerequisites: ECE 581 and A&EP 606. For description, see ECE 592.

A&EP 633(6330) Nuclear Reactor Engineering
(also NS&E 633(6330))
Fall. 4 credits. Prerequisite: Introductory course in nuclear engineering. Offered on demand. K. B. Cady.
For description, see NS&E 633.

A&EP 661(6610) Nanocharacterization
Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduate should consult with instructor before enrolling. Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanning probe and force microscopy; scanning transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

A&EP 662(6620) Micro/Nano-fabrication and Processing
Spring. 3 credits. Introduction to the fundamentals of micro- and nano-fabrication and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is placed on understanding the physics and materials science that define and limit the various processes at the level of Brodie and Muray.

A&EP 663(6630) Nanobiotechnology
(also BIO G 663[6630], MSA&E 563[5630])
Spring. 3 credits. Letter grades only. Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NTBC associate institutes.

A&EP 711(7110) Principles of Diffraction
(also MS&E 671[6710])
Fall. 3 credits. Letter grades only. J. D. Brode.
Graduate-level introduction to diffraction/recognition phenomena in solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

A&EP 751(7510) M.Eng Project
Fall, spring. 6-12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A final and complete research report is required.

A&EP 753(7530) Special Topics Seminar in Applied Physics
Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

(also ECE 682[6820])
Spring. 3 credits. Prerequisite: ECE 581. C. E. Seyler.
For description, see ECE 682.

**BIOLOGICAL AND ENVIRONMENTAL ENGINEERING 243**

- BEE 368(3680) Biotechnology Applications: Animal Bioreactors Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor.
- BEE 371(3710) Physical Hydrology for Ecosystems Spring. 3 credits. Prerequisite: MATH 192 or permission of instructor. Offered alternate years; next offered 2008–2009.
- BEE 401(4010) Renewable Energy Systems Spring. 3 credits. Prerequisite: college physics.
- BEE 427(4270) Water Sampling and Measurement Fall. 3 credits. Prerequisites: fluids or hydrology course and MATH 191.
- BEE 435(4350) Principles of Aquaculture Spring. 3 credits. Prerequisite: at least junior standing.
- BEE 450(4500) Bioinstrumentation Spring. 4 credits. Prerequisites: MATH 294, introductory computing, two semesters of physics, statistics, or permission of instructor.
- BEE 453(4530) Computer-Aided Engineering: Applications to Biomedical Processes (also M&A 453(4530)) Spring. 3 credits. Prerequisite: at least junior standing.
- BEE 459(4590) Biosensors and Bioanalytical Techniques Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Next offered 2008–2009.
- BEE 464(4640) Bioseparation Processes Fall. 3 credits. Prerequisites: introductory biochemistry and physics, MATH 192, BEE 260, or permission of instructor. Next offered 2008–2009.
- BEE 471(4710) Introduction to Groundwater (also EAS 471(4710)) Spring. 3 credits. Prerequisite: MATH 293, fluid mechanics or hydrology course.
- BEE 473(4730) Watershed Engineering Fall. 3 credits. Prerequisite: fluid mechanics or hydrology course.
- BEE 474(4740) Water and Landscape Engineering Applications Spring. 3 credits. Prerequisite: fluids or hydrology course or permission of instructor.
- BEE 475(4750) Environmental Systems Analysis Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.
- BEE 476(4760) Solid Waste Engineering Spring. 3 credits. Prerequisites: one semester of physics and chemistry.
- BEE 478(4780) Ecological Engineering Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.
BEE 520(5900) M.P.S. Project
Fall, spring. 1-6 credits. Requirement for all M.P.S. candidates in field.

BEE 533(5330) Engineering Professionalism
Spring. 1-2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will be graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam. S-U or letter grades.

BEE 551(5950) Master of Engineering Design Project
Fall, spring. 3-6 credits. Prerequisite: admission to M.Eng. degree program.

BEE 647(6470) Water Transport in Plants (also BIOPL 651(6510))
Fall. 2 credits. Offered alternate years.

BEE 649(6490) Solute Transport in Plants (also BIOPL 649(6490))
Fall. 3 credits. Offered alternate years; next offered 2008-2009.

BEE 651(6510) Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisite: BIOMI 290 or BIOBM 351 or permission of instructor.

BEE 655(6550) Thermodynamics and Its Applications
Fall. 3 credits. Prerequisite: MATH 293 or equivalent; for undergraduates, permission of instructor. Offered alternate years.

BEE 659(6590) Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Next offered 2008-2009.

BEE 671(6710) Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisite: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Offered alternate years; next offered 2008-2009.

BEE 676(6760) Molecular and Cellular Engineering (also CHEM E 466(4660))
Spring. 3 credits. Prerequisite: one year college calculus and chemistry; minimum of one course in thermodynamics and computer programming. Offered alternate years; next offered 2008-2009.

BEE 680(6800) Master's-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

BEE 690(6900) Doctoral-Level Thesis Research
Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

BIOMEDICAL ENGINEERING

BME 302(3020) Cellular Principles of Biomedical Engineering (also CHEM E 402(4020))
Spring. 3 credits. Prerequisite: BME 301 or course work in basic biology such as BIO 110, BIOM 330, or BIOM 290 plus mathematics through differential equations (e.g., MATH 221 or 294), or permission of instructor. Lec and lab. D. A. Putnam and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/secretion/ligand interactions, (2) cellular trafficking, and (3) signal transduction.

BME 330(3300) Introduction to Computational Neuroscience (also BIOM/PSYCH/COGST 330(3300))
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BIOM 222 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2008-2009.

C. Linster.

For description, see BIONB 330.

BME 360(3600) Molecular and Cellular Biotechnology (also BEE 360(3600))
Spring. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. J. Bonassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 404(4040) Electrical and Chemical Physiology
Spring. 3 credits. Prerequisite: BME 301, 302, or 401 or biology background or permission of instructor. Lec and lab. D. Lipson and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter-organ and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 404(4040) Biomedical System Design (also ECE 402(4020))
Spring. 1-4 credits. Pre- or corequisites: at least one of ECE 425, 476, 453, J. C. Belina.

For description, see ECE 402.

BME 411(4110) Science and Technology Approaches to Problems in Human Health
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and G. Kapitza.

Will provide an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the
Weill Cornell Medical College will discuss health problems they are unable to treat as well as they would like, then Cornell University and Weill faculty will discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

BME 442(4420) Instrumentation for Biology (also BIONB 442(4420))
Fall. 4 credits. B. R. Land.
For description, see BIONB 442.

[BME 463(4630) Neuromuscular Biomechanics (also M&A E 463(4630))]

BME 464(4640) Orthopedic Tissue Mechanics (also M&A E 464(4640))
Spring. 3 credits. Prerequisites: ENGRD 202 and M&A E 325 or permission of instructor. Offered alternate years.
For description, see M&A E 464.

BME 481(4810) Biomedical Engineering (also CHEM 481(4810))
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. L. Olbricht.
For description, see CHEM 481.

BME 490(4900) Independent Undergraduate Project in Biomedical Engineering
Fall. spring. Variable credit. Research or projects by an individual or a small group of undergraduates.

BME 491(4910) Principles of Neurophysiology (also BIONB 491(4910))
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U or letter grades for graduate students by permission of instructor. B. R. Johnson.
For description, see BIONB 491.

BME 501(5010) Bioengineering Seminar (also BEE 501(5010))
Fall. spring. 1 credit. Prerequisite: junior, senior, or graduate standing. D. Lipson and L. Bonassar.

BME 509(5090) Tissue and Devices for Human Body Repair (also FSAD 439(4390))
Spring. 3 credits. Prerequisites: ENGRD 202 and M&A E 325 or permission of instructor. Offered alternate years.
For description, see FSAD 439.

BME 562(5620) Biomechanical Systems—Analysis and Design (also M&A E 562(5650))
Spring. 3 credits. L. Estoff.
For description, see MS&E 562.

BME 565(5650) Biomedical Optics, Imaging, and Spectroscopy
Spring. 3 credits. Prerequisites: introductory physics, calculus and biology. W. R. Zipfel.
Fundamentals of optical systems design, application and analysis concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors and tissue optics; optical systems design concepts such as resolution, optical transfer functions, deconvolution and interference, all in relation to biomedical microscopy, spectroscopy and bioanalytical techniques.

BME 631(6310) Engineering Principles for Drug Delivery (also CHEM 631(6310))
Fall. 3 credits. Prerequisites: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam.
Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability, stimul-sensitive systems, controlled release devices, produgs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 641(6410) Biomedical Engineering Analysis of Proteins for Medicine
Spring. 3 credits. Prerequisites: graduate standing and background in biology and chemistry. M. Jin.
Protein engineering principles applied to developing molecules for biotherapeutics and biophysical studies. Course topics include general overview overview of biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentations for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 664(6640) Mechanics of Bone (also M&A E 664(6640))
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years.
For description, see M&A E 664.

[BME 665(6650) Principles of Tissue Engineering (also M&A E/MS&E 665(6650))]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years.
For description, see M&A E/MS&E 665(6650).
foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

**BME 703(7030) Graduate Student Teaching Experience**
Fall, spring. Variable credit. S-U or letter grades. Staff.
Guided individual experience in laboratory instruction and/or lectures/recitation. Instruction also provides a preparatory teaching experience for graduate students considering an academic career.

**BME 711(7110) Fundamentals of Biomedical Engineering Research I**
Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipel and staff.
First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

**BME 712(7120) Fundamentals of Biomedical Engineering Research II**
Spring. 3 credits. Prerequisite: BME 711 or permission of instructor. W. L. Olbricht and staff.
Continuation of BME 711.

**BME 716(7160) Immersion Experience in Medical Research and Clinical Practice**
Fall and spring. 6 credits. Prerequisite: Ph.D. students in BME. I. J. Bonassar and Y. Wang.
Seven-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

**BME 731(7310) Advanced Biomedical Engineering Analysis of Biological Systems**
Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk.
Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organism to application of whole-body systems.

**BME 760(7600) Nucleic Acid Engineering**
(also BEE 760(7600))
Spring. 2 credits. Prerequisite: graduate standing. BEE 560 or permission of instructor. D. Luo.
For description, see BEE 760.

**BME 790(7900) Biomedical Engineering Seminar**
Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler.
Research-based seminars. May meet with other seminar series as appropriate.

**BME 800(8099) M.S. Thesis Research**
Fall, spring. Variable credit. Thesis research for the M.S. degree in BME.

**BME 900(9999) Ph.D. Thesis Research**
Fall, spring. Variable credit. Thesis research for the Ph.D. degree in BME.

**CHEMICAL AND BIOMOLECULAR ENGINEERING**

**CHEMIE 112(1120) Introduction to Chemical Engineering (also ENGR 112)**
Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan.
Course in the Introduction to Engineering series. For description, see ENGR II 112.

**CHEMIE 219(2190) Mass and Energy Balances (also ENGRD 219(2190))**
Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.
For description, see ENGRD 219.

**CHEMIE 288(2880) Biomedical Engineering: Fundamentals and Applications**
Spring. 3 credits. Prerequisite: ENGRD 219 Mass and Energy Balances. Staff.
A basic introduction to modern biology including aspects of biochemistry, molecular and cellular biology intended for students with no significant background in this area. An emphasis on practical applications of this knowledge in a variety of settings including the production of industrial enzymes, pharmaceuticals, and biologies.

**CHEMIE 301(3010) Nonresident Lectures Spring. 1 credit. P. Clancy.**
Lecturers from industry and from selected departments of the university provide information to assist students in their postgraduate plans.

**CHEMIE 313(3130) Chemical Engineering Thermodynamics**
Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanraht.
Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

**CHEMIE 323(3230) Fluid Mechanics**
Spring. 3 credits. Prerequisites: CHME 219 and engineering mathematics sequence. L. A. Archer.

**CHEMIE 324(3240) Heat and Mass Transfer**
Fall. 3 credits. Prerequisite: CHEMIE 323. A. D. Stroock.

Applications to problems involving conduction, convection, and diffusion.

**CHEMIE 332(3320) Analysis of Separation Processes**
Spring. 3 credits. Prerequisites: CHEMIE 313 and 324. A. B. Anton.
Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

**CHEMIE 372(3720) Introduction to Process Dynamics and Control**
Spring. 2 credits. Prerequisites: CHEMIE 313 and 323. Staff.
Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

**CHEMIE 390(3900) Reaction Kinetics and Reactor Design**
Spring. 3 credits. Prerequisites: CHEMIE 313 and 323. J. R. Engstrom.
Study of chemical reaction kinetics and principles of reactor design for chemical processes.

**CHEMIE 401(4010) Molecular Principles of Biomedical Engineering (also BME 301(3010))**
Fall. 3 credits. Prerequisite: BIO G 110 or BIBHM 330. M. Jin.
For description, see BME 301.

**CHEMIE 402(4020) Cellular Principles of Biomedical Engineering (also BME 302(3020))**
Spring. 3 credits. D. A. Putnam.
For description, see BME 302.

**CHEMIE 424(4240) Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer**
Spring. 3 credits. Prerequisites: undergraduate fluid or continuum mechanics (e.g., M&AE 323, CHEMIE 323, A&EP 444) or permission of instructor. B. L. Kirby.
For description, see M&AE 524.

**CHEMIE 432(4320) Chemical Engineering Laboratory**
Fall. 4 credits. Prerequisites: CHEMIE 323, 324, 332, and 390. A. M. Center and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

**CHEMIE 462(4620) Chemical Process Design**
Spring. 4 credits. Prerequisite: CHEMIE 432. A. M. Center and staff.
Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

**CHEMIE 470(4700) Process Control Strategies**
Spring. 3 credits. A. M. Center.
Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control, and models both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 472(4720) Feedback Control Systems (also ECE 472(4720), M&AE 478(4780)) Fall. 4 credits. Prerequisites: CHEM 372, ECE 220, M&AE 326, or permission of instructor.

For description, see M&AE 478.

CHEME 480(4800) Chemical Processing of Electronic Materials Spring. 3 credits. A. B. Anton.

Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochromy of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEME 481(4810) Biomedical Engineering (also BME 481(4810)) Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. W. L. Olbricht.

Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHEME 484(4840) Microchemical and Microfluidic Systems Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. J. R. Engstrom.

Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 490(4900) Undergraduate Projects in Chemical Engineering Fall, spring. Variable credit.

Research or studies on special problems in chemical engineering.

CHEME 490(4990) Senior Seminar Fall, spring. 1 credit. Prerequisite: CHEME senior seminar. Staff.

Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquia and Seminars in Physics and Related Fields" which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 520(5200) An Overview of Chemical Processing Fall, spring. 1–6 credits; 1 credit per sec.

Spring, first third of semester. 1 credit. Prerequisite: nonchemical engineers. T. M. Duncan.

Introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling.

CHEME 521(5201) Introduction to Biomedical Engineering (module) Spring, first third of semester. 1 credit. W. L. Olbricht.

Meets concurrently with CHEME 481.

CHEME 522(5202) Introduction to Electronic Materials Processing (module) Spring, first third of semester. 1 credit. A. B. Anton.

Meets concurrently with CHEME 480.

CHEME 523(5203) Introduction to Polymer Processing (module) Spring, second third of semester. 1 credit. L. A. Archer.

Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

CHEME 524(5204) Turbomachinery Applications (module) Fall, last third of semester. 1 credit. A. M. Center.

Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

CHEME 525(5205) Chemical Engineering Tools and Equipment (module) Spring, first third of semester. 1 credit. A. M. Center.

Introduces the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and trouble-shooting methods frequently used by chemical engineers.

CHEME 526(5206) Hydrocarbon Resource Exploration and Development (module) Fall, second third of semester. 1 credit. A. M. Center.

An examination of hydrocarbon resource formation, geology, exploration, drilling, development, and initial processing prior to shipment.

CHEME 527(5207) Introduction to Petroleum Refining (module) Fall, second third of semester. 1 credit. A. M. Center.

Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

CHEME 528(5208) Renewable Resources from Agriculture-Sugarcane as a Feedstock (module) Fall, last third of semester. 1 credit. A. M. Center.

Maximizing the value of a renewable resource by control of inputs and final product use.

CHEME 543(5430) Bioprocess Engineering Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in biological sciences required. Staff.

Discusses principles involved in using microorganisms, tissue cultures, and enzymes for processing. Primary emphasis is on processes of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

CHEME 564(5640) Design of Chemical Reactors Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. D. L. Koch.

Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 565(5650) Design Project Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students. Staff.

Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 572(5720) Managing New Business Ventures Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. A. M. Center.

Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 590(5999) Special Projects in Chemical Engineering Fall, spring. Variable credit. Prerequisite: graduate standing. Nonthesis research or studies on special problems in chemical engineering.

CHEME 631(6310) Engineering Principles for Drug Delivery (also BME 631(6310)) Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. D. A. Putnam.

For description, see BME 631.

CHEM 640(6400) Polymeric Materials Fall. 3 credits. C. Cohen.

Covers chemistry and physics of the formation and characterization of polymers, principles of fabrication.

CHEME 644(6440) Aerosols and Colloids Fall. 3 credits. D. L. Koch.

Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, theoretical and phase behaviors; and their role in technologies including paints, foods, health-care products, drug delivery, composite materials and air pollution control.

CHEME 681(6810) Air Pollution Control Spring. 3 credits. P. H. Steen.

Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.
CHEM E 664(6640) Energy Economics
Fall. 3 credits. A. J. Hunter.
Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and cost factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEM E 665(6650) Energy Engineering
Spring. 3 credits. A. J. Hunter.
Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

CHEM E 675(6750) Synthetic Polymer Chemistry [also MAE 622(6220), CHEM 671(6710)]
Spring. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHEM E 711(7110) Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 389–390 and CHEM 313 or equivalent. F. A. Escobedo.
Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEM 712(7130) Chemical Kinetics and Transport
Spring. 5 credits. Prerequisite: CHEM 390 or equivalent. C. Cohen and A. D. Stroock.
Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering, transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcations; reaction in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEM E 731(7310) Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323–324 or equivalent. Y. L. Joo.
Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEM E 741(7410) Selected Topics in Biochemical Engineering
Fall, spring. 1 credit; may be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLisa.
Discussion of current topics and research in biochemical engineering for graduate students.

[CHME 745(7450) Physical Polymer Science I]
Fall. 3 credits. Corequisite: CHEM 711 or equivalent. Offered alternate years; next offered 2008–2009. L. A. Archer.
Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity, mechanical and thermodynamic properties of gels; polymer melts.

CHME 751(7510) Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. Staff.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

[CHME 753(7530) Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation]
Fall. 3 credits. Prerequisite: CHME 751 or equivalent. Offered alternate years; next offered 2008–2009. P. H. Steen]

CHEM 790(7900) Seminar
Fall, spring. 1 credit each semester.
Requirement for all graduate students in field of chemical and biomolecular engineering. General chemical engineering seminar.

CHM 792(7920) Principles and Practices of Graduate Research
Fall. 1 credit. M. P. DeLisa and A. D. Stroock.
A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, and fieldwork); problem solving, avoiding self-deception, documenting research (lab notebooks, computer files) and reporting research (writing a technical paper and oral presentations).

CHEM 890(8999) Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEM 990(9999) Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING
Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Each area has several areas of specialization. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 113 Sustainability for Appledore Island (also ENGR 113) (f,s,
CEE 116 Modern Structures (also ENGR 116) (f,s)
CEE 320 Engineering Computation (formerly CEE/ENGR 241) (also ENGR 320) (f,s)
CEE 304 Uncertainty Analysis in Engineering (f,s)
CEE 308 Introduction to CADD (f,s)
CEE 309 Special Topics in Civil and Environmental Engineering (f,s)
CEE 323 Engineering Economics and Management (also ENGR 323) (f,s)
CEE 400 Senior Honors Thesis (f,s)
CEE 401 Undergraduate Engineering Teaching in CEE (f,s)

Civil Infrastructure
See also: CEE 116, 320, 304, 308, 503, and 595
Geotechnical Engineering

CEE 112(1130) Sustainability Design for Appledore Island (also ENGRD 1130)

Spring. 3 credits. Students must register under ENGRD 113. J. J. Bisogni.
The course utilizes a unique environment, Appledore Island, as an example of how sustainability is addressed in the design of basic components of the built environment; energy, water supply and waste treatment. Students will present preliminary designs of sustainable systems to the engineering staff of Appledore Island.

CEE 116(1160) Modern Structures (also ENGRD 1160)

Fall. 3 credits. Students must register under ENGRD 116. A. Ingraffea.
Course in Introduction to Engineering series.
For description, see ENGRD 116.

CEE 255(2550) AguaClara: Sustainable Water Supply Project

For description, see CEE 455.

CEE 304(3040) Uncertainty Analysis in Engineering

Fall. 4 credits. CEE Engineering co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and model properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, wind/speed/flow distributions, pollutant concentrations, and models of vehicle arrivals.

CEE 308(3080) Introduction to CADD

Fall, spring. 1 credit. Prerequisites: attendance at a first meeting of one section; permission of instructor. No pre-enrollment allowed. Priority given to engineering students. Course begins first Mon. of Fall and second Mon. of Spring.
Staff.
Students learn to employ computer-aided design and drafting (CADD) to construct 2D drawings and 3D models using a variety of AutoCAD techniques. VIZ, an alternative software tool for 3D modeling and visualizations, is also introduced. Course meets in ACCEL (second floor of the Engineering Library in Carpenter Hall) so that each student can participate on an individual computer. Grades are based on attendance, weekly exercises completed in class, and a semester project due the last Friday of classes.

CEE 309(3090) Special Topics in Civil and Environmental Engineering

Fall, spring. 1-6 credits. Staff.
Supervised study via individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 320(3200) Engineering Computation (also ENGRD 3200) (formerly ENGRD/CIVE 241)

Spring. 3 credits. Students must register under ENGRD 320. C. Shoemaker.
For description, see ENGRD 320.

CEE 323(3230) Engineering Economics and Management (also ENGRG 3230)

Spring; usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg and J. Mihew.
Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 372(3720) Intermediate Solid Mechanics

Fall. 4 credits. Prerequisite: MATH 294, CEE 371. W. Aquino.
The course presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course will be a study of mathematical modeling, computer simulations, and physical experimentation.

CEE 400(4000) Senior Honors Thesis

Fall, spring. 1-6 credits. For students admitted to CEE Honors Program. Staff.
Supervised research, study, and/or project work resulting in a written report or honors thesis.
CIVIL AND ENVIRONMENTAL ENGINEERING

**CEE 401(4010) Undergraduate Engineering Teaching in CEE**
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussion with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

**CEE 406(4060) Civil Infrastructure Systems**
Fall. 3 credits. Prerequisites: probability and statistics (CEE 304 or equivalent) and engineering economics (CEE 323 or equivalent) course. Letter or S-U grades. F. Vanek. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

**CEE 411(4110) Remote Sensing: Resource Inventory Methods (also CSS 41)**
Spring. 3 credits. Prerequisite: permission of instructor. A. Lembo. For description, see CSS 411.

**CEE 432(4320) Hydrology**
Spring. 3 credits. Prerequisite: CEE 331. Intended for undergraduates. Lecturer concurrent with CEE 632. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.

**CEE 435(4350) Coastal Engineering**
Spring. 4 credits. Prerequisite: CEE 331. Taught based on demand; contact professor if interested in course. P.-L.F. Liu. Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.

**CEE 436(4360) Case Studies in Environmental Fluid Mechanics**
Spring. 4 credits. Prerequisite: CEE 331 or equivalent. Next offered 2008-2009. E. A. Cowen. An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory—and field—based studies (Cayuga Lake and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on a laboratory/field projects. Course includes a design project.

**CEE 437(4370) Experimental Methods in Fluid Dynamics**
Spring. 3 credits. Pre- or corequisites: CEE 331 or equivalent and CEE 301 or equivalent. A. A. Cowen. Same as CEE 637 but no project required. For description, see CEE 637.

**CEE 440(4400) Foundation Engineering**
Fall. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. Covers exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

**CEE 441(4410) Retaining Structures and Slopes**
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. Covers earth pressure theories; design of rigid, flexible, braced, tied-back, strutted wall, soil-nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

**CEE 444(4440) Environmental Site and Remediation Engineering**
Spring. 3 credits. Prerequisite: CEE 341. Next offered 2008-2009. T. D. O'Rourke. Covers the principles of hydrogeology; contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

**CEE 451(4510) Microbiology for Environmental Engineering**
Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson. Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOM 250 or equivalent.

**CEE 452(4520) Water Supply Engineering**

**CEE 453(4530) Laboratory Research in Environmental Engineering**
Spring. 3 credits. Prerequisite: CEE 351 or permission of instructor. M. L. Weber-Shirk. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

**CEE 454(4540) Sustainable Small-Scale Water Supplies**
Fall. 3 credits. M. L. Weber-Shirk. This course addresses the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

**CEE 455(4550) Aquaculture: Sustainable Water Supply Project**
Fall, spring. 3 credits. Prerequisite or corequisite: CEE 452 or CEE 454. Meets with CEE 259. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in Honduras. For more information see http://eeserver.cce.cornell.edu/aquacal3a/

**CEE 461(4610) Urban Transportation Planning and Modeling**
Spring. 3 credits. Prerequisite: CEE 361 or permission of instructor. A. H. Meyburg. Covers modern transportation planning practice and the analytical tools that are necessary to engage in this field. Emphasizes passenger transportation in the urban context. The legislative, political, and economic contexts of urban transportation planning (UTP) are discussed. The course presents the travel demand estimation process and the associated models and approaches and provides insights in travel survey data acquisition.

**CEE 463(4630) Transportation and Information Technology**
Fall. 3 credits. J. R. Mbowana. Improving the use of existing facilities has become an important objective in transportation planning. Examines the role of computer and telecommunications technologies to achieve these improvements. Focuses specific attention on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

**CEE 464(4640) Transportation Systems Design**

**CEE 465(4650) Environment/Energy and Transportation Planning and Management**
Spring. 3 credits. Prerequisites: CEE 361 or permission of instructor. H. O. Gao. For description, see CEE 665.

**CEE 471(4710) Fundamentals of Structural Mechanics**
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. Staff. Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

**CEE 472(4720) Introduction to the Finite Element Method**
Fall. 3 credits. Prerequisites: CEE 371, 372, and 471. W. Aquino. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and progressive aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong
background for moving to further study and research.

CEE 473(4730) Design of Concrete Structures
Spring. 4 credits. C. K. Hover.
Centered on the design of a multi-story building that is initially planned with masonry bearing walls and post-tensioned concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the post-tensioned concrete is replaced with cast-in-place reinforced concrete. Finally, the structural elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 474(4740) Design of Steel Structures
Spring. 4 credits. Prerequisite: 341 or permission of instructor. C. Earls.
An introductory course focused on the use of solid and structural mechanics to qualify elementary steel building and bridge behavior to enable design.

CEE 475(4750) Concrete Materials and Construction
Spring. 3 credits. C. K. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 476(4760) Evaluation and Failure of Structures
Spring. 3 credits. Prerequisites: ENGRD 202, 203, CEE 371 and 473. Staff.
This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.

CEE 477(4770) Introduction to Composite Materials (also M&E/ T&AM 455[4550], M&E 555[5550])
Fall. 3 credits. P. Petina.
For description, see T&AM 455.

CEE 478(4780) Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 481(4781) LRFD-Based Engineering of Wood Structures (also BEE 481[4781])
Spring. 3 credits. Prerequisite: ENGRD 202. For description, see BEE 481 under "College of Agriculture and Life Sciences."

CEE 492(4920) Engineers for a Sustainable World: Engineering in International Development
Fall. 3 credits. F. Vanek and P. Doing. Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local, and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 501-502 Design Project
Fall, spring. 3 credits each semester.
Requirement for students in M.Eng. (civil and environmental) program. Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialties areas of the civil and environmental engineering field as described below.

CEE 501-502(5021-5022) Project in Environmental and Water Resources Systems
Staff.

CEE 501-502(5031-5032) Project in Environmental Fluid Mechanics and Hydrology
Staff.

CEE 501-502(5041-5042) Project in Geotechnical Engineering
T. D. O'Rourke.
Design of major geotechnical engineering project. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 501-502(5051-5052) Agua Clara: Sustainable Water Supply Project
M. Weber-Shirk.

CEE 501-502(5061-5062) Project in Transportation Engineering
Systems analysis of a substantial transportation service.

CEE 501-502(5071-5072) Project in Structural Engineering
C. Earls.
A project-centered course focusing on the design of a major engineering structure. Planning and a preliminary design are completed during the fall semester; the final design is completed in the January intersession.

CEE 501-502(5081-5082) Project in Civil Infrastructure Systems
Staff.
Analysis of a problem in civil infrastructure.

CEE 501-502(5073-5074) Project in Civil Engineering Materials
Staff.

CEE 504(5240) Applied Systems Engineering (also CS 504[5504], ECE/ OR&E 512[5120], M&A 591[5910], SYSEN 510[5100])
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. Roundy.
For description, see SYSEN 510.

CEE 505(5252) System Architecture, Behavior, and Optimization (also CS 505[5505], ECE/ OR & AE 513[5130], OR & AE 513[5142], M&A 592[5920], SYSEN 520[5200])
Spring. 3 credits. Prerequisites: CEE/CS 504, ECE/OR & AE 512, M&A 591, or SYSEN 520. Staff.
For description, see SYSEN 520.

