Cornell University Officers of the Corporation

David J. Skorton, president
Carolyn A. (Biddy) Martin, provost
Antonio M. Gotto Jr., provost for medical affairs
Stephen T. Golding, executive vice president of finance and administration
James J. Mingle, university counsel and secretary of the corporation

Vice Presidents, Vice Provosts, and Dean of Faculty

Carolyn N. Ainslie, vice president for planning and budget
Thomas W. Bruce, vice president for communications and media relations
Stephen P. Johnson, vice president for government relations
Polley Ann McClure, vice president for information technologies
Susan H. Murphy, vice president for student and academic services
Mary George Opperman, vice president for human resources
Charles D. Phleger, vice president for alumni affairs and development
Joanne M. DeStefano, vice president for financial affairs
William E. Fry, dean of the university faculty
David R. Harris, deputy provost
Stephen Kresovich, vice provost
Michele A. Moody-Adams, vice provost
Alan S. Paau, vice provost
Robert A. Buhrman, vice provost
Ronald Seeber, vice provost
John A. Siliciano, vice provost

All members of the Cornell Community are encouraged to report bias activity, including hate crimes, either experienced directly or observed to WDELQ. They may also report the matter to a bias reporting team member (www.cornell.edu/diversity/biasresponse.cfm).

Members of the Cornell University community are strongly encouraged to report immediately any criminal activity and suspicious person(s) to the Cornell University Police Department. Incidents that may or may not be crimes may also be reported to "campus security authorities," which include, in addition to the Cornell University Police, those with responsibility for controlling access to buildings or facilities and officials having significant responsibility for students or campus activities.

Licensed counselors and campus clergy (pastoral counselors) are exempt from reporting requirements. Cornell University encourages counselors and clergy, if and when they deem it appropriate, to inform those who they counsel of procedures for reporting crimes on a voluntary, confidential basis for inclusion in the Cornell University Police Statistical Crime Record. Cornell Policy 607 255-1111

For Cornell University directory information or general information, call 607 255-2000 or 607 254-INFO. Courses of Study is available on the web at cornell.edu/academic/courses.cfm.

To obtain a copy of this catalog, please follow these guidelines:

If you are a prospective undergraduate student and don’t have web access, please contact the Undergraduate Admissions Office, Cornell University, 410 Thurston Ave., Ithaca, NY 14850-2488, 607 255-5241.

If you are a prospective graduate student, please consult the listing of the course catalog on the web (see above for address).

If you are a currently enrolled student, please consult the listing of the course catalog on the web (see above for address) or contact your college registrar.

All others please contact the Office of the University Registrar, Cornell University, B07 Day Hall, Ithaca, NY 14853-2801, 607 255-4232, e-mail: dsys1@cornell.edu

Photography by CU Photography and Charles Harrington.
Accreditation
Cornell University is accredited by the Middle States Commission on Higher Education.
A copy of the most recent reaffirmation of Cornell’s accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell’s accreditation should be addressed to Paul Streeter, assistant vice president for planning and budget, Cornell University, 441 Day Hall, Ithaca, NY 14853-2801, ps33@cornell.edu.

Cornell University
(USPS 132-860)
Volume 100 of the series "Cornell University" consists of four catalogs, of which this is number three, dated August 1, 2008. Issued once in January, once in July, once in August, and once in November. Published by Cornell University, Publications and Marketing, East Hill Plaza, 353 Pine Tree Road, Ithaca, NY 14850–2820. Periodicals postage paid at Ithaca, New York.
Postmaster: Send address changes to Cornell University, Office of the University Registrar, B07 Day Hall, Ithaca, NY 14853–2801.

Introduction

Courses of Study (www.cornell.edu/academics/courses.cfm), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time/Room Rosters. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu. The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 143 Caldwell Hall, Ithaca, NY 14853-2602, 255-8920, gradschool.cornell.edu, gradschool.cornell.edu.

College of Veterinary Medicine, Office of Student and Academic Services, Cornell University, Schuman Hall, Ithaca, NY 14853-6401, 255-3700, www.vet.cornell.edu/prospective.htm.

Weill Cornell Medical College and Graduate School of Medical Sciences of Cornell University, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-1067, www.med.cornell.edu/education/admissions, wcme-admissions@med.cornell.edu.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from their college, the Office of the Judicial Administrator, Gannett Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or their access to services and education will be terminated and they will be subject to a $350 late fee, then $25 per week after the sixth week plus any finance charges. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes, reside in university-owned residences, or use any other university services. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return. Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted by the student's college upon recommendation by Gannett Health Services.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 2008–2009

Endowed Divisions

Undergraduate

Architecture, Art, and Planning

Arts and Sciences

Engineering

Hotel Administration $36,500

Graduate

Graduate School with chair in an endowed college $29,500

Johnson Graduate School of Management $44,950

Professional

Law School

entering students $46,670

second-year students $45,800

third-year students $44,850

Contract Divisions (tuition rates are tentative)

Undergraduate

Agriculture and Life Sciences

Human Ecology

Industrial and Labor Relations

New York State resident* $20,160

Nonresident DVM $57,100

Graduate, Ph.D. $20,800

Student Activities Fee (Tentative)

Undergraduate students $204

Graduate and professional students $70

Summer Session (2008)

$925 per credit*

In Absentia Fees

Undergraduate $15 per semester

Graduate and professional $200 per semester

Law and management $75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.
Residency status is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2008 semester is June 1, 2008. The deadline for the Spring 2009 semester is November 1, 2008. Further information and an application can be found at www.bursar.cornell.edu.

Regular session rate: Special program rates may vary. Admission application fees and forms may be found at www.cornell.edu/admissions.

Tuition Refund Policy
Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the “Proration Schedule for Withdrawals and Leaves of Absence” below.

Repayment policy: Students receiving financial aid from the university who withdraw during a semester will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All payments are due by the due date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student’s name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Payments
An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred.

University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student’s bill by several departments and offices of the university. Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2536; fax 255-6442; uco-bursar@cornell.edu; www.bursar.cornell.edu). Bursar account information may be viewed real time on Just the Facts/Student Center.

Student Health Insurance
Because of the high cost of medical care, it is Cornell University policy that every full-time registered student must have health insurance coverage.

The Student Health Insurance Plan (SHIP) is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and population-specific material for undergraduates, graduate students, and professional students are mailed to each student in July. Undergraduates, graduate students, and professional students each have separate deadlines and guidelines. Please be sure to check the July mailing for complete details.

The Student Health Insurance Plan provides coverage 24 hours a day, 365 days a year, anywhere in the world. Students graduating midway may be eligible to purchase the Early Grad Plan. Those enrolled in the SHIP may enroll their eligible dependents for an additional cost (full deadline: September 30). Graduate and professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

Student Record Privacy Statement: Annual Notification Under FERPA
The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell Policy 4.5 Access to Student Information, available at www.policy.cornell.edu/Vol._4.5.cfm. These rights include:

1. The right to inspect and review the student’s education records within 45 days of the day the university receives a request for access.

Students should submit to the office of the university registrar, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent.

a. Disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic (including emeritus faculty), research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official needs to review an education record to fulfill his or her professional responsibilities.

b. Upon request, to officials of another school in which a student seeks or intends to enroll.

to parents or legal guardians of dependent students as that term is defined in the Internal Revenue Code. In general, the university does not make education records available to the parents of a
student. However, where the university believes that it is in a dependent student's best interest, information from the student's education records may, at the university's discretion, be released to the parents or legal guardians of such a dependent student. Such disclosure generally will be limited to information about a student's official status at the university, but parents or legal guardians of a dependent student may also be notified upon the authorization of the dean of the student's college, or the Vice President for Student and Academic Services, or the Dean of Students, or their designees in the following cases:

- when a student has voluntarily withdrawn from the university or has been required by the university to withdraw;
- when a student has been placed on academic warning;
- when the student's academic good standing or promotion is at issue;
- when a student engages in alcohol-or-drug-related behavior that violates Cornell policies;
- when a student has been placed on disciplinary probation or restriction;
- in exceptional cases when a student otherwise engages in behavior calling into question the appropriateness of the student's continued enrollment in the university.

Unless otherwise indicated in writing by the student at the time of registration, or thereafter, the university will presume that a full-time undergraduate student is a dependent as that term is defined in the Internal Revenue Code. Undergraduate students who are not financially dependent and do not wish to permit their parents or legal guardian access to their education records should advise the Office of the University Registrar in writing and provide evidence of financial independence. Graduate and professional students are not assumed to be financially dependent upon their parents or legal guardian for these purposes.

d. Disclosure of directory information.

Cornell University has defined directory information to include the following: name, local address, local telephone listing, e-mail address, photograph, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities and sports, weight and height (of members of athletic teams), and any degrees earned and awards received. Directory information may be released unless the student updates his/her privacy settings (under personal information) on Just the Facts/Student Center. Students who wish to suppress their directory information from the printed telephone directory must perform this update within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on Just the Facts/Student Center.

3. The right to request the amendment of the student's education record that the student believes is inaccurate.

Students may ask the office of the university registrar to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5901

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet titled the Code of Academic Integrity and Acknowledging the Work of Others is available from the Office of the Dean of the College of Arts and Sciences at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.

Protection of Human Participants in Research

The Human Research Protection Program is designed to assure the safety and well-being of individuals who participate in research projects at Cornell University. Research activities covered by the Human Research Protection Program include, but are not limited to, experiments and psychological or physical tests on humans, surveys, questionnaires, and studies of existing data, documents, or records in which there are individual identifiers. To help faculty, staff, and students determine if an activity or project falls under the purview of Cornell's Human Research Protection Program, the Office of Research Integrity and Assurance (ORIA) has developed a Decision Tree, available on their website.

The Institutional Review Board for Human Participants (IRB) is the official review board for all university projects that seek to use humans as research participants, assuring compliance with university policy and federal regulations protecting human subjects in research at universities. All proposals involving human participants in any category, including those initiated by students, must be submitted to the IRB for review before any research activities begin. Only after receiving an approval letter from the IRB, or an Exemption from IRB Review by ORIA, may a project be initiated. The guidelines for the use of human participants in research are available at www.irb.cornell.edu. Inquiries and communications about the guidelines should be directed to the IRB administrator (255-5138, irbhp@cornell.edu).

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) (www.iacuc.cornell.edu). Cornell's Animal Users Health and Safety Program (AUHSP) covers faculty, staff, students, visiting scholars, contractors, and volunteers who have direct or indirect exposure to Cornell-owned vertebrate research and training animals. Program requirements are based on the type and frequency of exposure to animals, animal tissues, and/or time spent in an animal care facility (e.g., working, visiting, doing maintenance work). Students enrolled in courses utilizing vertebrate animals are required to fill out a Risk Assessment Form (www.oria.cornell.edu/AUHSP/documents/AUHSPRiskAssessmentForm.pdf) and enroll in the AUHSP. Additionally, students should contact the Occupational Medicine Office of Gannett Health Services, or their personal health care provider, before working with animals or entering an animal facility, if they may have any medical conditions that may increase their risk.

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a set of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery, or in other experimental procedures, the course description that appears in Courses of Study should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor of each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to
students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor of the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the chair of the Institutional Animal Care and Use Committee (IACUC) at 255-3749 or by e-mail at iacuc-mailbox@cornell.edu.

9. Faculty members should instruct students in the responsible use of animals. For more information, see www.policy.cornell.edu/vol1_4.cfm.

Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 9–10.

2. Acceptable performance on a Cornell departmental examination as demonstrated by consultation between the student, his or her advisor, and the professors teaching the courses.

3. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

4. GCE Advanced Level and International Baccalaureate Examinations are listed on page 11.

Note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work.

Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph 1 or 2 above. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject. It recommends Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of Courses of Study). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one's overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.

Advanced placement examinations. Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college registrar's office (see list below).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both on the basis of departmental examinations given during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 9–12. Students need to register for these examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school registrar's office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ithaca, NY 14853 to the addresses given in the following sections.

- College of Agriculture and Life Sciences, 140 Roberts Hall
- College of Architecture, Art, and Planning, B1 West Sibley Hall
- College of Arts and Sciences, 55 Goldwin Smith Hall
- College of Engineering, 158 Olin Hall
- School of Hotel Administration, 180 Statler Hall
- College of Human Ecology, 145 Martha Van Rensselaer Hall
- School of Industrial and Labor Relations, 101 Ives Hall

International Credentials

The policies currently in effect for General Certificate of Education (GCE) “A” Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on pages 9 and 10. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

SUPPLEMENTARY INFORMATION

Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 2070–2080 and 2150–2160. CHEM 2150–2160 is intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examinations. To take the departmental examinations, students must sign up beforehand in the Chemistry and Chemical Biology Instructional Office, 131 Baker Laboratory, or online at www.chem.cornell.edu/cref/advplreg.aspx.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in C50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 2150–2160 and should consult the CHEM 2150 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the A exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 2110. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced signup is not necessary.

CREDIT AND PLACEMENT

The tables on the following pages summarize how credit and placement are determined for most subjects. Supplementary information for some subjects follows immediately.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.
Mathematics exam should be taken by Calculus program. The Department of Mathematics offers a senior year. (Calculus AB or Calculus BC) during their CEEB's two Advanced Placement Examinations calculus should, if possible, take one of the had the equivalent of at least one semester of level. Secondary-school students who have has already been covered at an appropriate calculus courses given in many high schools, 1910 cover substantially the same topics as Calculus courses MATH 1110, 1120, and Courses.

For guidance in selecting an appropriate course, please consult First Steps in Math, published on the Mathematics Department web site (www.math.cornell.edu) under Courses.

The calculus courses MATH 1110, 1120, and 1910 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calculus AB or Calculus BC) during their senior year.

The Department of Mathematics offers a placement examination during orientation week that covers the material of the AP Calculus program. The Department of Mathematics exam should be taken by

Mathematics and Statistics

For guidance in selecting an appropriate course, please consult First Steps in Math, published on the Mathematics Department web site (www.math.cornell.edu) under Courses.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 1106 or 1110. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 1120, 1220, or 1910 and all 8 credits if they take MATH 1106 or 1110.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. Students who have been awarded AP credit for statistics (3 academic credits) will forfeit those credits if they take AEM 2100, ILRST/STSCI 2100, MATH 1710, or PAM 2100.

1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination, or
2. students who believe that their placement is incorrect.

Students are strongly urged to take this departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on this test does not become a part of the student's record. No advance registration for the departmental examination is necessary. A separate placement exam for students in the College of Engineering or the BEE program will be announced during the academic briefings. Students who have been awarded advanced placement credit for calculus or statistics may not also receive academic credit for similar courses taken at Cornell. Students who have been awarded AP credit for statistics (3 academic credits) will forfeit those credits if
students may receive at most 4 AP credits, which they will forfeit if they take MATH 1910, the first course in the sequence.

Modern Foreign Languages
Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement Credit” under “Foreign Language Requirements” in the College of Arts and Sciences section of this catalog. Students whose SAT II or AP scores are two years old or more, or who have had a year of formal study or substantial informal study since they last took a placement test should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:
1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).
2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 5 credits.
3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Note that credit transfer and placement are the result of different processes. Students wishing to enroll in a language course at Cornell are required to take the placement test.
4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 5 credits in a foreign language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services at sao.cornell.edu/orientation/placement.htm. For more information, see “College of Arts and Sciences” on language course placement, or contact Calleen Hile, 305 Morrill Hall, for French, Italian, and Spanish (placement tests in French, Italian, and Spanish are available at coll.itc.cornell.edu); Miriam Zubal, 185 Goldwin Smith Hall, for German; Doreen Silva, 226 Morrill Hall, for Russian; Kim Robinson, 388 Rockefeller Hall, for Asian languages; Nava Scharf, 409 White Hall, for Hebrew; or Munther Younes, 409 White Hall, for Arabic.

Music
Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music. That is, credit cannot be earned on the basis of the AP IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere.

Outstanding performance on the departmental examination of two years’ credit is earned by students 3 credits and placement directly into MUSIC 2102. In rare instances students may place into MUSIC 3101, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week and, when necessary, at the beginning of the spring semester. For more information about the examination, see the departmental web site.

Physics
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, fall semester; appointment required). For information about the departmental examination, consult the director of undergraduate studies, 101 Clark Hall (physicssdu@cornell.edu).

Physics B—Students earning a score of 5 may receive 8 credits for non-calculus-based PHYS 1101 and 1102. Those earning a score of 5 in Physics B and a score of 4 or 5 in Calculus BC may choose to accept 4 credits in calculus-based PHYS 1112 or 2207 instead of 8 credits in PHYS 1101 and 1102. Those earning a score of 4 may receive 4 credits in PHYS 1101. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive 4 credits for PHYS 1112 or 2207, or placement into PHYS 1116, a more analytic first-semester course, with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive 5 credits for PHYS 2213.

Students will not receive credit for an advanced placement course if they receive credit for a Cornell course with similar content. Students may receive credit for only one of the courses in each group:
PHYS 1101, 1112, 1116, 2207
PHYS 1102, 2208, 2213, 2217

A student planning a major in physics or applied and engineering physics and who is eligible for AP credit should consult with his or her advisor or the department representative. Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrollment. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from the director of undergraduate studies, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE
Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Just the Facts/Student Center. Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student’s advisor and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student’s college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, the Department of Physical Education and Athletics, and First-Year Writing Seminars have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

*Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

*Consult the college office for special considerations and requirements.

AUDITING COURSES
Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND SUBJECT CODES
In 2008 the university moved to a 4-digit course numbering system; some subject codes also changed. If you are having difficulty finding a course for which you know only the former 3-digit course number, you may be able to locate the course and its corresponding 4-digit number in the 2007–08 Courses of
The list of courses that follows is arranged in two broad groups.

**Group 1:** Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences  
Architecture, Art, and Planning  
Arts and Sciences  
Engineering  
Hotel Administration  
Human Ecology  
Industrial and Labor Relations  
Nutritional Sciences  
Officer Education  

**Group 2:** Graduate professional divisions

Law  
Management  
Veterinary Medicine  

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND MEETING TIMES

Students are expected to be present throughout each semester at all meetings of classes for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

01:25 p.m. to 04:25 p.m.

(Mon. and Wed.) 07:30 p.m. to 10:30 p.m.
On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 p.m. to 7:30 p.m., on Fridays the hours after 4:25 p.m., on Saturday the hours after 12:05 p.m., and all day Sunday shall be free from all formal undergraduate classes or laboratory exercises.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each semester.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

Final Examinations

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.
General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

1. Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.
2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.
3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

Evening Preliminary Examinations

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m. An alternative time to take the examination must be provided for those students who have academic, religious, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-. F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- F = 0.0

This is how a semester average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Credits</th>
<th>Quality Points</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 103</td>
<td>B+</td>
<td>3.3</td>
<td>3</td>
<td>9.9</td>
</tr>
<tr>
<td>ENGL 151</td>
<td>C-</td>
<td>1.7</td>
<td>3</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B-</td>
<td>3.0</td>
<td>4</td>
<td>12.0</td>
</tr>
<tr>
<td>PAM 100</td>
<td>B</td>
<td>3.0</td>
<td>3</td>
<td>9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0</td>
<td>3</td>
<td>6.0</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td></td>
<td>16</td>
<td>42.0</td>
<td></td>
</tr>
</tbody>
</table>

To arrive at the semester average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more semesters) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U Grades

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

a. the S-U system have symbol equivalents which are uniform within the university. S means C- or above; U means D+, D, D-, or failure.

b. S-U options be chosen by the student during the first three weeks of the semester.

c. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the semester.
d. course requirements (required, reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (1) Must have 100 credit hours with A, B, C, D grades. (2) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen may not exercise the S-U option. (4) Only one optional S-U course is allowed per semester.

Architecture, Art, and Planning. (1) All courses specifically required for a degree must be taken for letter grades. (2) S-U grading for courses so designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen may not exercise the S-U option. (4) Only one optional S-U course is allowed per semester.

Arts and Sciences. (1) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (2) Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (1) The course in question must be offered with an S-U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S-U basis during their first semester with the exception of courses graded "S-U only" such as physical education, ROTC, supplemental courses, and independent workshops. (3) The proposed S-U course must count as either a liberal studies distribution or an approved elective in the Engineering curriculum. (4) Students may elect to enroll S-U in only one course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.) (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S-U do not count toward eligibility on the Dean’s List and may
students may be offered on an S-U basis at the letter grade. (2) Elective courses for veterinary medicine.

(1) There is one specifically approved by an admissions officer only when it is the only option or (2) when internal transfer.

Determining a student's academic status. (5) academic standing. (4) A U grade is D–) credits. (3) Student must also be in good standing in S-U courses (not counting physical education) may be counted toward degree requirements during a student's college career.

Industrial and Labor Relations. (1) This option may be elected, if available in IRR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements include a minimum of 105 letter grade (A+ to D–) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student's academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course.

Internal Transfer. (1) S-U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S-U basis only. All other required core courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S-U basis at the option of the professor.

INCOMPLETE
The grade of incomplete is appropriate only when two basic conditions are met:

1. the student has a substantial equity at a passing level in the course with respect to work completed; and
2. the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at registrar.sas.cornell.edu. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school for those entering freshman undergraduates. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. A swim test hold will be placed on the student's record until he or she has passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION

Classes
All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied. Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

SWIM TEST
The Faculty Advisory Committee on Athletics and Physical Education has established a basic swimming and water safety competency requirement for all entering freshmen undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. A swim test hold will be placed on the student's record until he or she has passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division
Students may not always be satisfied with the original Cornell school or college into which they've been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting
to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Sponsorship is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-5486).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0852)
www.adwhiteprofessors.cornell.edu

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professors-at-Large engage in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty while in residence.

Term Ending in 2009

Behrends, Olko, legal historian
Butler, Judith, cultural theorist
Venter, Craig, geneticist

Term Ending in 2010

Aldous, David, statistician
Leeson, Lynn Hershman, digital artist
Peskin, Charles, mathematician
Tibi, Bassam, Islamist

Term Ending in 2011

Sims, Lowery Stokes, art curator

Term Ending in 2012

Angier, Natalie, science writer

Term Ending in 2013

Lakhdar Brahimi, diplomat
Sir Partha Dasgupta, economist
Shri Kulkarni, astronomer
Ann Markusen, regional planner
Laura Restrepo, writer, journalist, and activist

Term Ending 2014

Hélène Cixous, writer and literary theorist
Hans Föllmer, mathematician
Denise Riley, philosopher and poet

FRANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of '56 University Professorship in honor of Cornell's ninth president (1977–1995). The purpose of the Rhodes Class of '56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of ’56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of ’56 Professors visit the campus for a week to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments

Grandin, Temple, associate professor of animal science
Moses, Robert Parris, civil rights leader and founder of the Algebra Project
Zinni, Anthony, USMC four-star general (retired)

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255–4355)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Electrical Engineering or the Department of Computer Science, or some department of the College of Engineering. Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center’s members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics

MATH 4130 Honors Introduction to Analysis I
MATH 4140 Honors Introduction to Analysis II
MATH 4230 Honors Linear Algebra
MATH 4340 Honors Introduction to Algebra
MATH 6110 Real Analysis
MATH 6120 Complex Analysis
MATH 6150 Mathematical Methods in Physics
MATH 6210 Measure Theory and Lebesgue Integration
MATH 6220 Applied Functional Analysis
MATH 6310–6320 Algebra
MATH 6330 Noncommutative Algebra
MATH 6340 Commutative Algebra
MATH 6510 Algebraic Topology
MATH 6610 Geometric Topology
TAM 6100, 6110 Methods of Applied Mathematics I, II, III
TAM 6130 Asymptotics and Perturbation Methods

Analysis (and Differential Equations)

MATH 4280 Introduction to Partial Differential Equations
MATH 6170 Dynamical Systems
MATH 6180 Smooth Ergodic Theory
MATH 6190–6200 Partial Differential Equations
MATH 6250–6530 Differentiable Manifolds I and II
MATH 6620 Riemannian Geometry
MATH 7110–7120 Seminar in Analysis
MATH 7130 Functional Analysis
MATH 7150 Fourier Analysis
MATH 7220 Topics in Complex Analysis
MATH 7280 Seminar in Partial Differential Equations

Logic and Theory of Computing

CS 6760 Introduction to Automated Reasoning
CS 6766 Reasoning about Uncertainty
CS 6810 Theory of Computing
CS 7192 Seminar in Programming Reflection
MATH 4860 Applied Logic (also CS 4860)
MATH 6810 Logic
MATH 7810–7820 Seminar in Logic
MATH 7830 Model Theory
MATH 7840 Recursion Theory
MATH 7870 Set Theory
MATH 7880 Topics in Applied Logic

Numerical Mathematics and Operations Research

CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4200)
CS 6210 Matrix Computations
CS 6220 Numerical Optimization and Nonlinear Algebraic Equations
CS 6240 Numerical Solution of Differential Equations
CS 6670 Machine Vision
CS 6820 Analysis of Algorithms
MATH 4250 Numerical Analysis and Differential Equations (also CS 4210)
ORIE 6355 Scheduling Theory
ORIE 6300–6310 Mathematical Programming, I and II
ORIE 6320 Nonlinear Programming
ORIE 6325 Interior-Point Methods for Mathematical Programming

Discrete Mathematics and Geometry

MATH 4410 Introduction to Combinatorics I
MATH 4420 Introduction to Combinatorics II
MATH 4550 Applicable Geometry
MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES
170 Uris Hall (255-6370)
The Mario Einaudi Center for International Studies was established in 1961 to encourage and support comparative and interdisciplinary research on international subjects. It supports four U.S. Department of Education Title VI National Resource Centers and 16 other international programs. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development, economics, and world peace. More than 700 faculty members voluntarily collaborate with the center and its associated programs. Undergraduate students may choose from a variety of minors such as international relations, Latin American studies, modern studies, French studies, East Asian studies, Southeast Asian studies, global health, or international agriculture and rural development.

In its ongoing effort to anticipate and respond to changing global circumstances and perspectives, the center applies its resources to new pilot activities and initiatives that bring faculty members and students together across traditional disciplines and departmental boundaries. As part of its Foreign Policy Initiative, the center has formed a network of faculty members and students that brings together Cornell and support faculty to mobilize undergraduate students’ understanding of issues on the front pages of newspapers as events unfold during the semester.

For additional information on current programs, publications, and courses, contact:

Mario Einaudi Center for International Studies
Nicholas van de Walle, center director
David R. Lee, director of the international relations minor
170 Uris Hall

Global Health Program
Rebecca Stoltzfus and Warren Johnson, program co-directors
www.human.cornell.edu/dns/globalhealth

Institute for African Development
Muna Ndulo, program director
www.einaudi.cornell.edu/af
The minor is open to students enrolled in any of the seven Cornell undergraduate colleges. When the requirements of the minor are met, an official note is made on the student’s academic record (see www.inequality.cornell.edu/academics/ for further information).

**Symposia and Lecture Series**

CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of events is listed on the center’s web site (www.inequality.cornell.edu).

For more information about CSI, contact us at 254-8674 or inequality@cornell.edu.

**COGNITIVE SCIENCE**

278G Uris Hall
255-6431
cogsci@cornell.edu
www.cogsci.cornell.edu

Cognitive Science focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Science draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Science is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

**Undergraduate Programs**

An undergraduate minor in Cognitive Science in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department.

For further information on the undergraduate program, see the Cognitive Science Program in the College of Arts and Sciences and/or contact Julie Simmons-Lynch, program coordinator (255-6431 or cogsci@cornell.edu).

**Graduate Programs**

Cornell offers a graduate field minor in Cognitive Science. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Science to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neuroscience and behavior on common committees. For further information on the graduate field of Cognitive Science, contact Morten Christiansen, director of graduate studies (255-3570, mhc27@cornell.edu) and/or contact Julie Simmons-Lynch, program coordinator, 278G Uris Hall, Office of Cognitive Science (255-6431 or cogsci@cornell.edu).

**Courses**

Courses from across the university that are relevant to the Cognitive Science Program are listed in this catalog in the Cognitive Science Program section under Arts and Sciences.

**CORNELL ABROAD**

300 Caldwell Hall
255-6224 (tel.)
255-8700 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Recent events have made us aware that those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in today’s world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified study abroad programs are available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

**LOCATIONS ABROAD**

Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by or affiliated with Cornell.

**AFRICA**

Botswana, Cameroon, Ghana, Kenya, Madagascar, Mali, Tanzania, Uganda: School for International Training (SIT)

Ghana: University of Ghana (through CIEE); NYU
Kenya: Wildlife Management (School for Field Studies); University of Nairobi
South Africa: Universities of Cape Town and KwaZulu–Natal, Organization for Tropical Studies, School for International Training (SIT)
**GENERAL INFORMATION - 2008–2009**

### ASIA
- China: Chinese University of Hong Kong; *Cornell FALCON for the spring semester at Peking University; full year at the Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES Beijing; CET in Beijing or Harbin; Hong Kong University of Science and Technology; Alliance for Global Education in Beijing or Shanghai; Syracuse University program at Tsinghua University, *CAPS at Peking University*
- India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers Universities); CIEE at University of Hyderabad
- Indonesia: School for International Training, Bali
- Japan: *Kyoto Consortium for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University*
- Korea: Yonsei University; Ewha University
- Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University*
- Thailand: Khon Kaen University (CIEE)
- Vietnam: University of Hanoi (CIEE), CET

### AUSTRALIA AND NEW ZEALAND
- Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of Queensland, Brisbane; University of Western Australia, Perth; School for International Training, Sydney
- New Zealand: Otago, Auckland, Massey; Canterbury, and Lincoln Universities; EcoQuest

### EUROPE
- Czech Republic: UPCEs (CERGE-EI) at Charles University; CET program in Jewish Studies, CIEE Prague
- Denmark: *Danish Institute for Study Abroad (DIS)*
- France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University)*
- Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University*
- Greece: College Year in Athens; Arcadia
- Hungary: Central European University; CIEE Budapest; Budapest semester in Math
- Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork
- Italy: *Bologna Consortial Studies Program; *Cornell College of Art, Architecture, and Planning Program in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University Program in Padova; IES Milan and Rome; Intercollegiate Center for Classical Studies in Rome; Syracuse University program in Florence
- Netherlands: University of Amsterdam; Leiden University
- Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian); Smolny College, Math in Moscow
- Spain: *Cornell–Michigan–Penn program at the University of Seville; *Consortium for Advanced Study in Barcelona; various language and culture programs*
- Sweden: The Swedish Program at the University of Stockholm
- United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Catholic University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science, and the School of Oriental and African Studies, the University of the Arts (including London College of Fashion), as well as other universities and art schools of choice.*
- Externally sponsored programs in the UK include the British American Drama Academy; the Arcadia, Boston, and Rochester University internships; and the Hansard Parliamentary Internship Programme.
- Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell–Brown–Penn Centre in London.

### LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
- Argentina and Chile: various university-based study abroad programs, through the Institute for Study Abroad of Butler University or CIEE
- Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)
- Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Studies; CIEE
- Cuba: study abroad programs in Cuba are currently suspended
- Ecuador and Jamaica: International Partnership for Service Learning
- Honduras: Escuela Agrícola Panamericana (Zamorano)
- Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM); Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California; IFA-Butler program at Universidad Autónoma de Yucatán, Mérida

### MIDDLE EAST AND NORTH AFRICA
- Egypt: American University in Cairo
- Israel: Ben-Gurion University; University of Haifa; Hebrew University of Jerusalem; Tel Aviv University
- Jordan: University of Jordan (CIEE), SIT
- Lebanon: American University of Beirut
- Morocco, Oman: School for International Training

### Other Locations
Cornell students are by no means limited to the locations listed above or to the programs identified for particular countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Tajikistan, Turkey, Venezuela, and elsewhere.

### Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are expected to have a cumulative grade point average of 3.0 or above. About 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count study abroad credit toward their Cornell degree.

### When Students Study Abroad and for How Long
Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

### Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 300 Caldwell Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for program offerings and links to universities and programs worldwide, as well as for applications to download and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisors in their colleges to discuss how they will meet college degree requirements. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both the faculty advisor and the college study abroad advisor. Arts and Sciences, Human Ecology,
and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2009 semester and the 2009–2010 academic year is February 15, 2009, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the full year in 2009–2010 is November 1, 2008. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding fall. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for programs approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the institution or program overseas, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell students who participate in programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad tuition per semester, which covers tuition, housing during tenancy, prearrival orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2008–2009 the Cornell Abroad tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDCUCO (Emory, Duke, and Cornell in Paris), or the Michigan–Cornell–Penn Program in Seville is $21,100. For the Denmark Institute for Study Abroad (DIS), the Cornell Abroad tuition is $21,950 per semester, and for the Kyoto Consortium for Japanese Studies (KCJS), the tuition is $27,500 per semester. For the Bologna Consortium for Study in Philosophy, Politics, and Society (BCSP), the tuition is $16,200 per semester for academic-year students and $18,850 for spring-only participants. Students studying in all other programs in 2008–2009 pay the tuition and other costs charged by their programs and a Cornell International Program Tuition (CITP) of $4,850 per semester. The CITP covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program Tuition of $5,250. This higher amount covers the cost of on-site support services provided by Cornell Abroad.

Financial Aid
Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships; there are also external sources of aid for which Cornell Abroad students are eligible.

Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about the policies of those institutions regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (300 Caldwell Hall): Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes and CDs, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site (www.cuabroad.cornell.edu), which incorporates links to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

College Study Abroad Advisors
Agriculture and Life Sciences: Christine Potter, 140 Roberts Hall; Architecture, Art, and Planning: Jayne LeGro, B-1 West Sibley Hall; Arts and Sciences: Dean Pat Wasylycia-Levy, 55 Goldwin Smith Hall; Engineering: Engineering Advising, 167 Olin Hall; Hotel Administration: Barbara Lang, 180 Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

255-5240 (fax)
cipa@cornell.edu

M.P.A. Program Flexibility
The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA fellow works closely with a faculty advisor to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

Advising
Upon entering the M.P.A. program, each fellow is assigned a program advisor based on his or her area of interest. These advisors are drawn from the CIPA core faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another core faculty member to be their program advisor. Toward the end of their first year, when they select their professional report/thesis topic, CIPA fellows choose a report/thesis advisor among the more than 100 faculty members in the field of public affairs. The advisor guides the fellow in research and writing.

Foundation Course Work
To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA fellows take three courses in each of the following three subject areas:
• Administration, Politics, and Public Policy
• Economics and Public Finance
• Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA core faculty member.

Concentration Course Work
Concentration course work enables fellows to focus on a specific area of public policy study. Students choose their courses of study—domestic or international—from the following options:
• Environmental Policy
• Finance and Fiscal Policy
• Government, Politics, and Policy Studies
• Human Rights and Social Justice
• International Development Studies
• Public and Nonprofit Management
• Science and Technology Policy
• Social Policy

Fellows select a concentration during the latter half of the first year of course work.

Internships and/or Off-Campus Study Options
CIPA fellows are expected to gain practical work experience in an area related to their concentration. The objective is to gain pragmatic professional experience that will complement a student's formal academic study. CIPA's Office of Professional
Development provides assistance to fellows in finding internships that match their interests, expertise, and professional goals. Appropriate internships are available in public policy—or public affairs–related organizations in both the public and private sector. In recent years, 95 percent of fellows actively searching for an internship find one. Organizations include:

- Congressional Research Service
- Deloitte and Touche
- Government Accountability Office
- New York City Office of Management and Budget
- Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
- U.S. Department of State
- U.S. Congress
- World Food Program
- state, local, and urban municipal governments
- nongovernmental organizations and think tanks worldwide
- private sector consulting firms

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- Cornell in Rome
- Cornell in Washington
- Cornell–Nepal Study Program

In the fall of 2008, two additional opportunities for study abroad will become available in Mexico City, Mexico, and Budapest, Hungary.

Professional Writing Requirement
As a culmination of studies in the M.P.A. program, each fellow develops and submits either a professional report or thesis. Typically, the report or thesis grows out of a fellow’s specific area of concentration and often incorporates work done during the summer internship or an off-campus study program. Both the CIPA professional report and the thesis require the student to synthesize and apply his or her education to formulate a solution to a policy problem. The thesis places a greater emphasis on problem definition and literature review, while the professional report emphasizes feasibility, practitioner accessibility, and adapting a student’s writing to the professional culture and standard practices of the client organization. The level of work expected for the M.P.A. thesis or professional report is equivalent to one or two semester-long courses.

Professional Student Activities
CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities on campus. These provide fellows with opportunities to share work experience with other fellows, and to meet practitioners and distinguished faculty members in the field of public affairs. Fellows participate in one or more of the following activities for at least two semesters. These initiatives include:

- Colloquium and Conference Committee: This student group sets the agenda for the weekly Colloquium Series and makes arrangements for the chosen guest lecturers to come to campus.
- Point of View (POV): The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
- The Current: CIPA fellows publish a journal of student policy research. Working on The Current offers fellows a firsthand view of the rigor of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.
- CIPA Public Service Exchange: A unique service learning partnership with nonprofit and government agencies, providing fellows with the opportunity to engage in the supervised practice of public policy.

Complementary Degrees
CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

Accelerated Master’s Program
An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

Residence Requirement
Fellows are required to spend four semesters in study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master’s Program can earn the equivalent of two semesters in residence during their senior year.

Admission
The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in public policy or implementation are strongly encouraged to apply. Admission to CIPA is selective.

Decisions are based on:
- potential for public-policy leadership as evidenced by professional work; community, extracurricular, or other relevant experience
- an evaluation of the applicant’s overall academic record
- GRE scores
- two letters of recommendation
- current résumé
- an extensive written statement of purpose, as outlined on the CIPA web site: www.cipa.cornell.edu

Applicants for whom English is a second language will need to achieve the following minimum scores on the new (2005) Internet-based test version of the TOEFL: writing 20, listening 15, reading 20, speaking 22. Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For an application or for more information, contact the Cornell Institute for Public Affairs, 294 C.U. Hall, Ithaca, NY 14853; 255–8018; fax: 255–5240; cipa@cornell.edu; www.cipa.cornell.edu.

Financial Aid
CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. In addition, Cornell offers numerous assistantship and employment opportunities for graduate students. Applicants are encouraged to explore all available sources of external funding, including grants that may be provided by current employers. Decisions on institute funding are determined on a rolling basis following admission decisions.

CORNELL PLANTATIONS
One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

Introduction
Cornell Plantations is Cornell University’s arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. H. Newman Arboretum and the 25 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We’re also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women’s issues, to nutrition.

Credit Courses
Cornell Plantations offers three for-credit courses: HORT 4800 Plantations Fall Lecture Series, HORT 4850 Public Garden Management, and HORT 6400 New Directions in Public Horticulture. HORT 4800 is a 1-credit S-U lecture series offered each fall. HORT

INTERDISCIPLINARY CENTERS, PROGRAMS, AND STUDIES 23
confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies"). For information regarding content or availability of EPL core/related courses, contact the academic department listed.

EPL Core Courses

PHIL 1940/GOVT 2947 Global Thinking
PHIL 2420 Social and Political Philosophy
PHIL 2460/BSOC 2061/STS 2061 Ethics and the Environment
PHIL 2470 Ethics and Public Life
PHIL 3420 Law, Society, and Morality
GOVT 6917 Normative Elements of International Relations

Related Courses

ANSC 4140 Ethics and Animal Science
ENGRG 5600/STS 5601 Ethical and Social Issues in Engineering
ILRCB 4820 Ethics at Work
ILRCB 4880 Liberty and Justice for All
NAV 4402 Leadership and Ethics
NBA 6710 Business Ethics
NTRRES 3320 Introduction to Ethics and Environment
NTRRES 4330 Applied Environmental Philosophy
PAM 5670 Health Policy
PHIL 1450 Contemporary Moral Issues
PHIL 2410 Ethics
PHIL 2450 Ethics and Health Care
PHIL 3410 Ethical Theory
PHIL 3460/GOVT 3625 Modern Political Philosophy
PHIL 6410 Ethics and Value Theory
Michele M. Moody-Adams, Wyn and William Y. Hutchinson Professor of Ethics and Public Life; and professor of philosophy; Burke Hendrix, assistant professor of government and assistant professor of ethics and public life; Erin Taylor, assistant professor of philosophy/ethics; Neelam Sethi, senior lecturer in philosophy/ethics.

PROGRAM ON ETHICS AND PUBLIC LIFE

240 Goldwin Smith Hall
255-8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless
The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell’s strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the 21st century.

Graduates of Cornell’s SES program are well prepared for several career and advanced study options:

- Graduate studies leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geology/geophysics, biogeochemistry, hydrology, oceanography).
- Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level such as environmental consulting and science writing.
- Employment in natural resources industry, including fossil fuels and water. These fields usually require an M.S. degree.
- Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.
- Advanced degree in teaching, for example, earth science at the middle or high school level.
- Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.

The SES major is available for students in the College of Agriculture and Life Sciences, the College of Engineering, and the College of Arts and Sciences. The SES major has its home in the Department of Earth and Atmospheric Sciences and includes collaboration with several departments across the university.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The requirements for the major are as follows:

1. Basic Math and Sciences
   a. MATH 1110–1120, or MATH 1910–1920
   b. PHYS 2207–2208, or PHYS 1112–2213
   c. CHEM 2070–2080 or CHEM 2090–2080 (or 2070–1570)
   d. BIOG 1101/1103 and 1102/1104 (or 1105–1106) or BIOG 1109 and 1110

2. Required introductory course: EAS 2200 The Earth System

   The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:
   - EAS 3010 Evolution of the Earth System
   - EAS 3030/NTRES 3030 Introduction to Biogeochemistry
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics

4. Concentration Courses

   Four intermediate to advanced-level courses (3000 level and up) are selected that build on the core courses and have prerequisites among the “Basic Math and Sciences” courses listed above. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. These concentration courses build depth and provide the student with specific expertise in some facet of earth system science. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests by seeking the student's advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/observational/laboratory experience

   Exposure to the basic observations of earth science, whether directly outdoors in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 5 credits of course work of an observational nature is required. Possibilities include:
   - Courses given in the Hawaii Environmental Semester program;
   - Courses given by the Shoals Marine Laboratory;
   - EAS 2500 Meteorological Observations and Instruments;
   - EAS 3520 Synoptic Meteorology II;
   - EAS 4170 Field Mapping in Argentina;
   - EAS 4370 Geophysical Field Methods;
   - EAS 4910 and/or 4920 Undergraduate Research, total 3 credits with appropriate choice of project;
   - Field courses taught by another college or university (3-credit minimum)

Cornell Field Program in Earth and Environmental Systems: Semester in Hawaii

Cornell University offers a spring-semester program of environmental and Earth systems study on the Big Island of Hawaii. The Hawaiian Islands are an outstanding natural laboratory where students can explore a variety of ecosystems, examine their development over time, witness human influences on plant and animal communities, and experience geologic processes such as active volcanism in concert with the students. Students spend most of their time in the field, gaining hands-on experience probing the interaction between earth, ocean, atmosphere, and biosphere. This is an ideal opportunity to apply fundamental concepts of geology, chemistry, and biology in a real-world setting. Students enrolled in the Environmental Semester Program will complete 17 credit hours of course work during the spring semester. For Cornell students majoring in Science of Earth Systems, EAS 3220, EAS 3400, and EAS 3510 satisfy degree requirements for the major.

For more information contact Professor John Csine, Department of Earth and Atmospheric Science, john.csine@cornell.edu, and visit www.eas.cornell.edu.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers a highly ranked accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to talk with their academic advisors to explore offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields associated with each of the undergraduate options.)

Applied Economics and Management

The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell’s general undergraduate business degree. Accredited by AACSB International—The Association to Advance Collegiate Schools of Business, AEM’s undergraduate business program offers a broad, flexible curriculum that reflects the program’s analytical, applied economics approach. Students choose among 10 specializations: finance, marketing, strategy, accounting, entrepreneurship, agribusiness management, food industry management, environmental and resource economics, international trade and development, and applied economics (aem.cornell.edu).

Arts and Sciences

Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, statistics, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

Engineering

Many of today’s business managers hold engineering degrees. Each of the College of Engineering’s 13 majors prepare students for business careers. Operations Research and Engineering and Information Science; Systems and Technology are the most business-oriented engineering degree programs, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any
major can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science. A new business minor for engineering students is also offered by the Department of Applied Economics and Management (www.engineering.cornell.edu).

**Hotel Administration**
The School of Hotel Administration is the world’s leading hospitality management program. The school offers a rigorous core business curriculum with courses in finance, accounting, real estate, facilities management, planning and design, food and beverage management, marketing, tourism, and strategy; information systems; human resource management and organizational behavior; human resource management, managerial communication, and law. The school’s 150-room conference hotel gives students the opportunity to apply what they learn in a real-world business and its Practice Credit requirement further ensures a balance between classroom learning and real-world practice (www.hotelschool.cornell.edu).

**Human Ecology**
The College of Human Ecology offers three business-oriented majors. The fiber science and apparel design major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in facilities planning and management study interior design, management, environmental psychology, and real estate to pursue careers as facility planners and workplace consultants in real estate firms and large corporations. The policy analysis and management major offers concentrations focusing on health care, consumers, and family and social welfare, and its graduates pursue careers as nonprofit managers, consumer advocates, and policy researchers (www.human.cornell.edu).

**Industrial and Labor Relations**
The School of Industrial and Labor Relations (ILR) focuses on the “people” side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior, human resource management, collective bargaining, labor law, labor economics, labor unions, industrial international and comparative labor, and social statistics. Students can then develop special interests in management, dispute resolution, negotiation, employee relations, labor unions, collective bargaining, public relations, and public policy. ILR graduates begin careers in management, consulting, and public policy, but about one-third go directly to law school (www.ilr.cornell.edu).

**Related Areas**
**Entrepreneurship@Cornell**
This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. Entrepreneurship-related courses are offered by all seven of Cornell’s undergraduate colleges and schools as well as the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (eship.cornell.edu).

**International Programs**
Several additional programs allow business students to focus on a particular geographic area. Majors and concentrations are offered in Latin American Studies, Modern European Studies, China and Asia-Pacific Studies, Asian Studies, Near Eastern Studies, and Africana Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdisciplinary program in international agriculture and rural development.

**COMBINED DEGREE PROGRAMS**
Highly qualified undergraduates may co-register with the Johnson Graduate School of Management during their senior year, thereby earning their M.B.A. degree in less than the usual time. Students in all Cornell undergraduate colleges may explore this option. The College of Engineering allows qualified students to earn a B.S., M.B.A., and M.Eng. degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the course work.

**PRELAW STUDY**
Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophy on human nature and mental behavior. Psychology and human development lead to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students’ interests, help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to apply and be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the bachelor of arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as The Nature, Functions, and Limits of Law, which are open to all undergraduates.

**PREMEDICAL STUDY**
Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student’s other interests.

**PREVETERINARY STUDY**
There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors.
Business and PreProfessional Study

including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of D.V.M. Admissions, College of Veterinary Medicine, Cornell University, S2–009 Schurman Hall, Ithaca, NY 14853–6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Office of Multicultural and Diversity Programs, College of Agriculture and Life Sciences, 140 Roberts Hall, Ithaca, NY 14853.
INTRODUCTION

College Focus
The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

- Land-grant, or agricultural sciences
- Applied social sciences
- Environmental sciences
- New life sciences

Faculty members challenge students with educational programs that promote problem-solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban, and rural development throughout New York State, the nation, and the world.

Administration
Susan A. Henry, dean
Barbara A. Knuth, co–senior associate dean
Jan P. Nyrop, co–senior associate dean
Margaret H. Ferguson, associate dean for finance and administrative services
Michael P. Riley, associate dean for alumni affairs, development, and communications
Donald R. Viands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station
Helene R. Dillard, associate dean and director of cooperative extension
Christopher B. Watkins, associate director of cooperative extension
Glenn J. Applebee, associate director of cooperative extension
Daniel J. Decker, director of CALS land grant affairs, senior advisor to the dean
W. Ronnie Coffman, director of international programs
James E. Haldeman, senior associate director of international programs
Terry W. Tucker, associate director of international programs
Alice Pell, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs
Animal science: W. Ronald Butler, 149 Morrison Hall
Applied economics and management: Loren W. Tauer, 154 Warren Hall
Biological and environmental engineering: Daniel J. Aaneskowsky, 104 Riley-Robb Hall
Biological statistics and computational biology: James Booth, 1178 Comstock Hall
Communication: Geri K. Gay, 339 Kennedy Hall
Crop and soil sciences: Harold van Es, 232 Emerson Hall
Development sociology: Max Pfeffer, 133A Warren Hall
Earth and atmospheric sciences: Teresa E. Jordan, 2116 Snee Hall; Arthur T. DeGaetano, associate chair, 1119 Bradfield Hall
Ecology and evolutionary biology: Richard G. Harrison, E345 Corson Hall
Education: Arthur L. Wilson, 435 Kennedy Hall
Entomology: Jeffrey G. Scott, 2130 Comstock Hall
Food science: Kathryn J. Boor, 114 Stokking Hall
Horticulture: Marvin P. Pritts, 134A Plant Science Bldg.
Landscape architecture: Peter J. Trowbridge, 440 Kennedy Hall
Microbiology: William C. Ghiorse, B76C Wing Hall
Molecular biology and genetics: Kenneth J. Kemphues, 435 Biotechnology Bldg.
Natural resources: Marianne E. Krasny, 118 Kemphues Hall
Neurobiology and behavior: Kraig Adler, 446A S. G. Mudd Hall
Plant biology: William L. Crepet, 412 Mann Library
Plant breeding and genetics: Mark E. Sorrels, 214 Emerson Hall
Statistical sciences: Martin T. Wells, 301 Malott Hall

Student Services

Office of Academic Programs
The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty, and alumni. The hub of these services is the Office of Academic Programs in Roberts Hall, including the director, associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Multicultural and Diversity Office, and the Registrar's Office. Although most of the student services are in the Office of Academic Programs, services also are located across the college in the Office of Undergraduate Biology and in various departments. Faculty members in the College of Agriculture and Life Sciences consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty advisor in his or her major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, coordinates the college international exchange programs, and offers consultation and support for personal issues. Two counselors with expertise in college policies and guidelines provide confidential consultation and support appropriate to each student's academic circumstances. Students seek advising, consultation, and support on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management.

Academic advising is available for students who are interested in international study, need to file petitions, wish to waive college academic regulations, have disability concerns, are experiencing academic difficulties, take or return from leave of absence, or have requests for tutoring.

The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society.

The staff is available on a walk-in basis, as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, and Pamela Torelli.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college’s undergraduate population. Additionally, the office is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State, the nation, and the world.

The Office of Undergraduate Academic Affairs is charged with monitoring and programming for the Educational Opportunity Program (EOP) and Prehealth Collegiate Science and Technology Entry Program (CSTEP). EOP and CSTEP are state-supported programs intended to assist New York State, the nation, and the world.
tate students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, Learning Strategies Center, and the State Programs Office. Other university contacts include the University Career Center and the Office of Financial Aid regarding concerns of the underrepresented student population. The director provides support for the CALS Diversity Committee. The director together with peer advisors carries out the duties of the office. The staff acts as a major advocacy group, as well as an information and referral center.

Given the college’s policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions that serve the college’s entire population. At present, that includes general college diversity activities, serving as the college prehealth advisor, and providing ongoing support at all levels for the Office of Counseling and Psychological Services.

The CALS Registrar’s Office holds walk-in hours to assist students with any registrar-related issue. The office maintains student records and reviews degree progress on a semester basis, maintains the Dean’s List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/current/registrar.

The CALS Registrar’s Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 9:00 to 11:00 a.m. and Wednesdays from 2:00 to 4:00 p.m. in 140 Roberts Hall. No appointment is necessary during these times. Registrar’s Office staff include Melanie Holland, Torrey Jacobs, Shawayn Lockwood, and Adrienne Wilson.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of more than 400 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships.

The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, Sheri Mahaney, Sharon Rackliffe, or Jo-Lynn Buchanan in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer, and intra-university transfer student processes. The office hosts on- and off-campus information sessions for students, evaluates and makes decisions on more than 5,000 applications each year, and coordinates events for admitted students. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Sheils, Tara Bubble, Jared Rivers, Lorie Fessenden, and Erica Walters.

Students
Undergraduate enrollment is approximately 3,200, with about 57 percent in the upper division. Each year about 850 students graduate, while 648 freshmen and 275 new transfer students enroll. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

Admission
A significant factor taken into consideration by the CALS admissions committee is how well a student’s academic interests relate to the mission of the college. If you decide to apply for admission to the College of Agriculture and Life Sciences, we’ll ask you to choose from more than 20 major fields of study. As a part of the application process, you’ll be asked to write about your academic interests and to articulate how you see your interests blending into our programs that contribute to the mission of our college. Our majors fall within these broad areas: life sciences, environment, social sciences, and agriculture and food. Appropriateness for the college must also align with high academic achievement. While approximately 60 percent of CALS students live in New York State, about 40 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 26 percent are self-identified as members of ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions/; e-mail: als_admissions@cornell.edu).

Transfer Students
All accepted transfer credit must be from an accredited college or university. Transfer credit is awarded based on review of official transcripts. Additional course information may be required. Contact the CALS Registrar’s Office for information. A maximum of 60 non-Cornell credits may be transferred. Approximately 30 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, two- and four-year institutions. Detailed information on transfer admission is available on the CALS Admissions web site.

Intra-University Transfer
A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program unavailable in their current college. Guidelines are available on the CALS Admissions web site. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and letter of interest.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Students need to spend two semesters in their home college before applying. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. During this trial semester, the student must achieve a predetermined average and take approved courses to assure acceptance.

Special Students
A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should complete the Cornell transfer application process. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students
Programs in which students study off campus but enroll for Cornell credit include SEA semester, Semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, Capital Semester, Cornell in Washington, student teaching, IPM internship, and clinical microbiology internship.

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm. Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and Cooperative Extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development
Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar’s Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, Riley-Robb Hall, and Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies and the master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences. Students need an advisor in each major.

Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to offer in recognizing the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural sciences: Antonio DiTommaso, 903 Bradford Hall, ad79@cornell.edu

Agricultural science education: William Camp, 416 Kennedy Hall, wgc@cornell.edu

Animal science: W. Bruce Currie, 454 Morrison Hall, wbc1@cornell.edu

Applied economics and management: Dale Grossman, 114 Warren Hall, dag14@cornell.edu

Atmospheric science: Mark Wysocki, 1114 Bradford Hall, mw13@cornell.edu

Biological engineering: Michael Walter, Riley-Robb Hall, mw12@cornell.edu

Biological sciences: Jeffrey Doyle, 404 Mann Library, jbd5@cornell.edu; Bonnie Cornella, 216 Stimson Hall, bcc3@cornell.edu

Biology and society: Brian Chabot, 102 Little Rice, bfc1@cornell.edu

Biometry and statistics: Steven Schwager, 1194 Comstock Hall, ssj5@cornell.edu

Communication: Brian Earle, 328 Kennedy Hall, boe1@cornell.edu

Crop and soil sciences: Antonio DiTommaso, 903 Bradford Hall, ad79@cornell.edu

Development sociology: Tom Hirschel, 333 Warren Hall, th2@cornell.edu

Entomology: John Losey, 4126 Comstock Hall, jrl127@cornell.edu

Environmental engineering: Michael Walter, Riley-Robb Hall, mw12@cornell.edu

Food science: Alicia Orta-Ramirez, 107 Stocking Hall, aor98@cornell.edu

Information science: Christine Stenglein, 303 Upson Hall, cms242@cornell.edu

Interdisciplinary studies: Lisa Ryan, 140 Roberts Hall, lar@cornell.edu

International agriculture and rural development: Terry Tucker, 16 Warren Hall, ttt2@cornell.edu

Landscape architecture: Peter Trowbridge, 440 Kennedy Hall, pjt@cornell.edu

Nutritional sciences: Charles McCormick, 223 Savage Hall, ccm3@cornell.edu

Plant sciences (crop science; horticulture; plant biology; plant breeding and genetics; plant pathology/protect): Peter Davies, 255 Plant Sciences Bldg., pjd2@cornell.edu

Science of earth systems: John Cisne, 2102 Snee Hall, jhc1@cornell.edu

Science of natural and environmental systems: Tim Fahey, 12 Fernow Hall, tf5@cornell.edu

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student’s major. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Minors available in CALS can be found on the CALS Counseling and advising web site (cals.cornell.edu/cals/current/advising/options/doublmaj.cfm). For minors outside of CALS, please consult with the specific department.

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual-enrollment and to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (B.SLA) and graduate levels (MLA I), as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Agriculture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies.

Agriculture and life sciences [M.P.S. (agr.)]: Don Viands, 151 Roberts Hall, drv3@cornell.edu

Agricultural economics: TBA, 146 Warren Hall, lgm2@cornell.edu

Animal breeding: John Pollak, B-47 Morrison Hall, ep6@cornell.edu

Animal science: Richard Quaaas, B-47 Morrison Hall, rq2@cornell.edu

Atmospheric sciences: Kelly Cook, 5114 Snee Hall, khc5@cornell.edu

Biochemistry, molecular, and cell biology: Volker Vogt, 358 Biotechnology Bldg., vmv1@cornell.edu

Biological and environmental engineering: Antje Bacumner, 306 Riley-Robb Hall, ajb23@cornell.edu

Biometry: Robert Strawderman, 1172 Comstock Hall, rls54@cornell.edu

Communication: Bruce Lewenstein, 321 Kennedy Hall, bwl1@cornell.edu

Development sociology: Lindy Williams, 336 Warren Hall, lw20@cornell.edu

Ecology and evolutionary biology: Irby J. Lovette, 188 Johnson Center, Lab of Ornithology, ilj2@cornell.edu

Education [also M.A.T.]: John Sipple, 421 Kennedy Hall, jps2@cornell.edu

Entomology: Cole Gilbert, 6136 Comstock Hall, cg23@cornell.edu

Environmental toxicology: Andrew Yen, Stocking Hall, ay15@cornell.edu

Food science and technology: Martin Wiedmann, 412 Stocking Hall, mw16@cornell.edu
**Undergraduate Research**

A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university. Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, in 177 Roberts Hall; or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 4990-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclassmen usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships:

- **CALS Career Development Office**: [www.cals.cornell.edu/cals/current/career/](http://www.cals.cornell.edu/cals/current/career/)
- **CALS Undergraduate Research Opportunities**: [www.cals.cornell.edu/cals/current/student-research/undergrad/](http://www.cals.cornell.edu/cals/current/student-research/undergrad/)
- **CALS Research Honors Program**: [www.cals.cornell.edu/cals/current/student-research/honors/](http://www.cals.cornell.edu/cals/current/student-research/honors/)
- **CALS Undergraduate and Graduate Student Grants Proposal Development**: [www.cals.cornell.edu/cals/current/student-research/grants/](http://www.cals.cornell.edu/cals/current/student-research/grants/)
- **CALS Undergraduate Minority Research**: [www.cals.cornell.edu/cals/current/student-research/minority/](http://www.cals.cornell.edu/cals/current/student-research/minority/)
- **CALS Internship Guidelines**: [www.cals.cornell.edu/cals/current/student-research/internship/](http://www.cals.cornell.edu/cals/current/student-research/internship/)

**Undergraduate Research @ Cornell**: [www.research.cornell.edu/curb/](http://www.research.cornell.edu/curb/)

**CALS Undergraduate Research Board**: [www.cals.cornell.edu/cals/current/student-research/undergrad/](http://www.cals.cornell.edu/cals/current/student-research/undergrad/)

**CALS Undergraduate Research Tower**: [www.cals.cornell.edu/cals/current/student-research/minority/](http://www.cals.cornell.edu/cals/current/student-research/minority/)

**Research Honors Program**

The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion requires a thesis written in the style of a master's thesis or scholarly journal article. Original honors research may be suitable for publication in a professional journal. Students are required to send an electronic version of their thesis title, abstract, and the research advisor’s name to Ann Gartner, amg286@cornell.edu, by the end of the spring semester. In addition to copies of the entire thesis requested by the program area, one copy is required by the Office of Academic Programs (140 Roberts Hall). This copy will be made available in Mann Library. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During each summer the **CALS Research Honors Abstracts** is published as a compilation of honors theses abstracts.

The bachelor of science degree with “distinction in research” is conferred upon students with a special opportunity to work with a faculty mentor and to experience the research process. Successful completion requires a thesis written in the style of a master’s thesis or scholarly journal article. Unless otherwise noted in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program are not eligible for distinction in research by participating in a program offered by another college or administrative unit.
The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with “distinction in research.”

At or near the completion of their research, students are required to give an oral presentation or poster session during an appropriate event. Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURBS) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors/.