CEE 509(5290) Heuristic Methods for Optimization (also CS/CIS 572[5720], OR & AE 520[5200])
Fall. 3 or 4 credits. Prerequisites: graduate standing or CS, ENGRD 211 or 321; ENGRD 320 or permission of instructor. C. A. Shoemaker.
Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for both serial and parallel computation are discussed in comparison with other optimization algorithms.

CEE 550(5800) Project Management
Fall, spring. 4 credits. Prerequisites: permission of instructor. F. J. Wayno.
Core course, commonly included in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 559(5910) Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor. Staff.
Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592(5920) Engineering Management Methods
Spring. 3 credits. Prerequisites: CEE 323 and 304 or equivalent. M. A. Turquikt.
Methods for managing data and transforming data into information. The goal is to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project design, scheduling, operations, forecasting, and resource allocation.
CEE 594(5940) Economic Methods for Engineering and Management (also ECON 494[4940])
Fall. 4 credits. Prerequisite: calculus, probability and statistics, and an economics course, or instructor permission. Introduction to economic concepts and microeconomic decision models, including market analysis and pricing strategies; production choices and cost estimation; input acquisition and employee motivation; project evaluation and the cost of capital; decision-making in risky and uncertain environments; industry structure, bidding strategies, and game theory; plus the regulatory and ethical consequences of overall managerial strategies.

CEE 595(5950) Construction Planning and Operations
Fall. 3 credits. P. G. Carr.
The course prepares students for responsibilities in overseeing the engineering and management of construction; on-time—on-budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction projects. Students study the contracts for engineering, architecture, and construction; focusing on cost estimation and schedule control; responsibilities and risks; and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.

CEE 596(5960) Management Issues in Forensic Engineering
Introduction to Management issues in Forensic Engineering, Contract Administration and Dispute Resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the client, the contractors, and the public are examined.

CEE 597(5970) Risk Analysis and Management (also TOX 597[5970])
Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 304, ENGRD 270, ILRST 210, BTRY 261, or AEM 210); two semesters of calculus, senior or graduate standing or permission of instructor. J. R. Stedinger.
Develops a working knowledge of risk terminology and reliability engineering, analysis tools and models used to analyze safety, environmental and technological risks, and social and psychological risk issues. Discussions address risk issues in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 601(6020) Seminar—Water Resources and Environmental Engineering
Fall. 1 credit. Staff.
Practices topics of current interest.

CEE 602(6070) Seminar—Civil Infrastructure
Fall, spring. 1 credit. Requirement for first-year graduate students. Staff.
Practices topics of current interest.

CEE 603(6080) Seminar—Engineering Systems and Management
Fall. spring. 1 credit. Staff.
Practices topics of current interest.

CEE 606(6860) Civil Infrastructure Systems
Fall. 3 credits. Prerequisites: probability and statistics course (CEE 304 or equivalent) and engineering economics course (CEE 325 or equivalent). Letter or S-U grades. F. Vanek.
Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 609(6090) Numerical Methods for Engineers
Fall. 3 credits. P. J. Diamessis.
The primary focus is algorithm implementation within the context of engineering applications (spinning fluid and solid/fracture mechanics and beyond). Student projects will include parallel implementation using resources at the Theory Center. Course topics will include: Sources of error and error propagation, eigenvalue/eigenvector computation, solution of linear systems via direct or iterative methods and issues of parallel implementation, least squares approximation of oblique data, and data streams; solution of non-linear equations, interpolation in one and two dimensions, and wavelets.

CEE 610(6100) Remote Sensing Fundamentals (also CSS 660[6100])
Fall. 3 credits. Prerequisite: facility with algebra, trigonometry, and univariate statistics. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources from the ground, from aircraft or satellite. Coverage includes sensors, sensor ground-data acquisition, data analysis and interpretation, and project design.

CEE 615(6150) Digital Image Processing
Spring. 3 credits. Prerequisite: facility with algebra, trigonometry, and univariate statistics. W. D. Philpot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, analysis, classification, and an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

CEE 617(6015) Special Topics—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 620(6200) Water-Resources Systems Engineering
Spring. 3 credits. Prerequisites: CEE 325 and 593 or BTRY 475, 477, or 478. Staff.
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621(6210) Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 or permission of instructor. Offered on demand. J. R. Stedinger.
Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty, objectives and hydrologic inputs. Statistical issues include: maximum likelihood and moment estimators; censored date sets and historical information; probability plotting, Bayesian inference, regionalization, and stochastic streamflow models, stochastic simulation, and stochastic reservoir-operation optimization models.

CEE 622(6230) Environmental Quality Systems Engineering
Fall. 3 credits. Prerequisites: MATH 294, optimization, and graduate standing or permission of instructor. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation and contaminated groundwater. Applications include linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 628(6021) Seminar—Environmental and Water Resources Systems Analysis
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.
Graduate students and faculty members present informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 630(6300) Computational Fluid Dynamics for Environmental Flows

CEE 631(6310) Computational Simulation of Flow and Transport in the Environment
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 320 or experience in numerical methods and programming, and elementary fluid mechanics. P. L.-F. Liu.
Conservation equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of
transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 632(6320) Hydrology
Spring. 3 credits. Prerequisite: CEE 351. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

CEE 633(6330) Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 351. Next offered 2008-2009. Please contact professor if interested in this course. W. H. Brutsaert. Fluid mechanics and equations of single-phase and multiphase flow, methods of solution. Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration, groundwater recharge; land subsidence, seawater intrusion, micelle displacement; and transient seepage in unsaturated materials.

CEE 634(6340) Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor. Next offered 2008-2009. Please contact professor if interested in this course. W. H. Brutsaert. Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635(6350) Small and Finite Amplitude Water Waves
Spring. 3 credits. Taught based on demand; please contact professor if interested in this course. P. L.-F. Liu. Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 636(6360) Environmental Fluid Mechanics
Spring. 3 credits. Taught based on demand; please contact professor if interested in this course. E. A. Cowen. Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 637(6370) Experimental Methods in Fluid Dynamics (also M & AE 627(6272))
Spring. 4 credits. Pre- or corequisites: CEE 331 or equivalent and CEE 304 or equivalent. E. A. Cowen. Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis, and covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 638(6303) Seminar—Hydraulics
Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. Staff. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639(6305) Special Topics in Hydraulics
On demand. 1-6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640(6400) Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 641(6410) Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 644(6440) Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent or permission of instructor. Next offered 2008-2009. T. D. O'Rourke. Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 649(6405) Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 653(6530) Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion. Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654(6540) Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or CHEM 287-288. J. J. Bisogni. Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibrium computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655(6550) Transport, Mixing, and Transformation in the Environment

CEE 656(6560) Physical/Chemical Process
Fall. 3 credits. Pre- or corequisite: CEE 653 or permission of instructor. J. J. Bisogni. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetic analysis, stoichiometry, biocatalysis, and design of biological treatment processes.

CEE 657(6570) Biodegradation and Biocatalysis
Spring. 3 credits. Prerequisites: introductory microbiology and CEE 656, or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetic analysis, stoichiometry, biocatalysis, and design of biological treatment processes.

CEE 658(6580) Biodegradation and Biocatalysis
Spring. 3 credits. Prerequisites: CEE 451 or BIOM 290 or equivalent; CEE 351 or CHEM 390 or permission of instructor. R. E. Richardson. Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzymes, genes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.
CEE 659(651) Seminar—Environmental Quality Engineering
Spring. 1 credit. Prerequisite: graduate students in environmental engineering. R. E. Richardson. Presentation and discussion of current research in environmental engineering.

CEE 681(6610) Urban Transportation Planning and Modeling
Spring. 3 credits. Prerequisite: CEE 361 or permission of instructor. A. H. Meyburg. For description, see CEE 461.

CEE 662(6620) Urban Transportation Network Design and Analysis
Fall. 3 credits. Prerequisite: CEE 361 or permission of instructor. M. A. Turnquist. The course develops and uses mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures based on user equilibrium and stochastic user equilibria. Students apply these tools to a substantive real-world case study.

[CEE 663(6630) Network Flows and Algorithms]

CEE 665(6650) Environment/Energy and Transportation Planning and Management
Spring. 3 credits. Prerequisites: CEE 361 or permission of instructor. H. O. Gao. The course focuses on the nexus of transportation and environment, energy, and climate-change concerns. It is interdisciplinary: drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory estimation, renewable fuels, air quality impact, and life cycle assessment of alternative fuels/vehicles, Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ). Students will apply course materials to real-world case studies.

CEE 668(6060) Seminar—Transportation System Engineering
Fall. Spring. 1 credit. Staff. Presents topics of current interest.

CEE 671(6710) Fundamentals of Structural Mechanics
Fall. 3 credits. Prerequisites: ENGRD 202, MATH 294. Staff. Topics include beam bending, beams on elastic foundation, stability analysis for columns and beam-columns, linear elasticity, numerical solutions for linear elasticity problems, and applications including stress concentration, torsion, and plates.

CEE 672(6720) Introduction to the Finite Element Method
Fall. 5 credits. Prerequisites: CEE 571, 372, and 471. W. Aquino. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 673(6730) Design of Concrete Structures
Spring. 4 credits. Prerequisite: CEE 371 or permission of instructor. K. C. Hover. Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 675(6750) Concrete Materials and Construction
Spring. 3 credits. K. C. Hover. Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 676(6760) Advanced Composite Materials (also T&AM 655(6550), M&AE/MSE 655(6550))
Spring. 4 credits. CEE 477/T&AM 455/555 not a prerequisite but excellent background.

CEE 677(6770) Engineering Analysis
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2008–2009. M. D. Grigoriu.

CEE 678(6780) Structural Dynamics and Earthquake Engineering

CEE 679(6790) Evaluation and Failure of Structures
Spring. 3 credits. Staff. Teaches material and structural evaluation through the lens of failure. Builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures.

CEE 690(6900) Creativity, Innovation, and Leadership
Spring. 3 credits. Pre- or corequisite: CEE 590 or permission of instructor. F. J. Wayno. Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in fostering both. Not incidentally, the course also helps students who take it become more creative themselves. The course is highly participative and has a flow that moves from the individual—to the group—to the organization, with theory, research results, and practical skills-development woven seamlessly together.

CEE 692(6095) Special Topics in Engineering Management
On demand. 1–6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 693(6930) Public Systems Modeling
Fall. 4 credits. D. P. Loucks. An introduction to the use of model building and use, especially related to public sector planning and management issues. The course will focus on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this "modeling technology" is to help us generate and communicate information that can assist and better inform public decision making.

CEE 694(6940) Research in Engineering Management
On demand. 1–6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 697(6075) Special Topics in Structural Engineering
On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 710(7010) Research—Remote Sensing
On demand. 1–6 credits. W. D. Philpot. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 724(7020) Environmental and Water Resources Systems Analysis Research
On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Staff. Investigations of particular environmental or water resources systems problems.
CEE 720(6025) Special Topics in Environmental and Water Resources Systems Analysis
Offered on demand. 1-6 credits. D. P. Loucks.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 735(7303) Research in Environmental Fluid Mechanics and Hydrology
On demand. 1-6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge of the research report.

CEE 736(7360) Turbulence and Turbulent Mixing in Environmental Stratified Flows
Spring. 3 credits. Prerequisite: CEE 655 or a second course in fluid mechanics or with instructor's permission. F. J. Diemesis.
Fundamentals of stratified flows, stratified homogeneous turbulence (spectrum, length scales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (algebraic models, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include: fossil turbulence theory and vortex-integral wave decomposition in strongly stratified turbulence.

CEE 740(7400) Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart.

CEE 741(7410) Rock Engineering
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. T. D. O'Rourke.

CEE 744(7440) Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 640.
Continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

CEE 745(7450) Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

[CEE 746(7460) Embankment Dam Engineering
Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor. Next offered 2009–2010. F. H. Kulhawy.
Principles of analysis and design for earth and rockfill dams, including construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.]

CEE 749(7040) Research in Geotechnical Engineering
On demand. 1-6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 750(7050) Research in Environmental Engineering
On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 759(6055) Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.

CEE 761(7640) Practicum in Modeling Transportation Systems
Fall. 3 credits. Prerequisites: CEE 661, 662, and 663. L. K. Nozick.
Reviews random-process theory, simulation, and first-passage time. Linear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

CEE 773(7730) Structural Reliability
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2008–2009. M. D. Grigoriu.

CEE 774(7740) Advanced Structural Concrete
Fall. 3 credits. Staff.
Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.

CEE 775(7750) Nonlinear Finite Element Analysis
Spring. 3 credits. W. Aquino.
Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated Lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

CEE 776(7760) Advanced Topics in Stability
Spring. 3 credits. Prerequisite: CEE 374 or equivalent. Next offered 2008–2009. C. Earls.

CEE 777(7770) Computational Solid and Structural Mechanics
Spring. 3 credits. Staff.
This course covers the formulation and numerical solution of problems of solids and structures using the finite element method. Topics include a review of solid mechanics: nonlinear kinematics, invariance, first and second law of thermodynamics, and constitutive equations with internal variables, strong forms and weak forms; implicit and explicit algorithms; variants of Newton's method; and Lagrangian and Eulerian formulations. Application topics are chosen from the following areas: 3D finite elasticity, fully nonlinear beams and shells, distributed and discrete damage, contact-impact, and plasticity.
CEE 779(7790) Advanced Behavior of Metal Structures
Fall, 4 credits. Prerequisite: CEE 341 or permission of instructor. C. Earls.
An advanced course focused on the use of solid and structural mechanics to quantify more complex aspects of metal building behavior so as to enable more sophisticated approach to design.

CEE 783(7073) Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

CEE 785(7070) Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursues a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786(7860) Special Topics in Structural Engineering
On demand. 1-6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses.

CEE 810(8100) Thesis—Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 820(8200) Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 830(8300) Thesis—Environmental Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 860(8600) Thesis—Transportation Systems Engineering
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 880(8700) Thesis—Structural Engineering
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

CEE 890(8800) Thesis—Civil Infrastructure Systems
Fall, spring. 1-12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE
The Department of Computer Science is part of the College of Arts and Sciences, Computing and Information Science (CIS), and the College of Computing. For complete course descriptions, see the Computer Science listing in the CIS section.

CS 099(1109) Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: freshman standing. Credit may not be applied toward engineering degree. S-U grades only.

[CS 100H(1113) Computing Using Java—Honors
Fall or spring. 4 credits.]

CS 100J(1110) Introduction to Computing Using Java
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

CS 100M(1112) Introduction to Computing Using MATLAB
Fall, spring. 4 credits. Corequisite: MATH 111, 191, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience.

CS 100R(1114) Introduction to Computing Using MATLAB and Robotics
Fall and/or spring. 4 credits. Prerequisite: some programming experience.

CS 101(1130) Transition to Object-Oriented Programming
Fall, spring, summer. 1 credit. Prerequisite: one course in programming.

CS 101M(1132) Transition to MATLAB
Fall, spring, summer. 1 credit. Prerequisite: CS 100 (1110 or 1112) or equivalent programming experience. Credit granted for both CS 113 and 215 only if 113 taken first. S-U grades only.

CS 114(2006) Unix Tools
Fall, usually weeks 5-8. 1 credit. Prerequisite: CS 100 (1110 or 1112) or equivalent programming experience. Recommended: knowledge of at least one programming language. S-U grades only.

CS 130(1300) Introductory Design and Programming for the Web (also ISO 130[1300])
Fall, 3 credits. Prerequisite: none. No computer background necessary.

CS 155(1610) Computing in the Arts (also ART 175, CIS 155[1610], ENGR 155[1610], MUSC 155[165], PSYCH 155[1650])
Fall, 3 credits. Recommended: good comfort level with computers and some of the arts.

CS 167(1620) Visual Imaging in the Electronic Age (also ARCH 459[4590], ART 170[1700], CIS 167[1620], ENGR 167[1670])
Fall. 3 credits. For description, see ART 170.

CS 170(1710) Introduction to Cognitive Science (also COGST 101[1010], LING 170[1700], PHIL 191[1910], PSYCH 102[1020] (formerly CS 101)
Fall, summer. 3 credits. For description, see COGST 101.

[CS 172(1700) Computation, Information, and Intelligence (also COGST 172, ENGR 172[1700], PSYCH 172[1700])]
Fall or spring. 3 credits. Prerequisite: some knowledge of differentiation; freshman standing or permission of instructor. Next offered 2008-2009.

CS 211(2110) Object-Oriented Programming and Data Structures (also ENGRD 211[2110])
Fall, spring, summer. 3 credits. Prerequisite: CS 100J, CS 101J, or CS 100H or CS 100M if completed before fall 2007 or equivalent course in Java or C++.

CS 212(2111) Programming Practicum
Fall, spring, 1 credit. Pre- or corequisite: CS/ENGRD 211. Letter grades only.

CS 213(2134) C++ Programming
Fall. 2 credits. Prerequisite: CS 100 or equivalent programming experience. Students who plan to take CS 113 and 215 must take 113 first. S-U grades only.

CS 214(2136) Advanced UNIX Programming and Tools
Spring, usually weeks 5-8. 1 credit. Prerequisite: CS 114 or equivalent. S-U grades only.
CS 215(2004) Introduction to C#  
Spring, usually weeks 5–8. 1 credit.  
Prerequisite: CS/ENGRD 211 or equivalent experience. S–U grades only.

CS 230(2300) Intermediate Design and Programming for the Web (also INFO 230[2300])  
Spring. 3 credits. Prerequisite: CS 130 or equivalent knowledge.

CS 280(2800) Discrete Structures  
Fall, spring. 3 credits. Prerequisite: CS 100 or permission of instructor.

CS 285(2850) Networks (also ECON 204[2040], INFO 204[2040], SOC 209[2090])  
Spring. 4 credits. Prerequisite: none.

CS 312(3110) Data Structures and Functional Programming  
Fall. spring. 4 credits. Prerequisite: CS 211 and 212 or equivalent programming experience. Should not be taken concurrently with CS 314 or 316.

CS 314(3420) Computer Organization (also ECE 314[3140])  
Spring. 4 credits. Prerequisite: CS 211 or ENGRD 230. Should not be taken concurrently with CS 312.

CS 316(3410) Systems Programming  
Fall. 4 credits. Prerequisites: CS 211 or equivalent programming experience. Should not be taken concurrently with CS 312.

CS 321(3510) Numerical Methods in Computational Molecular Biology (also BIOBM 321[3210], ENGRD 321[3210])  
Fall. 3 credits. Prerequisites: at least one course in calculus (e.g., MATH 106, 111, or 191) and a course in linear algebra (e.g., MATH 221 or 294 or BTRY 417). CS 100 or equivalent and some familiarity with iteration, arrays, and procedures, knowledge of discrete probability and random variables at the level of CS 280.

CS 322(3220) Introduction to Scientific Computation (also ENGRD 322[3220])  
Spring, summer. 3 credits. Prerequisites: CS 100 and MATH 221 or 294; knowledge of discrete probability and random variables at the level of CS 280.

CS 324(3740) Computational Linguistics (also COGST 424[4240], LING 424[4244])  
Fall, spring. 4 credits. Prerequisites: LING 203. Recommended. CS 114. Labs involve work in Unix environment. For description, see LING 424.

CS 330(3300) Data-Driven Web Applications (also INFO 330[3300])  
Fall. 3 credits. Prerequisite: CS/ENGRD 211. CS majors may use only one of the following toward their degree: CS/INFO 330 or CS 433.

CS 372(3700) Explorations in Artificial Intelligence (also INFO 372[3720])  
Spring. 3 credits. Prerequisites: MATH 111 or equivalent, a statistics course, and CS/ENGRD 211 or permission of instructor.

CS 381(3810) Introduction to Theory of Computing  
Fall. summer. 3 credits. Prerequisite: CS 280 or permission of instructor.

[CS 400(4150) The Science of Programming  
Fall. 3 credits. Prerequisite: CS 211.]

[CS 411(4110) Programming Languages and Logics  
Fall or spring. 4 credits. Prerequisite: CS 312 or permission of instructor. Next offered 2008–2009.]

CS 412(4120) Introduction to Compilers  
Spring. 3 credits. Prerequisites: CS 312 or permission of instructor and CS 314 or 316. Corequisite: CS 413.

CS 413(4121) Practicum in Compilers  
Spring. 2 credits. Corequisite: CS 412.

CS 414(4410) Operating Systems  
Fall, spring. 3 credits. Prerequisites: CS 314 or 316. Corequisite: CS 415 in spring only.

CS 415(4411) Practicum in Operating Systems  
Fall, spring. 2 credits. Corequisite: CS 414.

CS 416(4420) Computer Architecture (also ECE 473[4750])  
Fall. 4 credits. Prerequisites: ENGRD 230 and CS/ECE 314. For description, see ECE 475.

CS 419(4450) Computer Networks  
Spring. 4 credits. Pre- or corequisite: CS 414 or permission of instructor.

CS 421(4210) Numerical Analysis and Differential Equations (also MATH 425[4250])  
Fall. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

CS 422(4220) Numerical Analysis: Linear and Nonlinear Problems (also MATH 426[4260])  
Spring. 4 credits. Prerequisites: MATH 221 or 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

CS 426(4520) Introduction to Bioinformatics  
Spring. 4 credits. Prerequisites: CS/ENGRD 211, 280.

CS 428(4510) Introduction to Computational Biophysics  
Fall. 3 credits. Prerequisite: CS 100, CHEM 211 or equivalent, MATH 221 or 294, PHYS 112 or 213, or permission of instructor. Recommended: BIOBM 330.

CS 430(4300) Information Retrieval (also INFO 430[4300])  
Fall. 3 credits. Prerequisite: CS 211 or equivalent.

CS 431(4302) Web Information Systems (also INFO 431[4302])  
Spring. 3 credits. Prerequisites: CS 211 and some familiarity with web site technology.

CS 432(4320) Introduction to Database Systems  
Fall. 3 credits. Prerequisites: CS 312 or (CS 211, 212 and permission of instructor).

CS 433(4321) Practicum in Database Systems  
Fall. 2 credits. Pre- or corequisite: CS 432. CS majors may use only one of the following toward their degree: CS/INFO 330 or CS 433.

CS 465(4620) Introduction to Computer Graphics (also ARCH 374[3740])  
Fall. 3 credits. Prerequisite: CS/ENGRD 211.

CS 466(4621) Computer Graphics Practicum  
Fall. 2 credits. Pre- or corequisite: CS 465.

CS 472(4700) Foundations of Artificial Intelligence  
Fall. 3 credits. Prerequisites: CS/ENGRD 211 and CS 280 or equivalent.

CS 473(4701) Practicum in Artificial Intelligence: Robotics and Embedded AI (also M&AE 472[4730])  
Fall. 2 credits. Pre- or corequisite: CS 472.

[CS 474(4740) Introduction to Natural Language Processing (also COGST 474[4740], LING 474[4744])  
Fall or spring. 4 credits. Prerequisite: CS 216. Next offered 2008–2009.]

[CS 475(4702) Artificial Intelligence: Uncertainty and Multi-Agent Systems  
Spring. 4 credits. Prerequisites: CS/ENGRD 211 and CS 280 or equivalent. Next offered 2008–2009.]

CS 478(4780) Machine Learning  
Spring. 4 credits. Prerequisites: CS 280, 312, and basic knowledge of linear algebra and probability theory.

CS 482(4820) Introduction to Analysis of Algorithms  
Spring, summer. 4 credits. Prerequisites: CS 280 and 312.

[CS 483(4812) Quantum Computation (also PHYS 481/581[4481/7481])  
Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. Next offered 2008–2009. For description, see PHYS 481.]

[CS 485(4850) Mathematical Foundations for the Information Age  
Spring. 4 credits. Prerequisite: CS 381.]

CS 486(4860) Applied Logic (also MATH 486[4860])  
Spring. 4 credits. Prerequisites: MATH 222 or 294, CS 280 or equivalent (e.g., MATH 332, 432, 454, 481), and some additional course in mathematics or theoretical computer science.

CS 487(4830) Introduction to Cryptography  
Fall. 4 credits. Prerequisites: CS 280 (or equivalent), CS 381 (or mathematical maturity), or permission of instructor.

CS 490(4999) Independent Reading and Research  
Fall, spring. 1–4 credits.

CS 501(5150) Software Engineering  
Spring. 4 credits. Prerequisite: CS 211 or equivalent experience programming in Java or C++.

CS 513(5430) System Security  
Fall. 4 credits. Prerequisites: CS 414 or 419 and familiarity with Java, C, or C++ programming languages.

CS 514(5410) Intermediate Computer Systems  
Spring. 4 credits. Prerequisites: CS 414 or permission of instructor.

CS 516(5420) Parallel Computer Architecture (also ECE 572[5720])  
Fall. 4 credits. Prerequisite: ECE 475. For description, see ECE 572.
[CS 519(5450)] Advanced Computer Networks (also CS 619(6450))
Fall or spring. 4 credits. Prerequisites: CS 419 or permission of instructor. Next offered 2008-2009.

CS 530(5300) The Architecture of Large-Scale Information Systems (also INFO 530(5300))
Spring. 4 credits. Prerequisite: CS/INFO 330 or 432.

CS 565(5640) Computer Animation (also ART 273(2703), CIS 565(5640))
Fall. 4 credits. Prerequisite: none.
For description, see ART 273.

CS 566(5642) Advanced Animation (also ART 372, CIS 566(5642))
Spring. 4 credits. Prerequisite: none.
For description, see ART 372.

[CS 572(5722)] Heuristic Methods for Optimization (also CEE 509(5090), OR&IE 533(5340))
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 322 and/or CS 465 or permission of instructor. Offered alternate years; next offered 2008-2009.

CS 589(5620) Interactive Computer Graphics
Spring. 4 credits. Prerequisite: CS 465.

CS 611(6110) Advanced Programming Languages
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

CS 612(6120) Advanced Compilers and Program Analysis
Spring. 4 credits. Prerequisites: CS 412 or permission of instructor.

CS 614(6410) Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 414 or permission of instructor.

[CS 615(6460)] Peer-to-Peer Systems
Spring. 4 credits. Recommended. CS 614.

[CS 619(6450)] Research in Computer Networks (also CS 519(5450))
Fall or spring. 4 credits. Prerequisite: CS 419 or permission of instructor. Next offered 2008-2009.

CS 621(6210) Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.

[CS 622(6220)] Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: CS 621.

[CS 624(6240)] Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 421 or 621), differential equations, and knowledge of MATLAB.

[CS 626(6510)] Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations, and nonlinear optimization methods.

CS 628(6522) Biological Sequence Analysis
Fall. 4 credits. Prerequisite: none.

[CS 632(6320)] Database Systems
Spring. 4 credits. Prerequisite: CS 432-433 or permission of instructor. Next offered 2008-2009.

[CS 633(6322)] Advanced Database Systems
Spring. 4 credits.

CS 664(6670) Machine Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 221 or equivalent. Offered spring 2008.

CS 665(6620) Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: CS 465 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.

CS 667(6630) Physically Based Rendering
Fall or spring. 4 credits. Prerequisites: CS 465 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.

[CS 671(6762)] Introduction to Automated Reasoning
Fall or spring. 4 credits. Prerequisite: CS 611 and graduate standing or permission of instructor.

CS 672(6700) Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: CS 472 or permission of instructor.

[CS 673(6724)] Integration of Artificial Intelligence and Operations Research
Spring. 3 credits.

CS 674(6740) Advanced Language Technologies (also INFO 630(6300))
Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 430 nor CS 474 are prerequisites. Offered fall 2007.

CS 676(6764) Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic.

[CS 677(6766)] Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2008-2009.

CS 678(6780) Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 478 or equivalent, or CS 578 or equivalent, or permission of instructor.

CS 681(6820) Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 482 or graduate standing.

CS 682(6810) Theory of Computing
Spring. 4 credits. Prerequisite: CS 381 and CS 482 or permission of instructor.

CS 683(6822) Advanced Design and Analysis of Algorithms
Spring. 4 credits. Prerequisite: CS 681 or permission of instructor.

CS 684(6840) Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 482. No prior knowledge of game theory or economics assumed.

CS 685(6850) The Structure of Information Networks (also INFO 685(6850))
Fall or spring. 4 credits. Prerequisite: CS 482.

[CS 686(6860)] Logics of Programs
Fall or spring. 4 credits. Prerequisites: CS 481, 682, and MATH 481 or MATH/CS 486. Next offered 2008-2009.

CS 687(6830) Cryptography
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs).

CS 709(7090) Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only.

CS 714(7410) Topics in Systems
Fall or spring. 3 credits. Prerequisite: permission of instructor.

CS 715(7192) Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

[CS 717(7430)] Topics in Parallel Architectures
Fall, spring. 4 credits. Prerequisite: CS 601 or permission of instructor.

CS 719(7690) Computer Graphics Seminar
Fall, spring. 3 credits.

CS 719(7190) Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: CS 611 or permission of instructor. S-U grades only.

CS 726(7590) Problems and Perspectives in Computational Molecular Biology
Fall or spring. 1 credit. Open to all from life sciences, computational sciences, and physical sciences. S-U grades only.

CS 732(7320) Topics in Database Systems
Fall, spring. 4 credits. Prerequisite: CS 633 or permission of instructor.

CS 733(7390) Database Seminar
Spring. 1 credit. S-U grades only.

[CS 750(7726)] Evolutionary Computation and Design Automation (also M&E 650(6500))
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2008-2009.

CS 754(7490) Systems Research Seminar
Fall. spring. 1 credit. S-U grades only.
EARTH AND ATMOSPHERIC SCIENCES

For complete course descriptions, see the related EAS course. W. Allmon and J. Monger.

EAS 101(1101) Introductory Geological Sciences (To Know Earth)
Fall. 3 credits. C. Andronicos.

EAS 108(1108) Earth in the News
Summer. 3 credits. S. L. Losh.

EAS 109(1109) Dinosaurs
Fall. 1 credit. J. L. Cisne.

EAS 119(1190) Fossil Preparation
Fall. 1 credit. Prerequisite: EAS 109 or related EAS course. W. Allmon and J. Cisne.

EAS 122(1220) Earthquake! [also ENGR 122(1220)]
Spring. 3 credits. L. Brown. Course in Introduction to Engineering series. For description, see ENGR 122.

EAS 131(1310) Basic Principles of Meteorology
Fall. 3 credits. 1-credit lab is EAS 133. M. W. Wysocki.

EAS 133(1330) Basic Meteorology Lab

EAS 150(1500) Fortran Applications in Earth Science (also CIS 122(1122))
Spring. 2 credits. 7-week course. Prerequisite: CIS/EAS 121 or equivalent. Letter grades only. M. W. Wysocki.

EAS 154(1540) Introductory Oceanography (also BIOEE 154(1540))
Fall, summer. 3 credits. Lec. Optional 1-credit lab is EAS/BIOEE 155. Fall: B. Monger and C. Greene; summer: B. Monger.

EAS 155(1550) Introductory Oceanography Lab (also BIOEE 155(1550))
Fall. 1 credit. Lab. Corequisite: EAS/BIOEE 154. B. Monger and C. Greene. Laboratory course covering topics presented in EAS/BIOEE 154.

EAS 170(1700) Evolution of the Earth and Life (also BIO G 170(1700))
Spring. 3 credits. J. L. Cisne

EAS 213(2130) Marine and Coastal Geology
Summer. 4 credits. Prerequisite: introductory geology or ecology or permission of instructor. Staff.

EAS 220(2200) The Earth System
Fall. 4 credits. Prerequisites: MATH 111/119. Letter grades only. Staff.

EAS 222(2220) Seminar—Hawaii's Environment
Fall. 1 credit. S-U grades only. A. Moore.

EAS 240(2400) Field Study of the Earth System
Spring. 5 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii, one semester of calculus (MATH 190, 191, 192, or 111, 112) and two semesters of any of the following: PHYS 207/208 or 112/213; CHEM 207/208; BIO G 101/103-102/104 or 105/106 or 109/110; or equivalent course work. A. Moore.

EAS 250(2500) Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 131. M. W. Wysocki and B. Monger.

EAS 268(2680) Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math, S-U or letter grades. A. T. DeGaetano.

EAS 296(2960) Forecast Competition
Fall and spring. 1 credit. Students enroll for two consecutive semesters; credit awarded for second semester; may be repeated for credit. Prerequisite: sophomore standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks.

EAS 301(3010) Evolution of the Earth System
Fall. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent, and EAS 220. T. Jordan, N. Riha, and W. D. Allmon. Four Saturday field trips.

EAS 303(3030) Introduction to Biogeochemistry (also NTRES 303(3030))
Fall. 4 credits. Prerequisites: CHEM 207, MATH 112, plus a biology or geology course. L. A. Derry and J. Yavitt.

EAS 304(3040) Interior of the Earth
Spring. 3 credits. Prerequisite: EAS 220 or permission of instructor. C. Andronicos.

EAS 305(3050) Climate Dynamics
Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. K. H. Cook.

EAS 322(3220) Biogeochemistry of the Hawaiian Islands
Spring. 4 credits. Prerequisite: enrollment in EES semester in Hawaii, EAS 220, EAS 303, or permission of instructor. L. Derry.

EAS 334(3340) Microclimatology
Spring. 3 credits. Prerequisite: physics course. Offered alternate years. D. S. Wilks.

EAS 341(3410) Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

EAS 342(3420) Atmospheric Dynamics
Spring. 3 credits. Prerequisites: MATH 192, 213 or equivalent, one year physics. K. H. Cook.

EAS 350(3500) Dynamics of Marine Ecosystems (also BIOEE 350(3500))
Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (e.g., EAS 154), or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth.

EAS 351(3510) Marine Ecosystems Field Course (BIOEE 351(3510))

EAS 352(3520) Sympotic Meteorology I

EAS 353(3530) Physical Oceanography
Fall. 3 credits. Prerequisites: MATH 112 or 192, or one year of physics, or permission of instructor. Next offered 2008–2009. B. C. Monger.

EAS 401(4010) Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Prerequisites: introductory college-level geology, physics, and chemistry and math through differential equations or permission of instructor. L. Cathles.

EAS 404(4040) Geodynamics
Spring. 3 credits. Prerequisite: calculus and calculus-based physics course or permission of instructor. Offered alternate years; next offered 2008–2009. J. Phipps Morgan.

EAS 405(4050) Active Tectonics
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 426/488. S-U or letter grades. Offered alternate years. R. Lohman.

EAS 415(4150) Geomorphology
Fall. 3 credits. B. L. Isaac.
[EAS 575(5750)] Planetary Atmospheres [also ASTRO 575(5755)]
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2008-2009. P. Gierasch.

[EAS 577(5770)] Planetary Surface Processes [also ASTRO 577(5775)]
Spring. 3 or 4 credits. Offered alternate years; next offered 2008-2009. J. Bell.

[EAS 578(5780)] Planet Formation and Evolution [also ASTRO 578(5785)]
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2008-2009. J-L. Margot and M. Pritchard.

EAS 584(5840) Inverse Methods in the Natural Sciences
Spring. 3 credits. Prerequisite: MATH 294. Complete substantial class project. D. Hysell.

[EAS 628(6280)] Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. Next offered 2008-2009. S. M. Kay.

[EAS 641(6410)] Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years; next offered 2008-2009. L. A. Derry.

EAS 648(6480) Air Quality and Atmospheric Chemistry [also MAE 648(6480)]
Fall. 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent); graduate standing or permission of instructor. S-U or letter grades. K. M. Zhang.

For description, see MAE 648.

[EAS 652(6520)] Advanced Atmospheric Dynamics [also ASTRO 652(6525)]
Spring. 3 credits. Prerequisites: EAS 341 and 342 or equivalent. Offered alternate years; next offered 2008-2009. S. J. Colucci.

[EAS 655(6550)] Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 455 or permission of instructor. Offered alternate years; next offered 2008-2009. W. M. White.

[EAS 666(6660)] Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2008-2009. D. S. Wilks.

[EAS 675(6750)] Modeling the Soil-Plant-Atmosphere System [also CS 675(6750)]
Spring. 3 credits. Prerequisite: EAS/CSS 483 or equivalent. Next offered 2008-2009. S. J. Rha.

EAS 692(6920) Special Topics in Atmospheric Science
Fall. Spring. 1-6 credits. S-U or letter grades. Staff.

EAS 693(6930) Special Topics in Geologic Sciences
Fall or spring. 1-3 credits, variable. S-U or letter grades. Staff.

EAS 700-799(7000-7990) Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.

EAS 701-702(7010-7020) Thesis Research
Fall, 701; fall, 702; spring. 1-15 credits, variable. S-U or letter grades. Staff.

EAS 711(7110) Upper Atmospheric and Space Physics
Fall or spring. 1-6 credits. D. I. Hysell. Seminar.

EAS 722(7220) Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 731(7310) Advanced Topics in Remote Sensing and Geophysics
Spring. J. Phipps Morgan.

EAS 733(7330) Advanced Topics in Geodynamics
Fall. 3 credits. J. Phipps Morgan.

EAS 750(7500) Satellite Remote Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

EAS 751(7510) Petrology and Geochemistry
R. W. Kay.

EAS 755(7550) Advanced Topics in Tectonics and Geochronology
Fall. 3 credits. J. Phipps Morgan.

EAS 775(7750) Advanced Topics in Oceanography
C. H. Greene.

EAS 777(7770) Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 773(7730) Paleobiology
J. L. Cisne.

EAS 775(7750) Advanced Topics in Paleobiology
W. D. Allmon.

EAS 780(7800) Earthquake Record Reading

EAS 781(7810) Exploration Geophysics
L. D. Brown.

EAS 793(7930) Andes-Himalaya Seminar

EAS 795(7950) Low-Temperature Geochemistry
1-3 credits. S-U grades only. L. A. Derry.

EAS 796(7960) Geochemistry of the Solid Earth
W. M. White.

EAS 797(7970) Fluid-Rock Interactions
L. M. Cathles.

EAS 799(7990) Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EAS 850(8500) Master's-Level Thesis Research in Atmospheric Science
Fall, spring. Credit. S-U grades only. Graduate faculty.

EAS 950(9500) Graduate-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit. S-U or letter grades. Graduate faculty.

EAS 951(9510) Doctoral-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit. S-U or letter grades. Graduate faculty.

---

ELECTRICAL AND COMPUTER ENGINEERING

ECE 210(2100) Introduction to Circuits for Electrical and Computer Engineers [also ENGRD 210(2100)]
Fall, spring. 4 credits. Corequisites: MATH 293 and PHYS 213. All students must enroll in a lab and a sec. For description, see ENGRD 210.

ECE 220(2200) Signals and Information
Fall, spring. 4 credits. Prerequisite: MATH 293. All students must enroll in a lab and a sec. For description, see ENGRD 210.

Introduction to signal processing. Topics include frequency-based representations: Fourier series and discrete Fourier transform; discrete time linear systems: input/output relationships, filtering, spectral response; analog-to-digital and digital-to-analog conversion; continuous time signals and linear time invariant systems: frequency response and continuous-time Fourier transform.

ECE 230(2300) Introduction to Digital Logic Design [also ENGRD 230(2300)]
Fall, spring. 4 credits. Prerequisite: CS 100. For description, see ENGRD 230.

ECE 250(2500) Technology in Society [also ENGRG 250(2500), HIST/S&TS 250(2500)]
Fall. 3 credits. Humanities elective for engineering students. Next offered 2008-2009. For description, see ENGRG 250.

ECE 291-292(2910-2920) Sophomore Electrical and Computer Engineering Independent Project
Fall, spring. 1-8 credits. Individual study or directed reading in connection with a special engineering problem chosen by the student, after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor and submit an Independent Project Form to the Student Services Office, 223 Phillips Hall.
ECE 293-294(2930-2940) Sophomore Electrical and Computer Engineering Group Projects Fall, 293; spring, 294. 1-8 credits.
Group study, analysis, and, usually, experimental tests in connection with a special engineering project chosen by the students after consultation with the faculty member directing the project. New projects will be added upon faculty request. Written progress reports are required. Students must submit a Group Project Form to the Student Services Office, 223 Phillips Hall.

ECE 298(2980) Inventing an Information Society (also AM ST 292(2980), HIST 292(2920), S&TS 292(2921), ENGRG 298(2980), INFO 292(2921)) Spring, 3 credits. Approved for humanities distribution. Next offered 2008-2009.
For description, see ENGRG 298.

ECE 303(3030) Electromagnetic Fields and Waves Fall, 4 credits. Prerequisites: grade of C or better in: PHYS 213, PHYS 214, MATH 293, MATH 294, and ECE/ENGRG 210. Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell's equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, method of images, material polarization and dielectrics, energy, work, and power in electromagnetic systems; wave propagation and polarization, waves in media (dielectrics, conductors, and anisotropic materials); reflection, transmission, and refraction at media interfaces, guided waves in transmission lines, Smith charts, transients; metallic and dielectric waveguides; radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

Methods of computational electromagnetics are introduced in conjunction with and shown to supplement analytic solution methods. Topics include a review of vector calculus and electromagnetic theory, finite difference methods for electrostatics and wave propagation in one or more dimensions, finite difference time domain methods, finite element methods in one and two dimensions, integral formulations of Maxwell's equations, the method of moments, and Green's functions and numerical integration. Applications are drawn from microwave circuits and microwave cavities, magnetostatics and eddy current problems, capacitance calculations, scattering from thin wires, and optical components.

ECE 306(3060) Fundamentals of Quantum and Solid-State Electronics Spring, 4 credits. Prerequisites: PHYS 214 and MATH 294.
Introductory quantum mechanics and solid-state physics for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic semiconductor. Applications include quantum wells and the p-n junction.

ECE 310(3100) Introduction to Probability and Random Signals Fall, 4 credits. Prerequisite: MATH 294. May be used in place of ENGRD 270 to satisfy engineering distribution requirement. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications are given in such areas as communication, device modeling, and information theory. Material includes: classical probability, probability measures, countable and uncountable sample spaces, random variables, probability mass function, probability density function, cumulative distribution function, important discrete and continuous distributions, functions of one random variable, functions of two random variables, random multivariate functions, moments, independence and correlation, conditional probability, characteristic functions, special characteristics of Normal distribution, signals and filtering, Central Limit Theorem, Law of Large Numbers, introduction to Decision and Estimation.

ECE 311(3110) Electrical and Computer Engineering Honors Seminar Spring, 1 or 2 credits. Students are required to attend all the lectures. Honors students must take this seminar for letter grade and 2 credits. Two summary papers are required. Nonhonors students must take the seminar pass/fail and for 1 credit. One summary paper is required. Summary papers review a topic presented in the seminar.

ECE 314(3140) Computer Organization (also CS 314(3420)) Spring, 4 credits. Prerequisite: CS/ENGRG 211 or ENGRG 230.
Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students learn assembly language programming and design a simple pipelined processor.

ECE 315(3150) Introduction to Microelectronics Fall, spring, 4 credits. Prerequisite: ECE/ENGRG 210.
The course offers an introduction to the basic devices and circuits in modern microelectronics. Students will learn not only basic structures and operations of semiconductor devices through simple models (diodes, CMOS and BJTs) but also how to analyze and design basic transistor modules in digital and analog circuits including biasing, amplifiers, filters, logic gates, and memory. We will introduce intuitive design methods to map circuit specifications to transistor topology, as well as first-order time-constant estimation. SPICE and measurement labs will accompany the progress in lectures for hands-on experiences.

ECE 320(3200) Networks and Systems Spring, 4 credits. Prerequisites: ECE 220 and MATH 294.
Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 325(3250) Foundations of ECE Mathematics Fall, 3 credits. Prerequisites: MATH 293 and MATH 294.
Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions; linear algebra; inner products and orthogonal representations; basic ideas from multivariable calculus; and elementary convex analysis.

ECE 391-392(3910-3920) Junior Electrical and Computer Engineering Independent Project Fall, 391; spring, 392. 1-8 credits. For description, see ECE 291-292.

ECE 393-394(3930-3940) Junior Electrical and Computer Engineering Group Project Fall, 393; spring, 394. 1-8 credits. For description, see ECE 293-294.

ECE 402(4020) Biomedical System Design (also BME 404(4040)) Spring, 4 credits. Introduces techniques of measuring and conditioning low-level (biological) signals. Topics include the design of measurement systems, analog-to-digital conversion, data acquisition, noise and signal processing techniques, digital signal processors, and applications to bioengineering.

ECE 411(4110) Random Signals in Communications and Signal Processing Fall, 4 credits. Prerequisite: ECE 220 and ECE 310 or equivalent.
Introduction to models for random signals in discrete and continuous time, Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random processes. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 413(4130) Introduction to Nuclear Science and Engineering (also M&AE 458(4580), T&AM 413(4130)) Fall, 3 credits. Prerequisites: PHYS 214 and MATH 294.
For description, see T&AM 413.

ECE 415(4150) GPS: Theory and Design (also M&A E 415(4150)) Fall, 4 credits. Prerequisite: ECE 220 and MATH 294.
For description, see T&AM 415.
ECE 425/4250 Digital Signal Processing
Fall. 4 credits. Prerequisites: ECE 220 and 310.
Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are surveyed, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

ECE 426/4260 Applications of Signal Processing
Spring. 4 credits. Coursing Design Experience (CDE) course. Prerequisite: ECE 425 or permission of instructor. Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is a laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, signal coding, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ECE 430/4300 Lasers and Optical Electronics
Fall. 4 credits. Prerequisite: ECE 303 or equivalent.
Introduction to the operation and application of lasers: Cover diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

ECE 432/4320 Micro-Electro Mechanical Systems (MEMS)
Fall. 4 credits. Prerequisite: ECE 315 or permission of instructor.
Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/micron-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ECE 433/4330 Microwave Theory, Devices, and Applications
Fall. 4 credits. Prerequisite: ECE 303.
Introduction to the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course will cover the considerations that must be appreciated when the operating frequency approaches or exceeds $1GHz$. Topics include microwave devices, microwave measurement techniques, $S$-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 437/4370 Fiber and Integrated Optics
Spring. 4 credits. Coursing Design Experience (CDE) course. Prerequisite: ECE 303 or equivalent. Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, analytical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

ECE 444(4440) Computer Networks and Telecommunications
Fall. 4 credits. Prerequisites: ECE or CS 314 and a course in probability. Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics that are covered include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer Mode, local area network technology, network interconnections, protocol design (OSI and IP), network security, and network error. Emphasis is placed on performance evaluation.

ECE 446(4460) Digital Communications Over Packet-Switched Networks
Spring. 4 credits. Coursing Design Experience (CDE) course. Prerequisites: ECE/CSE 314 and probability course. Next offered 2008-2009. Basic course in networking covering the design and performance analysis of communication systems operating over packet-switched networks. Aims to bridge the gap between a classical networking course and a classical digital communications course. The course is lab oriented, with a strong emphasis on programming assignments (both C and MATLAB). Topics include data compression, error control in networks, and network algorithms.

ECE 451(4510) Electric Power Systems I
Fall. 4 credits. Prerequisite: ECE 320 or equivalent.
Acquaints students with modern electric power system analysis and control. Stresses analysis techniques appropriate for the restructured industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

ECE 452(4520) Electric Power Systems II
Spring. 4 credits. Prerequisite: ECE 320 or permission of instructor.
Accomplishes a comprehensive understanding of the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course will cover the considerations that must be appreciated when the operating frequency approaches or exceeds $1GHz$. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 467/4670 Digital Communication Receiver Design
Fall. 4 credits. Coursing Design Experience (CDE) course. Prerequisite: ECE 220. Introduces circuits to broadband digital receiver design. Topics include: PAM and QAM modulation and down-conversion, pulse shaping, matched filtering, carrier frequency and phase recovery, baud-timing synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course project: composition and testing of a MATLAB-based software receiver.

ECE 468(4680) Telecommunication Systems
Spring. 4 credits. Prerequisite: ECE 467 or permission of instructor. Recommended: ECE 411. Quadrature amplitude modulation receiver design, including LQ mismatch compensation, carrier recovery (using Costas loop and phase-locked loop), baud-timing (using bandedge power optimization), and adaptive equalization (trained, blind, fractionally spaced, and using decision-feedback).

ECE 472(4720) Feedback Control Systems (also CHEM 472/4720, M&E 478/4780)
Fall. 4 credits. Prerequisites: CHEM 372, ECE 220, M&E 326, or permission of instructor. For description, see M&E 478.

ECE 473/4730 Optimizing Compilers
Fall. 4 credits. Prerequisite: ECE 314/CS 314. Next offered 2008-2009. Covers compiler optimizations for high-performance microprocessors as well as how software interacts with hardware and the operating system. The projects involve implementing, testing, and evaluating an optimizing compiler backend that generates executables for a UNIX workstation. Lecture topics include three-address code, static single assignment form, many code optimizations,
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: fuels and conditions required for fusion power and basic fusion-reactor concepts; fundamental aspects of plasma physics relevant to fusion plasmas and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

ECE 487(4870) Introduction to Radar and Remote Sensing (also EAS 487(4870))
Fall. 3 credits. Prerequisites: ECE 220 and 486 (or grade of B or better in ECE 303). For description, see EAS 487 in the College of Arts and Sciences.

ECE 488(4880) Radio Frequency (RF) Circuits and Systems
Spring. 4 credits. Prerequisite: ECE 315 or equivalent.
Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis.
Six laboratory sessions.

ECE 491-492(4910-4920) Senior Electrical and Computer Independent Engineering Project
Fall. 491; spring. 492. 1-8 credits.
For description, see ECE 291-292.

ECE 493-494(4930-4940) Senior Electrical and Computer Engineering Group Project
Fall. 493; spring. 494. 1-8 credits.
For description, see ECE 293-294.

ECE 495-499(4950-4990) Special Topics in Electrical and Computer Engineering
Spring. fall. 1-4 credits.
Seminar, special interest, or temporary course.

ECE 504(5040) Advanced Computational Electronics, Electrodynamics, and Devices
Spring. 3 credits. Prerequisite: ECE 305. Co-meets with ECE 304. Offered next 2008-2009.
For description, see ECE 304. Students taking ECE 504 will be expected to complete and present a substantial class project to be negotiated with the instructor.

ECE 512(5120) Applied Systems Engineering I (also CEE 504(5040), CS 504(5040), M&AE 591(5910), ORAE 512(5120), SYSEN 510(5100))
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.
For description, see M&AE 591.

ECE 513(5130) Applied Systems Engineering II (also CEE 505(5050), CS 505(5050), M&AE 592(5920), ORAE 513(5130), SYSEN 520(5200))
Spring. 3 credits. Prerequisite: CEE 504(504), ECE 512 OR ORIE 512, or M&AE 591.
For description, see M&AE 592.
circuit. Students perform a series of fabrication steps including lithography, metatization, plasma etching and annealing to realize working semiconductor devices (Schottky diode, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each will be tested to verify the success (or failure) of the fabrication process.

**ECE 537(5370) Nanoscale Devices, Circuits, and Physics**

Fall. 4 credits. Prerequisites: ECE 457, or permission of instructor. Offered alternate years from ECE 535.

An integrated study connecting semiconductor physics with properties of electronic and optic devices at the nanoscale and the use of electronic devices in circuit. Topics include electronic and optic phenomena in confined structures and in nanoscale limits—single electron phenomena, nanoscale quantum and size effects such as in tunneling and optical transitions, transistor operation in limited scattering limits, plasmonics, molecular transport, interface effects, and the unification of device attributes with implementation in circuits.

**ECE 547(5470) Computer Vision**

Fall. 4 credits. Prerequisites: ECE 220 (or CS 280) and 314 or permission of instructor.

Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

**ECE 548(5480) Digital Image Processing**

Spring. 4 credits. Prerequisites: ECE 411, ECE 425, and familiarity with linear algebra.

Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

**ECE 551(5510) Electric Systems Engineering and Economics (Electricity Markets) [also AEM 655(6550)]**

Fall. 2 credits. Prerequisites: basic calculus, microeconomics course. Cannot be used as an ECE technical elective.

Designed to explore new arrangements in power system planning and operation brought about by the current restructuring of the electric industry. Organized around lectures on (1) how basic economic principles interact with basic engineering principles to determine the physical design and operational makeup of the system; and (2) the principles and techniques of optimization and their applications to emerging institutional arrangements in the power industry. Involved extensive laboratory work designed to test the principles under discussion. A final requires building an intelligent software agent capable of performing in a competitive market with rules similar to those being set up in the electric power business today. The agents are exercised in a class competition.

**ECE 554(5540) Advanced Analog VLSI Circuit Design**

Spring. 4 credits. Prerequisite: ECE 453.

Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design and analysis, circuit layouts, and system design, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

**ECE 582(5820) Fundamental Information Theory**

Spring. 4 credits. Prerequisite: ECE 411 or equivalent.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 564(5640) Detection and Estimation**

Spring. 4 credits. Prerequisites: ECE 410, 411, or permission of instructor.

**ECE 569(5690) Fundamentals of Networks**

Fall. 4 credits. Prerequisite: ECE 411. Recommended: ECE 446.

Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols' operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov Chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and wired networks are illustrated by examples from numerous practical systems. Discussion of a number of classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

**ECE 587(5870) Digital Communications**

Spring. 4 credits. Prerequisites: ECE 430, 510, or permission of instructor.

Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmissions and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

**ECE 568(5680) Mobile Communication Systems**

Spring. 4 credits. Prerequisites: ECE 411 and 467. Next offered 2008-2009.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ECE 572(5720) Parallel Computer Architecture [also CS 516(5722)]**

Fall. 4 credits. Prerequisites: ECE 310, 457. Principles and trade-offs in the design of parallel architectures. Emphasis on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

**ECE 574(5740) Advanced Digital VLSI**

Fall. 4 credits. Prerequisites: ECE 314 and 474.

Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations. Students will complete a group project of the design of a microprocessor.

**ECE 575(5750) High-Performance Microprocessor Architecture**

Spring. 4 credits. Prerequisite: ECE 473 or 475.

Provides in-depth coverage of some of the advanced architectural features of current high-performance microprocessors. Lecture topics include trace caches, branch predictors, value predictors, confidence estimators, finite state machines, multi-threading, predication, software speculation, RISC, EPIC, case studies of modern high-end microprocessors, and research ideas. The projects involve writing simulators to evaluate architectural components on large programs that execute billions of instructions.

**ECE 576(5760) Advanced Microcontroller Design**

Fall. 4 credits. Prerequisites: ECE 476 and ECE 475 or equivalent.

Design of system-on-chip applications. Students working in pairs design, debug, and construct several systems that illustrate the design of embedded processors with custom peripherals running a real-time operating system. The content focuses on laboratory work: the lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

**ECE 578(5780) Computer Analysis of Biomed Images**

Spring. 4 credits. Prerequisite: instructor permission. Open to students with engineering, biomedical, or biology background.

Powerful imaging modalities with attending computer image processing methods are
evolving for the evaluation of health and the
detection of disease. This course focuses on
the quantitative analysis of such images and
Computer Aided Diagnosis (CAD), i.e., the
automatic identification and classification of
abnormalities by the computer.

**ECE 579(5790) Advanced High-Speed
and RF Integrated Circuits**
Spring. 4 credits. Prerequisites: ECE 433
and ECE 452.
Principles of analog integrated circuit design
in the Giga-Hertz frequency range. This
course covers the fundamental understanding
of high-frequency circuit building blocks such as
low noise amplifiers, mixers, oscillators,
phase locked loops, frequency synthesizers,
clock and data recoveries, and power
amplifiers. Additionally, because some of the
traditional microwave building blocks such as
transmission lines and distributed circuit
elements are essential parts of today's high
speed integrated circuits, the course will
briefly cover them. Throughout the course, a
systematic overview of advanced wireless and
wireline applications would be covered. The
course emphasizes physical understanding and
intuitive design methods as well as qualitative
techniques and computer simulations. The
course has collaboration class projects, based
on real-world problems.

**ECE 581(5810) Introduction to Plasma
Physics (also A&E 608[6060])**
Fall. 4 credits. Prerequisite: ECE 303 or
equivalent. First-year graduate-level course;
open to exceptional seniors.
Topics include plasma state, motion of
charged particles in fields, drift-orbit theory;
coulomb scattering, collisions; ambipolar
diffusion; elementary transport theory; two-
fluid and hydromagnetic equations; plasma
oscillations and waves; CMA diagram;
hydromagnetic stability; and elementary
applications to space physics, plasma
technology, and controlled fusion.

**ECE 583(5830) Introduction to Technical
Management**
Fall. 3 credits. Prerequisite: Industrial
Experience or equivalent (summer work or
school work). For M. Eng. students only.
This course is taught from the perspective of a
chief technology officer and is targeted at M.
Eng. and management students interested in
"real world" problems. It provides an
introduction via case examples to the
technical, management, and organizational
issues of developing and marketing products
in high-tech businesses. The focus is on the
unique nature of this type of business,
including managing with high risk/uncertainty
levels, learning to manage very diverse project
teams, and recognizing technical versus
market success in order to make good
business decisions.

**ECE 584(5840) Advanced GPS Receiver
Design**
Spring. 4 credits. Prerequisite: ECE 415 or
GPS receiver design from the RF section to
the observables is investigated and implemented in MATLAB software. Creation of
C/A code, up-sampling, down conversion,
code correlation, acquisition, tracking, and
interpreting the navigation message. Students
start with the digitized GPS bandwidth and
build a software receiver to create the
navigation solution as the final project.

**ECE 585(5850) Upper Atmospheric
Physics I**
Fall. 4 credits. Prerequisites: physics
through 214 or equivalent, introductory
chemistry, ECE 406 or equivalent. Next
The structure and dynamics of the ionosphere
and upper atmosphere. Charged particle
production, loss and transport. Coupling to
the neutral atmosphere. Ionospheric
instabilities. High-latitude currents and plasma
convection and its implications for the
ionosphere and upper atmosphere.

**ECE 586(5860) Upper Atmospheric
Physics II**
Spring. 4 credits. Prerequisites: ECE 581
Topics include solar phenomena, solar wind,
and space weather; magnetospheric structure
and physical processes; plasma instabilities in
the ionosphere and magnetosphere; and
magnetic reconnection and the relation to
high-latitude phenomena.