The following are the honors program areas:

**Animal Sciences**

Faculty committee: S. M. Quirk, chair; Y. R. Boisclair, J. R. Giles, J. Gavalchin, P. A. Johnson, T. R. Overton

The objective of the animal sciences research honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing a research project should consult with their faculty advisors by their junior year. All students are encouraged to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year. Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- Register for ANSC 4990 Undergraduate Research.
- Participate in ANSC 4020 Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.
- Details pertaining to the specific requirements of the program can be obtained from the administrative office of the Department of Animal Science, 149 Morrison Hall.

**Biological Sciences**

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall or at www.biology.cornell.edu/research/honors.html.

**Biology & Society**

Faculty committee: B. Chabot, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in Biology & Society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in BSOC, ALS, or HE 4991–4992, Honors Project I and II. More information on the program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 11: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 25: Thesis defense accomplished.
- May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

**Entomology**

Faculty committee: C. Gilbert, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Research honors students have the option of earning academic credit by enrolling in ENTOM 4970 Independent Study during any semester while working toward a research honors thesis. This need not be the student’s academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.

Applications will be reviewed by a committee consisting of the biology & society program, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in BSOC, ALS, or HE 4991–4992, Honors Project I and II. More information on the program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Sequence of Requirements**

1. Discuss the matter with his or her academic advisor, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This plan must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 8 credits each in BSOC, ALS, or HE 4991–4992, Honors Project I and II. More information on the program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- Last week of second semester of the junior year: Application for honors program submitted to 306 Rockefeller Hall.
- April 11: Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 25: Thesis defense accomplished.
- May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.
Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student's mentor. The designation of “distinction in research” on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member's commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 4990).

2. Work with a faculty advisor to identify and formulate a research problem. If the faculty advisor is not in the Department of Landscape Architecture, select a co-advisor from the department to ensure that the research is consistent with the field.

3. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submissions are encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.

4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.

5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.

6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master's thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee's comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.

7. Give two oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student's senior year.

8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13. These copies are in addition to the unbound copy required for Mann Library. A 250-word abstract must be provided electronically to the CALS Office of Academic Programs and must appear at the front of the thesis (see “CALS Requirements for Honors Thesis”).

Natural Resources
Faculty director: J. B. Yavitt, chair
The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research, find and carry out supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 4991 Honors Research in Natural Resources) during their honors research. The research findings are presented in a written thesis reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule.

Junior Year
1. File an informal application with the faculty director. The application includes a project description and advisor information.

Senior Year
1. Register for NTRES 4991 before the add deadline (fall and spring).

2. Sixth week of fall semester: Submit formal application to faculty director (16 Fernow Hall).

3. March 31: Thesis should be close to completion.

4. April 15: Submit two copies of the thesis to the faculty director for ad hoc reviews.

5. May 4: Pick up ad hoc reviewers' comments from the faculty director.

6. May 15: Submit two copies of the final thesis: one for the college, one for the program director.

7. Week of May 25: Students will be notified of the decision, and the faculty director will recommend that each approved student graduate with “Distinction in Research.”

Nutritional Sciences
Faculty committee: J. T. Brenna, C. Bisogni
The research honors program in the Division of Nutritional Sciences is a structured experience that requires (1) taking a course in research (NS 3980), (2) conducting a research project through which the student becomes intellectually engaged in the whole
research process, (3) completing a written thesis that reports the research, and (4) giving an oral presentation of the project at the undergraduate honors symposium. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program is an excellent opportunity for students who are highly interested in research and wish to commit substantial time and intellectual energy to a project that will span about four semesters of their undergraduate experience. Honors students carry full academic loads. This intensive research experience is not suitable for all students, and those who wish a less intensive research experience may conduct research with a faculty member under NS 410.

Students interested in the program should take NS 4980 as early in their program as possible. Students are required to write the honors project proposals in fulfillment of the research honors program requirements at the DNS Honors Research Program web site (www.nutrition.cornell.edu/dns7_undergradhonres.html) or contact Professor Brennan. Acceptance into the research honors program occurs when the student (1) is accepted into a faculty member’s research program and (2) submits a research proposal abstract that is approved by the directors of the research honors program.

Students interested in the program typically spend the spring sophomore semester and fall junior semester exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although some guidance in this process will be provided in NS 3980. By the fall of the junior year, the student is expected to have identified their faculty member and be working with him/her on a proposal abstract, which is due early in the spring junior semester.

Students receive academic credit for work on their honors project under NS 4990. The 6 required credits may be taken over several semesters. How much time is spent on the project each semester will be the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually assigns one hour of academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The research honors program is the major component of the research honors program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior semester and fall senior semester. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior semester is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted to a second faculty member for evaluation. When comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the semester.

**Physical Sciences**

Faculty committee: S. J. Mulvaney, chair; C. D. Bustamante

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology. In addition to meeting the requirements of the college, the student is expected to:

1. Identify a thesis advisor and thesis topic before the end of the junior year.
2. Work with the thesis advisor to prepare a budget, short research proposal (2-3 pages), and application form. These materials must be received by the Physical Sciences committee chair by the end of the third week of senior year.
3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.
5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.
7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which graduation is expected.

There is no required format, but the thesis is usually written in the form of a research journal article or a master’s thesis. Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Social Sciences**

Faculty committee: Nancy Chau, chair; Angela Gonzales, Travis Park, and Cliff Scherer

Research projects in the social sciences include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above. The evaluation of the student’s written application, and on approval of a detailed thesis proposal. The application and proposal are due to the program area chair no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis advisor during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

- Methodology and experimental plan, necessary space, equipment and supplies, and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and estimates completion within the remainder of the student's undergraduate tenure is feasible.

A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminars, professional meetings).

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable research report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be returned by the honors committee within at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor certifying that the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Additional guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon.
1. **Research Topic**: State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

2. **Research Questions/Empirical Hypotheses**: Specify the proposed questions to be answered or hypotheses to be tested empirically via collection of data and a mode of analysis accepted in the social sciences.

3. **Research Methods**: Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

4. **Expected Significance**: State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise pending petition to the Social Science Research Honors Committee. Students should register for honors credit directed by the faculty research honors project advisor.

Distinction in research is awarded upon approval of the research honors thesis by the Social Sciences Research Honors Committee. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. The Honors Committee recommends the submission of the thesis draft to the thesis advisor two months before graduation to permit sufficient time for revision. Two copies of the thesis must be submitted to the chair of the Honors Committee no later than the middle of the second-to-last month before graduation (i.e., April or November). A supporting letter from the faculty member supervising the work also must be submitted. The thesis will be independently reviewed and further revisions may be required before the thesis is accepted. Final approval of the thesis requires a majority vote of the Honors Committee.

### OFF-CAMPUS OPPORTUNITIES

**Albany Programs**

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments. Those accepted should plan a program of study in consultation with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement for academic credit for the Assembly Intern Program, students enroll in ALS 3920. To receive academic credit for the Senate Assistants Program, students enroll in ALS 4000. Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

**Cornell in Washington**

The Cornell in Washington program offers students in all majors an opportunity to earn full academic credit for a semester in Washington, D.C. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, carry out independent research projects, and take one or two electives. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 4998 and cannot receive credit for the externship experience alone. For further information, see p. 22, inquire at M101 McGraw Hall, 255-4090, or visit cwl.cornell.edu.

**Marine Biological Laboratory’s (MBL) Semester in Environmental Science**

The Marine Biological Laboratory’s (MBL) Semester in Environmental Science is a semester-long program held each fall in Woods Hole, Massachusetts. This is a multi-university and college program run by the staff of the Ecosystems Center of the MBL. Approximately 15–20 students interact intensively with the world-class research staff of the Ecosystems Center in a mixture of classroom, laboratory, and field-research activities. The major focus of the program are on biogeochemistry, ecosystem science, and the impacts of land use and global change on the environment. Students spend about 20 hours each week conducting intensive, hands-on field and lab work in coastal forests, fresh water ponds, and estuaries, and complete an independent research project as part of the curriculum. The MBL is one of the oldest (founded in 1888) and most distinguished biological field stations in North America. Cornell credit for up to 16 credits is offered. More information on the program can be obtained from the Cornell faculty liaison (Dr. Thomas Prach, E309 Corson Hall, 255-6757) or from the director of the program (Dr. Ken Foreman, MBL Ecosystems Center, 508-289-7777; courses.mbl.edu/SES).

**SEA Semester**

The SEA Semester is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Six weeks are spent in Woods Hole, and the following six weeks are spent on either one of SEA’s two sailing vessels: the SSV Robert Seamans or the SSV Corwith Cramer. For more information, contact SEA Education Association, P.O. Box 6, Woods Hole, MA 02543 (1-800-552-3633 x 770) or visit www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

**Shoals Marine Laboratory (SML)**

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML provides a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," in the section Shoals Marine Laboratory (B IOSM), for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, or visit www.sml.cornell.edu.

**Internships**

Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship. Unlike the CALS guidelines for assigning credits, the 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college’s attention a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. For internships not governed by an established internship course, the student must enroll in a 497-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agriculture and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.
1. Credit will be assigned or accepted only in cases in which a Cornell faculty member is directly involved in determining both the course content and in evaluating the student's work.

2. The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.

3. Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.

4. Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be found on the web at cal.s.cornell.edu/cals/teaching/elr.

5. Students need to keep their faculty internship advisor updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work, and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in the Registrar's Office in 140 Roberts Hall.

Pay and Credit for Undergraduate Research, Teaching, and Internships

Research: students can receive pay or credit, or they can partition it so that they receive pay for part of the research and credit for the other as long as the work does not overlap.

Undergraduate Teaching Assistant: students can receive either pay or credit, but they cannot partition it.

Internships: students may receive both pay and credit for the same internship experience.

Study Abroad

Each year about 200 CALS undergraduates spend an academic year or semester studying abroad. Whether attending a large university in Australia, a smaller campus in Sweden, or a university in Singapore or Hong Kong, CALS students have a variety of international study options available to them. They can choose from:

- a CALS exchange program in a variety of universities around the world that have been created especially for CALS students. For a list of the programs available, visit www.cals/current/abroad-exchange/index.cfm;
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu/

Whether participating in a CALS exchange or a program through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty advisor and meet with the college study abroad advisor to review the college policies and to receive college approval. College policies can be viewed at: www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm.

Study abroad advising hours are held in the Counseling and Advising Office, 140 Roberts Hall.

Ithaca College and Wells College Exchange Programs

The Cornell University–Ithaca College Exchange Program is a reciprocal arrangement between Cornell University and Ithaca College that allows matriculated full-time students with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition charges on a per-credit basis. This arrangement is available during the fall and spring semesters only, and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, N.Y. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.sce.cornell.edu/exmu/

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Requirements

A. Minimum total credits: 120 academic credits are required for graduation.

Important Exceptions:

- Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
- Review or supplemental courses (e.g., 1000- to 1099-level courses) increase the number of credits required for graduation by the number of credits in the course.
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu/

Whether participating in a CALS exchange or a program through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty advisor and meet with the college study abroad advisor to review the college policies and to receive college approval. College policies can be viewed at: www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm.

Study abroad advising hours are held in the Counseling and Advising Office, 140 Roberts Hall.

Ithaca College and Wells College Exchange Programs

The Cornell University–Ithaca College Exchange Program is a reciprocal arrangement between Cornell University and Ithaca College that allows matriculated full-time students with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition charges on a per-credit basis. This arrangement is available during the fall and spring semesters only, and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, N.Y. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.sce.cornell.edu/exmu/

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Requirements

A. Minimum total credits: 120 academic credits are required for graduation.

Important Exceptions:

- Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
- Physical education courses do not count toward 120 credits for graduation. They do not count toward the minimum 12 credits required for full-time status.
- Minimum credits at Cornell: 60 academic credits must be completed at Cornell.
- Maximum non-Cornell credits: 60 non-Cornell credits (AP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.
- Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation. CALS credits include all courses from departments within CALS, and courses offered in the Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences Departments. Specifically, courses offered under the following subject prefixes count as CALS credits: AGSCI, AIS, ALS, AEM, ANSC, BEE, BIOG, BIOAP, BIOM, BIONB, BION, BIOSM, BTRY, COMM, CSS, DSOC, EAS, EDUC, ENTOM, FDSC, HORT, IARD, INFO, LA, NS, NTRES, PLLR, PLPA, SNES.
- Maximum credits from endowded colleges: 55 endowed credits can be completed without incurring excess tuition charges.
- Endowed credits include all courses from departments in the College of Arts and Sciences, Architecture, Art, and Planning, Engineering, the Hotel School, the Johnson School of Graduate Management, and the Law School. Courses completed during the summer and winter sessions do not count against the 55 endowed credit limit.
- Minimum letter-graded credits: 100 (prorated based on non-Cornell credits).*
- Maximum credits earned through independent study, research, teaching assistantships, and/or internships: 15 credits of "unstructured" course work can be applied toward graduation requirements (prorated based on non-Cornell credits) (i.e., a minimum of 100 "structured" credits are required for graduation).
- The prorated formula is available at www.cals.cornell.edu/current/registrar.

2. Physical Education Requirement

A. Pass two PE courses with a satisfactory grade.

Exception: External transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college before matriculation.

B. Pass a required swim test, administered during orientation. External transfer students who are exempt from PE are exempt from the swim test.

C. Students are expected to complete the physical education requirement in their first two semesters at Cornell.
3. Residency Requirements
A. Eight semesters of full-time study are expected. Transfer students are credited with one semester in residence for each 15 credits earned at another institution.
B. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in the Internal Transfer Division.
C. Freshmen are limited to one S-U course per semester.
D. PE does not count toward the 12 credit minimum required for full-time status.

6. Distribution Requirements
The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas.

3. Schedule Requirements
A. Students are expected to enroll in at least 5 credits each semester.
B. Freshmen may not enroll in more than 18 credits, not including physical education.

4. Approval of the student's faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be charged accordingly.

5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to be prorated in the spring semester are encouraged to submit the application by December 15. The final deadline is January 15.

Please be advised that prorated tuition may impact the student's financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements
Minimum cumulative GPA: 2.00 or above must be maintained. The cumulative GPA includes all grades earned at Cornell.

5. Schedule Requirements
A. Students are expected to enroll in at least one CALS course each semester until 55 CALS credits have been earned.
B. Freshmen may not enroll in more than 18 credits, not including physical education.
Knowledge, Cognition, and Moral Reasoning (KCM)
These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

Literature and the Arts (LA)
These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, analyzing and criticizing reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Social and Behavioral Analysis (SBA)
These courses examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

Foreign Language (FL)
These courses are taught by the following departments: Africana Studies and Research Center (ARSC—language only), Asian Studies (BENG, BURM, CHIN, HINDI, INDO, JAPAN, KMER, KOREA, SANSK, TAG, THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only, DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FREN, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSA, HUNGR, POLISH, SEICB, and UKRAN).

Diversity (D)
Although not a requirement, the college recommends that students take at least one diversity course.

Written and Oral Expression. 9 credits total, of which at least 6 must be in written expression. Oral expression is not required by the college (it may be for some majors); all 9 credits may be in written expression. Courses in written and oral expression may be selected from the following:

Oral Expression

COMM 2100, 2030, 3600

Written Expression

First-Year Writing Seminars

Sophomore Seminars

AEM 2000

COMM 1310, 2630, 3520, 3600

ENGL 2800, 2810, 2880, 2890, 3820–3850, 3880, 3890

LA 2150

7. Quantitative Literacy Requirement
Faculty legislation requires minimum competency in quantitative literacy to complete a degree in the College of Agriculture and Life Sciences. This requirement can be satisfied in one of three ways:
• Earning a score of 4 or 5 on the AP Calculus exam; or
• Transferring an approved calculus or statistics course with a grade of “C” or better; or
• Taking an approved math or statistics course at Cornell.
A complete listing of approved math and statistics courses is available online at www.cals.cornell.edu/current/registrar/. Pre-approval forms are available in CALS Registrar’s Office.

Non-Cornell Credit Policies
1. Non-Cornell credit includes:
• advanced placement credit (see p. 8 for further details);
• credit earned at an accredited college or university;
• credit earned through the Ithaca College and Wells College Exchange Programs;
• credit earned through a Cornell Abroad or CALS exchange program.
2. Non-Cornell credit is accepted by CALS when:
• the credits are earned at an accredited institution;
• the credits do not duplicate course work already completed at Cornell;
• the credits are earned before matriculating into CALS or during the summer or winter session or through Cornell Abroad or an approved exchange program;
• the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
• the grade earned is “C-” or better; and
• an official transcript is sent directly to the CALS Registrar’s Office from the college/ university where the credits were completed.

Please note: Cornell University does not accept credit for courses sponsored by colleges not taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 8–12 of this catalog. For CALS-specific policies, see College Credit Earned While in High School.
3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.
• If more than 60 non-Cornell credits have been completed, the CALS Registrar’s Office will work with the student to determine which credits best fulfill CALS graduation requirements.
• Advanced placement credits are limited to 30 credits.
• Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.
4. Non-Cornell credits are recorded on the graduation summary and can be applied toward CALS credits, distribution requirements, and major requirements.
• Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits on the graduation summary and count toward the minimum of 55 CALS credits required for graduation.
• Non-Cornell courses that are equivalent to Cornell courses that fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.
• Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the maximum of 55 endowed credit hours.
• If a course has no comparable course at Cornell, the Registrar staff will determine how the credit should be applied.
• Faculty advisors determine how non-Cornell credit will be applied toward major requirements; the CALS Registrar’s Office determines how non-Cornell credit will be applied toward CALS graduation requirements.
5. Students who have already matriculated into CALS and are planning to take courses at another institution should complete a transfer credit pre-approval form before completing the course work. Pre-approval forms are available in the CALS Registrar’s Office in I40 Roberts Hall.
6. During the regular academic year, students can be enrolled in courses at both Cornell and another institution only if the student is taking a course not offered at Cornell. (Schedule conflicts or unavailability of courses in a given semester do not constitute valid rationales for concurrent enrollment at another institution.)

College Credit Earned while in High School
If a student is enrolled in a college or university course during his or her high school years, transfer credit will be given only if all the following criteria are met:

1. Course cannot be used to fulfill high school graduation requirements.
2. Course must be a standard course taught by a post-secondary institution, available to all students.
3. If taught in a high school, the high school must be a satellite location, one of several options available to all students taking the course.
4. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
5. Students must be enrolled for college credit and pay college tuition.
6. Instructor must be a faculty member (includes adjunct) at the offering college.
7. An official transcript must be sent to the CALS Registrar’s Office by the offering institution. It is the student’s responsibility to request an official transcript.
8. Written verification from the offering institution must be provided to confirm that all credit earned in high school meets these criteria. It is the student’s responsibility to request this written verification. Forms are available in the CALS Registrar’s Office, 140 Roberts Hall.

Each condition must be met for credit to be accepted.

Appropriate AP exams identifying a student’s understanding of the material indicated by achieving the scores outlined in Courses of Study may be used to gain credit for coursework that does not meet the criteria outlined above.

Graduation Procedures
1. The progress of each student toward meeting the degree requirements is recorded each semester in the CALS Registrar’s Office on a graduation summary form. Students can review their graduation summary online at https://dust.cals.cornell.edu.
2. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are expected to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters. A student who wishes to either graduate early or delay graduation must complete an additional application with the CALS Registrar’s Office.
3. Application to graduate. In the first semester of their senior year, students must complete and file an application to graduate with the CALS Registrar’s Office.

Deadlines to File the Application to Graduate:
January graduates: September 15
May graduates: December 1

Failure to meet these deadlines could result in a student’s name being omitted from the commencement program and/or a diploma not being available for pick-up on commencement Sunday.

Student Responsibilities: It is the student’s responsibility to complete Part I of the Application to Graduate available online at https://dust.cals.cornell.edu. Schedule a meeting with your faculty advisor(s) to complete Part II of the application; submit Part II of the application to the CALS Registrar’s Office, 140 Roberts Hall; seek clarification from your advisor and/or the CALS Registrar’s Office staff if graduation requirements are unclear; and retain a copy of the Application to Graduate for your records.

Note: If a student is completing more than one major and/or a minor, the student must meet with and complete Part II of the Application to Graduate with all advisors.

Faculty Advisor Responsibilities: It is the faculty advisor’s responsibility to complete Part II of the Application to Graduate with the student, listing any outstanding requirements on the application (including courses in which the student is currently enrolled), and answer any student questions regarding major requirements.

CALS Registrar’s Office Responsibilities: It is the responsibility of the CALS Registrar’s Office to update the graduation summary of seniors before each student’s final fall semester. The CALS Registrar staff is available to review degree requirements during walk-in hours and by appointment.

Commencement Information: Commencement information will be provided to all graduating seniors directly by the Commencement Office. Information is also available at www.commencement.cornell.edu.

ACADEMIC POLICIES AND PROCEDURES

Registration
All students must register with the university at the beginning of each semester. In order to be considered a registered student by the university, a student must:
- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- clear any holds, whether these are from the Bursar’s Office, Gannett Health Center, the judicial administrator, or the dean of your college; and
- satisfy New York State health requirements.

Students can check their registration status by logging into Cornell University’s student information system. Students must register for courses before the end of the seventh week.

Enrollment Changes
A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through “Just the Facts” or the official course drop and add form at the Registrar’s Office, 140 Roberts Hall. Approval of the faculty advisor may be required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

Academic Integrity Policy
The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings; students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the CALS Registrar’s Office, 140 Roberts Hall.

Repeated Courses
Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their cumulative GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their cumulative GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Incompletes
Students must not enroll again for a course in which they received an incomplete. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Consultation with their faculty advisor, students pre-enroll by computer.

https://dust.cals.cornell.edu
2. Students are guilty of violating the code if they:
   • knowingly represent the work of others as their own.
   • use or obtain unauthorized assistance in any academic work.
   • give fraudulent assistance to another student.
   • fabricate data in support of laboratory or field work.
   • forge a signature to certify completion or approval.
   • submit the same work for two different courses without advance permission.
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
   • in any other manner violate the principle of absolute integrity.

3. Faculty members assume responsibility to:
   • in any other manner violate the principle of absolute integrity.
   • make clear the conditions under which the code is to be violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned.
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
   • make clear the consequences of violating any aspects of the code.

4. Faculty members fulfill their responsibility to:
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
   • make clear the conditions under which examinations are to be given.
   • make clear the consequences of violating any aspects of the code.
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.

5. Academic Honors
   The college encourages high academic achievement and recognizes outstanding students in several ways:
   1. Dean's List.
   Each semester, students are recognized for academic excellence by inclusion on the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:
   a. a minimum course load for the semester of 12 letter-graded credits.
   b. completion of at least one CALS course.
   c. achievement of a semester GPA of at least 3.50; and
   d. achievement of an S grade, or a C- or better grade in each course (including physical education), with no Incompletes.
   Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.
   2. Bachelor of Science with Honors
   a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate "summa cum laude."
   b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the cumulative Cornell GPA) will graduate "magna cum laude."
   c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the cumulative Cornell GPA) will graduate "cum laude."
   3. Bachelor of Science with Distinction in Research.
   Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.
   Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are selected from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community. Visit Ho-Nun-De-Kah's website at www.hndk.org/.
   5. Golden Key is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key's website at www.rso.cornell.edu/gkihs/.

Academic Standing
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students. Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:
   • semester GPA of at least 2.00
   • cumulative GPA of at least 2.00
   • satisfactory completion of 12 or more credits per semester
   • reasonable progress toward completion of major and distribution requirements

Petitions Procedures
The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee:
   • reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements.
   • receives and acts on petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee.
   • acts on readmission requests from persons whose previous enrollment was terminated by the committee.
   • notifies the petitioner in writing of the action taken by the committee.

A petition for exemption from a college academic requirement or missed deadline may be filed by any student who has grounds for exemption. A petition is usually prepared with the assistance of a student's faculty advisor, whose signature is required. The advisor's recommendation is helpful to the committee. The committee reviews the written petition and determines whether there
is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action. Students wishing to withdraw from a course after the end of the seventh week must petition. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total workload, and scheduling prior to stated deadlines. A grade of W (for “withdrawal”) is recorded on the transcript if a petition to drop a course is approved after the end of the seventh week of classes, and if an approved drop results in fewer than 12 credits.

Forms are available in the Counseling and Advising Office, 140 Roberts Hall. Counselors are available to assist with the process.

**Leave of Absence**
A student taking a break from studies in a future semester or who finds it necessary to leave the university before the end of a semester should submit a written petition for a leave of absence. Such action serves as appropriate notification to the university offices and corrects the student's transcript. An approved leave is considered a voluntary interruption in study and holds the student's place in the college without requiring reapplication to the university. Voluntary leaves are issued in two ways: unrestricted for students in good academic standing (no restrictions placed on length of leave up to five years, or activities pursued, and simple notification by student of intent to return), and restricted (length of leave and activities pursued may be specified, and a petition to return must be approved by the Committee on Academic Achievement and Petitions). A leave exceeding five years will require additional paperwork.

Information and petition forms are available in the Counseling and Advising Office, 140 Roberts Hall.

**Withdrawal**
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

**MAJOR FIELDS OF STUDY**
The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available. Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet the minimum distribution requirements of the college.

**Agricultural Sciences**
Agriculture is an exciting and dynamic field involving a wide range of disciplines. The Agricultural Sciences major trains students to be broad thinkers who are scientifically skilled and knowledgeable about socioeconomic issues related to agriculture and the environment. This interdisciplinary program is for students wishing to pursue a general education in agriculture to prepare for careers that require knowledge of food systems and natural resources. Such careers may include the production and marketing of plant/animal foods, agricultural education in secondary schools, organic farming, cooperative extension, and crop consultation.

By providing students with focused categories of courses from which to choose, the Agricultural Sciences program is designed to allow students to work with their advisor in developing a curriculum that best fits the needs of each individual. The program allows students to focus on one or two areas of concentration while gaining a broad exposure to the agricultural courses across the college.

All students are required to take the core courses in sustainable agriculture, soil science, and integrated pest management, as well as gain practical experience by completing an internship and a "hands-on" experiential learning capstone course addressing real problems in agricultural science. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

Students graduating with an Agricultural Sciences major will be trained to address complex global agricultural issues of today and will have a knowledge base that leads to employment in a variety of fields. The required emphasis on one or two concentration areas also allows students to become experts in the area of agriculture that is most exciting to them.

Since students in the Agricultural Sciences program come from across the college, we create a family of students who take courses, study, learn, and discuss together as a group. We do this by organizing activities that facilitate learning in an interdisciplinary setting, such as inviting guest speakers from various sectors of the agricultural industry to lead discussions, offering professional development workshops to train students for the workforce, and hosting social events for students in the major. Opportunities are also available in research and outreach experiences, and in summer employment, which serve to enrich the students' practical experience.

**Animal Sciences**
The Animal Sciences program area offers a coordinated group of courses dealing with the principles of animal genetics, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef, cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and ease accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisors. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy business or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industries. These are examples of the flexibility within these programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a select group of students.

Students declaring a minor in animal science will arrange for a formal academic advisor in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of which must be taken at Cornell), the makeup of which will be determined in consultation with the advisor. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfaction completion of minor requirements will be verified by the minor advisor's signature on the petition to graduate.

For information, contact Deloris Bevins in 149 Morrison Hall, debvins@cornell.edu.
Applied Economics and Management
The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's general undergraduate business degree. Accredited by AACSB International—the Association to Advance Collegiate Schools of Business—AEM's undergraduate business program offers a broad, flexible curriculum. Ten (10) areas of specialization are offered in AEM.

Accounting
Agribusiness Management
Applied Economics
Entrepreneurship
Environmental and Resource Economics
Finance
Food Industry Management
International Trade and Development
Marketing
Strategy

Minors
Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in eight different subject areas: Agribusiness Management, Business, Environmental and Resource Economics, Finance, Marketing, Food Industry Management, Applied Economics, International Trade and Finance. The minors consist of between 18 and 20 credits of required courses. Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside CALS. For those lacking time to incorporate all the business minor requirements during the regular school year, up to three of the required courses can be taken during Summer Session.

Atmospheric Science
Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of three semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. **Atmospheric science:**
   a. EAS 3410, 3420, 3520, 4470, 4510
   b. See tracks listed below for additional required courses

2. **Mathematics, statistics, and computer science:**
   a. MATH 1110, 1120, (1920 or 2130), 2930
   b. AEM 2100 or equivalent
   c. EAS 2000 or equivalent

3. **Basic physical sciences:**
   a. PHYS 2207, 2208, or equivalent
   b. CHEM 1560

4. **Tracks**

**Biological Sciences**
Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and systematic and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.biology.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

Biological and Environmental Engineering
The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and environmental engineering. BEE faculty and students address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering majors in the Department of Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in biological engineering or environmental engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences.

Engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (solid mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and engineering design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology, applications, bioinstrumentation, engineering
aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students may further strengthen their programs by completing an engineering minor. Students preparing for medical school take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills and collaborative problem-solving.

Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu.

The department also offers technology concentrations in biological engineering technology and environmental engineering technology within the Interdisciplinary Studies Major in CALS. The technology concentrations emphasize technical applications of biological, environmental, physical, and life sciences. Students take courses in basic biological and physical sciences and mathematics, and choose electives in engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology students participate in undergraduate teaching and research, internships, independent study, project teams, and study abroad. Students should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for technical people who have strong math and science skills, who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is preparing the next generation to meet these challenges.

Specific course distribution requirements for the concentrations in biological engineering technology and environmental engineering technology include the following:

1. **Basic Subjects**
   - a. Calculus 8
   - b. Chemistry 7
   - c. Physics 8
   - d. Computer applications 4
   - e. Statistics or probability 3
   - f. Introductory biological sciences* 6–8
   - g. Written and oral expression* 9
   - h. Social sciences and humanities* 12

   *Required of CALS majors.

2. **Advanced and Applied Subjects**
   - a. Five courses (15 credits) in the biological, environmental, or agricultural sciences 15
   - b. Five courses (15 credits) in technology. Three courses from the list of approved technology courses**
     One course must be chosen from the list of approved laboratory courses.**
     The lab course cannot double count as one of the three required technology courses 15
   - **Contact department for a list of approved courses.

3. **Electives**
   - Additional courses to complete College of Agriculture and Life Sciences requirements

4. **Total (minimum)** 120

For further details on the biological and environmental technology concentrations, contact the BEE department undergraduate programs office at 207 Riley-Robb Hall, 607-255-2173 or at www.bee.cornell.edu.

**Biology & Society**

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students can elect courses that satisfy the requirements and courses, see "Biology & Society" under the College of Arts and Sciences requirements, at www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

**Admissions**

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year.

The application includes:

1. a one- to two-page statement explaining the student’s intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. a selected theme.
3. a tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. a transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 60 faculty members from three colleges serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also "Biology & Society" in the College of Arts and Sciences section of this publication.

**Biology & Society requirements:**

1. Introductory biology (1101–1104, 1105–1106, or 1107–1108, or a 5 in AP biology)
2. College calculus (one course)
3. Ethics (one course)
4. Two social sciences/humanities foundation courses
5. Three biology foundation courses
6. One biology depth course
7. Statistics (one course)
8. Core course
9. Five theme courses (a coherent group of five courses relevant to the student’s special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.

**Biometry and Statistics**

Quantitative prediction and interpretation are increasingly essential components of biological, physical, and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using mathematical, statistical, and computational methods. The wealth of data that can be
acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, continues to increase exponentially, providing the means for sophisticated analysis of complex phenomena.

The Biometry and Statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of statistical and mathematical techniques to the sciences. Biometry applies statistics and mathematics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small firms; salaries are usually excellent. Experience gained through summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended. For further details on the Biometry and Statistics major/minor, please contact the Director of Undergraduate Studies, Professor Steven J. Schwager (1194 Comstock Hall) at ssj5@cornell.edu or go to www.bscb.cornell.edu.

Requirements for the Major (beyond the college requirements)

Ten (10) core courses: plus either the Statistics or the Statistical Genomics concentration. Only courses for which the student receives a grade of C- or better will count toward the major in biometry and statistics.

Core Courses:
- BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics
- BTRY 4820 Statistical Genomics
- BTRY 4830 Quantitative Genomics and Genetics
- BTRY 4940 Computational Genomics
- BTRY 4790/CS 4782 Probabilistic Graphical Models

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student's responsibility to develop this concentration, with advice from the faculty, particularly the student's faculty advisor. It will be helpful to discuss the selection of courses with the Director of Undergraduate Studies or Undergraduate Advising Coordinator of a department closely linked with the chosen concentration.

The Minor

A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 1198 Comstock Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student's major and a BSCB faculty advisor. Students and advisors in other departments should contact the Director of Undergraduate Studies in the Department of Biological Statistics and Computational Biology if they have general questions about biometry and statistics courses or the minor. A BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor
- BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics
- MATH 1110 Calculus I
- MATH 1120 or 1220 or 1910 Calculus II
- MATH 1920 or 2130 Multivariable Calculus or MATH 2210–2220 or 2240 Linear Algebra and Multivariable Calculus

One (1) additional statistics elective from the advanced statistics course list given above.

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C- or better will count toward the minor in biometry and statistics.

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how
- communication influences attitudes, opinions, and behaviors
- mass media work in our society
- to use, evaluate, and design communication technologies
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses
- COMM 1101 Cases in Communication
- COMM 1300 Visual Communication
- COMM 1310 Writing about Communication

This set of courses provides students with a basic understanding of communication and communication processes.

Required sophomore courses
- COMM 2010 Oral Communication
- COMM 2820 Research Methods in Communication Studies

Two of the four Focus Area introductory courses:
- COMM 2200 Media Communication
- COMM 2450 Psychology of Social Computing
- COMM 2820 Research Methods in Communication Studies
- COMM 2200 Media Communication
- COMM 2450 Psychology of Social Computing
COMM 2760  Cases in Communication and Social Influence

COMM 2850  Communication in the Life Sciences

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication distributed among advanced writing and presentation courses, electives, and focus area requirements. Students must also complete 3 credits of college-level statistics. In consultation with their advisers, students concentrate in one of four defined focus areas appropriate to specific educational and career goals.

1. Communication in the life sciences (CILS): Students focusing in CILS will investigate how communication influences public understanding of science, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator/outrach specialist, environmental or health-risk communicator, and business, legal, and other graduate study.

2. Communication media studies (CMS): Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how what we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media. These processes extend to entertainment to news to the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media industries, in designing the laws and policies regarding media, in business, legal, or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.

3. Communication and information technologies (CIT): Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as well as people’s interface and information needs. Possible career paths include information systems designer, research analyst, user interface designer, usability specialist, technology writer, and business, legal, and other graduate study.

4. Communication and social influence (CSI): Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations, and individuals to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human affairs. This focus area would be appropriate for students interested in using communication to bring about change in the individual and societal level. Possible career paths include public relations, marketing communications, polling, human resources, governmental affairs, sales, business, legal, and other graduate study.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both.

The minor in communication consists of four required courses: COMM 1101, 1300, 2010 and either 2200, 2450, 2760, or 2850; Students also complete three elective courses totaling 9 credit hours, at least two of which must be at the 3000–4000 level, excluding the advanced writing and presentation courses and COMM 3030, 3530, 4050, 4960, and 4980.

The minor in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information systems component area (primarily computer science), two courses from the human-computer interaction cognitive science one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences

The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects and is a part of the Agricultural Sciences major (crop production and management concentration). A specialization in crop science is a part of the plant science major. A focus on soil science is possible in two majors, the science of natural and environmental sciences (SNES) or the science of earth systems (SES). The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas including: Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture. The SNES major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNES major, students can concentrate in environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics.

A minor in crop management is also available for students with any major at Cornell University. In summary, it requires at least two courses and at least 7 credits in each of crop science (CSS 2110 or 4050, 3170, or 4410) and plant protection (CSS 3150, 4440, ENTR 2410, or PLPA 3010) plus at least three courses and at least 12 credits in soil science (CSS 2600, 3210, 3650, 3720, 4120, or 4660). Equivalent transferred courses can be substituted. This minor helps prepare students for the Certified Crop Advisor Exam, an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification as Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and 3 credits in plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology

Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these and other facets of social change in both domestic and international settings.

The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agricultural systems on rural development and rural labor markets; community and regional development; environmental sociology; technology; the political economy of globalization; women in development; and ethnic stratification and integration. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international, or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in development sociology are required to successfully complete and select a sequence of courses: introductory sociology (DSOC 1101), international development (DSOC 2050), population dynamics (DSOC 2010), methods (DSOC 3130 or 3140), theory (DSOC 3010), social stratification (DSOC 2700), and a course in statistics. Four additional
Development sociology courses are also required of all majors, at least two of which must be at the 3000 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development; the social processes limiting the environment; population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in many areas of study.

Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociocultural studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

The department offers a general DSOC minor and a minor in Globalization, Ethnicity, and Development. For a complete list of requirements for either minor, please go to our web site: http://devsoc.cals.cornell.edu or visit 135 Warren Hall.

The department maintains strong ties with technical fields in CALS as well as with programs dealing with a range of issues of importance to both international and domestic development. These include: the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area and ethnic studies programs including the American Indian Program, Latino Studies Program, Asian American Studies Program, Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members are involved in working relations with faculty members in the Department of Sociology and social science units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

**Education**

The Department of Education builds on strong academic disciplines such as sociology, psychology, anthropology, biological and political sciences, political thought, and philosophy, and is grounded in empirical and theoretical studies of educational practice in order to address diverse contexts and across the lifespan. The department has two foci to meet societal demands for teachers, researcher, and learners. The Learning, Teaching, and Social Policy (LTSP) concentrates on the Cornell Teacher Education Program (CTE), concentrates on teacher education in science, mathematics and agricultural science: education, diversity, critical pedagogy, the study of school-age children and their families, and policy related to formal education. The Adult and Extension Education (AEE) concentration prepares scholars and practitioners for adult and extension education leadership and professional development roles in domestic and international community-based, non-formal, and formal organizations and focuses on community and organizing adult education, public scholarship, university extension/outreach, learning in adulthood, educational planning and program development, and international adult and extension education. These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through their scholarship and practice. Our undergraduate program leads to initial certification in agricultural science education. An undergraduate minor in education is also available for students across all colleges at Cornell. For the latest information on program developments, go to education.cornell.edu.

**Adult and Extension Education (AEE).** Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides opportunities for graduate students to investigate participatory educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research, teaching, and extension on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on adult, extension, and international education by connecting action and research. We seek to move beyond procedural questions of “how to do it” to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in critical reflection on practice to create practical theory from and for action.

Participation in the AEE program helps scholars and practitioners prepare for adult and extension leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include: participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States, international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

**Learning, Teaching, and Social Policy (LTSP).** This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, the program challenges students to create and apply research-based, critically reflective analysis of cognitive, intellectual, personal, social, moral, and institutional dimensions of learning, teaching, and educational policy in a variety of contexts and at multiple governance levels. Students engage in critically reflective practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, social, and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interactions, and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigates factors that contribute to scientific and quantitative literacy, critical and inquiry include: participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States, international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

The Cornell Teacher Education (CTE) program is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agricultural science, education; staff development; and health issues related to the education of adults.
and ethical decision making skills needed for participation in a democracy.

**Agricultural Science Education** is taught at the middle and high school levels in New York State and nationally. Building on strong academic disciplines in the agricultural sciences, and with a solid grounding in the psychological, social, empirical, and theoretical bases of educational practice, the department offers two programs that lead to professional certification in Agricultural Science Education. The undergraduate degree in Agricultural Science Education and the agriculture option in the Master of Arts in Teaching are both offered under the Cornell Teacher Education umbrella. In addition, the undergraduate degree offers a non-certification option for persons with interests in instruction in non-school settings such as extension, 4-H, arboretums, and state and national parks. All three of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

**Minor in Education**

The minor in education gives students a planned core of courses to provide them with an overview of education as a field. One option prepares students to move into the graduate segment of the Cornell Teacher Education (CTE) program. Other options provide preparation for admission into other graduate teacher certification programs or a background for professional venues such as extension, business, and industry. Any undergraduate student in the university may enroll subject to availability in courses required for the minor. Students who wish to pursue a minor in Education must complete and submit an application. Applications are available in 408 Kennedy Hall, the CALS Office of Academic Programs, or by e-mailing cu_teacher_ed@cornell.edu.

**Effective College Teaching Series.** The Center for Learning and Teaching, under the auspices of the Department of Education, offers a series of courses, both credit and noncredit, for the improvement of teaching at Cornell, designed for Cornell faculty members and graduate students who are either currently teaching or intending to teach. For details, contact the Center for Learning and Teaching, 255–6130, or www.clt.cornell.edu.

**Current offerings include:**

**EDUC 5480 Effective College Teaching**

Spring and one-week summer session. 1–3 credits. For faculty and graduate students who intend to pursue an academic career.

**EDUC 5780 ITADP Cross-Cultural Classroom Dynamics, Language, and Teaching Practicum**

Fall and spring. 2 credits. For international graduate students who have, or will have, teaching assistantships.

**EDUC 5790 ITADP Further Training for International Teaching Assistants**

Fall and spring. Noncredit course for international teaching assistants who have completed EDUC 5780 but need or desire continued work in classroom instructional and communication skills.

**Graduate Teaching Development Workshops**

Offered early in each fall and spring semester, this daylong series offers an array of workshops in teaching effectiveness, from teacher-student interactions to developing a teaching portfolio. Noncredit, open to all Cornell faculty members and graduate teaching assistants.

**EDUC 6200 Internship in Education**

Fall and spring. 1 credit. Prerequisite: CALS Graduate Student Professional Development Workshop. For CALS graduate teaching assistants or CALS teaching personnel who wish to extend their workshop experience through reflective practice and consultation with an instructional support specialist.

**Entomology**

The entomology curriculum provides students with a basic background in biological and natural sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology, including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes flexibility among the core requirements and electives that can be selected by students in consultation with their advisors.

**Requirements**

General Requirements for CALS (see Graduation Requirements for Bachelor of Science) Basic Science and Math Requirements

- One year of college mathematics, may substitute statistics or biometry, but must include one course in calculus
- One semester of physics (may need two depending on future plans)
- CHEM 1560–2080 or 2070–2080
- CHEM 1570 (organic)
- Introductory biology (101–104 recommended, even if AP credit received)
- BIOGD 2810 (genetics) or PLBR 2250 (plant genetics)
- BIOE 2780 (Evolutionary Biology)
- Choose one of the following two courses:
  - BIOE 2610 (Ecology and the Environment)
  - BIOBM 3500 or 3510 (Principles of Biochemistry)

(Choice depends on student interest in organismal vs. cellular/molecular aspects of biology)

Entomology Requirements (15–21 credits)

- ENTOM 2120 Insect Biology—4 cr
- Group A (core courses). Choose two of the following six courses:
  - ENTOM 3510/3511 Insect Systematics—4 cr
  - ENTOM 3330 Larval Insect Biology—3 cr
  - ENTOM 3250 Medical and Veterinary Entomology—4 cr
  - ENTOM 4440 Integrated Pest Management—4 cr

**Food Science**

The food science program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world.

Students in the food science program can choose from one of four specialization options in the major: (1) food science; (2) food operations and management; (3) food biotechnology; or (4) environmental science. The major meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills to move to the major. The second year emphasizes the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of second-year core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.
Enology and Viticulture. Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in Viticulture. For these students, plant science courses will be their “major,” and their required courses in enology (offered within the Food Science program) could contribute to a “minor” in Food Science.

Students with primary interest in enology and secondary interest in viticulture (E/V) may major in Food Science (with a concentration in enology) and meet the minor requirements in plant sciences if so desired (with a concentration in horticulture).

Students in either track will take many of the same courses during their two years and must satisfy the core degree-program requirements of their major and minor program, as well as the general requirements of the college. The curriculum will consist of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students will be expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major.

Prospective students should contact the undergraduate coordinators in either the Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

Information Science

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context. The field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.
- **Information Systems.** This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 12 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

**Requirements**

Core (12 courses)

1. **Introductory (two courses):**
   - INFO 1301 Introduction to Programming Web Applications
   - INFO 1302 Introduction to Designing Web Applications

2. **Math and Statistics (four courses):**
   - MATH 1110 Calculus I
   - one course chosen from: MATH 1710 Statistical Theory and Application in the Real World; HADM 2201 Hospitality Quantitative Analysis; AEM 2100 Introductory Statistics; PAM 2100 Introduction to Statistics; ENGRD 2700 Basic Engineering Probability and Statistics; BTRY 3010 Statistical Methods I; SOC 3010 Evaluating Statistical Evidence; CEE 3040 Uncertainty Analysis in Engineering; ILRST 3120 Applied Regression Methods; ECON 3010 Introduction to Statistics and Probability; PSYCH 3500 Statistics and Research Design

3. **Human-Centered Systems (two courses):**
   - INFO 2140 Cognitive Psychology
   - INFO 2450 Psychology of Social Computing

4. **Information Systems (two courses):**
   - CS 2110 Object-Oriented Programming and Data Structures
   - INFO 2500 Intermediate Design and Programming for the Web

5. **Social Systems (two courses):**
   - either ECON 3010 Microeconomics or ECON 3130 Intermediate Microeconomic Theory
   - one course chosen from: INFO 2921 Inventing an Information Society; INFO 3551 Computers: From the 17th Century to the Dotcom Boom; or INFO 3561 Computing Cultures; or INFO 3200 New Media and Society

Where options in the core courses exist, the choice will depend on the student’s interests and planned advanced courses for the selected primary and secondary tracks.

**Tracks**

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade.

Additional information on Information Science courses can be found below and in the CIS section of Courses of Study. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, and STS).

1. **Human-Centered Systems**
   - PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
   - INFO 3450 Human–Computer Interaction Design
   - PSYCH 3470 Psychology of Visual Communications
   - INFO 3650 Technology in Collaboration
   - PSYCH 3800 Social Cognition*
   - PSYCH 4130 Information Processing: Conscious and Unconscious
   - PSYCH 4160 Modeling Perception and Cognition
   - INFO 4400 Advanced Human–Computer Interaction Design
   - INFO 4450 Seminar in Computer-Mediated Communication
   - INFO 4500 Language and Technology
   - DEA 4700 Applied Ergonomic Methods

*Students who take PSYCH 3420 may also count its prerequisite, PSYCH 2050, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 3800 may also count PSYCH 2800 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 2050 or 2800 can be counted toward the primary/secondary track requirements.

2. **Information Systems**
   - INFO 3300 Data-Driven Web Applications
   - INFO 3720 Explorations in Artificial Intelligence
   - CS 4450 Computer Networks
   - LING 4424 Computational Linguistics
   - INFO 4500 Information Retrieval
   - INFO 4502 Web Information Systems
   - CS 4620 Introduction to Database Systems
   - CS 4700 Foundations of Artificial Intelligence
   - LING 4474 Introduction to Natural Language Processing
   - ORIE 4740 Statistical Data Mining I
   - CS 4780 Machine Learning
   - ORIE 4800 Information Technology
   - CS 5150 Software Engineering
   - CS 5430 System Security
   - INFO 5300 Architecture of Large-Scale Information Systems
   - CS 5780 Empirical Methods in Machine Learning and Data Mining
3. Social Systems
INFO 2040 Networks
SOC 3040 Social Networks and Social Processes
INFO 3200 New Media and Society
AEM 3220 Internet Strategy*
INFO 3490 Media Technologies
INFO 3551 Computers: From the 17th Century to the Dotcom Boom
INFO 3561 Computing Cultures
INFO 3660 History and Theory of Digital Art
ECON 3680 Game Theory*
INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology
STS 4111 Knowledge, Technology, and Property
ECON 4190 Economic Decisions Under Uncertainty
INFO 4290 Copyright in a Digital Age
INFO 4550 Seminar on Applications of Information Science
ORIE 4550 Introduction to Game Theory*
INFO 4444 Responsive Environments
INFO 4570 Social and Economic Data
HADM 5574 Strategic Information Systems*
ECON 4760 Decision Theory I
ECON 4770 Decision Theory II
HADM 4489 The Law of the Internet and E-Commerce
INFO 4850 Computational Methods for Complex Networks
INFO 5150 Culture, Law, and Politics of the Internet

*Only one of ORIE 4550 and ECON 3680 may be taken for IS credit. Only one of AEM 3220 and HADM 5574 may be taken for IS credit.

The Minor
A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of Courses of Study. Students should visit www.infosci.cornell.edu/ugrad for the most up-to-date description of the concentration and its requirements.

International Agriculture and Rural Development
International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural and rural development in low-income countries. The student chooses an area of concentration within the major and works with an advisor to plan an individualized program of study. Areas of concentration include (1) social development and livelihoods, (2) food systems, and (3) environment and ecosystems. The core curriculum and areas of concentration are designed to acquaint students with relevant socioeconomic factors, the physical and biological aspects of tropical crops and animal production, and issues of resource management and sustainability in low-income countries.

Requirements
In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 50 credits toward the major. A minimum of 18 credits from a core curriculum (in addition to foreign language) are required, 8 of which should be in international agriculture and rural development (IARD). The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 436). Other course work is drawn from a wide range of disciplines, consistent with the student’s chosen concentration. Students are expected to complete an overseas field study experience of a minimum of six weeks. The objective is to familiarize students with the many facets of agricultural and rural development in low-income countries.

International Studies Minor
Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build “global competencies.” The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements
1. Five courses with significant international content, as recommended by students’ major departments (three should be from CALS).

Highly recommended
1. Foreign language course work.
2. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the CALS International Programs Office, 255-3811.

Landscape Architecture
Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program’s unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad
The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

Master of Landscape Architecture (M.L.A.) License Qualifying Degree
Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio. (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee.)

First Year
Fall Semester  Credits
*LA 5050 Graphic Communication I 3
*LA 5010 Composition and Theory 5

Master of Landscape Architecture Advanced Degree Program. The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, and two courses in site engineering, a seminar in design theory, a course in professional practice, and a concentration, and electives.

Undergraduate Minor for Nonmajors
Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society’s relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits
+LA 3600 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
+LA 2610 Fieldwork in Urban Archaeology (4 credits)
+LA 2620 Laboratory in Landscape Archaeology (3 credits)
+LA 2820 Photography and the American Landscape (3 credits)
+LA 4180 Audio Documentary: Stories from the Land (3 credits)
+LA 4830 Seminar in Landscape Studies (3 credits)
Natural Resources
Natural Resources is an interdisciplinary major focusing on the fundamental knowledge and analytical tools required to conserve, restore, and manage the Earth’s biodiversity and ecosystem services in sustainable ways. The curriculum draws on relevant knowledge from biology, ecology, chemistry, mathematics, sociology, economics, law, and ethics. A large number of field courses provide direct experience with biodiversity in forests, wetlands, streams, lakes, and policy-making arenas. Courses address pressing environmental issues such as global climate change, landscape transformation, endangered and invasive species, human alteration of biogeochemical cycles, “green” markets and other environmental strategies, environmental justice, bio-cultural and biological diversity, and international conservation. Concentrations include applied ecology, resource policy and management, and environmental studies. The major allows students flexibility to pursue a variety of paths to understand the biological, ecological, ethical, and societal basis for biodiversity conservation, sustainable development, and resource management.

The Future for Natural Resources Majors
Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between society and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that will shape the future of our environment, either as professionals within a diverse array of environmental careers, or as informed citizens working in other professions.

Graduates with a major in natural resources have the flexibility to pursue a number of different careers because of the interdisciplinary nature of the curriculum. The major prepares students for graduate school in numerous fields, and for entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit (e.g., conservation organizations) sectors. Many students will select an area to pursue studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy. Graduates often assume leadership positions in government, colleges and universities, national and international conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum
Natural resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college’s distribution requirements for graduation. Freshmen and sophomores complete a series of four foundation courses in the major: Introduction to the Field of Natural Resources, Environmental Conservation, Introductory Field Biology, and Society and Natural Resources. Juniors complete three core courses: Applied Population Ecology, General Ecology, and Natural Resources Management and Planning. These foundation and core courses introduce the critical environmental and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses.

Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management, or environmental studies. Through course work in these concentrations, students gain an in-depth understanding of principles, concepts, and practices. All students also have the flexibility to gain exposure to a wide variety of environment-related courses offered by Natural Resources and other departments throughout Cornell. Many students elect to conduct a research honors thesis.

Areas of Concentration within the Major
Applied ecology is designed as a foundation for those who wish to pursue careers or advanced study in science-based conservation or management of fish and wildlife populations and their habitats, conservation biology, control of invasive and overabundant species, watershed and landscape management, quantitative population dynamics, resource inventory and information management, or applied ecology and biogeochemistry of forests and wetlands. This concentration also may interest students seeking a biologically based approach to environmental science or global studies. Students in this concentration typically focus their coursework in the areas of species biology and applied ecosystem ecology, including quantitative analysis of fish, wildlife, and plant populations, ecosystems, and landscapes. They complement their coursework within the departments with courses in other departments, such as Ecology and Evolutionary Biology, Microbiology, Geology, Crop and Soil Science, Atmospheric and Earth Sciences, and Plant Biology.

Resource policy and management provides a foundation for students who wish to pursue careers in natural resource conservation and management, environmental sociology, international conservation, environmental law, environmental policy analysis, or environmental communication. Students who select this concentration typically focus on courses related to development of environmental policy, management strategies for particular species or ecosystems, natural resource planning, resource economics, or programs in environmental communication and education. They complement their coursework within the department with courses in other departments such as Government, Ecology and Evolutionary Biology, Development Sociology, Communication, Applied Economics and Management, City and Regional Planning, and Policy Analysis and Management.

Environmental studies is intended for those who wish to pursue a broad and synthetic approach to understanding and participating in reconstituting the relationship between society and environment. The concentration’s emphasis is on developing an ability to think critically about these interactions. Building on a foundation of courses required for the natural resources major, during years 3 and 4, each student will design a cohesive sequence of six upper-division courses with help from their departmental advisor. These six courses should include two courses from each of three categories: (1) natural science; (2) social science and analytic skills, e.g., economics, political economy, logic, computer programming, GIS, statistics; and (3) humanities, e.g., history, philosophy, literature, arts, foreign language. A course, or a concentration, highlighted environmental theme ensures development of specific competencies linked to personal and professional ambitions of the individual student. Example themes include the environmental law, environmental education, “green” business, sustainable agriculture, and environmental communication. Students are expected to take advantage of internship, independent study, and honors thesis opportunities, as appropriate.

Research and Work Opportunities for Undergraduates
The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and access for research at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. For a comparison of the natural resources major with other environmental majors, see www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences
Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, and agricultural systems, and social and institutional environments. The program in nutritional sciences provides students with strong training in human nutrition in the context of understanding and appreciating the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands...
upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advanced study provides researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses that interest them. The core requirements include introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 1150 Nutrition, Health and Society; NS 2450 Nutritional and Physicochemical Aspects of Food; NS 3450 Nutritional and Physicochemical Aspects of Food; NS 3510 Physiological and Biochemical Bases of Nutrition; and NS 3200 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisors in the Division of Nutritional Sciences with whom they meet regularly. Advisors help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during their academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate school or employment in research or in a plant science laboratory.

The Division of Nutritional Sciences is affiliated with the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, 21 Savage Hall, 255–4410, aadns@cornell.edu.

The minor in nutrition and health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and public health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 1150 Nutrition, Health and Society, plus 9 credits of 2000-level or above didactic NS courses. Enrollment is limited in some courses. Please check www.nutrition.cornell.edu/undergrad/calsmin.html for details.

**Plant Sciences**

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology and Plant-Microbe Biology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science; for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in plant sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments. Other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualifying students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the work force immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance related industry such as a law firm, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are freely available to students for hands-on practice, technical training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas) and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Middletown (Orange County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments in the Plant Sciences consortium and are available for undergraduate and graduate field study.

**Crop science** is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program take at least 6 credits in plant sciences (plant science, entomology, and plant pathology), and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

**Enology and viticulture.** The College of Agriculture and Life Sciences offers a curriculum in viticulture and enology within existing undergraduate B.S. degree programs in plant sciences and food science.

Students with primary interest in viticulture and secondary interest in enology (V/E) can enroll in the plant sciences degree program, with a concentration in horticulture and a specialization in viticulture. For these students, plant sciences will be their "major," and their required courses in enology (offered within the food science program) will constitute a "minor" in plant sciences with a concentration in enology.

Students with primary interest in enology and secondary interest in viticulture (E/V) will "major" in food science (with a concentration in enology) and "minor" in plant sciences (with a concentration in Horticulture).

Students in either track take many of the same courses during their two to four years, and must satisfy the core degree-program requirements of their major and minor programs, as well as the general requirements of the college. The curriculum consists of course work in the basic sciences (e.g., chemistry, biology, microbiology) as well as advanced courses in plant and food sciences. In addition, students are expected to participate in internships at vineyards and/or with wine makers.

The curriculum is designed to provide students with a strong background in the basic sciences, coupled with a thorough understanding of plant and food sciences as applied to viticulture and wine making. Elective courses can be taken in a variety of areas to support and expand the major. Prospective students should contact the undergraduate coordinators in either the...
Department of Horticulture (viticulture option) or Food Science (enology option) for specific course requirements.

**Horticulture.** Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants grown in farms and gardens, nurseries and landscapes, and athletic and recreational facilities; indoor plants, greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and tea. The knowledge and techniques are essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses for the plant sciences major, plus the following courses:

**HORT 1101** Horticultural Science and Systems (4 credits)
**HORT 4000** Plant Propagation (3 credits)

Two HORT courses in plant production or management at the 4000 level (6 credits)

One additional course of integrated pest management (plant pathology, entomology, or weed science) and the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisors.

**Plant biology** stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to man. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an advisor each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

**Plant breeding and genetics** relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PLBR 2010, 4030, 4040, and BIOL 3430. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

**Plant pathology and plant-microbe biology** faculty study interactions of plants with pathogenic and beneficial microorganisms and with toxic elements in air and water. Some specialists in the field choose to focus their attention on the cause and management of plant diseases and others employ contemporary tools of molecular biology to answer fundamental questions about the nature of host-pathogen interactions. Working together, they advance the frontiers of science to ensure rapid deployment of new strategies for growing healthy crops with maximum yields and minimal impacts on the surrounding environment. For instance, a concentration in Plant Pathology and Plant-Microbe Biology is preparation for graduate study in the field. However, graduates may also be employed as sales or technical representatives to agrichemical firms, Cooperative Extension educators, state or federal regulatory officials, and laboratory technicians. Suggested courses beyond the Plant Science core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.

**Plant protection** is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

**Science of Earth Systems (SES)**

During the past several decades, with the increasing concern about issues such as air and water pollution, nuclear waste disposal, the destruction of the ozone layer, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

The SES major emphasizes the basic study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. Cornell's strengths across a broad range of earth and environmental sciences have been fused to provide students with the tools to engage in what will be the primary challenge of the 21st century. The SES major has its home in the Department of Earth and Atmospheric Sciences, but includes collaboration with other departments across the university.

The SES curriculum includes a strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. During the junior and senior years, students complete the SES core sequence, studying such topics as climate dynamics, Earth system evolution, biogeochemistry, and Earth's interior. These classes emphasize the interconnectedness of the Earth system. The selection of upper-level concentration courses allows the student to develop an area of expertise that complements the breadth of the introductory and SES core courses. Traditional concentrations include atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences. Students desiring a concentration focused on less traditional areas of study are encouraged to work with their advisors to develop an individually designed concentration. Individually designed concentrations might encompass more interdisciplinary studies in topics such as sustainable Earth and environmental systems or Earth system science and policy.

The SES major provides a strong preparation for graduate school in any one of the Earth system sciences, such as atmospheric sciences, geology, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of environmentally oriented earth resource careers in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

**Requirements for the Major**

1. **Basic Math and Sciences**
   - This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.
   - a. MATH 1910–1920 (or MATH 1110–1120)
   - b. PHYS 2207–2208 (or PHYS 1112–2213)
   - c. CHEM 2070–2080 or 2070–1570 or 2090–2080
   - d. BIOG 1101/1103–1102/1104, or 1105–1106, or BIOG 1109/1110

2. **Required Introductory Course:**
   - EAS 2200 The Earth System

3. **Science of Earth Systems Core Courses**
   - These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major.
   - EAS 3010 Evolution of the Earth System
   - EAS/NTRES 3030 Biogeochemistry
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics

4. **Concentration Courses**
   - Four intermediate to advanced-level courses (5000 level and up) that build on the core courses and have prerequisites in the basic
Agriculture and Life Sciences - 2008–2009

The SNES major is an excellent preparation for careers in governmental or non-governmental organizations responsible for environmental evaluation and policy; professional programs in law, business, journalism; and graduate programs in a variety of environmental science fields (earth science, ecology, environmental engineering, marine biology, soil science).

Foundation Courses
The purpose of this component of the program is to provide a strong foundation in the basic sciences and an introduction to the relationships between the biophysical and social sciences. Many of these courses (listed below) will also contribute to completion of CALS distribution requirements.

- two semesters of college-level biology
- two semesters of college-level calculus
- four semesters of college-level chemistry and physics (at least one semester of each)
- one semester of college-level statistics
- DEA 1500 Introduction to Human-Environment Relationships
- NTRES 2010 Environmental Conservation

The freshman and sophomore years are designed to provide a strong scientific basis for future advanced study and to become engaged in environmental studies through DEA 1500 and NTRES 2010. Depending on student interest and available time, other courses in environmental study may be taken as electives earlier in the schedule. Advanced placement credit will be accommodated in the program through consultation with the student's faculty advisor.

Environmental Core
The environmental core consists of six courses. Its purpose is to provide a rigorous, integrated understanding of the environment, broadly defined. This core recognizes that knowledge of the environment encompasses physical and biological sciences, social sciences, and human behavior. SNES 1010, required in the freshman year, provides a unifying overview of the goals, depth, and breadth of the major.

Core courses are to provide integration (among areas, disciplines, methodologies, topics, and issues); systems emphasis; basic, rigorous presentation of core material; root competencies for understanding the environment; a framework for further advanced courses; and a new way of thinking that enables innovative solutions to difficult problems.

Biotic Systems: BIOEE 2610 Ecology and the Environment
Colloquium Series: SNES 2000 Environmental Sciences Colloquium
Earth Systems: CSS 3650 Environmental Chemistry: Soil, Air, and Water
Economic Systems: AEM 2500 Environmental and Resource Economics
Environmental Science: SNES 1010 Intro to the Science and Management of Environmental and Natural Resources
Social Systems: DSOC 3240 (STS 3241/SOC 3240) Environment and Society

Science of Natural and Environmental Systems
Environmental stewardship and sustainability are increasingly recognized as human and planetary imperatives. This environmental science major will provide you with a strong foundation in the basic sciences, and an introduction to the relationships between the biophysical and social sciences.

Concentrations include environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development.

The curriculum comprises an intensive foundation in the sciences; an environmental core with courses covering earth, biotic, social, and economic systems; and several disciplinary programs of study. This major emphasizes interdisciplinary work, independent thinking and analysis, and development of competency in writing and speaking.

5. Field/Observational/Laboratory Experience
Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include Courses in the Hawaii Environmental Semester program;
Courses given by the Shoals Marine Laboratory;
EAS 2500 (Meteorological Observations and Instruments);
EAS 3520 (Synoptic Meteorology D);
EAS 4170 (Field Mapping in Argentina);
EAS 4370 (Geophysical Field Methods);
EAS 4910 and/or 4920 (Undergraduate Research, total 3 credits) with appropriate choice of project
Field courses taught by another college or university (3-credit minimum).

For more information, contact Professor John Cisne, Department of Earth and Atmospheric Sciences, john.cisne@cornell.edu, or visit www.eas.cornell.edu.

Programs of Study
Programs of study that focus in one or more areas of environmental science have been established to provide disciplinary expertise sufficient for entry-level professional proficiency. Each student in the major will be required to take four courses at the 300 level or above in at least one program of study.

Programs of study do not replace or duplicate current majors. Rather, they provide the basic core of knowledge essential for an introductory understanding of the area—the concepts, basic science, methodologies, and major applications. Programs of study include:

- Environmental Agriculture
- Environmental Biology
- Environmental Economics
- Environmental Information Science
- Sustainable Development

For more information about this major, see snes.eas.cornell.edu, visit the undergraduate program office in 12 Fernow Hall, or send e-mail to sw386@cornell.edu.

Special Programs in Agriculture and Life Sciences
Interdisciplinary Studies. The opportunity to develop an independent major in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students may plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for interdisciplinary studies must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

Descriptions of Courses
Undergraduate and graduate courses in the college are offered through the academic departments and units and also through the biological sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order. Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.
The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas including: Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

AGSCI 3800 Organic Food and Agriculture (also CSS/HORT 3800)
Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600. HORT 1101 recommended, or permission of instructor. S-U or letter grades. Staff. For description, see CSS 3800.

AGSCI 4010 Seminar in Agricultural Sciences
Fall or spring. 1 credit. S-U grades only. Staff.

Students in this weekly seminar series will learn about current debates and hot issues in the agricultural sciences today from both local and global perspectives. It will include both Agricultural Sciences majors presenting on their capstone experiences, and invited guest speakers. The target audience is Agricultural Sciences majors. Students are required to prepare a weekly reflection on each presentation. This course creates a weekly forum in which majors in our interdepartmental program can gather to learn and discuss important issues in agricultural sciences, while at the same time building community within our Agricultural Sciences major program.

AGSCI 4940 Special Topics in Agricultural Sciences
Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AGSCI 4960 Internship in Agricultural Sciences
Fall, spring, or summer. 1–3 credits variable, 6 credits maximum. Prerequisite: permission of student's advisor in advance of participation in internship programs. S-U or letter grades. Staff.

In this experiential learning opportunity, students will participate in structured, on-the-job learning under supervision of qualified professionals in a cooperating external organization. Internships and learning goals are arranged by the student in conjunction with an internship advisor and the internship host. Course may be taken multiple times for up to 6 credits. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

American Indian Studies
The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 1100 and AIS 1110, plus at least three other courses from the AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. One of the courses offered toward the minor must be at the 300- or 400-level only. No one 3-credit independent study (AIS 4970) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S-U credit will be counted toward the minor. Students seeking to minor in American Indian Studies are encouraged to contact Professor Kurt Jordan, associate director of academic development, 255-3109. Application materials for the minor may also be obtained from the AIP office, 4th floor, Caldwell Hall. Students are also advised to consult www.aip.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

Minor in American Indian Studies

Required Courses
AIS 1100 Introduction to American Indian Studies I: Indigenous North America to 1890
AIS 1110 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Electives

(Group A, Arts and Humanities)
AIS 1950 Colonial Latin America
AIS 2360 Native Peoples of the Northeast
AIS 2390 Seminar in Iroquois History
AIS 2600 Introduction to Native American Literature
AIS 2660 Introduction to Native American History
AIS 3640 Politics of ‘Nations Within’
AIS 3860 Contemporary American Indian Fiction of the United States
AIS 4040 Race and Ethnicity in Latin America
AIS 4300 Native American Philosophies
AIS 4860 American Indian Women’s Literature
AIS 4900 New World Encounters, 1500–1800

(Group B, Social and Natural Sciences)
AIS 2300 Cultures of Native North America
AIS 2350 Archaeology of North American Indians
AIS 3110 Social Movements
AIS 3400 Contested Terrain: Hawaii
AIS 3480 Iroquois Archaeology
AIS 3530 Anthropology of Colonialism
AIS 4000 Critical Approaches to American Indian Studies
Examines contemporary American Indian land use as a sociopolitical and cultural process to effect social change.

AIS 3330 Ways of Knowing: Indigenous and Local Ecological Knowledge (Fall) (ANTHR 3330) (CA) (SBA) (D)
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. Letter grades only. K.A. Kassam.
For description, see NTRES 3330.

AIS 3400 Contested Terrain: Hawaii (also SOC 3420) (CA) (SBA)
Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history, M. M. Hamabata.
This course, offered in conjunction with Earth and Atmospheric Sciences program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions are incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/hawaii/ regarding the status of this course.

AIS 3480/6480 Iroquois Archaeology (also ANTHR 3480/6480) (CA) (HA)
Fall. 4 credits. S-U or letter grades.
For description, see ANTHR 3248/6248.

AIS 3640 Politics of “Nations Within” (also GOVT 3640) (SBA) (KCM)
[AIM 3860 Contemporary American Indian Fiction (also ENGL 3670) (LA) (CA) (D)]
Fall. 4 credits. Next offered 2010–2011. Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove’s Cogeeva, a novel of the Allotment Era, students read works by a range of Native fiction writers (from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.

AIS 4000 Critical Approaches to American Indian Studies (also AIS 6000) (CA) (HA)
Fall. 4 credits. Prerequisite: advanced undergraduates or graduate students; permission of instructor. Course requirements differ at 400 and 600 levels. S-U or letter grades. Next offered 2009–2010. Staff. An interdisciplinary survey of the literature in Native American Studies. Readings engage themes of indigeneity, coloniality, power, and “resistance.” The syllabus is formed from some of “classic” and canonical works in Native American Studies but also requires an engagement with marginal writings and theoretical and historical contributions from scholars in other disciplines.

AIS 4300 Native American Philosophies (also ENGL/AMST 4300) (KCM) (LA)
Fall. 4 credits. Prerequisite: permission of instructor. Next offered 2009–2010. E. Cheyfitz.
This course will focus on American Indian, Native Alaskan, and Native Hawaiian social, spiritual, legal, political, aesthetic, scientific, environmental, and historical thought from the pre-invasion period (before 1492) to the present as it is contained in both oral narratives and written texts (nonfiction, fiction, and poetry).

AIS 4600 Field and Analytical Methods in American Indian Archaeology (also ANTHR/ARKEO 4260) (SBA) (HA)
Spring. 6 credits. Prerequisite: permission of instructor. K. A. Jordan.
This course uses historic-period American Indian sites in the Finger Lakes region to provide hands-on instruction in archaeological field, laboratory, and analytical methods. Students will analyze museum artifacts and engage in field survey and excavation. Readings treat field and laboratory methodology, research design, culture history, and material culture typologies.

AIS 4720/7720 Historical Archaeology of Indigenous Peoples (also ANTHR/ARKEO 4272/7272) (CA) (HA)
Seminar examining the responses of indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge documentary histories.

AIS 4860 American Indian Women’s Literature (also ENGL 4860) (LA) (CA) (D)
Spring. 4 credits. Next offered 2010–2011. For description, see ENGL 4860.

AIS 4900 New World Encounters, 1500 to 1800 (also HIST/AMST 4990) (CA) (HA) (D)
Fall. 4 credits. J. Parmenter.
For description, see HIST 4900.

AIS 4970 Independent Study
Fall or spring. 1–4 credits. Staff. Topic and credit hours TBA between faculty member and student. The American Indian Program office must approve independent study forms.

AIS 5000 Critical Approaches to American Indian Studies (also AIS 4000) (D)
Fall. 4 credits. Next offered 2009–2010. Staff.
For description, see AIS 4000.

AIS 6010 American Indian Studies Proseminar
Fall and spring. 1 credit. Staff. Graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloquium format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

AIS 6350 Indigenous Peoples and Globalization (also DSOC/LATA 6350) (D)
Fall. 3 credits. Next offered 2010–2011. A. Gonzales.
Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. At issue are the lands, resources, traditional knowledge, and indigenous struggles for recognition and self-determination.

AIS 6610 Colonial American Literatures (also ENGL/AMST 6610)
For description, see ENGL 6610.

AIS 6710 Law and Literature in the Antebellum United States (also ENGL 6710)
Spring. 4 credits. E. Cheyfitz.
For description, see ENGL 6710.

AIS 6970 Individual Study in American Indian Studies
Fall, spring, or summer. 1–3 credits. S-U or letter grades. Staff. A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of interest in American Indian Studies.

Department of Statistical Science
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the CIS section of this catalog.

Environmental Toxicology

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training.
that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Stocking Hall, or at toxicology.cornell.edu.

TOX 3070 Pesticides and the Environment (also ENTO 3070)
Fall. 2 credits. Prerequisites: BIOG 1101–1102 or equivalent. Offered even-numbered years. A. G. Hay. For description, see ENTO 3070.

TOX 4370 Eukaryotic Cell Proliferation (also BIOM 4370)
Spring. Variable credit; students may take lec for 2 credits, or lec and disc for 3 credits. Limited to 20 students per disc; priority given to graduate students. Prerequisite: BIOG 1101–1102 or 1105–1106 and BIOM 3300 or 3310/3320. Recommended: BIOGD 2810 and BIOM 4520. S. Lee. For description see BIOM 4370.

[TOX 4900 Insect Toxicology and Insecticidal Chemistry (also ENTO 4900)]
Spring. 3 credits. Prerequisite: general chemistry course. Offered even-numbered years; next offered 2009–2010. J. G. Scott. For description, see ENTO 4900.]

TOX 5970 Risk Analysis and Management (also CEE 5970)
Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 3040), ENGRD 2700, ILRST 2100, BTRY 2610 or AEM 2100; two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Steedinger. For description, see CEE 5970.

TOX 6100 Introduction to Chemical and Environmental Toxicology (also BIOMI 6100)
Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. A. G. Hay. For description, see BIOMI 6100.

TOX 6110 Molecular Toxicology (also NS 6110)
Spring. 3 credits. Prerequisites: TOX 6100 or permission of instructors. Offered alternate years. S. Bloom, R. Dieterl, D. Muscarella, and B. Strupp. For description, see NS 6110.

TOX 6990 Environmental Toxicology Journal Club (also BIOMI 6990)
Spring only. 1 credit. Requirement for env. tox. students until post-A exam. A. G. Hay. For description, see BIOMI 6990.

TOX 7010 Mouse Pathology and Transgenesis (also VTBSM 7010)
Fall. 1 credit. Prerequisites: basic course in histology (BIOAP 4150 or equivalent) highly recommended, or permission of instructor. Letter grades only. A. Nikitin. For description, see VTBSM 7010.

TOX 7020 Seminar in Toxicology (also NS 7020)
Fall or spring. 1 credit. For description, see NS 7020.

[TOX 7130 Cell Cycle Analysis (also VTBSM 7130)]
Spring. 1 credit. S-U grades only. Offered even years; next offered 2009–2010. A. Yen. For description, see VTBSM 7130.]

TOX 8900 Master's Thesis and Research
Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

TOX 9900 Doctoral Thesis and Research
Fall/spring. Credit TBA. Prerequisite: permission of chair of graduate committee and instructor.

Related Course in Another Department
FDSC 6210 Food Lipids

NONDEPARTMENTAL COURSES

ALS 1100 College and Career Exploration in the College of Agriculture and Life Sciences
Summer. 1 or 5 credits. Prerequisite: high school juniors or seniors. Letter grades only. Staff. This program is a great opportunity to explore possible majors, careers, and research opportunities in Cornell's world-class College of Agriculture and Life Sciences (CALS) while earning college credit. The one-week program, for 1 credit, will consist of students attending presentations by admissions, career, and student services offices; talk with faculty members, staff, and students; visit labs and research facilities; enjoy field trips; participate in team projects; and write several short papers. You'll also focus on two of CALS's four priority areas. The three-week program, for 3 credits, combines the one-week program with two additional weeks of in-depth, hands-on exploration into the two subject areas you selected during the first week.

[ALS 1101 Transition to and Success at Cornell]
Fall. 1 credit. Prerequisite: entering students in CALS. Letter grades only. Staff and CALS Career Development Office.

ALS 1340 Emergency Medical Technician
Fall and spring. 3 credits each semester. Full academic-year course requiring fall and spring enrollment. Recommended: basic or advanced first aid, S-U or letter grades. D. A. Grossman, R. Kniffen, and A. E. Gantert.

ALS 1350 Advanced Emergency Medical Technician, Critical Care
Fall and spring; two-semester course. 4 credits each semester. Prerequisite: current certification as N.Y.S. Basic or Intermediate E.M.T. or have applied for reciprocity. S-U or letter grades.

ALS 1340 Emergency Medical Technician
Fall and spring; two-semester course. 4 credits each semester. Prerequisite: current certification as N.Y.S. Basic or Intermediate E.M.T. or have applied for reciprocity. S-U or letter grades.

ALS 2020 Internship
Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S-U grades only.

ALS 4770 Environmental Stewardship in the Cornell Community
Spring. 2–4 credits, variable. J. M. Regenstein, plus faculty advisor for credits 3 and 4. Each student undertakes an original project to improve the environment at Cornell while working with a faculty advisor and the Cornell infrastructure (generally campus life and facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present the final written project report orally at a public forum. (Note: If students prefer to take 1 or 2 credits of independent research in a department in the College of Agriculture and Life Sciences, this can be arranged. Assistance in finding a faculty advisor is provided. May be taken more than once.)
ALS 4940 Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits max. S-U or letter grades.
The college teaches "trial" or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 4991/4992 Honors Project I and II (also BSOC/STS/HE 4991/4992)
Fall among others. 8 credits (register for 8 credits each semester; total credits awarded is 8). Prerequisite: biology & society seniors and permission of department; overall GPA of 3.3. Apply in 506 Rockefeller Hall.

Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 4998 Politics and Policy: Theory, Research, and Practice (also AMST/PAM/GOVT 4998)
Students in CALS must register for ALS 4998. S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office, M101 McGraw Hall, or online at ciw.cornell.edu.

ALS 5100 Leadership Development for Life Scientists
Spring. 3 credits. Prerequisite: invitation or permission of instructor. S-U grades only.
Formal training and practice of skills required for leading people in an academic or business environment. Skills include coaching, feedback, managing conflict, fostering teamwork, creating vision and developing diversity. A significant portion is devoted to understanding one's own strengths and weaknesses, and how to recognize and use strengths in others.

ALS 5810 International Teaching Assistant Development Program Course 4
Fall or spring. 2 credits. Prerequisite: ALS 5800. ITADP staff.
Specifically designed for international graduate students who have completed ALS 5800 and who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants develop and demonstrate critical listening and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

ALS 5811 Environmental Policy (also BSOC 4611-4612, BIOEE 6610–6611)
Fall, fall; 6611, spring. 3 credits each semester; students must register for 6 credits each semester since “R” grade is given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. D. Pimentel.
For description, see BIOEE 6610.

APPLIED ECONOMICS AND MANAGEMENT

AEM 1101 Introduction to Applied Economics and Management
Fall. 1 credit. Prerequisite: required of and limited to freshmen in EAM S-U grades only. D. A. Grossman and A. M. Novakovic.
The purpose of this course is to acquaint first-year students in EAM with their new department and better enable them to make academic and early career decisions. A cross-section of faculty will lead discussions that introduce most of the major academic subjects taught in EAM. In addition, there are guest presenters from venture capital, career planning, student organizations, course planning, and ethics and academic integrity. There are several homework assignments.

AEM 1102 Personal Evaluation and Development
Spring. 1 credit. Required for and open only to all AEM first-year students. A. Novakovic.
This course is designed to help students better understand their personal and professional skills and attributes and enhance their abilities in areas such as teamwork, leadership, ethics, and interpersonal relationships. Weekly meeting will either be one plenary lecture or a smaller lab. There will be a service activity coordinated through the Public Service Center scheduled over a weekend. There will be a “robes” activity through the Outdoor Education Center, with times arranged to accommodate the facility.

AEM 1200 Introduction to Business Management (D)
Fall, spring, summer. 3 credits. Two evening prelims. P. D. Perez.
Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technology and its impact on operations, globalization, ethics, economy, and entrepreneurship. Guest speakers are an important part of the course.

AEM 1201 Business Management Case Analysis
Fall. 1 credit. Requirement for and limited to AEM majors. P. D. Perez.
Offers student teams the opportunity for hands-on application of general business management concepts through discussion and written analysis of a series of cases. Case topics are closely coordinated with both the content and sequencing of material presented in AEM 1220.

AEM 1210 Entrepreneurship Speaker Series
Fall. 1 credit. M. P. D. Perez.
Seminars and guest lectures by faculty members engaged in the study and practice of entrepreneurship and by prominent entrepreneurs associated with the Entrepreneurship and Personal Enterprise program at Cornell, with a view to inform and inspire students. Evaluation includes attendance and written feedback on lectures. Intended as a companion to AEM 1200 but may be taken independently.

AEM 1220 Entrepreneurship in the Life Sciences
Spring. 1 credit. W. Lesser.
Seminars and guest lectures by faculty members engaged in the study and practice of entrepreneurship in the life sciences. Emphasis on the process of turning scientific discovery into business opportunity and success. Evaluation includes attendance and written feedback on lectures. Intended as a follow-up to AEM 1200 and AEM 1210 but may be taken independently.

AEM 1230 Foundations of Entrepreneurship and Business
Fall. 2 credits. P. D. Perez.
Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship at Cornell. Includes lectures, selected guest appearances by successful entrepreneurs, and extensive use of IT-based learning and presentation tools.

AEM 2000 Contemporary Controversies in the Global Economy
Fall. 3 credits. Prerequisite: ECON 1110. Recommended: ECON 1120. Priority given to sophomores and juniors in AEM. C. Barrett.
Aims to stimulate critical thinking and cogent writing and speaking about contemporary controversies that attract regular attention in the international press and among key private and public sector decision-makers. Students read and discuss competing arguments about current issues such as patenting and pricing of pharmaceuticals worldwide, controls on commercial and humanitarian distribution of...
genetically modified foods, and immigration restrictions. Students write a series of short briefing papers and give regular oral briefs, which are evaluated for quality of communication and content.

**AEM 2100 Introductory Statistics**
Spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Two evening prelims. J. Little. Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Includes an introduction to Minitab, a statistical software package.

**AEM 2190 Introduction to Applied Portfolio Management**
Summer. 4 credits. Special Program. D. Dase. Based in New York City’s Financial District. Topics include capital markets; the impact of the economy and the Federal Reserve System; recent stock market history; regulation; investment banking and management principles of both institutional and individual portfolios. Industry guest speakers provide unique perspectives. An individualized internship is required of all students.

**AEM 2210 Financial Accounting**
Fall, spring, summer. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. Little. Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording inventory, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

**AEM 2240 Principles of Finance**
Fall, spring, summer. One credit. R. Curtis. This course focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include time value, bonds, stock valuation, capital budgeting, financing alternatives, costs of capital, the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

**AEM 2250 AEM Certificate in Business Management Consulting Project**
Summer 1 credit. R. Curtis and P. Perez. Student teams consult with local organizations in central New York and suggest solutions to problems those organizations are currently facing. Students will apply business principles they have learned during their summer AEM Certificate in Management immersion program. Each team will prepare a written report and will give a presentation to AEM Certificate faculty and representatives of the organization the team is working with.

**AEM 2260 AEM Certificate Activities**
Summer. 1 credit. Staff. Students participate in special activities as part of the AEM Certificate in Business Management summer immersion program. While activities may vary from year to year, in the past these activities have included a field trip to corporate sites in New York City, Cornell Outdoor Education team building and leadership exercises, a career services resume/job search presentation, and a talk on the evolution of a local small business by its founder. Student participation in all activities is mandatory and a paper focusing on “take-aways” from each activity is required.

**AEM 2270 Introduction to International Business**
Summer. 4 credits. D. Ng. Based in the global finance center of Hong Kong, students gain an understanding of the fundamental understanding of how some of the most powerful multinational firms in the world make and implement financial decisions, how they manage risk and gain competitive advantage, how they interact with governments, and what the risks and returns are in conducting such international business. Students will be assigned to internships in order to experience firsthand how such corporations function.

**AEM 2300 International Trade and Finance (also ECON 2300) (SBA)**
Spring. 3 credits. Prerequisites: ECON 1110 or equivalent. Recommended: ECON 1120 or equivalent. S-U or letter grades. One evening prelim. D. Dase. One semester introduction to international economic principles and issues. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 4300 and ECON 3610–3620.

**AEM 2400 Marketing**
Fall, summer. 5 credits. E. W. McLaughlin. Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization’s strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lecturers and current marketing applications from various companies are presented and analyzed.

**AEM 2410 Marketing Plan Development**
Fall, spring. 2 credits. Requirement for and limited to AEM majors. D. J. Perosio. Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

**AEM 2500 Environmental and Resource Economics (SBA)**
Fall. 3 credits. S-U or letter grades. G. Poe. Introduces fundamental economic principles and the “economic approach” to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Subjects include valuation, benefit-cost analysis, property rights, and ecological economics. Uses these tools to explore major current policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

**AEM 3020 Farm Business Management**
Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 4050 and 4270. W. A. Knoblauch. Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition of equipment, and management of capital, labor, land, buildings, and machinery.

**AEM 3200 Business Law I (also NBA 5600)**
Fall and summer. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman. Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

**AEM 3210 Business Law II (also NBA 5610) (D)**
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; business law course or permission of instructor. D. A. Grossman. The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion reviews selected topics in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

**AEM 3220 Internet Strategy**
Spring. 3 credits. Prerequisites: AEM 2200 and ECON 1110. A. Leiponen. Explores the impact of new technologies on business processes and industries. Focuses particularly on the effects of information and communication technologies (ICT). The objective is to understand the nature of information as an economic good, business opportunities and challenges created by ICT, and organizational constraints involved in exploiting these opportunities.

**AEM 3230 Managerial Accounting**
Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 2210 or equivalent. Two evening prelims. J. Little. Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes two evening prelims, a third exam, weekly homework.

**AEM 3240 Finance (also PAM 5620)**
Fall and spring. 4 credits. Priority given to CALS majors. Prerequisites: AEM 2100, 2200, and 2210, or equivalents. Three evening prelims. R. Curtis. Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial planning, capital management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions,
financing alternatives; the cost of capital and the capital-structure decision, distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 3250 Personal Enterprise and Small Business Management
Spring. 4 credits. Prerequisites: junior or senior standing; AEM 2200 and 2210 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. $100 per team. D. Streeter.

Focuses on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs, who discuss the start-up process and the process of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 3280 Innovation and Dynamic Management (also HADM 4443)
Spring. 3 credits. Prerequisite: junior or senior standing. Staff. For description, see HADM 4443.

AEM 3290/3291 International Agribusiness Study Trip
Fall, 3290; spring, 3291. 2 credits. Prerequisites: AEM 2200 or 3020, and 2400. Open by application before March 1 of spring semester before course is offered. Approximately 12 students are selected with preference given to sophomores and juniors in CALS. Field study co-payment: $800. B. Gloy and T. Schmit.

Gives students interested in agribusiness management exposure to the managerial practices essential to the success of agribusiness and food companies competing in the global marketplace. Involves a two-week international field study trip that takes place after the final exam period of the spring semester before the course is offered. The course meets for a few sessions in advance of the field study trip. A paper analyzing an aspect of the field study is required.

AEM 3300 Managerial Economics and Decision Making
Spring. 3 credits. Prerequisite: ECON 1110. D. Simon.

Focuses on tools for making various decisions managers encounter in the real world, including decisions of pricing, output, advertising expenditures, and new product introductions. Considers issues such as how to estimate a firm's demand and cost functions as considered in making such decisions. Compares standard microeconomic models with more realistic approaches to making decisions considering decisions that are less stylized and more similar to those managers face on a regular basis.

AEM 3310 Economics of Business Regulation
Spring. 3 credits. Prerequisites: ECON 1110, 1120, and AEM 2200. S-U or letter grades. J. Prince.

Studies the economics and other factors (e.g., politics, lobbying) that determine regulation policy along with firm strategies in regulated or potentially regulated markets. Major topics include: antitrust, economic regulation and environmental regulation. Applications to the current business environment are emphasized.

AEM 3330 European Business Institutions
Spring. 1 credit. Prerequisites: ECON 1110 and AEM 2200. A. Leiponen.

This course examines the institutional environment of business in Europe on different levels including national and supranational (EU) power structures, forms of business organization and governance, and culture and values. As a result of this course, students will be able to understand and be sensitive to the drivers of business behavior and performance in a foreign, particularly European, context.

AEM 3340 Women, Leadership, and Entrepreneurship (D)
Fall. 1 credit. Prerequisite: junior or senior standing. D. Streeter

Seminar that uses lectures, guest panels, and readings to focus on issues facing women (and their partners) in their business careers. Topics include the status of women in business leadership, pathways and strategies for leadership development, family/life balance issues, gender issues in the workplace, and resources for emerging leaders.

AEM 3350 International Technology Marketing of Biotechnology
Spring. 3 credits. Prerequisites: ECON 1110 and BIOG 1109 or equivalents. S-U or letter grades. W. H. Lesser.

Explores international technology marketing from an economics perspective using biotechnology as an example. Topics include technology theories, products, risk (health and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international trade agreements. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

AEM 3360 Intermediate Accounting I
Fall. 3 credits. Prerequisites: AEM 2210 and 3290. Staff.

Includes an overview of Generally Accepted Accounting Principles, balance sheet valuation and income measurement and recognition. Other topics include accounting for pensions, earnings per share and special financial reporting issues.

AEM 3370 Intermediate Accounting II
Spring. 3 credits. Prerequisite: AEM 3600 Intermediate Accounting I. Staff.

Continuation of the in-depth study of accounting theory, generally accepted accounting principles, and the techniques involved in measuring, recording, summarizing, and reporting financial data for business organizations. Learn the GAAP accounting for equities, revenue, investments, accounting changes, and statement of cash flows. Understand accounting alternatives to GAAP for the topics covered so that students are prepared to understand and use future changes in GAAP.

AEM 3380 Social Entrepreneurs, Innovators, and Problem Solvers
Fall. 4 credits. A. Wessels.

This course introduces students to the social entrepreneurs, innovators, and visionaries who are creating new strategies for solving society's problems. The course highlights innovative case studies of success in restoring the environment, resolving conflicts, curing diseases, overcoming poverty, and addressing other problems of social injustice. At the end of the course, each student develops an original blueprint for social innovation: a creative proposal for solving a societal problem.

AEM 3420 Integrated Marketing Communication

AEM 3440 Consumer Behavior
Fall. 3 credits. Prerequisites: AEM 2400 or equivalent. B. Wansink.

Develops a useful, conceptual understanding of the problems and strategies associated with psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to analyze and understand this dynamic consumer society responsibly, systematically, and creatively.

AEM 3460 Dairy Markets and Policy
Spring. 3 credits. Prerequisites: junior or senior standing; ECON 1110 or equivalent. S-U or letter grades. A. Novakovic.

Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities. Emphasizes learning both the origin and characteristics of dairy policies and methods for analyzing their impacts on market performance.

AEM 4020 Food and Brand Lab Workshop
Fall and spring. 3 credits. Prerequisite: permission of instructor. B. Wansink.

The purpose of the Food and Brand Lab Workshop is to provide students with an advanced opportunity to develop an advanced understanding of consumers by involving them in collaborative, theory-based research related to food. This course is focused on asking and answering the “why” questions behind consumer behavior. Fall semester students will receive an “R” grade and then receive their grade for course in the spring semester.

AEM 4030 Farm Management Study Trip
Spring. 1 credit. Prerequisite: AEM 3020. Open by application only.

W. A. Knoblauch and B. Gloy.

Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. Students must write a paper that further explores an aspect of the trip.

AEM 4040 Advanced Agricultural Finance Seminar
Spring. 3 credits. Limited to 16 students. Prerequisite: senior standing; extensive course work in farm management and farm finance. Open by application before March 1 of year before course is offered.

C. Turvey.

Special program in agricultural finance, conducted with financial support from the
Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall semester, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring semester.

**AEM 4050 Agricultural Finance**
Spring. 4 credits. Prerequisite: AEM 3200 or equivalent. Recommended: calculus and statistics. C. Turvey. Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

**AEM 4100 Business Statistics**
Fall. 3 credits. Prerequisite: AEM 2100 or equivalent. C. van Es. Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introductions to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

**AEM 4110 Introduction to Econometrics**
Fall. 3 credits. Prerequisite: AEM 2100 and either ECON 3130 or PAM 2000 or equivalents. D. Just. Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Introduces assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques.

**AEM 4120 Computational Methods for Management and Economics**
Spring. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 2100 or equivalent. C. Gomes. Course in applied mathematical programming. Emphasizes formulation of and interpretation of solutions to mathematical models of problems in economics and business. Studies blending, resource allocation, capital budgeting, transportation and financial planning, and inventory management. Introduces integer and nonlinear programming.

**AEM 4130 Business Strategy Research**
Fall. 3 credits. Prerequisite: AEM 2100 or equivalent statistics course. G. Blalock. AEM 4130 introduces empirical microeconomic research methods applied primarily to questions of business strategy. The course objective is to familiarize students with the potential problems of business strategy research and the methods employed to overcome those problems. Students will read and discuss peer-reviewed academic journal articles in business and economics.

**AEM 4140 Behavioral Economics and Managerial Decisions**
Fall. 3 credits. Prerequisites: junior or senior standing; ECON 3130 or PAM 2000. Lab fee: $40. D. Just and W. Schulze. Behavioral economics integrates psychology and economics by identifying systematic anomalies in decision-making. These are now recognized to be an important source of error in business decisions, and provide the foundation for both behavioral marketing and finance. The course compares rational choice theory with behavior both in lecture and through a series of economics experiments in which students face situations that are likely to lead to anomalies such as "the winner's curse," the status quo bias, hyperbolic discounting, and bias in assessing risks. Students have the opportunity to evaluate their own decision-making.

**AEM 4150 Price Analysis**
Fall. 3 credits. Prerequisites: AEM 2100 or equivalent. ECON 3130 or PAM 2000 or equivalent. H. M. Kaiser. Focuses on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Pays special attention to empirical analysis. Includes institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions.

**AEM 4170 Decision Models for Small and Large Businesses**
Fall. 3 credits. Prerequisite: junior or senior standing (priority given to AEM majors); AEM 2100 or equivalent. N. F. lec in weeks labs are held. C. L. van Es. Focuses on economic and statistical models of decision analysis and their applications in large and small business settings. Demonstrates how use of models can improve the decision-making process by helping the decision maker. Emphasizes the importance of sensitivity analysis and the need to combine both quantitative and qualitative considerations in decision making. Draws cases from small business scenarios, the public policy arena, and corporate settings. Lab sessions focus on implementing decision models with computers.

**AEM 4180 Introduction to System Dynamics Modeling**
Fall. 4 credits. Prerequisites: MATH 1106 or higher and upper-level standing or permission of instructor. C. Nicholson. Introduction to concepts of system dynamics modeling, including the modeling process, fundamental modes of dynamic behavior and the stock-flow-feedback structures that generate them, system mapping tools and modeling human behavior. Emphasis on examples from agriculture, natural resource management and international development. Lab develops skills in the use of dynamic modeling software.

**AEM 4190 Strategic Thinking**
Spring. 3 credits. Prerequisite: PAM 2000 or ECON 3130. S-U or letter grades. N. H. Chau. The art of thinking strategically puts out doing one's adversary at the core of the decision-making process, while anticipating that the adversary is doing the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their subordinates and superiors, national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically on firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars, and the arms race).

**AEM 4200 Investments**

**AEM 4210 Derivatives and Risk Management**
Fall. 3 credits. Prerequisites: AEM 2100 and 3240 or equivalents. Recommended: ECON 3130 or equivalent and a calculus course: familiarity with calculus and probability and statistics. Priority given to AEM students. S-U or letter grades. H. Dao. Covers the pricing of derivatives and how derivatives can be used for the purpose of risk management and speculation. A portion of this course involves the use of a spreadsheet or other computer programs.

**AEM 4220 Estate Planning (also NBA 5620)**
Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. S-U grades only. D. A. Grossman. Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

**AEM 4230 Contemporary Topics in Applied Finance**
Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 5240. Letter grades. V. Bogan. Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision-makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores newer issues such as technology and financial markets.

**AEM 4240 Management Strategy**
Fall and spring. 3 credits. Prerequisite: AEM seniors in business. Fall. G. Blalock; spring. D. Simon. Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on what should be considered and how strategic decisions should be made.
AEM 4260 Fixed-Income Securities
Fall. 3 credits. Prerequisites: MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. Bogan.
This course focuses on fixed-income securities, including corporate bonds, default-free bonds, and floating rate notes. Other topics include related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the analysis of specific types of fixed-income securities, there will be an examination of the tools used in bond portfolio management.

AEM 4270 Agribusiness Strategy
Fall. 3 credits. Prerequisite: AEM 2200 or 3200. B. Gloy.
Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategic development, organizational design and structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 4280 Valuation of Capital Investment
Spring. 3 credits. Prerequisites: AEM 2100 and 3240 or equivalents. D. T.-C. Ng.
Focuses on the analysis of financial information—particularly firms' financial reports—for making decisions to invest in businesses. The primary focus is on equity (share) valuation, with some attention given to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm; forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 4290 International Finance
Spring. 3 credits. Prerequisites: AEM 2100 and 3240, S-U or letter grades. D. T.-C. Ng.
Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital budgeting decisions. Specific topics include exchange rates, the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use of innovative financing for the multinational corporation.

AEM 4300 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 1110–1120 or equivalents and intermediate microeconomics course. S-U or letter grades. N. H. Chau.
Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 4310 Agricultural and Food Policy
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 2000, ECON 3010, 3130, or equivalent. S-U or letter grades. A. Novakovic.
Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. Explores methods of policy analysis, and students learn to critique policies and write policy briefs.

AEM 4320 Public Private Sector Economics
Spring. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney.
The government agency and the individual business enterprise are two of the most powerful influences on the economic performance of the economy and on the lives of citizens. These relationships range from cooperative to competitive, from friendly to hostile. It is an uneasy relationship, each side possessing basic powers and yet each having an important need for the other. In the United States, the result is a mixed economy in which the public and the private sectors interact in many ways. Government exercises a variety of important powers in dealing with the individual private enterprise, ranging from taxation to regulation. Business, in turn, relies on constitutional protections as well as on public support of its basic role in creating income, employment, and material standards of living. In a dynamic and increasingly globalized economy, the business-government relationship is constantly changing and the line between public and private sectors frequently shifts. Future managers are constantly confronted with issues that relate to government-business interfaces.

AEM 4340 Government Policy Workshop (also CRP 4180, FGSS 4200)
Spring. 3 credits. Prerequisite: intro microeconomics. H. deGorter.
The politics of the WTO and trade policy are explored. We examine what the WTO is, how it operates, how much power it really has, why it was created, incentives for governments to cooperate. How WTO rules affect domestic politics and foreign policy goals and how WTO rules and agreements are enforced. We also debate the effect of trade on growth and poverty.

AEM 4350 Entrepreneurial Leadership
Fall, weeks 1–14. 2 credits. Prerequisite: permission of instructor. D. Streeter.
Participants learn about concepts and practice skills important to becoming an entrepreneurial leader in startup or small business, corporate environment and/or the public sector. Set in a global context, issues related entrepreneurial leadership are covered: vision, opportunity identification, engagement of teams in resource-constrained situations, and tolerance for ambiguity and risk.

AEM 4370 Innovation Strategy
Spring. 3 credits. Prerequisites: AEM 2200 and ECON 1110. A. Leiponen.
Explores innovation and technological change. Studies how technological change affects economies and industries, how innovation of new products, processes, and services takes place in firms. Group projects involve case studies of local high-tech startup companies.

AEM 4420 Emerging Markets
Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 2400 and PAM 2000 or ECON 3150. R. D. Christy.
Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 4430 Food-Industry Strategy
Fall. 3 credits. Prerequisite: AEM juniors, seniors, or graduate students; AEM 2400 or 4480; or permission of instructor. Staff.
Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles are applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to their challenges and opportunities.

AEM 4440 Managing for Market-Driven Growth
Fall. 3 credits. Prerequisite: AEM 2400; junior or senior standing. Staff.
A sound marketing strategy is essential for the long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 4450 Food Policy for Developing Countries (also NS 4450) (SBA)
Fall. 3 credits. Prerequisites: 6 credits in economics, applied economics and international relations or sociology and 6 credits in nutrition and/or agricultural sciences. P. Pinstrip-Andersen.
Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach based on case studies and active participation by students will be used.
AEM 4460 Food Marketing Colloquium
Fall. 1 credit. Prerequisite: junior or senior standing; extensive course work in food industry management and marketing. D. J. Perosio.
The seminar covers advanced topics in food marketing, many of which have an important international dimension and are presented by industry members. A field trip may be taken. Students participate in research topics on various aspects of the food industry.

AEM 4470 Retail Speaker Series
Spring. 1 credit. D. Perosio.
Senior and guest lecturers invited to the study and practice of retailing. This class provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. Speakers share their views about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unprecedented opportunity to learn and question how retail leaders view the current and future status of retailing, the largest sector in the U.S. economy.

AEM 4480 Food Merchandising
Spring. 3 credits. Prerequisite: junior or senior standing; AEM 2100. D. J. Perosio.
Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning, and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers.

AEM 4490 Global Marketing Strategy (D)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; marketing course. Next offered 2009–2010. Staff.
Examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. Includes case analysis and discussion.

AEM 4500 Resource Economics (also ECON 4500) (SBA)
Fall. 3 credits. Prerequisites: MATH 1110, ECON 3160, and familiarity with Excel. J. M. Conrad.
Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 4510 Environmental Economics (also ECON 4090) (SBA)
Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course, and calculus. S-U or letter grades. Staff.
Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/ institutional perspectives and ecological economic concepts.

AEM 4520 Accounting for Mergers and Acquisitions
Fall. 3 credits. E. Lewis.
Detailed analytical study of special issues and situations in financial accounting. Continuous emphasis is placed on the relationship between theory and practice to reflect the latest professional pronouncements. Highly technical topics related to corporation, partnership, government and not-for-profit organizations, with a focus on business combinations and the particular accounting challenges that they present.

AEM 4530 Risk Management, Internal Control and Assurance
Fall. 3 credits. J. Lippitt.
Theory and practice of independent examination of financial statements. Discussion of relationships with clients; working papers, assurance procedures, including evaluation of internal controls; accounting principles; risk assessment; liability and professional ethics.

AEM 4540 China's and India's Growth Miracles (also ECON 4540)
Fall. 2 or 3 credits. E. Prasad.
This is an advanced undergraduate course that will cover topics in international finance and open economy macroeconomics. The course will be organized around a detailed examination of the growth experiences of China and India, as a device for illustrating and delving into key analytical concepts.

AEM 4550 Sustainability, Business and the Environment

AEM 4600 Security Trading and Market Making

AEM 4620 Technology and Financial Markets
Fall. 2 credits. Prerequisites: AEM 3240 and one 4000-level AEM finance course; permission of instructor. V. Bogan.
The course focuses on issues involving technology and financial markets. It is designed to equip future finance professionals with the knowledge of key finance systems (Bloomberg) skills and technologies. The lectures and labs will teach students to apply their theoretical finance knowledge in real world situations for the purpose of optimizing their future job performance and increase their marketability. Lectures will explore topics on the effects of technology on financial markets. The lab component of the course will require students to complete the 30-hour, self-paced Bloomberg certification process. Instructor permission is required.

AEM 4640 Economics of Agricultural Development (also ECON 4640)
Fall. 3 credits. Prerequisite: ECON 1110–1120 or permission of instructor. B. D. Charnov.
Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topics include the nature of development and technological change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Uses examples from a wide variety of developing countries to illustrate the basis for economic analysis.

AEM 4940 Undergraduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 4970 Individual Study in Applied Economics and Management
Fall or spring. Variable credit. S-U or letter grades. Students must register using independent study form (available in undergraduate program office in Warren Hall). Staff.
Used for special projects designed by faculty members.

AEM 4980 Supervised Teaching Experience
Fall, spring, or summer. 1–4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U or letter grades. Staff.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 4990 Undergraduate Research
Fall, spring, or summer. 1–4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S-U or letter grades. Staff.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 4991 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Prerequisite: requirements for honors program met (see "Honors Program” under CALS). Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 6050 Agricultural Finance
Fall. 3 credits. Prerequisite: AEM 3240 or 4050 or equivalent B. A. Gloy.
Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.
AEM 6080 Production Economics (also ECON 4080)
Fall. 3 credits. Prerequisite: ECON 3130 and MATH 1110 or equivalents.
R. Boisvert.
Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, revenue, demand, and supply functions. Demonstrates concepts of efficiency and productivity. Introduces production response over time and under risk.

AEM 6120 Applied Econometrics
Fall. 1 credit. Corequisite: AEM 4110.
D. Just.
Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 4110, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 6180 System Dynamics Applications
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. C. Picchio.
This course provides more detailed discussion of SD concepts and further develops skills in system dynamics modeling through application to a project chosen by the student. Iterative writing assignments and peer review are used to refine problem statements, causal hypotheses, simulation models, model evaluation and policy analysis. Final project includes development and application of a simulation model.

AEM 6300 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 4300)
Spring. 4 credits. Prerequisites: AEM 6080 or PEM 6030, ECON 3130, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalitys, and the general theory of second-best optimality. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 6320 Open Economy Analysis: Theory and Applications
Spring. 3 credits. Prerequisites: ECON 3130/314 or permission of instructor. S-U or letter grades. N. Chau and S. Kyle.
Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economics. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 6340 Government Policy Workshop (also CRP 6180, FGSS 6200)
Spring. 4 credits. S-U or letter grades. M. E. Warner.
For description, see CRP 618.

AEM 6400 Analysis of Agricultural Markets (also ECON 4400)
Fall. 3 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Offered even-numbered years. H. M. Kaiser.
Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

AEM 6410 Commodity Futures Markets
Spring, weeks 8–14. 2 credits.
Prerequisites: AEM 4110 and 4150 or equivalents. Recommended: AEM 6400.
W. G. Tornel.
Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.

AEM 6420 Globalization, Food Safety, and Nutrition (also NS 6420)
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades. A. Prostredt-Andersen.
Directed readings course with a weekly 50-minute discussion session. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

AEM 6510 Environmental and Resource Economics
Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing.
Open to graduate students outside economics. G. L. Poe.
Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and value hedonic approaches, travel cost models, and contingent evaluation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public good, common property, and externality problems. Students are required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem.

AEM 6550 Electric Systems Engineering and Economics (also ECE 5510)
Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount.
For description, see ECE 5510.

AEM 6600 Agroecosystems, Economic Development, and the Environment
Spring. 3 credits. Prerequisite: graduate standing. Open to graduate students outside economics; additional sec TBA for economics majors. S-U or letter grades.
D. R. Lee.
Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 6670 Topics in Economic Development (also ECON 7770)
Spring. 3 credits. Targeted to second- and third-year graduate students. Prerequisites: basic first-year courses in ECON or AEM or permission of instructor. S-U or letter grades. R. Kanbur.
Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

[AE6700 Economics of Consumer Demand (also PAM 6080)]
Fall. 3 credits. Prerequisites: ECON 314 or 3130 and two semesters of calculus. S-U or letter grades. Next offered 2009-2010. C. K. Ranney.
Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. At times allows Becker and Lancaster models of demand may be introduced.]

AEM 6690 Biofuels: The Economic and Environmental Interactions (also BEE 4900)
Spring. 2 credits. Prerequisites: senior or graduate standing; others by permission of instructor. S-U or letter grades. P. G. Hess.
For description, see BEE 4900.

AEM 6940 Graduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the beginning of the semester.
AEM 6980 Supervised Graduate Teaching Experience
Fall or spring. 1–4 credits; max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Graduate students should enroll in AEM 4980. Students must register using independent study form (available in undergraduate program office in Warren Hall) S-U letter grades. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 6990 M.P.S. Research
1–6 credits. Prerequisite: M.P.S. students. Credit granted for M.P.S. project report. Staff.

AEM 7000 Individual Study in Applied Economics and Management
Fall or spring. Prerequisite: graduate standing and prerequisite core courses. Credit, class hours, and other details TBA with faculty member. Staff. Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Students must register in section appropriate to topic being covered; section number is provided by instructor.

AEM 7010 Applied Microeconomics I
Fall. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. W. D. Schulze and R. N. Boisvert. This course covers economic models and empirical applications in consumer demand and production economics.

AEM 7020 Applied Microeconomics II
Spring. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. H. DeGorter, D. R. Just, and J. Prince. This course covers economic models and empirical applications in welfare economics, risk analysis and industrial organization.

AEM 7080 Advanced Production Economics
Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 3110 or ECON 6090. H. Daouk. Provides (together with AEM 7110) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures.

AEM 7110 Econometrics I
Fall. 3 credits. Prerequisite: AEM 7000 or equivalent. T. D. Mount. Coverage beyond AEM 7100 of dynamic models, including single equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 7120 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 4170, R. N. Boisvert. Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 7130 Dynamic Optimization
Spring. 3 credits. Prerequisite: ECON 6090 and ECON 6170. Letter grades only. J. M. Conrad. Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

AEM 7140 Experimental Economics
Fall. 4 credits. Prerequisite: ECON 6090. Offered alternate years. W. D. Schulze. Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 7170 Research Methods in Agricultural Economics
Spring. 2 credits. Prerequisite: graduate standing. R. N. Boisvert. Discussed the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 7300 Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Prerequisite: graduate standing. ECON 6300 or equivalent. D. R. Lee. Examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

AEM 7350 Public Finance: Resource Allocation and Fiscal Policy (also ECON 7350)
Spring. 4 credits. Prerequisite: ECON 6090. R. Kanbur. For description, see ECON 7350.

AEM 7400 Empirical Analysis of Industrial Organization
Spring. 3 credits. Prerequisites: ECON 6090, ECON 6100, and AEM 7100. J. Prince. This course will analyze in detail leading papers in the empirical industrial organization (IO) literature. In doing so, the objective will be to develop students’ skills in determining appropriate theoretical and corresponding econometric models for applied research, and to improve students’ proficiencies with a variety of econometric models (e.g., OLS, IVs, MLE, GMM, discrete choice).

AEM 7440 Advanced Consumer Research
Fall. 3 credits. Prerequisite: graduate standing; priority given to CALS Ph.D. students, especially in AEM, nutritional science, or food technology. B. Wansink. Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 7500 Resource Economics
Fall. 3 credits. Prerequisites: ECON 6090 and 6180, or AEM 7130. J. M. Conrad. Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 7510 Environmental Economics
Spring. 4 credits. Prerequisites: ECON 6090 and graduate-level econometrics course. S-U or letter grades. G. L. Poe. The objective of this course is to provide a graduate-level survey of the two prevailing contemporary themes in environmental economics: the measurement of the demand for environmental resources as input into benefit-cost analyses, and the design of incentive-based, cost-effective policy instruments to achieve environmental goals. Core topics include market failure, conceptual foundations for valuing changes in environmental quality, empirical applications of non-market valuation methods, and cost-effective market mechanism design for reducing pollution. Additional topics include information asymmetries and mechanism design for non-point source pollution, and international/global environmental issues.

AEM 7620 Microeconomics of International Development
Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. C. B. Barrett. Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks; and product/factor markets analysis. Emphasizes empirical research.

AEM 7640 Microeconomics of International Finance
Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S-U or letter grades. C. B. Barrett. Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks; and product/factor markets analysis. Emphasizes empirical research.
ANIMAL SCIENCE

ANSC 1100 Domestic Animal Biology I
Fall. 4 credits. S-U or letter grades. W. B. Currie
Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals. Laboratory exercises include animal handling, examining aspects of anatomy, and small group discussions of contemporary biotechnologies. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

ANSC 1105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Prerequisite: freshmen, sophomores, or first-year transfer standing. D. E. Bauman and J. Gavalchin.
A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

ANSC 1120 Sustainable Animal Husbandry
Summer. 3 credits. S-U or letter grades. D. L. Brown.
Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems related to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, goats, poultry, aquaculture, camels, horses, draft animals, animal systems modeling, Third World limited resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

ANSC 1160 Animal Agriculture and Society—From Food to Medicine
The course is designed to integrate concepts of physiology, immunology, growth biology, lactation, pregnancy, fiber production, and work into current production systems and cultural and societal aspects of animal food production and use, and the current economic forces driving some of the production system evolution. The course is intended for majors and nonmajors with an emphasis on integrating animal biology with our current production and food systems from an Animal Science perspective. Course topics include Domestication, Pre-technology Agriculture, Production Systems and Economics, Food Systems and Safety, Environmental Issues and Perspectives, Animal-Derived Food in Human Health, and Use of Animals in Biomedicine. Thus, the course is founded on basic biological principles with the goal of integrating the biology with current production and economic pressures.

ANSC 2120 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 2080 or equivalent. Recommended: ANSC 1100 and 1160. D. J. R. Cherney.
Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

ANSC 2140 Captive Raptor Management and Propagation
Summer. 3 credits. Prerequisites: high school chemistry and biology. J. E. Parks.
This course is an introduction to the natural history and the care and management of raptors (birds of prey). Approaches to captive care and maintenance, retraining, and captive breeding with potential for reducing pressures on wild populations of avian species will be included. A major objective is to present and discuss the scientific basis and merit of avian husbandry and breeding practices in species relevant to the course. Hands-on opportunities in basic raptor handling techniques are included.

ANSC 2150 Exotic Avian Husbandry and Propagation
Fall. 2 credits. Prerequisite: ANSC 1100, 1160, or one year introductory biology. J. Parks and D. Muscarella.
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

ANSC 2210 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: one year of college biology. Staff.
Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

ANSC 2400 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: ANSC 1100–1160 or equivalent or one year introductory biology. J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasizes on physiological mechanisms and application to fertility.
regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

**ANSC 2410 Animal Reproduction and Development Lab**
Spring. 1 credit. Limited to 30 students per lab. Prereq- or corequisite: ANSC 2400. J. E. Parks.
Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

**ANSC 2500 Dairy Cattle Principles**
Fall. 3 credits. Prerequisite for ANSC 2510, 3510, 3540, and 3550. S-U or letter grades. D. M. Galton.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of dairy cattle production.

**ANSC 2510 Applied Dairy Cattle Genetics**
Spring. 2 credits. Prerequisite: ANSC 2500. S-U or letter grades. D. M. Galton.
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd performance.

**ANSC 2650 Horses**
Fall. 3 credits. Prerequisites: ANSC 1100 and 1160 or permission of instructor. S-U or letter grades. S. A. Brooks.
Selection, management, feeding, breeding, and training of light horses.

**ANSC 2900 Meat Science (also FDSC 2900)**
Fall. 2 or 3 credits. Max 4 credits. Lab fee: $15. D. Shaw.
Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to a commercial meat plant may be taken.

**ANSC 3100 Introduction to Animal Welfare**
Fall. 2 credits. S-U or letter grades. Staff.
Animal welfare will be discussed, mainly for farm animals, but companion animals will also be considered. Both animal specific and general areas of animal welfare will be discussed. This course will provide much of the background needed for Cornell to field a team and participate in the U.S. National Animal Welfare Judging contest in the spring.

**ANSC 3200 Comparative Animal Nutrition and Toxicology: Horses, Dogs, Cats, and More**

At the end of this course, students will: (1) Be able to match feed resources to the physiological needs of horses, dogs, cats, rabbits, deer, reindeer, birds, reptiles, and a variety of other animals found at home; in zoos, rehabilitation centers, on ranches and farms. (2) Understand the nutritional processes by which a successful, science-based feeding strategy should be developed for animals without a history of domestication. (3) Understand the evolutionary and physiological basis for some of the diversity in nutritional strategies and toxicological vulnerabilities found among animals.

**ANSC 3410 Biology of Lactation**
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or animal physiology course. Offered alternate years. Y. R. Bougheir.
Comprehensive survey of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland; (2) hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (3) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Information used comes from a variety of species, including the mouse for developmental aspects, the dairy cow for production aspects, and the human for health issues.

**ANSC 3510 Dairy Herd Management**
Fall. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. Recommended: AEM 3020. D. M. Galton.
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**ANSC 3540 Dairy Cattle Herd Health**
Fall. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S-U or letter grades. Staff.
Application of scientific principles to practical herd management with emphasis on herd health and animal well-being. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture, and quality control. An all-day field trip to a commercial meat plant may be taken.

**ANSC 3600 Beef Cattle**
Spring. 3 credits. Offered even-numbered years; next offered 2009–2010. M. L. Thonney.
Focuses on aspects of beef cattle nutrition and management including on-farm herd health analysis.

**ANSC 3650 Dairy Cattle Nutrition**
Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. Letter grades only. T. R. Overton and L. E. Chase.
Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory exercises include practical applications and field trips.

**ANSC 3680 Beef Cattle**
Spring. 3 credits. Offered odd-numbered years. M. L. Thonney.
Focuses on aspects of beef cattle nutrition and management including on-farm herd health analysis.

**ANSC 3920 Mechanisms of Animal Growth and Development**
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or equivalent introductory physiology course. Letter grades only. Q. Long and Y. Boisclair.
A course on the basic biology of animal growth and development. The course employs model systems (cell culture, fish, and mice) to examine cellular and molecular mechanisms of animal growth and development, and farm animals to discuss whole animal growth processes and applications of new technologies. Lectures cover: (1) patterns of whole animal growth during fetal and postnatal life; (2) molecular and cellular basis of formation and development of skeletal muscle, adipose tissue, and bone; (3) regulation of growth and development by hormones and growth factors; (4) emerging molecular technologies and whole-genome approaches for improving growth and meat quality.

**ANSC 3980 Animals in Biomedical Research**
Spring. 3 credits. Prerequisite: one year introductory biology, ANSC 1100 or equivalent introductory physiology course. Letter grades only. X. Lei.
This course introduces features and applications of various animal models for biomedical research on human health and diseases. Emphasis will be placed on appropriate animal models for studying human diabetes, cancer, cardiovascular disease, hereditary disease, and nutritional deficiencies. Model species include food-producing animals, recreation/companion animals, and laboratory animals.

**ANSC 4000 Livestock in Tropical Farming Systems**
Comprises analyses of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and methods of management. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, and decision making. Principles, field study, independent study projects and classroom interactions facilitate problem-solving to improve welfare of rural households.

**ANSC 4010 Dairy Production Seminar**
Spring. 1 credit. Prerequisite: senior standing. T. R. Overton.
Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

**ANSC 4020 Seminar in Animal Sciences**
Spring. 1 credit. Prerequisite: students engaged in undergraduate honors research projects. S-U or letter grades. S. Quirk.
Reports of undergraduate research and honors projects. Students present oral reports of their work for class discussion.

**ANSC 4050 Molecular and Cellular Approaches to Reproductive Physiology**
Fall. 3 credits. Prerequisites: one year of introductory biology and introductory physiology (ANSC 1100 and ANSC 2400, formerly ANSC 300) or BIOAP 3110 or equivalent. S. Quirk. Lectures on selected topics in reproductive biology of male and female mammals with a focus on how research questions are formulated, addressed and influenced by previous discoveries. Concepts introduced apply to investigation of all areas of animal physiology. Laboratory exercises provide experience in cellular and molecular methods used to study reproductive function.

**ANSC 4100 Nutritional Physiology and Metabolism**
Fall. 3 credits. Prerequisites: biochemistry and physiology courses. R. E. Austic and D. E. Bauman. Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to understand how the metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

**ANSC 4110 Applied Cattle Nutrition**
Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisites: ANSC 1100 and 2120 (or equivalent). Higher numbered courses are used in the laboratory to actualize the information presented in lectures. Herd case studies are used in the lab and there are field trips to farms to evaluate the nutritional management. Students develop components of a CNMP for a case study farm, using the Cornell University Nutrient Management Planning System (CNMPS) and other tools. All students enrolled learn the concepts and processes of developing the crop and manure nutrient management plan component of a CNMP during the first half of the semester in Module 1.

**ANSC 4121 Whole-Farm Nutrient Management—Module 2 (also CSS 4121)**
Spring. 2 credits. Prerequisite: enrollment in Module 1 (ANSC 4120) for first half of semester. M. E. Van Amburgh and Q. M. Ketterings. Module 2 builds on crop and manure nutrient planning (Module 1) by integrating agronomic nutrient management planning with herd nutrient management planning. Develop knowledge and skills necessary to integrate crop production and herd feeding management for reducing nutrient imports on farms. Work on case studies outside lab.

**ANSC 4140 Ethics and Animal Science**
Spring. 2 credits. Prerequisite: junior or senior standing. D. J. R. Cherney. Explores the place of humans in the biological world, origins of ethics and morality; use and status of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and online, and a project of the student’s choice are used to evaluate the performance of each student.

**ANSC 4250 Gamete Physiology and Fertilization (also BIOAP 4250)**
Fall. 2 credits. Limited to 50 students. Prerequisite: ANSC 2400 or equivalent. Offered alternate years; next offered 2009–2010. J. E. Parks. Study formation, growth, differentiation, maturation, and transport of mammalian sperm and oocytes and cytological, physiological, and molecular changes required for fertilization.

**ANSC 4270 Fundamentals of Endocrinology (also BIOAP 4270)**
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Next offered 2009–2010. P. A. Johnson. Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology. Examples are selected from many animals, including humans.

**ANSC 4510 Dairy Herd Business Management**
Fall. 3 credits. Corequisite: ANSC 4560. J. Karszes and D. M. Galton. Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.

**ANSC 4560 Dairy Management Fellowship**
Spring. 2 credits. Prerequisites: senior standing, ANSC 3510; permission of instructor. S-U grades only. D. M. Galton. Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

**ANSC 4570 Introductory Spanish for Dairy Producers**
Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S-U or letter grades. Staff. Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

**ANSC 4580 Advanced Spanish for Dairy Producers**
Fall. 3 credits. Prerequisite: ANSC 4570 or permission of instructor. S-U or letter grades. Staff. Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce, and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-sequence program that will further develop the students’ skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.

**ANSC 4700 Merchandizing Beef Cattle**
Fall. 2 credits. S-U or letter grades. M. J. Baker. Introduction to the merchandizing of replacement beef heifers. Topics of study will include budgeting, advertising, animal preparation, cataloging, clerking and reporting. Students will gain practical knowledge through lecture as well as hands on experience by planning, organizing and conducting a sale of bred beef heifers from the Empire Heifer Development Program.