**ECE 587(5870) Energy Seminar I (also
M&A 545[5450])**
Fall. 1 credit.
Energy resources, their conversion to
electricity or mechanical work, and the
environmental consequences of the energy
cycle are discussed by faculty members from
several departments in the university and by
outside experts. Topics include: energy
resources and economics; coal-based
electricity generation; nuclear reactors; solar
power; energy conservation by users; and
air pollution control.

**ECE 588(5880) Energy Seminar II (also
M&A 546[5460])**
Spring. 1 credit.
For description, see ECE 587; however,
different speakers and/or topics are discussed
in ECE 588.

**ECE 591(5910) Adaptive Feedback
Systems**
Fall. 4 credits. Prerequisites: ECE 411, 467,
472, or 521 and MATLAB. Next offered
Parameter adaptation algorithm construction
and tuning for a variety of applications in
which an adaptive filter is embedded in a
feedback loop: telephony echo cancellation,
model-following control, recursive
identification of pole-zero models, differential
pulse code modulation, duct noise control,
and decision feedback equalization.

**ECE 593-594(5930-5990) Advanced
Topics in Electrical and Computer
Engineering**
Fall, spring. 1–4 credits.
Seminar, special interest, or temporary course.

**ECE 610(6100) Graduate Seminar in
Medical Instrumentation**
Fall. 1 credit. S-U grades only. Offered
alternate years; next offered 2008–2009.
The seminar will provide a format for
identifying, investigating, and discussing state-
of-the-art developments related to
instrumentation design techniques, and
simulation sciences as they apply to
biomedical problems and solutions.

**ECE 662(6620) Network Information
Theory**
Fall. 3 credits. Prerequisite: ECE 562 and
permission of instructor.
Second course in information theory, focusing
on multiterminal aspects, as covered in the
textbooks of Yeung and Csiszar/Koerner.

**ECE 683(6830) Seminar in GPS and
GNSS**
Fall, spring. 1–3 credits. Prerequisite: ECE
415/M&AE 415 or equivalent.
Seminar in GPS (Global Positioning System)
and GNSS (Global Navigation Satellite
Systems) science and engineering. Current
topics in receiver design such as low signal
acquisition, ambiguity resolution, and software
receivers and topics in GPS science such as
space weather effects on GPS and the use of
GPS for remote sensing. Students typically
make one presentation during the semester.

**ECE 685(6850) Memory Technologies and
Systems**
Fall. 4 credits. Prerequisites: ECE 314, ECE
475; permission of instructor. Cannot be
used as an ECE technical elective.
Covers various aspects of the Memory Wall
Problem. Students study memory systems from
the lowest building blocks on up. The course
begins with a review of virtual memory to
prepare for studying "adaptable" or "active"
memory controllers that use their own TLBs
and page tables to remap addresses. Modern
DRAM designs, memory access ordering and
scheduling, and seminal memory system
papers from the literature will be covered.
Other topics include PIM and interesting new
memory technologies for uses other than main
memory.

**ECE 693(6930) Master of Engineering
Design**
Fall, spring. 3–8 credits. Must enroll both
semesters, will receive R grade for first
semester. For students enrolled in M.Eng.
(Electrical) degree program.
Uses real engineering situations to present
fundamentals of engineering design. Each
project is named and research-based. Students
selected by an instructor to prepare for studying "adaptable" or "active"
memory controllers that use their own TLBs
and page tables to remap addresses. Modern
DRAM designs, memory access ordering and
scheduling, and seminal memory system
papers from the literature will be covered.
Other topics include PIM and interesting new
memory technologies for uses other than main
memory.

**ECE 697-698(6970-6980) Master of
Engineering Research**
697. fall; 698. spring. 7 credits. Prerequisite:
For students enrolled in M.Eng. (Electrical)
degree Research Track program. Must
enroll both semesters.
Project designed for the M.Eng. student in the
Research Track program and more resembles
a research thesis. Students will work closely
with an ECE Graduate Field Faculty member
on a common area of interest. Each professor
is assigned a section number. To register,
see roster for appropriate six-digit course ID numbers.

**ECE 791-792(7910-7920) Thesis
Research**
791. fall; 792. spring. 1–15 credits. For
students enrolled in master's or doctoral
program. Each professor is assigned a section number. To register,
see roster for appropriate six-digit course ID numbers.

For complete descriptions, see the INFO listing in the CIS section.

INFO 130(1300) Introductory Design and Programming for the Web (also CS 130(1300))
Fall. 3 credits.
For description, see INFO 150 in CIS section.

INFO 172(1700) Computation, Information, and Intelligence (also COGST 172, CS 172(1700), ENGR 172(1700))
Fall or spring; 3 credits. Prerequisite: some knowledge of differentiation; freshman standing or permission of instructor. Next offered 2008–2009.
For description, see CS 172 in CIS section.

INFO 204(2040) Networks (also ECON 204(2040), SOC 209(2120)] [SBA]
Spring. 4 credits.
For description, see ECON 204.

INFO 214(2140) Cognitive Psychology (also COGST 214, PSYCH 214(2140)] [KCM]
Fall. 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students, see INFO/PSYCH 614.
For description, see PSYCH 214.

INFO 230(2300) Intermediate Design and Programming for the Web (also CS 230(2300))
Spring. 3 credits. Prerequisite: CS/INFO 130 or equivalent.
For description, see INFO 230 in CIS section.

INFO 245(2450) Psychology of Social Computing (also COMM 245(2450)] [SBA]
Fall. 3 credits.
For description, see COMM 245.

INFO 292(2921) Inventing an Information Society (also AM ST 292[2980], ECE/ENGRG 298[2980], HIST 292[2920], S&TS 292(2921])
For description, see ENGRG 298.

INFO 295(2950) Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 231 or equivalent.
For description, see INFO 295 in CIS section.

INFO 320(3200) New Media and Society (also COMM 320(3200))
Spring. 3 credits.
For description, see COMM 320.

INFO 330(3300) Data-Driven Web Applications (also CS 330(3300))
Fall. 3 credits. Prerequisite: CS/INFO 211.
For description, see INFO 330 in CIS section.

INFO 345(3450) Human-Computer Interaction Design (also COMM 345(3450)] [SBA]
Spring. 3 credits.
For description, see COMM 345.

INFO 349[3491] Media Technologies (also CS/INFO 349[3491], S&TS 349[3491]) [CA]
Spring. 3 credits.
For description, see COMM 349.

INFO 355(3551) Computers: From the 17th Century to the Dot.com Boom (also S&TS 355[3551]) [CA]
Fall. 4 credits.
For description, see S&TS 355.

INFO 356[3561] Computing Cultures (also S&TS 356[3561]) [CA]
INFO 366(3650) History and Theory of Digital Art (also ART H 366[3650]) [CA]
Fall. 4 credits.
For description, see ART H 366.

INFO 372(3720) Explorations in Artificial Intelligence (also CS 372[3700])
Spring. 3 credits. Prerequisites: MATH 111 or equivalent, an information science approved statistics course, and CS 211 or permission of instructor.
For description, see INFO 372 in CIS section.

INFO 387(3871) The Automatic Lifestyle: Consumer Culture and Technology (also S&TS 387[3871]) [CA]
For description, see S&TS 387.

INFO 415(4150) Environmental Interventions (also S HUM 415)
Fall. 4 credits.
For description, see S HUM 415.

INFO 429(4290) Copyright in the Digital Age (also COMM 429[4290])
Fall. 3 credits.
For description, see COMM 429.

INFO 430(4300) Information Retrieval (also CS 430[4300])
Fall. 3 credits. Prerequisite: CS/INFO 211 or equivalent.
For description, see INFO 430 in CIS section.

INFO 431(4302) Web Information Systems (also CS 431[4302])
Fall. 4 credits.
For description, see COMM 431.

INFO 435(4350) Seminar on Applications of Information Science (also INFO 635[6390])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 211 or equivalent; experience in using information systems. Undergraduate and master's students should register for INFO 435; Ph.D. students should register for INFO 635.
For description, see INFO 435 in CIS section.

INFO 440(4400) Advanced Human-Computer Interaction Design (also COMM 440[4400]) [SBA]
Fall. 3 credits. Prerequisite: COMM/INFO 245.
For description, see COMM 440.

INFO 444(4144) Responsive Environments (also ART H 444[4144]) [CA]
Spring. 4 credits.
For description, see ART H 444.

INFO 445(4450) Seminar in Computer-Mediated Communication (also COMM 445[4450])
Fall. 3 credits. Prerequisite: COMM/INFO 245. Next offered 2009–2010.
For description, see COMM 445.

INFO 447(4470) Social and Economic Data (also ILRLE 447[4470])
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, one upper-level social science course, or permission of instructor.
For description, see INFO 447 in CIS section.

INFO 450(4500) Language and Technology (also COMM 450[4500]) [SBA]
Spring. 3 credits. Prerequisite: COMM 240 or COMM 245 or permission of instructor.
For description, see COMM 450.

INFO 490(4900) Independent Reading and Research
Fall. spring. 1–4 credits.

INFO 491(4910) Teaching in Information Science, Systems, and Technology
Fall. spring. Variable credit.

INFO 515(5150) Culture, Law, and Politics of the Internet
Fall. 4 credits.
For description, see INFO 515 in CIS section.

INFO 530(5300) The Architecture of Large-Scale Information Systems (also CS 530[5300])
Spring. 4 credits. Prerequisite: CS/INFO 330 or CS 432.
For description, see INFO 530 in CIS section.

INFO 614(6140) Cognitive Psychology (also COGST 614[6140], PSYCH 614[6140])
Fall. 4 credits.
For description, see PSYCH 614.

INFO 630(6300) Advanced Language Technologies (also CS 674[6740])
Fall or spring, in 2007–2008, offered in fall. 3 credits. Prerequisite: permission of instructor. Neither INFO/CS 430 nor CS 474 are prerequisites.
For description, see CS 674 in CIS section.

INFO 635(6390) Seminar on Applications of Information Science (also INFO 435[4350])
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 211 or equivalent; experience in using information systems. Undergraduates and master's students should register for INFO 435; Ph.D. students should register for INFO 635.
For description, see INFO 635 in CIS section.

INFO 640(6400) Human-Computer Interaction Design (also COMM 640[6400])
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 640.

INFO 645(6450) Seminar in Computer-Mediated Communication (also COMM 645[6450])
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 645.
MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111(1110) Nanotechnology (also ENGR 111[1110])
Fall. 3 credits. E. Giannelis. Course in Introduction to Engineering series. For description, see ENGR 111.

MS&E 118(1180) Design Integration: DVDs and iPods (also ENGR 118[1180], T&AM 118[1180])
Spring. 3 credits. Course in Introduction to Engineering series. For description see ENGR 118.

MS&E 119(1190) Biomaterials for the Skeletal Systems (also ENGR 119[1190])
Fall. 3 credits. D. Grubb. Course in Introduction to Engineering series. For description, see ENGR 119.

MS&E 206(2060) Atomic and Molecular Structure of Matter (also M&AE 313[3130])
Spring. 4 credits. C. Liddell.

Discusses the basic elements of structure: order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MS&E 261(2610) Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 261[2610])
Fall. 3 credits. S. L. Sass. For description, see ENGRD 261.

MS&E 262(2620) Electronic Materials for the Information Age (also ENGRD 262[2620])
Spring. 3 credits. Prerequisite: MATH 192. Co-requisite: PHYS 213 or permission of instructor. G. Malliaras. For description, see ENGRD 262.

MS&E 269(2690) Technologies for Making the Small
Spring. 3 credits. Prerequisites: CHEM 207/211, MATH 192, M. Thompson. This course provides an introduction to principles and practice of nanofabrication techniques, concluding with hands-on fabrication laboratory. A range of nanosystems is explored from microelectronic circuits to MEMS sensors and/or microfluidics. Fundamentals common to all fabrication including lithography, deposition, and etching processes are explored in lectures and lab exercises. New developments in "soft" micro-stamp lithography and self-assembly methods are discussed. In the final project students build one of several nanosystems depending on their interests.

MS&E 291-292[2910-2920] Research Involvement Ila and Iib
291, fall; 292, spring. 3 credits each semester. Prerequisite: approval of department. Staff. Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis of ideas is emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

MS&E 301(3010) Materials Chemistry (also M&AE 581[5810])
Fall. 3 credits. L. Estroff. Provides a molecular understanding of materials properties: quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

MS&E 302(3020) Thermodynamics of Condensed Systems (also M&AE 583[5830])
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson. Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, surfaces, defects. Introduces electrochemistry and fuel/power cells.

MS&E 391-392[3910-3920] Research Involvement Ila and Iib
391, fall; 392, spring. 3 credits each semester. Prerequisite: departmental approval. Staff. For description, see MS&E 291. May be taken as a one-semester affiliation with a research group.

MS&E 402(4020) Mechanical Properties of Materials, Processing, and Design (also M&AE 312[3120], MS&E 582[5820])
Fall. 3 credits. Prerequisite: MS&E 206. Corequisite: MS&E 304 or permission of instructor. S. Baker.

Additional courses include:

MS&E 304(3040) Kinetics, Diffusion, and Phase Transformations (also MS&E 584[5840])
Spring. 4 credits. Prerequisite: MS&E 303 or permission of instructor. R. Hennig. Topics include phenomenological and atomistic theories of diffusion: diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electromigration; interfaces and microstructure; nucleation and growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

MS&E 305(3050) Electronic, Magnetic, and Dielectric Properties of Materials (also MS&E 585[5850])
Spring. 3 credits. Prerequisite: MS&E 206 or permission of instructor. R. B. van Dover. Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling, Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magneto-resistance. Materials for data storage, and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

MS&E 307(3070) Materials Design Concepts I
Fall. 2 credits. J. Blakely. For description, see MS&E 407.

MS&E 311(3110) Junior Laboratory I
Fall. 1 credit. D. Ast. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in thermodynamics of condensed systems and electronic, magnetic, and dielectric properties of materials.

MS&E 312(3120) Junior Laboratory II
Spring. 1 credit. D. Ast. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and mechanical properties of materials, processing, and design.

MS&E 391-392[3910-3920] Research Involvement Ila and Iib
391, fall; 392, spring. 3 credits each semester. Prerequisite: departmental approval. Staff. For description, see MS&E 291. May be taken as a one-semester affiliation with a research group.

MS&E 402(4020) Mechanical Properties of Materials, Processing, and Design (also M&AE 312[3120], MS&E 582[5820])
Fall. 3 credits. Prerequisite: MS&E 206. Corequisite: MS&E 304 or permission of instructor. S. Baker.
Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials. How mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep, deformation, fracture, and fatigue.

**MS&E 403-404(4030-4040) Senior Materials Laboratory I and II**

Fall; 403, spring, 3 credits each semester. Staff. Practical laboratory covering the analysis and characterization of materials and processes. Emphasis is on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

**MS&E 405-406(4050-4060) Senior Thesis I and II**

405, fall; 406, spring, 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. M. Thompson.

Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

**MS&E 407(4070) Materials Design Concepts II**

Fall. 2 credits. J. Blakely.

Introduces materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and social issues. Patents, searching, and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

**MS&E 410(4100) Physical Metallurgy and Applications (also MS&E 510(5100))**

Spring. 3 credits. Prerequisites: MS&E 205, 305, 304 or permission of instructor. S. Baker.

Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include: thin films and patterned structures for use in microelectromechanical systems, superalloys for high temperature engine applications, shape memory alloys for biomedical applications, and others.

**MS&E 433(4330) Materials for Energy Production, Storage, and Conversion (also MS&E 533(5330))**

Fall. 3 credits. R. Dieckmann. Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

**MS&E 481(4810) Biomedical Materials and Their Applications**

Spring. 3 credits. Prerequisite: departmental approval. Staff.

Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, case studies involving physiological systems are considered, and design of artificial parts and materials are investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included. Examples may include dialysis, art and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation about a case study.

**MS&E 481(4810) Technology Management (also MS&E 587(5870))**

Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage. Most organizations recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.

**MS&E 482(4820) Plasma Processing of Electronic Materials (also ECE 482(4820))**

Spring. 3 credits. Prerequisites: PHY 213 and 214 or equivalents. Offered if sufficient demand.

For description, see ECE 482.

**MS&E 487(4870) Ethics and Technology**

Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

**MS&E 489(4890) Colloids and Colloid Assemblies for Advanced Materials Applications (also MS&E 589(5890))**

Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneity, structure, layered, hollow, porous, and heterojunction structures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and nanotubes. Applications: photonics, biotechnology, biological screening, drug delivery, catalysis, and magnetic recording.

**MS&E 491-492(4910-4920) Research Involvement IVA and IVB**

491, fall; 492, spring. 3 credits each semester. Prerequisite: departmental approval.

For description, see MS&E 291. May be continuation of a one-semester affiliation with a research group.

**MS&E 495(4950) Undergraduate Teaching Involvement**

Fall, spring. Variable credit. Staff.

Grants credit to students who help in the laboratory portions of select MS&E courses. The number of credits earned is determined by the teaching load and is typically 1-3.

**MS&E 501-502(5010-5020) Special Project**

Fall, spring. 6 credits. Staff.

Master of Engineering research project.

**MS&E 512(5120) Mechanical Properties of Thin Films (also MS&E 513(5130))**

Stresses, elastic and plastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.

**MS&E 521(5210) Properties of Solid Polymers**

Fall. 3 credits. Prerequisite: ENGRD 261. Corequisite: MS&E 303 or permission of instructor. C. Ober.

**MS&E 523(5230) Physics of Soft Materials**

Fall. 3 credits. U. Wiesner.

The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in the presence of fluctuation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used and available at Cornell. The characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.
The course begins with an overview of relevant materials, from small aromatic molecules to conjugated polymers. We then discuss their optoelectronic properties, including topics from photophysics (absorption, emission, photogeneration, recombination), charge transport and injection (doping, hopping, disorder) and nonlinear optics. Molecular conduction mechanisms are reviewed. Their applications in electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors are then discussed.

**[MS&E 531(533)] Introduction to Ceramics**
Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomic and phenomenological approach, relationships between diffusion and point defect structure). Ceramic phase diagrams, phase transformations. Emphasizes physical-chemical aspects of the different topics.

**[MS&E 533(5330)] Materials for Energy Production, Storage, and Conversion**
(also ECE 536(5360))
Fall. 3 credits. R. Dieckmann.
For description, see MS&E 433.

**[MS&E 541(5410)] Nanofabrication of Semiconductor Devices**
(also ECE 536(5360))
Fall. 4 credits. Prerequisites: ECE 315 and ECE 457 or equivalent.
For description, see ECE 536.

**[MS&E 542(5420)] Flexible Electronics**
C. Ober.
Flexible electronics holds the promise of transformative developments in: (1) flat panel lighting (low cost, low energy), (2) energy production (solar), and (3) infrastructure control and monitoring (sensing, energy control, hazard monitoring). Practical realization of flexible circuits will require dramatic progress in new materials that are compatible with flexible media and amenable to facile and low temperature processing as well as major advances in manufacturing technologies such as roll-to-roll processing. This course will discuss these and other developments.

**[MS&E 543(5430)] Thin-Film Materials Science**
Fall. 3 credits. R. B. van Dover.
Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics include deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and superlattices, electrical and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electroymigration. The recommended textbook is *Electronic Thin Film Science for Electrical Engineers and Material Scientists* by Tu, Mayer, and Feldman.

**[MS&E 545(5450)] Magnetic and Ferroelectric Materials**
Fall. 3 credits. Prerequisites: PHYS 213 and 214 or equivalent. Next offered 2008-2009.
R. B. van Dover.

**[MS&E 555(5550)] Introduction to Composites Materials**
(also CEE/MS&E 455(4550))
Spring. 3 credits.
For description, see T&AM 455.

**[MS&E 562(5620)] Blominalization: The Formation and Properties of Inorganic Biomaterials**
Spring 3 credits. Prerequisites: MS&E 301 or CHEM 257 or CHEM 357-358 or equivalent or permission of instructor. Next offered 2008-2009.
This course will examine the wide variety of mineralized materials made by biological organisms including mollusk shells, mammalian bone and teeth, silica bodies in plants, and magnetotactic bacteria. The focus will be on the molecular and biological mechanisms that lead to the formation of these materials as well as their unique physical properties (mechanical, optical, magnetic).

**[MS&E 563(5630)] Nanobiotechnology**
(also A&EP/BIO G 663[6630])
Spring. 3 credits.
For description, see A&EP 663.

**[MS&E 571(5710)] Analytical Techniques for Material Science**
Spring. 3 credits. D. Grubb.
Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids: characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear reaction analysis, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

**[MS&E 572(5720)] Computational Materials Science**
Fall. 3 credits. Prerequisite: MS&E 303 or equivalent. R. Hennig.
Computational methods for predicting the behavior of condensed matter systems. Includes Monte Carlo, molecular dynamics, and phase field approaches. Introduction of physical parameters from simulation results and limitations of computational methods. Survey of interatomic potential development and quantum-mechanical ab-initio techniques. Examples drawn from surface and condensed phase systems.

**[MS&E 591(5910)] Materials Chemistry**
(also MS&E 301[3010], M&AIE 312[3120])
Spring. 3 credits. L. Estroff.
For description, see MS&E 301.

**[MS&E 582(5820)] Mechanical Properties of Materials, Processing, and Design**
(also ECE 402(4020), M&AIE 312[3120])
Fall. 3 credits. Corequisite: MS&E 584 or permission of instructor. S. Baker.
For description, see MS&E 302.

**[MS&E 583(5830)] Thermodynamics of Condensed Systems**
(also MS&E 303[3030])
Fall. 4 credits. M. O. Thompson.
For description, see MS&E 303.

**[MS&E 584(5840)] Kinetics, Diffusion, and Phase Transformation**
(also MS&E 304[3040])
Spring. 4 credits. Prerequisite: MS&E 583 or permission of instructor. R. Hennig.
For description, see MS&E 304.

**[MS&E 585(5850)] Electronic, Magnetic, and Dielectric Properties of Materials**
(also MS&E 305[3050])
Spring. 3 credits. R. B. van Dover.
For description, see MS&E 305.

**[MS&E 587(5870)] Technology Management**
(also MS&E 481[4810])
E. F. Glannell.
For description, see MS&E 481.

**[MS&E 588(5890)] Colloids and Colloid Assemblies**
C. Liddell.
For description, see MS&E 489.

### Graduate Core Courses

**[MS&E 601(6010)] Chemistry of Materials**
Spring. 3 credits. Prerequisite: thermodynamics course at level of MS&E 303. C. Ober.
Topics include basic statistical thermodynamics, partition functions and thermodynamic state functions, distribution laws of thermodynamics, free-energy functions and conditions of equilibrium, chemical reactions, statistics of electrons in crystals, heat capacity, heterogeneous systems and phase transitions, and lattice models of 1, 2 and 3-dimensional interacting systems. Also covers: statistical thermodynamics of alloys, free-energy and phase diagrams, order-disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

**[MS&E 602(6020)] Elasticity, Plasticity, and Fracture**

**[MS&E 603(6030)] Thermodynamics of Materials**

**[MS&E 604(6040)] Kinetics of Reactions in Condensed Matter**
Spring. 3 credits. R. Dieckmann.
Phenomenological and microscopic aspects of diffusion in fluids; both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids. Cartesian tensors are utilized for fields and properties. Covers phase stability and transformations; nucleation and growth, spinodal decomposition and displacive transformations; phase coarsening processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems, grain-boundary migration controlled kinetics, viscosity, anelasticity, and diffusional creep.

**[MS&E 605(6050)] Electronic Properties of Materials**
Methods to characterize structure of materials. Elements of Structure at length scales ranging from sub-nanometer to millimeter. Crystals, Liquids, Amorphous Solids/Glasses Short and long-range structures. Techniques to Probe Structure. Real space imaging techniques, probe microscopies, optical, electron and X-ray methods. Diffraction methods. Applications of structural methods may include, Polymers.
Polycrystalline: Metals, Dislocations, Biological Membranes, Nano-Composites, Surfaces, Interfaces in Semiconductors, Photonic Materials, Domains in Ferroelectronics and Ferromagnetics, Biological materials.

**MS&E 606(6060) Condensed Matter Structure**
Focuses on ways to characterize structure. Includes lectures by several faculty on structural determination on a wide range of materials. Elements of structure at length scales ranging from sub-nanometer to millimeter. Descriptions of structure in crystals, liquids, amorphous solids/glasses. Short- and long-range order, microstructures, cellular structures, domains, domain boundaries, 2-phase and composite structures. Techniques to probe structure: “direct” microscopy, real space imaging, including probe microscopies, optical, electron and X-ray methods. Indirect methods for analysis of diffraction fields, Fourier/reciprocal space. Examples of application may include polymer structure, metal grain textures, dislocation arrays, cellular structure, structure of biological membranes, nano-composite structures, surfaces, interfaces and grain boundaries in semiconductors, structure of photonic materials, domain structures in ferroelectrics and ferromagnetics, biological materials.

**Related Course in Another Department**
Introductory Solid-State Physics (PHYS 454, A&EP 450)

**Further Graduate Courses**

**[MS&E 610(6100) Physical Metallurgy and Applications (also MS&E 410(4100))]**
Spring. 3 credits. Prerequisites: MS&E 206, 303, 304 or permission of instructor. Next offered 2008-2009. S. Baker. For description, see MS&E 410.

**MS&E 621(6210) Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607(6070))**
Fall. 4 credits. Prerequisite: CHEM 605 or permission of S. Lee. For description, see CHEM 607.

**MS&E 655(6550) Composite Materials (also M&A/E/T&AM 655(6550))**
Spring. 4 credits. Staff. For description, see T&AM 655.

**MS&E 665(6650) Principles of Tissue Engineering (also M&A/E/BME 665(6650))**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see BME 665.

**MS&E 671(6710) Principles of Diffraction (also A&EP 711(7110))**
Fall. 3 credits. Letter grades only. Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock.
For description, see A&EP 711.

**[MS&E 681(6810) Surfaces and Interfaces in Materials**

Deals with special topics in surface and interface science. The main topics are: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distribution, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

**Specialty Courses**

**MS&E 800(8000) Research in Materials Science**
Fall. spring. Credit TBA. Staff. Independent research in materials science under the guidance of a member of the staff.

**MS&E 801(8010) Materials Science and Engineering Colloquium**
Fall and spring. 1 credit each semester. Enrollment limited to MS&E Ph.D. students. Staff.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MS&E 802(8020) Materials Science Research Seminars**
Fall, spring. 2 credits each semester. Prerequisite: graduate students involved in research projects. Staff.
Short presentations on research in progress by students and staff.

**MECHANICAL AND AEROSPACE ENGINEERING**

M&A 111(1110) Naval Ship Systems (also NAV S 202(2020))
Fall. 3 credits.
For description, see NAV S 202.

M&A 117(1170) Introduction to Mechanical Engineering (also ENGR 117(1170))
Fall. 3 credits. 2 lec and 1 lab per week. Course in Introduction to Engineering series. For description, see ENGR 117.

M&A 127(1270) Introduction to Entrepreneurship and Enterprise Engineering (also ENGR 127(1270))
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none.
For description, see ENGR 127.

M&A 212(2120) Mechanical Properties and Selection of Engineering Materials
Spring, may be offered in summer. 3 credits. Prerequisites: ENGRD 202 (Structures) or permission of M&AE faculty.
Mechanics of deformable bodies and a reinforcement of the concept of “simple engineering elements” for numerical analysis associated with design. Introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue and environmental effects are developed. A general introduction to the selection of material for a given application.

M&A 221(2210) Thermodynamics (also ENGR 221(2210))
Fall, spring, may be offered in summer. 3 credits. Prerequisites: MATH 192 and PHYS 112 or permission of instructor.
For description, see ENGRD 221.

M&A 225(2250) Mechanical Synthesis
Spring. 4 credits. Prerequisite: ENGRD 202. Pre- or corequisites: ENGR 203 and 221. Lab fee.
Hands-on introduction to the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical dissection used to demonstrate successful product design and function. Basic instruction on CAD and technical sketching.

M&A 305(3050) Introduction to Aeronautics
Fall. 3 credits. Prerequisite: T&AM/ENGRI 203. Pre- or corequisites: one of the following thermodynamics classes: ENGR 221 or BEE 222 and one of the following fluid mechanics classes: M&A 323 or CHEM 323 or BEE 331 or CEE 331; upperclass engineers or permission of instructor.
Introduction to aerodynamic design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Calculation of lift and drag for aircraft.
Analysis of aerodynamic performance. Introduction to stability and control.

M&AE 306/3060 Spacecraft Engineering
Spring. 3 credits. Prerequisite: ENGRD 203 or junior or senior M&AE or ECE students or permission of instructor. Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

M&AE 312/3120 Mechanical Properties of Materials, Processing, and Design (also MS&E 402/4020, 562/5820) Fall. 4 credits. For description, see MS&E 402.

M&AE 313/3130 Atomic and Molecular Structure of Matter (also M&AE 206/2060, M&AE 501/5810) Spring. 4 credits. For description, see M&AE 206.

M&AE 323/3230 Introductory Fluid Mechanics
Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202 and ENGRD 203 and pre- or co-registration in ENGRD 221, or permission of instructor. Limited to ME majors and those officially registered in the Engineering Cooperative Program. Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli’s equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

M&AE 324/3240 Heat Transfer
Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: M&AE 323 or permission of instructor. Topics include discussion of steady and unsteady heat conduction; forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boilers.