**ANSC 4940 Special Topics in Animal Science**
Fall or spring. 4 credits max. Prerequisite: undergraduate standing. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**ANSC 4960 Internship in Animal Science**
Fall or spring. 1–3 credits, variable; 6 credits max, during undergraduate career. Students must register using independent study form (available in 146 Roberts Hall). S-U grades only. Staff. Structured, on-the-job learning experience under supervision of qualified professionals in a cooperating organization (e.g., farm, agribusiness, pharmaceutical company, zoo, educational institution). Internships are arranged by the student and must be approved in advance by the student’s academic advisor. The internship should provide a professionally supervised experience with at least 60 hours on the job per credit required. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.
ANSC 4970 Individual Study in Animal Science
Fall or spring. 1–3 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff. May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

ANSC 4980 Undergraduate Teaching
Fall or spring. 1–3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ANSC 4990 Undergraduate Research
Fall or spring. 1–3 credits max. during undergraduate career. Prerequisite: junior or senior standing; GPA of at least 2.7. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

ANSC 6300 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 6300)
Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years.

X. G. Lei and C. C. McCormick.

Emphasizes absorption, metabolism, gene regulation, antioxidation, and genetic defects related to mineral nutrition. Team-taught lectures cover topics ranging from single gene mutation to social and environmental aspects of mineral nutrition and mineral-related disorders. Discusses effective approaches to improve global mineral nutrition by agriculture and food systems.

ANSC 6190 Field of Nutrition Seminar (also NS 6190)
Fall and spring. 0 credits. No grades given. For description, see NS 6190.

ANSC 6210 Reproductive Physiology/Endocrinology Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. W. R. Butler and staff.

Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

ANSC 6220 Seminar in Animal Metabolism
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Y. R. Boisclair and D. E. Bauman.

Current issues in metabolism are discussed as they relate to productivity, well-being, and diseases of animals. Students present research proposals for new initiatives, progress reports on ongoing projects and recent peer-reviewed publications of high significance.

ANSC 6940 Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ANSC 6900 Master’s-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty.

For students admitted specifically to a master’s program.

ANSC 9910 Doctoral-Level Thesis Research
Fall or spring. Credit TBA, max. 12 credits per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty.

For students admitted to candidacy after "A" exam has been passed.

ANSC 9910 Doctoral-Level Thesis Research
Fall or spring. Credit TBA, max. 12 credits per semester. Prerequisite: permission of advisor. S-U grades only. Graduate faculty.

For students admitted to candidacy after "A" exam has been passed.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

ANSC 4970 Individual Study in Animal Science
Fall or spring. 1–3 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff. May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

ANSC 4980 Undergraduate Teaching
Fall or spring. 1–3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Designed to consolidate the student’s knowledge. A participating student assists in teaching a course allied with his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

BEE 1110 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Limited to 20 students per lab. Letter grades only. T. J. Cook.

Emphasis is on selection of proper materials and techniques to achieve successful metal fabrication, maintenance, and repair projects. Covers hand and machine tools, fasteners, strengths of materials, classification and identification of metals, sheet metal work, soldering, pipe fitting, controlling distortion, oxy-acetylene torch cutting, welding and brazing, carbon steel stick arc welding, arc cutting and use of the carbon arc torch.

BEE 1140 Introduction to Wood Construction
Fall. 3 credits. Limited to 16 students per lab. Letter grades only. T. J. Cook.

Principles and practice of wood construction. Covers site selection and preparation, drainage, water and septic development, foundations, concrete work and block construction, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods and joinery, fasteners and their application. Each student plans and constructs an approved carpentry project (fine furniture to livestock equipment) that will be useful, durable, and show the students ability and mastery of the subject matter.

BEE 1150 Advanced Metal Fabrication Techniques
Spring. 1 credit. Prerequisite: BEE 1110 or permission of instructor. Letter grades only. T. J. Cook.

Principles and practices beyond the scope of BEE 1110. Includes out-of-position, low-hydrogen, high-carbon steel and cast iron welding. Topics such as soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma arc, and oxy cutting of metals are covered. Planning, development, and fabrication of a metal construction project is required for an optional second credit.

BEE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050.

Prerequisite: BEE majors or permission of instructor. Letter grades only. M. F. Walter.

Forum covering the career opportunities for engineering students and the activities and curricula that lead to those careers. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and
students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

**BEE 1510 Introduction to Computer Programming**
Fall. 4 credits. Limited to 18 students per lab and rec. No previous programming experience assumed. Pre- or corequisite: MATH 1910 or equivalent. Letter grades only. C. L. Anderson.
Introduction to computer programming and concepts of program analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

**BEE 2220 Biocatalysis**
Spring. 3 credits. Prerequisites: MATH 1920, BIOL 1110, PHYS 2213, and CHEM 1200, or completion or concurrent. Letter grades only. J. H. Hunter.
Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy to heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions. Reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

**BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)**
Fall. 3 credits. Pre- or corequisite: MATH 2930. Letter grades only. B. A. Ahner.
Case studies of contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic chemistry, biology, ecology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

**BEE 2600 Principles of Biological Engineering (also ENGRD 2600)**
Fall. 3 credits. Pre- or corequisite: MATH 2930. Letter grades only. A. J. Baemer.
Focuses on the integration of biological principles, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics range from molecular principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. BEE students must complete either BEE 2510 or BEE 2600 to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

**BEE 350 Principles of Navigation (also NAVS 350)**
Spring. 4 credits. Three classes each week (lec-rec-project work). Letter grades only. L. Rainaud.
Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, tide tables, almanac, tides, and currents. Also briefly discusses electronic navigation systems.

**BEE 3299 Sustainable Development: A Web-Based Course**
Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S-U or letter grades. N. R. Scott.
Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, global processes, sustainable and industrial ecology, renewable energy, and life cycle analysis.

**BEE 3310 Bio-Fluid Mechanics**
Fall. 4 credits. Prerequisites: ENGRD 2020 and Engineering math sequence. Letter grades only. K. G. Gebremedhin.
Properties of Newtonian and non-Newtonian fluids; hydrostatic and dynamic forces; principles of continuity, conservation of mass, energy and momentum and their applications; laminar and turbulent flows and boundary layer, introduction to Navier Stokes; dimensional analysis and similarity; blood flow in the cardiovascular system; gas exchange in the pulmonary system; blood flow and sodium transport in the kidney. The major concepts are covered by case studies.

**BEE 3500 Biophysical and Environmental Transport Processes**
Fall. 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course. Letter grades only. A. K. Datta.
Focuses on understanding the principles of heat and mass transfer in the context of biological (biomedical/bioprocessing/bioenvironmental) systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology in their biovector (soil/water/air), and industrial processing of food and biomaterials.

**BEE 3600 Molecular and Cellular Biotechnology (also BME 3600)**
Spring. 3 credits. Prerequisite: BEE 2600, biology course, linear algebra, ordinary differential equations, or permission of instructor. Letter grades only. J. C. March.
Biotechnology viewed at the cellular and molecular level. Advances in biotechnology will be broken down into functional parts using the tools of biological engineering (thermodynamics, transport, kinetics, etc.) to understand how and why they work with an emphasis on design. Particular attention paid to gene therapy, proteomics, biotechnology, and nucleic acid engineering. Case studies in biomedical, bioprocess, and bioenvironmental engineering.

**BEE 3650 Properties of Biological Materials**
Spring. 3 credits. Satisfies BEE laboratory experience requirement. Pre- or corequisite: ENGRD 2020. Letter grades only. J. A. Bartsch.
Mechanics and structural properties of biological materials; mechanical testing of animal, plant, and food products. Laboratory exercises involve quasi-static and dynamic testing of materials and interpretation of test results. Uses experimental techniques to determine engineering properties of these materials.

**[BEE 3660 Biotechnology Applications: Animal Bioreactors**
Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. Offered alternate years; next offered 2009–2010. J. B. Hunter.
Introduces students to the biotechnological applications of animals, their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals; growth factors, anti-tumor proteins, antibodies, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

**BEE 3710 Physical Hydrology for Ecosystems**
Spring. 3 credits. Prerequisite: MATH 1920 or permission of instructor. Letter grades only. Offered alternate years. M. T. Walter.
This is an introduction to fundamental hydrology emphasizing physical hydrological processes and the roles of interactions among hydrology, ecology, biogeochemistry, and human activities. This course focuses on the nature of surface and near surface processes and introduces deeper, groundwater-hydrology. A broad range of specific topics is covered: e.g., the hydrologic cycle, watershed hydrology, runoff generation, physical and biophysical vadose zone processes, erosion and sediment transport, and eco-hydrological systems.

**BEE 4010 Renewable Energy Systems**
Spring. 3 credits. Prerequisite: college physics. Letter grades only. L. D. Albright.
Introduces energy systems with emphasis on quantifying costs and designing/optimizing renewable energy systems. Emphasizes how environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

**BEE 4270 Water Sampling and Measurement**
Fall. 3 credits. Satisfies BEE laboratory experience requirement. Pre- or corequisites: fluids or hydrology course and MATH 1910. Letter grades only. Next offered 2009–2010. L. D. Geoghegan and T. S. Steenhuis.
Get wet and muddy with this course on water measurement sampling methods where science and engineering technologies are integrated to quantify, characterize, and analyze environmental engineering problems. This field-based lab course focuses on quantification of surface and subsurface water flow and quality, utilizing various measurement equipment and analytical techniques. Quality assurance protocols and interpretation of watershed contaminants are addressed.
BEE 4350 Principles of Aquaculture
Spring. 3 credits. Prerequisite: at least junior standing. Letter grades only. No-one is allowed to add course after 2nd lec. Two required field trips require class to return registered at 7 p.m.
M. B. Timmons.
An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate’s previous course background and interests. Includes supervised “hands-on” laboratory experiences.

BEE 4500 Bioinstrumentation
Spring. 4 credits. Satisfies both BEE laboratory experience and BEE capstone design requirement. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics or permission of instructor. Letter grades only. J. Aneshansley.
Bioinstrumentation applications are emphasized in this laboratory-based course. Electronic instruments from sensor to computer are considered. Static and dynamic characteristics of components and systems are examined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. A variety of biological applications of instrumentation are discussed.

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)
Spring. 3 credits. Satisfies BEE capstone design requirement. Satisfies College of Engineering technical writing requirement. Prerequisite: heat and mass transfer (BEE 3500 or equivalent). Letter grades only. A. K. Datta.
Introduction to simulation-based design as an alternative to prototype-based design, analysis and optimization of complex real-life processes for design and research, using industry-standard physics-based computational software. Emphasis is on building a model starting from a real process and developing its computer model. Covers biomedical processes in thermal therapy and drug delivery that involve heat transfer, mass transfer, and fluid flow. Computational techniques introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own semester-long biomedical project, which is the major part of the course (no final exam).

BEE 4540 Physiological Engineering
This course examines engineering measurements of biological systems and mathematical models of animal physiology. Membrane transport, sensory organs (vision, hearing), and immune systems (Respiratory and cardiovascular systems) are investigated in laboratory experiments and problem sets associated with the laboratories. Engineering mathematics (differential equations, Fourier transforms, and Laplace transforms) are used to model and analyze physiological systems. Laboratories include wet laboratory measurements of red blood cell volume, reaction times and nerve conduction, sound production and analysis, color and spatial frequency tests of human vision, construction of a temperature controlled pacemaker circuit, use of telemetry to monitor heart rate during exercise. Design of a spirometer to measure respiratory function.

BEE 4590 Bioensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: biochemistry and course and permission of instructor. Letter grades only. A. J. Baeumner.
Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and Micro TAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, analyze biosensors published in literature, and theoretically design a biosensor based on criteria discussed in class. Undergraduate students work together in teams of two to three. Meets concurrently with BEE 6590. BEE 6590 students work independently on individual biosensor projects.

BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, BEE 3500 or equivalent, Mass and Energy Balances, or permission of instructor. Letter grades only. J. C. March.
This course covers modeling biological systems from an engineering standpoint. Starting with deterministic approaches, the class will functionally decompose and mathematically model systems important to biological engineers (including bioprocessing, biomedicine, and microbial ecology). Mechanistic aspects of biology will be handled using stochastic (probabilistic) approaches in the second half of the semester.

BEE 4640 Bioseparation Processes
Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 2920, BEE 2600 or equivalent, or permission of instructor. Offered alternate years. S-U or letter grades. J. B. Hunter.
Bioseparation is the technology and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biofuels, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

BEE 4710 Introduction to Groundwater (also EAS 4710)
Intermediate level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

BEE 4720 Watershed Engineering
Fall. 3 credits. Satisfies BEE capstone design requirement when co-registered in BEE 4900. Satisfies College of Engineering technical writing requirement when co-registered in BEE 4930. Satisfies BEE laboratory experience requirement. Prerequisite: fluid mechanics or hydrology course. Letter grades only. M. T. Walter.
This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design; assignments are generally representative of real-life engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.

BEE 4740 Water and Landscape Engineering Applications
Spring. 3 credits. Satisfies BEE capstone design requirement. Prerequisites: fluids or hydrology course or permission of instructor. Letter grades only. T. S. Steenhuis and L. D. Geohring.
This course will focus on how water moves in soil and the implications for design of drainage and irrigation systems in the landscape. The course addresses aspects of soil physics, flow in porous media, water quality and water supply or disposal in regard to drainage and irrigation applications. Emphasis is on problem solving in actual situations, and a major site-design project is required.

BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only. D. A. Haith.
Applications of mathematical modeling, simulation, and optimization to environmental-quality management. Fate and transport models for air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives for solid-waste management and water and air pollution control. Introduction to hydrologic simulation (watershed and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only. D. A. Haith.
Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion, sanitary landfills, composting, recycling, and materials recovery facilities; and hazardous waste management. Emphasizes quantitative analyses.

BEE 4780 Ecological Engineering
Spring. 3 credits. Satisfies BEE capstone design requirement when co-registered in BEE 4960. Satisfies College of Engineering technical writing requirement when co-registered in BEE 4930. Satisfies BEE laboratory experience requirement. Prerequisite: fluid mechanics or hydrology course. Letter grades only. M. T. Walter.
This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design; assignments are generally representative of real-life engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, nonpoint source pollution control, stream restoration, stormwater management, and erosion control.
natural systems, the most advanced form of this new engineering direction, includes constructed wetlands, hydropodonic applications of plants in resource-recovery waste management systems, soil restoration, phytoremediation, and bioafforestation to toxics. Biomass refineries to create energy-independent communities, sustainable drinking water systems, carbon sequestration, and zero-polluting farms are future sustainable practices that also solve some of society's larger problems.

BEE 4800 Introduction to Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S-U or letter grades. P. G. Hess.
This course investigates the science behind atmospheric chemistry and its relation to air pollution, climate, and environmental change. It examines the chemistry and physics that determine the atmospheric composition on global scales including ozone photochemistry, atmospheric transport, the oxidizing capacity of the atmosphere, and biogeochemical cycles.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Prerequisite: BEE capstone design requirement when co-registered in BEE 4900. Prerequisite: ENGRD 2020. Letter grades only K. G. Gebremedhin. Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; design of beams, columns, trusses, frames, arches, bridges, diaphragms; connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Spanswick.
The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 4870 Sustainable Energy Systems
Fall. 3 credits. Satisfies BEE capstone design requirement. Intended for upper-level undergraduate and graduate students. Prerequisites: BEE 3500 and thermodynamics course. Letter grades only. N. R. Scott and L. D. Allbright. Offers a systems approach to understanding renewable technologies (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

BEE 4890 Entreprenuerial Management for Engineers
Spring. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing; ENGRD 2700 or CEE 4040 or equivalent highly recommended. Letter grades only. M. B. Timmons and R. A. Evans. The course focuses on how to start a new company centered on engineering or biological technologies. Course objectives include coverage of: entrepreneurship principles; fund raising, negotiation, financial calculations (internal rate of return, time value of money, proforma statements); legal structures of businesses; project management; and to develop an awareness of issues related to professional ethics; and technical writing and communication. Majority of work done in teams including a complete business plan that is prepared to Angel investors. Business plans must require less than $100K in startup funding and may result in actual investment by the angel investor group.

BEE 4900 Biofuels: The Economic and Environmental Interactions (also AEM 6900)
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S-U or letter grades. P. G. Hess. This course surveys the latest research on the science and economics of biofuels. Questions addressed include the environmental and economic impacts of biofuel use and whether the use of biofuels justifies public policy intervention. The class will consist of a colloquium, discussion with the colloquium speaker, and an in-class discussion section.

BEE 4930 Technical Writing for Engineers
Fall. 1 credit. Meets College of Engineering technical writing requirement when taken concurrently with BEE 4730. Letter grades only. Covers communication skills necessary for oral and written technical project reports. Also considers outlines, style, audience, and general presentation mechanics.

BEE 4940 Special Topics in Biological and Environmental Engineering
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Each 4940 has a unique course ID specific to your project advisor. S-U grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 4970 Individual Study in Biological and Environmental Engineering
Fall and spring. 1–4 credits. Prerequisites: written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 4990 Undergraduate Teaching
Fall and spring. 1–4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 4990 Undergraduate Research
Fall and spring. 1–4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

BEE 4991 BEE Honors Research
Fall or spring. 1–6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff. Intended for students pursuing the research honors program in BEE.

BEE 5010 Bioengineering Seminar (also BME 5010)
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. Staff. To give you, the engineer-in-training, a broad overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give the students a working knowledge of how abstracts are written and revised.
BEE 5330  Engineering Professionalism  
Spring. 1 or 2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam. ** S-U or letter grades. Lec only 1st 10 weeks of semester. M. B. Timmons, J. R. Stedinger, other Engineering Faculty. Presentations address engineering professionalism and ethics, and provide preparation for the general NY FE Examination taught in a team-based format. The second-credit ethics portion emphasizes the engineer’s professional responsibilities for the health and welfare of the public and the guiding principles for a professional engineer. Case histories on engineering ethics will be examined and students will write their own personal statement addressing integrity. Homework addresses FE exam preparation, and students complete the formal comprehensive review of engineering subjects associated with the Fundamentals of Engineering Exam.

*1-credit option includes FE review only. **Students must file their N.Y. FE Exam application by November 1 of the previous year or by May 1 of the spring semester to be enrolled in BEE 5330. The FE exam registration and siting fees total $205 and are paid to the N.Y. State Education Department and the testing service, not to Cornell. The N.Y. FE Exam is offered in April and October; the April exam may be taken at Cornell and other N.Y. locations; the October exam is not offered at Cornell.

BEE 5900  M.P.S. Project  
Fall and spring. 1–6 credits. Requirement for each M.P.S. candidate in field. Letter grades only. BEE graduate faculty. Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

BEE 5950  Master of Engineering Design Project  
Fall and spring. 3–6 credits. Prerequisite: admission to M.Eng. degree program. Letter grades only. BEE graduate faculty. Comprehensive engineering design projects relating to the candidate’s area of specialization. Projects are supervised by faculty members on an individual basis. A formal project report and oral presentation of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 5950 is required for the M.Eng. degree (can be taken in two semesters).

BEE 6430  Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 6430)  
Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students. D. D. Bowman. In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the survival of pathogens in the field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

[BEE 6470  Water Transport in Plants (also BIOPL 6510)  
Fall. 2 credits. Letter grades only. Offered alternate years; next offered 2009–2010. R. M. Spanswick. Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant root water stress and plant growth in relation to water stress.]

[BEE 6490  Solute Transport in Plants (also BIOPL 6490)  
Fall. 3 credits. Letter grades only. Offered alternate years. R. M. Spanswick. Fundamental treatment of the transport of ions and small organic molecules in plants. Topics include electrolyphysiology of cell membranes, including ion channels and electrogenic ion pumps; transport mechanisms for the major ions; intercellular and long-distance ion transport; cotransport systems for sugars and amino acids; phloem transport; ABC-type transporters.

[BEE 6510  Bioremediation: Engineering Organisms to Clean Up the Environment  
Spring. 5 credits. Prerequisites: BIOMI 2900 or BIOBM 3350 or permission of instructor. Letter grades only. Next offered 2009–2010. B. A. Ahner. Examines ways in which organisms may be used to remove or metabolize pollutants in the environment, including bacterial degradation of organics and phyto remediation of heavy metals. Through lectures and current literature, students evaluate the benefits as well as the current obstacles. Examines the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.]

[BEE 6550  Thermodynamics and Its Applications  
Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Letter grades only. Offered alternate years; next offered 2009–2010. J-Y. Parlange. Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, and structure of organisms].

[BEE 6590  Biosensors and Bioanalytical Techniques  
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. J. A. Bacunner. For description, see BEE 4590.

[BEE 6710  Analysis of the Flow of Water and Chemicals in Soils  
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Letter grades only. Offered alternate years. J-Y. Parlange. Encompasses a full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques. Analyzes both homogeneous and heterogeneous soils.

BEE 6720  Drainage  
Spring. 4 credits. Prerequisites: BEE 4710 or BEE 4750. Letter grades only. Offered alternate years. T. S. Steenhuis and L. D. Geohring. Discusses the theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage. Critically reviews drainage design methodologies due to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and matrix flow on water quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

[BEE 6740  Ecohydrology  
Spring. 3 credits. Prerequisite: ecology or hydrology course. Offered alternate years; next offered 2009–2010. Letter grades only. M. T. Walter. The objective of this course is to investigate novel topics that involve the interactions between physical hydrological processes and ecosystem processes, including the impacts of human activities on the ecohydrological system. The course is designed to encourage teams of students from historically disparate disciplines to collaboratively combine their unique skills and insights to answer multidisciplinary ecohydrological questions. This course will consider a broad range of scales from a stomate and a soil pore to a forest, watershed, and region, with emphasis placed on those scales and systems most appropriate to student interests. Through course work we will clarify the current understanding of various topics, identify knowledge gaps, develop hypotheses, and test them quantitatively by creating models and analyzing available data. The goal of this course is to identify the basic principles of ecohydrology and become familiar and comfortable with a range of quantitative tools and approaches for answering ecohydrological questions.]

BEE 6870  The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries  
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. L. P. Walker. Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of biological systems for environmental bioremediation.

BEE 6940  Graduate Special Topics in Biological and Environmental Engineering  
Fall or spring. 4 credits max. S-U or letter grades. BEE graduate faculty. The department teaches “trial” courses under this number. Offers vary by semester, and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than
twice under this number. Each 6940 has a unique course ID number.

**BEE 6970 Graduate Individual Study in Biological and Environmental Engineering**

Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U or letter grades. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

**BEE 7000 Orientation to Graduate Study**

Fall, first seven weeks. 1 credit. Prerequisite: new graduate students in BEE. S-U or letter grades. A. J. Baeumner. Introduction to BEE research policy, programs, methodology, resources, and degree candidates’ responsibilities and opportunities.

**BEE 7010 BEE Seminar Series**

Spring. 1 credit. S-U or letter grades. J. C. March and M. T. Walter. Presentation and discussion of research and special developments pertinent to biological and environmental engineering and related fields.

**BEE 7540 Water and Culture in the Mediterranean: A Crisis**

Spring. 3 credits. Prerequisite: graduate standing or permission of instructors. S-U or letter grades. T. S. Steenhuis, G. Holst-Warhaft, et al. The course addresses the crisis of water in the Mediterranean region, through case studies situated in watershed basins, especially the Nile. It focuses on attitudes, conflicts, and relationships of local people and nations toward water, expressed in culture, environmental laws, and watershed management practices.

**BEE 7600 Nucleic Acid Engineering (also BME 7600)**

Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S-U or letter grades. Next offered 2009–2010. D. Luo. Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the “genetic engineering” sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine are introduced. Efficient and effective literature reading and evaluation are emphasized.

**BEE 7710 Soil and Water Engineering Seminar**

Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. T. S. Steenhuis, J-Y. Parlange, M. F. Walter, and M. T. Walter. Study and discussion of research or design procedures related to selected topics in watershed management, erosion control, hydrology, colloid transport, and water quality.

**BEE 7870 Industrial Ecology of Agriculturally Based Bioindustries**

Spring. 3 credits. Prerequisites: graduate standing; one year of calculus, some knowledge of MATLAB, BEE 6870. Letter grades only. Offered alternate years; next offered 2009–2010. L. P. Walker. This course is designed to bring students from the life sciences and engineering together in teams to model and simulate sustainable agriculturally based bioindustries like those currently being used to produce bioenergy and biodegradable polymers. It is a system modeling and analysis course focused on interconnecting discrete physical, chemical, and biological processes to create novel industrial ecologies that are sustainable. An input/output modeling methodology is employed to develop and manipulate the structure of complex agriculturally based bioindustries and to generate the material, energy, and monetary flows. Special emphasis is placed on designing and analyzing webs of connected processes such that waste products from one process can be used as a raw material for another process. Students will use linear algebra and state space tools in the MATLAB toolbox to simulate static and dynamic behavior of these complex webs of connected processes and to conduct life cycle analysis of these complex webs.

**BEE 7880 Biomass Conversion of Energy and Chemicals**

Spring. 3 credits. Prerequisite: one year of college calculus and chemistry; minimum of one course in thermodynamics and computer programming. Letter grades only. Offered alternate years. L. P. Walker. Biological and physical conversion of biomass to bioenergy and bioproducts. Biological and engineering concepts associated with microbial and enzymatic conversion of biomass to useful products, physical and chemical concepts associated with the pretreatment of biomass and the separation of key biomolecules. Uses mass and energy balances and mathematical models (with MATLAB) to simulate process behavior.

**BEE 8900 Master’s-Level Thesis Research**

Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty. Variable credit for M.S. research.

**BEE 9900 Doctoral-Level Thesis Research**

Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S-U grades only. BEE graduate faculty. Variable credit for Ph.D. research.

**BIOLOGY & SOCIETY**

The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see “Biology & Society” under the College of Arts and Sciences.

**BIOMETRY AND STATISTICS**

**BTRY 1150 Introduction to Quantitative Methods**

Spring. 4 credits. Review of basic algebra concepts, the equation of a line, and systems of linear equations. Properties of functions and applications, including polynomial, exponential, and logarithmic functions. Basic probability laws, counting principles, discrete probability distributions, expected value. Frequency distributions, measures of central tendency and variation. The binomial and normal distributions.

**BTRY 3010 Biological Statistics I (also NTRES 3130)**

Fall and summer. 4 credits. Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 3020 Biological Statistics II (also NTRES 4130)**

Spring. 4 credits. Prerequisite: BTRY 3010 or 6010. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 3100 Statistical Sampling (also ILRST 3100)**

Fall. 3 credits. Prerequisites: two semesters of statistics. Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.
BTRY 4070 Principles of Probability and Statistics (also ILRST 4070)
Fall. 4 credits. Cannot be taken for credit after completion of BTRY 4080/4090 or MATH 4710/4720 sequence. Prerequisites: one year of calculus. Course is prerequisite for upper-division statistical genomics courses. Recommended: some knowledge of multivariate calculus and statistics.
A one-semester version of the BTRY 4080/4090 sequence. Topics include: combinatorial probability, conditional probability and independence, random variables (and their moments), standard distributions (multinomial, Poisson, normal, gamma, beta, etc.) and their properties. The second half of the course focuses on parametric inference using maximum likelihood and Bayesian approaches. Computational methods are emphasized using the R programming language. The course is a prerequisite for upper-division statistical genomics courses.

BTRY 4080 Theory of Probability
Fall. 4 credits. Prerequisites: MATH 1110, 1120, at least concurrent enrollment in 2130 or 2220 or equivalents. Recommended: at least one introductory course in statistical methods. Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables; random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

BTRY 4090 Theory of Statistics
Spring. 4 credits. Prerequisites: BTRY 4080 or equivalent and at least one introductory statistics course. Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 4080. Topics include sampling distributions, principles of data reduction and methodology, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

BTRY 4100 Multivariate Analysis (also ILRST 4100)
Spring. 4 credits. Prerequisites: BTRY 3010, some knowledge of matrix algebra. S-U or letter grades. Application of classical multivariate methods to data from a variety of fields using a statistical software package. Topics include the multivariate normal distribution, multivariate regression, MANOVA, principal components and factor analysis; canonical correlation; discriminant analysis and clustering.

BTRY 4790 Probabilistic Graphical Models (also CS 4782)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). A thorough introduction to graphical models, a flexible and powerful framework for machine learning and probabilistic modeling that combines graph theory and probability theory. Covers both directed models (Bayesian networks) and undirected models, inference and parameter learning, and exact and approximate algorithms. Special cases such as hidden Markov models, tree-like Bayesian nets, and conditional random fields are discussed in detail.

BTRY 4820 Statistical Genomics
Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 4070. Highly recommended: at least one previous course in statistical methods and one in biology. Next offered 2009–2010. Statistical analysis of genetic, molecular, and genomic data. Models are developed for linkage analysis, QTL mapping, pedigrees, molecular population genetics and genomics, and phylogenetic inference.

BTRY 4830 Quantitative Genomics and Genetics
Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics or equivalent. S-U or letter grades. A rigorous treatment of analysis techniques used to understand complex genetic systems. This course will cover both the fundamentals and advances in statistical methodology used to analyze disease, agriculturally relevant, and evolutionarily important phenotypes. Topics will include mapping quantitative trait loci (QTLs), application of microarray and related genomic data to gene mapping, and evolutionary quantitative genetics. Analysis techniques will include association mapping, interval mapping, and analysis of pedigrees for both single and multiple QTL models. Application of classical inference and Bayesian analysis approaches will be covered and there will be an emphasis on computational methods. Meets concurrently with BTRY 6850.

BTRY 4840 Computational Genomics
Fall. 4 credits. Prerequisites: BTRY 4070 and at least one course in statistical methods and at least one in algorithms. Next offered 2009–2010. Computational principles and methods for the analysis of genomic data. Topics include sequence alignment, motif finding, phylogeny reconstruction, and gene regulatory networks.

BTRY 4940 Undergraduate Special Topics in Biometry and Statistics
Fall or spring. 1–3 credits. S-U or letter grades. Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 4950 Statistical Consulting
Fall. 2–3 credits. Pre- or corequisites: BTRY 3020 or 6020 and 4900 and permission of instructor. S-U or letter grades. Next offered 2009–2010. Participation in the Cornell Statistical Consulting Unit: Faculty-supervised statistical consulting with researchers from other disciplines.

BTRY 4960 Statistical Consulting II
Fall. 1 credit. Prerequisites: BTRY 3020 or 6020, and 4900. S-U grades only. Next offered 2009–2010. Participation in the Cornell Statistical Consulting Unit: Faculty-supervised statistical consulting with researchers from other disciplines.

BTRY 4970 Undergraduate Individual Study in Biometry and Statistics
Fall and spring. 1–3 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 4980 Undergraduate Supervised Teaching
Fall and spring. 2 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 4990 Undergraduate Research
Fall or spring. 1–3 credits. Prerequisite: statistics and biometry undergraduates; permission of faculty member directing research. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

BTRY 6010 Statistical Methods I (also ILRST 6100)
Fall and summer. 4 credits. Prerequisite: graduate standing or permission of instructor. Develops and uses statistical methods to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Introduces interactive computing through statistical software. Emphasizes basic principles and criteria for selection of statistical techniques.

BTRY 6020 Statistical Methods II
Spring. 4 credits. Prerequisite: BTRY 6010 or equivalent. Continuation of BTRY 6010. Emphasizes the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes appropriate design of data collection, and the appropriate application and interpretation of statistical techniques. Practical applications are implemented using a modern, widely available statistical package.

BTRY 6030 Statistical Methods III: Categorical Data (also ILRST 4110)
Spring. 3 credits. Prerequisite: BTRY 6010 and 6020 or permission of instructor. Offered alternate years. Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.
BTRY 6040 Statistical Methods IV: Applied Design
Spring. 4 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Applications of experimental design including such advanced features as split plots, incomplete blocks, fractional factorial. Stresses use of the computer for both design and analysis, with emphasis on solutions of real data problems.

BTRY 6070 Principles of Probability and Statistics
Fall. 4 credits. Prerequisite: one year of calculus. Recommended: some knowledge of multivariate statistics. For description, see BTRY 4070.

BTRY 6150 Applied Functional Data Analysis
Fall. 3 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Functional data analysis studies data that may be thought of as continuously sampled smooth curves. The course focuses on extensions of standard statistical techniques to these data. Topics include visualization and data exploration, nonparametric smoothing, functional linear models, functional principal components analysis, analysis involving derivatives, registration, nonlinear smoothing. The course makes extensive use of MATLAB.

BTRY 6520 Computationally Intensive Statistical Inference
Spring. 4 credits. Prerequisite: ORIE 6700 and at least one course in probability. S-U or letter grades. Offered alternate years. Modern applications in statistics often require intensive computation not handled by “off-the-shelf” software. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focus is on the use of statistical methods for solving problems in statistical inference and estimation.

BTRY 6790 Probabilistic Graphical Models (also CS 6782)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent); programming and data structures (CS 2102 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). For description, see BTRY 4790.

BTRY 6820 Statistical Genomics
Fall. 4 credits. Prerequisite: MATH 1110. Highly recommended: at least one previous course in statistical methods and one in biology. Next offered 2009–2010. For description, see BTRY 4820.

BTRY 6830 Quantitative Genomics and Genetics
Spring. 4 credits. Prerequisites: BTRY 4070 and introductory genetics course or equivalent. S-U or letter grades. For description, see BTRY 4830.

BTRY 6840 Computational Genomics
Fall. 4 credits. Prerequisites: BTRY 4070 and at least one previous course in statistical methods and at least one in algorithms. Next offered 2009–2010. For description, see BTRY 4840.

BTRY 6890 Topics in Population Genetics and Genomics
Fall. 1 credit. Prerequisite: BTRY 6820 or permission of instructor. This course is a graduate seminar on current topics in population genetic data analysis. Topics this semester may include: detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for association mapping; efficient methods for disease gene mapping; use of comparative genomic data for population genetic inference. Readings will be chosen primarily from current literature.

BTRY 6940 Graduate Special Topics in Biometry and Statistics
Fall or spring. 1–3 credits. S-U or letter grades. Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 6970 Individual Graduate Study in Biometry and Statistics
Fall, spring, or summer. 1–3 credits. S-U or letter grades. Individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 7170 Theory of Linear Models

BTRY 7180 Generalized Linear Models
Fall. 3 credits. Prerequisites: primarily for Ph.D. students in statistics; BTRY 6020, BTRY 4090, or equivalent. S-U or letter grades. Next offered 2009–2010. A theoretical development of generalized linear models and related topics including generalized estimating equations, and generalized linear mixed models.

BTRY 7200 Topics in Computational Genomics
Spring. 1 credit. Prerequisite: BTRY 4840/6840 or permission of instructor. Weekly seminar series on recent advances in computational genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

BTRY 7270 Advanced Survival Analysis
Spring. 3 credits. Prerequisites: at least one graduate-level course in probability, mathematical statistics, and regression modeling. S-U or letter grades. This course focuses on the rigorous development of nonparametric, semiparametric, and parametric modeling and statistical inference procedures appropriate for analyzing right censored data arising in single sample, k-sample, and regression problems. Tools to be discussed in detail include the Nelson-Aalen and Kaplan-Meier estimators, the logrank test, and the Cox proportional hazards and accelerated failure time regression models. Counting process notation and elementary martingale theory are used to facilitate the development of the large sample theory required for statistical estimation and testing procedures.

BTRY 7950 Statistical Consulting
Fall and spring. 2–3 credits. Prerequisites: BTRY 6020 and 4090 and permission of instructor. S-U or letter grades. Participation in the Cornell Statistical Consulting Unit (CSCU); faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 7980 Graduate Supervised Teaching
Fall and spring. 2–4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S-U grades only. Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 7990 Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: M.S. candidates; permission of graduate field member concerned. S-U grades only. Research at the M.S. level.

BTRY 8900 Graduate-Level Dissertation Research
Fall or spring. 1–9 credits. Prerequisite: Ph.D. candidates; permission of graduate field member concerned. S-U grades only. Research at the Ph.D. level.

BTRY 9900 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. S-U grades only.
COMM 2010 Oral Communication (D)  
Fall, spring, and summer. 3 credits. B. L. Berggren.  
This course introduces students to key principles and theories in the study of human communication. Cases cover personal situations, entertainment, national crises, business situations, new technologies, and other contexts. The goal is to understand the links between these daily activities, "mid-range" theories of human behavior, and broader social concepts of modernity and post-modernity.

COMM 1101 Cases in Communication (SBA)  
Fall. 3 credits. B. L. Weisweiler.  
Through analysis of cases, this course introduces students to key principles and theories in the study of human communication. Cases cover personal situations, entertainment, national crises, business situations, new technologies, and other contexts. The goal is to understand the links between these daily activities, "mid-range" theories of human behavior, and broader social concepts of modernity and post-modernity.

COMM 1300 Visual Communication (SBA)  
Spring. 3 credits. C. Scherer.  
Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print, and interactive media develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 1310 Writing about Communication  
Spring. 3 credits. Corequisite: COMM 1300. L. Van Buskirk and staff.  
Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and applied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently. Several assignments focus on visual communication theories explored in COMM 1300 as well as ideas from COMM 1101.

COMM 2010 Oral Communication (D)  
Fall, winter, spring, or summer. 3 credits. Limited to 20 students per sec (fall and spring) or 15 students per sec (summer). Priority given to juniors and seniors, then sophomores. Fluency in spoken English assumed. Sections meet beginning first day of instruction; may precede lecture. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren, T. Michael, and staff.  
Through theory and practice, students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 2030 Argumentation and Debate (D)  
Fall, spring, and summer. 3 credits. S. Nelson.  
Students learn the principles of argumentation and debate. Topics emphasize Internet database research, synthesis of collected data, policy analysis of evidentiary quality, refutation of counter claims, identification of logical fallacies, risk evaluation, framing of issues, and coherent storytelling. Prepares students to work with a great range of opinion and evidence. Emphasizes different viewpoints, including those of different cultures. Assumptions are interrogated.

COMM 2200 Media Communication (D)  
Fall. 3 credits. S. Byrne.  
Introduction to media history, industry, content, policy, process, and effects.

COMM 2450 Psychology of Social Computing (also INFO 2450) (SBA)  
Fall and summer. 3 credits. J. Hancock and J. Birnholtz.  
Course focuses on understanding online communication through principles of cognitive and social psychology, and aspects of the Internet that defy traditional psychological understandings. Topics include impression formation and management, deception and trust, group dynamics, social support, "Internet addiction," online pornography, and organizational impacts of new communication technology.

COMM 2630 Organizational Writing  
Fall, winter, spring, or summer. 3 credits. Limited to 25 students per sec. Prerequisite: junior, senior, or graduate standing; college-level writing course. L. Van Buskirk and staff.  
Students write from the point of view of various organizations, including businesses, government agencies, and nonprofit organizations. This course emphasizes appropriate representation of the writer's organization, audience analysis, and clear and effective writing. Emphasis on organization and content. Assignments include text for web sites, reports, proposals, memoranda, letters, and e-mail.

COMM 2720 Principles of Public Relations and Advertising  
Winter and summer. 3 credits. Not open to freshmen. Staff.  
Survey of the fields of public relations and advertising. Describes organizations, jobs, and functions in the industry. Covers the roles of public relations and advertising in society, the economic system, and organizations; psychological and sociological principles as bases for appeals; strategies for media selection and message execution. Introduction to research and regulation.

COMM 2760 Cases in Communication and Social Influence (SBA)  
Spring. 3 credits. Prerequisite: COMM 1101. P. McLeod.  
Social influence is one of the most basic and important functions of communication. This course introduces communication majors to the focus area of Communication and Social Influence (CSI). Through case studies, exercises and field projects the course will address issues ranging from influence between individuals to influence at national and international levels.

COMM 2820 Research Methods in Communication Studies (SBA)  
Spring. 3 credits. Pre- or corequisite: sophomore standing. J. Niederdeppe.  
The course covers social scientific methods to solve communication research problems empirically. Topics include basic principles of social scientific research, random sampling, questionnaire design, experimental research design, focus group techniques, content analysis, and basic descriptive and inferential statistics. Students will also learn basic data manipulation, presentation and analysis techniques using SPSS and EXCEL.

COMM 2840 Sex, Gender, and Communication (also FGSS 2840) (D) (SBA)  
Fall. 3 credits. Not open to freshmen. L. Van Buskirk.  
Explores the personal, career, social, and economic implications of male and female gender categories. Topics include theories of male and female gender construction, self-identity, social structures, personal relationships, and gender concerns in the workplace. The course devotes equal time to men and to women and focuses on important contemporary communication issues.

COMM 2850 Communication in Life Sciences (also STS 2851) (SBA)  
Spring. 3 credits. B. L. Weisweiler and staff.  
Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define scientifically based social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 3010 Speech Communication in Context  
Fall and spring. 3 credits. Prerequisite: COMM 2010, second-semester sophomore, junior, or senior standing. S. Nelson and R. Hardesty.  
This course introduces students to advanced theories of speech communication and then demonstrates the usefulness of these theories in several different contexts, including business and professional, small groups, interpersonal, and intercultural settings. Grades are based on a combination of in-class presentation, tests, and a final paper.

COMM 3030 Speech and Debate Practicum  
Fall and spring. 2 credits. Prerequisite: Program in Speech and Debate members; permission of instructor; completion of one year in program. S. Nelson and R. Hardesty.  
Students learn how to prepare for CEDA (Cross Examination Debate Association) debate, Lincoln-Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of 8 credits.

COMM 3100 Communication and Decision Making in Groups (SBA)  
Spring. 3 credits. Prerequisite: junior or senior standing; priority given to COMM majors. P. McLeod.  
This course will provide students with a greater understanding of information sharing, persuasion, and decision development in
small work groups. Through practical exercises, class discussions and lectures, students will learn firsthand how tools such as decision structuring processes can affect group performance. The course will be taught in an interactive hands-on format that emphasizes the testing of understood theory.

COMM 3260 New Media and Society (also INFO 3200) (CA)
Spring. 3 credits. T. Gillespie.
This course builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. We investigate how new media frame our experience of the world and shape our political involvement in it, and how new media intersect with our sense of identity and involvement in culture.

COMM 3300 Media and Human Development (SBA)
Fall. 3 credits. Prerequisite: COMM 2200. S. Byrne.
Provides a developmental perspective on how children and adolescents interact with, interpret, and respond to media content. Major areas of consideration include the effects of media violence, health and pro-social messages, educational programming, advertising, video violence, sexual media, and content children find frightening. Students will evaluate the strategies that have been proposed to mitigate negative effects of the media on children.

COMM 3450 Human–Computer Interaction Design (also INFO 3450) (SBA)
Spring. 3 credits. G. Gay and staff.
Gives students insight into the design of computer interfaces and software from the user’s point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 3490 Media Technologies (also STS/INFO 3491) (CA)
Spring. 3 credits. Offered odd-numbered years. T. Gillespie.
Our efforts to communicate, share culture, and drive social agendas depend on the tools we’ve developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.

COMM 3520 Science Writing for the Mass Media (also STS 3521)
Fall. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. B. Lewenstein.
How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into web sites, blogs, and other media.

COMM 3520 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 2600, COMM/STS 3520, ENGR 3500, or permission of instructor. B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science, held in February each year. Before the meeting, students review science writing techniques and issues. At the meeting, students meet with science writers and attend press conferences and scientific sessions. Students write at least two stories. Students are responsible for all costs of travel, lodging, and meals.

COMM 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 33551)
Fall. 4 credits. J. Ratcliff.
For description, see STS 3551.

COMM 3560 Writing for New Media: Theory, Analysis, and Practice
Spring. 3 credits. Prerequisites: sophomore standing and at least one college-level writing course. L. Van Buskirk and staff.
This advanced-level writing course emphasizes academic, analytical, and practical writing skills. Students will research and write analyses of texts that appear in new media outlets, including independent Wikis and blogs and those linked to conventional journalistic sources. The first three or four class essays will analyze style, content, reliability, and readability of such texts. In the second half of the course, students will write their own blogs and Wikis on approved communication and social science topics.

COMM 3650 Technology and Collaboration (also INFO 3650) (SBA)
Spring. 3 credits. Prerequisite: COMM 2450. J. Birnholtz.
Course focuses on understanding the use of communication technologies in groups, with a particular focus on the unique and sometimes difficult issues raised by groups that are geographically distributed. Topics include theories of group and organizational behavior, interpersonal awareness, privacy, trust, technology-mediated communication, and technology evaluation and adoption.

COMM 3760 Planning Communication Campaigns (SBA)
Fall. 3 credits. Prerequisites: COMM 2820 or equivalent social research course and one semester of introductory statistics. K. McComas.
Provides a theoretical and practical overview of how audiences, messages, and evaluation of communication campaigns work. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; audience segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

COMM 3980 Issues in Teaching Communication (KCM)
Fall and spring. 1 credit. Prerequisites: junior or senior standing; present or past undergraduate teaching assistant for COMM course. K. Berggren.
Seminar bringing together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 4050 Community Service Practicum
Fall and spring. 1 credit; may be repeated once for credit. Meets one hour weekly. S. Nelson and R. Hardesty.
Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 4100 Organizational Communication: Theory and Practice (D) (CA)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. COMM 1101 or permission of instructor. C. Yuan.
Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today’s business environment; examines formal and informal communication networks.

COMM 4200 Public Opinion and Social Process (SBA)
Spring. 3 credits. Prerequisite: COMM 2820. Offered even-numbered years. Staff.
The course provides a scientific and applied overview of the concept of “public opinion” and its implications for macrosocial processes. The concept’s historical development in fields such as political science, social psychology, and communication science is reviewed, followed by a closer look at what is meant by “measuring” public opinion. For example, is public opinion measured by summing across individual opinions, or are there macro-level dynamics of public opinion that go beyond what individuals in a society think?

COMM 4210 Communication and the Environment (SBA)
Spring. 3 credits. Offered odd-numbered years. K. McComas.
Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media’s impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 4220 Psychology of Entertainment (SBA)
Fall. 3 credits. Prerequisites: introductory psychology or HD 120 or COMM 1010 or 2820. M. Shapiro.
Every media format uses entertainment including video games, advertising, television, movies, sports, and news. This course examines the psychology (conscious and
unconscious) of entertainment, including why people like entertainment, what makes a story entertaining, how people mentally process entertainment, what makes things frightening or funny, and can entertainment persuade.

**COMM 4280 Communication Law**
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. D. Grossman.
This course deals with the law governing communication media. Topics include First Amendment concepts, restraints on newspaper libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

**COMM 4290 Copyright in the Digital Age**
Fall. 3 credits. Offered odd-numbered years. T. Gillespie.
This course looks at recent legal and cultural battles about digital copyright, to investigate how participation in a digital world is structured, who speaks, what they can say, who hears, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture and power.

**COMM 4400 Advanced Human-Computer Interaction Design**
(also INFO 4400) (SBA)
Fall. 3 credits. Prerequisite: COMM/INFO 245 or permission of instructor. G. Gay and staff.
Focusses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

**COMM 4450 Seminar in Computer-Mediated Communication**
(also INFO 4450) (SBA)
Fall. 3 credits. Prerequisite: COMM/INFO 245. Next offered 2009–2010. J. Hancock and staff.
Focusses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

**COMM 4500 Language and Technology**
(also INFO 4500) (SBA)
Spring. 3 credits. Next offered 2009–2010. J. Hancock and staff.
Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

**COMM 4560 Community Involvement in Environmental Decisions**
Spring. 3 credits. Prerequisite: junior or senior standing or permission of instructor. Offered odd-numbered years. K. McConnell.
Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision making process. Through selected readings and course activities, this class will examine both traditional and contemporary methods of community involvement. When evaluating the methods, the class will discuss how social structures work to define criteria for success.

**COMM 4660 Public Communication of Science and Technology (also STS 4660)**
Spring. 3 credits. Prerequisite: COMM 2850, or 3520, ENGRC 3500, or permission of instructor. Offered even-numbered years. B. Lewenstein.
Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Examines the context in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.

**COMM 4760 Communication Fellows Program**
Fall. 2 credits. Prerequisites: Communication seniors selected based on goals and academic preparation; permission of instructor. Fee for three-day trip. $150. Next offered 2009–2010. Staff.
Series of lectures, seminars, and guest speakers exploring the planning, evaluation, and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies, and policymakers.

**COMM 4860 Risk Communication**
Fall. 3 credits. C. Scherer.
Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

**COMM 4940 Special Topics in Communication**
Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S-U or letter grades. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 4960 Communication Internship**
Fall or spring. Work component and variable. 1 credit, may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren. Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organization. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A final paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**COMM 4970 Individual Study in Communication**
Fall or spring. 1–3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall).
Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

**COMM 4980 Communication Teaching Experience**
Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Intended for undergraduates desiring classroom teaching experience. Prerequisite: junior or senior standing; 3.0 GPA (2.7 if teaching assistant for skills development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall).
Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

**COMM 4990 Independent Research**
Fall or spring. 1–3 credits; may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

**COMM 4991 Independent Honors Research in Social Science**
Fall or spring. 1–6 credits. Prerequisite: undergraduate standing; requirements met for honors program. Staff.
Intended for students pursuing the research honors thesis in communication. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. Students should select a faculty advisor and begin proposal development during their junior year.
COMM 5660 Workshop in Science Communication for Scientists
Spring. 2 credits. Prerequisite: graduate standing. B. Lewenstein.

This semester-long workshop will train researchers in the sciences (including natural sciences, engineering, experimental social sciences, etc.) to communicate effectively with nonscientists such as policy makers, political stakeholders, the media, and the general public. Training activities during the weekly session will be role-play, reading/discussion, writing press releases and other outreach materials, and discussion with invited speakers. Outside of the regularly scheduled time, additional activities may include field trips to newrooms and a training session with a professional media trainer.

COMM 6100 Seminar in Social Networks
Spring. 4 credits. Prerequisite: graduate standing. C. Yuan.

COMM 6180 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. S. Byrne.

Focuses on theories of communication’s influence on persuasion and attitude change. Familiarizes students with a variety of social-psychological theories of attitude change and persuasion. Also applies those theories to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication.

COMM 6210 Advanced Communication and the Environment
Spring. 3 credits. Offered odd-numbered years. K. McComas.

Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media's impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content. Lectures concurrent with COMM 4210; graduate students should enroll in COMM 6210.

COMM 6220 Advanced Psychology of Entertainment
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. M. Shapiro.

Graduate seminar examining the psychology (conscious and unconscious) of entertainment media (including video games, advertising, television, music, sports, and news). Specific topics examined will vary. Depending on preparation, students may be asked to attend COMM 4220 lectures and take exams.

COMM 6400 Human–Computer Interaction Design (also INFO 6400)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. G. Gay and staff.

Graduate-level readings and research supplementing COMM/INFO 440. Focuses on the design of computer interfaces and software from the user’s point of view. The goal is to teach user interface designs that ‘serve human needs’ while building feelings of competence, satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 6450 CMC Graduate Seminar (also INFO 6450)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2010–2011. J. Hancock and staff.

Graduate-level readings and research supplementing COMM/INFO 445. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

COMM 6500 Language and Technology (also INFO 6500)

Graduate-level readings and research supplementing COMM/INFO 450. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

COMM 6660 Public Engagement in Science (also STS 6661)
Spring. 3 credits. Offered even-numbered years. B. Lewenstein.

In recent years, the scientific community has increasingly referred to “public engagement in science.” This seminar explores the scholarly literature addressing that move: the links between “public engagement” and earlier concerns about sciences literacy, public understanding of science, and outreach; and the intersections between literature in communication and in science studies on issues involving the relationships among science(s) and public(s).

COMM 6800 Studies in Communication
Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor. S. Fussell.

Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

COMM 6810 Advanced Communication Theory
Spring. 3 credits. Prerequisite: COMM 6800 or graduate standing and permission of instructor. M. Shapiro.

Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

COMM 6820 Methods of Communication Research
Fall. 3 credits. Recommended: familiarity with basic statistical concepts. J. Birnholtz.

Analyzes methods of communication research based on a social science foundation. Goals will be to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

COMM 6830 Qualitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 6820 and graduate standing. L. Humphreys and K. McComas.

Course will review qualitative methods used in communication research, including interviews, focus groups, fieldwork (ethnography), and case studies. Students will practice the various methods so they can learn to apply them to their own research. Course will also discuss how researchers analyze qualitative data and build theories from their observations.

COMM 6840 Theories and Methods of Small Group Research

COMM 6860 Risk Communication
Spring. 3 credits. K. McComas and C. Scherer.

Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories of risk communication.

COMM 6910 Seminar: Topics in Communication
Fall and spring. 0 credits. S-U grades only. Staff.

Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication. Other weeks graduate students present thesis proposals to faculty members and peers.

COMM 6940 Special Topics in Communication
Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S-U or letter grades.

Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

COMM 6950 Structural Equation Modeling Techniques in Social Science Research
Fall. 3 credits. Prerequisite: course in multiple regression; graduate standing. Letter grades only. Offered even-numbered years. C. Yuan.

This is an advanced research methods class for graduate students in the social sciences with an emphasis on data analysis using structural equation modeling (SEM). The class will cover both its basic principles and practical applications (e.g., multi-group models, growth curve models) using LISREL/PRELIS software.
COMM 7810 Seminar in Psychology of Communication
Spring. 3 credits. Prerequisite: COMM 6800 and 6810 or equivalent graduate-level theory in psychology or social psychology. Letter grades. Offered odd-numbered years. M. Shapiro. Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

COMM 7940 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. Letter grades only. Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 7970 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. Letter grades only. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 7980 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester; may be repeated once. Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. (Students must use faculty member's section number to register.) Letter grades only. Graduate faculty. Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 7990 Graduate Research
Fall, spring, or summer. 1–3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor. Letter grades only. Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 8900 Master's-Level Thesis Research
Fall or spring. 1–6 credits; may be repeated for a maximum of 6 credits. Prerequisite: permission of committee chair. S-U grades only. Thesis research for M.S. (communication) students.

COMM 9900 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits; may be repeated for a maximum of 9 credits. Prerequisites: completion of "A" exam; permission of committee chair. S-U grades only. Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

Courses by Subject
Crop Science: 2110, 3150, 3170, 4030, 4050, 4140, 4260, 4440, 4551–4555, 6080, 6100, 6120, 6130, 6140, 6420, 6941, 7910, 8900, 9910
Environmental Information Science: 3970, 4100, 4110, 4200, 4550, 4850, 4860, 6200, 6210, 6600, 6740, 6750, 6943, 7920, 8910, 9920
Soil Science: 2600, 3210, 3620, 3630, 3650, 3720, 4120, 4600, 4720, 4850, 6630, 6660, 6670, 6690, 6710, 6720, 6840, 6942, 7900, 8920, 9900

General Courses
CSS 1900 Sustainable Agriculture: Food, Farming, and the Future
Fall. 3 credits. Limited to 60 students. S-U or letter grades. G. W. Fick. Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture.

CSS 3800 Organic Food and Agriculture (also AGSCLI/HORT 3800)
Fall. 3 or 4 credits. Prerequisite: CSS 1900 or equivalent graduate course work. S-U or letter grades. Recommended, or permission of instructor. Discussion of techniques and methods of organic food production, including vegetables, orchard crops, grains and animal systems. Critically evaluates relevant issues that affect the environment, consumers, and the industry. Optional lab includes interaction with experts, field trips to farms, and living laboratory at Dilmun Hill.

CSS 4910 Food, Farming, and Personal Belief (also IARD 4910)
Spring. 1 credit. Recommended: Sustainable Agriculture (CSS 1900) or equivalent. S-U grades only. G. Fick. Reading and discussion course focusing on the relationship between agricultural sustainability and religious faith, especially the linkage between the motivation to adopt practices of sustainability and personal value systems of farmers and consumers. Principles of scientific agriculture are examined with the holistic view of sustainable development.

CSS 4940 Biotechnology and Development (also GOVT 4303)
Spring. 2 credits. Sec. 2. S-U or letter grades. J. E. Thies and R. J. Herring. Of all the technological solutions to agronomic problems that have been proposed in the last few decades, none has created the ethical, cultural, religious, economic, environmental and political stances with regard to the use of transgenic crops as a tool for agricultural development. Discussions on selected topics and associated directed readings will be led by the course coordinators and invited speakers. Students will be assessed on their participation in discussions and on a written position paper in the subject area.

CSS 4940 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 4 credits max. S-U or letter grades. The department teaches “trial” courses under this number. Offers vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 4970 Individual Study in Crop and Soil Sciences
Fall or spring. 1–6 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

CSS 4990 Undergraduate Research
Fall or spring. Credit TBA. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 6900 Scientific Method in Practice
Spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S-U grades only. H. G. Gauch, Jr., and G. W. Fick. Students in this course study Hugh Gauch’s book Scientific Method in Practice, which is designed to help scientists become better scientists through deeper understanding of common themes that extend across the disciplines. Topics include the history and philosophy of science, reliance on evidence, deductive and inductive logic, probability, parsimony, and hypothesis testing.

CSS 6960 Agroecological Perspectives for Sustainable Development
Fall and spring. Sec 2. 1 credit. S-U grades only. Staff. Agroecological perspectives for sustainable development.

CSS 6970 Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S-U grades only. Staff. Covers current research and selected topics in the crop and soil sciences and related fields.
Crop Sciences

**CSS 2110 Field Crop Systems**
Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation.

**CSS 3150 Weed Biology and Management**
Fall. 4 credits. Prerequisite: introductory course in biology or botany. A. DiTommaso. Examines principles of weed science. Emphasizes (1) weed biology and ecology; (2) weed-management strategies used in agricultural and natural ecosystems; and (3) chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, crop-weed interactions, herbicide application, selectivity, and symptomology.

**CSS 3170 Seed Science and Technology (also HORT 3170)**
Fall. 3 credits. Prerequisite: BIOL 2410 or equivalent. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

**CSS 4030 Traditional Agriculture in Developing Nations (also IARD 4030)**
Fall. 1 credit. S-U grades only. P. Hobbs. Half the world’s arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

**CSS 4050 Field Crop Systems**
Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation. Lab report and term paper on contemporary field crop systems required. Designed for professional students or advanced undergraduates. Credit for both CSS 4050 and CSS 2110 (or CSS 3110) not permitted.

**CSS 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 4140)**
Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. P. Hobbs. Characterizes and discusses traditional shifting cultivation, lowland rice-based systems, upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are evaluated. The impact of tropical cropping systems on the environment.

**CSS 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 4260)**
Fall. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs. For description, see HORT 4260.

**CSS 4440 Integrated Pest Management (also ENTOM 4440)**
Fall. 4 credits. Prerequisites: biology course or permission of instructor. J. E. Losey and A. DiTommaso. For description, see ENTOM 4440.

**CSS 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also HORT 4551–4555)**
Spring. 5 modules; 1 credit each. Offered even-numbered years; next offered 2009–2010. Coordinator: H. C. Wien. For description, see HORT 4551–4555.

**CSS 6080 Water Status in Plants and Soils**
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years; next offered 2009–2010. T. L. Setter. This is a lecture and lab course that introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, soil water content analyzers, sap flow instrumentation, and abscisic acid analysis with ELISA.

**CSS 6100 Plant Responses to Environmental Stresses**
Fall. 3 credits. Prerequisite: course work in plant physiology and/or plant molecular biology or permission of instructor. Offered alternate years; next offered 2010–2011. T. L. Setter. Study of the responses of plants to environmental stresses, including drought, high temperature, salinity, chilling, freezing, hypoxia, and toxic elements. Emphasizes the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

**CSS 6120 Seed Biology**
Fall. 3 credits. Prerequisite: plant physiology course or permission of instructor. R. L. Obendorf. Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world’s major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

**CSS 6130 Physiology and Ecology of Yield**
Spring. 3 credits. Prerequisite: plant physiology course (BIOL 2420 or 3420) or permission of instructor. T. L. Setter. Study of environmental constraints on crop–plant productivity from the perspective of key biological processes. Examines acclimation responses and genetic adaptation for temperature, light, water, compacted soil, and mineral-limited nutrient environments. Topics include photosynthesis and nitrogen assimilation, phloem translocation and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes; dwarfing root, and floral/fruit/grain sinks in response to environment; seed set; water transport and stomatal regulation; root architecture and function; behavior in water-limited situations. Students will develop an ability to identify processes that are in need of improvement through optimization of crop cultural practices or genetic change.

**CSS 6140 Weed Ecology and Management**
Spring. 3 credits. Prerequisite: CSS 3150 or equivalent. Offered odd-numbered years; next offered 2010–2011. A. DiTommaso. Examination of plant ecological principles governing weed population dynamics and weed-crop competitive interactions in different crop and noncrop ecosystems. Explores the application of these fundamentals for the development and implementation of environmentally sound and sustainable integrated weed management strategies. Topics include seed biology and seedbank dynamics, weed demography and spatial variation, weed-crop interference, invasive weed biology, biological weed control, and site-specific weed management.

**CSS 6420 Mineral Nutrition: From Plants to Humans (also BIOLP 6420)**
Spring. 3 credits. Prerequisite: BIOLP 3410 or equivalent. Offered odd-numbered years; next offered 2009–2010. O. Vatamanuk, L. V. Kochian, and R. M. Welch. This course focuses on the biophysical, biochemical, molecular and physiological processes by which plants absorb mineral nutrients from the soil, translocate, and utilize them for growth and development. Selected lectures will focus on the relation between the nutrient status of plants and human nutrition and health. Students will be also exposed to state-of-the-art techniques that are used for analyses of mineral status of plants.

**CSS 6941 Special Topics in Crop Science**
Fall or spring. 1–6 credits. S-U or letter grades. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

**CSS 7910 Graduate-Level Thesis Research in Crop Science**
Fall or spring. Credit. 0–6 credits. S-U grades only. Graduate faculty. Thesis research for Ph.D. students before “A” exam has been passed.
CSS 4650 Global Positioning System
Spring. 3 hrs/wk. 1 credit. Prerequisite: CSS 4110 or 4200, or equivalent, or permission of instructor. S. DeGloria.
Introduction to navigation-grade GPS instruments used in agronomic and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration and mapping of geo-positional data. Contact instructor to arrange group meeting times late in spring semester.

CSS 4850 Problem Solving in Environmental and Agroecosystem Science I
Fall. 4 credits. Prerequisite: senior standing, CSS 2600 or equivalent. Next offered 2009–2010. Staff.
Capstone experience for seniors, centering on the multidisciplinary analysis of a specific problem (e.g., a brownfield in Ithaca in fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. Involves field trips, in-depth discussions of data assembled before the course, gathering of relevant scientific information, data interpretation, and report writing. Students are expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.

CSS 4860 Problem Solving in Environmental and Agroecosystem Science II
Spring. 4 credits. Prerequisite: senior standing, CSS 4850. Next offered 2009–2010. Staff.
Capstone experience for seniors, in continuation of CSS 4850. Students work in groups to carry out the laboratory measurements identified in the fall, with faculty members serving as technical support and lecturing as needed. Students are expected to work approximately 15 hours per week on a range of laboratory measurements. The results of these measurements are discussed as they become available and are combined with the rest of the assembled information to come up with recommendations about the management of the targeted problem (e.g., in spring 2005, a brownfield in Ithaca).

CSS 6200 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: CSS 4110 or CSS 4200, or equivalent or permission of instructor. S. DeGloria.
Theory and practice of applying geo-spatial data for resource inventory and analysis, biophysical process modeling, and land surveys. Emphasizes use and evaluation of spatial analytical methods applied to agronomic and environmental systems and processes. Laboratory section is used to process, analyze, and visualize geo-spatial data of interest to the student.

CSS 6210 Applications of Space-Time Statistics
Spring. 2 credits. Prerequisite: BTRY 6010 or equivalent. S-U grades only. Offered alternate years; offered after spring break 2009. H. Van Es.
Introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics, temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. Focuses on landscape-scale processes and a user’s perspective.

CSS 8600 Remote Sensing Fundamentals (also CEE 6100)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Phulpot.
Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CSS 8740 Environmental Genomics
Fall. 2 credits. S-U or letter grades. Offered alternate years; next offered 2009–2010. D. Buckley.
This course surveys genomic and metagenomic approaches to characterizing microbial-environment interactions and the evolution and activity of microorganisms at individual, population, and ecosystem scales.

CSS 8750 Modeling the Soil-Plant-Airosphere System (also EAS 6750)
Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. Offered alternate years. S. J. Riba.
Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

CSS 8910 Master’s-Level Thesis Research in Environmental Information Science
Fall or spring. 1–6 credits. S-U or letter grades. Staff.
Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 9920 Graduate-Level Dissertation Research in Environmental Information Science
Fall or spring. TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. students before "A" exam has been passed.

CSS 9910 Doctoral-Level Dissertation Research
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after "A" exam has been passed.

Environmental Information Science

CSS 3970 Environmental Microbiology [also BIOMI 3970]
Spring. 3 credits. Prerequisite: BIOEE 2610 or BIOMI 2900 or CSS 2600 or permission of instructor. Offered alternate years; next offered 2009–2010. E. L. Madsen.
Discusses the biology, behavior, and function of microorganisms in natural environments in relation to present and potential environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutants, chemical inputs, and environmental biotechnology.

CSS 4100 The GMO Debate: Environmental Impacts
Spring. 3 credits. Prerequisite: BIOG 1109 or equivalent. D. Buckley and P. Hobbs.
This course covers issues pertaining to the agricultural use of genetically modified organisms with emphasis on evaluating their environmental impact. Students will learn to critically evaluate the risks of benefits associated with the use of GMOs. We will examine the types of GMOs in use and development, how they are made, and their potential impacts on the environment including: gene flow, non-target effects, horizontal gene transfer, biodiversity effects and the implications of changes in farming practices and chemical inputs.

CSS 4110 Environmental Information Science (also CEE 4110)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. S. DeGloria and S. Hoskins.
Survey of geo-spatial data and information applied to the science of natural and environmental systems. Experimental approaches emphasize use and integration of maps, spatial databases, aerospace imagery, field data, and the global positioning system (GPS) to discriminate, measure, inventory, and monitor agricultural and environmental resources and processes.

CSS 4200 Geographic Information Systems
Fall. 4 credits. Prerequisite: CSS 4110 or equivalent or permission of instructor. S. DeGloria.
Principles and applications of geographic information systems for characterizing and assessing agronomic and environmental systems. Emphasizes accessing, updating, analyzing, and mapping geo-spatial data and information. Considers information needs assessment; spatial data accession; coordinate systems; spatial database design, construction, and maintenance; modeling and analysis; map accuracy assessment; and digital cartography.

CSS 4860 Problem Solving in Environmental and Agroecosystem Science I
Fall. 4 credits. Prerequisite: senior standing, CSS 2600 or equivalent. Next offered 2009–2010. Staff.
Capstone experience for seniors, centering on the multidisciplinary analysis of a specific problem (e.g., a brownfield in Ithaca in fall 2004), with a number of faculty members serving as technical resources and lecturing as needed. Involves field trips, in-depth discussions of data assembled before the course, gathering of relevant scientific information, data interpretation, and report writing. Students are expected to work approximately 15 hours per week on a range of assignments. The course is conceived as the first of a sequence of two complementary courses, but it can be taken alone.
Soil Science

CSS 2600  
**Soil Science**  
Fall. 4 credits. S-U or letter grades. J. Russell-Anelli.  
This course is designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil identification, testing, mapping, classification, GIS, and land evaluation. (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health. (3) unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

CSS 3210  
**Soil Management for Sustainability**  
Spring. 2 credits. Prerequisites: CSS 260 or equivalent. S-U or letter grades. H. van Es, J. Lehmann, and J. Thies.  
Integrated perspectives on the physical, biological, and chemical aspects of soil management in the broader context of agroecosystems. Understanding of the interactions between soil, water, organisms, and chemical inputs forms the basis for discussions on conventional and organic cropping systems, soil health, water quality and quantity, bioenergy, greenhouse gases, and sustainability. Lab sessions elaborate through case studies and discussion of current topics.

CSS 3620  
**Soil Morphology**  
Fall/spring. 1 credit. Prerequisite: CSS 260 or equivalent. S-U or letter grades. J. Russell-Anelli.  
This course presents the principles for field identification of soil profiles, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.

CSS 3630  
**Soil Genesis, Classification, and Survey**  
Fall. 4 credits. Prerequisite: CSS 2600. One all-day field trip required. J. Russell-Anelli.  
Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

CSS 3650  
**Environmental Chemistry: Soil, Air, and Water**  
Spring. 3 credits. Prerequisites: CHEM 2070–2080 or CHEM 1500. M. B. McBride.  
This course covers the chemistry of the biosphere and biogeochemical processes that control the fluxes, concentrations, and bioavailability of essential elements and pollutants in soil, air, and water. It gives particular attention to soil's function as a filter for contaminants. Describes the hazards of environmental contamination by xenobiotics and heavy metals, with emphasis on behavior and properties of pollutants that pose the greatest risk to human and ecological health.

CSS 3720  
**Nutrient Management in Agroecosystems**  
Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. J. Lehmann.  
Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students will have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 4120  
**Whole-Farm Nutrient Management (also ANSC 4120)**  
Spring. 2- or 4-credit option. Prerequisite: ANSC 4110; junior, senior, or graduate standing. Offered as two modules. Enrollment in Module 1 for first half of semester required (2 credits); consists of crop and manure nutrient management plans for CALS students. Enrollment in Module 2 for second half of semester optional (additional 2 credits). M. E. VanAmhurgh and Q. M. Ketterings.  
For description, see ANSC 4120.

CSS 4660  
**Soil Ecology (also HORT 4660)**  
Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies.  
Discover the wonder of life underground. In this course, you will study the amazing diversity of soil organisms along with their multifaceted functions in terrestrial ecosystems. The fundamental principles and features of biologically-mediated processes in the soil and the functions of soil biota in both managed and unmanaged ecosystems will be highlighted. Special topics include: beneficial symbioses and biological control of plant pathogens, biogeochemistry of unique habitats, bio-remediation and composting of organic wastes, among others. Laboratory focuses on molecular activities and traditional methods for assessing abundance, activity, and diversity of soil organisms.

CSS 4720  
**Nutrient Management and Research in Agroecosystems**  
Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. J. Lehmann.  
Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students will have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

CSS 6720  
**Nutrient Cycling in Natural and Managed Ecosystems**  
Fall. 3 credits. Prerequisite: CSS 3720 or NTRES 3210 or BIOE 4780, or permission of instructor. J. Lehmann.  
Focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes how nutrient management can be improved without creating environmental hazards. Students will have hands-on training in analytical procedures and expand knowledge in discussion groups and through oral as well as poster presentations.

Discussion of energy and mass transfer in the soil-plant-atmosphere system, and their relevance to important environmental processes. Covers water, heat and gas flow, energy budgets, and nutrient dynamics. Discussion of management approaches to sustainable crop production, soil, and water conservation, greenhouse gas mitigation, as well as research methods and instrument design for monitoring soil processes. Domestic and international perspectives are covered.
Covers nutrient cycling in soil and the interface between the soil and the biosphere, atmosphere, and hydrosphere. Examines the biogeochemistry of nutrient elements in natural ecosystems, disturbed or degraded ecosystems, and agricultural systems, including pollution in watersheds. Students develop independent projects, present a research proposal, and conduct field research that culminates in a presentation and a paper in publishable format.

**CSS 6840 Topics in Soil Microbial Ecology**
Fall. 1 credit. Disc. S-U grades. Offered alternate years. D. Buckley. Seminar and discussion course dealing with current topics in soil microbial ecology including: Community ecology and diversity, microbial biogeography, biogeochemistry, plant-microbe interactions, microbial feedbacks on plant communities, gene exchange and evolution in soils, soil microbial genomics, and relationships between structure and function of microbial communities in soil systems.

**CSS 6942 Special Topics in Soil Science**
Fall, spring, or summer. 1–6 credits. S-U or letter grades. Study of topics in soil science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

**CSS 7900 Graduate-Level Dissertation Research in Soil Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. students before “A” exam has been passed.

**CSS 9920 Master-S Level Thesis Research in Soil Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Thesis research for master’s students.

**CSS 9990 Doctoral-Level Dissertation Research in Soil Science**
Fall or spring. Credit TBA. S-U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after “A” exam has been passed.

**DEVOLPMENT SOCIOLOGY**

**DSOC 1200 Development Sociology First-Year Writing Seminar (SBA)**
Fall, spring. 3 credits. Staff. The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Program brochure for instructors and descriptions.

**DSOC 2010 Population Dynamics (also SOC 2202) (SBA)**
Spring. 3 credits. ALS students must enroll in DSOC 2010. S-U or letter grades. L. Williams. This course provides an introduction to population studies. The primary focus is on relationships between demographic processes (fertility, mortality, and immigration) and social and economic issues. Discussion will cover special topics related to population growth and spatial distribution, including: marriage and family formation, population aging, changing roles and statuses of women, labor force participation, immigration, urban growth and urbanization, resource allocation, and the environment.

**DSOC 2050 International Development (also SOC 2206) (SBA) (D)**
Spring. 3 credits. P. McMichael. Examines new questions concerning development models in the post–Cold War era from a comparative and global perspective on North-South relations. While the focus is the “Third World,” the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, the course examines Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multinational institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

**DSOC 2070 Problems of Contemporary Society (also SOC 2070) (SBA)**
For description, see SOC 2070.

**DSOC 2090 Social Inequality (also SOC 2203) (SBA)**
For description, see SOC 2028.

**DSOC 2150 Introductory Organizations (also SOC 2150) (SBA)**
For description, see SOC 2150.

**DSOC 2200 Sociology of Health of Ethnic Minorities (also LSP 2200) (SBA) (D)**
Fall. 3 credits. S-U or letter grades. P. A. Parra. Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Careful attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

**DSOC 2220 Controversies About Inequality**
For description, see SOC 2220.

**DSOC 2750 Immigration and a Changing America (D) (SBA) (HA)**
Spring. 3 credits. S-U or letter grades. D. Gurak. Immigration helped America become the nation that it is today. While many experts thought that immigration’s contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no signs of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and the impacts that immigrants are having on the American economy and society today. It looks in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

**DSOC 3010 Theories of Society and Development (SBA) (KCM)**
Spring. 3 credits. Prerequisite: development sociology or sociology course. S-U or letter grades. F. Makki. Introduction to the “classical” sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic social upheavals of the industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and conflicting) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

**DSOC 3050 Education, Inequality, and Development (SBA)**
Fall. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enygue. The main goal of this course is to examine the functions of education institutions, as they affect individual welfare, inequality, and development. It begins with a review of basic definitions and measures of education, inequality, and development, and then examines the individual and societal functions of education, from theooretical perspectives drawn from sociology, economics, and demography. The insights from these various perspectives are examined critically. The course also reviews studies that have examined how investments in education appear to affect selected outcomes.

**DSOC 3060 Farmworkers: Contemporary Issues and Their Implications (SBA)**
Fall. 1 credit. S-U or letter grades. M. J. Dudley. Introduction to contemporary issues of farmworkers in the United States. Examines issues related to unauthorized immigrant workers, farmworker demographics, farmworker access to health services, labor concerns, farmworker needs, and integration into new home communities. Will include guest lectures by faculty members from throughout the university currently engaged in related research.
DSOC 3130 Social Indicators and Introduction to Social Science Research (SBA)
Fall. 3 credits. P. Eloundou-Enyegue. This course is an introduction to social sciences research. It covers all steps in the research process through which social scientists derive credible answers to important questions about social change and social influences on individual behavior. It covers the general process from the formulation of a research question to the final presentation of findings. The course is designed as a preface for future work in social science research and it is recommended for students who simply want to sharpen their capacity to evaluate the claims made by researchers.

DSOC 3140 Spatial Thinking, GIS, and Related Methods (SBA) (KCM)
Spring. 4 credits. J. Francis. Everything occurs in space. Knowing where organizations are located and events occur in space provides clues to understanding social order and processes not revealed by traditional social analysis techniques. At the same time, spatial thinking and methods are becoming increasingly used in the social sciences. The purpose of this course is to introduce the undergraduate to both aspects of spatial patterns, trends, and themes but also to methodologies for bringing spatial considerations into their research. The course will provide a practical introduction to GIS via lab assignments.

DSOC 3240 Environment and Society (also STS 3241, SOC 3240) (SBA)
Spring. 3 credits. G. Gillespie. The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservationism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental justice. A second objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

DSOC 3290 Latin American Politics, Economy, and Society (also GOVT 2992, LATAM 3290) (SBA)
Spring. 3 credits. Prerequisite: introductory sociology recommended. S-U or letter grades. G. Flores-Macías. This course is designed as an introduction to political, economic, and social issues in 20th-century Latin America. In the first section of the course the regions is analyzed through a political lens, focusing on issues including state formation, populism and corporatism, revolutions, the breakdown of democracy, military rule, and democratization. We then turn to issues under the heading of economic perspectives including dependency theory, import substitution industrialization, the debt crisis, market reform, and the period of the post-Washington Consensus. The third section of the course presents a selection of the region’s central social issues including class structures, civil-military relations, church-state relations, social movements, and both internal and international migration. Throughout the semester, we will make reference to specific countries to illustrate each topic. Knowledge of Spanish or Portuguese is not required.

DSOC 3310 Environmental Governance
For description, see NTRES 3310.

DSOC 3360 Rural Areas in Metropolitan Society (SBA)
Spring. 3 credits. Prerequisite: social science course. D. Brown. Analyzes the changing structure and role of small towns and rural areas in developed nations. Focuses on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity, increased societal interdependence, and rapid social, economic, technological, and ecological change. Considers alternative policies to ameliorate rural problems and/or enhance rural contributions to national development. Students participate in group research projects in rural communities.

DSOC 3400 Agriculture, Food, and Society (also SBA) (KCM)
Fall. 3 credits. S-U or letter grades. G. W. Gillespie. Changing food and agricultural systems reflect the development patterns and social organization of an increasingly global society. Sociological questions include: What are major trends? What drives them? What benefits and costs accrue to people, communities, and ecosystems? How can we evaluate issues in such a way as to promote problem-solving? What development strategies might better manifest shared values?

DSOC 3550 Latinos, Law, and Identity (also LSP/AMST 3550) (SBA)
Spring. 3 credits. Prerequisite: DSOC 101 or permission of instructor. R. Mize. Critical explorations of the critical justice movement and Latina/o identities. Legal cases, federal and state laws, and constitutional issues that impact Latina/os residing in U.S. highlighted. Theoretical contributions of law and society, critical race theory, LatCrit, and outsider jurisprudence perspectives applied to precedent-setting cases and current attempts at marginalizing/empowering Latina/o communities.

DSOC 3700 Comparative Social Inequalities (also SOC 3710) (D) (SBA)
Fall. 3 credits. Prerequisite: introductory social science course. Staff. Reviews both classical and contemporary theories of social inequality. Employing a global perspective, the course examines various relations of inequality—in the labor market and the reorganization of work and employment and in relation to questions of difference—of race, gender, ethnicity, sexuality, and ability—as these patterns unequal access to resources, differentially provide economic and social security, and shape life chances and lived experiences. Throughout the course special attention is given to the importance of understanding patterns of change in relation to the reconfiguration of global production, consumption, and migration.

DSOC 3750 Comparative U.S. Racial and Ethnic Relations (also AMST/LSP 3750) (D) (SBA) (HA)
Spring. 3 credits. Prerequisite: DSOC 101 or permission of instructor. Letter grades only. R. L. Mizrahi. A comparative historical study of the social construction of race. Examines structures of racism as they influence Latina/o, African American, Native American, and Asian American experiences. Does a critical interrogation of whiteness and ethnic identities. Focuses on historical legacy of institutional and interpersonal racism and its contemporary relevance in terms of political economic, residential, legal, educational, cultural, health, and social-psychological inequalities.

DSOC 4100 Health and Survival Inequalities (also SOC 4100) (D) (SBA)
Fall. 4 credits. Letter grades only. A. Basu. Historical inequalities in health and survival continue to exist today. This course will cover some of the markers of such inequalities, including region, class, race, gender, and age and examine some of the biological, socioeconomic and political determinants of these differences. Macro as well as individual and family level determinants will be examined. Policy prescitions will be evaluated and new innovative approaches proposed.

DSOC 4210 Theories of Reproduction (also SOC 4210) (D) (SBA)
Spring. 4 credits. Letter grades only. A. Basu. Examines the contentious debate of what makes women have any, few, and many children. It covers theories of population growth and changing fertility in both historical and contemporary populations. Demographic concepts like “the demographic transition” and “natural fertility” are discussed. Primary attention is given to “sociocultural” and “gender-based” explanations of reproductive behavior. The course also looks at theories about the place of the state in women’s lives.

DSOC 4320 Environmental Strategies
For description, see NTRES 4320.

DSOC 4630 Islam in Africa and Its Diaspora
For description, see ASRC 4630.

DSOC 4870 Global Conflict and Terrorism (SBA) (KCM)
Spring. 3 credits. A. Geisler. Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the readings. May be repeated for credit.

DSOC 4890 Independent Study in Development Sociology (SBA)
Fall or spring. 3 credits, variable; may be repeated for credit. May be used to prepare for DSOC 5000 during the spring term. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Involves 1-3 credits of independent study, research experience, or public service experience.
DSOC 4940 Special Topics in
Development Sociology (SBA)
Fall or spring. 4 credits max. S-U or letter grades.
The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

DSOC 4991 Independent Honors
Research in Social Science (SBA) (KCM)
Fall and spring. 1–6 credits; 6 credits max. may be earned in honors program. Prerequisite: requirements for honors program met. A. Gonzales.
Students should select a faculty advisor and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

DSOC 6030 Classical Sociological Theory
Fall. 4 credits. Prerequisite: graduate standing. M. J. Pfeffer.
Reviews the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

DSOC 6060 Sociological Theories of Development
Spring. 3 credits. Prerequisite: DSOC 603 or permission of instructor. F. Malkki.
Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

DSOC 6080 Demographic Techniques (also PAM 6060)
Spring. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S-U or letter grades. D. Gurak.
Introduction to the major methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

DSOC 6150 Qualitative Research Methods
Fall. 3 credits. Letter grades only. L. Williams.
Seminar introducing students to a number of qualitative research methods in the social sciences. Discusses field observation, archival research, in-depth individual interviews, and focus group interviews. Assesses the strengths and weaknesses of various strategies of field research and consider a range of practical matters such as choice of research site (and sample where appropriate). We discuss choice of research questions and issues of feasibility in research plans. Highlights ethical considerations.

DSOC 6170 Foundations in Social Research: Comparative Epistemologies
Fall. 3 credits. Letter grades only. S. Feldman.
Seminar designed to introduce graduate students in the social sciences to the variety of epistemological approaches used by social scientists to analyze social change and development. Examines both positivist and nonpositivist approaches. Relates the relationship of quantitative and qualitative methodologies to different epistemologies.

DSOC 6190 Quantitative Research Methods
Spring. 4 credits. Prerequisite: statistics course. Letter grades only. J. Francis.
Graduate-level course in measurement and analysis of survey, demographic, and observational data. Topics include linear regression, analysis of variance, and analysis of covariance with both continuous and categorically coded variables. Introduces logistic regression and some nonlinear models. Gives special attention to handling ordered and unordered categorical data as these are prevalent in social/demographic data sets. Analyzes data from real surveys like the American National Election Studies and the General Social Surveys using programs like SAS and SPSS. Includes labs and writing programs to analyze these data. Students familiarize themselves with data cleaning, missing data estimation, transformations, subsetting, and other data handling procedures.

DSOC 6200 Sociology of the Community (SBA)
Spring. 3 credits. Prerequisite: graduate students only. S-U or letter grades. D. Brown.
This graduate seminar critically analyzes the intellectual core of community sociology and its theoretical development over time. "Community," as a concept, is often reified and rarely critically examined, hence the course begins by clarifying the various ways in which "community" has been conceptualized and operationalized by sociologists. The course provides students with both a grounded conceptual foundation and an overview of multiple strategies for conducting research on community structure and change in the United States and internationally. The course includes a critical examination of the forms and shapes of sociological research on the community assumes. A case study approach is used to examine the assumptions driving the methods and analysis of both contemporary and historical research.

DSOC 6250 State, Economy, and Society (SBA) (HA)
Fall. 3 credits. Prerequisite: graduate students only. P. D. McMichael.
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and world/historical methodologies.

DSOC 6320 Environmental Governance
For description, see NTRES 3310.

DSOC 6400 Community and Changing Property Institutions (SBA)
Fall. 3 credits. Prerequisite: graduate students only. C. C. Geisler.
The "ownership society" assumes multiple forms. The seminar focuses on property in land and acquaints students with the origin and evolution of property rights. It traces major property debates (aboriginal ownership vs. terra nullius; private versus public (and mixed) ownerships; the tragedy (versus the opportunity) of the commons; takings vs. giving as well as abiding property topics with which social scientists should be familiar (the "new" property; property rights as human rights, and new currents in land reform).

DSOC 6630 Islam in Africa and Its Diaspora
For description, see ASRC 4630.

DSOC 6940 Special Topics in Development Sociology
Fall or spring. 4 credits max. Prerequisite: graduate standing. S-U or letter grades.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

DSOC 7900 Graduate-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for Ph.D. students only before "A" exam has been passed.

DSOC 7910 Teaching Experience
Fall or spring. 1–3 credits. Prerequisite: DSOC graduate standing. S-U grades only. Graduate faculty.
Participation in the ongoing teaching program of the department.

DSOC 7920 Development Sociology
Fall or spring. 1–3 credits. Prerequisite: requirements for honors program met. A. Gonzales.
Participation in the ongoing teaching program of the department.

DSOC 8900 Master’s-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for master’s students.

DSOC 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S-U or letter grades. Graduate faculty.
Thesis research for Ph.D. candidates after "A" exam has been passed.
Related Courses in Other Departments
(Others may be added)
Population Dynamics (SOC 2050)
Gender Relations, Gender Ideologies, and Social Change (FGSS 5240)

EARTH AND ATMOSPHERIC SCIENCES

General Courses
EAS 1400 Freshman Writing Seminar "Writing in the Sciences: Environmental Perspectives"
Spring. 3 credits. S. Jessup.
This course is a Freshman Writing Seminar in which students examine interactions between humans and the natural environment from an individual, societal, and scientific perspectives. Readings include a brief historical survey of humanity's role within the natural world and short readings about current environmental issues. Includes a research project where each student explores a current environmental issue.

EAS 2900 Computer Programming and Meteorology Software
Spring. 3 credits. Prerequisites: EAS 130; MATH 1110 or equivalent. N. Mahowald and B. Belcher.
Introduction to Fortran computer programming and visual software packages specifically tailored for meteorological applications using packages such as BORTN 90 (this includes problem analysis, algorithm development, and program writing and execution), data manipulation, and instruction in the use of GRADS, and GEMPACK visual display tools.

EAS 4960 Internship Experience
Fall or spring. 1–2 credits. S-U grades only. Staff. See individual units for requirements. All 4960 internship courses must adhere to the CALS guidelines at http://www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

EAS 4890 Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1–4 credits. S-U grades only. Students must register using independent study form. Staff.
The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

Atmospheric Science
EAS 1310 Basic Principles of Meteorology
Fall. 3 credits. M. W. Wysocki.
Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. The optional 1-credit laboratory for the course is offered as EAS 1350.

EAS 1330 Basic Meteorology Lab
This course is required for atmospheric science majors but is optional for other students taking EAS 1310.

EAS 1340 Weather Analysis and Forecasting
Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1330. S-U grades only. M. W. Wysocki and staff.
This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific atmospheric storms (synoptic and mesoscale), including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

EAS 2500 Meteorological Observations and Instruments
Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.
Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument siting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis. The course is intended to serve as preparation for Observers Examination.

EAS 2680 Climate and Global Warming
Spring. 3 credits. Prerequisite: basic college math. S-U or letter grades. A. T. DeGaetano.
Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, and observed and projected climate changes and impacts. Also covers natural climate variations (e.g., El Niño) and their consequences and predictability. Readings focus on recent scientific findings related to climate change.

EAS 2960 Forecast Competition
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S-U grades only. D. S. Wilks.
Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 3050 Climate Dynamics
Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. K. H. Cook.
Discusses processes that determine climate and contribute to its change, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Investigates contemporary climate change issues and discusses them in the context of natural variability of the system.

EAS 3340 Microclimatology
The relationship of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. A. T. DeGaetano.
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)
Spring. 3 credits. Prerequisites: familiarity with multivariate calculus (e.g., MATH 2930, 2130, or 2220 or equivalent); one semester of university physics. K. H. Cook.
Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 3520 Synoptic Meteorology I
Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 4350 Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.
Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques.
EAS 4700 Physical Meteorology
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years; next offered 2009–2010. A. T. DeGaetano. Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include an introduction to atmospheric radiation processes; atmospheric optics and electricity; microphysical cloud processes; and principles of radar probing of the atmosphere.

EAS 4510 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci. Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 4560 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. Next offered 2009–2010. S. J. Colucci. Structure and dynamics of midlatitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

EAS 4570 Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. M. W. Wysocki. Examines sources, effects, transport, measurement, and controls of air pollution. Discusses the basic principles in each area with an emphasis on their local, regional, and global impacts.

EAS 4700 Weather Forecasting and Analysis
Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki. Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student’s knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

EAS 4820 Atmospheric Modeling
Spring. 3 credits Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. N. Mahowald. Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principle of the numerics in these models, including dynamical cores and subgrid-parameterization. Included will be a discussion of evaluation of models and effective presentation of model results.

EAS 4830 Environmental Biophysics (also CSS 4830)
Fall. 4 credits. Prerequisite: CSS 2600 or equivalent, calculus. H. van Es and S. J. Riha. For description, see CSS 4830.

EAS 4840 Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisites: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell. Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4940 Special Topics in Atmospheric Science (undergraduate level)
Fall or spring. 8 credits max. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.

EAS 4970 Individual Study in Atmospheric Science
Fall or spring. 1–6 credits. S-U grades only. Students must register using independent study form. Staff. Topics are arranged at the beginning of the semester for individual study or for group discussions.

EAS 4990 Undergraduate Research in Atmospheric Science
Fall or spring. Credit TBD. S-U grades only. Students must register using independent study form. Staff. Independent research on current problems in atmospheric science.
EAS 6920 Special Topics in Atmospheric Science
Fall or spring. 1–6 credits. S-U or letter grades. Staff.
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 7110 Upper Atmospheric and Space Physics
Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.

EAS 8500 Master’s-Level Thesis Research in Atmospheric Science
Fall or spring. Credit TBA. S-U grades only. Graduate faculty.
Thesis research for atmospheric science master's students.

EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S-U or letter grades. Graduate faculty.
Dissertation research for atmospheric science Ph.D. students only before "A" exam has been passed.

EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science
Fall or spring. Credit TBA. S-U or letter grades. Graduate faculty.
Dissertation research for atmospheric science Ph.D. candidates after "A" exam has been passed.

Science of Earth Systems

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.

EAS 1101 Introductory Geological Sciences (To Know Earth)
Fall. 3 credits. G. Chronicos.
Designed to enhance an appreciation of the physical world for nonscientists and science majors. Emphasizes natural environments, surface temperatures, dynamic processes such as mountain belts, volcanoes, earthquakes, glaciers, and river systems. Covers interactions of the atmosphere, hydrosphere, biosphere, and lithosphere (Earth system science). Examines water, mineral, and fuel resources and environmental concerns.

EAS 1108 Earth in the News
Summer. 3 credits. S. L. Losh.
Introduction to physical geology and Earth system science and explores the scientific basis for informed decision making regarding many timely environmental issues including global warming; water pollution and use, geologic hazards such as floods, earthquakes, and volcanoes; fossil fuel distribution and use; and land use. A field trip is taken in the Ithaca area.

EAS 1109 Dinosaurs
Fall. 1 credit. J. L. Csine.
Introductory survey course for anyone interested in dinosaurs. Lectures examine the fossil evidence and illustrate how various biological and geological disciplines contribute to understanding dinosaurs and their world.

EAS 1190 Fossil Preparation
Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Csine.
Hands-on experience in the preparation and curation of fossils in laboratories at the Paleontological Research Institution (PRI). Students provide own transportation to the Museum of the Earth via public transit or other means. Activities include preparation and study of vertebrate, invertebrate, and plant specimens; sorting of bulk material such as field collections and mastodon dung, and curation of prepared specimens.

EAS 1220 Earthquake! (also ENGR 1220)
Spring. 3 credits. L. D. Brown.
Explores the science of natural hazards and strategic resource. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical resource. Covers techniques for locating and characterizing earthquakes and assessing the damage they cause; methods of using sound waves to image the Earth's interior to search for strategic minerals; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

EAS 1540 Introductory Oceanography—Lecture (also BIOEE 1540)
Fall, summer. 3 credits; optional 1-credit lab offered as EAS/BIOEE 1550. S-U or letter grades. Fall: C. H. Greene and B. Monger; summer: B. Monger. Intended for both science and nonscience majors. Cover the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course explores threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn broadly how the Earth works (physically, chemically, and biologically) in a single nonquantitative class.

EAS 1550 Introductory Oceanography—Laboratory (also BIOEE 1550)
Fall. 1 credit. Corequisite: EAS/BIOEE 1540. B. Monger and C. H. Greene. Laboratory course covering topics presented in EAS/BIOEE 1540.

EAS 1700 Evolution of the Earth and Life (also BIOG 1700)
Spring. 3 credits. J. L. Csine.
Earth system's and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions; and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography; fossil-collecting on field trips.

EAS 2130 Marine and Coastal Geology
Summer. 4 credits. Prerequisite: introductory geology or ecology course or permission of instructor. Staff.
Special two-week course offered at Cornell's Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details, including estimated cost and an application, contact SML office, G4 Stimson Hall, or visit www.sml.cornell.edu.

EAS 2220 Seminar: Hawaii’s Environment
Fall. 1 credit. S-U grades only. A. Moore.
A seminar for students interested in the unique environmental systems of the Hawaiian Islands. This course is designed to bring together students returning from field studies in Hawaii with students interested in going there to study. Through reading and discussion we will explore the geology, biology, ocean, atmosphere, and culture of the Hawaiian environment.

EAS 3010 Evolution of the Earth System
Fall. 4 credits. Prerequisites: EAS 2200, MATH 1120 or 1920 and CHEM 2070 or equivalent. Two Sat field trips. T. Jordan, S. Riha, and W. Allmon.
Life activities alter the physical and chemical environment, and are altered by that environment. This interaction over very long times constitutes a co-evolution of earth and life. Course uses modern systems, tens of thousand year old systems, and hundreds of million year old systems to illustrate principles, methods of reconstructing deep history, and the context of natural change inherent to life and earth.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030)
Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, and biology and/or geology course. L. A. Derry and J. Yavitt.
Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.
EAS 3040 Interior of the Earth
Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.
This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic structure of the continents and ocean basins, and large scale tectonics. Interaction between deformation, melt generation and metamorphism will be examined as mechanisms by which the crust is differentiated from the underlying mantle. Geophysical and geochemical techniques for probing the deep interior of the earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 3220 Biogeochemistry of the Hawaiian Islands
Spring. 4 credits. Prerequisites: enrollment in EES semester in Hawaii; EAS 2200, EAS 3030 or permission of instructor. L. A. Derry.
A field-oriented study biogeochemistry course held on the Island of Hawaii. Field, class, and laboratory work focus on how landscape age and climate strongly control biogeochemical cycling and ecosystem development in Hawaii. Other topics include succession of ecosystems, evolution of nutrient cycles, and impacts of invasive species. The course is structured around field projects, carried out both as groups and individually.

EAS 3400 Field Study of the Earth System
Spring. 6 credits. Prerequisites: enrollment in EES Semester in Hawaii, one semester of calculus (MATH 1910/1920 or 1110/1120) and two semesters of any of the following: PHYS 2207/2208 or 1112/1121; CHEM 2070/2080 or 2090/2080; BIOG 1101–1103–1102–1104 or 1105/1106 or 1109/1110 or equivalent course work.
A. Moore.
Interdisciplinary field course covering fundamental concepts of the Earth system. Topics include global circulation patterns in the solid Earth, atmosphere and ocean; energy and mass transfer; change and variability of the atmosphere and ocean systems; the temporal record of change preserved in the geologic record; Earth/ocean/atmospheric controls on ecosystem processes. The course is project-based with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)
Fall. 3 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOEE/EAS 1540) or permission of instructor. Offered alternate years; next offered 2009–2010.
C. H. Greene and R. W. Howarth.
Lecture course covering the interactions of physical and biological processes in marine ecosystems.

EAS 3510 Conservation Oceanography (also BIOEE 3510)
Spring. 4 credits. Prerequisite: EAS 3400. Recommended: oceanography course.
C. H. Greene and C. D. Harvell.
Covers the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on ocean-basin to regional scales and work down to the smaller scales relevant to individual organisms. Introduces students to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3530 Physical Oceanography
Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or permission of instructor. Offered alternate years. B. Monger.
The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are used to explain the ocean's responses to wind and buoyancy forcing, but the course will emphasize the basic physical principles at play, and not just the mathematical results. Student presentations of recent research papers will elaborate principles learned in the course.

EAS 4010 Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Recommended: previous course in geology. L. Cathles.
The Earth's energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the Earth's atmospheric evolution, rifting, mantle convection, and hydrologic cycle. The processes of resource accumulation are described in terms of simple, chemical and physical principles and in the societal contexts of supply, demand, and sustainability.

EAS 4040 Geodynamics
Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years; future year 2010–2011. J. Phipps-Morgan.
Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the Earth. Familiar physical and chemical principles and concepts are applied to study of plate tectonics, fluid dynamics, mantle convection, melting, and mountain building.

EAS 4050 Active Tectonics
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. Offered alternate years; next offered 2009–2010. R. Lohman.
Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

EAS 4060 Marine Geology and Geophysics
Spring. 4 credits. Prerequisite: EAS 2200 or comparable courses. Recommended: completion of some EAS classes. J. Phipps-Morgan.
This course will use geological, geochemical, and geophysical data to explore the geology of the ocean floor. We will begin by discussing in depth the mid-ocean ridge system where the basaltic seafloor is created by plate spreading. This complex system involves a rich interplay of volcanism, hydrothermal flow, mantle flow, and lithosphere deformation, and is responsible for both the architecture of the ocean crust and the chemical composition of seawater. After this, we will discuss the evolution of the seafloor during its residence at Earth's surface. We end up by discussing processes of complex faulting, melting, and fluid flow processes at subduction zones where seafloor is transformed into mantle and crust. There will be a lab section focused on the use of GMT to make maps of relevant geological and geophysical information.

EAS 4170 Field Mapping in Argentina
Summer. 3 credits. Prerequisite: introductory EAS course and EAS 4260 or EAS 3040. S. Mahlburg Kay.
Field mapping course in Argentina that fulfills field requirement for majors with interests in geological sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of various sedimentary, metamorphic and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the U.S. Exercises are done in combination with students and faculty of the University of Buenos Aries.

EAS 4250 European Discovery of Impacts and Explosive Volcanism
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Letter grades only. Meets one day per week plus field trip during spring break. Fee probably charged for required weekend field trip. Offered alternate years; next offered 2009–2010. J. Phipps-Morgan.

EAS 4260 Structural Geology
Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. Offered alternate years. C. Andronicos.

EAS 4340 Exploration Geophysics
Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years; future year 2010–2011. L. D. Brown.
Fundamentals of subsurface imaging by multichannel seismic reflection techniques as used in oil exploration and geohydrological investigations. Covers survey design, acquisition, analysis, processing, and interpretation in both 2-D and 3-D. Includes discussion of related techniques such as seismic refraction analysis, tomographic inversion, vertical seismic profiling, shear wave exploration, and ground-penetrating radar. Lab is keyed to state-of-the-art seismic processing, modeling, and interpretation software from LandMark.

EAS 4370 Geophysical Field Methods in Marine Geology
Fall. 3 credits. Prerequisites: PHYS 2208 or 2213, or permission of instructor. Offered alternate years; next offered 2009–2010. L. D. Brown.
[EAS 4400 Seminar on Climate Change Science, Impacts, and Mitigation]
Fall. 2 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2009–2010. M. Mahowald. The course will focus on reading, understanding, and evaluating the IPCC report (2007 version).

EAS 4530 Mineralogy
Fall. 4 credits. Prerequisite: EAS 1101 or 2200 and CHEM 2070 or 2090 or permission of instructor. S. Mahburg Kay. Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent projects. Includes use of electron microprobe (EPMA) and x-ray facilities.

EAS 4540 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: EAS 4530 or permission of instructor. Offered alternate years; next offered 2010–2011. R. W. Kay. Covers crystallography and crystal chemistry of minerals and methods of their study. Includes x-ray diffraction, optical methods, and computer simulation of crystal structures. Emphasizes effects of high pressures and temperatures with implications for understanding the Earth’s interior.

EAS 4550 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years; next offered 2009–2010. W. M. White. The Earth from a chemical perspective.

EAS 4580 Volcanology

EAS 4600 Late Quaternary Paleoecology
Fall. 4 credits. Offered alternate years; future year 2010–2011. M. Goman. Explores topics in Late Quaternary paleoecology. Broadly divides into sections: (1) lectures that cover a variety of topics, such as philosophy of paleoecology, radiometric dating methods, and paleoenvironmental proxies. (2) field- and laboratory-based research. The field research provides students with hands-on experience in sediment core collection; while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.

EAS 4610 Paleoclimate: Since the Last Ice Age
Fall. 3 credits. Prerequisites: EAS 2200 or permission of instructor. Offered alternate years; next offered 2009–2010. M. Goman. This course examines changes and variability in climate for the last 21,000 years.

EAS 4620 Marine Ecology (also BIOEE 4620)
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years. C. D. Harvell and C. H. Greene. For description, see BIOEE 4620.

EAS 4710 Introduction to Groundwater (also ECE 4700)
Spring. 3 credits. Prerequisite: MATH 2940, fluid mechanics or hydrology course. Offered alternate years; next offered 2009–2010. L. M. Cathles and T. S. Steenhuys. Intermediate-level study of aquifer geology, groundwater flow, and contamination of aquifers and clean-up methods.

EAS 4750 Special Topics in Oceanography
Fall, spring, summer. 2–6 credits, variable. Prerequisites: completion of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. Monger. Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

EAS 4760 Sedimentary Basins
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2009–2010. T. E. Jordan. The focus is on the physical characteristics of sedimentary basins, which host fossil fuels and groundwater, and can potentially store CO2.

EAS 4780 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 5010 or permission of instructor. Offered alternate years; future year 2010–2011. T. E. Jordan. Covers modern improvements on traditional methods of the study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Considers physical correlation, dating techniques, and time resolution in sedimentary rocks as well as physical controls on the stratigraphic record and numerical modeling.

EAS 4790 Paleobiology (also BIOEE 4790)
Spring. 4 credits. Prerequisites: one year of introductory biology and BIOEE 2740 or 3750 or EAS 3010, or permission of instructor. W. D. Allmon. Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

EAS 4810 Survey of Earth Systems
Fall, spring. 2 credits. Fall, R. Kay; spring, J. Cisne. Weekly seminar for seniors in the Science of Earth Systems major on current topics in Earth system science. Readings, presentations, and discussions will focus on results from the recent literature, including how to analyze a scientific paper, and exploration of connections across the subdisciplines in the field. The course will serve as both a review of key concepts, and a vehicle to explore developing concepts in the field.

EAS 4840 inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be employed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell. Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4880 Global Geophysics
Spring. 3 credits. Prerequisites: MATH 1920 or 1120 and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman. Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth’s gravitational and magnetic fields, and heat flow.

EAS 4910–4920 Undergraduate Research
Fall, spring. 1 to 4 credits. Fill out form at 2124 Snee Hall. Staff (J. L. Cisne, coordinator). Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.
systems by analyzing examples ranging from epoch-making classics to work now appearing in the literature.

**EAS 5220 Advanced Structural Geology I**
Fall. 3 credits. Prerequisites: EAS 4200 and permission of instructor. Offered alternate years; next offered 2009–2010.  R. W. Allmendinger and C. Andronicos. Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and fabric analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

**EAS 5240 Advanced Structural Geology II**
Fall. 3 credits. Prerequisites: EAS 4200 and permission of instructor. Offered alternate years; next offered 2009–2010.  R. W. Kay.

**EAS 5750 Planetary Atmospheres (also ASTRO 6575)**

**EAS 5770 Planetary Surface Processes (also ASTRO 6577)**
Spring. 3 or 4 credits. Offered alternate years.  J. Bell.

**EAS 5780 Planet Formation and Evolution (also ASTRO 6578)**
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years.  J.-L. Margot and M. Pritchard. For description, see ASTRO 6578.

**EAS 5840 Inverse Methods in the Natural Sciences**
Fall. 3 credits. Prerequisites: MATH 2940.  D. L. Hysell. An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms. Students in EAS 5840 will be expected to complete and present a substantial class project to be negotiated with the instructor.

**EAS 6280 Geology of Orogenic Belts**
Spring. 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay. Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.

**EAS 6410 Analysis of Biogeochemical Systems**
Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years.  L. A. Derry. Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems; Eigen-analysis of linear systems; feedback and nonlinear cases, problems of uncertainties in natural systems; modeling software such as Stella II and MATLAB; and applications to current research of participants or from recent literature.

**EAS 6560 Isotope Geochemistry**
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years.  W. M. White. Nucleosynthetic processes and the isotopic abundance of the elements, geochronology, and cosmochronology using radioactive decay schemes, including U-Ph, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 14C and 36Cl. Use of radiogenic and stable isotope evidence regarding the formation of the Earth and the solar system. Stable isotopes and their use in geothermometry, ore petrogenesis, and the global climate system.

**EAS 6930 Special Topics in Geological Sciences**
Fall or spring. 1–3 var. credits. S–U or letter grades. Staff. Study of specialized advanced topics in the Earth Sciences through readings from the scientific literature, seminars, and discussions.

**EAS 7000–7990 Seminars and Special Work**
Fall, spring. 2 credits. Offered alternate years.  R. W. Allmendinger.

**EAS 7220 Advanced Topics in Structural Geology**
R. W. Allmendinger.

**EAS 7310 Advanced Topics in Remote Sensing and Geophysics**
M. Pritchard.

**EAS 7330 Advanced Topics in Geodynamics**
Spring. J. Phihps Morgan.

**EAS 7500 Satellite Remote Sensing in Biological Oceanography**
Summer. B. C. Monger
In this service-learning course, students participate in team projects; attend research opportunities in agricultural education and the principles of the Community Learning and Service Partnership (CLASP). Seminars examine the issues of learning through service and reflection, adult teaching philosophy and practice, and empowerment through education. Students must commit to continuing their service by taking EDUC 2210 the following spring semester.

EDUC 2210 Community Learning and Service Partnership (CLASP)
Spring only. 2–4 credits, variable. Prerequisites: EDUC 2200 and permission of instructor. S-U or letter grades.

Continues the field experience and curriculum begun in EDUC 2200. Students work with Cornell service staff to accomplish a variety of learning goals selected by the employees. Students receive in-service training and support. Seminars examine the impact of gender, race, and social class on learning and educational opportunity.

EDUC 2400 The Art of Teaching (CA)
Fall and spring. 3 credits. B. Heath-Camp. This exploratory course is designed for students of all backgrounds and interests who have a desire to learn more about education and teaching. Teaching takes place in a variety of contexts from the family to the workplace and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional classroom settings and includes a minimum of 40 hours of fieldwork in area classrooms.

EDUC 4040 Learning and Teaching I
Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on students’ understandings of pupils and classroom structures.

EDUC 4050 Learning and Teaching II
Spring. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. Designed to foster development of pedagogical and reflective understanding crucial to good teaching. Students explore what it means to understand and teach through examining key disciplinary topics, which requires rethinking disciplinary knowledge, assessment of learning, and motivation. Required fieldwork (4 hours weekly) focuses on students’ understandings of pupils and classroom structures.
EDUC 4200 Field Experience
Fall or spring. 1–4 credits. Undergraduates must attach to their course enrollment material written permission from faculty member who will supervise work and assign grades. S-U or letter grades. Staff. Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate their field experience.

EDUC 4410 Language, Literacy, and Schooling
Spring. 3 or 4 credits. Lab TBA. T. Park. Foundation for literacy activities in secondary education. Examines current research, policy, and practice relating to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a research project based on fieldwork.

EDUC 4510 Multiculturalism and Education (also AMST/LSP 4510) (D)
Fall. 3 credits. Letter grades. S. Villenas. This course explores research on race, ethnicity, and language in American education. It examines historical and current patterns of minority school achievement and the cultural premises undergirding educational practices in diverse communities and schools. Policies, programmatic, and pedagogical responses to diversity, including multicultural and bilingual education, are addressed.

EDUC 4590 Educational Innovations in Africa and the Diaspora (also ASRC 4601) (D)
Fall. 3 credits. 4 in College of Arts and Sciences. N. Assié-Lumumba. Deals with educational innovations geared to promoting equal opportunity based on gender, race and class, in Africa and the African Diaspora. After introducing the concepts and theories of education and innovations and the stages of innovation as planned change, the course focuses on concrete cases and different types of educational innovations. Selected case studies from the United States, include the creation and expansion of historically black institutions with a focus on Tuskegee Institute (now Tuskegee University), Lincoln University, Spelman College, and the Westside Preparatory School in Chicago. The African cases studied include African languages for instruction in Nigeria, science education also in Nigeria, Ujamaa and education for self-reliance in Tanzania, classroom action research in Lesotho, Information Communication Technologies (ICTs) in African higher education with a focus on African Virtual Universities (AVU), the application of the Global Development Learning Network (GDLN) in Côte d’Ivoire, and OnLine learning in South Africa.

EDUC 4630 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Summer. 3 credits. S-U or letter grades. N. Assié-Lumumba. Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries, and also elearning programs designed in industrial countries for developing countries.

EDUC 4940 Special Topics in Education
Fall, spring, or summer. 4 credits max. Prerequisite: permission of instructor. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester, and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 4970 Individual Study in Education
Fall, spring, or summer. 1–3 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 4980 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career. Prerequisite: GPA of at least 2.7. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 4990 Undergraduate Research
Fall, spring, or summer. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Prerequisite: junior or senior standing; GPA at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Staff. Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 4991 Independent Honors Research in Social Science
Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program. Prerequisite: requirements for honors program met. S-U or letter grades. Staff.

EDUC 5020 Education and Development in Africa (also ASRC 5020)
Spring. 3 credits. 4 in College of Arts and Sciences. S-U or letter grades. N. Assié-Lumumba. Examines the relationship between education and individual and national development. Besides human capital theory, different paradigms of development, including modernization and dependency theories, and Third World Forum, are examined. Issues discussed include schooling and nonformal education; the role of primary, secondary, and higher education in development, and the issues related to employment, national migration and international brain drain, language, equity in access, output, and outcome based on social class, ethnicity, race, gender, and nationality. Finally, the information and communication technologies (ICTs), indigenous knowledge systems, and the role of higher education in the national, regional, and international contexts and cooperation are discussed.

EDUC 5320 Educational Programs in Agricultural Science
Fall. 3 credits. W. Camp. Overview of the organization and planning processes necessary to operate a successful agricultural science education program in the public schools. Topics include local needs assessments, agricultural advisory boards, community-partnering strategies, program planning, course development, sequencing instruction, professional development. Fieldwork provides experience with New York agricultural education students, teachers, and programs.

EDUC 5350 Youth Organizations for Agricultural Science Education
Spring. 3 credits. Prerequisite: senior or graduate standing in Agricultural Science Education. Letter grades only. T. Park. Provides future agriculture educators a comprehensive overview of the components of agriculture education programs, including supervised agricultural experience (SAE) and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA organization, structure, and functions on national, state, and local levels.

EDUC 5440 Curriculum and Instruction
Spring. 3 credits. S-U or letter grades. B. Heath-Camp. The focus of this curriculum and instructional planning course will be on the concepts and principles for developing curriculum and the processes for delivering curriculum. Experiences will be designed to assist in identifying the educational needs of clients/students, selecting curriculum content, designing curricula, and delivering the curriculum.

EDUC 5710 Social and Political Context of American Education (also SOC 5710) (HA) (SBA) (D)
Fall. 3 credits. Prerequisites: admission to Cornell Teacher Education Program or permission of instructor. J. Sipple.
Examines the goals, roles, inputs, and outcomes of schooling in American society, and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.

**EDUC 5710.1 Social and Political Context of American Education Required Discussion Section (also SOC 5710.1)***

Fall. 1 credit. Required sec for 1 credit. Must be taken with EDUC 5710 Social and Political Context of American Education.

J. Sipple.

**EDUC 5780 International Teaching Assistant Development Program (ITADP) Training Course: Cross-Cultural Classroom Dynamics, Pronunciation, and Language, Video Teaching Practicum***

Fall and spring. 2 credits. S-U grades only. TBA. ITADP staff.

Designed for first-time international teaching assistants from countries in which English is not the first language. Focuses on three areas: cross-cultural classroom dynamics, video teaching practicum, and language—enhancing communicative competence in English. Through small-group seminars and individual conferences, the ITADP helps international teaching assistants develop their linguistic and pedagogical skills as they gain sensitivity to the dynamics of U.S. classrooms.

**EDUC 5790 Further Training for International Teaching Assistants***

Fall, spring, summer. 2 credits.

Prerequisite: EDUC 5780. S-U or letter grades. Lec, three contact hours per week. ITADP staff.

Designed for international teaching assistants from countries in which English is not the first language and who have completed EDUC 5780, the ITADP follow-up course provides further instruction and practice in oral English and pedagogical skills.

**EDUC 6010 Secondary Agriculture, Science, and Mathematics Teaching Practicum***

Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program. S-U grades only. D. Trumbull, B. Crawford, W. Camp, and T. Park.

Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for 14 weeks.

**EDUC 6020 Practicum Seminar***

Fall or spring. 9 credits. Prerequisite: EDUC 6010 or permission of instructor. W. Camp, B. Crawford, D. Trumbull, and T. Park.

Begin with full-day sessions of intensive consideration of classroom practice relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use theories to develop and evaluate teaching materials and practices. Students also complete an extensive portfolio documenting their work.

**EDUC 6140 Gender, Context, and Epistemological Development (also FGSS 6240)(D)***

Fall. 3 credits. S-U or letter grades. Offered alternate years. D. Schrader.

This seminar explores concepts of personal epistemological development and how social context and gender influence how we know and how we think. We examine the dynamic interactions between individuals' view of the nature of knowledge, metacognitive awareness of thought processes and strategies, and social contexts of education and real life.

**EDUC 6160 Moral Psychology and Education (also FGSS 6060)***

Fall. 3 credits. Prerequisites: EDUC 3110, graduate standing or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. D. Schrader.

This seminar examines questions of the psychological development of knowing what is right, just, good, and of value. We study moral development from cognitive-developmental, social-contextual, normative, and gendered perspectives. Topics vary by semester but include the relationship between judgment and action, moral education, social aggression, moral leadership, and integrity.

**EDUC 6170 Psychology of Adolescence in Case Study (also FGSS 6180)***

Spring. 3 credits. Prerequisite: any one of the following: EDUC 3110, HD 6170, or permission of instructor. S-U or letter grades. D. Schrader.

Adolescent psychological development is examined from the perspective of the individual subject and the researcher. Using a case study approach we explore classic and contemporary theories of adolescence, relying on primary source readings and first-person accounts to give us insight into adolescent issues, such as identity, values, and behaviors.

**EDUC 6180 Learning in Adulthood: An Introduction***

Fall. 3 credits. S-U or letter grades. R. Caffarella.

An introduction of learning in adulthood is provided with emphasis on understanding adult learning in contemporary society, reviewing key seminal and current theory and research, and exploring how this knowledge relates to practice. Students from other disciplines, in addition to Education, who work with adults in informal and formal learning settings are welcomed.

**EDUC 6200 Internship in Education***

Fall or spring. 1–4 credits. S-U or letter grades. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. Staff. Opportunity for practical experience in educational professions development.

**EDUC 6210 Work-Experience Coordinator Certification Course I***

Summer. 3 credits. Prerequisite for EDUC 6220. S-U or letter grades.

First of two-course sequence designed to meet state certification requirements for Coordinator of Diversified Cooperative Work Experience programs.

**EDUC 6220 Work-Experience Coordinator Certification Course II***

Second of two-course sequence designed to meet state certification requirements for Coordinator of Diversified Cooperative Work Experience programs.

**EDUC 6330 Program Planning in Adult and Extension Education***

Spring. 3 credits. S-U or letter grades. Offered alternate years. A. Wilson.

Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

**EDUC 6470 Innovative Teaching in the Sciences***

Spring. 3 credits. S-U or letter grades. R. Crawford.

This seminar on innovative ways to teach is designed for doctoral and master's-level students in education, sciences, math, and possibly other disciplines, including extension and outreach. Readings will include issues of gender and underrepresented populations in science, math and engineering. Students will design inquiry-based instruction in their field.

**EDUC 6510 Anthropology and Education***

Spring. 3 credits. Letter grades. Lec. S. Villenas.

A study of schooling and education from anthropological perspectives and ethnographic methodology. Participants examine teaching and learning in families, communities, and schools as cultural processes. Some topics include the differential school achievements of racial/ethnic minorities, school reform efforts, youth culture and identities, and literacy in adult learning spaces.

**EDUC 6610 Administration Leadership and Organizational Change***

Fall. 3 credits. J. Sipple.

Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

**EDUC 6620 Evaluation Design***

Spring. 3 credits. Prerequisite: survey of research methods (or other graduate level class in research methods), statistics. S-U grades only. M. Constanas.

This course is designed to introduce graduate students to the principles and practices of program evaluation. It addresses practical realities and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Students who enroll in this class will become familiar with the technical characteristics, practical realities, and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class
discussions, and assignments will support the development of the proposal.

**EDUC 6640 Methods for Interpretive Research**
Spring, 3 credits. Prerequisites: course in research methods/research design. S-U or letter grades. Next offered 2009-2010. D. Trumbull. Studies interpretive qualitative research, which attends to the complex interactions between researcher, researched and contexts and accepts the centrality of interpretation in research.

**EDUC 6680 Narrative Inquiry in Social Science and Action Research**
Spring, 3 credits. S-U or letter grades. S. Peters. Provides an introduction to the theory and practice of narrative inquiry in action-oriented social science research. It includes a range of theoretical and practical topics related to narrative inquiry, taking an approach that combines seminar and workshop formats. Class sessions and assignments provide students with opportunities to practice elements of narrative inquiry, and to develop draft proposals for research projects that incorporate a narrative orientation.

**EDUC 6710 American School Reform: Organizational and Sociological Perspectives**
Spring, 3 credits. S-U or letter grades. J. Sipple. For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization, the.goBack long history of policy initiatives designed to reform schools. The focus is American K-12 public education, though issues of pre-K, private, and post-secondary education are covered.

**EDUC 6800 Foundations of Adult and Extension Education**
Fall, 3 credits. Limited to 20 students. S-U or letter grades. Staff. Offered alternate years. A. Wilson. Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual controversies, philosophical issues, and current research directions through a seminar approach.

**EDUC 6810 Democracy, Science, and Education**
Spring, 3 credits. S-U or letter grades. S. Peters. Explores the actual and potential connections between democracy, science, and education. The first half of the course examines several different models and theories of democracy. Attention is focused on how the nature and practice of citizenship and politics are conceptualized under each of these models, and the implications of these conceptualizations for the political and civic educations of roles of teachers, scientists, adult educators, community development practitioners, and community organizers. The second half of the course involves a critical examination of the roles that scientists, experts, technologies, and knowledge do, might, and/or should play in addressing social problems.

**EDUC 6820 Community Education and Development**
Fall, 3 credits. Limited to 25 students. S-U or letter grades. S. Peters. Offers an opportunity for students to engage in a critical study of the purposes and practices of professional organizers and educators in community and economic development initiatives. The course places a special focus on the civic or democratic dimensions of educational practice. Civic practice in community education and development is viewed in relation to the craft of “educational organizing” as a vehicle for social learning and collective action. Key philosophies and traditions of educational organizing are studied and analyzed in their historical, cultural, social, and political context, with an eye toward implications for contemporary practice in a broad range of settings.

**EDUC 6850 Training and Development: Theory and Practice (also IARD 6850)**
Spring, 4 credits. Limited to 20 students. S-U or letter grades. R. Caffarella. Provides practitioners and researchers with conceptualizations from different perspectives of training and development, primarily in international settings. Engages students in critical and reflective analysis related to adults as learners, training and education at the institutional and program levels, major development issues at national and global levels, and ethical practice. Examines two majors themes that drive training and development: the impact of context, and the role of power.

**EDUC 6940 Special Topics in Education**
Fall, spring, or summer. 1-3 credits. Permission: permission of instructor. S-U or letter grades. Staff. Topics TBA.

**EDUC 7000 Directed Readings**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For study that predominantly involves library research and independent study.

**EDUC 7010 Empirical Research**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For study that predominantly involves library research and independent study.

**EDUC 7020 Practicum**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For study that predominantly involves field experience in community settings.