M&AE 325/3250 Analysis of Mechanical and Aerospace Structures
Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 202 and M&AE 323 or permission of instructor. Topics include design and implementation of mechanical systems. Topics include the analysis and design of structural components, risk assessment, and system safety. Solution strategies include both analytical and finite element methods.

M&AE 326/3260 System Dynamics
Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required.

Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multidegree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

M&AE 327/3272 Mechanical Property and Performance Laboratory
Spring. 2 credits. Prerequisites: M&AE 212, 325. This course provides an introduction to the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.

M&AE 378/3780 Mechatronics
Fall. 3 credits. Prerequisite: MATH 293, PHYS 215, or permission of instructor. At the intersection of mechanical and electrical engineering lies the integration of technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled mechatronic systems. Typical examples include analog circuits (both passive and active components); filter design; diodes; transistors, MOSFETS and power amplification; pulse width modulation; transduction; mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming. Lab experiments eliminate in the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

M&AE 400/4001 Components and Systems: Engineering in a Social Context (also SATS 400/4001)
Spring. 3 credits. Prerequisites: upper-class standing, two years of college physics. Offered alternate years; next offered 2008–2009. Addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, the course investigates interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 523.

M&AE 425(4251) FSAE Automotive Design Project
Fall. Spring. Usually 3 credits: 3 for team members or 4 for team leaders. Prerequisite: M&AE or ECE juniors and seniors or permission of instructor. Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

M&AE 427(4272) Fluids/Heat Transfer Laboratory
Fall. 3 credits. Fulfills technical-writing requirement. Prerequisites: M&AE 323, 324. Laboratory exercises in fluid and thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, air foil stall, flow visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

M&AE 428(4280) Engineering Design
Fall. 2 credits. Prerequisite: senior standing or permission of instructor. This course is offered to illustrate and practice the design process. It consists of formal lectures and invited seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design "projects" in the semester.

M&AE 429(4291) Supervised Senior Design Experience
Fall. Spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing or permission of instructor; taken concurrently or after M&AE 428. Letter grades only.
Substantial design experience based on the knowledge and skills acquired in earlier course work and incorporating engineering standards and realistic constraints. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as "Senior Design Elective" (M&AE 400, 425, 427, 470, 479, 486) or are directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

[M&AE 449(4490)] Combustion Engines and Fuel Cells
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323. Offered alternate years; Next offered 2008–2009.
Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion, knock, Performance and control of undesirable emission exhausts.

[M&AE 453(4530)] Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 453[4530])
Spring. 3 credits. Fulfills technical elective requirement for M&AE students. Prerequisite: Heat and Mass Transfer (BEE 350, Biological and Environmental Transport Processes, or CHEM E 324, Heat and Mass Transfer, or M&AE 324, Heat Transfer, or equivalent). For description, see BEE 453.

[M&AE 455(4550)] Introduction to Composite Materials (also CEE 477[4770], MSE & E 555[5550], T & A M 453[4535])
Fall. 4 credits. For description, see T & A M 455.

[M&AE 458(4580)] Introduction to Nuclear Science and Engineering (also ECE 413[4130], T & A M 413[4130])
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294
For description, see T & A M 413.

[M&AE 459(4590)] Introduction to Controlled Fusion: Principles and Technology (also ECE 484[4840], A & E P 484[4840])
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years.
For description, see ECE 484.

[M&AE 461(4610)] Entrepreneurship for Engineers (also ENGRG 461[4610], OR & E 453[4530])
Fall. 3 credits. Limited enrollment. Prerequisite: enrollment open to upper-class engineers or permission of instructor. Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

[M&AE 463(4630)] Neur muscular Biomechanics (also BME 463[4630])

[M&AE 464(4640)] Orthopaedic Tissue Mechanics
Spring. 3 credits. Prerequisites: ENGRD 202 Mechanics of Solids and M&AE 325 Mechanical Design and Analysis or permission of instructor. Offered alternate years.
Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and how these properties relate to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

[M&AE 466(4660)] Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 401[4010])
Fall. 3 credits. Prerequisites: ENGRD 202 Mechanics of Solids and previous course work in biology or permission of instructor. For description, see BME 401.

[M&AE 470(4701)] Finite Element Analysis for Mechanical and Aerospace Design
Spring. 3 credits. Fulfills senior design requirement for M&AE students. Limited enrollment. Prerequisite: senior standing or permission of instructor. Evenings exams
Term project.
Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature response solutions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB or ANSYS).
Selected mechanical and aerospace applications in the areas of trusses, beams, frames, heat transfer (steady state and transient), and elasticity (static and dynamic). Term project. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429. Co-meets with M&AE 570.

[M&AE 473(4730)] Practicum in Artificial Intelligence
Fall. 2 credits. Corequisite: CS 472. For description, see CS 473.

[M&AE 477(4770)] Engineering Vibrations
Spring. 3 credits. Prereq and corequisite: M&AE 326 or permission of instructor. Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived from Newton's law and Lagrange's equations. Eigenanalysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches are also investigated. Co-meets with M&AE 577.

[M&AE 478(4780)] Feedback Control Systems (also CHEM E 472[4720], ECE 472[4720])
Fall. 4 credits. Prerequisites: CHEM E 372 or M&AE 326 or permission of instructor. Analysis techniques, performance specifications, and analog-digital compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with M&AE 578.

[M&AE 479(4791)] Modeling and Simulation of Mechanical and Aerospace Systems
Fall. 4 credits, variable. Limited enrollment. Prerequisite: seniors in engineering or permission of instructor. Next offered 2008–2009.
Analysis and simulation of linear and nonlinear systems. Representation of discrete and distributed dynamical systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB or Mathematica) and special-purpose simulation software (such as Simulink). Selected applications from diverse fields. Term project. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

[M&AE 486(4861)] Automotive Engineering
Fall. 3 credits. Prerequisites: ENGRD 202 or permission of instructor. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. "Senior Design Elective" if students sign up for the corresponding section of M&AE 429.

[M&AE 490(4900)] Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. 4 variable credits. Prerequisite: undergraduate standing and permission of instructor. For the intended individual student or small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

[M&AE 498(4980)] Teaching Experience in Mechanical Engineering
Fall, spring. 3 variable credits. Prerequisite: permission of instructor. Students serve as teaching assistants in Cornell mechanical engineering classes or in local middle school technology classes. Cannot be used to fulfill M.E. technical elective or M.E. major elective requirements but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor.

[M&AE 500(5000)] Components and Systems: Engineering In a Social Context
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor, two
fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and solution for compressible fluids, sound waves, viscous flows, boundary layers, and potential flows.

M&AE 602(6202) Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: M&AE 601. Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds numbers. Potential flows, conformal transformations, slender-body theory, and Kelvin's impulse are included. Laminar viscous flows are studied, including fully diffused flows, exact solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Various stability problems associated with high Reynolds number flows are discussed. Finally, certain low Reynolds number flows associated with creeping motions or with ultra-small scale are described.

M&AE 606(6060) Spacecraft Dynamics and Mission Design
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 294 is required; some experience with MATLAB is expected. Offered alternate years; next offered 2008-2009. The focus is on spacecraft attitude dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data.

M&AE 608(6080) Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Behavior of an ideal gas is considered at the microscopicscale. Introduction to kinetic theory—the velocity distribution function, molecular collisions, and Boltzmann equation; to quantum theory—postulates of quantum mechanics, rigid rotor, harmonic oscillator, one-electron and multi-electron atoms and molecular structure; and to statistical mechanics—the partition function, relation to thermodynamics, calculations of thermodynamic properties.

M&AE 624(6240) Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisite: course in fluid dynamics (e.g., M&AE 523) or permission of instructor. Graduate version of M&AE 524. Introduction to fluid mechanics at micro- and nanoscale. Emphasis on fundamental physical phenomena and processes in micro- and nanoscale systems. Topics include fluid mechanics, hydrodynamics, heat transfer, and thermodynamics.

M&AE 631(6310) Turbulence and Turbulent Flows
Fall. 4 credits. Prerequisite: M&AE 601 (Fluid Dynamics and Aerodynamics), graduate standing, or permission of instructor. Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-layer and free boundary flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

M&AE 632(6320) Multiphase Turbulence: Particulates, Drops, and Polymer Suspensions
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. S. B. Pope. Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics covered include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of combustion at the level of M&AE 543, Combustion Processes, is useful but not required.

M&AE 645(6450) Turbulent Reactive Flow
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; Next offered 2008-2009. Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmospheric, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basic processes and governing equations, experimental techniques and observations, and a range of modeling approaches. Class meets, on average, twice per week.

M&AE 648(6480) Air Quality and Atmospheric Chemistry (also EAS 648H(6480))
Fall. 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent); graduate standing or permission of instructor. Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change. Students will examine the source-receptor relationship of major air pollutants with an emphasis on the physical and chemical fundamentals of atmospheric transport and transformation. Topics include photochemical smog, atmospheric aerosols, atmospheric transport and deposition, emissions from energy systems, introduction to air quality monitoring and modeling, and air quality management.

M&AE 650(6500) Evolutionary Computation and Design Automation (also CS 750H(750))
Fall. 4 credits. Not offered every year; next offered 2008-2009. For description, see CS 750.

M&AE 651(6510) Conduction and Radiation Heat Transfer
Fall, weeks 1-7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. An advanced treatment of heat conduction and thermal radiation from a theoretical perspective. Topics include: development of the conductive transport equation in integral and differential forms; the transport theorem; solutions for steady state and transient conditions; moving boundary effects including melting and solidification; introduction to radiation including black body and gray body radiation, the radiative transport equation and radiation in an absorbing and scattering medium. At the level of Conduction Heat Transfer, by V. Arpaci and Radiation Heat Transfer, by E. M. Sparr and R. D. Cess.

M&AE 652(6520) Convection Heat Transfer
Spring. 4 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. This course aims to provide a detailed look at convection heat transfer from a theoretical perspective. Topics include: conservation of linear momentum in integral and differential forms; boundary layer flows with emphasis on laminar conditions (some introduction to turbulence also included); internal and external flows; forced and free convection; theoretical solutions and scale analysis. At the level of Convection Heat Transfer, by A. Bejan, and Convective Heat and Mass Transfer, by W. M. Kays et al.

M&AE 655(6550) Composite Materials (also T&AM 655(6550), M&AE 655(6550))
Spring. 4 credits. For description, see T&AM 655.

M&AE 656(6560) Nanoscale Energy Transport and Conversion
Spring. 4 credits. Prerequisites: undergraduate heat transfer recommended (e.g., M&AE 324) or permission of instructor. Offered alternate years. This course aims to provide a detailed look at thermal, electrical, and optical energy transport and conversion mechanisms at the nanoscale. Topics to be covered include: a brief review of macroscopic heat transfer with emphasis on limits of macroscopic models, microscopic picture of energy carriers, material waves, energy quantization and energy states in solids, statistical thermodynamics and probability distribution functions as related to thermal energy storage, energy transport by waves and classical particle descriptions of transport processes and energy conversion and exchange processes between carriers. Emphasis will be put on practical applications and nanomaterials and nanoelectronic and nanophotonic devices and nanostructured energy conversion devices.
M&AE 663(6630) Neural Control (also ME 663(6633))

[M&AE 664(6640) Mechanics of Bone (also BME 664(6643))
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

M&AE 665(6650) Principles of Tissue Engineering (also BME 665(6650), MSE 665(6650))
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.

For description, see BME 665.

M&AE 675(6750) System Identification and Control

M&AE 676(6760) Model-Based Estimation

M&AE 678(6780) Multivariable Control Theory

M&AE 680(6801) Special Investigations in Mechanical and Aerospace Engineering

M&AE 695(6950) Special Topics in Mechanical and Aerospace Engineering

M&AE 711(7110) X-Ray Diffraction Methods for Engineering Materials

M&AE 712(7120) Mechanics of Materials with Oriented Microstructures

M&AE 714(7140) Computational Sensors: Information Technologies for Complex Continuum Systems

M&AE 715(7150) Atomic Modeling of Materials

M&AE 734(7340) Analysis of Turbulent Flows

M&AE 736(7360) Theory of Computational Aerodynamics

M&AE 737(7370) Computational Fluid Mechanics and Heat Transfer

M&AE 791(7910) Mechanical and Aerospace Research Conference

M&AE 799(7999) Mechanical and Aerospace Engineering Colloquium

M&AE 890(8900) Research in Mechanical and Aerospace Engineering

M&AE 990(9900) Research in Mechanical and Aerospace Engineering
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

**NUCLEAR SCIENCE AND ENGINEERING**

Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

**NS&E 484(4840) Introduction to Controlled Fusion: Principles and Technology** (also A&EP/ECE 484[4844], M&A 459[4590])

Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

For description, see ECE 484.

**NS&E 590(5900) Independent Study**

Fall, spring. 1–4 credits. Letter or S-U grades. Staff.

Independent study or project under guidance of a faculty member.

**NS&E 591(5910) Project**

Fall, spring. 1–6 credits. Staff.

Master of engineering or other project under guidance of a faculty member.

**OR&IE 431(4130) Introduction to Nuclear Science and Engineering** (also ECE/ M&A/T&AM 413(4130))

Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.

For description, see TRAM 413.

**OPERATIONS RESEARCH AND INFORMATION ENGINEERING**

**OR&IE 311(3800) Information Systems and Analysis**

Spring. 4 credits.

A systematic and hierarchical approach to the development of information systems, featuring business case justification, requirements analysis, user case analysis, functional analysis, structural design, object-oriented modeling, database design, verification and validation, and project schedule estimation. Graphical tools of analysis (e.g., the Unified Modeling Language) are emphasized. Examples are drawn from business and industrial processes. An integrative design project resulting in a detailed information system design specification (but not necessarily implementation) is required.

**OR&IE 312(3120) Industrial Data and Systems Analysis**

Spring, 4 credits. Prerequisite: ENGRD 270. Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural event-based programming (Visual Basic), and geographical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factory scheduling and simulation, materials planning, cost estimation, inventory planning, and quality engineering.

**OR&IE 320(3300) Optimization I**

Fall. 4 credits. Prerequisite: MATH 221 or 294.

Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

**OR&IE 321(3210) Optimization II**

Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.

A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

**OR&IE 350(3150) Financial and Managerial Accounting**

Fall and spring. 4 credits. Covers principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

**OR&IE 360(3500) Engineering Probability and Statistics I**

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.

A rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, accumulation functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, binomial, and hypergeometric. Uses basic concepts and techniques of random processes to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing, and reliability.

**OR&IE 416(4100) Design of Manufacturing Systems**

Fall 4 credits. Prerequisite: senior OR&IE student or permission of instructor. Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisors are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance are presented in lectures.

**OR&IE 430(4330) Discrete Models**

Fall. 4 credits. Prerequisites: OR&IE 320 and CS 211 or permission of instructor.

Next offered 2009–2010. Covers basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

**OR&IE 432(4320) Nonlinear Optimization**

Fall. 4 credits. Prerequisite: OR&IE 320.

Introduction to the practical and theoretical aspects of nonlinear optimization. Gives attention to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming, e.g., interior-point methods. Introduces methods of numerical linear algebra as needed.

**OR&IE 434(4300) Optimization Modeling**

Spring. 3 credits. Prerequisite: at least B− in OR&IE 321/521. Next offered 2009–2010. Emphasizes modeling complicated decision problems as linear programs, integer programs, or highly structured nonlinear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

**OR&IE 435(4350) Introduction to Game Theory**

Fall. 3 credits. Next offered 2008–2009. Broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; and games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**OR&IE 436(4360) A Mathematical Examination of Fair Representation**

Spring. 3 credits. Prerequisite: MATH 222 or 294 or permission of instructor. Next offered 2009–2010. Covers the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the United States) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. Indivisibility of seats leads us to interesting mathematical questions and a long, rich, and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to other realms where
indivisible resources are to be allocated among competing constituencies.

**OR&IE 437(4370) Computational Optimization**
Spring. 4 credits. Prerequisite: OR&IE 320. Corequisite: OR&IE 321.
Covers computational implementation and related methodology for solving large-scale, real-world integer programming problems. Primary emphasis is on branch-and-cut technology: pre-processing, cut strength, exact and heuristic separation techniques, branching strategies, multi-processing. Hands-on experience and application of state-of-the-art software for various discrete optimization models, including the traveling salesman, capacitated vehicle routing, and air crew scheduling models; experimentation with massively parallel computational implementation on the IBM BlueGene computer for the largest feasible subsystem problem.

**OR&IE 451(4150) Economic Analysis of Engineering Systems**
Spring. 4 credits. Prerequisites: OR&IE 320 and 350.
Topics include financial planning, including cash flow analysis and inventory flow models; engineering economic analysis, including discounted cash flows and taxation effects; application of optimization techniques, as in equipment replacement or capacity expansion models, and issues in designing manufacturing systems. Includes a student group project.

**OR&IE 452(4152) Entrepreneurship for Engineers (also M&AE/ENGR 461[4610])**
Fall. 3 credits. Prerequisite: upper-class engineers or permission of instructor. For description see M&AE 461.

**OR&IE 453(4154) Revenue Management**
Fall. 3 credits. Prerequisites: OR&IE 320 and 360, or permission of instructor. Next offered 2008–2009.
Covers revenue management concepts, models used in practice, and possible extensions; forecasting techniques, including time series methods, booking curves, and customer preference models; demand uncensoring; overbooking and optimization with emphasis on stochastic models of demand, benefit measurement, and technological issues; bid-prices and dynamic programming techniques; examples from the airlines, hotels, car-rental agencies, restaurants, and other industries.

**OR&IE 462(4250) Introductory Engineering Stochastic Processes II**
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Next offered 2009–2010.
Topics include stationary processes, martingales, random walks, and gambler’s ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**OR&IE 464(4540) Extreme Value Analysis with Applications to Financial Engineering**
Spring. 3 credits. Prerequisites: undergraduates and M.Eng. students; stochastic processes course at level of OR&IE 361; statistics course. Next offered 2009–2010.
Covers the basic models of extreme events used in hydrology, finance, insurance, environmental science (pollution controls), reliability, risk management. The course material integrates field of heavy tailed modeling and the implications of heavy tails in insurance and data networks.

**OR&IE 468(4600) Introduction to Financial Engineering**
Fall. 3 credits. Prerequisites: OR&IE 360 and 361.
This is an introduction to the most important notions and ideas in modern financial engineering, such as arbitrage, pricing, derivatives, options, interest rate models, risk measures, equivalent martingale measures, complete and incomplete markets, etc. Most of the time the course deals with discrete time models. This course can serve as a preparation for a course on continuous time financial models such as OR&IE 568.

Spring. 3 credits. Prerequisites: engineering math through MATH 244 and ENGR 270 and OR&IE 360. No previous knowledge of finance required.
Introduction to the applications of OR techniques, e.g., probability, statistics, and optimization, to finance and financial engineering. First reviews probability and statistics and then surveys asset returns, ARIMA time series models, portfolio selection, regression, CAPM, option pricing, GARCH models, fixed-income securities, resampling techniques, and behavioral finance. Also covers the use of MATLAB, MINITAB, and SAS for computation.

**OR&IE 474(4740) Statistical Data Mining I**
Fall. 4 credits. Prerequisites: OR&IE 360 and MATH 294 or equivalent; or permission of instructor.
Examines the statistical aspects of data mining, the effective analysis of large data sets. The first half of the course covers the process of building and interpreting statistical models in a variety of settings including multiple regression and logistic regression. The second half connects these ideas to techniques being developed to handle the large data sets that are now routinely encountered in scientific and business applications. Assignments are done using one or more statistical computing packages.

**OR&IE 476(4710) Applied Linear Statistical Models**
Spring, weeks 1–7. 2 credits. Prerequisite: ENGR 270.
Topics include multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**OR&IE 480(4800) Information Technology**
Spring. 4 credits. Pre- or corequisites: CS/ENGR 211 and either OR&IE 311 or 312. This course covers a variety of fundamental aspects of information technology. Topics may include: information transmission, storage, encryption and security; the value of information and the economics of information goods; databases, the Internet, World Wide Web, wireless and cellular networks, and peer-to-peer networks.

**OR&IE 481(4810) Delivering OR Solutions with Information Technology**
Spring. 3 credits. Prerequisite: OR&IE 480. Next offered 2008–2009.
Studies the ways in which technology is used to deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Real actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.

**OR&IE 483(4850) Applications of Operations Research and Game Theory to Information Technology**
Spring. 3 credits. Prerequisites: OR&IE 321, 361, or permission of instructor. Next offered 2009–2010. Covers a variety of operations research and game theoretic problems arising in information technology. Examples include web searching, networks, routing and congestion control, online auctions, and trust and reputations in electronic interactions.

**OR&IE 490(4990) Teaching in OR&IE**
Fall, spring. Variable credit. Prerequisite: permission of instructor.
Involves working as a TA in an OR&IE course. The instructor assigns credits (the guideline is 1 credit per four hours per week of work with a limit of 3 credits).

**OR&IE 499(4999) OR&IE Project**
Fall, spring. Variable credit. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the associate director.

**OR&IE 512(5140) Applied Systems Engineering (also CEE/CIS 504[5040], ECE 512[5120], M&A 591[5910])**
Fall. 3 credits. Prerequisite: permission of instructor.
For description, see SYSEN 510.

**OR&IE 513(5142) Systems Analysis Architecture, Behavior, and Optimization (also CEE/CIS 505[5050], ECE 513[5130], M&A 592[5920])**
Spring. 3 credits. Prerequisites: CEE/CIS 504, ECE/OR&IE 512, or M&A 592.
For description, see OR&IE 520.

**OR&IE 515(5100) Design of Manufacturing Systems**
Fall. 4 credits. Prerequisite: graduate students in engineering and business school, permission of instructor.
For description, see OR&IE 416.

**OR&IE 516(5110) Case Studies**
Fall. 1 credit. Prerequisite: M.Eng. students in OR&IE.
Presents students with an unstructured problem that resembles a real-world situation. Students work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

**OR&IE 518(5126) Supply Chain Management**
Spring. 3 credits. Prerequisites: one of the following: OR&IE 312, 416, or 562.
A supply chain is the scope of activities that deliver operations research methodology in real applications, including decision support systems, embedded operations research techniques, packaged software, and web-based techniques. Real actual applications are investigated. Labs introduce Visual Basic for Applications (VBA) for decision support.
spansing several corporations. Supply chain management focuses on the flow of products, information, and money through the supply chain. An overview of issues, opportunities, tools, and approaches. Emphasis is on business processes, system dynamics, control, design, and re-engineering. Covers the relationship between the supply chain and the company's strategic position relative to its clients and its competitors. Considers dimensions of intercorporate relationships with partners, including decision-making, incentives, and risk.

The first part of this course treats regression methods to model seasonal and nonseasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

The course covers various interest rate financial instruments, with particular emphasis on Mortgage Backed Securities. Develops real market-techniques for pricing, trading, and assessing relative value. Explores how specific interest rate and volatility views can be expressed and/or leveraged via trading strategies.

Current topics dealing with applications of financial engineering and the mathematical tools required to use them, starting with the Black-Scholes model. Driven by the problem of derivative security pricing and hedging in this model, the course develops a practical knowledge of stochastic calculus from an elementary standpoint, covering topics including Brownian motion, martingales, the Ito formula, the Feynman-Kac formula, and Girsanov transformations.
models. Estimation of diffusion models. Data mining in financial engineering. Estimation of risk measures. Bayesian statistics. Students will be instructed in the use of MATLAB and R software; prior knowledge of MATLAB is helpful but not required. This course is intended for M.Eng. students in financial engineering and assumes some familiarity with finance and financial engineering. Students not in the M.Eng. program are welcome if they have a suitable background. Students with no background in finance should consider taking OR&IE 473 instead.

OR&IE 575(4711) Experimental Design
Spring; weeks 8-14 (alternates with 576). 2 credits. Prerequisite: OR&IE 476. Covers randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorial designs, response surfaces, Latin squares, split plots, and Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

OR&IE 576(4712) Regression
Spring; weeks 8-14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476. Next offered 2009-2010. Covers nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, and regression with correlated errors. Computing in MINITAB or SAS.

OR&IE 577(5770) Quality Control
Fall. 3 credits. Prerequisite: ENGRD 270. Next offered 2009-2010. Covers concepts and methods for process and acceptance control, control charts for variables and attributes; process capability analysis; acceptance sampling; continuous sampling plans; life tests; and use of experimental design and Taguchi methods for off-line control.

OR&IE 580(4580) Monte Carlo Simulation
Fall, weeks 1-7 and 16-20. 2 credits. Prerequisite: OR&IE 360. May be taken concurrently and computing experience, or permission of instructor. Introduction to Monte Carlo simulation. Emphasizes tools and techniques needed in practice. Random variate, vector, and process generation, input and output analysis, modeling.

OR&IE 581(4581) Discrete-Event Simulation
Fall; weeks 8-14. 2 credits. Prerequisite: OR&IE 580. Introduction to discrete-event simulation. Emphasis on tools and techniques needed in practice. Modeling using a discrete-event simulation language, output analysis.

OR&IE 582(4582) Monte Carlo Methods in Financial Engineering
Fall; weeks 8-14. 2 credits. Prerequisite: OR&IE 580. An overview of Monte Carlo methods as they apply in financial engineering. Generating sample paths. Variance reduction (including quasi random number), discretization, and sensitivities. Applications to derivative pricing and risk management.

OR&IE 597(5940) Systems Engineering Project
Fall, R grade only, spring, 5 credits. Prerequisite: M.Eng. students enrolled in systems engineering option. Substantial, group-based design project that has a strong systems design component. The project must be approved by an ASE 1 instructor before the student enrolls in the course. The following projects are pre-approved: FSAE, HEV, Robocup, Brain. A formal report is required.

OR&IE 598(5910) Master of Engineering Manufacturing Project
Fall, R grade only, spring, 5 credits. Prerequisite: M.Eng. students enrolled in manufacturing option. Project course coordinated by Center for Manufacturing Enterprise.

OR&IE 599(5980) Project
Fall; weeks 8-14. 2 credits. Prerequisite: OR&IE 630. Next offered 2009-2010. Rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis; network flow problems and algorithms; theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' lemma, and exploiting special structure in the simplex method and computational implementation.

OR&IE 631(6310) Mathematical Programming I

OR&IE 632(6320) Nonlinear Programming
Spring. 3 credits. Prerequisite: OR&IE 630. Next offered 2009-2010. Necessary and sufficient conditions for constrained and constrained optimality. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty, and barrier methods).
Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discusses the basic ingredients—barrier functions, central paths, and potential functions—that go into the derivation of polynomial-time algorithms and various ways of combining them. Emphasizes recent mathematical theory and the modern viewpoints.

**OR&IE 636(6336) Integer Programming**

Fall, 3 credits. Prerequisite: OR&IE 630.

Topics include discrete optimization; linear programming in which the variables must assume integral values; theory, algorithms, and applications; and cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

**OR&IE 637(6327) Semidefinite Programming**

Spring, 3 credits. Prerequisite: OR&IE 655.

Covers linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory; eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality, computational methods, particularly interior-point algorithms.

**OR&IE 639(6329) Convex Analysis**

Spring, 3 credits. Prerequisite: OR&IE 630 or permission of instructor. Next offered 2009–2010.

**OR&IE 640(6500) Queues and Control of Queues: The Dynamic Programming Approach**

Fall, 3 credits.
We will cover basic queueing theory followed by an introduction to Markov decision processes (MDPs). The second part of the class will cover the use of MDPs to develop control policies in a variety of queueing settings.

**OR&IE 650(6500) Applied Stochastic Processes**

Fall, 4 credits. Prerequisite: one-semester calculus-based probability course.
Introduction to stochastic processes that present the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

**OR&IE 651(6510) Probability**

Spring, 4 credits. Prerequisite: real analysis at level of MATH 413; one-semester calculus-based probability course.
Covers sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, and conditioning.

**OR&IE 662(6540) Advanced Stochastic Processes**

Fall, 3 credits. Prerequisite: OR&IE 651 or equivalent.
Topics include Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

**OR&IE 670(6700) Statistical Principles**

Fall, 4 credits. Corequisite: OR&IE 650 or equivalent.
Topics include review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; and introduction to linear models.

**OR&IE 671(6710) Intermediate Applied Statistics**

Spring, 3 credits. Prerequisite: OR&IE 670 or equivalent. Next offered 2008–2009.
Topics include statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; and simultaneous inference. Applications in regression analysis and ANOVA models. Covers variance components and mixed models. Use of the computer as a tool for statistics is stressed.

**OR&IE 673(6630) Empirical and Computational Issues in Finance**

Spring, 3 credits. Prerequisites: stochastic processes course at level of OR&IE 650; statistics course at level of OR&IE 670, or permission of instructor. Next offered 2008–2009.
Designed to introduce students to existing empirical work in finance and to demonstrate the use of statistical, econometric, and numerical methods in the analysis of financial data. Topics include linear and nonlinear time series analysis, high-frequency data and market microstructure, continuous-time models, extreme values and quantile estimation, volatility models, and MCMC methods. Numerous applications using market data are presented. MATLAB programming skills are useful.