**EDUC 7030 Teaching Assistantship**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

**EDUC 7040 Research Assistantship**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

**EDUC 7050 Extension Assistantship**
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S-U or letter grades. Staff. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

**EDUC 7620 Comparative and International Education**
Summer. 3 credits. S-U or letter grades. N. Assié-Lumumba. Seminar that critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

**EDUC 7830 Farmer-Centered Research and Extension (also IARD 7830)**
Fall. 3 credits. S-U or letter grades. G. Applebee. Forum for discussion and critical analyses of participatory research and extension approaches in agriculture and natural resource management in the complex and diverse environments characteristic of many developing countries. Theoretical and philosophical arguments that underpin participatory research and extension, as well as current tools and techniques for facilitating participation and social learning are examined. Case studies and individual projects related to farmer-centered research and extension provide a focus for analyses. The course also explores and pays special attention to the challenges and opportunities related to institutionalization of participatory research and extension for sustainable agriculture and natural resource management.

**EDUC 8900 Master’s-Level Thesis Research**
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S-U or letter grades. Times TBA. Staff.

**EDUC 9900 Doctoral-Level Thesis Research**
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work S-U or letter grades. Times TBA. Staff. Doctoral or other research and development projects for Ph.D. students.
ENTOMOLOGY

Courses by Subject
Apiculture: 2600, 2640
Behavior: 2150, 3150, 3250, 3940, 4710, 6620
Conservation: 3440
Ecology: 3690, 4520, 4550, 4560, 4700, 6720, 7570
Introductory courses: 2010, 2100, 2120, 2150, 2410
Medical and veterinary entomology: 2100, 3520, 3530, 4100, 4110
Morphology: 3220
Outreach: 3550, 3560
Pathology: 4630, 6700
Pest management: 2410, 2770, 4200, 4410, 4470, 4770, 6470, 6700
Physiology, development, and toxicology: 3070, 3940, 4000, 4830, 4900, 6850
Systematics: 3110, 3311, 3330, 4400, 4530, 6340, 6350, 6550

ENTOM 2100 Alien Empire: Bizarre Biology of the Insect Origins
Spring. 2 or 3 credits. S-U or letter grades.
Optional field trips. B. N. Danforth.
Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects and their interaction with humans. We will examine both the detrimental roles insects play (e.g., pests and vectors of disease) as well as their beneficial roles (e.g., pollination, edible insects, insect products such as waxes, dyestuffs, and silk). We will also explore the symbolic representation of insects in art, literature, and religion. Students taking the course for 3 credits will meet once per week (on Friday) for discussion and documentary films on the biology of insects.

[ENTOM 2100 Plagues and People (also BSOC 2101)]
Fall. 2 or 3 credits. Prerequisites: introductory biology or permission of instructor. Offered alternate years; next offered 2009–2010. Lec, lab (also TOX 3700).Fall. 2 credits. Prerequisites: BIOG 1101–1102 or equivalent. Lec, lab/disc. W. M. Tingey. Introduction to insect pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, sight identification, diagnosis, decision-making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, turf, urban environments and public health; veterinary, dairy, livestock, and poultry. Five-off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

ENTOM 2600 Biology of the Honey Bee
Fall. 2 credits. Lec. N. W. Calderone. Introduces students to the life history, physiology, ecology, and behavior of honey bees. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior. Also includes lectures on pollination of agricultural crops, honey and beeswax, bees in ancient and modern rituals, Africanized honey bees, and insect politics.

ENTOM 2640 Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Pre- or corequisite: ENTOM 2600. Lab. N. W. Calderone. Consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment. Topics include management of bees for pollination, honey harvesting and processing, wax processing and candle making, and disease identification/control. The class makes a number of field trips to commercial beekeeping operations. Students conduct simple experiments to demonstrate color and odor perception by bees, as well as the chemical basis of swarming, nest guarding, and mating.

ENTOM 2770 Invasive Species and Natural Enemies
Spring. 2–3 credits. S-U grades optional. Lec, lab, demonstration; optional field trip, optional disc session offered for 1 credit. Lec. W. M. Tingey. The purpose of this course is for students to learn about the looming problems caused by invasive species and use of biological control against invasives and other pests. These topics are obviously germane in biology; however, they have social, economic and philosophical links. Many research projects on invasive species and biological control are conducted on Cornell campus; examples of research will be provided, including talks by guest lecturers. Subjects covered will include basic concepts of biological invasion and biological control. These subjects fit well together because one of the first lines of defense against invasive species is use of biological control. Moreover, the effects of invasive species impact agriculture but also increasingly affect and can permanently change natural systems. Natural enemies used for biological control that will be discussed include predators, parasitoids, pathogens, herbivores and antagonists to control vertebrate, invertebrate, and microbial pests and weeds.

ENTOM 2120 Insect Biology
Fall. 4 credits. Prerequisites: BIOG 1101–1102 or equivalent. Lec, lab/disc. A. Hajek and J. Nyrop. An in-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 2150 (2 credits). Students in ENTOM 3150 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Insect Biology Program of Study should take ENTOM 3150 rather than 2150. Students may not take both ENTOM 2150 and 3150 for credit.

ENTOM 3150 Spider Biology
Fall. 3 credits. Prerequisites: introductory biology or permission of instructor. Letter grades only. Lec. L. S. Rayor. In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 2150 (2 credits). Students in ENTOM 3150 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Insect Biology Program of Study should take ENTOM 3150 rather than 2150. Students may not take both ENTOM 2150 and 3150 for credit.

ENTOM 3250 Insect Behavior
Spring. 3 credits. Prerequisites: introductory biology and either ENTOM 2120 or BIONB 2210. Lec. Offered alternate years. L. S. Rayor. Insects are the most diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 3310 Insect Phylogeny and Evolution]
Fall. 3 credits. Prerequisite: ENTOM 2120. Corequisite: ENTOM 3311. Offered alternate years; next offered 2009–2010. L. C. Harrington. This course will provide a broad overview of insect diversity, morphology, phylogeny, evolution, and fossil history. Evolution of the insects will be discussed in light of real data sets based on morphology and/or DNA sequence data. Basic principles of phylogeny reconstruction using both morphological and DNA sequence data will be presented using published data sets. Analytical methods such as parsimony, maximum likelihood, and Bayesian methods will be discussed and compared. We will also cover how phylogenies are used to analyze evolutionary patterns, such as historical biogeography, co-evolution, and host-parasite relationships.
ENTOM 3311 Insect Phylogeny and Evolution Laboratory
Fall. 1 credit. Prerequisite: ENTO 2120 lab. Lab fee: $40. Corequisite: ENTO 3310. Next offered 2009–2010. B. N. Danforth. Introduction of the diversity, phylogeny, evolution, and fossil history of insects. Includes lab practice in insect morphology, insect diversity, and phylogenetic analysis. Entomology undergraduates wishing to count this course toward their Group A requirement are required to take the laboratory, as well as the lecture for a total of 4 credits.

ENTOM 3330 Maggots, Grubs, and Outworms: Larval Insect Biology
Spring. 3 credits. Prerequisites: ENTO 2120 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. J. K. Liebherr. The evolutionary history of the Holometabola has been greatly informed by attributes of their larvae. This course introduces students to the biology, anatomy, and natural history of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

ENTOM 3350 Naturalist Outreach Practicum
Fall. 3 credits. Prerequisite: introductory biology. S-U or letter grades. L. S. Rayor. Learn the skills to do effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry–based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively multimedia presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

ENTOM 3360 Naturalist Outreach in Biology
Fall. 1–2 credits, variable. Prerequisite: ENTO 3350. S-U or letter grades. L. S. Rayor. For students who have already taken Naturalist Outreach Practicum (ENTOM 3350) who wish to continue doing scientific outreach through the Naturalist Outreach Speakers Bureau. This course can be taken twice.

ENTOM 3340 Insect Conservation Biology
Spring. 3 credits. Prerequisite: entomology or conservation biology course or permission of instructor. S-U or letter grades. L. C. Harrington. In-depth look at the concepts and issues surrounding the conservation of insects and other invertebrates. Topics include sampling rare populations; insect conservation genetics; the role of phylogeny in determining conservation priorities; refuge design; saving individual species; the unique political, social, and ethical aspects of insect conservation and preservation of their ecological services (i.e., pollination, decomposition, pest suppression, and insectivore food sources).

ENTOM 3520 Medical and Veterinary Entomology
Fall. 3 credits. Prerequisites: BIOG 1101–1102 or permission of instructor. S-U or letter grades. Offered alternate years. L. C. Harrington. Diseases resulting from arthropod-borne pathogens (such as malaria, West Nile virus, dengue, and yellow fever) cause considerable human and animal suffering and death worldwide. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. The goal is to encourage an understanding of evolutionary and ecological issues associated with disease transmission. Undergraduate and graduate students from entomology as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.

ENTOM 3521 Lab in Medical and Veterinary Entomology
Fall. 1 credit. Prerequisite: ENTO 3520 at the same time or have taken another Medical/Veterinary Entomology course. S-U or letter grades. Offered alternate years. L. C. Harrington. The laboratory compliments the lecture course, ENTO 3520. Includes field trips, collection and identification and arthropods of medical/veterinary importance; and hands-on experience with modern laboratory research methods.

ENTOM 3690 Chemical Ecology (also BIOEE/BION 3690)
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalent, or permission of instructor. S-U or letter grades. L. C. Agrawal, G. Jander, A. Kessler, and J. Thaler. For description, see BIOEE 3690.

ENTOM 3940 Circadian Rhythms (also PLPA/BIOGD/BION 3940)
Fall. 2 credits. Corequisite lab (3941). Prerequisite: 2000-level biology. S-U or letter grades. K. Lee. For description, see PLPA 3940.

ENTOM 4101–4110 Malaria Interventions in Ghana
4101, fall; 4110, spring. 2 credits each semester. S-U grades only. R grade given at end of fall semester and final grade at end of spring semester. L. C. Harrington. This service learning class will educate students about malaria, Ghanaian culture, and general public health intervention strategies. During the fall semester, students will hear from a variety of speakers and will read and discuss key papers. Students in the class will travel to Ghana in the spring semester, create a malaria needs indicator to evaluate intervention strategies in partnership with the Ghana Health and Education Initiative. After returning from the service trip, students will evaluate their survey and intervention plan.

ENTOM 4110 Primary Health Care in Honduras
Spring. 2 credits. S-U grades only. L. C. Harrington. Honduras is a country rich in natural resources, beauty and culture, however, the people face significant public health challenges. This service-learning course will teach people about Honduran culture, politics and history as well as health care.

The course will prepare students for a summer internship opportunity at the La Guacamaya Clinic in Yoro.

ENTOM 4200 Grape Pest Management (also PLPA 4200)
ENTOM 4400 Phylogenetic Systematics (also BIOPL 4400)
ENTOM 4440 Integrated Pest Management (also CSS 4440)
Fall. 5 or 4 credits with lab. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. Lec. J. E. Losey and A. DiTommaso. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

ENTOM 4530 Principles and Practice of Historical Biogeography (also BIOPL 4530)
Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U or letter grades. Lec, lab. Offered alternate years; next offered 2009–2010. J. K. Liebherr and M. Luckow. Survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological, and phylogenetic analytical methods. Presents geological and paleontological aspects of biogeography and discusses large-scale biogeographic patterns. Labs focus on computer applications and discussion of controversial issues.

ENTOM 4550 Insect Ecology (also BIOEE 4550)
Fall. 4 credits. Recommended: ENTO 2120 or BIOEE 2610 or permission of instructor. S-U or letter grades. Offered alternate years. J. S. Thaler. Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Emphasizes the importance of interactions with the biotic and abiotic environment. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.

ENTOM 4630 Invertebrate Pathology
Fall. 3 credits. Prerequisites: one year introductory biology. S-U or letter grades. Lec, lab. Offered alternate years. A. E. Hajek. Lecture presents principles of pathology as applied to invertebrates. Topics include noninfectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases, and use of pathogens for control. Lab involves a diversity of pathogens and hosts, using techniques such as microinjection, electrophoresis, immunosassay, density gradient centrifugation, soil extraction, and computer simulation.

ENTOM 4700 Ecological Genetics (also BIOEE 4700)
Spring. 3 credits. Prerequisites: BIOEE 2780 or permission of instructor. S-U or letter grades. B. P. Lazzaro. Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measuring adaptation in natural populations, detecting the effects of
population demography, and determining the genetic basis of quantitative traits. Draws examples from primary research on animals and plants to illustrate experimental techniques and methods of data analysis on single-gene, multi-locus and genome-wide scales.

**ENTOM 4830 Insect Physiology**
Spring. 4 credits. Prerequisite: ENTOY 2120 or permission of instructor. Lec. lab. 600. Offered alternate years. C. Gilbert and A. Douglas.
Introduction to the unique ways in which insects have met their basic needs. Introduction to the often unique ways in which insects have met their basic needs. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.

**ENTOM 4900 Toxicology of Insecticides (also TOX 4900)**
Spring. 3 credits. Prerequisite: general chemistry course. S-U or letter grades. Lec. Offered alternate years; next offered 2009–2010. J. G. Scott.
History, metabolism, and mechanism of action of genetically modified, synthetic, and naturally occurring insecticides. Discusses insecticide resistance, resistance management, and new approaches to insect control with genetically modified organisms.

**ENTOM 4940 Special Topics in Entomology**
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester, and are authorized by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the course is not to be offered more than twice under this number.

**ENTOM 4970 Individual Study in Entomology**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

**ENTOM 4980 Undergraduate Teaching**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Undergraduate teaching assistant in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**ENTOM 4990 Undergraduate Research**
Fall and spring. Credit TBA. S-U or letter grades. Staff.
Prerequisite: permission of instructor. Students must register using an Independent Study Form (available in 140 Roberts Hall).

**ENTOM 6340 Special Topics in Systematic Entomology**
Fall or spring. On demand. 2–4 credits. Prerequisite: permission of instructor. Staff.
Lectures on the classification, evolution, and biometrics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

**ENTOM 6550 Nomenclature Seminar**
Spring. 1 credit. S-U or letter grades. Lec. Offered alternate years. J. K. Liebherr.
This seminar will expose you to the rules of zoological nomenclature supported by the International Trust for Zoological Nomenclature. These rules will be viewed in the context of necessary principles for any system that concerns names of biological entities. The class benefits from our outstanding Comstock Memorial Library, from which we will view examples of important entomological works to gain an understanding of how the International Code for Zoological Nomenclature has been implemented.

**ENTOM 6620 Insect Behavior Seminar**
Spring. 2 credits. Prerequisites: permission of instructor or ENTOY 2120 and BION 2210 or equivalents. S-U or letter grades. Offered alternate years; next offered 2009–2010. C. Gilbert.

**ENTOM 6700 Seminar on Biological Control**
Fall. 1 credit. Prerequisite: ENTOY 2770, 4400, or 4630 or permission of instructor. S-U or letter grades. Offered alternate years. A. E. Hajek.
Upper-level seminar series in biological control covering topics chosen by participating students and faculty. Weekly discussion groups with each participant presenting at least one oral report based on independent reading or research focusing on a central theme for the semester.

**ENTOM 6850 Seminar in Insect Physiology**
Spring. 1 credit. Prerequisite: permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. C. Gilbert.

**ENTOM 7070 Individual Study for Graduate Students**
Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

**ENTOM 7090 Teaching Entomology**
Credit TBA. Staff.
Teaching entomology or for extension training.

**ENTOM 7670 Current Topics in Entomology**
Fall and spring. 1 or 2 credits. Requirement for first- and second-year entomology graduate students. S-U grades only. A. Hajek and B. N. Danforth.
This course provides first- and second-year graduate students with an overview of the field of Entomology. The course format changes from year to year but generally involves attendance at the weekly Entomology seminar on Monday as well as a one-hour meeting shortly after the seminar either with faculty from the department or with visiting speakers. Additional readings may be required. Graduate students in Entomology are required to attend the class for a total of two semesters (ideally in the first year of their graduate program). The 2-credit option is for students attending the Jugatae seminar and a one-hour meeting following the seminar. The 1-credit option is for attendance at the seminar only.

**ENTOM 8900 Master’s-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOY 9900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff.
Research at the master’s level.

**ENTOM 9900 Doctoral-Level Thesis Research**
Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTOY 9900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S-U or letter grades. Staff.
Research at the doctoral level.

**Jugatae Seminar**
Fall and spring.
Seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to undergraduate and graduate students. All interested undergraduate and graduate students are encouraged to attend.

**FOOD SCIENCE**

**FDSC 1101 Science and Technology of Foods**
Fall 1 credit. S-U grades only. J. H. Hotchkiss and staff.
Explores the application of science and technology to foods. Lectures elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice is given.

**FDSC 1102 Leadership and Career Skills in Food Science**
Spring 1 credit. Prerequisite: limited to freshman Food Science majors only. S-U grades only. R. Gravani and J. Hotchkiss.
This course will provide students with opportunities to learn more about their personality type and apply this information to leadership and team building skills, diversity and ethics issues, as well as career skills in the field of food science. Topics and concepts addressed in the course will be reinforced through presentations, interactive exercises and activities, case studies and networking with food science alumni. Students will be required to participate in a project utilizing the Food Science Alumni Career Link network.
examines Halal laws and explores the interactions between the two communities. Reviews current food-related issues in both communities, including recent court decisions. May also consider some aspects of ethnic foods.

FDSC 2900 Meat Science (also ANSC 2900)
Fall. 2 or 3 credits; lec only—2 credits; lec plus lab—3 credits; lab cannot be taken without lec. Letter grades only. D. E. Shaw. Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also studies properties of fresh and processed meat, microbiology, preservations, nutritive value, inspection, and sanitation. Lab exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants may be taken.

FDSC 3210 Food Engineering Principles
Fall. 3 credits. Prerequisites: FDSC 2000 and introductory physics. Letter grades only. S. S. H. Rizvi. Introduces the engineering principles underlying food processes and equipment. Topics include thermodynamics, mass and energy balance, fluid mechanics, heat and mass transport, refrigeration and psychrometrics.

FDSC 3400 Microbiology and Technology of Winemaking
Fall. 3 credits. Limited to 30 students. Prerequisite: introductory microbiology or permission of instructor. Letter grades only. R. Mira de Orduña. This course provides a systematic overview of the microbiological technological and organizational fundamentals of winemaking considering differences among winemaking regions.

FDSC 3410 Microbiology and Technology of Winemaking
Fall. 1 credit. Limited to 20 students; preference given to students in enology and viticulture programs in Food Science and Plant Science (Horticulture). Prerequisite: permission of instructor. Letter grades only. R. Mira de Orduña. Laboratory practice in winemaking microbiology and technology. Students will produce grape wines from several grape varieties and according to different vinification protocols. The laboratory includes introductory lectures, grape handling and vinification practices as well as chemical and sensory grape must and wine analysis.

FDSC 3510 Milk Quality
Fall. 1 credit. Prerequisite: ANSC 2500 or equivalent or permission of instructor. Letter grades only. M. Wiedmann. Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FDSC 3940 Applied and Food Microbiology Laboratory (BIOMI 3940)
Fall. 3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt. Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Reviews issues related to the biochemistry, genetics, and physiology of microorganisms important in these processes. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FDSC 3950 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 2910 or equivalent. Letter grades only. A. Orta–Ramirez. Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products. Prerequisites: Microbiology of foods. Provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the hazards in foods, good manufacturing practices, prerequisite programs, Hazard Analysis Critical Control Point (HACCP) concept, and the application of current technologies in reducing the risk of foodborne illnesses. Uses case studies and class projects to demonstrate and apply the key principles discussed.

FDSC 4000 Current Topics in Food Science and Technology
Spring. 1 credit. S-U grades only. J. H. Hotchkiss. Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FDSC 4010 Concepts of Product Development
Spring. 2 credits. Prerequisite: FDSC 2000 or equivalent. Letter grades only. Offered alternate years. R. B. Gravani. Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FDSC 4020 Agriculture in Developing Nations I (also IARD 4020)
Fall. 2 credits. T. L. Tuck and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec). Acquaints students with the major issues and problems in international agriculture and rural development and demonstrates how problems in development are being addressed in the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a

FDSC 1104 Wines and Vines (also HORT 1040)
Spring. 2 or 3 credits. Lec and lab required for undergraduate enology and viticulture students. Lec. (2 cr.) limited to 60 students; lab (1 cr.) limited to 30 students. Priority given to enology and viticulture students. Letter grades only. K. Arnink and I. Merwin. Introduction to the study of grape cultivation, fermentation biology, wine composition, and sensory perception. Topics include winemaking history, viticultural regions, current vineyard and winery practices, wine chemistry and microbiology, and sensory evaluation of wine flavors. Wines are used to illustrate the components and processes that determine wine sensory properties.

FDSC 1500 Food Choices and Issues
Spring. 2 credits. S-U or letter grades. R. B. Gravani and D. D. Miller. The goal of this course is to help students develop improved strategies for making healthier food choices. Concepts and principles that form the bases for current dietary guidelines and food safety regulations are discussed. Topics include the U.S. food system, relationships between diet and health, food processing, food safety, and selected contemporary issues relating to nutrition, food quality, and safety. Students conduct nutritional analyses of their diets using a computer software program.

FDSC 2000 Introduction to Physicochemical and Biological Aspects of Food (also NS 3450)
Fall. 3 credits. Prerequisite: college-level courses in chemistry and biology. Letter grades only. J. H. Hotchkiss and R. S. Parker. Comprehensive introduction to the physical, chemical, and nutritional properties of foods and to the principles and practice of food science and technology. Topics include chemistry and functionality of commodities and ingredients, chemical and physical phenomena that affect food quality, techniques of processing and preservation, microbiology and fermentation, food safety, and regulation.

FDSC 2100 Food Analysis
Spring. 3 credits. Limited to 24 students. Prerequisite: CHEM 2080 or equivalent. Lec, lab. R. H. Liu and A. Orta–Ramirez. Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Discusses gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry.

FDSC 2500 Kosher and Halal Food Regulations (D)
Spring. 2 credits. Prerequisite: at least sophomore standing. S-U or letter grades. J. M. Regenstein. Comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. Examines the kosher food laws, their origin, and their application in modern food processing. Describes the nature of the kosher supervision industry in America. Also

FDSC 3400 Food Nutrition and Science and Technology
Spring. 3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt. Provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the hazards in foods, good manufacturing practices, prerequisite programs, Hazard Analysis Critical Control Point (HACCP) concept, and the application of current technologies in reducing the risk of foodborne illnesses. Uses case studies and class projects to demonstrate and apply the key principles discussed.

FDSC 4010 Concepts of Product Development
Spring. 2 credits. Prerequisite: FDSC 2000 or equivalent. Letter grades only. Offered alternate years. J. H. Hotchkiss. Discussion of the sequence of events in developing and marketing new food products. Topics include food formulation, packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FDSC 4020 Agriculture in Developing Nations I (also IARD 4020)
Fall. 2 credits. T. L. Tuck and R. W. Blake (Mexico sec); K. V. Raman and W. R. Coffman (India sec). Acquaints students with the major issues and problems in international agriculture and rural development and demonstrates how problems in development are being addressed in the Gulf Region of Mexico and India. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Latin America and Asia through cases in southern Mexico and India. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a
preparatory course for participants selected to participate in the spring semester course Agriculture in the Developing Nations II (IARD 6020), which includes concurrent field trips to the Gulf Region of Mexico and India during the January intersession.

FDSC 4050 Managing Food Waste Without Trashing the Environment
Spring. 3 credits. Prerequisite: FDSC 2000 or equivalent. Letter grades only. Lab, lecture. Offered alternate years. J. M. Regenstein.
Examines the various waste streams generated by food plants, institutional feeders, supermarkets, and restaurants. What is the role of waste minimization? What technologies can control or remediate the problems? What are the disposal, composting, and recycling options? What are the legal requirements locally, state-wide, and nationally that affect various food waste processes? This course serves as a general introduction to available waste management technologies and to policy issues faced by a wide range of businesses and production plants.

FDSC 4060 Dairy and Food Fermentations
Fall. 2 credits. Prerequisite: BIOM 2900. Letter grades only. M. Wiedmann.
Lectures cover the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FDSC 4100 Sensory Evaluation of Food
Fall. 2–3 credits, 1 lab credit. Lect and lab required for undergraduate food science majors. Prerequisite: statistics course. Letter grades only. H. T. Lawless.
Topics include the sensory evaluation methods used to determine flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

FDSC 4150 Principles of Food Packaging
Spring. 3 credits. Letter grades only.
Offered alternate years. J. H. Hotchkiss. Discusses the chemical and physical properties and separation of the basic materials used to construct packaging. Presents the influence of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FDSC 4170 Food Chemistry I
Spring. 3 credits. Prerequisites: CHEM 1570 or BIOM 3300 or 3310. S-U or letter grades. J. W. Brady.
Covers the chemistry of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods.

FDSC 4180 Food Chemistry II
Fall. 3 credits. Prerequisite: FDSC 4170. S-U or letter grades. C. Y. Lee, C. I. Moraru, and J. M. Regenstein. Discusses the chemical composition of several food groups (meats, fruits, vegetables, and dairy) and the chemical reactions and changes that take place during processing and storage, as well their effects on the quality and nutritional characteristics of these foods.

FDSC 4190 Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: BIOM 3500 or 3510 or CHEM 1570 or equivalent. Corequisite: FDSC 4170. D. D. Miller.
Deals with the chemical properties of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

FDSC 4230 Physical Principles of Food Preservation and Manufacturing
Fall. 3 credits. Prerequisite: FDSC 3210. Letter grades only. Lec, disc. S. J. Mulvaney.
Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FDSC 4250 Unit Operations and Dairy Foods Processing
Spring. 3 credits. Prerequisites: FDSC 3210, 3940, 4170, 4180, and 4230 or permission of instructor. Letter grades only. Lec, lab. C. I. Moraru.
Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpins the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience in operating pilot plant equipment and the manufacture of high quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FDSC 4300 Understanding Wine and Beer
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor; age 21 by first day of class (Jan. 21, 2009). Letter grades only. T. E. Acree and K. J. Siebert.
Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples of wines and beers to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.

FDSC 4400 Wine and Grape Flavor Development
Spring. 3 credits. Limited to 30 students. Recommended: prior course in enology and/or viticulture. Letter grades only. G. Sacks.
This course will use a (bio)-chemical perspective to investigate viticulture and enological factors that impact flavor and other quality attributes (mouthfeel, color, stability) of wine and wine grapes. Course is limited to 30 students, with preference given to students in the enology or viticulture program.

FDSC 4500 Fundamentals of Food Law
Spring. 2 credits. Letter grades only. Offered alternate years; next offered 2009–2010. J. M. Regenstein.

FDSC 4560 Advanced Concepts in Sensory Evaluation
Spring. 2 credits. Prerequisite: FDSC 4100. S-U or letter grades. Offered alternate years. H. T. Lawless.
Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. Students conduct a research project or term paper on a current issue in sensory evaluation.

FDSC 4666 U.S. Food Industry and Food Science Research
Summer. 1 credit. Prerequisite: enrollment in Food Science summer scholars program or MPS in Food Science and Technology. S-U grades only. M. Wiedmann.
This course will introduce students to the U.S. food industry and food science research. Students will participate in weekly meetings to cover topics such as food science research methods, ethics in food science and research; field trips to food processing plants and R&D facilities, and panel discussions on food science careers in the United States. Students will be required to keep journals with weekly entries that reflect critical thinking on the challenges and opportunities in the discipline of food science.
FDSC 4940 Special Topics in Food Science
Fall or spring. 4 credits max. S-U or letter grades. Staff.
This course is intended primarily for MPS students in the Field of Food Science and Technology enrolled in the dual Cornell-TNAU MPS degree program. An intensive overview of the principles of food polymer science and rheology and analysis of current and emerging processes for food manufacturing.

FDSC 4990 Research for Lausanne Exchange Students
Fall/spring. 10 credits max. Prerequisite: permission of instructor. S-U or letter grades. Staff. Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FDSC 5000 Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students majoring in food science and technology. Staff. Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required research seminar research.

FDSC 5160 Flavors—Analysis and Applications
Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. Surveys taste, aroma, volatile, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FDSC 5220 Nutraceuticals and Functional Foods
Spring, Fall, or spring. 4 credits max. S-U or letter grades. Staff. Consider the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasizes the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FDSC 5300 Master of Professional Studies (Agriculture) Project
Fall, spring, summer. 1–6 credits. Requirement for MPS students in Graduate Field of Food Science and Technology. S-U or letter grades. Staff. Problem solving project involving analysis and/or active research to the Field of Food Science and Technology.

FDSC 5400 Chemistry of Dairy Products
Spring, fall, or spring. 4 credits max. S-U grades only. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy biochemistry course equivalent to BIOBM 3300 or equivalent. Offered alternate years; next offered 2009–2010. B. A. Lewis and J. W. Brady. Surveys taste, aroma, volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FDSC 5421 Food Lipids
Spring, fall, or spring. 2 credits. Prerequisite: basic biochemistry course. Letter grades only. Offered alternate years; next offered 2009–2010. R. H. Liu. Describes the physical, chemical, biochemical, and functional properties of lipids. Emphasizes lipid oxidation, emissions, and functional foods associated with lipids.

FDSC 5422 Nutraceuticals and Functional Foods
Spring, fall, or spring. 2 credits. Prerequisite: biochemistry course equivalent to BIOBM 3300 and one year college biology or permission of instructor. Letter grades only. Offered alternate years. R. H. Liu. Covers nutraceuticals and functional foods, natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Also discusses biomarkers, safety and efficacy testing, and regulations for nutraceuticals and functional foods.

FDSC 5500 Advanced Food Microbiology
Spring, fall, or spring. 2 credits. Prerequisite: BIOM 2900, FDSC 3940. Letter grades only. Offered alternate years; next offered 2009–2010. M. Wiedmann. Explores advanced topics in food microbiology. Places major emphasis on critical evaluation of current literature and on microbiological concepts that affect food microbiology. Specific areas covered include microbial ecology, foods, rapid detection and typing methods for foodborne pathogens, microbial modeling, pathogenesis of foodborne diseases, and food applications of genetic engineering. Some guest lectures may be arranged to provide an introduction to other advanced food microbiology topics (e.g., risk assessment).

FDSC 5600 Chemometric Methods in Food Science
Fall. 2 credits. Prerequisites: basic statistics and chemistry course or permission of instructor. S-U or letter grades. Offered alternate years. K. J. Siebert. Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

FDSC 5950 Food Science Internship
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. Students must submit a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. S-U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 496 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 5970 Individual Study in Food Science
Fall or spring. 5 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades. Staff. May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FDSC 6000 Seminar in Food Science
Fall and spring. 1 credit. S-U grades only. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students majoring in food science and technology. Staff. Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required research seminar research.

FDSC 6020 Agriculture in Developing Nations II (also NS 6200)
Spring, fall, or spring. 2 credits. Limited to 16 students. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy biochemistry course or permission of instructor. Letter grades only. Offered alternate years. D. M. Barbano.

FDSC 6040 Chemistry of Dairy Products
Fall. 2 credits. Limited to 16 students. Prerequisites: introductory organic and biochemistry, food chemistry, and dairy biochemistry course or permission of instructor. Letter grades only. Offered alternate years. D. M. Barbano.

FDSC 6060 Agriculture in Developing Nations III (also NS 6200)
Spring, field trips to Gulf Region of Mexico (sec 1) and India (sec 2) during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field study trip (including airfare, local transportation, and lodging; some merit and need based financial aid may be available): approx. $2,500. R. W. Blake, T. W. Tucker, and C. F. Nicholson (Mexico); K. V. Ramasubbu, S. Ramakrishnan (India). For description, see IARD 6020.

FDSC 6080 Chemometric Methods in Food Science
Fall. 2 credits. Prerequisite: basic statistics and chemistry course or permission of instructor. S-U or letter grades. Staff. Uses multivariate statistical methods (chemometrics) to provide the analytical techniques needed to solve problems in the food sciences. The course covers model design, data acquisition and cleansing, exploratory data analysis, regression, principal components analysis, discriminant analysis, clustering, and other multivariate methods. A computer laboratory component allows the student to apply the methods on a variety of problems in food science and technology. The course is particularly applicable to many other problems in biology and chemistry.

FDSC 6160 Flavors—Analysis and Applications
Spring. 2 credits. S-U or letter grades. Offered alternate years; next offered 2009–2010. H. T. Lawless and T. E. Acree. Advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. Surveys taste, aroma, volatile, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems. Also discusses recent advances in the physiology of taste and smell.

FDSC 6200 Food Carbohydrates (also NS 6200)
Spring. 2 credits. Prerequisite: qualified seniors and graduate students, BIOBM 3300 or equivalent. Offered alternate years; next offered 2009–2010. B. A. Lewis and J. W. Brady.

FDSC 6220 Food Carbohydrates (also NS 6200)
Spring. 2 credits. Prerequisite: qualified seniors and graduate students, BIOBM 3300 or equivalent. Offered alternate years; next offered 2009–2010. B. A. Lewis and J. W. Brady.

FDSC 6300 Microbiology

FDSC 6320 Nutraceuticals and Functional Foods
Spring. 2 credits. Prerequisite: biochemistry course equivalent to BIOBM 3300 and one year college biology or permission of instructor. Letter grades only. Offered alternate years. R. H. Liu. Covers nutraceuticals and functional foods, natural bioactive compounds, antioxidants, and dietary supplements, botanicals and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy of nutraceuticals and functional foods. Also discusses biomarkers, safety and efficacy testing, and regulations for nutraceuticals and functional foods.
On-the-job learning experience under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

FDSC 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

HORTICULTURE

HORT 1101 Horticultural Science and Systems
Fall. 4 credits. I. A. Merwin. Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 1102 Hands-On Horticulture
Spring. 2 credits. Not for seniors or plant science majors. Nominal materials fee.

FDSC 6940 Food Polymer Science: Principles and Applications
Spring. 2 credits. Prerequisites: introductory chemistry and physics. Offered alternate years; next offered 2009–2010. S. J. Mulvaney. Integrates polymer science, chemistry, and materials science principles as the basis for characterization of the physical properties of biopolymer materials of interest to the food industry. Emphasizes unique aspects of food materials, e.g., plasticization by water, physical gelation, transient networks, and effects of thermal treatments on material properties. Problems and case studies based on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

FDSC 6650 Food and Bioprocessing Systems
Spring. 2 credits. Prerequisite: FDSC 4230. Letter grades only. Lect. disc. Offered alternate years. S. H. Rizvi, S. J. Mulvaney, and C. I. Morano. Fundamental and quantitative analyses of current and emerging techniques used in the processing of foods and related biological materials. Topics include thermal processes, extrusion, supercritical fluids processing, membrane separation, high-pressure processing, pulsed electric field processing, ultraviolet and pulsed light treatment.

FDSC 6940 Special Topics in Food Science
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FDSC 6950 Current Readings in Food Science
Fall and spring. 1 credit; may be taken multiple times. Graduate students in food science strongly encouraged to enroll. Prerequisite: 3000- to 4000-level course relevant to chosen topic. S-U grades only. Staff. Seminar series on current topics chosen by participating faculty members and students on a rotating basis. Format consists of weekly discussion groups with each participant presenting at least one oral report based on independent reading. Multiple sections focusing on different topics may be taught in any given semester. Topics include food microbiology and food safety, food chemistry, packaging, food engineering. Interested students should contact the designated instructor(s) for each semester.

FDSC 6960 Graduate Internship in Food Science
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 696 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 6980 Graduate Teaching Experience
Fall and spring. 1 to 3 credits. S-U grades only. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

FDSC 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA; max. 12. Prerequisite: doctoral students who have passed "A" exam; permission of Special Committee chair. S-U grades only. Graduate faculty.

HORT 1104 Introduction to Wines and Vines (also FDSC 1104)
Spring. 2 credits. Letter grades only. K. J. Arnink and I. A. Merwin. For description, see FDSC 1104.

HORT 1105 Lab/Field Practice in Wines and Vines (also FDSC 1105)
Spring. 1 credit. K. J. Arnink and I. A. Merwin. For description, see FDSC 1105.

HORT 1160 Nature Writing
Spring. 3 credits. Letter grades only. D. W. Wolfe. Today more than ever we need individuals who not only enjoy or study nature, but also can write effectively about it so that others will know what they know, and feel what they feel. We will begin by reading and writing about the technique of others, from Thoreau and Whitman, to Edward Abbey and Wendell Berry, to emerging new voices in this genre. We will critique essay structure, literary creativity, and evidence of careful research and observation. Nature writing is more than a desk job, and in that spirit we will have at least two shared field trips. Students will develop their unique “voice” for expressing their views, expertise, and passion for nature by research and revision of essay topics of personal interest.

HORT 2010 The Art of Horticulture
Fall. 2–3 credits. Fee for materials: $35. M. Eames-Sheavly. Experimental course survey, two distinct units: plants used in/as art; plants as a subject of art. Unit 1: sculpture methods, such as turf-works, tree sculpture; Unit 2: drawing, botanical illustration, watercolor/pastel painting. Required: attendance; critical reflection in journals; original, creative final project. Optional third credit: pursue proficiency in drawing.

HORT 2200 Practicing Sustainable Landscapes
Fall. 2–3 credits; 1 additional credit for student projects permission by instructor. Offered odd-numbered years; next offered 2009–2010. L. E. Drinkwater. Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production. Covers concepts from biological and environmental sciences and includes hands-on activities.

HORT 2350 Plants and Human Well-Being (CA) (HA)

HORT 2400 Exploring the Small Farm Dream
Spring. 1 credit. Prerequisite: permission of instructors. S-U grades only. J. Green and A. Rangarajan. Explore opportunities and challenges involved in starting up and managing a small farm. Weekly presentations and discussion with innovative farmers and others. Topics include diversified farming, high-value horticulture, grass-based farming, agroforestry, dairy and livestock opportunities, community-supported...
agriculture, farm business planning, access to land, marketing strategies, juggling jobs, family-farming, and more.

**HORT 2430 Taxonomy of Cultivated Plants (also BIOL 2430)**
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOL 2480. Offered every even-numbered years. M. A. Luckow.
For description, see BIOL 2430.

**HORT 3000 Herbaceous Plant Materials**
Fall. 3 credits. Cost of field trip: $75. W. B. Miller.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

**HORT 3100 Production and Marketing of Greenhouse Crops**
Spring, 4 credits. Prerequisites: HORT 101 and any other horticulture course; junior standing preferred. Letter grades only. W. B. Miller.
Course covers basics of establishing a greenhouse operation, growing crops in optimized environments and serving niche or mass market. Discusses technology basics including structures and equipment, systems for heating and cooling, lighting, irrigating and fertilizing, materials handling; environmental stewardship and integrated pest management; and production management. Also covers world centers of greenhouse crop production; culture of cut, pot, bedding, vegetable, and fruit crops in greenhouses, emphasizing successful harvesting through environmental, physical, and chemical management of growth and development. Each student grows one or more crops.

**HORT 3170 Seed Science and Technology (also CSS 3170)**
Fall. 3 credits. Prerequisite: BIOL 2410 or equivalent course approved by instructor. Letter grades only. Offered odd-numbered years. A. G. Taylor, Geneva Experiment Station.
Study of the principles and practices involved in seed production, conditioning, storage, quality management, seed enhancements, and stand establishment. Hands-on laboratory experience.

**HORT 3300 Golf and Sports Turf Management I**
Spring. 3 credits. Prerequisite: CSS 2600 or permission of instructor. Letter grades only. F. S. Rossi and A. M. Petrovic.
Proposal, site, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses. Case study projects are a major aspect of the course.

**HORT 3400 Golf and Sports Turf Management Techniques**
Fall. 2 credits. Prerequisite: HORT 3300. Letter grades only. F. S. Rossi.
A course designed to provide hands-on learning of essential turfgrass management skills including mower set-up, sprayer calibration, calibration mathematics, budget development, etc.

**HORT 3800 Organic Food and Agriculture (also CSS/AGSCI 3800)**
Fall. 3–4 credits. Prerequisite: CSS 1900, CSS 2600, HORT 1101, or permission of instructor. Staff.
For description, see CSS 3800.

**HORT 3910 Woody Plant Identification and Use I**
Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.
Module of HORT/LA 4910 covering the identification of approximately 160 woody trees, shrubs, and vines in leaf and their use in the landscape. Students desiring a more comprehensive course that covers site assessment, soil modification, design, plant specifications and landscape establishment principles and techniques should take HORT/LA 4910 or the 4910–4920 sequence.

**HORT 3920 Woody Plant Identification and Use II**
Spring. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only. N. L. Bassuk.
Module of HORT/LA 4920 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 3910 (fall module) need not be taken before taking HORT 3920 (spring module). Students also assist in the establishment of a new landscape on campus.

**HORT 4000 Principles of Plant Propagation**
Spring. 3 credits. Prerequisites: BIOL 2420 and 2421 or another plant physiology course or permission of instructor. K. W. Mudge.
Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Examples include both temperate and tropical horticultural, agronomic, and forestry crops.

**HORT 4030 Plant Cell and Tissue Culture (also PLBR 4030)**
Fall. 3 credits. Letter grades only. E. D. Earle.
For description, see PLBR 4010.

**HORT 4040 Plant Tissue Culture Laboratory (also PLBR 4020)**
Fall. 1 credit. E. D. Earle.
For description, see PLBR 4020.

**HORT 4200 Nursery-Crop Production**
Fall. 3 credits. Prerequisite: HORT 4000 or permission of instructor. Cost of field trips: $75. Offered odd-numbered years; next offered 2009–2010. K. W. Mudge.
Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

**HORT 4250 Postharvest Biology of Horticultural Crops**
Fall. 3 credits. Offered odd-numbered years; next offered 2009–2010. S. Gan.
Study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts.

**HORT 4260 Practicum in Forest Farming as an Agroforestry System (also NTRES/CSS 4260)**
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, P. Hobbs, and L. E. Buck.
Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel’s Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include: site evaluation and planning, temperate-nut harvest and variety evaluation, mushroom culture, small-fruited and fruit-tree culture, and medicinal-herb culture. Outdoor activities are integrated with selected readings via an online discussion board.

**HORT 4400 Restoration Ecology**
Fall. 5 credits. Prerequisite: upper division or graduate standing and permission of instructor. Letter grades only. Lec, lab, plus several weekends. T. H. Whittow.
Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, readings, and discussion, site visits to active restoration sites, and a real world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

**HORT 4420 Berry Crops: Culture and Management**
Fall. 5 credits. Offered even-numbered years. M. P. Pritts.
Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, and blueberries, and other minor small fruit crops and of cultural practices that influence productivity, fruit quality, and pest damage. Considers marketing and economics and discusses alternate production practices for both commercial and home gardeners. Frequent field trips enhance classroom activities.

**HORT 4430 Viticulture and Vineyard Management—I**
Fall. 3 credits. Prerequisites: BIOG 1101/1103, 1102/1104, BIOL 2410, CSS 2600, BIOL 2420/2421 or equivalents. Letter grades only. J. E. Vanden Heuvel, P. Cousins.
First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring production and quality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

**HORT 4440 Viticulture and Vineyard Management—II**
Spring. 3 credits. Pre- or corequisites: HORT 4430 and PLBR 2250 or equivalent. Letter grades only. J. E. Vanden Heuvel.
Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine, and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.
HORT 4450 Ecological Orchard Management
Spring. 3 credits. Prerequisite: introductory biology. Recommended: previous horticulture/plant science courses. S-U or letter grades. Offered even-numbered years; next offered 2009–2010. T. A. Merwin.

The ecology and technology of deciduous tree-fruit production. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 4490 Green Signals and Triggers—The Plant Hormones (also BIOPL 4490)
Spring. 2 credits. Prerequisites: introductory biology and BIOPL 2420 or 3420 or permission of instructor. S-U or letter grades. Offered even-numbered years; next offered 2009–2010. P. J. Davies.

For description, see BIOPL 4490.

HORT 4500 Principles of Vegetable Production
Fall. 3 credits. Prerequisite: HORT 1101, CSS 2600, or equivalent. Letter grades only. Two Sat. field trips; students responsible for cost of their meals. Offered even-numbered years. R. R. Bellinder and S. Reinert.

Commercial vegetable production from variety selection to postharvest. Topics include: crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production. Term project required. Field trips to large scale conventional, small, diversified, and organic farms are planned in early semester.

HORT 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also CSS 4551–4555)
Spring. 5 modules, 1 credit each. Prerequisite: CSS 5600 and BIOPL 2420. Offered even-numbered years; next offered 2009–2010. Coordinator: H. C. Wien.

Students learn the principles of mineral nutrition function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 4550 Principles of Vegetable Production (also CSS 4551)
Spring, weeks 10–12. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years. A. M. Petrovic.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4555 Fruit Crop Nutrition (also CSS 4555)
Spring, weeks 13–14. 1 credit. Prerequisite: CSS 2600 and BIOPL 2420, or equivalent. Offered even-numbered years. L. Cheng.

Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4600 Cropping Systems Ecology
Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even-numbered years; next offered 2009–2010. D. W. Wolfe.

Course utilizes the basic principles of plant population biology, environmental physiology, and ecology to evaluate the management, productivity, and environmental impact of various cropping systems.

HORT 4620 Physiology of Vegetables and Flowers
Spring. 4 credits. Prerequisite: BIOPL 2420 or equivalent. Offered odd-numbered years. H. C. Wien.

Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous plants. Emphasizes processes of flower induction, fruit and seed set, and the balance of vegetative and reproductive growth, especially in perennials. Practical hands-on greenhouse experiments and small group discussions illustrate the lecture material.

HORT 4660 Soil Ecology (also CSS 4660)
Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies.

For description, see CSS 4660.

HORT 4730 Ecology of Agricultural Systems (also BIOEE 4730)
Fall. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. During first six weeks, R meetings may run later due to field trips. Offered even-numbered years. L. E. Drinkwater and A. G. Power.

For description, see BIOEE 4730.

HORT 4800 Plantations Lecture Series
Fall, 12 weeks, 6 lec. 1 credit. S-U grades only. Meets alternate W evenings. D. A. Rakow.

Covers a range of subjects related to the plant and natural sciences, and human-cultural themes. On non-lecture Wednesdays, the class meets to discuss content from the previous week. Students are required to write a reaction paper for each lecture.

HORT 4850 Plant Garden Management
Spring. 3 credits. Prerequisites: HORT 3000. HORT 4910 or 4920. Cost of two-and-a-half-day field trip to botanical gardens and arboreta: approx. $85. Offered even-numbered years; next offered 2009–2010. D. A. Rakow.

Explores the history of public gardens, types of contemporary public gardens, and the operation of public gardens including botanical gardens and arboreta.

HORT 4900 Golf and Sports Turf Management II
Spring. 2 credits. Prerequisite: HORT 3500. F. S. Rossi.

Designed for students familiar with turfgrass science and a strong interest in the design, construction, and maintenance of golf courses and sports fields. This course focuses on current and emerging issues concerning the scientific, economic and environmental aspects of golf courses and sports fields.

HORT 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4910)
Fall. 4 credits. Limited to 48 students.

Prerequisite: horticulture or landscape architecture majors or permission of instructor. Preregistration required. N. L. Bassuk and P. J. Trowbridge.

Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students can critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices. A project where students implement what they have learned by creating a new landscape serves to integrate theory, principles, and practices. No prior design experience necessary.

HORT 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also LA 4920)
Spring. 4 credits. Limited to 48 students.

Prerequisite: passing grade in HORT/LA 4910; horticulture or landscape architecture majors or permission of instructors. Preregistration required. N. L. Bassuk and P. J. Trowbridge.

Second half of course focuses on the winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage, and surface detailing, and planting techniques. Students critically assess potential planting sites, and select appropriate trees, shrubs, vines, and ground covers for a given site. Design for specific sites followed by written specifications and graphic details are produced to implement these proposals. Students implement, in a hands-on manner, site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

HORT 4940 Special Topics in Horticulture
Fall or spring. 4 credits max. S-U or letter grades. Staff.

The department teaches “trial” courses under this number. Offerings may vary by semester, and will be advertised before the semester begins. Courses offered under the number will be approved by the department.
horticulture, and the same course is not offered more than twice under this number.

**HORT 4950 Undergraduate Seminar—Current Topics in Horticulture**
Fall and spring. 1 credit; may be taken four times for 1 credit per semester. Graduate students should enroll in HORT 6000. S-U grades only. L. Cheng. Undergraduate participation in weekly departmental seminar series.

**HORT 4960 Internship in Horticulture**
Fall or spring. Variable credit. Prerequisite: permission of student's advisor in advance of participation in internship programs. S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall) signed by faculty member who will supervise study and assign grade. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm. Staff.

**HORT 4970 Individual Study in Horticulture**
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Individual study in horticultural sciences under the direction of one or more faculty members. Staff.

**HORT 4980 Undergraduate Teaching Experience**
Fall or spring. Variable credit. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

**HORT 4990 Undergraduate Research**
Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in horticultural sciences.

**HORT 5000 Master of Professional Studies (Agriculture) Project**
Fall or spring. 1–6 credits; 6 credits max. toward M.P.S. (agriculture) degree. Requirement for M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S-U or letter grades. Staff. Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

**HORT 6000 Seminar in Horticulture**
Fall and spring. 1 credit. Requirement for graduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 4950. S-U grades only. L. Cheng.

Weekly seminars consisting of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry.

**HORT 6100 Extension Volunteer Development in Garden-based Learning**
Fall. 2 credits. Prerequisite: course work in horticulture and related fields. Undergraduate plant sciences students by permission of instructor. L. J. Bushway. An extension/outreach training course for graduate entomology, and horticulture students. Learn the skills to effectively develop the knowledge of adult volunteers in garden-based learning programs. With guidance, develop and pilot a volunteer training session on an introductory horticultural science topic appropriate to your interest and experience.

**HORT 6110 Field Experience in Extension Volunteer Development in Garden-based Learning**
Spring. 1 credit. Prerequisite: HORT 6100. L. J. Bushway. Lead introductory horticulture science training sessions for Master Gardener Volunteers and/or other volunteer groups associated with garden-based learning programming. Performance reflection discussions with peers and instructor will follow each volunteer training session to facilitate further skill development. Travel to multiple Cornell Cooperative Extension county offices throughout the state is required.

**HORT 6150 Quantitative Methods in Horticultural Research**
Spring, weeks 1–7. 2 credits. Prerequisite: BTRY 6010, 6020, or permission of instructor. S-U grades only. Offered even-numbered years. D. W. Wolfe. Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature. Explores other quantitative methods. Topics include approaches to controlling and analysis of variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

**HORT 6170 Advanced Analytical Methods for Plant Systems**
Spring. 2 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Offered odd-numbered years. L. Cheng. Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills. Discusses suitability of various procedures for measuring important plant and soil components. Analytical techniques are chosen from: ICP spectroscopy, elemental analysis by combustion or flow analysis, gas chromatography, HPLC, electrophoresis, electrochemical assays, enzyme assays, bioassays, and mass spectrometry.

**HORT 6180 Breeding for Pest Resistance (also PLBR 6180)**
Fall. 2 credits. Prerequisites: BIOGD 2810 and PLBR 4030 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Offered even-numbered years. P. D. Griffiths. For description, see PLBR 6180.

**HORT 6251 Advanced Postharvest Biology: Postharvest Physiology**
Fall. 1 credit (12 lec). Offered even-numbered years. S. Gan. Emphasizes the physiological and biochemical aspects of growth and maturation, ripening and senescence of harvested horticulture plant parts.

**HORT 6252 Advanced Postharvest Biology: Plant Senescence (also BIOPL 4836)**
1 credit. (12 lec). S. Gan. Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research.

**HORT 6253 Advanced Postharvest Biology: Postharvest Technology**
1 credit. (12 lec). D. C. Roberts. Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.

**HORT 6350 Tools for Thought**
Fall. 1 credit. Prerequisite: graduate standing. S-U grades only. T. E. Whitlow. Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

**HORT 6400 New Directions in Public Horticulture**
Spring. 1 credit. Offered odd-numbered years. D. A. Rakow and S. M. Skelly. Designed to introduce students to a range of current issues facing public gardens through a set of required readings. Each class period is devoted to a discussion of the topic between the instructors and students based on both the readings and personal experiences.

**HORT 6450 Advanced Viticultural Topics**
Spring. 2 credits. Prerequisite: HORT 4430 or equivalent. Letter grades only. Offered even-numbered years; next offered 2009–2010. A. N. Lakso and T. R. Bates. In-depth lecture/discussion of complex topics of viticulture, which include crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

**HORT 6940 Special Topics in Horticulture**
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

| INFO 3561 Computing Cultures (also STS 3561) (CA) | Spring. 4 credits. No technical knowledge of computer use presumed or required. For description, see STS 3561. |
| INFO 3650 Technology in Collaboration (also COMM 3650) (SBA) | Spring. 3 credits. Prerequisite: COMM/INFO 245. For description, see COMM 3650. |
| INFO 3660 History and Theory of Digital Art (also ARTH 3660) (CA) | Fall. 4 credits. Next offered 2009–2010. For description, see ARTH 3660. |
| INFO 3720 Explorations in Artificial Intelligence (also CS 3720) | Spring. 3 credits. Prerequisites: MATH 1110 or equivalent, information science approved statistics course, and CS 2110 or permission of instructor. Next offered 2009–2010. For description, see INFO 3720 in CIS section. |
| INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology (also STS 3871) | |
| INFO 4290 Copyright in the Digital Age (also COMM 4290) (CA) | Fall. 3 credits. Offered odd-numbered years. For description, see COMM 4290. |
| INFO 4300 Information Retrieval (also CS 4300) | Fall. 3 credits. Prerequisite: CS/ENGRG 2110 or equivalent. For description, see INFO 4302 in CIS section. |
| INFO 4302 Web Information Systems (also CS 4302) | Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology. For description, see INFO 4302 in CIS section. |
| INFO 4350 Seminar on Applications of Information Science (also INFO 6350) | Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 2110 or equivalent; experience in using information systems. For description, see INFO 4350 in CIS section. |
| INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400) (SBA) | Fall. 3 credits. Prerequisite: COMM/INFO 2450. For description, see COMM 4400. |
| INFO 4414 Responsive Environments (also ARTH 4414) (CA) | Spring. 4 credits. Next offered 2009–2010. For description, see ARTH 4414. |
| INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450) (SBA) | Fall. 3 credits. Prerequisite: COMM 2450. Next offered 2009–2010. For description, see COMM 4450. |
| INFO 4470 Social and Economic Data (also LLRLE 4470) | Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor. For description, see INFO 4470 in CIS section. |
| INFO 4500 Language and Technology (also COMM 4500) (SBA) | Spring. 3 credits. Prerequisites: INFO 2450 or permission of instructor. Next offered 2009–2010. For description, see COMM 4500. |
| INFO 4850 Computational Methods for Complex Networks | Spring. 3 credits. Prerequisites: ECON/INFO 2040/SOC 2090/CS 2950 or equivalent knowledge; CS 2110 or INFO 2300 or equivalent knowledge of basic programming. For description, see INFO 4850 in CIS section. |
| INFO 4950 Independent Reading and Research | Fall, spring. 1–4 credits. Independent reading and research for undergraduates. |
INFO 4910 Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a TA in a course in the information science, systems, and technology major.

INFO 5150 Culture, Law, and Politics of the Internet
Fall. 4 credits.
For description, see INFO 5150 in CIS section.

INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)
Spring. 4 credits. Prerequisite: CS/INFO 3300 or CS 4320.
For description, see INFO 5300 in CIS section.

INFO 6002 Critical Technical Practices
INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)
Fall. 4 credits.
For description, see PSYCH 6140.

INFO 6144 Responsive Environments (also ARTH 6144)
For description, see ARTH 6144.

INFO 6300 Advanced Language Technologies (also CS 6740)
Fall or spring. In 2008–2009, offered in fall. 3 credits. Prerequisite: permission of instructor. Neither INFO/CS 4300 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.

INFO 6350 Seminar on Applications of Information Science (also INFO 4350)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 2110 or equivalent, and experience in using information systems. Undergraduates and master's students should enroll in INFO 4350; Ph.D. students should enroll in INFO 6350.
For description, see INFO 6350 in CIS section.

INFO 6400 Human-Computer Interaction Design (also COMM 6400)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6400.

INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2009–2010.
For description, see COMM 6450.

INFO 6648 Speech Synthesis by Rule (also LING 6648)
Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor.
For description, see LING 6648.

INFO 6500 Language and Technology (also COMM 6500)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2009–2010.
For description, see COMM 6500.

INFO 6850 The Structure of Information Processing (also CS 6850)
Fall. 4 credits. Prerequisite: CS 4820.
For description, see INFO 6850 in CIS section.

INFO 7090 IS Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7470 Social and Economic Data (GR-RDC) (also ILRLE 7400)
Spring. 4 credits. Limited to Ph.D. and research master's students.
For description, see INFO 7470 in CIS section.

INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT

IARD 2020 Perspectives in International Agriculture and Rural Development
Fall. 3 credits. R. Nelson, R. Herdt, and L. Harrington.
The course is designed to enable students to gain an understanding of major issues in international agricultural development. It provides an overview of world poverty and hunger, and of varying perspectives on approaches being taken to address these and related problems. Students will characterize the state of agriculture and rural livelihoods in selected developing countries, and will analyze how innovations in agriculture in these countries can contribute to rural development.

IARD 4010 Experience Latin America: Rural and Urban Realities I (also LATA 4010)
Fall. 2 credits. R. Blake and T. Tucker.
Acquaint students with fundamental cultural, historical, socio-political, literary, anthropological, health, agricultural, and development issues in southern Mexico. The lectures/discussions establish the global and regional contexts for better transcultural understanding. This course may be taken as a stand-alone survey course in international agriculture and rural development or in Latin American studies. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Agriculture in the Developing Nations II (IARD 4020), which includes a field trip to Asia during the January intersession.

IARD 4020 Agriculture in Developing Nations I (also FDSC 4020)
Fall. 2 credits. K. V. Raman and W. R. Coffman.
Acquaint students with the major issues and problems in international agriculture and rural development and to demonstrate how problems in development are being addressed in India and Thailand. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Asia through cases in India and Thailand. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Agriculture in the Developing Nations II (IARD 6020), which includes a field trip to Asia during the January intersession.

IARD 4030 Traditional Agriculture in Developing Countries (also CSS 4030)
Fall. 1 credit. S-U grades only. P. Hobbs.
For description, see CSS 4030.

IARD 4040 Crop Evolution, Domestication, and Diversity (also PLBR/BIOL 4040)
Spring. 2 credits. Prerequisite: BIOGD 2810 or PLRB 2250 or permission of instructor. S-U or letter grades.
S. Kresovich.
For description, see PLRB 4040.

IARD 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PLBR 4050)
Spring. 2 credits. Prerequisite: senior or graduate standing. S-U or letter grades.
A. F. Krattiger and S. Kowalski.
For description, see PLBR 4050.

IARD 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 4140)
Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course or permission of instructor.
P. Hobbs.
For description, see CSS 4140.

IARD 4910 Food, Farming, and Personal Belief (also CSS 4910)
Spring. 1 credit. Prerequisite: Sustainable Agriculture (CSS 1900) or equivalent recommended. S-U grades only. G. Fick.
For description, see CSS 4910.

IARD 4940 Special Topics in International Agriculture and Rural Development (also LATA 4940)
Fall, spring. Summer. 1–3 credits. S-U or letter grades.
The department teaches "trial" courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 4960 International Internship (also LATA 4960)
Fall, spring. 1–6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S-U or letter grades.
International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student's work. The student researches and initiates an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.
IARD 4970 Independent Study in IARD
(Also LATA 4970)
Fall and spring. 1–3 credits. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 5980 International Development M.P.S. Project Paper
Fall and spring. 1–6 credits; max. 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international development (ID). S-U grades only. N. Uphoff. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 5990 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1–6 credits; maximum of 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S-U grades only. S. Kyle. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

IARD 6010 Experience Latin America II
(Chiapas Edition) (Also LATA 6010)
Spring. 3 credits. Prerequisite: IARD or LATA 4010. R. Blake and T. Tucker. Designed to provide undergraduate students with an opportunity to observe the rich living cultures, environments, ecologies, rural and urban communities, and development issues in tropical southern Mexico. Also designed to promote interdisciplinary exchange among faculty, staff, and students and their Mexican hosts and counterparts. A two-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with a range of topics pertinent to the target cultures of Chiapas. Optional 1-credit discussion in Spanish can be taken concurrently (SPAN 3620).

IARD 6020 Agriculture in Developing Nations II (Also FDSC 6020)
Spring, field trip to Asia during Jan., intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. Cost of field-study trip is $4,000 (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman. Designed to provide students with an opportunity to observe agricultural development in Asia and to promote interdisciplinary exchange among faculty, staff, students and their Indian and Thai counterparts. A three-week field-study trip in January is followed by discussions, written projects and oral presentations dealing with problems in food, agriculture and livestock production in the context of social and economic conditions of India and Thailand.