**OR&IE 674(6740) Statistical Learning Theory for Data Mining**

Fall, 3 credits. Prerequisites: probability course at level of OR&IE 651; statistics course at level of OR&IE 670.
Provides a thorough grounding in probabilistic and computational methods for statistical data mining. Covers a subset of the following topics from supervised and unsupervised data mining: the framework of learning, performance measures and model selection, methodology, theoretical properties and computing algorithms used in parametric and nonparametric methods for regression and classification. Frequentist and Bayesian methods.

**OR&IE 677(6720) Sequential Methods in Statistics**

Spring, 3 credits. S-U grades only.

The statistical theory of sequential design and analysis of experiments has many applications; including monitoring data from clinical trials in medical studies and quality control in manufacturing operations. This course covers classical sequential hypothesis tests, Wald’s SPRT, stopping rules, Kiefer-Weiss test, optimality, group sequential methods, estimation, repeated confidence intervals, stochastic curtailment, adaptive designs, and Bayesian and decision theoretic approaches.

THEORETICAL AND APPLIED MECHANICS

THEORETICAL AND APPLIED MECHANICS

SYSTE KES ENGINEERING

SYSEN 101(1010) Getting Design Right: A Systems Approach

Summer six-week session. 2 credits. Web-delivered. Instructor: Peter L. Jackson. This course is a freshman-level exposure to the product design process. The process of getting design right is sometimes called systems engineering. We explain the process using the acronym DMEODVI (Define, Measure, Explore, Optimize, Design, Verify, and Iterate). The process begins with understanding customer requirements and ends with validating the design against those requirements. It can then be iterated to greater levels of design detail. The focus is on detailed engineering design but rather on the process of ensuring that the detailed design will meet the needs of the customer. Students work through the steps of the process with reference to a particular product design challenge. The course is web-delivered using the Blackboard learning instruction system. Pre-requisites: high school mathematics and science, and familiarity with spreadsheet modeling (e.g., MS Excel).

SYSEN 510(5100) Applied Systems Engineering (also CEE/CS 504[5040], ECE/OR&IE 512[5120], M&E 593[5930]) Fall. 3 credits. Prerequisites: senior or graduate standing in an engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. Staff. For description, see SYSEN 510.

SYSEN 520(5200) Systems Architecture, Behavior, and Optimization (also CEE/CIS 505[5050], ECE 513[5130], OR&IE 514[5142]) Spring. 3 credits. Prerequisite: Applied System Engineering M&E 591, CEE/CIS 504, ECE/OR&IE 512, SYSEN 510 or 511, or permission of instructor. H. Topaloglu. This is an advanced course in the application of the systems engineering process to the architecture design and operation of complex systems. Topics include techniques for design, simulation, optimization, and control of complex systems. Case studies and system simulations in diverse areas provide context for the application of these techniques.

Students majoring in Systems Engineering enroll in SYSEN 520. Students taking the minor in Systems Engineering enroll in M&E 591, CEE 504, ECE 513, or OR&IE 513. Students in Continuing Education enrollment in SYSEN 521. Course is identical for all versions.

SYSEN 521(5210) Systems Architecture, Behavior, and Optimization Spring. 3 credits. Intended for off-campus students. Prerequisites: Applied Systems Engineering or permission of instructor. Staff. For description, see SYSEN 520.

SYSEN 530(5300) Systems Engineering for the Design and Operation of Reliable Systems (also M&E 593[5930]) Fall. 3-4 credits. Prerequisites: SYSEN 510 and either OR&IE 270 or CEE 304 or permission of instructors. H. O. Gao. Develops skills in the design, operation and control of systems for reliable performance. Focuses on four key themes: risk analysis (with a particular emphasis on risk assessment and risk characterization), modeling system reliability (including the development of statistical models based on accelerated life testing), quality control techniques and the optimization of system design for reliability. Students in Continuing Education enrollment in SYSEN 531. Lectures are identical for all versions.

SYSEN 531(5310) Systems Engineering for the Design and Operation of Reliable Systems Fall. 3-4 credits. Prerequisites: SYSEN 510 and either OR&IE 270 or CEE 304 or permission of instructor. H. O. Gao. Intended for off-campus students. For description, see SYSEN 530.

SYSEN 570(5700) Special Topics in Systems Engineering On demand. 1-4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 571(5710) Practicum in Systems Engineering On demand. 1-4 credits. Staff. Supervised study by individuals or small groups of one or more specialized topics not covered in regular courses.

SYSEN 590(5900) Systems Engineering Design Project 1-8 credits. Prerequisite: permission of instructor. Staff. A design project that incorporates the principles of systems engineering for a complex system. Projects are performed by teams of students working together to meet the requirements of the project.

SYSEN 680(6800) Topics in Systems Engineering Research Spring. 1.5 credits. Staff. Advanced topics in systems engineering research.

THEORETICAL AND APPLIED MECHANICS

BASICS IN ENGINEERING MATHEMATICS AND MECHANICS

(T&AM 118[1180] Design Integration: DVDs and iPads (also ENGR 118[1180]) Course in Introduction to Engineering series. For description, see ENGR 118.)

T&AM 202(2020) Mechanics of Solids (also ENGRD 202[2020]) Fall, spring. 4 credits Prerequisite: PHYS 112, co-registration in MATH 192, or permission of instructor. For description, see ENGRD 202.

T&AM 203[2030] Dynamics (also ENGRD 203[2030]) Fall, spring. 3 credits. Prerequisite: T&AM 202, co-registration in MATH 293, or permission of instructor. For description, see ENGRD 203.

ENGINEERING MATHEMATICS

T&AM 310(3100) Introduction to Applied Mathematics I Fall, spring. 3 credits. Prerequisites: MATH/T&AM 293 and 294. Covers initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Also covers special functions, linear partial differential equations. This is an introduction to probability and statistics. Use of computers to solve problems is emphasized.

(T&AM 311[3110]/5110) Introduction to Applied Mathematics II Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken independently of T&AM 310). Next offered 2008–2009. Introduction to complex variable theory, including Cauchy's integral theorem, Method of Residues, conformal mapping. Applications to inversion of transforms.

(T&AM 312[3120]/5120) Introduction to Mathematical Modeling Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 312 can be taken independently of 312). Next offered 2008–2009.
Mathematical modeling of physical and biological systems.

T&AM 610(6100) Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. Intensive course requiring more time than normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates by permission of instructor. Emphasis is on applications. Course covers linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, and complex variables.

T&AM 611(6110) Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis on applications. Course covers partial differential equations, transform techniques, tensor analysis, and calculus of variations.

T&AM 612(6120) Methods of Applied Mathematics III

T&AM 613(6130) Asymptotics and Perturbation Methods
Spring. 3 credits. Prerequisites: T&AM 610 and 611 or equivalent. Next offered 2008-2009. Topics include asymptotic behavior of solutions of linear and nonlinear and ODE: asymptotic expansion of integrals.

T&AM 617(6170) Advanced Mathematical Modeling—Biological and Fluid Dynamics
Spring. 3 credits. Next offered 2008-2009. Covers the fundamentals of fluid dynamics that rises in biological fluid dynamics such as the motion of the microscopic cells in low Reynolds number flows and unsteady aerodynamics of flapping flight and free falling objects.

T&AM 718(7180) Topics in Applied Mathematics

Continuum Mechanics

T&AM 455(4550) Introduction to Composite Materials [also CEE 477(4770), M&AE 455(4550), MSE 555(5550)]
Fall. 3 credits. Prerequisite: ENGRD 202. Topics include introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates, including computer software for design; and manufacturing methods and applications for composites. There is a group component: design and manufacturing paper, required, and a group laboratory on laminated component fabrication.

T&AM 591(5910) Master of Engineering Design Project I
Fall. 3–12 credits, variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 592(5920) Master of Engineering Design Project II
Spring. 3–12 credits, variable. M.Eng. (mechanics) project related to the master of engineering in mechanics.

T&AM 655(6550) Advanced Composite Materials [also CEE 676(6760), M&AE/MS&E 655(6550)]
Spring. 4 credits. T&AM 455/555 not a prerequisite but excellent background. Topics center around micromechanical and statistical (reliability) aspects of the strength and fatigue of fibrous composites. Topics include Hodgepeth shear-lag models of stress transfer around arrays of fiber breaks; statistical theories of composite failure to forecast reliability; stress distributions around holes and cuts in composite laminates; and compressive strength of composites.

T&AM 663(6630) Solid Mechanics I
Fall. 4 credits. Rigorous introduction to solid mechanics, emphasizing linear elasticity; tensors; deformations, rotations and strains; balance principles; stress, small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics, and boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 664(6640) Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663 or equivalent. Preparation for advanced courses in solid mechanics. Topics include singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; and three-dimensional elasticity.

T&AM 751(7510) Continuum Mechanics and Thermodynamics
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Next offered 2009–2010. Course topics include kinematics: conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; and finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752(7520) Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Review of governing equations. Topics include linearization and stability; constitutive inequalities; exact solution of special problems.

T&AM 753(7530) Fracture
Spring. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Also covers nonlinear rate-independent, small-scale deformation fracture mechanics; plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks; failure mechanisms of polymers, ceramics, composites, and metals; void growth, load transfer between fibers, crazing; fracture testing, fatigue testing, computation of stress intensity factors; and plate theory and fracture.

T&AM 754(7540) Topics in Continuum Mechanics

T&AM 757(7570) Inelasticity

T&AM 759(7590) Boundary Element Methods
Spring. 4 credits. Next offered 2009-2010. Topics include a variety of applications of the boundary element method. Examples are: potential theory, linear elasticity, elastoplasticity, micro and nano-electro-mechanical systems, meshfree boundary methods.

Dynamics and Space Mechanics

T&AM 570(5700) Intermediate Dynamics
Fall. 3 credits. Topics include Newtonian mechanics; motion in rotating coordinate systems; introduction to analytical mechanics; virtual work. Lagrangian mechanics; Hamilton’s principle; small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies; and gyroscopes. As time allows, introduction to orbital mechanics and chaos may be offered.

T&AM 578(5780) Nonlinear Dynamics and Chaos
Spring. 3 credits. Prerequisite: MATH/T&AM 293 or equivalent. Introduction to nonlinear dynamics, with applications to physics, engineering, biology, and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics include one-dimensional systems; bifurcations, phase plane; nonlinear oscillators; and Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671(6710) Hamiltonian Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Next offered 2008-2009. Course topics include review of Lagrangian mechanics, Kanes equations, Hamilton’s principle, Hamiltons canonical equations, Lie transforms, Hamilton-Jacobi theory; KAM theory; and Melnikovs method.

T&AM 672(6720) Celestial Mechanics [also ASTRO 579(6579)]
Spring. 3 credits. Next offered 2008-2009. Course topics include description of orbits; Hill curves, libration points; osculating orbital elements perturbation equations; effects of forces on satellite orbits, mechanics of planetary rings.

T&AM 673(6730) Mechanics of the Solar System [also ASTRO 571(6570)]
Spring. 3 credits. Prerequisite: advanced undergraduate course in dynamics. Next offered 2008-2009. Course topics include gravitational potentials, planetary gravity fields; free and forced rotations; Chandler wobble, polar wander, and damping of nutation.

T&AM 675(6750) Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Dynamics of nonlinear oscillators, including free and forced vibrations of both conservative and limit cycle oscillators, parametric excitation, systems of two, and N-coupled oscillators. Mathematical techniques include
perturbation methods, center manifold reduction, and differential-delay equations.

[T&M 768(7680) Elastic Waves in Solids
Fall. 3 credits.]

T&M 776(7760) Applied Dynamical Systems (also MATH 717(7170))
Spring. 4 credits.
For description, see MATH 717.

[T&M 796(7960) Mechanics of Terrestrial Locomotion
Spring. 3 credits. Prerequisite: T&M 570, M&AE 571, or A+ level understanding of any sophomore or above mechanics course. Next offered 2008–2009. The energetics and stability of people, other legged animals and robots are studied by mechanical analysis of simple models.]

Special Courses, Projects, and Thesis Research

T&M 413(4130) Introduction to Nuclear Science and Engineering (also ECE 413(4130), A&EP 413(4130), NS&E 413, M&AE 458(4580))
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.
Designed for juniors or seniors in any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. Also can serve as a basic course for those who do not intend to continue in the field. Introduces the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics.

T&M 491–492(4910–4920) Project in Engineering Science
491. Fall. 492. spring. 1–4 credits TIA.
Projects for undergraduates under the guidance of a faculty member.

T&M 796–800(7960–8000) Topics in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits TIA.
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&M 890(8900) Master's Degree Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits TIA.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&M 990(9900) Doctoral Research in Theoretical and Applied Mechanics
Fall, spring. 1–15 credits TIA.
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

FACULTY ROSTER

Abel, John F., Ph.D., U. of California, Berkeley. Prof. (Emeritus). Civil and Environmental Engineering, Emeritus
Afshari, Ehsan, Ph.D., California Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering
Albinesi, David H., Ph.D., U. of Massachusetts. Assoc. Prof., Electrical and Computer Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Allmendinger, Richard, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Allmon, Warren D., Ph.D., Harvard U. Adjunct Assoc. Prof., Earth and Atmospheric Sciences
Andronicos, Christopher L., Ph.D., Princeton U. Assoc. Prof., Earth and Atmospheric Sciences
Anthes, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
Apanasovich, Tatiana Y., Ph.D., Texas A&M U. Assoc. Prof., Operations Research and Information Engineering
Appel, Alyssa B., Ph.D., Johns Hopkins U. Assoc. Prof., Electrical and Computer Engineering
Aquino, Wilkens, Ph.D., U. of Illinois. Asst. Prof., Civil and Environmental Engineering
Archer, Lynden A., Ph.D., Stanford U. Assoc. Prof., Mechanical and Aerospace Engineering
Armstrong, Helen, Ph.D., U. of Sussex (U.K.). Assoc. Prof., Computer Science
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering
Avdelidis, Chris, Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Baeumner, Antje J., Ph.D., U. of Stuttgart (Germany). Assoc. Prof., Biological and Environmental Engineering
Bailey, Graeme, Ph.D., U. of Birmingham (U.K.). Prof., Computer Science
Baker, Shefford P., Ph.D., Stanford U. Assoc. Prof., Materials Science and Engineering
Bala, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Computer Science
Barnes, William C., Ph.D., U. of Arizona. Prof., Earth and Atmospheric Sciences
Bartel, Donald L., Ph.D., U. of Iowa. Prof., Mechanical and Aerospace Engineering and Biomedical Engineering
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
Bassett, William A., Ph.D., Columbia U. Prof. (Emeritus). Earth and Atmospheric Sciences
Bhavikatti, Sanjiv, Ph.D., U. of California, Berkeley. Asst. Prof., Electrical and Computer Engineering
Bird, John M., Ph.D., Rensselaer Polytechnic Inst. Prof. (Emeritus). Earth and Atmospheric Sciences
Birman, Kenneth P., Ph.D., U. of California, Berkeley. Prof., Computer Science
Blow, James J., Ph.D., Cornell U. Assoc. Prof., Civil and Environmental Engineering
Blakely, John M., Ph.D., Glasgow U. (U.K.). Herbert Fisk Johnson Professor of Engineering, Materials Science and Engineering
Bland, Robert G., Ph.D., Cornell U. Prof., Operations Research and Information Engineering
Bloom, Arthur L., Ph.D., Yale U. Prof. (Emeritus). Earth and Atmospheric Sciences
Bojanczyk, Adam M., Ph.D., U. of Warsaw (Poland). Assoc. Prof., Electrical and Computer Engineering
Bonassar, Lawrence J., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biomedical Engineering and Mechanical and Aerospace Engineering
Booker, John F., Ph.D., Cornell U. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
Boock, Joel D., Ph.D., Massachusetts Inst. of Technology. Director and Prof., Applied and Engineering Physics
Brown, Larry D., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Bruzewicz, Wilfred H., Ph.D., U. of California, Davis. William L. Lewis Prof. of Engineering. Civil and Environmental Engineering
Buhrman, Robert A., Ph.D., Cornell U. John Edison Sweet Professor of Engineering, Applied and Engineering Physics
Burns, Joseph A., Ph.D., Cornell U. Irving Porter Church Professor of Engineering, Theoretical and Applied Mechanics, Astronomy
Burtscher, Martin, Ph.D., U. of Colorado, Boulder. Assoc. Prof., Electrical and Computer Engineering
Butcher, Jonathan, T., Ph.D., Georgia Inst. of Technology. Asst. Prof., Biomedical Engineering
Cady, K. Bingham, Ph.D., Massachusetts Inst. of Technology. Prof., Theoretical and Applied Mechanics; Nuclear Science and Engineering
Callister, John R., Ph.D., Cornell U. Kinzelberg Professor of Entrepreneurship in Engineering
Campbell, Bill E., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mechanical and Aerospace Engineering
Cardic, Claire, T. Ph.D., U. of Massachusetts, Amherst. Assoc. Prof., Computer Science
Caruana, Richard, Ph.D., Carnegie Mellon U. Asst. Prof., Computer Science
Cahill, Lawrence M., III, Ph.D., Princeton U. Prof., Earth and Atmospheric Sciences
Caughey, David A., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Chang, Hsiao-Dong, Ph.D., U. of California, Berkeley. Prof., Electrical and Computer Engineering
Cisne, John L., Ph.D., U. of Chicago. Prof., Earth and Atmospheric Sciences
Clancy, Paulette, Ph.D., Oxford U. (U.K.). Prof., Chemical and Biomolecular Engineering
Cohen, Claude, Ph.D., Princeton U. Prof., Chemical and Biomedical Engineering
Collins, Lance K., Ph.D., U. of Pennsylvania, Prof., Mechanical and Aerospace Engineering
Colucci, Stephen J., Ph.D., SUNY Albany. Prof., Earth and Atmospheric Sciences
Corstange, Robert L., Ph.D., U. of Wisconsin. Prof., Computer Science
Cook, Kerry H., Ph.D., North Carolina State U. Prof., Earth and Atmospheric Sciences
Cook, John H., Ph.D., North Carolina State U. Prof. (Emeritus). Biological and Environmental Engineering
Cool, Terrill A., Ph.D., California Inst. of Technology. Prof., Applied and Engineering Physics
Cowen, E. A., Ph.D., Stanford U. Assoc. Prof., Civil and Environmental Engineering
Craighead, Harold G., Ph.D., Cornell U. Charles W. Lake Jr. Prof. of Engineering, Applied Engineering and Physics
Crank, Edmund T., Ph.D., Cornell U. Emeritus, Theoretical and Applied Mechanics
Daniel, Susan, Ph.D., Lehigh U. Assoc. Prof., Chemical and Biomolecular Engineering
Datta, Ashim K., Ph.D., U. of Florida. Prof., Electrical and Computer Engineering
Dawson, Paul R., Ph.D., Colorado State U. Prof., Mechanical and Aerospace Engineering
deBoer, P. C, Tobais, Ph.D., U. of Maryland. Graduate School Prof. (Emeritus), Mechanical and Aerospace Engineering
DeGaetano, Arthur T., Ph.D., Rutgers U. Assoc. Prof., Chemical and Biomolecular Engineering
Delchamps, David F., Ph.D., Harvard U. Assoc. Prof., Electrical and Computer Engineering
DeLisa, Matthew, Ph.D., U. of Maryland. Asst. Prof., Chemical and Biomolecular Engineering
Derry, Louis, Ph.D., Harvard U. Assoc. Prof., Earth and Atmospheric Sciences
Diamentis, Peter, Ph.D., U. of California, San Diego. Asst. Prof. Civil and Environmental Engineering
Dick, Richard J., Ph.D., U. of Illinois. Prof. (Emeritus), Civil and Environmental Engineering
Dieckmann, Rudiger, Ph.D., U. of Hannover (Germany). Prof., Materials Science and Engineering
Doerchuk, Peter C., Ph.D., Massachusetts Inst. of Technology/M.D., Harvard U. Prof., Biomedical Engineering and Electrical and Computer Engineering
Duncan, T. Michael, Ph.D., California Inst. of Technology. Assoc. Prof., Chemical and Biomolecular Engineering
Dvosky, Leonard B., M.A., U. of Michigan. Prof. (Emeritus), Civil and Environmental Engineering
Earls, Christopher J., Ph.D., U. of Minnesota. Assoc. Prof., Civil and Environmental Engineering
Eastman, Loren F., Ph.D., Cornell U. Given Foundation Professor of Engineering, Electrical and Computer Engineering
Engstrom, James R., Ph.D., California Inst. of Technology. Prof., Chemical and Biomolecular Engineering
Erickson, David C., Ph.D., U. of Toronto (Canada). Asst. Prof., Mechanical and Aerospace Engineering
Escobedo, Fernando A., Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Chemical and Biomolecular Engineering
Estoff, Lara A., Ph.D., Yale U. Asst. Prof., Materials Science and Engineering
Fan, K.Y. Daisy, Ph.D., Cornell U. Asst. Prof., Computer Science
Fine, Terrence L., Ph.D., Harvard U. Prof., Electrical and Computer Engineering
Fischbach-Tschil, Claudia, Ph.D., U. of Regensburg (Germany). Asst. Prof., Biomedical Engineering
Fisher, Elizabeth M., Ph.D., U. of California, Berkeley. Assoc. Prof., Mechanical and Aerospace Engineering
Friedman, Eric, Ph.D., U. of California, Berkeley. Assoc. Prof., Operations Research and Information Engineering
Fuchs, W. Kent, Ph.D., U. of Illinois, Urbana-Champaign. Prof., Electrical and Computer Engineering
Gaeta, Alexander L., Ph.D., U. of Rochester. Prof., Applied and Engineering Physics
Gao, H. Oliver, Ph.D., U. of California, Davis. Asst. Prof., Civil and Environmental Engineering
Garcia, Ephrahim, Ph.D., SUNY Buffalo. Assoc. Prof., Mechanical and Aerospace Engineering
Garwood, John R., Ph.D., Stanford U. Prof., Neck Prof. of Engineering, and Director Materials Science and Engineering
Gehreke, Johannes, Ph.D., U. of Wisconsin, Madison. Assoc. Prof., Computer Science
George, Albert R., Ph.D., Princeton U. John F. Carr Prof. of Mechanical Engineering, Mechanical and Aerospace Engineering
Giannelis, Emmanuel, Ph.D., Michigan State U. Walter R. and Joan J. Haller Prof. of Engineering, and Director Materials Science and Engineering
Gorewit, Ronald C., Ph.D., Michigan State U. Prof., Biological and Environmental Engineering
Gossett, James M., Ph.D., Stanford U. Prof., Civil and Environmental Engineering
Gouldin, Frederick C., Ph.D., Princeton U. Prof., Mechanical and Aerospace Engineering
Greenberg, Donald P., Ph.D., Cornell U. Prof., Computer Science
Greene, Charles, Ph.D., U. of Washington. Prof., Earth and Atmospheric Sciences
Gries, David, Dr. rer. nat. Munich Inst. of Technology (Germany). Prof., Computer Science
Grieg, Arne, M.D., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Information Engineering
Hao, Zeyun, Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Haith, Douglas A., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Hallman, Darius O., Ph.D., U. of California, Berkeley. Prof., Mathematics and Theoretical and Applied Mechanics
Hao, Zeyun, Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Hammer, David A., Ph.D., Cornell U. John J. Carlson Ward Prof. of Nuclear Energy Engineering; Electrical and Computer Engineering
Hartmann, Juris, Ph.D., California Inst. of Technology. Walter R. Read Professor Emeritus of Computer Science
Healey, Timothy J., Ph.D., U. of Illinois. Prof., Theoretical and Applied Mechanics
Heine, Sheila S., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Henderson, Shane, Ph.D., U. of Michigan. Assoc. Prof., Operations Research and Information Engineering
Hess, Peter, Ph.D., U. of Washington. Assoc. Prof., Biological and Environmental Engineering
Hopcroft, John E., Ph.D., Stanford U. IBM Professor of Engineering and Applied Mathematics, Computer Science
Hover, Kenneth C., Ph.D., Cornell U. Prof., Civil and Environmental Engineering
Hu, Chung Y., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics, Mechanical and Aerospace Engineering
Hunter, Jean B., Ph.D., Columbia U. Assoc. Prof., Biological and Environmental Engineering
Hutter, Daniel, Ph.D., Massachusetts Inst. of Technology. Prof., Computer Science/Johnson Graduate School of Management
Hysell, David L., Ph.D., Cornell U. Prof., Earth and Atmospheric Sciences
Ingraffea, Anthony R., Ph.D., U. of Colorado. Dwight B. Baum Prof. in Engineering, Civil and Environmental Engineering
Irwin, Lynne H., Ph.D., Texas A&M U. Assoc. Prof., Biomedical Engineering and Applied Mechanics
Jackson, Peter L., Ph.D., Stanford U. Prof., Operations Research and Information Engineering
James, Doug L., Ph.D., U. of British Columbia (Canada). Assoc. Prof., Computer Science
Jarrow, Robert A., Ph.D., Massachusetts Inst. of Technology. Prof., Operations Research and Information Engineering
Jenkins, James T., Ph.D., Johns Hopkins U. Walter S. Carpenter Jr. Prof. of Engineering, Theoretical and Applied Mechanics
Jewell, William J., Ph.D., Stanford U. Prof., Biological and Environmental Engineering
Jin, Monsoo, Sc.D., Massachusetts Inst. of Technology. Asst. Prof., Biomedical Engineering
Joachims, Thorsten, Ph.D., U. of Dortmund (Germany). Assoc. Prof., Computer Science
Johnson, C. Richard, Jr., Ph.D., Stanford U. Prof., Electrical and Computer Engineering
Joo, Yong L., Ph.D., Stanford U. Assoc. Prof., Chemical and Biomolecular Engineering
Jordan, Teresa, Ph.D., Stanford U. Prof., Earth and Atmospheric Sciences
Kai, Edwin C., Ph.D., U. of Illinois, Champaign-Urbana. Assoc. Prof., Electrical and Computer Engineering
Kargar, Daniel E., Ph.D., U. of California (S. I.O). Prof. (Emeritus), Earth and Atmospheric Sciences
Kay, Robert W., Ph.D., Columbia U. Prof., Electrical and Computer Engineering
Keich, Uri, Ph.D., Courant Inst. Asst. Prof., Computer Science
Kelley, Michael C., Ph.D., U. of California, Berkeley. James A. Friend Family Distinguished Prof. Prof., Electrical and Computer Engineering
Kittner, Paul M., Ph.D., U. of Minnesota. Prof., Electrical and Computer Engineering
Kirby, Brian L., Ph.D., Stanford U. Assoc. Prof., Mechanical and Aerospace Engineering
Kleinberg, Jon M., Ph.D., Massachusetts Inst. of Technology. Prof., Computer Science
Kleinberg, Robert, Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Computer Science
Schied, Alexander, Ph.D., U. of Bonn (Germany). Assoc. Prof., Operations Research and Information Engineering
Schneider, Fred B., Ph.D., SUNY Stonybrook. Prof., Computer Science
Schuler, Richard F., Ph.D., Brown U. Prof., Civil and Environmental Engineering/Economics
Schwartz, David, Ph.D., SUNY Buffalo. Sr. Lect., Computer Science
Scott, Normon V., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Selman, Bart, Ph.D., U. of Toronto (Canada). Prof., Computer Science
Sengers, Phoebe, Ph.D., Carnegie-Mellon U. Asst. Prof., Science and Technology Studies/Computing and Information Science
Servetto, Sergio D., Ph.D., U. of Illinois, Champaign-Urbana. Asst. Prof., Electrical and Computer Engineering
Seyler, Charles E., Jr., Ph.D., U. of Iowa. Prof., Electrical and Computer Engineering
Shealy, J. Richard, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Shimoy, David B., Ph.D., U. of California, Berkeley. Computer Science and Operations Research and Information Engineering
Shoemaker, Christine A., Ph.D., U. of Southern California. Joseph F. Ripleys Prof. of Engineering, Civil and Environmental Engineering
Shuler, Michael L., Ph.D., U. of Minnesota. Samuel B. Eckert Prof. of Chemical and Biomolecular Engineering and Biomedical Engineering
Silcox, John, Ph.D., Cambridge U. (U.K.). David E. Burr Prof. of Engineering, Applied and Engineering Physics
Sirer, Emin Gun, Ph.D., U. of Washington. Asst. Prof., Computer Science and Information Engineering
Skorton, David J., M.D., Northwestern U. Prof., Biomedical Engineering and Weill Medical College
Slater, Floyd O., Ph.D., Purdue U. Assoc. Prof. (Emeritus). Civil and Environmental Engineering
Spanswick, Roger M., U. of Edinburgh (U.K.). Prof., Biological and Environmental Engineering
Spencer, Michael G., Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Steding, Jery R., Ph.D., Harvard U. Prof., Civil and Environmental Engineering
Stein, Paul H., Ph.D., Johns Hopkins U. Prof., Chemical and Biomolecular Engineering
Steinhaus, Tammo S., Ph.D., U. of Wisconsin., Prof., Biological and Environmental Engineering
Stewart, Harry E., Ph.D., U. of Massachusetts, Amherst. Assoc. Prof., Civil and Environmental Engineering
Strogatz, Steven H., Ph.D., Harvard U. Prof., Theoretical and Applied Mechanics
Stroock, Abraham D., Ph.D., Harvard U. Asst. Prof., Operations Research and Information Engineering
Sub, Goo-kwon E., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Electrical and Computer Engineering
Tang, Chang L., Ph.D., Harvard U. Spencer T. Quiin Professor of Engineering. Electrical and Computer Engineering
Tardos, Eva, Ph.D., Eotvos U. (Hungary). Prof., Computer Science and Operations Research and Information Engineering
Teitelbaum, R. Tim., Ph.D., Carnegie-Mellon U. Assoc. Prof., Computer Science
Thomas, Robert J., Ph.D., Wayne State U. Prof., Electrical and Computer Engineering
Thompson, Michael O., Ph.D., Cornell U. Assoc. Prof., Materials Science and Engineering
Timmons, Michael B., Ph.D., Cornell U. Lester B. Knight Director of the Knight Laboratory, Prof., Biological and Environmental Engineering
Tiwari, Sandip, Ph.D., Cornell U. Prof., Electrical and Computer Engineering
Todd, Michael J., Ph.D., Yale U. Leon C. Welch Prof. Operations Research and Information Engineering
Tong, Lang, Ph.D., U. of Notre Dame. Prof., Electrical and Computer Engineering
Topaloglu, Huseyin, Ph.D., Princeton U. Asst. Prof., Operations Research and Information Engineering
Torrance, Kenneth E., Ph.D., U. of Minnesota. Joseph C. Ford Professor, Mechanical and Aerospace Engineering
Turcotte, Donald L., Ph.D., California Inst. of Technology. Prof. (Emeritus). Earth and Atmospheric Sciences

Zimpel, Warren, Ph.D., Cornell U. Assoc. Prof., Biomedical Engineering
Students interested in professional and research master's and doctoral degrees at Cornell pursue their graduate studies through the Graduate School, which administers 96 graduate fields, ranging from aerospace engineering to zoology. Programs leading to degrees in law (J.D. and LL.M.) are administered by the Cornell Law School; the doctor of medicine (M.D.) is administered by Cornell's Weill Medical College in New York City; the doctor of veterinary medicine (D.V.M.) is administered by the College of Veterinary Medicine; and the master of business administration (M.B.A.) is earned through the Johnson Graduate School of Management.