IARD 6030 Planning and Management of Agriculture and Rural Development
(Also GOVT 6927)
Spring. 4 credits. N. T. Uphoff and T. W. Tucker. Reviews experiences and approaches in agricultural and rural development in a range of developing countries, with particular attention to contemporary issues of participation, decentralization, local institutions, capacity-building, civil society, social capital, and empowerment. Case studies from Asia, Africa, and Latin America.

IARD 6850 Training and Development: Theory and Practice (Also EDUC 5850)
Spring. 4 credits. S-U or letter grades. R. Caffarella. For description, see EDUC 6850.

IARD 6940 Graduate Special Topics in IARD
Fall or spring. 1–4 credits. S-U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 6960 Agroecological Perspectives for Sustainable Development (Also NTR/ES/CSS 6960)
Fall, spring. 1 credit. S-U grades only. L. Fisher, L. Buck, and P. Hobbs. A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 6970–6980 International Development M.P.S. Seminar
Fall, spring. 1 credit. S-U grades only. N. Uphoff. For M.P.S. students to discuss important issues in international development and to prepare them to work on their project papers. Specific content varies.

IARD 6990 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. Prerequisite: required for, and limited to, M.P.S. IARD students or permission of instructor. S-U grades only. S. C. Kyle. Provides students with the opportunity to develop and present their special projects. Also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

IARD 7830 Farmer-Centered Research and Extension (Also EDUC 7830)
Fall. 3 credits. S-U or letter grades. T. Tucker. Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people’s knowledge bases and to enhance their capacity to critically analyze their own problems, to conduct their own research, and to empower them to take direct action to solve those problems.

LANDSCAPE ARCHITECTURE

LA 1410 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grades only. Fee for required drafting equipment plus materials for projects: approx. $250. Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drawing, and model making to understand design principles of the changing landscape.

LA 1420 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approx. 20 students. Prerequisite: freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. $250. Applies fundamentals of land use design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.

LA 2010 Medium of the Landscape
Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. $200; field trip: approx. $250. Studio course emphasizing the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 2020 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 2010 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

Fall. 4 credits. Lec. Next offered 2010–2011. A. Hammer. Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for a culture’s biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing how do we represent the complexity of a place and our relation to it?
LA 2520 Daily Life and Cultural Landscapes (CA)
Fall. 3 credits. J. Zorn.
Surveys the common and not-so-common daily activities of the world of ancient Israel and its neighbors—Mesopotamia, Egypt, and Canaan. Many courses cover aspects of ancient political history or ancient literature, but these often focus on the activities of members of social elites, at the expense of the activities of more average citizens. The focus of this course on ancient technologies provides a broader spectrum, spanning all social classes. Material to be covered includes topics such as food production and processing, pottery production, metallurgy, glass making, cloth production and personal adornment, implements of war, medicine, leisure time (games and music), and others.

LA 2610 Fieldwork in Urban Archaeology (also CRP/ARKEO 2610) (CA) (LA)
Fall. 3 credits. Three 8-hr. Sat. field labs required; students choose three Sat. from seven offered. S. Baugher.
Urban archaeologists study American Indian, colonial, and 19th-century sites that now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today’s cities; and how various cultures have altered the urban landscape. Students participate in a local archaeological excavation.

LA 2620 Laboratory in Landscape Archaeology (also ARKEO 2620)
Spring. 3 credits. Required: LA 2610 or ARKEO 2610 or permission of instructor. S. Baugher.
Various American Indian civilizations and European cultures have altered the landscape to meet the needs of their cultures. Students learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 2660 Jerusalem through the Ages (also NES/JWST/ARKEO/RELST 2660) (CA) (LA)
Fall. 3 credits. Next offered 2009–2010. J. Zorn.
Explores the history, archaeology, and natural topography of Jerusalem throughout its long life, from its earliest remains in the Chalcolithic period (ca. 4000 B.C.E.) to the 19th century, including Jebusite Jerusalem, Jerusalem as the capital of the Davidic dynasty, the Roman era city of Herod and Jesus, the Crusaders and medieval Jerusalem, and Ottoman Jerusalem as the city entered the modern era. Students examine the original historical sources (e.g., Bible, Josephus, and the Madeba map) that pertain to Jerusalem.

LA 2820 Photography and the American Landscape (CA) (LA)
Fall. 3 credits. A. Hammer.
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 3010 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 2020 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250. This studio engages participants in the art and science of design as well as focusing on site-scaled projects that consider significant cultural and natural landscapes. This course explores theories of landscape restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 3020 Integrating Theory and Practice
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250. Studio building on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historical factors and their relationships to site design and planning are critically explored through theory and practice.

LA 3160 Site Engineering II
Fall. 2 credits. Prerequisite: LA 3150 or permission of instructor. M. Adleman.
Lectures and studio projects dealing with earthwork estimating; storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 3180 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.
This course emphasizes detail design and use of landscape materials in project implementation. It explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, studio problems, and development of drawings leading to construction documentation for one or more comprehensive projects.

LA 3600 Pre-Industrial Cities and Towns of North America (also ARKEO 3600, CRP 3600/6660, LA 6660) (CA) (LA)
Spring. 3 credits. S. Baugher.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. The course considers how each culture has altered the landscape in its own unique way as it created its own built environments.

LA 4010 Urban Design Studio
Fall. 5 credits.
This studio focuses on the integration of theory and practice in landscape architecture at the urban scale. Urban design methods and strategies are introduced and applied to city-scaled projects including community engagement.

LA 4020 Integrating Theory and Practice II
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the expression of design solutions that grow from and affirm a clear sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?
LA 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4910)
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required. Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk. Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites; select appropriate trees, shrubs, vines, and ground covers for a given site; and learn about the principles and practices of site amelioration and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

LA 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4920)
Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 491. Preregistration required. Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk. Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage and surface detailing, and planting techniques. Students critically assess potential planting sites; select appropriate trees, shrubs, vines and ground covers for a given site. Designs for specific sites are followed by written specifications, and graphic details are produced to implement these proposals. Students are engaged in a hands-on manner in site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 491 and 492 constitute an integrated course.

LA 4940 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U or letter grades. Topical subjects in landscape architectural theory, history, or technology. Group study of topics not considered in other courses.

LA 4950 Green Cities: The Future of Urban Ecology (also CRP 3840/5840)
Fall. 4 credits. R. Young. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of “green cities” in terms of transportation, renewable energy, recycling, land use, and the built environment.

LA 4970 Individual Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades.

LA 4980 Undergraduate Teaching
Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 4990 Undergraduate Research
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding undergraduates to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 5010 Composition and Theory
Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Basic principles of natural and cultural processes that form “places” in the landscape. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of observation.

LA 5020 Composition and Theory
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 5010.

LA 5050 Landscape Representation I
Fall. 3 credits. Corequisite: LA 5010 or permission of instructor. Introduces students to both conventional and unconventional representation and graphic techniques. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of observation.

LA 5060 Graphic Communication II
Spring. 3 credits. Prerequisite: LA 5050. Corequisite: LA 5020 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing; concept modeling; composite drawings; and visual books.

LA 5240 History of European Landscape Architecture*
Fall. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5250 History of American Landscape Architecture*
Spring. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5450 The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor. K. Gleason. Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient forums and public parks depicted on the Severan Marble plan of Rome. Opportunity for a spring break trip to Rome.

LA 5520 Photography and the American Landscape
Fall. 3 credits. A. Hammer. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, exploratory surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 5900 Theoretical Foundations
Fall. 2 credits. Prerequisite: senior or graduate standing. A. Hammer. This seminar is intended to provide students in the Department of Landscape Architecture with an overview of the theories and discourses related to the field. Topics may include, but not be limited to, environmental perception, issues of language and representation, pertinent debate in cultural geography, developments in ecological design, landscape urbanism, infrastructure, etc. Weekly readings, discussion, short papers.

LA 5980 Graduate Teaching
Fall or spring. 1–5 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. (Credit hours are determined by the formula: 2 hours per week = 1 credit hour).

LA 6010 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: graduate standing or permission of instructor. Supplies and fees: approx. $250. This studio focuses upon site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation. These are explored through projects that derive form from specific site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between theory and practice.
LA 6020 Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. This studio builds on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Projects focus upon the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 6030 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: landscape architecture graduate students in final year of study. Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 6160 Site Engineering II
Fall. 2 credits. Prerequisite: LA 6150 or permission of instructor. M. Adlemann. Lectures and studio projects dealing with earthwork, stormwater management, site surveys, site layout, and horizontal and vertical road alignment.

LA 6180 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge. This course emphasizes detail design and use of landscape materials in project implementation. It explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, short studio problems, and the development of drawings leading to construction documentation for one or more comprehensive projects.

LA 6660 Pre-Industrial Cities and Towns of North America (also CRP 6660)(D)
Spring. 5 credits.

LA 6900 Methods of Landscape Architectural Inquiry
Spring. 3 credits. Prerequisite: graduate standing. S-U or letter grades. This class builds on the theoretical foundations provided in LA 5900 with an investigation of the variety of methods used in landscape architectural and urban design research and practice. These methods may include, but are not limited to, physical analysis, mapping, site inventory, behavioral observations, and cultural landscape investigations. The format of the class combines weekly lecture and applied research.

LA 6940 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U or letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

LA 7010 Urban Design and Planning
Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. $250; required field trip: approx. $50. This studio explores the application of urban design and town-planning techniques to specific contemporary problems of city environments. The studio investigates issues of urbanism and applies them to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. The course introduces three-dimensional computer modeling and digital design media as tools for urban design.

LA 7020 Advanced Design Studio
Spring. 5 credits. This advanced design studio provides students in the final year of the graduate program in Landscape Architecture with the opportunity to work on complex, real time projects. The overarching goal of this class is to test the student’s theoretical, methodological, technical and representational competency and ability to engage with a range of scales and issues. Through intensive studio work, seminar sessions, independent research and site visits students will gain the knowledge and skills necessary to develop sound and creative solutions to environmental design problems.

LA 7900 Audio Documentary: Stories from the Land
Spring. 3 credits. Letter grades only. A. Hammer. Offers hands-on experience in basic audio documentary. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects for podcasting, webcasting, and radio. Explores relationships between sound and the still or moving image.

LA 7910 Placemaking by Design
Fall. 3 credits. Limited to 20 students. S-U or letter grades. P. Horrigan. Seminar providing an understanding of contemporary planning and land use and design methods. Students learn strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 7920 Landscape Preservation: Theory and Practice
Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. D. Krall. Examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

LA 8000 Master’s Thesis in Landscape Architecture
Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

NTRES 1101 Intro to the Science and Management of Environmental and Natural Resources (also SNES 1101)
Fall. 3 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Natural Systems, or other “environmental cluster” areas in CALS. J. Lassoie and E. Madsen. This course provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth’s ecological and environmental systems. Case studies, guided readings, multi-media presentations, videos, discussions, and field and laboratory exercises are used to introduce students to the interdisciplinary basis for understanding the complexities of such systems within the text of modern society. Active student participation in all phases of the course is expected.

NTRES 1102 Introduction to Environmental Studies
Summer. 3 credits. S-U or letter grades. R. J. McNeil. Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they relate to our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

NTRES 1103 Science Fiction and Environment
Summer. 3 credits. S-U or letter grades. R. J. McNeil. This course is intended to be primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in environmental studies. Science fiction stories and two books will be used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles which may be helpful to us in choosing ways to live. Some extra attention to studying and
learning may be helpful to new college students.

**NTRES 2010 Environmental Conservation**

Spring. 3 credits. T. Fahey.

Our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 2100 Introductory Field Biology**

Fall. 4 credits. Limited to 60 students. Prerequisite: sophomore or junior standing with advisor in natural resources or permission of instructor; BLOG 1101-1102 or equivalent. Cost of two required overnight weekend field trips: approx. $12. C. Smith.

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of those events.

**NTRES 2201 Society and Natural Resources (also DSOC 2201) (SBA)**

Spring. 3 credits. Letter grades only. R. Stedman.

The actions of people are crucial to environmental well-being. This course addresses the interrelationships between social phenomena and the natural (i.e., biophysical) environment. It is intended to: (1) increase student awareness of these interconnections in their everyday lives; (2) introduce students to a variety of social science perspectives, including sociology, economics, psychology, and political science, that help explain these connections; (3) identify the contributions of each of these perspectives to our understanding of environmental problems; and (4) discuss how natural resource management and environmental policy reflect these perspectives.

**NTRES 2320 Nature and Culture (HA) (CA)**

Spring. 3 credits. S-U or letter grades. J. Tantillo.

We will examine the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, will be introduced.

**NTRES 3030 Introduction to Biogeochemistry (also EAS 3030)**

Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry. For description, see EAS 3050.

**NTRES 3100 Applied Population Ecology**

Fall. 3 credits. Prerequisite: completion of calculus (MATH 1106, 1110, or equivalent). Highly recommended: background in biology or ecology. Letter grades only. E. Coop.

In-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer exercises are used to reinforce concepts presented in lecture.

**NTRES 3110 Fish Ecology, Conservation, and Management**

Spring, 3 credits. Prerequisites: none. Recommended: NTRES 2100, BIOEE 2610, or equivalent. L. Rudstam and R. Jackson.

Covers basic principles of fish ecology at the individual, population, and community level, particularly as they relate to interactions between fish and their environment and the implications of human activities to these relationships. Emphasizes the application of ecological principles to the conservation and management of fisheries resources and aquatic habitats. Extensive use of current literature and case studies will provide context for principles covered.

**NTRES 3111 Fish Ecology Laboratory**

Spring, four field trips TBA. 1 credit. Pre- or corequisite: NTRES 3110. L. Rudstam and R. Jackson.

Four field trips are planned to provide hands-on experiences in fish ecology and management. They include: a one-weekday Great Lakes experience aboard the USGS Kahoe on Lake Ontario, a one-day Oneida Lake trip to a state-of-the-art fish hatchery during the walleye run, a one-day Oneida Lake weekend trip to the Cornell Biological Field Station experiencing fish collection techniques, and a two-hour trip to Cayuga Inlet to witness the run of rainbow trout and possibly lamprey eels. Activities include demonstrations of various fish sampling gears and sample analysis techniques. Each student is required to maintain a written journal describing activities and concepts learned from each field trip that will be turned in at the end of the semester.

**NTRES 3130 Biological Statistics I (also BTRY 3130)**

Fall. 4 credits. Prerequisite: one semester of calculus. P. Sullivan.

Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

**NTRES 3140 Conservation of Birds**

Spring, summer. 2 credits. Prerequisite: NTRES 2100 or permission of instructor. Offered alternate years. C. R. Smith.

A course for majors and non-majors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds are explored in the contexts of agricultural practices, habitat management, the design and management of natural preserves, endangered species management, global climate change, and the economic importance of bird study as an outdoor recreational activity.

**NTRES 3141 Conservation of Birds Laboratory**

Spring, summer. 1 credit. Corequisite: NTRES 3140. Offered alternate years. C. R. Smith.

A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying the songbird population.

**NTRES 3220 Global Ecology and Management**

Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.

The subjects of biogeography, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

**NTRES 3240 Ecological Management of Water Resources**

Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic variability and communities, groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

**NTRES 3250 Forest Management and Maple Syrup Production**

Spring. 3 credits. Limited to 22 students. Priority given to juniors and seniors. Field lab participation required; often involves strenuous walking in all weather conditions. Letter grades only. Offered alternate years; next offered 2009–2010. P. J. Smallidge.

Practical, field-oriented course emphasizing principles and practices of stewardship and multiple purpose management of small, nonindustrial, private forest land in the northeastern United States, including the production of maple syrup.
NTRES 3260  Applied Conservation Ecology
Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S. Morreale. Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation ecology and evolutionary theory. Tools include field sampling techniques, resource and conservation mapping, spatial referencing, GIS, measures of biodiversity, and manual and automated techniques for studying soil, stream, and forest biota and related physical factors.

NTRES 3300 Natural Resources Planning and Management
Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber. Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 3311 Environmental Governance (also STS5/BIOC/DSG 3311) (SBA)
Spring. 3 credits. S. Wolf. Considers the question of environmental governance, defined as the assemblage of social institutions that regulate natural resource use and shape environmental outcomes. Participants explore the roles of public policy, market exchange, and collective action in resource (mis)management. Introduces theoretical concepts from a variety of social science perspectives to support case studies and student-led discussions. Comparative analysis of how governance is pursued in different countries, historical periods, and ecological contexts (forestry, endangered species, water quality) highlight scope for institutional innovation. Course details at www.dnr.cornell.edu/saw44/ntres3311.html.

NTRES 3320 Introduction to Ethics and Environment (KCM)
Fall. 3 credits. J. Tantillo. Introduction to ethics, aesthetics, and epistemology as related to the environment. Asks the question “How should I live?” and explores the implications of different answers to that question for our treatment of nature. Also examines the various approaches to ethics theory; the relations between art, literature, religion, and morality; the objective nature of value judgments; and the subjective nature of nature.

NTRES 3330 Ways of Knowing: Indigenous Ecological Knowledge (also AIS 3330) (CA, SBA) (D)
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. K.-A. Kassam. Based on indigenous and local "ways of knowing," this course: (1) presents a theoretical and humanistic framework from which to understand generation of ecological knowledge; (2) examines processes by which to engage indigenous and local knowledge of natural resources, the non-human environment, and human-environment interactions; and (3) reflects upon the relevance of this knowledge to climatic change, resource extraction, food sovereignty, and issues of sustainability and conservation.

NTRES 4100 Conservation Biology: Concepts and Techniques
Fall. 3 credits. Limited to 30 students. Prerequisite: juniors, seniors, or graduate students. NTRES 3100 or equivalent. Recommended: NTRES 2100. E. G. Coocha and T. A. Gavin. Thorough analysis the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasizes analysis of variation and maintenance of biological diversity, and focuses on principles and techniques, including demographic viability analysis of populations, genetic analysis, as well as aspects of the human dimensions of conservation biology.

NTRES 4110 Quantitative Ecology and Management of Fisheries Resources
Spring. 4 credits. Prerequisites: NTRES 3130 recommended or permission of instructor. S-U or letter grades. Offered alternate years. P. J. Sullivan. Examines the dynamics of marine and freshwater fisheries resources with a view toward observation, analysis, and decision making within an inferential framework. Growing pressure on fisheries resources, habitat modification, and increased uncertainty about the nature of biological systems are at the center of many fisheries issues. Quantitative models are useful for integrating information needed by decision makers in addressing these issues. The course develops analytical methods to assess the dynamics and status of fisheries resources and then demonstrates how the information may be transformed into useful information for decision makers.

NTRES 4120 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits; two-week intensive course (MTWR F a.m. lec, p.m. labs) in Jan. with follow-up meetings during spring semester. Prerequisites: NTRES 3100 (or equivalent or permission of instructor), college-level math or statistics course. Lec/ lab E. Coocha. This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics. The course will focus on exploration of a selection of the tools needed for modern wildlife conservation and management, including (particularly) analysis of mark-recapture data, population viability analysis, community analysis, decision theory, and matrix modeling.

NTRES 4130 Biological Statistics II (also BTRY 3020)
Spring. 4 credits. Prerequisite: NTRES 3130 or BTRY 3010. Staff. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

NTRES 4200 Forest Ecology
Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey. Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology, forest biogeography, ecophysiology of forest trees; disturbance, succession and community analysis; primary productivity, and nutrient cycling.

NTRES 4201 Forest Ecology Laboratory
Fall. 1 credit. Corequisite: NTRES 4200. Weekend trip: approx. $30. T. J. Fahey. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

NTRES 4220 Wetland Ecology and Management—Lecture
Fall. 3 credits. Prerequisite: BIOEE 2610. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Considers current regulations, protection programs, and management strategies.

NTRES 4221 Wetland Ecology and Management—Laboratory
Fall. 4 credits. Prerequisites: NTRES 4220. One weekend field trip required. B. L. Bedford. Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water, and methods of wetland identification and delineation.

NTRES 4240 Landscape Impact Analysis
Spring. 3 credits. Prerequisites: junior standing; one introductory and one advanced course in ecology or equivalents. Offered alternate years. B. L. Bedford. Presents ecological concepts and analytical tools needed to evaluate environmental impacts to natural resources and ecosystems within an integrated context that incorporates the landscapes in which these resources occur. Explores diverse conceptual frameworks for landscape impact analysis and exposes students to modern tools for evaluating landscapes.

NTRES 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/CSS 4260)
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Mudge, L. E. Buck, and P. Hobbs. For description, see HORT 4260.
NTRES 4280 Principles and Practices of Applied Wildlife Science
Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S-U or letter grades. Offered alternate years. Staff.
The course covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science will be discussed. The application of basic science and the scientific method will be integrated into community/agency-based problem solving. Issues and approaches to management of terrestrial and wetland wildlife will be discussed with emphasis on technical, logistical, analytical, and communication skills.

NTRES 4300 Environmental and Natural Resources Policy Processes
Spring. 3 credits. Prerequisites: junior standing; special application process. Lect. Wash., D.C., during Jan. 11-day winter session; three-two-hour orientation sessions in fall semester and four two-hour sessions in Feb. and March. Fee: approx. $450. Completed applications due by Oct 1. Applications available by contacting map10@cornell.edu or at www.dnr.cornell.edu/teaching/ugrad/courses. B. A. Knuth.
Intensive field-based exploration of the environmental policy process and its conceptual framework. Defining environmental problems; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; discussion with about 20 prominent Washington policymakers who appear as guest panelists. Self-selected research topic requires conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

NTRES 4310 Environmental Strategies (also DSOC 4320) (SBA)
Spring. 3 credits. S. Wolf.
Research-oriented seminar focused on conservation of natural resources in the contemporary political and institutional environment. We study opportunities to mobilize market mechanisms and competitive strategies of firms to harmonize economic and environmental demands on ecological systems. Through production of a portfolio of analyses of real-world integrated environmental management schemes, students will come to understand the mechanics of this general class of environmental policy tools and develop a critique as to why the market does not represent a comprehensive approach to sustainability. Course details at www.dnr.cornell.edu/saw/4/ntres431.html.

[NTRES 4320 Human Dimensions of Natural Resource Management]

NTRES 4330 Applied Environmental Philosophy (KCM)
Spring. 3 credits. Recommended: NTRES 3520. J. Tantillo.
Special topic for 2009. Environmental justice. Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus non-anthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecofeminism, and pragmatism.

NTRES 4340 International Conservation: Communities and the Management of the World’s Natural Resources
Fall. 3 credits. Letter grades only. J. Lassoie.
Lectures, readings, and multimedia information, including a new Internet-based platform linking students to conservation practitioners, builds a multidisciplinary understanding of the principles underpinning conservation and natural-resource management. Specific attention is given to the role of local communities in developing sustainable land-use strategies. Case studies from Africa, Latin America, Asia, and the United States examine particular conservation and management issues from widely different geopolitical perspectives. Stakeholder analyses are used to base discussions of each case, followed by a synthesis and discussion of key contrasts and comparisons centered on common themes identified during the course.

NTRES 4440 Resource Management and Environmental Law (also CRP 4440)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S-U or letter grades. R. Booth.
For description, see CRP 4440.

[NTRES 4560 Stream Ecology (also BIOEE 4560)]
Fall. 4 credits. Limited to 40 students. Prerequisite: permission of instructor. S-U or letter grades. One Sat field trip. Offered alternate years; next offered 2009–2010. C. Kraft and A. Flecker.
Lecture examines patterns and processes in stream ecosystems, including geomorphology and hydrology, watershed–stream interactions, trophic dynamics, biogeochemistry, disturbance, and conservation and management. Field and laboratory exercises focus on experimental and analytical techniques used to study stream ecosystems, including techniques to measure stream discharge, physical habitat, water chemistry, and stream biota. Field project with lab papers.

NTRES 4940 Special Topics in Natural Resources
Fall or spring. 4 credits max. S-U or letter grades.
The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 4970 Individual Study in Environmental Social Science and Resource Policy
Individual study under faculty supervision. Topics in environmental social science and resource policy are arranged depending on the interests of students and availability of staff.

NTRES 4971 Individual Study in Applied Ecology and Conservation Biology
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). M. Bain, E. Cooch, P. Curtis, T. Gavin, M. Hare, J. R. Jackson, C. Kraft, S. Morreale, M. Richmond, L. Rudstam, C. Smith, and P. Sullivan.
Individual study under faculty supervision. Topics in applied ecology or conservation biology are arranged depending on the interests of students and availability of staff.

NTRES 4972 Individual Study in Ecosystem Science and Biochemistry
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades.
Individual study under faculty supervision. Topics in ecosystem science and biogeochemistry are arranged depending on the interests of students and availability of staff.

NTRES 4980 Undergraduate Teaching in Natural Resources
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S-U or letter grades.
Designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students gain insight into the organization, function, and execution of course plans through application and discussions with instructor.

NTRES 4991 Honors Research in Natural Resources
Fall or spring. 2 credits. Prerequisite: beginning NTRES honors program in natural resources. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. The research supervisor should be a faculty member or senior research associate within NTRES.

NTRES 5900 Professional Projects—M.P.S.
Fall and spring. Credit TBA. Prerequisite: M.P.S. graduate students working on professional master's projects. S-U grades only.

NTRES 6000 Introduction to Graduate Study in Natural Resources
Fall. 2 credits. Prerequisite: beginning graduate students whose faculty advisors are in Natural Resources. S-U grades. C. E. Kraft.
Includes faculty-led discussions of key natural resource issues, student discussions of research ideas, and skill building sessions on proposal writing and giving research presentations.

NTRES 6010 Seminar on Selected Topics in Environmental Social Science and Resource Policy
Fall or spring. 1–4 credits. S-U grades only. Check with department for availability. Staff. Selected readings and discussions of research and/or current issues in environmental social science and resource policy. Offering varies by semester and is subject to availability of staff.

NTRES 6040 Seminar on Selected Topics in Resource Policy and Management
Fall or spring. 1–4 credits. S-U grades only. Check with department for availability. Staff. Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

NTRES 6110 Quantitative Ecology and Management of Fisheries Resources
Spring. 4 credits. Prerequisite: NTRES 3130 or permission of instructor. S-U or letter grades. Offered alternate years. P. J. Sullivan. Taught in conjunction with NTRES 4110 (see description above). Students taking the course for graduate credit are asked, in addition to the 4000-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

NTRES 6120 Wildlife Population Analysis: Techniques and Models
Spring. 3 credits. Prerequisite: NTRES 3130 or permission of instructor. S-U or letter grades. Offered alternate years. E. Couch. For description, see NTRES 4120.

NTRES 6140 Seminar on Selected Topics in Applied Ecology and Conservation Biology
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. S-U grades only. Check with department for availability. Staff. Discussion of individual research, current problems, and current literature in applied ecology and conservation biology. Offering varies by semester and subject to availability.

NTRES 6160 Seminar on Selected Topics in Ecosystem Science and Biogeochemistry
Fall or spring. 1–4 credits. Prerequisite: upper-level undergraduate or graduate standing. S-U grades only. Check with department for availability. Staff. Reviews current literature, student research, and selected topics of interest.

NTRES 6280 Principles and Practices of Applied Wildlife Science
Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S-U or letter grades. Offered alternate years. Staff. For description, see NTRES 4280.

NTRES 6310 Environmental Governance (also DSOC 6320)
Spring. 4 credits. S. Wolf. For description, see NTRES 3510. Students taking the course for graduate credit are required to read supplemental materials, undertake more complex research assignments, and participate in seminar discussion section.

NTRES 6340 International Conservation: Communities and the Management of the World’s Natural Resources
Fall. 3 credits. Variable. Prerequisite: graduate standing. Letter grades only. Offered alternate odd-numbered years. J. P. Lassoe. For description, see NTRES 4340. Students taking the course for graduate credit will be required to identify and critically review additional literature and participate in a one-hour discussion seminar per week (TBA).

NTRES 6700 Spatial Statistics
Spring. 3 credits. Prerequisites: BTRY 6010 and BTRY 6020 or equivalent, or permission of instructor, is highly recommended: introductory GIS course. S-U or letter grades. Offered alternate years; next offered 2009–2010. P. J. Sullivan. Develops and applies spatial statistical concepts and techniques to ecological and natural resource issues. Topics include visualizing spatial data and analysis and modeling of geostatistical, lattice, and spatial point processes. Students should consider taking this course simultaneously with CSS 6200.

NTRES 6840 Special Topics in Natural Resources
Fall or spring. 4 credits max. S-U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 6960 Agroecological Perspectives for Sustainable Development (also IARD/SSC 6960)
Fall and spring. 1 credit. S-U grades only. L. Buck, L. Fisher, and S. DeGloria. For description, see IARD 6960.

NTRES 6970 Graduate Individual Study in Natural Resources
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S-U or letter grades. NTRES graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 7800 Graduate Seminar in Ornithology (also BIOEE 7800)
Fall or spring. 1 credit. S-U grades only. Undergraduates must have permission of instructor. J. Hansell, J. Lovette, A. Dohnt, and D. Winkler. Group intensive study of current research in ornithology. Topics vary from semester to semester. Course may be repeated for credit.

NTRES 7900 Graduate-Level Thesis Research
Fall and spring. Credit TBA. Prerequisite: Ph.D. students before ‘A’ exam has been passed. S-U grades only.

NTRES 8900 Master’s Thesis Research
Fall and spring. Credit TBA. Prerequisite: graduate students working on master’s thesis research. S-U grades only.

NTRES 9000 Doctoral-Level Thesis Research
Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates after ’A’ exam has been passed. S-U grades only.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Environmental and Society (DSOC 2010, 3240, 3400, 4100)
Ecology and Biology (ENTOM 3440, 3700, 4550, 4700; BIOEE 2610, 2630, 2740, 2760, 3630, 4500, 4750, 4970, 4950, 4620, 4660, 4680, 4700, 4720, 4730, 4750, 4760, 4780; BIOM 2900–2920, 3970, 4180; BIOM 2210, 2220, 3210, 3270; BIOL 2410, 2470, 2480, 3420, 4480; CSS 4660, 4720; EAS 1540, 2200, 3010, 3030, 3500, 3510, 4400)
Environmental Law, Ethics, and Philosophy (STS 2061, CRP 3840, 4440, 4510, PHIL 2410, 2460, 3810)
Human Systems and Communication (COMM 2580, 3520, 4210, 4560, 4660; ENTOM 3550; CRP 3840)
Physical Sciences (BEE 1510, 2510, 3710, 4010, 4270, 4350, 4710, 4730, 4750, 4780; CSS 2600, 3650, 3720, 3970, 4110, 4200, 4210, 4830; EAS 1101, 1540, 2400, 3050; CEE 4320, 4510)
Public Policy and Politics (GOVT 2947, 3071, 3131, 4281; BSOC 4616)
Resource Economics (AEM 2500, 4310, 4500, 4510)
Spatial Data Interpretation (CSS 4110, 4200, 4650, 6200, 6600; DSOC 3140)

PLANT BREEDING AND GENETICS

PLBR 2010 Plants, Genes, and Global Food Production
Fall. 3 credits. May be used for partial fulfillment of CALS distribution requirement Physical and Life Sciences. Prerequisite: one year introductory biology or permission of instructor. S. McCouch. Introduction to plant breeding; offers a sense of the importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers examples of how
breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. Emphasizes the connection between the genetics of plants, modern scientific research, and the potential to respond to the growing human demand for food, fiber, fuel, and environmental sustainability.

PLBR 2250 Plant Genetics
Spring. 3 or 4 credits; 2 credits if taken after BIOGD 2810. Prerequisites: one year of introductory biology or equivalent, permission of instructor for students who have taken BIOGD 2810. P. Gregory. Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences and provides a basis for understanding the complex issues related to modern crop genetics. Topics include simple inheritance, linkage analysis, polyploidy, analysis of nuclear, chloroplast, and mitochondrial genomes; pollination controls; and methods for analysis and manipulation of genes, chromosomes, and whole genomes. Examples and materials are drawn from diverse crops and plant species.

PLBR 2990 Introduction to Research Methods in Plant Breeding and Genetics
Fall, spring, or summer. 1–3 credits, variable; S-U grades only. Staff. Intended for students who are new to undergraduate research. Students may be reading scientific literature, learning research techniques, or assisting with ongoing research. Students must identify a faculty supervisor who determines the work goals and the form of the final report.

PLBR 4010 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisite: plant biology or genetics course or permission of instructor. E. D. Earle. Provides broad coverage of techniques of plant tissue, cell, protoplast, embryo, and other culture and the applications of those techniques to biological and agricultural studies. Examples include horticultural, agronomic, and endangered species. Genetic modification of plants via gene transfer and other manipulations of cultured cells is a major topic.

PLBR 4011 Plant Tissue Culture Laboratory
Fall. 1 credit. Limited enrollment. Pre- or corequisite: PLBR 4010 or permission of instructor. E. D. Earle. Provides hands-on experience in plant tissue culture and complements PLBR 4010. Lab work includes cell, tissue, and organ culture techniques related to plant propagation, germplasm storage, and genetic manipulations. Experiments use a broad range of plant materials and include protoplast culture and Agrobacterium-mediated gene transfer.

PLBR 4030 Genetic Improvement of Crop Plants
Fall. 3 credits. Prerequisites: BIOGD 2810, PLBR 2250, or other standard genetics course and course in crops or horticulture. V. Gracen. Genetic enhancement of crop value to humans began with domestication and continues with farmers’ variety development and scientifically trained plant breeders’ applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

PLBR 4040 Crop Evolution, Domestication, and Diversity (also BIOL/ARD 4040)
Fall. 2 credits. Prerequisite: BIOGD 2810 or PLBR 2250 or permission of instructor. S-U or letter grades. S. Kresovich. Evolution, domestication, and breeding of crop plants have molded the current diversity we conserve and use. Based on advances in systematics and molecular genetics, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addresses underlying ethical, legal, and social issues affecting conservation and use.

PLBR 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 4050)
Spring. 2 credits. Prerequisite: senior or graduate standing. S-U or letter grades. A. F. Krattiger and S. Kowalski. Covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and negotiation. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

PLBR 4060 Methods of Plant Breeding Laboratory
Fall. 2 credits. Pre- or corequisite: PLBR 4050 or equivalent. S-U or letter grades. M. E. Sorrells. Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PLBR 4070 Nutritional Quality Improvement of Food Crops
Spring. 1 credit. Prerequisite: one year introductory biology or permission of instructors. S-U or letter grades. L. Li, L. Kochian, and R. Welch. Introduction to biofortification of crop plants for enhancing their nutritional quality and health-promoting properties. The course discusses strategies to improve the contents of micronutrients, vitamins, phyttochemicals, as well as the qualities of proteins and lipids via conventional breeding and transgenic approaches.

PLBR 4460 Plant Cytogenetics Laboratory
Spring, two-week module. 1 credit. S-U grades only. Prerequisite: genetics course or permission of instructor. Check with department for further information. K. N. Watanabe and W. Pawlowski. Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.

PLBR 4826 Plant Biotechnology (also BIOL 4826)
Spring. 1 credit. Prerequisite: BIOL 4831 or permission of instructor. S-U or letter grades. 12 lec. E. D. Earle. Deals with current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PLBR 4831 Concepts and Techniques in Plant Molecular Biology (also BIOPL/PLPA 4831)
Fall, eight weeks. 2 credits. Prerequisites: see BIOL 4830. S-U or letter grades. Two lec and one day of disc per week. S. McCouch, J. Giovanni, and J. Rose. For description, see BIOL 4831.

PLBR 4833 Plant Genome Organization (also BIOL 4833) Fall. 1 credit. Prerequisite: BIOL 4831. S-U or letter grades. Offered alternate years. S. D. Tanksley. For description, see BIOL 4833.

PLBR 4835 Molecular Breeding (also BIOL 4835)
Fall. 1 credit. S-U or letter grades. Offered alternate years; next offered 2009–2010. S. Tanksley. For description, see BIOL 4835.

PLBR 4940 Special Topics in Plant Breeding
Fall or spring. 4 credits max. S-U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
PLBR 4960 Internship in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6; minimum 60 on-the-job hours per credit granted. Prerequisites: junior or senior in plant breeding or equivalent, minimum GPA of 3.0 in plant breeding courses; permission of advisor and enrollment during pre-enrollment period of semester before internship. S-U grades only. Students must attach to their course enrollment materials a CALS independent study, research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

PLBR 4970 Individual Study in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4980 Undergraduate Teaching
Fall or spring. Variable credit; may be repeated to max. of 6. S-U or letter grades. Prerequisites: permission of instructor and previous enrollment in course to be taught or equivalent. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990 Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

Undergraduate research projects in plant breeding.

PLBR 6060 Advanced Plant Genetics
Spring. 3 credits. Prerequisites: BIOGD 2810 or equivalent and permission of instructor. S-U or letter grades. W. Pawlowski.

Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromosome biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.

PLBR 6180 Breeding for Pest Resistance (also HORT 6180)
Fall. 2 credits. Recommended: BIOGD 2810 and PLBR 4030 or equivalents; introductory course in plant pathology and/or entomology. Offered alternate even-numbered years. P. Griffiths.

Multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics include importance of host plant resistance, national and international germplasm collections, germplasm evaluation and enhancement, population development, evaluating populations, resistance mechanisms in plants, genetic control of resistance, approaches to breeding for host plant resistance, stability of genetic resistance mechanisms, the use of marker-assisted selection and molecular tools in breeding for host plant resistance.

PLBR 6220 Seminar
Fall or spring. 1 credit. S-U grades only. Staff, graduate students, and visitors.

PLBR 6500 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising research or teaching. Staff.

PLBR 6940 Special Topics in Plant Breeding
Fall or spring. 4 credits max. S-U or letter grades.

The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLBR 7160 Perspectives in Plant Breeding Strategies
Spring. 3 credits. Prerequisite: PLBR 4050. S-U or letter grades. Offered alternate odd-numbered years. M. E. Sorrells.

Emphasizes critical discussion and evaluation of selected benchmark papers and current literature. Reviews and discusses conventional and molecular selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops. Requires extensive outside reading. Grades are based on four papers demonstrating creative thinking and analysis of plant breeding concepts.

[PLBR 7170 Quantitative Genetics in Plant Breeding]
Spring. 3 credits. Prerequisites: PLBR 4030 and BTRY 6010 or equivalent. Letter grades only. Offered even-numbered years. D. R. Viands.

Discussion of quantitative genetics for more effective plant breeding. Specific topics include population genetics, linkage, components of variance (estimated from various mating designs); heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to determine correlation coefficients. During one period, plants in the greenhouse are evaluated to determine correlation coefficients.

PLBR 7900 Graduate-Level Dissertation
Fall or spring. Variable credit. Prerequisite: doctoral students who have not passed “A” exam; permission of instructor. S-U grades. Graduate faculty.

PLBR 8900 Master's-Level Thesis Research
Fall or spring. Variable credit. Prerequisite: master's candidates; permission of instructor. S-U grades. Graduate faculty.

For students working on a master’s thesis.

PLBR 9900 Doctoral-Level Dissertation Research
Fall or spring. Variable credit. Prerequisite: doctoral students who have passed “A” exam; permission of instructor. S-U grades. Graduate faculty.

For students admitted to candidacy after “A” exam has been passed.

PLANT PATHOLOGY AND PLANT-MICROBE BIOLOGY

PLPA 1100 Symbiotic Associations in Nature
Fall or spring. 3 credits. Letter grades only. E. B. Nelson.

This course is a Freshman Writing Seminar where students will explore symbiotic biology and the nature of science and written scientific communication through discussions of a broad range of symbiotic relationships. Students will be exposed to a broad range of writing styles in scientific communication. Students will gain experience writing in a number of styles common in the biological sciences. Additionally, students will learn to use evidentiary and inferential reasoning, articulate their thoughts and ideas through writing, make logical and systematic arguments, learn to revise their own writing and effectively critique others’ writing content, organization, and style.

PLPA 1200 Evolution: Evaluating the Public Debate
Spring or fall. 3 credits. Letter grades only. R. Loria.

Though we live in a world infused with science and technology, most of the general public and a significant number of Cornell students do not believe in evolution. Evolution, the theory that organisms are connected by genealogy and change over time, is well supported and accepted as true by the scientific community. Nevertheless, there is an emotional debate outside scientific circles about the legitimacy of evolution as an explanation for the diversity of life on earth, and the existence of humans in particular. Readings will include books and articles that address the evidence for evolution. We will also analyze the writings of proponents of “Intelligent Design” and study descriptions of the controversy in the popular press, both current and historical.

PLPA 2010 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U or letter grades. G. W. Hudler.

Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasizes the historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.
PLPA 3010 Biology and Management of Plant Diseases
Fall. 4 credits. Prerequisite: one year of biology. S-U or letter grades. M. G. Milgroom. Introduction to the biology of the pathogens that cause plant diseases, and the diagnosis and management of plant diseases. Topics include the biology of bacteria, fungi, oomycetes, viruses and nematodes, disease cycles, plant disease epidemiology, and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control, as well as for students preparing for advanced courses in plant pathology and plant-microbe biology.

[PLPA 3090 Fungi]
Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PLPA 3390. S-U or letter grades. K. T. Hodge. A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete’s foot, histoplasmosis, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.

PLPA 3190 Mushrooms of Field and Forest
Fall, weeks 1–8. 2 credits. Letter grades only. K. T. Hodge. Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoon lab field trips. During the evening labs, students use keys and microscopes to identify mushrooms they’ve collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

PLPA 3201 Mushrooms, Molds, and Molecules
Spring. 1 credit. Pre- or corequisite: PLPA 2010. S-U grades only. B. G. Turgeon and G. W. Hudler. An extra-credit option for students who are registered for PLPA 2010 Magical Mushrooms. Misschou, a Mold, who would like to use that knowledge to get more in-depth exposure to some of the issues raised in lecture. Experts in the fungus world talk about their work, emphasizing the fact that fungi produce myriads of diverse molecules that affect their own development (e.g., germination, reproduction, pathogenicity) and also beneficial (e.g., antibiotics, immunosuppressants, stress-reducing), as well as detrimental (e.g., toxins, poisons, allergens, carcinogens), effects on organisms around them.

PLPA 3940 Circadian Rhythms (also ENTOM/BIOGD/BION 3940)
Fall. 2 credits; optional 3rd-credit lab. Prerequisite: 2000-level biology. S-U or letter grades. K. Lee. Explores a fundamental feature of living organisms from all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

PLPA 4090 Principles of Virology (also VETMI/BIOMI 4090)
Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor. Recommended: BIOBM 3300, 3520, 4320. Letter grades only. G. R. Whittaker and S. G. Lazarowitz. For description, see VETMI 4090.

PLPA 4161 Microbes and Food: Contemporary Issues Affecting Humanity
Spring. 4 credits. Prerequisite: senior standing. S-U or letter grades. S. Beer. Addresses the all-encompassing role that microbes play in contemporary life. How do microbes affect food production, processing, preservation, safety, and waste disposal? Assess the role of microbes in industrial and environmental processing. Deals with origins of agriculture, GMOs and high input versus sustainable food production. Intense seminar/discussion format.

PLPA 4190 Agricultural Application of Plant Disease Concepts
Fall. 2 credits. Eight sessions. Prerequisite: PLPA 3010 and permission of instructor. S-U or letter grades. H. S. Aldwinckle and B. Nault. Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable field crops, a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. This course is taught at Geneva. Free transportation available.

PLPA 4200 Grape Pest Management (also ENTOM 4200)
Fall. 3 credits. Prerequisite: PLPA 3010, ENTOM 2410, or permission of instructors. S-U or letter grades. W. Wilcox, G. English-Loeby, and A. Landers. The course emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratory emphasis on field illustrations of classroom concepts. Team taught by a plant pathologist, entomologist, and agricultural engineer.

PLPA 4430 Pathology of Trees and Shrubs
Fall. 4 credits. Limited to 30 students. Prerequisites: PLPA 3010 or equivalent. S-U or letter grades. Offered even-numbered years. G. W. Hudler. For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considered forest, shade, and ornamental plants.

PLPA 4480 Evolution and Ecology of Symbiotic Associations (also BIOMI 4480)
Spring. 2 credits. Prerequisites: BIOL 1101–1102 or equivalent. Letter grades only. T. Pawlowska.

Symbiosis, a living together of two organisms in close associations, encompasses a spectrum of interactions ranging from mutually detrimental to mutually beneficial. We are going to focus on a selection of ecologically important symbiotic interactions, consider their evolutionary origins, and explore conditions that would favor their establishment and maintenance.

PLPA 4700 Professional Skills in Plant Science
Spring. 2 credits. S-U grades only. E. B. Nelson. Provides students who are aspiring to careers as research plant scientists with an overview of the art and science of the profession. Topics include (1) what it means to be a scientist and plant pathologist; (2) preparation required of graduate students in plant pathology programs; (3) ethical considerations important to plant pathologists; (4) how to seek funding to support research activities; (5) managing the scientific inquiry; (6) funneling curiosity into scientific inquiry; and (7) how to read a scientific paper. Students in related disciplines (e.g., horticulture, plant breeding, plant biology) also benefit from concepts presented in this course.

PLPA 4821–4822 Molecular Plant-Pathogen Interactions I and II (also BIOPL 4821–4822)
Spring, weeks 1–4. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310, and BIOPL 4851. A. R. Collmer and B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years). Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning Spring 2004, alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, and apoptotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.

[PLPA 4823 Molecular Plant-Microbe Interactions (also BIOPL/BIOIM 4823)
Spring, weeks 1–4. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310, and BIOPL 4851. S-U or letter grades. Offered even-numbered years; next offered 2009–2010. S. C. Winans. For description, see BIOPL 4823.]

PLPA 4831 Plant Molecular Biology I—Concepts and Techniques in Plant Molecular Biology (also BIOPL/PLBR 4831)
Fall, weeks 1–4. 2 credits. Prerequisites: BIOGD 2810, BIOBM 3300, or 3310. S-U or letter grades. J. J. Giovanni, S. M. McCormick, and J. Rose. For description, see BIOPL 4831.
PLPA 4940 Undergraduate Special Topics in Plant Pathology and Plant-Microbe Biology
Fall or spring. 4 credits max. S-U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 4970 Independent Study in Plant Pathology and Plant-Microbe Biology
Fall or spring. 1–5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PLPA 4980 Undergraduate Teaching Experience
Fall or spring. 1–5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PLPA 4990 Undergraduate Research
Fall or spring. 3–5 credits. S-U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Opportunity for research experience under the direction of a faculty member.

PLPA 6010 Concepts of Plant Pathology and Plant-Microbe Biology
Spring. 3 credits. Prerequisites: PLPA 3010 or equivalent. S-U or letter grades. R. Collmer. Concepts in plant-pathogen relationships uniting molecular and population biology approaches, with emphases on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PLPA 6020 Biology of Plant Pathogens
Spring. 3 credits. Prerequisite: PLPA 3010. S-U or letter grades. W. E. Fry and K. L. Perry. Biology and ecology of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Model plant pathogens are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PLPA 6010 to provide students with a comprehensive treatment of pathogen-host interactions at all levels from molecular to ecological. Laboratory periods are used for hands-on demonstration of pathogen diagnosis and manipulation or to discuss current literature relevant to lecture topics.

PLPA 6060 Molecular Plant Virology (also BIOMI 6060)
Spring, weeks 1–7. 1 credit. Prerequisites: BIOMI 4090 or equivalent or permission of instructor. S-U or letter grades. Offered odd-numbered years. S. G. Lazarowitz. Introduces students to the molecular biology of plant virus replication and interactions with the host to produce disease. Topics include virus replication strategies, cell-to-cell and systemic movement, host defense, responses and virus counterstrategies, and engineered resistance.

PLPA 6080 Genomics of Bacterium-Host Interactions (also BIOMI 6800)
Fall, weeks 2–5 (Sept. 1–26). 1 credit. Prerequisite: BIOMI 2900 or equivalent or permission of instructor. S-U or letter grades. Offered even-numbered years. A. Collmer, S. C. Winans, and D. Schneider. Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGRE Comprehensive Microbial Resource and Artemis tools, the legumes, Viridiplantae pests, V. enterococctica, Pseudomonas syringae, Ralstonia solanacearum, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium meliloti.

PLPA 6380 Filamentous Fungal Genomics and Development (also BIODE 6380)
Spring, weeks 9–12. 1 credit. Prerequisite: BIODE 2810 or equivalent. S-U or letter grades. M. G. Milgroom. Topics include modern genomics and developmental approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Fusarium graminearum, Magnaporthe grisea, and Ustilago maydis and from well-known genetic models such as Aspergillus nidulans and Neurospora crassa.

PLPA 6420 Pathogen Population Biology
Fall. Prerequisite: permission of instructor. S-U grades only. M. G. Milgroom. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6440 Current Topics in Oomycete Biology
Fall. Prerequisite: permission of instructor. S-U grades only. E. B. Nelson. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6500 Diseases of Vegetable Crops
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. J. W. Lorbeer and T. A. Zitter. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6600 Special Topics in Plant Disease Management
Fall and spring. 1 credit. S-U grades only. C. D. Smart. Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. Offered only at the Geneva campus. Students provide their own transportation.

PLPA 6610 Diagnostic Lab Experience
Fall and spring. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S-U grades only. Requires 3 hours per week per credit hour. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (plant pathology department) under supervision of the diagnostician.

PLPA 6680 Plant Pathology and Plant-Microbe Biology Seminar
Fall and spring. 1 credit. Requirement for all plant pathology and plant-microbe biology majors. S-U grades only. B. G. Turgeon.

PLPA 6820 Graduate Student Research Updates
Spring and fall. 1 credit. Requirement for all plant pathology and plant-microbe biology graduate students. S-U grades only. S. Cartinhour and H. Aldwinckle. Weekly graduate student seminar series. Guests with an interest in plant pathology research are welcome to attend. Classes meet simultaneously in Geneva and Ithaca and are linked by teleconference.

PLPA 6940 Graduate Special Topics in Plant Pathology and Plant-Microbe Biology
Fall or spring. 4 credits max. S-U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 7880  Research in Molecular Plant Pathology
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S-U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PLPA 7970  Special Topics Independent Study
Fall or spring. 1–5 credits. S-U or letter grades. Staff. Opportunity for independent study of a special topic.

PLPA 7980  Graduate Teaching Experience
Fall or spring. 1–5 credits. S-U grades. Staff. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PLPA 8900  Master’s-Level Thesis Research
Fall or spring. Credit TBA. S-U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For students working on a master’s degree.

PLPA 9900  Graduate-Level Thesis Research
Fall or spring. Credit TBA. S-U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For Ph.D. students who have not passed "A" exam.

PLPA 9910  Doctoral-Level Thesis Research
Fall or spring. Credit TBA. S-U or letter grades. Prerequisites: permission of advisor. Graduate faculty. For Ph.D. candidates who have passed "A" exam.

SCIENCE OF NATURAL AND ENVIRONMENTAL SYSTEMS

SNES 1010  Intro to the Science and Management of Environmental and Natural Resources (also NTRES 1010)
Fall. 3 credits. Prerequisite: first-year students in Natural Resources. Science of Natural and Environmental Systems, or other "environmental cluster" areas in CALS. J. Lassoie and E. Madsen. For description, see NTRES 1010.

SNES 2000  Environmental Sciences Colloquium
Fall. 1 credit. S-U grades only. S. Riha and J. Lehmann. This colloquium consists of a series of lectures on an annually changing theme central to the Environmental Sciences, which poses biophysical, economical and political challenges to modern society. Participants will become familiar with contemporary issues of environmental degradation and opportunities for their mitigation. The colloquium is mandatory for SNES majors and is open to the public.

SNES 4960  Internships in Environmental Science
Fall, spring, summer. 1 credit; may be repeated once for a total of 2 credits. S-U grades only. Student internships involving on- or off-campus supervised, structured work experience. Member of SNES faculty must serve as mentor and complete the term grade report. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/current/student-research/internship/index.cfm.

FACULTY ROSTER
Ahari, George S., Ph.D., Cornell U. Prof., Plant Pathology and Plant-Microbe Biology (Geneva)
Acrec, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Agello, Arthur M., Ph.D., North Carolina State U. Prof., Entomology (Geneva)
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering
Allbright, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Aneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Angenent, Largus T., Ph.D., Iowa State U. Assoc. Prof., Biological and Environmental Engineering
Austic, Richard E., Ph.D., U. of California, Davis. Prof., Animal Science
Baeummer, Antje J., Ph.D., U. of Stuttgart (Germany). Assoc. Prof., Biological and Environmental Engineering
Bain, Mark B., Ph.D., U. of Massachusetts. Assoc. Prof., Natural Resources
Bamburg, David M., Ph.D., Cornell U. Prof., Food Science
Barrett, Christopher B., Ph.D., U. of Wisconsin. Prof., Applied Economics and Management
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Biological and Environmental Engineering
Basa, Alaka, M.S., U. of London (UK). Prof., Development Sociology
Batt, Carl A., Ph.D., Rutgers U. Prof., Food Science
Baugh, Sherene, Ph.D., SUNY, Stonybrook. Assoc. Prof., Landscape Architecture
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Beaver, Steven V., Ph.D., U. of California, Davis. Prof., Plant Pathology and Plant-Microbe Biology
Bellinder, Robin R., Ph.D., Virginia Polytechnic Inst. and State U. Prof., Horticulture
Bjorkman, Thomas N., Ph.D., Cornell U. Assoc. Prof., Horticultural Sciences (Geneva)
Blake, Robert W., Ph.D., North Carolina State U. Prof., Animal Science
Blalock, Garrick, Ph.D., U. of California. Prof., Applied Economics and Management
Blossey, Bernd, Ph.D., Christian-Albrechts U. (Germany). Assoc. Prof., Natural Resources
Boisclair, Yves R., Ph.D., Cornell U. Prof., Animal Science

Kettenring, Quinne, Ph.D., Ohio State. Assoc. Prof., Crop and Soil Sciences
Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture. Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines. Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis. The college’s courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and architecture design studios and shop facilities are in Rand and Sibley. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk. Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

### Libraries
The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 207,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 500,000 slides as well as a rapidly developing digital image collection.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

### Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

### Cornell in Rome
Cornell in Rome is a semester-long study-abroad program of Cornell University’s College of Architecture, Art, and Planning. The college has been hosting students in Italy for 20 years. From its beginnings, the program has provided a transformative experience for young, developing artists, architects, urbanists, and scholars. The program is open to Cornell juniors and seniors, as well as students from other colleges and universities.

Drawing upon the historical and cultural resources of Rome, its museums, art, and architecture, and the city’s beauty and complexity as an ancient and yet modern European city, a semester in Rome has proven to be one of the most important experiences of the undergraduate years, for both intellectual and personal growth.
Courses are offered in architecture, art, and urban studies, architecture history, art history, drawing, photography, architecture theory, contemporary Italian culture, European politics, and Italian language. Weekly classes use the city and its wealth of museums and galleries, archaeological sites, villas, churches, and remarkable public spaces for on-site study, as well as Rome’s many neighborhoods, for field-based learning activities.

Cornell in Rome’s resident faculty, chosen from local and internationally known scholars, critics, architects, and artists, are all expert at using the city as an unparalleled resource for instruction and inspiration. They are joined by Cornell professors from each of the three departments in Ithaca, who teach in Rome for the entire term. An extensive field trip program to many different regions of Italy beyond Rome complements course offerings.

The program is based at Palazzo Lazzaroni, a seventeenth century building in the historic center of Rome and students live nearby in completely furnished apartments provided by the program, enjoying daily contact with the urban life of a major, European city.

Application is made in the academic year before participation. The deadline is November 1 for AAP students and December 15 for all out-of-college applicants. Detailed course and program information may be found at www.rome.cornell.edu. Students are also welcome to stop by the Cornell in Rome office at 149 East Sibley Hall.

AAP in New York City
The College of Architecture, Art, and Planning’s newly opened studio and classroom facility in New York City offers undergraduate and graduate students a unique opportunity to live and study in one of the most culturally vital urban centers in the world, and to be exposed to professional expertise at design firms and nonprofit agencies throughout the city. Located near Union Square in the vibrant Chelsea neighborhood of Manhattan, the AAP center is home base for a semester-long immersive, urban experience. The AAP NYC curriculum reflects Manhattan’s extraordinary artistic, historical, and cultural resources and connects students with AAP’s extensive network of professionals who frequently teach courses and serve as guest critics.

In addition to innovative course work, architecture students may also elect to do a 16-hour-per-week internship at a Manhattan firm. Students in the Urban and Regional Studies (URS) program spend three and a half days a week working with senior executives from public, private, and non-profit organizations. The first group of BFA students will be in residence in New York in spring 2009, combining studio work with art history and theory courses that utilize the unparalleled art resources of New York City.

Eligibility
The program is available to fourth- and fifth-year Cornell undergraduates in the Department of Architecture, and is required for fifth semester M. Arch. 1 students, and third semester M. Arch. 2 students. Students in the program of URS must have completed two years of their required curriculum. Students in the Department of Art are eligible to attend the program in the second semester of their sophomore year. Undergraduate students from outside Cornell are encouraged to apply.

Application is made in the academic year prior to participation. The deadline is November 1 for AAP students and December 15 for all out-of-college applicants.

COLLEGE ACADEMIC POLICIES
Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

Scholastic Standards
Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 credit hours with a grade point average for the semester of not less than C+ (2.3). The record of each student who falls below the standard will be reviewed by the college’s Academic Records Committee for appropriate action, among those described below:

1. The student is issued a Warning. This means the student’s performance is not up to expectations. Unless improvement is shown in the subsequent semester, the student may be placed on Final Warning or given a Required Leave of Absence from the college.

2. The student is issued a Final Warning. This indicates the student’s record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a Required Leave of Absence from the college.

3. The student is placed on a Required Leave of Absence. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college dean, chair of the Academic Records Committee, 129 Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must submit a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department and include an official transcript to request credit for courses taken. A return to study in the college after a required leave of absence is at the discretion of the college’s Academic Records Committee. Requests for spring semester return must be made by November 15 and requests for fall semester return must be made by April 15. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a Required Withdrawal. The student may not re-register in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance during that semester is deemed to be grossly deficient.

It is necessary to have a cumulative grade point average of at least 2.0 (C) for graduation.

Leaves of Absence
The College of Architecture, Art, and Planning adopted the following leave of absence policy effective in the fall of 2006:

Leaves of absence will be of four types:

1. Personal leaves of absence may be granted for a variety of reasons. The student may request a personal leave of absence no later than the third week of class in the affected term. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The term of this type of leave is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college.

2. Conditional leaves of absence may be granted for students desiring to take a leave but who are not in good academic standing or they wish to take a leave during the current term. Conditional leaves are at least two semesters in length. The department will set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. Students may be granted conditional...
ARCHITECTURE COURSES
Course offerings in the college of Architecture, Art and Planning are listed under the various departments. Courses are identified with a standard abbreviation followed by a three-digit number.

For the entering class of 2008, all new students in the college of AAP will be required to complete a 1-credit, interdisciplinary course offered in the fall semester.

AAP 101 The World We Make
Fall and spring, 1 credit. S-U grades. Staff. This course offers AAP first-year students an introduction to the subjects, theories, and methodologies of the disciplines of art, planning, architecture, and landscape architecture. Examples drawn from a range of historical periods as well as contemporary practice highlight distinct processes of thinking and working in each discipline, as well as areas of intersection and overlap.

ARCHITECTURE

Professional Degree Programs
Cornell offers two professional degrees in architecture: the undergraduate bachelor of architecture and the graduate master of architecture. These degrees count toward the professional registration requirements established by the various states, the National Architectural Accrediting Board, and the National Council of Architectural Registration Boards.

B. Arch.
The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work, reading, writing, and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental control, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the bachelor of architecture degree to the post-professional M. Arch. II program. Some students are then able to complete the requirements for the master's degree in one additional year.

M. Arch. I
Cornell's graduate professional program is normally three and one-half years long and is intended for students who already have a bachelor's degree in any subject. Information on this professional graduate program may be found on the architecture web site (www.architecture.cornell.edu).

Note on Professional Accreditation
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a one-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Master's degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitutes an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

The NAAB grants candidacy status to new programs that have developed viable plans for achieving initial accreditation. Candidacy status indicates that a program should be accredited within six years of achieving candidacy, if its plan is properly implemented.

Cornell in Rome
The program offers the opportunity for students from Cornell and other universities to spend one or two semesters of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and regional planning and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

AAP in New York City
The goals of the Architecture Program in New York City are to introduce the students to the best of contemporary practice while enabling students to benefit from transdisciplinary activities achieved by collaboration with the students of other departments and exposure to a multiplicity of practices including art and engineering.
Students have the opportunity to establish connections with significant practices outside of the studio through internships.

### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students. It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B. Arch. and B.F.A. in architecture candidates only:

- **Architecture, Culture, and Society**: 3402 (or equivalent), plus 9 credits in this area.
- **Architectural Science and Technology**: 2601, 2602, 2603, 2604, 3601, 3602, 3603, distribution requirement (3 credits), plus 6 credits in this area.
History of Architecture 1801, 1802, distribution requirements (9 credits), plus 7 credits (including a 4-credit seminar course) in this area.