THE GRADUATE SCHOOL
The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of master of arts, master of science, and doctor of philosophy but only such general requirements as best accomplish the aim of graduate study: a period of study in residence, mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system, the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee, who usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION
A successful applicant to the Graduate School must:
1. hold a baccalaureate degree or its equivalent granted by a faculty or university of recognized standing;
2. have adequate preparation for graduate work in the chosen field of study;
3. have fluent command of the English language;
4. present evidence of promise in advanced study and research; and
5. take the Graduate Record Examinations (GRE) General Test or other specific examinations required by the various fields of study.

Additionally, international applicants whose native language is not English must provide proof of competency in English as part of the admissions process. Proof can be:
1. the following minimum scores on the Test of English as a Foreign Language (TOEFL): writing, 20; listening, 15; reading, 20; and speaking, 22. Individual fields of study may set higher minimums.
2. evidence of at least two years of study in a college or university in a country where English is both the native language and the language of instruction.

Information about the TOEFL exam and the GRE—including examination times, dates, locations, and application forms—is available online from the Educational Testing Service (www.ets.org) or by postal mail at ETS, Princeton, NJ 08541, U.S.A.

DEADLINES
Each graduate field of study has specific deadlines for fall and spring admission. The earliest deadline is December 1; many deadlines fall in mid-January. Applications should be received no later than those published dates, which are available online at catalog.gradschool.cornell.edu.

INQUIRIES
Applicants should contact the fields of study for answers to specific questions about admission to their graduate programs. Contacts in the fields of study also can answer questions about facilities for advanced study and research, special requirements, and opportunities for fellowships and assistantships. Phone numbers, e-mail addresses, and other contact information are available online at catalog.gradschool.cornell.edu.

General questions about graduate study can be directed to Graduate School Student Services, 255-5820, or gradschool@cornell.edu or www.gradschool.cornell.edu or by writing to Graduate School, 145 Caldwell Hall, Cornell University, Ithaca, NY 14853-2602.
SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION
Michael D. Johnson, dean, E. M. Statler Professor
Steven A. Carrell, associate dean for academic affairs
Cathy Enz, associate dean of industry research and affairs
TBA, associate dean for business administration
Judi Brownell, dean of students
David Sherwyn, academic director, Center for Hospitality Research
Richard Penner, Richard J. and Monene P. Bradley Director for Graduate Studies
Lisa M. Shaffer, director of student services
Brad Walp, director of enrollment management and international programs
Neoma Mullens, associate director of admissions
Molly deRoos, associate director of career management

FACILITIES

Statler Hall Statler Hall is a unique building designed explicitly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, among its classrooms, lecture rooms, laboratories, library, computer center, beverage management center, newly refurbished auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed explicitly for the school's academic and executive education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation. In the fall of 2004, the school opened the Robert A. and Jun M. Beck Center, a 35,000-square-foot addition to Statler Hall. This $16.2 million expansion provides state-of-the-art classroom and meeting spaces, a computer laboratory, and teaching technologies that facilitate an interactive teaching style.

The School of Hotel Administration's Nestlé Library The Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 2,000 videotapes, and more than 600 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, real estate, and general hospitality business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including Business Source Premier, Proquest, Hotel Outlook, Mintel Marketing Intelligence, and the Hospitality and Tourism Index, a unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. More detailed information about the Nestlé Library can be found at www.nestlib.cornell.edu. In addition to offering an excellent collection of materials and access to extensive electronic resources, the Hotel School library provides instruction and research support to every student.

Statler Hotel and J. Willard Marriott Executive Education Center The Statler Hotel comprises 153 guest rooms, an executive education center, three restaurants, a lounge, and the university's faculty and staff club. The Statler Hotel is an independent, self-sustaining teaching unit that provides quality food and beverage, meeting, and lodging services to the local community and to campus visitors, such as parents and those who visit Cornell as part of the application process. The Statler Hotel provides a unique brand of hospitality that integrates the management theory taught at the Cornell Hotel School with practical expertise of the hotel's professional and student staff. The hotel offers part-time jobs to approximately 200 students each semester with priority given to students in the Hotel School. A select group of students participate in the Statler Leadership Development program and earn supervisory and management positions in the hotel.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in operations, management and organizational behavior, human resource management, finance/accounting, real estate development, food and beverage management, marketing, tourism, strategy, facilities management planning and design, communication, information systems, and law. Students also are encouraged to pursue a broad range of elective courses among the humanities, social sciences, and natural sciences as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the Hotel School's Student Handbook (available in the Office of Student Services, 180 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of bachelor of science. The requirements for that degree are:

1. completion of eight semesters in residence for those who entered as freshmen; semesters of residence for transfer students are determined by the amount of transfer credit awarded;
2. completion, with a minimum cumulative grade point average (GPA) of 2.0 (including a GPA of 2.0 in a full-time schedule of courses on campus in the final semester), of 120 required and elective credits (note: 120 credits does not include PE courses, as set forth in the table on the following page);
3. qualification in one language other than English. This requirement may be met by any one of the following: (a) three years of high school study of one foreign language; (b) score of 560 on Cornell Placement Test; (c) passing language course level 121 and 122 (8 credits) or the equivalent, and attaining a minimum grade of at least C- or "Satisfactory" in each (C or above for transfer credit from other institutions); or (d) passing language course level 123 or the equivalent;
4. completion of two units of practice credit; and
5. completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the Hotel School electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval from the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval science courses may be counted in the 21-credit group of free electives. No credit toward the degree is allowed for "00"-level courses, such as EDUC 005.
Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least 60 credits at Cornell University. In the core, transfer credit may be allowed against basic courses only (e.g., H ADM 121, 106). The communication courses (H ADM 165 and 365) are tailored specifically to the School of Hotel Administration, and thus, communication courses taken elsewhere generally are not a replacement for core courses.

Hotel elective courses may not be transferred, except from the Culinary Institute of America. Eighteen distributive electives may be transferred, and 21 credits in free electives may be transferred.

Concentration
While completing the Hotel School elective courses, undergraduates in the school may select a concentration.

Before selecting a field of concentration, students should consult the coordinator of instruction in that area during their sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative GPA of 3.0 in the concentration was attained.

Foreign Languages
Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, there is a second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found under "Modern Languages, Literature, and Linguistics" and under "Advanced Placement for Freshmen" in the College of Arts and Sciences section of this catalog.

Independent Study and Research
Students may conduct independent studies or research projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To enroll in an independent study or research project, students must obtain written permission from the school before the add deadline. See H ADM 497, 498, 499, 698, or 699 for more details.

Practice Credit Requirement
As part of the degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice credit requirement and submit verification thereof. Further details are set forth in the Student Handbook for Undergraduates in the School of Hotel Administration (available in the Office of Student Services, 180 Statler Hall).

Management-Intern Program
Hotel school juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the Management-Intern Program (MIP). Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students may receive a salary from the sponsoring organization. Positions are available in the United States and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made during the first semester of advance. Information meetings are held at the beginning of each semester and are open to all students. See H ADM 493, 494, and the student handbook for more details about the Management-Intern Program (available in the Office of Student Services, 180 Statler Hall).

Study Abroad
All students planning to study abroad must apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of this catalog.

The Hotel School represents the international aspects of the hospitality industry in many ways—from the large number of international students in its program to career opportunities throughout the world. To prepare for the global nature of the industry, students are encouraged to consider studying abroad in either the fall or spring semesters of their junior year (or, in some cases, both). While abroad, students have the opportunity to learn about other cultures, to become more proficient in a second (or perhaps third) language and, in those programs where internships are offered, to work in an international environment.

Students should start the investigation process early, including a consultation with the Hotel School study abroad advisor, 180 Statler Hall, as well as with the staff in the Cornell Abroad office, 300 Caldwell Hall. Requirements for college approval include a GPA of 3.0 or higher, good academic standing, registered full-time student status, and not being in one's final semester. Credits earned abroad are considered transfer credits and, as such, they count against the maximum of 60 transfer credits allowed. A maximum of 35 credits may be transferred from study abroad programs and students should plan on taking no less than 15 credits while abroad. Courses typically transfer into distributive and free electives. Credit for study abroad programs will be awarded only after successful completion (marks equivalent to a Cornell grade of C or higher) of the semester abroad and receipt of the official transcript by the college.

For further details on the application process and deadlines, see the "Cornell Abroad" section of this catalog or view the Cornell Abroad web site at www.cuabroad.cornell.edu/.

Culinary Institute of America Alliance
The School of Hotel Administration has an alliance with the Culinary Institute of America, which is located in Hyde Park, N.Y. Among other opportunities, Hotel School juniors and seniors are encouraged to apply for the Culinary Institute of America immersion program in January and during the summer. More information is available in the Office of Student Services, 180 Statler Hall.

Part-Time Study
Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or in other very extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last semester of study. Further details on part-time study may be found in the student's handbook (available in the Office of Student Services, 180 Statler Hall).

Grading System
Letter grades ranging from A to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each semester average as follows: A is equivalent to 4.0, B to 3.0, C to 2.0; D to 1.0; and F to 0. For good standing, a student must maintain a minimum average of 2.0. A maximum of 4 credits each semester may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade is equivalent to a C+ or above and an unsatisfactory grade is equivalent to a D+ or lower.

Students whose semester averages are at least 3.3 and who have taken at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

Course Requirements for the Bachelor of Science Degree
Note: The curriculum was revised during the 2003-2004 academic year, and the following requirements are for students entering the program in the fall of 2004 or later. Students who enrolled before the fall of 2004 should check their individual graduation requirements with the Office of Student Services, 180 Statler Hall.

Required courses
Operations: H ADM 105, 106, 201, 301, 305
Management and Organizational Behavior: H ADM 115
Human Resource Management: H ADM 211
Finance/Accounting: H ADM 121, 221, 222, 321
Food and Beverage Management: H ADM 236
Marketing, Tourism, and Strategy: H ADM 243, 441
Facilities Management, Planning, and Design: H ADM 255, 355
Managerial Communication: H ADM 165, 365, first-year writing seminar
Information Systems: H ADM 174, 275
Law: H ADM 387
Economics: H ADM 141
Specifically required credits

Typical Course Sequences

The following arrangements of courses tend to be more fixed during freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

**Freshman Year**
Typically, a freshman schedule will consist of 15 to 16 credits each semester, to include the following:

<table>
<thead>
<tr>
<th>Required Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>H ADM 105: Intro to Hotel Operations</td>
<td>2</td>
</tr>
<tr>
<td>H ADM 106: Intro to Food Service Operations</td>
<td>2</td>
</tr>
<tr>
<td>H ADM 115: Organizational Behavior and Interpersonal Skills</td>
<td>3</td>

**Course Schedule Information**

For up-to-date information about course scheduling, and to obtain a course supplement, contact the Office of Student Services, 180 Statler Hall, 255-6576.

**Organizational Management, Communication, and Law**

**Management and Organizational Behavior**

**H ADM 110(1110): Distinguished Lectures in Hospitality Management**

Fall. 1 credit. Elective. Author: Dean M. Johnson. The Dean's Distinguished Lecture Series is a long-standing Hotel School tradition that provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. In its 40-year history, the Dean's Distinguished Lecture Series has hosted the most influential and accomplished leaders from every segment of the hospitality industry. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unparalleled opportunity to learn and question how hospitality leaders view the current and future status of the industry.

**H ADM 115(1115): Organizational Behavior and Interpersonal Skills**

Fall and spring. 3 credits. Required. T. Hinkin, K. Walsh, J. Brownell, and T. Simons. This course focuses on how to manage people in the workplace. Students develop theoreic lenses for understanding people and organizations, as well as practical tools for accomplishing personal and organizational goals. Topics include: individual differences, conflicting management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group processes. Students learn through the use of case studies, self-assessment, experiential exercises, readings, discussions, papers, and group activities.

**H ADM 217(2217): Statler Leadership Development Program**

Fall. 1 credit. Elective. Prerequisite: one semester (200 hours) of employment at the Statler Hotel T. Hinkin. The Statler Leadership Development Program (SLDP) is a partnership among the Hotel School faculty, Statler Hotel management, and industry executives, who together teach and guide students how to become tomorrow’s leaders. The program enables students to progress through five different paid employment phases at the Statler Hotel, from entry level to student manager, and students who progress to the level of student manager become Statler Fellows and will travel to a major city for an all-expense-paid trip that includes forums with industry leaders, site visits of leading industry facilities, and cultural activities. Each phase requires approximately 200 hours of paid employment at the Statler Hotel and is completed through a certification process. Weekly Friday afternoon sessions (2:30–4:00 p.m.) with Statler Hotel managers include discussions, performance reflection, training sessions, and industry forums with hospitality leaders.

**H ADM 410(4410): Hospitality Management Seminar**

Fall. 1 credit. Elective. Limited to 30 Hotel seniors and graduate students. Corequisite: H ADM 110. Preregistered students or students wishing to add course who do not attend first class and who fail to notify the Secretariat in 146 Statler Hall of their absence before first class automatically will be moved to instructor’s waiting list. Students permitted to take course will have until F, Aug. 31, 2007, to add it. Failure to do so will result in their being dropped from course. Dean M. Johnson. H ADM 410 complements H ADM 110 by giving students the opportunity to interact with guest speakers and to participate in roundtable discussions on issues relating to the hospitality industry. Students will have the opportunity to gain a better understanding of industry trends, challenges, and opportunities.

**H ADM 411(4411): Negotiations in the Hospitality Industry**

Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: undergraduate standing. H ADM 115 or equivalent. T. Simons. Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-play...
exercises, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adapt their negotiating style to respond appropriately to others' different personalities and negotiation tactics.

H ADM 415(4415) Managerial - Leadership in the 21st Century
Spring, 1 credit. Elective. Due to the popularity of class, priority is given in the following order: seniors/second-semester grad., juniors/first-semester grad., nonemployees, extramural students, sophomores, freshmen, and Cornell employees. Space permitting, class may be added up until first day, but absolute deadline for dropping course is 12 noon, Feb. 8. F, Feb. 15 (1-4 P.M.), S, Feb. 16 (10 A.M.-6 P.M.), Sun, Feb. 17 (10 A.M.-4 P.M.), 2008, in Statler Auditorium. Attendance permitted in lieu of fee for credit. Fee for required notebook (charged to student's bursar bill, notebook distributed on first day of class): $55. K. Blanchard.

Managerial Leadership in the 21st Century helps students to observe and practice leadership in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop high-quality relationships between themselves and the people they support and depend upon (their boss, staff, peers/associates, and customers). When high-quality relationships exist, organizations tend to be characterized by high levels of integrity, customer satisfaction, employee empowerment, and organizational effectiveness. The concepts learned also help students create quality friendships and family relationships. A final paper is due three weeks after the last day of class.

H ADM 610(6610) M.M.H. Discussion - Forums in Hospitality Management
Fall, 1 credit. Required. M.M.H. students only. M. Johnson.

H ADM 611(6611) Negotiations in the Hospitality Industry
Spring, 3 credits. Elective. Limited to 30 students. Prerequisite: graduate standing; seniors by permission of instructor.

H ADM 710 or equivalent. T. Simons.

Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through the use of role-plays, discussions, and writing exercises, students develop into tough negotiators with whom people will want to continue doing business. Students become more comfortable with negotiations and develop their own personal negotiating style. Students also learn how to adjust their negotiating style to respond appropriately to others' personalities and negotiation tactics.

H ADM 614(6614) High-Performance Leadership
Spring, 3 credits. Elective. Limited to 30 students. Prerequisite: H ADM 710; graduate standing. Juniors and seniors should enroll in H ADM 314. T. Hinkin.

This course explores the nature of leaders and leadership from a variety of perspectives. Discussion of current articles in leadership prepares participants to be thoughtful leaders and discriminating consumers of leadership ideas. Topics include charismatic leadership, leadership characteristics, the exercise of power, symbolic communication, gender challenges, and leadership development. Leadership will be examined from the individual, small group, and organizational perspectives. Case studies further illustrate the application of course material. Students will assess their own leadership strengths and weaknesses in leadership development activities. Class members will have opportunities to interact with hospitality leaders and to gain a better understanding of the dynamics of leadership behavior.

H ADM 711(7711) Organizational Behavior
Fall, 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. T. Hinkin.

Organizational Behavior teaches how individuals, groups, and organizations interact within a complex, globalized service environment. Students develop interpersonal skills and gain a greater awareness of how their personal styles influence leadership and decision-making. They learn to motivate others, negotiate ethical decisions, manage teams, and lead organizations through change.

Human Resource Management
H ADM 210(2210) The Management of Human Resources
Spring, 3 credits. Elective. Prerequisite: Non-Hotel students. Not open to freshmen. L. Gasser.

Students engage in a practically oriented examination of the role of human resources management (HRM), starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors influencing HRM. The course examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. The course assumes a conceptual understanding of management and utilizes written case studies and videos.

H ADM 211(2211) Human Resource Management
Fall, spring, 3 credits. Required. Limited to 60 students per lec. Not open to freshmen or graduate students. Prerequisite: H ADM 115. B. Tracey and M. Sturman.

Human Resource Management provides students with a broad yet in-depth overview of the policies, practices, and procedures that can be used to attract, select, develop, and retain quality employees. A number of factors are considered, including HRM policies and practices and opportunities to apply course topics to substantive situations that students will face as future hospitality professionals. Students learn through the use of lectures, discussions, case studies, and videos.

H ADM 313(3313) Training and Development
Fall, 3 credits. Elective. Not open to freshmen. K. Walsh.
Training is one of the fundamental responsibilities of all hospitality managers, and this HR function plays an instrumental role in managing organizational change. In this course, you will learn how to design, implement, and evaluate both formal and informal training programs. In addition, we will examine factors beyond design and implementation that may influence training effectiveness. A variety of instructional technologies will be used in the course, including experiential activities that will enliven the learning process. The course will also include the opportunity to conduct a "live case study" of one or more training problems with a real hospitality firm.

H ADM 712(7712) Human-Resource Management
Spring, 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or written permission of instructor in advance of preenrollment. B. Tracey.

This graduate-level course covers the strategies that enable companies to attract, develop, and retain high-quality employees, which include selection, compensation, performance appraisal, and career management. In each of these areas, the focus is on the return on the human-resource investment.

Managerial Communication
H ADM 165(1165) Managerial Communication I
Fall, spring, 3 credits. Required. Limited to 18 students per lec. (Students who are required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in the Hotel School, including any semesters in Internal Transfer Division (ITD). Add/drop and section exchange required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop course by end of first week of classes. Course must be taken within first two semesters in the Hotel School, including any semesters in Internal Transfer Division (ITD). Add/drop and section exchange required. Priority given to Hotel students.

This course provides an introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Students develop abilities in analytical thinking and clear expression. Students will engage in the process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give oral presentations.

H ADM 364(3364) Corporate Communication
Spring, 3 credits. Elective. Limited to 20 students per lec.; priority given to Hotel students. Prerequisite: junior, senior, or graduate standing or written permission of instructor, for Hotel undergraduates, H ADM 165 or waiver, for non-Hotel undergraduates, completion of their college's writing requirement. A. Newman.

This course focuses on communicating challenging messages in business contexts. Writing assignments emphasize delivering both internal and external persuasive messages. Discussions focus on the use of technology in creating and maintaining a corporate image. Assignments often include business letters and memos written for various contexts, promotional materials, negative messages, and analytical reports requiring research.
H ADM 365(3365) Managerial Communication II
Fall, spring. 3 credits. Required. Limited to 22 students per class. Priority given to Hotel students. Prerequisites: Junior or senior standing for Hotel undergraduates. H ADM 165 and 115. D. Lennox and A. Newman.
This course provides a broad study of communication in a management context. Emphasis is on the significant role of communication in developing relationships that enable managers to achieve their goals. Students are presented with the theories and principles of persuasive communication that allow managers to influence professional audiences. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including one-on-one interaction, group work, and the formal development and presentation of ideas to larger audiences.

H ADM 462(4462) Intercultural Communication in the Hospitality Industry
Spring. 3 credits. Elective. Priority given to Hotel students. D. Lennox. This course is designed to help managers develop proficiency when communicating among and between people who do not share similar cultural assumptions. Students can expect to learn communication variables that differ among cultural groups, including the use of eye contact, body language, personal space, hierarchy, and time. Additional topics include persuasion and negotiation across cultures and the ethics of communication in international business. Students learn through the use of a blend of theory and practice. Activities include lectures, guided discussions, group projects, student and guest speaker presentations, and analysis of specific cross-cultural managerial challenges, with an emphasis on the service industry.

H ADM 761(7761) M.M.H. Managerial Communication
Fall. 3 credits. Required. Limited to 20 M.M.H. students per sec. D. Lennox and A. Newman. Managers use communication strategies that involve written and oral messages to solve problems and to accomplish professional goals within the workplace. The chief goal of this course is to help students become more competent, confident, and versatile communicators. Each student prepares clear and powerful messages—reports, oral presentations, letters, and memos—and learns to approach problems analytically and make thoughtful communication choices, some of which are situation-specific.

Law
H ADM 385(3385) Business Law I
Fall, spring. 3 credits. Elective. Open to Hotel School juniors, seniors, and graduate students and non-Hotel students. P. Wagner. Provides students with a presentation of three substantive areas of business law: contracts, intellectual property, and business organizations. Students read judicial opinions; learn to identify issues; and analyze the issues by applying legal principles.

H ADM 387(3387) Business and Hospitality Law
Fall, spring. 3 credits. Required. Prerequisite: Junior, senior, or graduate standing. D. Sherwyn. This course introduces students with an integrated presentation of employment discrimination, tort, and contract concepts as they apply to the legal aspects of hospitality management. Students examine relevant federal and state cases and statutes. The overall objective is to enable students to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions in the workplace.

H ADM 485(4485) Employment Discrimination Law and Union-Management Relations
Spring. 3 credits. Elective. Prerequisites: Junior, senior, or graduate standing. H ADM 387 or permission of instructor. D. Sherwyn. Anti-discrimination statutes and union-management relations are two of the most pervasive legal issues affecting the hospitality industry. Managers must take these issues into account whenever they make a personnel decision. This course provides students with an understanding of the discrimination law, a framework for complying with the law, a method for negotiating with the law, at the workplace, a method for maintaining positive employment relations, and an understanding of how to negotiate and administer a union contract.

H ADM 487(4487) Real Estate Law
Fall, spring. 3 credits. Elective. Prerequisite: Junior, senior, or graduate standing. Recommended: completion of H ADM 387. A. Kluza. Real Estate Law provides students with an understanding of the legal issues surrounding the ownership, transfer, and use and development of real estate. Students learn to recognize and to evaluate legal issues for the purpose of decision-making with respect to real estate, whether as a business executive, an entrepreneur, or an owner of personal real estate.

H ADM 489(4489) The Law of the Internet and e-Commerce
Fall. 3 credits. Elective. Prerequisite: Junior, senior, or graduate standing. A. Kluza. The Internet has changed how business is conducted in the hospitality industry. The change has raised numerous legal issues for courts and legislatures to debate. The purpose of this course is to allow students to identify and understand the rapid developments surrounding the law of electronic commerce. Topics include: how the Internet works; consumer protection; privacy, intellectual property (patent, trademark, and copyright); personal jurisdiction in cyberspace; and online contracts and legal disclaimers. This course introduces students to these emerging areas of the law and enables them to identify issues so that they can seek counsel intelligently and understand the law as it continues to evolve.

HOSPITALITY FACILITIES AND OPERATIONS

Food and Beverage Management
H ADM 236(2236) Culinary Theory and Practice
Fall. Spring. 4 credits. Required. Prerequisite: H ADM 106. Because this course is laboratory-based, students may not drop after first full week of class; during first week of class, students may drop only with permission of instructor and/or academic dean. T. O'Connor and R. Spies.
This course introduces the student to food- and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety. Students prepare recipes, menus, and production schedules. Students develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating them. They also are involved in a project in which they create menus; develop and standardize recipes; and complete a plan for a dining event. Completion of this course is a required experience in the Statler Hotel back-of-the-house.

H ADM 290(2290) Introduction to Culinary Arts
Fall, spring. 2 credits. Elective. Limited to 28 non-Hotel students; priority given to seniors and graduate students.
Preregistered students who do not attend first class are automatically dropped from instructor's record. Absolute drop deadline is W of second week of class. Students on wait list will be selected through a lottery system; all lottery participants must attend first week's class. Fee (includes cost of uniform and uniform cleaning): $75. G. Nordus.
This course focuses on the study of food groups and their methods of preparation, cooking, and presentation. The course is designed specifically for non-Hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Students are involved in food product identification, preparation, and service methods, and learning the professional language of food and cooking.

H ADM 440(4440) Introduction to Wines
Fall, spring. 2 credits. Elective. Prerequisite: Hotel juniors and seniors; and graduate students in all other colleges. Hotel students strongly encouraged to enroll in fall semester. Students are exempt from 21-year-old age requirement under Section 65 of New York State law. Preregistered students who do not attend first class and who fail to notify secretary in 274 Statler Hall of their absence before first class are automatically dropped from instructor's records. However, students still must drop course officially with their own college. Because of high demand for this course and consumption of wine, absolute drop deadline in fall for all students is F, Sept. 7, 2007, and drop deadline in spring is F, Feb. 1, 2008. Fee (includes cost of wine glasses and tasting kit): $50. No auditors. S. Mukoski.
Students will be introduced to the major wine-producing regions of the world and...
what consumers need to know to purchase wine at retail outlets and in a restaurant setting. Lecture topics include: flavor components in wine; pairing wine and food; responsible drinking; selecting quality and value. Gr. and. Wigner. Samples from a variety of countries, regions, and vineyards are evaluated.

**H ADM 431(4431) Wine and Food Pairing Principles and Promotion**

Fall, 2 credits. Elective. Limited to 20 Hotel School juniors, seniors, and graduate students. Prerequisite: H ADM 430. G. Pezzotti.

This course focuses on the pairing and creative marketing of wine and food. Students develop an understanding of regional and varietal wine styles, how food flavors can change a wine's flavor, and the promotion of wine and food. Topics include: wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, social event planning, and wine-list development. Students design and present wine and food tastings to industry guests.

**H ADM 432(4432) Contemporary Healthy Foods**

Fall, 3 credits. Elective. Prerequisite: H ADM 105 or equivalent. Priority given to 20 seniors and graduate students, others may enroll, space permitting. Cost of required field trip: $75. M. Tabacchi.

This course is designed to build a greater awareness and understanding among nutrition and foodservice professionals of the origins and manifestations of today's health-conscious and educated foodservice patron. Students gain an understanding of the marriage of nutrition and the imaginative, flavorful cuisine demanded by today's consumer. Emphasis is on the use of fresh produce, lean meats, and lack of fabricated diet foods. Creativity and nutrient density of foods served are very important components of menu design in this course. Key topics include the preparation, marketing, merchandising, and selling of healthy menus in the Statler Hotel.

**H ADM 435(4435) Selection, Procurement, and Supply Management**

Fall, first seven weeks of semester. 2 credits. Elective. Limited to 20 Hotel School juniors, seniors, and graduate students or permission of instructor. Add/drop deadline Aug. 31, 2007. R. Spies.

This course deals with contemporary management issues related to procurement activities within the hospitality industry. Focus is on both the food distribution industry and the hospitality industry so that students understand the role the distributor plays in the movement of food and supplies from the producer to the hospitality operator and how the creation of distribution partnerships serves to improve efficiency and reduce costs. Topics include: distribution channels and intermediaries in the supply chain; food distributor financial statement analysis; selection of suppliers; development of buying strategies; purchase timing and inventory management; the emerging role of the Internet; and e-procurement service providers.

**H ADM 436(4436) Beverage Management**

Spring, 3 credits. Elective. Prerequisite: Hotel junior, senior, or graduate standing. H ADM 430 (co-registration not allowed). S. Mutchkosi.

This course is designed for students who intend to pursue a career in food and beverage management. Course work deals specifically with the management of beverage operations. Lectures cover: dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lectures highlight industry trends and outlooks.

**H ADM 437(4437) Anheuser Busch Seminar in Quality Brewing and Fl. Beer**

Fall, spring, first seven weeks of semester. 2 credits. Elective. Prerequisite: Hotel students only; H ADM 430. One required local field trip (no fee). G. Pezzotti.

This course is designed for upper-level students who intend to pursue a career in the food and beverage industry. Students will advance their knowledge about beers in terms of managing such products in a restaurant setting or other foodservice outlet. Lecture topics include: the brewing process; sensory aspects of beer; international beer styles and types; marketing malt products; purchasing and distribution; storage and service; beer and wine pairings; staff training and education; cost controls; and third-party liability issues.

**H ADM 438(4438) Seminar in Culture and Cuisine**

Fall, 3 credits. Elective. Limited to 20 students. Prerequisite: H ADM 236 or permission of instructor. R. Spies.

This seminar explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through the use of readings, research, and meal preparation, students explore various aspects of food. The goal of this course is for students to develop an awareness of several international cuisines and to make comparisons and draw relationships among foodways of different cultures. Possibilities include the marriage of each cuisine into restaurant menus is discussed as well. Students write research reports, make oral presentations, and design and orchestrate the preparation of menus.

**H ADM 490(4490) Exploring Social Responsibility: Hunger and Homelessness**

Spring, 3 or 4 credits, variable. Elective. T. O'Connor.

Through lectures, class discussions, research, community service work, and a field placement practicum, students explore the economic, social, and political issues of our country's concern with housing and feeding disenfranchised and marginalized people. Students also explore public and private sector approaches to addressing poverty, hunger, and homelessness. This is a service learning course centered on community work experience. Students must choose one of three options. (1) students write in pairs or small groups with a local area agency that provides services for homeless or disadvantaged people. This field practicum comprises approximately 60 hours of community work during the semester, half of which is in direct service and half of which is project-based. (2) 4 credits. Students participate in the Alternative Spring Break through Cornell's PSC in various domestic or international locations. Students work in an agency that serves low-income, homeless, hungry, or disenfranchised people. Housing and transportation are arranged. This option may cost students up to $100. Students interested in this option must see the instructor at the time of pre-registration. (3) 3 credits. Students do community work in the Ithaca area with an agency that serves homeless, hungry, or disenfranchised people. Students work on a regular weekly basis for a minimum of 30 hours during the semester.

**H ADM 631(6631) Case Studies in Restaurant Management**

Spring, first seven weeks of semester. 2 credits. Elective. Deadline to drop is midnight of course. Prerequisite: graduate standing; seniors only by permission of instructor. A. Susskind.

Through a series of directed readings, case studies, and roundtable discussions with industry leaders, this course focuses on strategic issues in the food and beverage industry that affect the growth and development of multi-unit restaurant companies. In addition to the weekly scheduled seminar time, students are required to attend two additional receptions to honor the roundtable speakers. In class, students critically evaluate selected research related to multi-unit business management to serve as the basis for class discussion and to frame a broader understanding of leadership and growth strategies in the multi-unit restaurant business.

**Operations**

**H ADM 105(1105) Introduction to Hotel Operations**

Fall, spring, seven weeks. 2 credits. Required. Prerequisite: Hotel or ITD students. Corequisite: H ADM 106.

Students enrolled in Lec 1 of H ADM 105 take Lec 1 of H ADM 106 in same semester, and vice versa. R. McCarthy.

This course is designed to introduce students to the scope of the hotel industry and the organizational structure and operational mechanics of how the departments within the rooms division of an individual hotel operate. Understanding the scope of the industry involves understanding who the major players are and what market segments their brands serve. Students gain an understanding of how work is performed and how activities are coordinated within the rooms division and among other hotel departments.

**H ADM 106(1106) Introduction to Food Service Operations**

Fall, spring, seven weeks. 2 credits. Required. Prerequisite: Hotel or ITD students. Corequisite: H ADM 105.

Students enrolled in Lec 1 of H ADM 106 take Lec 1 of H ADM 105 in same semester, and vice versa. J LeBel.

Students are introduced to the principles of food and beverage management, beginning with an overview of the foodservice industry at large. Attention is focused on major industry segments, business practices, and
The catering and special events industries are among the fastest-growing segments within the hospitality industry. This course focuses on off-premise and on-premise catering for social and business functions and the management of large-scale independent events, such as sporting events, artistic performances, and product launches. Topics include: organizational structure; legal aspects of catering and special events management; production and service design; marketing and sales; catered function and special event planning and execution; staff recruitment and training; post-event analysis; financial success of catering; and special events businesses.

H ADM 408(4080) Introduction to Casino Operations
Fall. 2 credits. Elective. Limited to Hotel students. Cost of required field trip to Atlantic City: approximately $250.
R. McCarthy.
A vital part of the hospitality industry, casino gaming is one of the fastest-growing industries. This course focuses primarily on the operation and ownership of commercial casinos and the hotels attached to them. It is designed to introduce students to both the traditional and external casino environment. It looks at the historical development of gaming in America to understand how the industry has evolved to its present form. Students learn the organizational structure of a casino hotel, how it operates, and how it makes money. Students also gain an understanding of the different companies that own casino hotels and the current issues facing these companies. Topics include: casino marketing strategies and player rating systems; the social and economic impact of gaming and the various regulatory environments within which casinos operate; and how common casino games are played and the mathematics of the various games. Students build on their food and beverage and hotel knowledge to better understand the specific challenges facing casino hotel operators.

H ADM 495(4495) Implementing Strategies for Tying Wellness Practices to Corporate Wellness
Spring. 3 credits. Elective. Priority given to juniors, seniors, and graduate students; others may enroll, space permitting.
M. Tabacchi.
There is increasing evidence linking job-induced stress to overall health and happiness or lack thereof. Adding to workplace stress are the needs of its diverse and changing population. These stresses affect the financial health of the corporation as well as the psychological and physical health of the individual. The purpose of this course is to encourage future managers to evaluate the work environment and to enhance opportunities for diversity and inclusion. The course is designed for students focusing in food and beverage preparation. Students considering a career in the hotel or restaurant food and beverage environment or those who anticipate interacting with present-day culinary trends find the course especially beneficial. Over the course of the semester, the class works in groups and is responsible for the marketing, organization, planning, production, service, financial analysis, and accounting of three guest-chef specialty production nights. The chef is asked to recommend the evening's menu reflecting his or her culinary background and to work with the class in preparing the meal for the Cornell community using the Hotel School's facilities. A required final project analyzes the relative degree of success experienced during each guest-chef event. The analysis considers consumer reactions as an assessment of the appropriateness of the food and beverage management principles.
This applied statistics course is designed for professionals working in the hospitality industry. Topics include a thorough review of multiple linear regression, including model-building with partial regression plots and first-order interactions, and the use of categorical predictors and the interpretation of their coefficients, which are increasingly used to answer questions in finance, marketing, and other managerial areas. Other topics include: simple and multiple logistic regression; analysis of proportions; tests of independence with follow-up analysis; one- and two-factor ANOVA with follow-up analysis; and prediction and forecasting with neural networks used in operations and revenue management.

H ADM 602(6602) Spa and Spa Hotel and Resort Development and Management
Fall, spring. 3 credits. Elective. Limited to 33 Hotel School seniors and graduate students; others may enroll, space permitting. Cost of two required field trips: approx. $150. M. Tabacchi.

This course emphasizes the development, management, and marketing of free-standing spas, spas in hotels and resorts, and spa restaurants. Day spas, resort spas, and destination spas are studied in depth. The feasibility of success for new spas and the marketing research necessary to establish new spas are discussed. The design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments, and other spa programs are all considered. Required personnel, safety, legal, and ethical issues regarding spas are an important part of the course.

H ADM 603(6603) Quality and Process Improvement
Spring. 3 credits. Elective. Prerequisite: senior or graduate students only.

R. Verma.
The foundation of this course is on the emergence of quality management as a strategic focus in firms seeking excellence and a competitive edge. We will cover the underlying theory and conceptual basis behind quality management approaches commonly known as Six-Sigma, TQM, etc., which are frequently utilized by service firms operating in different competitive environments. Topics covered include: defining quality in service industries; techniques for designing high-quality services; process analysis; problem identification techniques; statistical process control techniques; process capability analysis; and robust design of service processes. Case studies illustrate the issues related to the implementation of successful quality management programs.

H ADM 605(6605) Yield Management
Fall. 3 credits. Elective. Limited to 30 students. Prerequisite: senior or graduate standing; H ADM 201 or 703 or equivalent. C. Anderson.

This course helps students learn how to apply the principles of yield management effectively. Focus is placed on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 606(6606) Restaurant Revenue Management
Fall. 3 credits. Elective. Limited to 40 students. Prerequisites: H ADM 703, graduate standing or permission of instructor. G. Thompson.

Revenue management is a method for managing capacity profitably. The objective of this course is to help students learn how to apply the principles of revenue management to maximize profitability in the restaurant industry. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics include forecasting, overbooking, reservations systems, information technology, process design, pricing, and management and marketing issues.

H ADM 609(6609) Airline Service Management
Spring. 3 credits. Elective. Priority given to 30 seniors and graduate students; others may enroll, space permitting. Cost of field trip: approx. $75. M. Tabacchi.

This course is a must for those interested in a career in the airlines industry. The impact of 9/11 upon the industry is investigated. Airline service and on-board services are used as competitive advantages by airline carriers. In fact, names such as Singapore Airlines and Virgin Atlantic have become synonymous with service excellence in the service economy. The strategies of developing competitive advantages and superior service in today's erratic economic climate are a major part of class discussion. Guest speakers from American Airlines, Singapore Airlines, US Airways, Delta, Continental Airlines, Virgin Atlantic, and SkyChefs are featured. In addition to service strategies both on the ground and in the air, students study the challenge of serving meals on international flights. Strategies, planning, and forecasting by these executives are examined. Case studies based on national and international airline business are an integral part of the course.

H ADM 703(7703) Operations Management
Summer. 3 credits. M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. S. Kimes.

Based on principles of scientific management, the course gives students the skills and understanding necessary for decision-making using quantitative and qualitative data. Students use computer spreadsheet software extensively for "number-crunching" analyses and learn to communicate the results of their analyses in a clear manner. Students are provided with a "tool kit" of sophisticated Excel models for solving service-operations problems.

H ADM 255(2255) Hospitality Development and Planning
Fall, spring. 3 credits. Required. Prerequisite: H ADM 255 or permission of instructor. R. Penner.

Students are introduced to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include: the project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. There is an emphasis on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 351(3351) Hospitality Facilities Design
Fall. 4 credits. Elective. Limited to 36 students. Prerequisite: H ADM 255 or permission of instructor. R. Penner.

This intensive studio course provides the graphic skills important for design and experience in applying these skills in hospitality planning and design situations. Students prepare design projects using both hand drafting and computer-aided design (CAD) software. These assignments cover basic graphic skills and layouts for typical hotel spaces including guest room suite, lobby and lobby bar, and full-service restaurant or specialty coffee retail outlet.

H ADM 355(3355) Hospitality Facilities Management
Fall, spring. 3 credits. Required. Prerequisite: H ADM 255. D. Zemke.

This course provides an overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering maintenance department. The renovation needs of hospitality facilities are examined, and key managerial aspects of renovations are considered.

H ADM 451(4451) Restaurant Development
Fall. 3 credits. Prerequisites: Hotel seniors or graduate students; juniors by permission of instructor; for undergraduates: H ADM 305. Students who wish to develop design skills for restaurant concepts are encouraged to enroll in H ADM 453 in the following spring. S. Robson.

Students are exposed to the process, challenges, and rewards of developing a restaurant concept from the idea to the construction of the final concept. Specific topics include concept creation, market research, creation of the delivery process, concept testing and evaluation, restaurant feasibility, site selection, facility programming, and development issues such as licensing, permitting, and construction. Visitors from the industry address best practices and their own experiences in getting a restaurant concept off the ground. The course includes readings, discussions with industry leaders, and case studies, and culminates with students formulating a detailed restaurant concept and development plan.

Facilities Management, Planning, and Design

H ADM 255(2255) Hospitality Development and Planning
Fall, spring. 3 credits. Required. Prerequisite: sophomore standing. S. Robson.

Students are introduced to the issues and opportunities inherent in the development and planning of hospitality facilities, specifically hotels and restaurants. Course components include: the project development sequence, conceptual and space planning, architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. There is an emphasis on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.
MARKETING, TOURISM, STRATEGY, AND INFORMATION SYSTEMS

Marketing, Tourism, and Strategy
H ADM 141(1141) Micro-economics for the Service Industry
Fall, spring. 3 credits. Required. Limited to 60 Hotel students per sec. C. Carroll.
This course introduces students to microeconomic principles and theories in the context of applications and considerations associated with the service industry. Students will develop an understanding of the role of the service industry. Discussion of these topics is a key component of the course.

H ADM 451(4451) Hospitality Marketing Principles
Spring. 3 credits. Elective. Prerequisite: senior or graduate standing. Cost of required overnight field trip: approx. $150. D. Stypanik.
This multidimensional course introduces the subject matter will be energized with the help of instructors and other sources. Students develop an understanding of the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design, and development projects. Students learn about the role of the development team, feasibility studies, space programming, construction management, and functional and design criteria for hotels and restaurants. Group exercises, industry guest speakers, and discussions. The course attempts to portray a variety of viewpoints regarding issues of contemporary interest to society and the business community. Discussion of these issues is a key component of the course.

H ADM 457(4457) Foodservice Facilities Design
Spring. 3 credits. Elective. Limited to 12 students per sec. Pre- or corequisites: H ADM 351, 305, and 451 (other commercial food production experience acceptable) or permission of instructor. Hotel seniors, juniors by permission of instructor. S. Robson.
This course provides an introduction to the basic aspects of foodservice facilities design and planning with an emphasis on restaurants. Students determine space allocations for the back-of-house areas, develop production workflow in the preparation areas, and select equipment using standards for production capability, quality of construction, and the ease of maintenance. All documentation is produced on CAD, which is taught as part of the weekly studio. Students also use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 457(4457) Hotel Development
Fall. 3 credits. Elective. Prerequisite: senior or graduate standing; juniors by permission of instructor. Cost of required overnight field trip: approx. $150. D. Stypanik.
This course focuses on the management structure and systems, laws and regulations, and industry practices that most influence the successful development of hospitality real estate, including lodging and eating facilities. Topics include: market studies, franchise requirements, governmental approvals, design, construction contracts, the construction process, scheduling, budgeting, and emerging issues and opportunities. Guest speakers present case studies of actual development projects.

H ADM 243(2243) Marketing Management for Services
Fall, spring. 3 credits. Required. Limited to 60 Hotel students per sec. M. Lynn.
This course introduces students to the process of starting a business from the group up, and to the qualities that are associated with successful entrepreneurs. Because the business plan is the heart of the startup process, the course will focus on the construction of business plans for new business concepts. The course will focus on the basics associated with the initial stages of starting a new venture: (1) how to identify and validate an opportunity; and (2) how to organize, construct, and write a sound, clear, concise business plan that is a selling document. The class will be exposed to recent trends in the hospitality industry and will select a few concepts identified by the instructor as startup business ideas. There will be analyses of actual business plans that were able to raise capital, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

H ADM 441(4441) Strategic Management
Fall, spring. 3 credits. Required. Prerequisite: Hotel students who have completed sophomore core courses.
This course introduces students to the process of starting a business from the group up, and to the qualities that are associated with successful entrepreneurs. Because the business plan is the heart of the startup process, the course will focus on the construction of business plans for new business concepts. The course will focus on the basics associated with the initial stages of starting a new venture: (1) how to identify and validate an opportunity; and (2) how to organize, construct, and write a sound, clear, concise business plan that is a selling document. The class will be exposed to recent trends in the hospitality industry and will select a few concepts identified by the instructor as startup business ideas. There will be analyses of actual business plans that were able to raise capital, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

H ADM 243(2243) Marketing Research for Decision Makers
Spring. 3 credits. Elective. Prerequisite: H ADM 243 and a statistics course.
M. Lynn.
This course helps students become better consumers of marketing research. Topics include issues involved in designing, conducting, and interpreting focus groups, depth interviews, surveys, experiments, and business models. Special emphasis is placed on what each method should and should not be used for and why.

H ADM 347(3347) Consumer Behavior
Fall, spring. 3 credits. Elective. Limited to 200 students. Prerequisite: junior or senior standing; H ADM 243 or equivalent introductory marketing course. M. Lynn.
This course helps students become better consumers of marketing research. Topics include: motivation, perception, learning, decision making, attitudes, nonverbal communication, persuasion, compliance, demographic, and psychographic. The practical implications of psychological principles are emphasized. Specific applications involve such areas as guest frequency programs, menu design, promotional strategy, personal selling, sales and marketing planning, and marketing research. Class time is used for discussions and application exercises as well as for the presentation of relevant information.

H ADM 413(4413) Introduction to Hospitality Entrepreneurship
Fall, spring. 2 credits. Elective. Prerequisite: Hotel students who have completed sophomore core courses.
This course introduces students to the process of starting a business from the group up, and to the qualities that are associated with successful entrepreneurs. Because the business plan is the heart of the startup process, the course will focus on the construction of business plans for new business concepts. The course will focus on the basics associated with the initial stages of starting a new venture: (1) how to identify and validate an opportunity; and (2) how to organize, construct, and write a sound, clear, concise business plan that is a selling document. The class will be exposed to recent trends in the hospitality industry and will select a few concepts identified by the instructor as startup business ideas. There will be analyses of actual business plans that were able to raise capital, as well as a review of real-life examples of the process of raising money, furnished by the instructor and other sources. The subject matter will be energized with the natural enthusiasm that comes from the day-to-day experiences of starting your own business.

H ADM 441(4441) Strategic Management
Fall, spring. 3 credits. Required. Prerequisite: senior standing; at least one course in accounting, finance, marketing, operations, economics, and information systems. Because students work in groups, absolute drop deadline is two weeks after first day of class. A. Kalnins.
Students learn to evaluate firms, industries, and the broader environments in which they exist. Since this is a capstone course, a part of the analysis process involves integrating...
material learned in all of the functional disciplines. Students also evaluate specific firm strategies and their impact on competitiveness and performance. Using all of this information, students are trained to select strategies for firms and to develop plans for implementing them. Topics include: environmental analysis, firm resource analysis, competitive analysis, strategy formulation, strategy implementation, international strategy, and strategic control.

**H ADM 447(4447) Managing Hospitality Distribution Strategies**
Spring. 3 credits. Elective. Prerequisites: H ADM 141 and 243. B. Carroll.
This course provides a framework for managing marketing distribution strategies. Emphasis is placed on presenting and analyzing the structure and interrelationships among distribution channels within the travel and hospitality industry. Theories of marketing distribution management and analysis are evaluated and applied within the context of that system. Topics include: dimensions of hospitality marketing distribution; economics of the major hospitality distribution segments; managing hospitality distribution; and the role of convention and visitors bureaus, national tourist organizations, and associations in distribution management.

**H ADM 645(6645) Services Marketing and Customer Experience Management**
Fall. 3 credits. Elective. Prerequisite: graduate standing; marketing course or permission of instructor. R. Kwontnik.
The main goal is to develop critical analytic skills and knowledge needed to implement service strategies for a competitive advantage. Topics include: key differences in goods versus services marketing and service gaps analysis; services consumer behavior and satisfaction; service quality; relationship marketing; service recovery; service design (including analysis of service as theater); service blueprinting and the "servicescape"; and services demand management, pricing, promotion, and distribution. Students learn through case studies, discussion of current services research, case analyses, and guest-speaker presentations. A variety of group and individual written projects and presentations, including a services-marketing audit, are also used.

**H ADM 743(7743) Marketing Management for Services**
Summer. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. C. Dev.
This course covers the fundamental concepts of marketing management and the techniques, analyses, and frameworks for solving marketing-management problems. Students explore theories and conceptual frameworks that draw on customer, competitor, and core-capability analyses in marketing planning and implementation. Students develop decision-making capabilities in product/service development, pricing, advertising and promotions, and distribution policies. The centerpiece of the course is team development of a marketing plan for a new hospitality business.

**H ADM 744(7440) Competitive Strategies for the Hospitality Industry**
Spring. 3 credits. M.M.H. requirement. Prerequisite: M.M.H. students or permission of instructor. C. Enz.
Competitive management considers the total enterprise, the industry, and the competitive environment in which firms operate. This integrative capstone course focuses on how firms formulate, implement, and evaluate corporate and business strategies. The goal is for students to develop a mastery of the tools used to perform analyses of the industry and competitors and to develop skill at evaluating and implementing strategies to sustain a firm's competitive advantage while generating superior value for customers.

**Information Systems**

**H ADM 174(1174) Microcomputing**
Fall, spring. 3 credits. Required. Limited to 40 students per sec. Fall, Hotel freshmen and transfer students; spring, open enrollment. P. Clark and M. Talbert.
This course provides a foundation in information technology (IT) and how it relates to everyday business computing. Students learn IT concepts during lectures, and these concepts are reinforced in practical lab sessions using current standards of business computing. Topics include: fundamental IT concepts; proficiency in Microsoft Office; understanding the issues of tool selection, standardization, and efficiency; integration of applications; and recognizing the importance of good computer management.

**H ADM 274(2274) Microcomputing**
Spring. 3 credits. Elective. Limited to 30 non-Hotel students per sec. P. Clark.
Students are introduced to business computing to develop functional computer fluency. Students develop their skills in the areas of text, spreadsheet, presentation and file management, and web site management. The course is entirely lab-oriented and students work using Windows 2000 software, which is the latest in word processing, spreadsheet, database, management, and web design.

**H ADM 275(2275) Introduction to Information Systems Management**
Fall, spring. 3 credits. Required. Prerequisite: Hotel students; H ADM 174. P. Clark and E. Wagner.
Goals for the course are to learn about information systems; understand and be able to clearly articulate the difference between information technology and information systems; link concepts and technical jargon to the real-world uses of information systems; and learn the information-systems fundamentals needed throughout hospitality careers. The course is designed for students who will work within hospitality organizations as end users, user-managers, leaders, and information-systems professionals. This is not a course for technologists but rather for the general-management student. Students are provided with the essential information that all hospitality management professionals should know about information systems.

**H ADM 374(3374) Fundamentals of Database Management and Data Analysis**
Spring. 3 credits. Elective. Limited to 30 students. G. Piccoli.
This course prepares students to create and manage information in a knowledge-based organization. The design and use of database and spreadsheet functionality are used to perform analyses and to make decisions. Students gain a conceptual foundation and then practice applying these ideas through project activities and course readings. Topics include: information and information management in organizations; fundamentals of relational database design and implementation; SQL queries; how to work in a database design team and as an individual researcher; database design and management using Microsoft Access; how to normalize a database design to ensure effective use of the technology; analysis of the managerial decision-making process and functionality within the context of the database; and the real-world uses of information systems.

**H ADM 476(4476) Visual Basic for Applications: End-user Programming**
Fall, spring. 3 credits. Elective. Limited to 30 students per sec. Due to capacity restraints, attendance at first class is mandatory; no-show students are dropped to make room for stand-by students; students may not drop course after second week of class. M. Talbert.
This is an introductory programming course for end-users (e.g., business managers and consultants). Students develop fluency in the popular Visual Basic for Applications (VBA) language. Using VBA, students learn how to customize and extend the Microsoft Office Suite, with an emphasis on Excel. They also develop custom information systems using Microsoft Office applications as programmable business tools.

**H ADM 477(4477) Advanced Business Modeling**
Fall, spring, second seven weeks of semester. 2 credits. Limited to 21 seniors and graduate students; priority given to M.M.H. students. Prerequisite: H ADM 174. Note: Deadline to drop course is midway of course. M. Talbert.
This course focuses on organizational systems, planning, and decision process and how information is used for decision support in organizations. Students are provided with practical skills in developing spreadsheet computer models using Microsoft Excel. Topics include: business planning and forecasting, numerical methods, advanced formulas and functions, user-interface design, data protection and validation, importing external data, and output presentation.
FINANCE AND REAL ESTATE

Finance/Accounting

H ADM 120(1120) Personal Financial Management
Fall, spring. 2 credits. Elective. Limited to 120 non-Hotel students. I. Hensley and E. Cornell.
Students are provided with an overview of personal financial planning, including money management, tax planning, use of credit, insurance, retirement planning, and estate planning.

H ADM 121(1121) Financial Accounting
Fall, spring. 3 credits. Required. Prerequisite: Hotel undergraduates. D. Dittman.
This course provides an introduction to the basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 221(2221) Managerial Accounting
Fall, spring. 3 credits. Required. Prerequisites: Hotel undergraduates; H ADM 121, 122, or equivalents. G. Potter and J. Hesford.
This course focuses on the use of accounting information for management decision making and control. Topics include product costing, budgeting, management decision making, and control systems. There is a final exam at the end of the semester.

H ADM 222(2222) Finance
Fall and spring. 3 credits. Required. Prerequisite: Hotel students or permission of instructor. C. Chang and Q. Ma.
The course will provide students with a broad understanding of managerial finance. The overall objective is to develop skills in using accounting and cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and long-term financing. Topics will include valuation of investments, capital budgeting decisions, risk analysis for capital budgeting, capital structure, long-term financing, cost of capital, debt capacity, and raising capital in the public markets. When appropriate, specific examples relating to important issues in the hospitality industry will be discussed.

H ADM 223(2223) Financial Accounting Principles
Fall, spring. 3 credits. Elective. Prerequisite: Non-Hotel undergraduates. P. Streb and A. N. Geller.
This course serves as an in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 225(2225) Finance
Fall, spring. 3 credits. Elective. Prerequisite: Non-Hotel undergraduates. Faculty.
Students are exposed to a wide variety of corporate finance topics, including: time value of money, risk and return, valuation models, cost of capital, capital budgeting, capital structure, and dividend policy.

H ADM 321(3321) Hospitality Financial Management
Fall, spring. 3 credits. Required. Limited to 54 Hotel students per sec. Prerequisites: H ADM 121, 221, and 222, or permission of instructor. J. deRoos and J. Corgel.
The course develops an understanding of the strategic role that financial analysis and financial planning play in internal management decision-making of hotel and restaurant firms. That understanding, coupled with the ability to apply the tools, forms the essence of hospitality financial management. Students build competence in using the quantitative tools of decision support models in hospitality financial management, develop a working knowledge of hospitality assets, specifically hotels and restaurants, how the assets and the owner's positions are valued, and the drivers of unit-level revenues and values. The course provides an introduction to the fundamentals of hotel and restaurant finance and develops an understanding of how franchise agreements and management contracts are used in hotels and restaurants.

H ADM 325(3325) Fundamentals of Financial Planning
Fall. 3 credits. Elective. Prerequisite: Junior or senior standing. Hotel students may use toward FARE concentration. P. Strebel.
Students are exposed to the many facets of wealth management: creating a coordinated financial plan, the dynamics of working with clients, the challenges of running a financial planning practice, and the attributes and skills required to be a successful financial advisor. This course is geared toward students interested in working in an advisory capacity with clients in fields such as investment banking, brokerage, insurance industry, accounting and tax, consulting, law, social work, banking, credit unions, lending institutions, securities, and investments.

H ADM 421(4421) Internal Control in Hospitality Operations
Fall. 3 credits. Elective. Limited to 30 students. Prerequisites: H ADM 321, 722, or equivalent. A. N. Geller.
This course deals primarily with operations. Generally, hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. Specifically, the design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that ensures effective internal control and verifiable audit trails. The course relies heavily on case studies of actual frauds perpetrated within hotel and restaurant operations.

H ADM 422(4422) Taxation and Management Decisions
Fall. 3 credits. Elective. Limited to 75 students. Prerequisite: Junior, senior, or graduate standing. L. Hensley.
This course introduces students to the tax advantages and disadvantages of the various organizational structures, including corporations, partnerships, and subchapter "S" corporations. Other topics include: financial information reporting to tax authorities and to shareholders and how these reports differ; the use of depreciation methods to achieve tax reductions; and syndication techniques and the role tax laws play in promoting private investments and development.

H ADM 426(4426) Advanced Corporate Finance