Theory of Architecture 2301, 2302, distribution requirements (6 credits), plus 6 credits in this area.

Visual Representation in Architecture 1501, 1502, distribution requirement (3 credits), plus 9 credits in this area.

Students wishing to receive recognition for a concentration must submit a concentration request form to the Architecture Department office. For a course to count toward a concentration, the student must receive a grade of C or better.

Transfer Students
Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M. Arch. I program.

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer semesters, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

Alternative Programs

Bachelor of Fine Arts
After completing the first four years of requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture
The history of architecture major leads to a bachelor of science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

Admission requirements. Two years of undergraduate study, ARCH 1801 and 1802 or the equivalent. Students transferring from a B. Arch. program in another college must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall semester of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

All students who wish to enter the program, either from Cornell or other institutions, must apply by November 15 for spring admission or by March 31 for fall admission. Applications for both internal and external transfer students are available from the Admissions Office, College of Architecture, Art, and Planning, Cornell University, B-1 West Sibley Hall, Ithaca, NY 14853-6702. Completed applications must be submitted to the Admissions Office.

Curriculum. A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Advising and student together prepare an appropriate two-year course of study according to the following guidelines:

1. 24 credits of 3000-level courses in architectural history: ARCH 3800 through 3819
2. 12 credits in 6000-level architectural history seminars: ARCH 6800 through 6819; or 8 credits in a 6000-level seminar plus ARCH 4901, offered for honors candidates only
3. One 3000-, 4000-, or 6000-level course in architectural theory
4. 24 credits in electives selected in consultation with the student's advisor
5. Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 3000 level, and have completed an honors thesis (ARCH 4901) deemed to be of distinguished quality by the history of architecture faculty.

Dual-Degree Options
Students can earn both the B.S. and B. Arch. degrees either simultaneously or sequentially. Students who have transferred into the B. Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences.

Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 172 Goldwin Smith Hall.

Students may also elect to continue toward a master of arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture
The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 1101 and 5901, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

Concentration in Architecture for Nonmajors
A special concentration has been formulated specifically for those students not enrolled in the Department of Architecture but who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Nonmajors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this concentration should complete a concentration form, which is available in the architecture department office. This form, when validated by the architecture department and the AAP college registrar, serves as evidence of completion of the concentration requirements. Students should consult their individual college registrars for information about whether their home college recognizes and notes such concentrations on transcripts or diplomas.

The curriculum for students in the Concentration in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

Required courses. A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example,
ARCH 1110 Introduction to Architecture Design Studio (offered summer only)  3 credits

or

ARCH 1103 Elective Design Studio (offered fall only, not offered every year)  6 credits

(ARCH 1103 may substitute for ARCH 1110; students who complete ARCH 1103 must take all other course requirements for the concentration.)

ARCH 1501 Drawing I (fall only)  2 credits

ARCH 1801 or 1802 History of Architecture I or II (ARCH 1801, fall; ARCH 1802, spring)  3 credits

Departmental elective courses: A minimum of 6 credits, including two departmental elective courses, are required.

Professional Master of Architecture

Mission Statement

Consistent with the broader mission of the Department of Architecture, the Master of Architecture program is dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program is committed to the view that the nature of contemporary practice must be continually investigated and reassessed in today’s globally expansive and technologically dynamic context. The program places the question of practice at the center of the learning process. It posits alternative models and methods of research and seeks to empower the student's sense of inquiry, responsibility, and creativity as she or he formulates her or his unique professional trajectory. The program aims in particular to engage the unique strengths and needs of the graduate student: her or his maturity, commitment to architecture, and the wealth and variety of academic and life experiences she or he brings to the discipline. The pedagogy sets skills and knowledge essential to the profession in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture in the 21st century.

Curriculum

Term One Units/Credit Hours

ARCH 5111 Core Design Studio I  6
ARCH 5511 Techniques in Vis Rep I, Freehand & Analytical Drawing 3
ARCH 5301 Theories and Analyses of Architecture I  3
ARCH 5603 Structural Concepts 4
ARCH 5801 History of Architecture I  3

Total Units/Credit Hours 19

Term Two

ARCH 5112 Core Design Studio II  6
ARCH 5512 Techniques in Vis Rep II: Analog/Digital Constructed Drawing 3
ARCH 5302 Theories and Analyses of Architecture II  3
ARCH 5604 Structural Elements 3
ARCH 5802 History of Architecture II  3

Term Three

ARCH 5113 Core Design Studio III 6
ARCH 6601 Environmental Systems II: Thermal Environmental Systems 3
ARCH 5602 Building Technology, Materials, and Methods 3
History Elective or Theory Elective*  3
Visual Representation Elective  3

Total Units/Credit Hours 18

Term Four

ARCH 5114 Core Design Studio IV  6
ARCH 6602 Environmental Systems III: Building Systems Integration 3
ARCH 6603 Structural Systems 3
ARCH 5402 Architecture, Culture, Society  3
Open Elective  3

Total Units/Credit Hours 18

Term Five

ARCH 5115 Core Design Studio V: Integrative Design Practices 6
ARCH 5201 Professional Practice  3
ARCH 8911 Proseminar in Design Research  3
History or Theory or Visual Representation Elective*  3

Total Units/Credit Hours 15

Term Six

ARCH 5116 Vertical Design Studio  6
Visual Representation Elective  3
Open Elective  3
History or Theory or Visual Representation Elective*  3

Total Units/Credit Hours 15

Term Seven

ARCH 8912 Independent Design Thesis 9
Open Elective  3

Total Units/Credit Hours 12

Total Units/Credit Hours 115

* Total required for graduation:
1 Theory elective
1 History elective
1 Theory or History elective
2 Visual Representation electives

Architectural Design

Courses in brackets are not offered this year.

Each student in the architecture program (undergraduates, graduates, New York City Program, and Rome Program participants) is charged a fee each semester to help defray the continuing costs of furnishing and replacing equipment.

Sequence Courses

ARCH 1101 Design I
Fall, spring, 6 credits. Prerequisite: department students. Staff.
Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 1102 Design II
Spring, 6 credits. Prerequisite: department students; ARCH 1101 and 1501. Staff.
Continuation of ARCH 1101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 2101–2102 Design III and IV
Fall and spring, 6 credits each semester. Prerequisites: department students; ARCH 1501–1502, for 2101, ARCH 1101 and 1502, for 2102, ARCH 2101. Corequisite: ARCH 2501–2502. Staff.

ARCH 3101–3102 Design V and VI
Fall and spring, 6 credits each semester. Prerequisites: department students; for ARCH 3101, ARCH 2101; for 3102, ARCH 3101. Staff.

ARCH 4101–4102 Design VII and VIII
Fall and spring, 6 credits each semester. Prerequisite: department students; for ARCH 4101, ARCH 3101 and 3602; for 4102, ARCH 4101. Staff.
Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 5101 Design IX
Fall or spring, 6 credits. Prerequisite: department students; ARCH 4102. Staff.
Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 5901 Design X—Thesis
Fall or spring, 8 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Prerequisite: ARCH 5101. Staff.

Graduate Courses

ARCH 5111 Core Design Studio I
Fall. 6 credits.
Introduction to fundamental concepts of architectural design and representation, including preliminary notions of site, program, and context. Emphasis on interpretive, analytical, and generative uses of drawing, physical modeling, and digital media in the design process.

ARCH 5112 Core Design Studio II
Spring. 6 credits. Prerequisite: ARCH 5111. Continuation of subjects developed in the first term. Focus on issues of program and architectonics in the design of a building type in context; introduction to site planning.

ARCH 5113 Core Design Studio III
Fall. 6 credits. Prerequisite: ARCH 5112. Focus on issues of program and architectonics in the design of a complex building type. Emphasis on interpretive, analytical, and generative uses of digital media.
ARCH 5114 Core Design Studio IV
Spring. 6 credits. Prerequisite: ARCH 5113. Focus on architecture's expanded sites: social, cultural, material, and/or environmental considerations of building in a complex urban landscape.

ARCH 5115 Core Design Studio V: Integrative Design Practices
Fall. 6 credits. (New York City.) Prerequisites: ARCH 5114, 5602, 5604, 6601, 6602, 6603. Focus on the development of architectural ideas in contemporary and material form. The studio explores emergent topics and constructive methods in contemporary architectural practice. Design study includes the creation of a comprehensive set of representations that describes an architectural project in detail. Students work in collaborative groups and in consultation with advisors drawn from professional practice to develop a project that engages a complex range of topical areas, including: structural and environmental systems, building envelope systems, materiality and construction, life-safety planning, and sustainability.

ARCH 5116 Vertical Design Studio
Spring. 6 credits. Prerequisite: ARCH 5115. Open to professional and post-professional M. Arch. students. The vertical studios are topical in nature, and engage contemporary issues in architectural practice and research.

ARCH 7111 Design A
Fall. 6 credits. Staff. Exploration of themes, methods, and technologies in contemporary design.

ARCH 7912 Design B: Topics Studio
Spring. 6 credits. Staff. Graduate vertical research studio.

ARCH 8901 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 8902 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Staff. Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 8911 Proseminar in Design Research
Spring. 3 credits. Prerequisites: ARCH 5801 and 5802. ARCH 8911 offers a synthesis of design and research methods for the development of an independent thesis proposal. Course work includes exposure to different theories and practices of design inquiry, explorations of critical positions for individual development, and preparation of a document encapsulating research leading to a thesis proposition. Successful completion of the course, which includes approval of the thesis document, is a prerequisite for advancement into ARCH 8912: Independent Design Thesis.

ARCH 8912 Independent Design Thesis
Fall. 9 credits. Prerequisites: ARCH 8911, 5116. An independent design project on a topic selected and developed by the student and researched in ARCH 8911. Marking the transition between academic and professional practices, the thesis project is an opportunity for each student to define an individual position with regard to the discipline of architecture.

ARCH 8913 Design C: ADR Project
Summer. 9 credits. Staff. Development of a design project in the student's territory of investigation.

Elective Design Courses

ARCH 1103–1104 Elective Design Studio
Fall, fall, 6 credits each semester. Prerequisite: nonarchitecture students; for ARCH 1103, permission of instructor; for ARCH 1104, ARCH 1103 and permission of instructor. Staff.

ARCH 2100, 3100, 4100, 5100 Elective Design Studio
Fall, spring, or summer. 6 credits. For transfer students and students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Staff. Nonsequence design used as temporary placement of transfer students, off-campus foreign programs third-year students (summer and Rome) and for incomplete in design sequence. In some cases student must petition to convert elective design into sequence design.

ARCH 5103 Design IXa
Fall and spring. 6 credits. Limited to department students. Prerequisites: ARCH 4102 and passing, but non-advancing, in ARCH 5101. Structured studio for those needing to retake ARCH 5101. The course operates within the fourth-year design studios.

ARCH 5104 Design Xa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 5103 and passing, but non-advancing. Staff. Structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars

ARCH 1110 Introduction to Architecture: Design Studio
Summer. 5 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. S-U option. Not offered every year. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major semester project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty members, as well as periodic reviews of the group by invited faculty and guest critics. The grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 1111 Concentration in Architecture: Design Studio
Summer only. 3 credits. Subject to enrollment. Prerequisite: non-architecture students. Not offered every year. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.

ARCH 3103 Special Problems in Architectural Design
Fall or spring. Variable credit; max. 3. Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3106 Praxis: Community Design Workshop (also ARCH 6106)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, verbal, and graphic communication skills to negotiate the public realm.

ARCH 3113 Furniture Design
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn an arch visual representation credit must enroll in sec 01; arch technology credit, sec 02; and in-college elective credit, sec 03. Prerequisite: permission of instructor. Not offered every year. Staff. Explores the history, design, and materiality of furniture. Analyses of materials and joinery-connective systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 3117 Contemporary Italian Culture
Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 5110 Thesis Proseminar
Fall and spring. 2 credits. Prerequisite: ARCH 4102. Staff. Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the conception, programming, and development of a thesis. This course is a prerequisite for ARCH 5901.
ARCH 5201 Professional Practice
Fall or spring. 3 credits. Staff.
Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect’s responsibilities from the pre-contract phase through cost estimating and specifications to construction. Application of computer technology in preparing specifications.

ARCH 5202 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 5201. Staff.
Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm’s practice and the identification of agency roles.

ARCH 5203 Curricular Practical Training
Fall or spring. 1 credit. Open to B. Arch. and M. Arch. students only. Approved independent study form required. Prerequisite: students whose internships are in a country other than that of their citizenship. S-U or letter grades. Independent study promotes an understanding of cultural differences within architectural practice. Course project involves writing a 10-page paper relating the experience of the internship to one or more texts approved by the instructor. Course may be taken more than once, but a maximum of 1 credit may be used to fulfill the in-college “free elective” distribution requirement. Students with summer internships enroll in the course during the spring semester prior to the internship and after obtaining an internship offer. Students with part-time fall or spring internships enroll in the course immediately after obtaining an internship offer.

ARCH 6105 Special Problems in Design
Fall and spring. Variable credit; max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff. Independent study.

ARCH 6106 Praxis: Community Design Workshop (also ARCH 3106)
Fall or spring. 3 credits. Corequisite: permission of instructor. Not offered every year. For description, see ARCH 3106.

ARCH 6110 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff. A companion seminar developing themes explored in ARCH 7111.

ARCH 6111–6112 Urban Housing Developments
6111, fall, 6112, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students, permission of instructor. Not offered every year. Staff.

ARCH 6113 Transportation
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 6114 Low-Cost Housing
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 6101 Architectural Theory
ARCH 1300 An Introduction to Architecture: Lectures
Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S-U or letter grades. Not offered every year. Staff. Survey course that covers the many facets of architecture: history, design principles, preservation, role of other than building technology, and cultural factors. Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

ARCH 1301 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 1301 is not a prerequisite for ARCH 1302. Staff. Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from contemporary Cornell campus.

ARCH 2301 Architectural Analysis
Fall. 2 credits. Corequisite: for architecture students, ARCH 2101. Staff. Introduction to analysis of the object of study in the interest of broadening one’s understandings of the ways in which architecture can connote and denote meanings.

ARCH 2302 Architectural Analysis II
Spring. 2 credits. Corequisite: for architecture students, ARCH 2102. Staff. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 3304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 6304)
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 3307 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit, max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3308 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff. Topic TBA.

ARCH 3309 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Mirin. Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 4302 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: upper-level students. Not offered every year. Staff. Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 4305 Architecture and Representation
Fall or spring. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 2301–2302. Not offered every year. Staff. Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 5301 Theories and Analyses of Architecture I
Fall. 3 credits. Introduces students to influential critical and creative themes in modern architecture. Topics cover influential 20th-century discourses and practices prior to the 1960s, the questions and contexts that they engaged, and their implications for contemporary thinking and design. Discussions and assignments aim at developing critical and graphical readings of both works and writings.

ARCH 5302 Theories and Analyses of Architecture II
Spring. 3 credits. Prerequisite: ARCH 5301. Continuation of ARCH 5301 focusing on themes in architectural discourse, design, and inquiry from the 1960s to the present, and their creative/critical implications.

ARCH 6301 Design Research
Fall. 3 credits. Staff. Introduction to themes of inquiry in contemporary architecture, including critical motives in research, topical “problems,” and materials and tactics of investigation.
ARCH 4408–4418 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each semester. Prerequisite: permission of instructor. B. MacDougall. Topic TBA.

ARCH 5402 Architecture, Culture, and Society
Spring. 3 credits.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of order within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and reproduction in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 6401–6402 Architecture in Its Cultural Context I and II
Fall or spring. 6 credits each semester. Prerequisite: permission of instructor. Not offered every year. B. MacDougall.

Visual Representation

ARCH 1501 Drawing I: Freehand Drawing
Fall. 2 credits. Staff. Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 1502 Drawing II: Drawing Systems
Spring. 2 credits. Prerequisite: ARCH 1501 or permission of instructor. Staff. Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, paraline projection, shade and shadow, and perspective.

ARCH 2503 Drawing III: Digital Media in Architecture
Fall or spring. 2 credits. Prerequisite: ARCH 1502 or permission of instructor. Letter grades only. Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

ARCH 4500 Architectural Publications
Fall or spring. Variable credit; max. 3. May be repeated for credit. Colloquium and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 4508 Special Investigations in Visual Representation
Fall or spring. Variable credit; max. 3. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 5512 Techniques in Visual Representation II: Analog/Digital Constructed Drawing
Spring. 3 credits. Prerequisite: ARCH 5511 or approved equivalent. Develops understanding of, and proficiency in projective drawing, including paraline and perspective representation in both analog and digital forms. Students are also introduced to a variety of digital representation applications, including modeling, rendering, and animation.

ARCH 6508 Special Investigations in Visual Representation II
Fall or spring. Variable credit; max. 4. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 6509 Special Topics in Visual Representation
Fall or spring. 3 credits. Prerequisite: permission of instructor. Staff. Topics TBA.

Architectural Science and Technology

Structures

ARCH 2603 Structural Concepts
Fall. 4 credits. Prerequisite: MATH 1110 or approved equivalent. M. Cruvellier. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 2604 Structural Elements
Spring. 3 credits. Prerequisite: ARCH 2603. J. Ochshorn or staff. Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 3603 Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 2604. M. Cruvellier. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 3604 Vertigo Structures (also ARCH 6604)
Fall or spring. 3 credits. Prerequisite: ARCH 3603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.
ARCH 3605 Bridge Design (also ARCH 6605)  
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. M. Cruvellier.

The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms; not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 4603 Special Topics in Structures  
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 5603 Structural Concepts  
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. M. Cruvellier.

For description, see ARCH 2603.

ARCH 5604 Structural Elements  
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. J. Ochshorn.

For description, see ARCH 2604.

ARCH 6603 Structural Systems  
Fall or spring. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. M. Cruvellier.

For description, see ARCH 3603.

ARCH 6604 Vertigo Structures (also ARCH 3604)  
Fall or spring. 3 credits. Prerequisite: ARCH 5603 or equivalent. Limited enrollment. Not offered every year. M. Cruvellier.

For description, see ARCH 3604.

ARCH 6605 Bridge Design (also ARCH 3605)  
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. Staff. For description, see ARCH 3605.

Construction  
ARCH 2602 Building Technology, Materials, and Methods  
Fall. 3 credits. J. Ochshorn.

Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 3607 Working Drawings (also ARCH 6607)  
Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 4604 Special Investigations in Construction  
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 4605 Special Topics in Construction  
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 2602 or permission of instructor. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation  
ARCH 2601 Environmental Systems I—Site Planning  
Spring. 3 credits. Staff.

Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 3601 Environmental Systems II—Thermal Environmental Systems  
Fall. 3 credits. Prerequisites: ARCH 2601 and permission of instructor. Corequisite: ARCH 3101. Letter grades only. Staff.

The first semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn how to shape the form of a building to respond to climate and the needs of an occupant.

In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVA) equipment, vertical transportation, communication, security, and fire protection systems.

ARCH 3602 Environmental Systems III—Building Systems Integration  
Spring. 3 credits. Prerequisites: ARCH 2602, 2603, 3101 and 3001. Corequisite: ARCH 3102. Letter grades only. Staff. The second half of this yearlong course addresses the design of the visual and acoustical environments of buildings.

Beginning with the basics of vision, followed by the concept and practice of daylighting, electric lighting sources, and human health, this course will provide students with a working understanding of light and sound as architectural media.

The objective of this yearlong course is to engage students to produce a comprehensive architectural project based on a building program and site. To do this, students will be required to select a design from a prior design studio project to develop in this course. In the comprehensive design project, students will be required to demonstrate an understanding of structural systems, environmental systems, building envelope systems, life-safety provisions, wall sections, building assemblies and the basic principles of sustainability.

ARCH 4601 Ecological Literacy and Design (also DEA 4220)  
Spring. 3 credits. Letter grades only. Cost of field trips: approx. $25. J. Elliott.

Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://instruct. cit.cornell.edu/courses/dea422/.ARCH.

ARCH 4618 Special Investigations in Environmental Systems and Conservation  
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 4619 Special Topics in Environmental Systems and Conservation  
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2601, 3601, and 3602 or permission of instructor. Not offered every year. Staff. For description, see ARCH 3601.

ARCH 6601 Environmental Systems II—Thermal Environmental Systems  
Fall. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only. Staff.

For description, see ARCH 3601.

ARCH 6602 Environmental Systems III—Building Systems Integration  
Spring. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only. For description, see ARCH 3602.

Computer Applications  
ARCH 3702 Imaging and the Electronic Age  
Fall or spring. 3 credits. For undergraduate non–computer scientists. Not offered every year. D. Greenberg.

Historical technological advances that created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many disciplines-specific areas including
architectural, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

**ARCH 3704: Computer Graphics I (also CS 4620)**
Fall. 4 credits. Prerequisite: CS/ENGRD 2110. Staff.
For description, see CS 4620.

**ARCH 4706: Special Topics in Computer Applications**
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 3704 or permission of instructor. Not offered every year. Staff.
Topics TBA.

**ARCH 4707-4708: Special Projects in Computer Graphics**
Not offered every year.

**ARCH 4709: Advanced Computer Graphics: Virtual Reality (also ARCH 6709)**
Fall. 3 credits. Prerequisites: introductory computer graphics or computer science course; or permission of instructor; upper-level undergraduate or graduate standing. Not offered every year. H. Richardson.
Explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course examines the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second half explores the uses of information technologies to model and simulate the creative design process. These explorations include developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and “reverse architecture” of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

**Graduate Courses**

**ARCH 6709: Advanced Computer Graphics: Virtual Reality (also ARCH 4701)**
Fall. 3 credits. Prerequisite: introductory computer graphics or computer science course; or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson.
For description, see ARCH 4709.

**ARCH 7701-7702: Architectural Science Laboratory**
7701, Fall; 7702, Spring. 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg. Projects, exercises, and research in the architectural sciences.

**ARCH 7903-7904: Thesis or Research in Architectural Science**
7903, Fall; 7904, Spring. Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff. Independent study.

**Architectural History**

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 1801–1802 in the first year, and three additional courses from the 3800–3819 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

**Sequence Courses**

**ARCH 1801: History of Architecture I**
Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

**ARCH 1802: History of Architecture II**
Spring. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain; may be taken independently of ARCH 1801. Staff.
The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

**Directed Electives**

**ARCH 3800: History of Theory**
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff.
This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

**ARCH 3801: From Utopia to the Ghetto: Renaissance Urban Form**
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky.
The history of the built domain; may be taken more than once to satisfy history of architecture requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

**ARCH 3802: History of Architecture I**
Fall. 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff.
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

**ARCH 3804: The Urban Landscape of Renaissance Rome: 1450 to 1600**
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky.
Explores the relationship between cinematic forms of mass media and architecture. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, and why it has been used as a vehicle for critical commentary on the urban condition, and the ways in which it is embedded in the historical development of architecture and urbanism.

**ARCH 3803: The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture**
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky.
Examines the complex relationship between the built environment, the commodification and definition of cultural heritage, collective memory and civic identity, and the commodification or commercialization of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World’s Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

**ARCH 3805: Magnificent Utility — Architecture and the Arts of Persuasion**
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto.
Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the 17th century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain,
England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 3806 The Architecture of India and Its Interpretation
Spring. 3 credits. Not offered every year. B. MacDougall.
Surveys the architectural record of ancient and medieval India with an emphasis on stupa and temple traditions. Devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Ferguson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 3807 19th Century: Tales of the City
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods.
Focuses on 19th-century cities as settings for modernism and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities. Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 3808 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto.
Precursors and proponents of the modern movement from the late 19th century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design serving the state in the 1940s.

ARCH 3809 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto.
From early 18th century to early 19th century, European society underwent profound change. Political absolutism—the doctrine of unlimited governmental control—was challenged; enlightenment attitudes—commitments to human reason, science, and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 3810 American Architecture and Building I (also AMST 3810)
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods.
Review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 3811 American Architecture and Building II (also AMST 3811)
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods.
Continuation of ARCH 3810 but may be taken independently. An account of American architecture, building, and responses to the environment from the post–Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 3812 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods.
Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium’s birth until the present day. The focus varies each semester with particular emphasis to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising are also explored. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 3813 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto.
Well-established cities were transformed by radical and unimagined change in the 19th and 20th centuries. Politics and economies were recast, population exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 3815 History of the Present—Contemporary Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. C. F. Otto.
Theory and practice in architecture and urbanism are investigated from late Modernism to contemporary positions. Built work, theoretical texts and graphics, and the nature of design practice in locations worldwide (such as the United States and the Pacific Rim) raise issues of globalization and the specificity of place and cultural identity. By engaging the immediate past using methods of cultural and design history, the course problematizes the relationship (and relevance) of history to architectural practice and experience.

ARCH 3816 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff.
Topics TBA.

ARCH 3817 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff.
Topics TBA.

ARCH 3818 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff.
Topics TBA.

ARCH 3819 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff.
Topics TBA.

ARCH 3904 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto.
Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the more recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 5801 History of Architecture I
Fall. 3 credits. Staff.
The history of the built environment as social and cultural expression from the earliest times to the beginning of the modern period is studied through selected examples from across the world. Themes, theories, and ideas in architecture and urban design are explored through texts, artifacts, buildings, cities, and landscapes.

ARCH 5802 History of Architecture II
Spring. 3 credits. Prerequisite: ARCH 581 or approved equivalent. Staff.
The history of the built environment as social and cultural expression from the modern period to the present day is studied through
selected examples from across the world. Architecture and urban design theories, and ideas are explored through texts, artifacts, buildings, cities, and landscapes.

Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 6802 to 6819 TBA before the start of the semester.

ARCH 6800 State of the Discipline
Fall or spring. 4 credits. Staff. This seminar will provide a survey of architectural historiography paying particular attention to the paradigm shifts of recent decades. Through the critical readings of important texts we will discuss the current state of the field while simultaneously reconsidering our position in it. The course will address how we apply theory to practice, develop research strategies that maximize methodological alliances, imbue the study of the past with contemporary relevance, and contribute as much to other disciplines as we borrow from them.

ARCH 6801 Foundations of the Discipline
Fall or spring. 4 credits. Staff. Explorations of seminal positions that established the disciplinary praxis of the history of architecture and urbanism, based on case studies.

ARCH 6802 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6803 Seminar in History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6804 Seminar in Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 6805 Practicum
Fall or spring. 4 credits. Staff. This course exercises history of architecture and urbanism's capacities for affecting contemporary events through critical associations with the past. The workshop culminates in an exhibition, publication, symposium, curricular initiative, or other public occasion. Enrollment of qualified graduate students from associated fields is encouraged.

ARCH 6806 Seminar in 17th- and 18th-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6808 Seminar in 20th-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6809 Seminar in History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6810 Seminar in American Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6812 Seminar in 19th-Century Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6816 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6817 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6818 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6819 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 2809 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff. Independent study for undergraduate students.

ARCH 4901 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff. Independent study for graduate students only.

ARCH 7809 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Prerequisite: permission of instructor. Staff. Independent study for graduate students only.

ARCH 8920 M.A. Essay Research
Fall. 4 credits. Prerequisite: permission of instructor and approved independent study form. Staff. Independent research for the M.A. essay.

ARCH 8921 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 6 credits. Staff. Independent preparation of the M.A. essay.

ARCH 9901 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Staff. Independent study for the doctoral degree.

ARCH 9911 M.A. Thesis in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Staff. Independent study for the master's degree.

ART

P. Phillips, chair (224 Tjaden Hall, 255-3558); M. Ashkin, director of graduate studies; R. Bertiona, J. Lacey, T. McGrain; E. Meyer, G. Page, M. Park, B. Perlus, B. Specter, W. S. Taft, and visiting artists and critics.

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it also to be preparation for careers in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in electronic imaging, painting, photography, printmaking, sculpture, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an advisor in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution
The B.F.A. degree requires 130 academic credits. A minimum of 59 are taken in the Department of Art.
Curriculum
Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.

Specific Course Requirements
By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration
Students must plan their programs to complete 20–27 credits in one of the studio areas of electronic imaging, painting, photography, printmaking, or sculpture. Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Electronic Imaging: ART 1701, 2304/2702 (1 of 2); 2703, 3703/3704 (1 of 2); 4701, 4702 (senior thesis)

Painting: ART 1201, 2201, 3201, 3202, 4201, 4202 (senior thesis)

Photography: ART 1601, 2601, 2605/2604/2605/3601 (1 of 4); 4601, 4602 (senior thesis)

Printmaking: ART 1301/1302/1303 (2 of 3); 2301/2302/2303 (1 of 3); 4301, 4302 (22)

Sculpture: ART 1401, 2401, 3401, 4401 (14)

Second Area of Concentration

Drawing: ART 1501, 1502, 2501, 2502, independent study

Electronic Imaging: ART 2304/2702 (1 of 2); 2703, 3703/3704 (1 of 2)

Photography: ART 1201, 2201, 3201, 3202

Photography: ART 1601, 2601, 2605/2604/2605/3601 (2 of 4)

Printmaking: ART 1301/1302/1303 (2 of 3); 2301/2302/2303 (1 of 3); 3301

Sculpture: ART 1401, 2401, 3401, 4402

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music and theatre, film, and dance. Students must file an approved “area of concentration” form. In addition to the courses required of all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 2000 or 3000 level, a minimum of two “out of college” studio electives (OCE studio) of 3–4 credits each, ART 4801 Pre-Thesis in Combined Media and ART 4802 Thesis in Combined Media.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their academic record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty advisor and the department chair to obtain signatures of approval for admission to the program. Students in the departments wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. (Under special circumstances, seniors may petition to attend the Rome Program.) Only under special circumstances, and with prior petition and approval, are seniors allowed to attend the Rome Program. Students wishing to spend two consecutive semesters in Rome must submit a petition, which should include the proposed course schedule for both semesters and must have appropriate faculty approval.

Sample Rome Curriculum

ART 4000 Rome Studio

Requirement for Rome

B.F.A. students, fulfills 4 credits in a studio concentration

ART 2009 Site-Specific Processes

ART 3102* Modern Art in Italy

ART 3107 History of Art in Rome: Early Christian to the Baroque Age

or

ART 3108 History of Art in Rome: Renaissance in Rome and Florence

or

ART 3702 Special Topics in Art History (spring only)

or

ART 3702 Special Topics: Intermediate and Advanced Drawing

ITALA 1110/1120 Italian Language

ARCH 3107 Contemporary Italian Film 1**

**Students may add by approved petition to take 19 credits in Rome.

17–18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, city and regional planning, and the Independent Studio in Art. Students may petition to take more than 16 credits per semester in the Rome Program. Students must study in Rome for one or two academic semesters.

*Fulfills 3000-level theory and criticism requirement.

Out-of-College Requirements

A minimum of 61 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include: physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

Modern: for example, 2600, 3600, 3740, 3760, 3605, 3650, 3550, 3750, 4523, 4507, 4547, 4600, 4816.

Non-Western: for example, 2350, 3550, 3510, 3800, 3805, 3855, 3850, 4523, 4510, 4578, 4850, 5571.

Three electives: any art history elective at the 3000 level or above or any architectural history elective. Also, approved 2000-level art history courses 2190, 2191, 2200, 2227, 2355, 2400. (Note: Offerings may vary each semester. Students are encouraged to consult

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar (ART 6101, 6102, 6203, 6204). Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence. Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Prior undergraduate art history course work may apply toward this requirement and will be evaluated by the director of graduate studies. Any remaining credit toward this requirement must be taken at Cornell. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Courses in Theory and Criticism

AAP 1101 The World We Make
Fall and spring. 1 credit. S-U grades. Staff. For description, see p. 128.

ART 1101 Introductory Art Seminar
Fall. 1 credit. Prerequisite: B.F.A. students. S-U grades only. Staff. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed. A maximum of two absences are allowed except by permission of chairman.

ART 1701 Visual Imaging in the Electronic Age
Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that concentrates on "why" rather than "how." Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics, modeling and rendering, matting and composing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

ART 2104 Art and the Multicultural Experience
Fall. 3 credits. R. Dalton. Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 3101 Contemporary Art
Fall or spring. Lab fee: $35. Staff. Students will be exposed to the ideas, issues, and methodology of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course combines lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and in encouraging the understanding of the connections between the conceptual and the technical in art making.

ART 3102 Modern Art in Italy
Fall or spring. 3 credits. Fulfills 3000-level theory and criticism requirement for fine arts majors. Prerequisite: Rome Program participants. Staff. Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, critics, and others. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion. Focuses on the role of the art critic and museum, and art collecting.

Related Courses

[ART 2009 Site-Specific Processes]

ART 3107 History of Art in Rome: Early Christian to the Baroque Age
4 credits. Rome Program. Not offered every year. Staff. General survey of the early Christian period to the fantastic vision of Piranesi in the 18th century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 3108 History of Art in Rome: Renaissance in Rome and Florence
Not offered every year. Staff. Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 4109 Independent Study/Supervised Readings in Art
Fall, spring. 1-3 credits, variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

Graduate Studio and Theory Courses

ART 5701 Theory Seminar
Fall or spring. 4 credits. Priority given to AAP and History of Art graduate students. Staff. Introduces students in art, art history, and architecture to diverse theoretical texts of relevance to the three fields. Readings include classic texts in post-structural theory and more recent writings in new areas of theory and artistic practice, including digital art, cyber-feminism, globalization, museums and museology, architecture in/as visual space, biotechnology, and artificial life, as well as issues in cognitive science and human-computer interaction centering on space and embodiment. Occasionally this seminar focuses on a single topic of convergence for these diverse areas.

ART 6103 Online Publication for the Visual Artist
Fall. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally each student learns to create a home page on the web.

ART 6104 Contemporary Theory in the Visual Arts
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 6203 Contemporary Theory and Visual Culture
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar exploring selected writings on contemporary issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

ART 6204 Current Criticism in the Visual Arts
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar designed to introduce graduate students to critical writing in the visual arts, both in print and in digital format. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

Graduate Studio Courses

ART 7001–7002 Graduate Studio I and II
7001, fall; 7002 spring. 9 credits. Prerequisite: first-year M.F.A. students. Staff. Required for all M.F.A. students. Course instructor is the chair of student’s Special Committee. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. All members of the faculty are available for individual consultation.

ART 8001–8002 Graduate Studio III and IV
8001, fall; 8002, spring. 9 credits. Second-year M.F.A. students. Staff. Required for all M.F.A. students. Course instructor is the chair of student’s Special Committee. Students are responsible, under faculty direction, for planning their own
Undergraduate Studio Courses in Drawing

Fees for all drawing courses: $25

ART 1500  Summer Drawing I
Summer. 3-week session. 3 credits.
Course does not fulfill studio credit for BFA majors. Staff.
General course introduces students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1501  Drawing I
Fall, spring. 3 credits. Staff.
General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1502  Drawing II
Spring. 3 credits. Prerequisite: ART 1501. Staff.
General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1501 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 1503  Summer Drawing II
Summer, 3-week session. Course does not fulfill studio credit for BFA majors. Staff.
General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1500 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 1507  Observation and Conception: Drawing
Summer, 6-week session. 3 credits. Staff.
Experimental investigations related to various properties of drawing relevant to contemporary artistic practices. Working from the imagination as well as studies from life serve as the basic structure for this course. These practices range from pictorial representation to conceptual strategies. The team-taught aspect of this course allows for a critical discourse and an intensive approach to learning skills and developing sensibilities, building a foundation for all further advanced visual media studies.

ART 1508  Conceptual Drawing
Summer, six-week session. 3 credits. Staff.
Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 1509  Life and Still-Life Drawing
Summer. six-week session. 3 credits. Staff.
Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

ART 2501  Drawing III
Fall. 3 credits. Prerequisite: ART 1502. Staff.
Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptual and formal considerations. The resulting body of work informs and supports advanced thesis work across the visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.

ART 4509  Independent Studio in Drawing
Fall, spring, or summer. 4 credits. Variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

Undergraduate Studio Courses in Electronic Imaging

Course fees:
1701, 3702, 4709 $250
2304, 2701, 2702 $105
3703/3704 $250
4701, 4702 $ 70

ART 1701  Electronic Imaging in Art
Fall or spring. 3 credits. Staff.
This is an introductory studio course using the computer for contemporary art making. Students approach software programs by researching historical and contemporary art issues, with emphasis on the constructed image: motion, virtuality and interactivity.

ART 2304  Large-Format Digital Printing
Fall and spring. 4 credits. Prerequisite: ART 1701. Staff.
Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, Quarkxpress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.

ART 2702  Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: ART 1701. Not offered every year. Staff.
Studio course that introduces students to digital video including camera, stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.

ART 2703  Computer Animation (also CIS 5640)
Fall. 4 credits. D. Greenberg.
Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

ART 3703  Advanced Projects in Time-Based Art
Fall. 4 credits. Prerequisites: ART 1700 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Letter grades only. Staff.
This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key frame-based animation, layering animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public spaces.

ART 3704  Interactive Digital Media
Spring. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Letter grades only. Staff.
This is a project-centered studio course designed to encourage students to integrate computer-aided and time-based media (video, sound, motion graphics, and text) using physical materials and space. The course will challenge students to develop a theoretical understanding of the relationship between body and technology in a social and cultural context. Students will use digital technologies to create projects using interactive CD-ROM/web art, sensor and micro-controller aided interactive video and sound installations, real-time performance, and public space. The course encourages integrative approaches to studio production.

ART 4701  Pre-Thesis in Electronic Imaging
Fall and spring. 6 credits. Prerequisites: ART 1701, 2304 or 2702, 2705, 4701. Staff.
For information, please call department.

ART 4702  Thesis in Electronic Imaging
Fall and spring. 6 credits. Prerequisite: ART 4701. Staff.
For information, please call department.
Undergraduate Studio Courses in Painting

Fees for painting courses (1201, 2201, 3201, 3202, 4201, 4202, 4209): $40

ART 1201 Introductory Painting
Fall, spring, or summer. 3 credits. Staff. Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 2201 Painting II
Fall or spring. 4 credits. Prerequisite: ART 1201 or permission of instructor. Staff. Continuation of the study of aspects of pictorial composition initiated in ART 1201, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 3201 Painting III
Fall or spring. 4 credits. Prerequisite: ART 2201 or permission of instructor. Staff. Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 3202 Painting IV
Fall or spring. 4 credits. Prerequisite: ART 3201 or permission of instructor. Staff. Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 4201 Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 3202. Staff. Advanced study of painting through assigned and independent projects using a variety of materials leading to the formulation of a thesis project.

ART 4202 Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 4201. Staff. Focused independent project demonstrating creative ability and technical proficiency. Projects are exhibited in an appropriate space at the end of the semester.

ART 4203 Independent Studio in Painting
Fall, spring, or summer. 4 credits. Variable. Prerequisites: juniors in good academic standing and permission of instructor. Staff. Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

Undergraduate Studio Courses in Photography

Darkroom fees for photography courses:
Black-and-white courses: $135
Color courses: $215

ART 1601 Photography I
Fall, spring, or summer. 3 credits. Staff. Basic lecture-studio course in black-and-white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

ART 1602 Black-and-White Photography
Summer, three-week session only. 3 credits. Staff. Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 1603 Color Photography
Summer, three-week session only. 3 credits. Staff. Intended for students at all levels, from introductory to advanced. Emphasis is on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 2601 Photography II
Fall, spring, or summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Staff. Continuation of Photography I, concentrating on black-and-white photographic processes, history and theory of creative practice, and individual projects.

ART 2602 Color Photography
Fall and summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Staff. Studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 2603 Photo Processes
Fall, spring, or summer. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Staff. Studio course in alternative and nonsilver photographic processes. Emphasis is on camera skills, basic techniques and processes, image content, and creative use of photo processes.

ART 2604 Studio Photography
Fall or spring. 4 credits. Prerequisite: ART 1601 or ARCH 2501, or permission of instructor. Staff. Course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 3601 Photography III
Fall, spring, or summer. 4 credits. Prerequisite: ART 1601, 2601, or permission of instructor. Staff. Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 4601 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 2601, 2603. Staff. Studio course intended for photography majors and other qualified students.

ART 4602 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: ART 4601. Staff. Studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 4609 Independent Studio in Photography
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in photography that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Undergraduate Studio Courses in Printmaking

Fees for printmaking courses:
Intaglio (1301, 2301, 4301, 4302, 4309): $95
Screenprinting (1302, 2302, 4301, 4302, 4309): $45
Lithography (1303, 2303, 4301, 4302, 4309): $95
Expanded Print Forms (1304, 2304): $95

ART 1301 Introductory Intaglio
Fall and spring. 3 credits. Staff. Basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

ART 1302 Introductory Graphics
Fall and spring. 3 credits. Staff. Introduces the two-dimensional thought process and the language of vision. Students explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

ART 1303 Introductory Lithography
Fall and spring. 3 credits. Staff. Study of the theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

ART 1304 Expanded Print Forms
Spring. 3 credits. Prerequisite: one of the following: ART 1301, 1302, 1303, 1601, 1701, 2501, or permission of instructor. Staff. Intensive experimental studio designed to introduce students to various ideas and processes of making artists’ books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography/ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital publication as an expanded print form helps students investigate how the book is reinvented or reshaped within an electronic context.

ART 2301 Intaglio II
Spring. 4 credits. Prerequisite: ART 1301. Staff. Studio course in advanced etching techniques. Refinement of processes and
ideas through the uses of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

### [ART 2302 Advanced Screen Printing]

**ART 2303 Lithography II**

Spring. 4 credits. Prerequisite: ART 1301. Staff.

Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

**ART 2304 Large-Format Digital Printing**

Fall and spring. 4 credits. Prerequisites: ART 1601, 1701, and one of the following: ART 1301, 1302, 1303, 1304 or permission of instructor. Staff.

Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photo-mechanical processes. Students use appropriate software, including Adobe Photoshop, Quarkxpress, Final Cut Pro, and Adobe illustrator to draw from both still and video base sources. Students work with large-format inkjet printers.

**ART 3301 Printmaking III**

Fall or spring. 4 credits. Prerequisite: ART 2301, 2302, or 2303 or permission of instructor. Staff.

Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 3302 Printmaking IV**

Fall. 4 credits. Prerequisite: ART 3301 or permission of instructor. Staff.

Continuation and expansion of ART 3301.

**ART 4301 Pre-Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisite: ART 3302. Staff.

Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 4302 Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisite: ART 4301. Staff.

Advanced printmaking project to demonstrate creative ability and technical proficiency.

**ART 4309 Independent Studio in Printmaking**

Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**ART 4409 Independent Studio in Sculpture**

Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

### Special Studio Courses

**ART 1109 Internship Practicum**

Fall, spring, and summer. Variable credit. S-U grades only.

Students serving as interns with art-related businesses or institutions may receive academic credit upon receipt of a letter from the internship sponsor confirming successful performance of internship responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements.

**ART 1505 Drawing Rome**

Summer. 3 credits. Letter grades only. Staff.

The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome: its public spaces, churches, museums, archaeological zones, and the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done on site. Course meets four weeks, 5X per week.

**ART 3702 Special Topics in Art Studio**

Fall, spring, or summer. 4 credits, variable. Staff.

Exploration of a particular theme or project. For example, Special Topics in Art History, offered spring 2009 for Rome Program participants.

**ART 3709 Independent Studio in Rome**

Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; juniors in good academic standing and written permission of instructor. Staff.

Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

**ART 3809 Independent Study/Cornell in NYC**

Fall, spring, or summer. 4 credits variable. Prerequisite: student in good academic standing and written permission of instructor on an approved independent study form. Staff.

Independent study or studio allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
ART 3901 Media Arts Studio I (also ARCH 4509/6509, DANCE 3570)
Fall. 3 credits. Prerequisites: FILM 3770; junior standing and permission of instructor. Equipment fee: $50. Staff.
For description, see DANCE 3570. [ART 3902 Media Arts Studio II]
ART 4000 Rome Studio
Fall or spring. 4 credits. Fullfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Lab fee: $60; additional fees for photography and printmaking. Staff.
Emphasis is divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media consist primarily of painting, drawing, sculpture, and photography; or those assigned by the instructor.
ART 4709 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.
Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.
ART 4801 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on combined media thesis form (must be received in art department before enrollment in course). Students must enroll in pre-thesis course in their primary area of concentration. Lab fee: $70. Staff.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they work. Projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.
ART 4809 Independent Studio in Combined Media
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Lab fee: $70. Staff.
An independent studio in combined media that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies

The program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Graduates from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies addressing urban and regional issues. Courses in the program provide students with a broad understanding of urban issues, the ability to assess those issues, and skills for technical analysis. The URS program is truly interdisciplinary: students learn to evaluate urban and regional problems by using wide ranges of analytic tools and disciplinary perspectives.

URS Statement of Purpose

The URS program encompasses an interdisciplinary, liberal arts course of study focused on the forces that shape the social, economic, and political character and physical form of cities, suburbs, and their surrounding regions. Students pursue knowledge in a range of disciplines, acquire significant writing skills, quantitative and non-quantitative analytical skills, and develop the capacity to think broadly and deeply regarding the past, present, and future of urbanized communities and their inhabitants.

Like many quality liberal arts programs, the URS program requires students to develop a broad academic base in the physical and biological sciences, quantitative methods and mathematics, social sciences and history, humanities and the arts, and writing. The major requires students to complete a series of four introductory courses and encourages them to develop expertise in areas such as, subutbs, and metropolitan regions through a series of lenses. Students use theory to examine social dynamics, politics, economics, history, design and land use patterns, and environmental problems.

Graduates pursue a wide variety of advanced studies and careers in city and regional planning, historic preservation, real estate, architecture, landscape architecture, public administration and law; and positions in the public sector teaching, not-for-profit institutions, and consulting firms.

Advanced Placement Credit

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences or in the groups Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR) currently utilized by the College of Arts and Sciences, provided that they must complete at least one science course during their undergraduate career. They may apply advanced placement credit toward the distribution requirement in Groups 3 and 4 previously established by the College of Arts and Sciences or toward the distribution requirements in categories currently established by the College of Arts and Sciences in Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA). Grades of S-U courses cannot be applied to the distribution requirements.

Basic Degree Requirements for students in the graduating classes of 2008-2009

URS requirements for graduation include (a) eight semesters of residence; (b) 120 credits; (c) General Education Requirements consisting of writing seminars, qualification in one foreign language, and a series of distribution requirements; (d) required courses for the major; (e) area requirements for the major; (f) free electives; (g) a minimum of 34 courses; and (h) completion of the university requirement in groups Physical and Biological Sciences or in the groups Physical and Biological Sciences or toward satisfaction of the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences. Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

More specifically these requirements include:

1. General Education
a. First-year writing seminars: two courses. Students earning a score of 5 on both English literature and English language exams will receive credits (in out-of-college electives) and place out of one first-year writing seminar.

b. Foreign language: three courses or qualification in one foreign language

c. Distribution Requirements: nine courses. Students must take a total of nine courses for the distribution requirement: four courses (of 3 or more credits each) from Groups 1 and 2 specified below, at least two of which are from Group 1, and at least one of which is from Group 2, five courses from Groups 3 and 4 specified below, with at least two in each group and two in the same department. No single course may satisfy more than one
distribution requirement. URS students must follow previously established College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (two to three courses required)
Group 2: Quantitative and formal reasoning (one to two courses required)
Group 3: Social sciences and history (two to three courses required)
Group 4: Humanities and the arts (two to three courses required)

URS students will be provided a complete listing of courses in Groups 1 through 4 based on requirements previously established for the College of Arts and Sciences. Note: The Arts and Science distribution requirement was changed for entering freshmen in the class of 2007. Rather than selecting courses from Groups 3 and 4, Arts and Sciences students are required to complete five courses in at least four of the following five categories: Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA). Social science and humanities courses are marked individually by category, and any given department may offer courses that fall into distinct categories. URS students are encouraged to select their Group 3 and Group 4 courses from four of these five categories.

URS students may not apply college credit earned before entering Cornell as a freshman to satisfy any distribution course requirement. However, they may petition to have that credit counted toward the 120 total credits required for graduation.

2. Required Courses for the Major: seven courses

CRP 1100 The American City (fall, 3 credits)
CRP 1101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)
CRP 1106 URS First-Year Seminar (spring, 1 credit)
CRP 2000 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
CRP 2010 People, Planning and Politics in the City (spring, 3 credits)
ECON 1110 Microeconomics (fall or spring, 3 credits)

Statistics: One course from a list of statistics courses (fall or spring, 3 credits)

3. Area Requirements: six CRP courses

The program requires that students take courses in six areas:

a. Design and Land Use (one course from designated list of courses)
   Students understand cities, suburbs, and regions in terms of aesthetic perception and patterns of human land use that shape physical, social and economic conditions.

b. Urban History, Society, and Politics (one course from designated list of courses)
   Students examine the growth, development, and character of today’s urbanized areas/residents, in light of complicated and evolving historical forces, social and economic concerns, and political constituencies, ideas, and choices.

c. Environment (one course from designated list of courses)
   Students become aware of the past, present, and future influence of the natural environment as modified by humans, in shaping, and in many instances substantially limiting urban growth and development.

d. Regional Development and Globalization (one course from designated list of courses)
   Students learn how far flung social and economic forces influence the economic health and general well-being of cities.

e. Methods for Planning and Urban Studies (one course in quantitative methods from designated list of courses)
   Students learn to use interviews, surveys, participant observation, and other non-quantitative methods to analyze attitudes, behaviors, trends, and other information related to urban development.

f. Methods for Planning and Urban Studies (one course in quantitative methods from designated list of courses)
   Students learn tools to analyze economic, sociological, and other quantitative data relevant to the development, implementation, and assessment of public and private actions that influence the growth and development of cities.

Basic Degree Requirements for students in the graduating class of 2010

Students in the Class of 2010 must meet the same requirements as those specified for the classes of 2008-2009 except that they must also complete AAP 1401 The World We Make (fall, 1 credit) under required courses for the major.

Basic Degree Requirements for students in the graduating classes of 2011 and beyond

Students in the classes of 2011 and beyond must meet the same requirements as those specified for the class of 2010 except that they must complete their Distribution Requirements (under General Education Requirements) in accord with the Distribution Requirements established for the College of Arts and Sciences: i.e., requirements specifying minimum number of courses and acceptable courses in Physical and Biological Sciences (PBS); Mathematics and Quantitative Reasoning (MQR); Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA).

Honors Program

Each year a few well-qualified seniors may join the honors program at the beginning of their senior year. Each honors student develops and submits an honors thesis under the guidance of his or her faculty advisor.

Urban Studies Concentration (non-URS majors)

The Urban and Regional Studies concentration has been formulated specifically for those students not enrolled in the Program of Urban and Regional Studies who are interested in complementing their current academic program with an introduction to various facets of urban studies (domestic, environmental, international, professional, urban affairs).

To complete the Urban and Regional Studies (URS) concentration, students must take at least six courses (minimum total of 18 credits) in the Department of City and Regional Planning (CRP). Courses must be completed with letter grade of C or above, as follows:

1. Nine (9) credits of required core courses:
   CRP 1100 The American City (3 credits)
   CRP 1101 The Global City: People, Production, and Planning in the Third World (3 credits)
   CRP 2000 The Promise and Pitfalls of Contemporary Planning (3 credits)

2. Nine (9) credits of elective department courses at the 300 level or higher.
   (Please consult department course listings.)

Students meet with their home college faculty advisor. Upon completion of course requirements, students complete a URS concentration application form, available in 106 W. Sibley Hall. The AAP registrar verifies course completion and grades for concentration requirements and signs the application form. The URS program director (who also serves as URS concentration advisor) verifies completion of the concentration, signs the form, and sends a letter (on department letterhead) to the student’s home college. The home college will record completion of the URS concentration on the student’s transcript.

URS Students in Concentrations Offered by Other Departments

The department recognizes concentrations earned within the university (accepting sets set by various colleges). URS students may apply for concentrations in any college (e.g. Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, and Feminist, Gender, and Sexuality Studies). When a student satisfies the requirements for a concentration, signs the form, and sends a letter (on department letterhead) to the student’s home college, the home college will record completion of the URS concentration on the student’s official transcript.

Off-Campus Opportunities

Cornell in Washington Program (C-i-W)

Students in good standing may earn degree credits through course work and an externship in Washington, D.C. Students at C-i-W may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in politics and public policy. Students take an 8-credit research course and select one or two seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad

Qualified undergraduates are encouraged to study abroad because exposure to foreign cultures can be an eye-
opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. Study-abroad opportunities are continually being developed, and programs are available in many countries. The department encourages URS students to explore these opportunities.

**Cornell-in-Rome.** Students in good standing can spend a semester at AAP's teaching facility, Palazzo Lazzaroni, in Rome. They earn credits in courses taken with Cornell faculty members, assigned to Rome and with the resident faculty instructors. Courses are available in areas of urban development, regional development, architecture and art, Italian language, culture, and history.

**AAP in New York City.** The College of Architecture, Art, and Planning has a teaching facility in New York. The URS Program will have a New York semester for its students beginning in 2008–2009.

**Research and fieldwork.** Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

**Additional Degree Options**

**Linked degree options.** URS students may earn both a bachelor of science degree and a master of regional planning (M.R.P) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

**Dual-degree options.** A student accepted in Cornell's College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in Urban and Regional Studies in a total of five years. A student accepted in Cornell's College of Agriculture and Life Sciences (CALS) may earn both a B.S. in a CALS major (e.g., Landscape Architecture) and a B.S. in URS in a total of five years. Special requirements have been established for these dual-degree programs. Cornell students interested in pursuing the dual-degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences or of the CALS for further information.

**Admissions Requirements and Procedures**

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete the University admissions application. Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Graduate School, Ithaca, NY 14853-6701, 607-255-4025.

**Transfer Students**

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work by the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfer students should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous coursework closely parallels the “General Education” requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-6701, 607-255-4025.

**The Graduate Program in City and Regional Planning**

There are five graduate degree programs in the city and regional planning department. The master of regional planning program (M.R.P) stresses skills basic to professional planning practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. The master of professional studies in international development (M.P.S./I.D.) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or midcareer professionals in related fields.

The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage.

The master of science (M.S.) or master of arts (M.A.) degrees in regional science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

**Off-Campus Opportunities**

**Cornell in Rome.** Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

**Undergraduate Program in Urban and Regional Studies**

**CRP 1100 The American City**

Fall. 3 credits. S-U or letter grades for out-of-department students only. W. W. Goldsmith. Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

**CRP 1101 The Global City: People, Production, and Planning in the Third World**

Spring. 3 credits. S-U or letter grades for out-of-department students only. A. Forsyth. Critical look at the physical and social development of giant cities in the Third World. Their origins, role, contributions, and shortcomings are examined. Their place in...
world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 1106 URS First-Year Seminar
Spring. 1 credit. S-U grades only. R. Booth.
Introduces students to substantive issues of the diverse disciplines that make up the planning profession through weekly interaction with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

CRP 2000 The Promise and Pitfalls of Contemporary Planning
Fall. 3 credits. Prerequisite: CRP 1100. A. Sanchez.
Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

CRP 2010 People, Planning, and Politics in the City
Spring. 3 credits. Prerequisites: CRP 1100 and 1101. P. Olpadwala.
Seminar examining various bases of political and professional power. What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups? The course addresses these and others questions.

CRP 2610 Fieldwork in Urban Archaeology (also LA 2610)
Fall. 4 credits. S. Baugher.
For description, see LA 2610.

CRP 2930 Inequality, Diversity, and Justice (also GOVT 2935, SOC 2930, PHIL 1930)
Fall. 4 credits. R. Miller.
For description, see PHIL 1930.

CRP 3011 Ethics, Development and Globalization (also CRP 6011)
Fall or spring. 4 credits. K. Donaghy.
This seminar surveys some of the most important recent contributions to the literatures of development ethics and global ethics and examines their power to illuminate such issues as the nature of development, poverty and human rights, globalization and local autonomy, environmentalism and consumerism, and humanitarian intervention and just wars.

CRP 3090 Community Development Seminar (also CRP 5090)
Spring. 3 credits. Letter grades. K. Reardon.
Introduction to the theory, method, and practice of contemporary community development. Topics include the role community-based organizations play in promoting sustainable development in distressed communities; the contribution planners are making to enhancing the organizational capacity of community-based organizations, and the interplay between neighborhood-based community development activities and regional economic development policy-making.

CRP 3101 Race, Space, Place (also CRP 6101)
Fall or spring. 3 credits. C. Lai.
This seminar examines critical theories of race and space and investigates key sites where racial formation and spatial production intersect. These multiscalar sites include the neoliberal city, the prison industrial complex, and the Mississippi Delta. We analyze not only the fatal coupling of difference, power, and space, but also the spatial politics of resistance and refusal.

CRP 3102 Asian American Politics and Public Policy (also CRP 6102)
Fall or spring. 3 credits. C. Lai.
This lecture course examines key political and public policy issues affecting Asian American communities, such as immigration law, racial profiling, labor struggles, and electoral politics. We pay particular attention to political mobilization efforts on the part of different Asian ethnic groups and examine how these groups have organized, framed their issues, and mobilized in terms of space, place, and spatial scale.

CRP 3105 Urban Political Economy Seminar (also CRP 6105)
Fall or spring. 3 credits. Staff.
This course deals with current topics in urban political economy and examines past and present dayseizure of land, resources, and ways of life as well as resistance against such seizures. We begin with an examination of colonial conquest and the expropriation of the English commons in the 17th and 18th centuries and conclude with contemporary anti-globalization struggles against privatization. Our reading will come from social history, political geography, and ethnic studies.

CRP 3180 Politics of Community Development (also CRP 5180)
Spring. 3 credits. Letter grades. Staff.
Seminar on city economic development and community institutions. Attention to issues of local politics, planning, housing, and economics. Term papers on field investigations are encouraged. Topics vary from year to year.

CRP 3210 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits. Not offered every year. K. Donaghy.
Introduction to the role and use of quantitative methods in the study of urban and regional issues, and the development and use of various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, simulation, and others. Strengths and weaknesses of those methods are also considered.

CRP 3270 Regional Economic Impact Analysis (also CRP 6270)
Fall. 3 credits. Letter grades. Staff.
A central concern of practicing planners and economic development professionals is how different events affect the regional economy of concern. Some events are the result of policy choices, such as the closing of a military base or an increase in the local sales tax. Some are the result of exogenous economic forces such as out-migration of population, disasters, natural-floods and hurricanes. This course defines the context, a regional economy, for such analysis, and then presents analytical tools for estimating economic impacts. The major tool covered in depth is regional input-output. Most of the course is devoted to understanding and applying IMPLAN, a software and data system for performing regional input-output analysis at the county level.

CRP 3280 Overview: Quantitative Methods in Policy Planning (also CRP 5180)
Fall or spring. 3 credits. S-U or letter grades. R. Booth.
Introduces students to the basic tools that are used in policy analysis. The goal is to set the context for the techniques presented, to understand the questions that each addresses, to be aware of their potential and limitations, their range of applicability, and the pitfalls to be avoided.

CRP 3300 Neighborhood Planning Workshop (also CRP 5300)
Spring. 4 credits. Letter grades. R. Kiely.
Offers students the opportunity to collaborate with local residents, leaders, and officials in the development of revitalization plans that address the critical environmental, economic, social challenges confronting their neighborhoods. A participatory action research approach is used to co-produce professional-quality development plans with local stakeholder groups. Significant fieldwork required.

CRP 3310 Social Justice and the City: Preparation for Urban Fieldwork
Spring. 3 credits. Prerequisite: Urban Scholar status or permission of instructor. Letter grades only. R. Kiely.
Students are introduced to key sociological, economic, historical, and cultural issues embedded in planning for social justice in urban America. Topics include: local realities and macro and macro policies affecting housing, education, immigration, health, legislation, legal affairs, mobility, development, and organizing in a large urban setting. In preparation for field-based learning and research experiences, the challenges of experiential education, public scholarship, and reflective practices will also be addressed both from the perspective of non-profit organizations and local government agencies serving under-resourced urban communities, and the undergraduate student as learner and worker. Students will be exposed to the principles of participant observation, informal/formal interviewing skills, managing field relations, professional ethics, and ethnographic report-writing.

CRP 3320 Post-Fieldwork Writing Seminar in Urban Policy (also CRP 5220)
Fall. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s). S-U or letter grades. R. Kiely.
Designed to enhance students’ research, writing, analytical, and organizational skills for producing policy-oriented articles that examine vital issues confronting the urban poor. Students will build on prior fieldwork with nonprofit organizations and public agencies.
CRP 3411 Growing Up In Cities
Fall or spring. 4 credits. K. Driskell. Growing Up in Cities is a global action research initiative that involves young people (ages 10 to 15) in exploring their local environment, identifying priorities for change, and working to make change happen. It is a comparative research initiative focused on how young people perceive, value, and use the urban environment; how they shape and transform urban spaces; and how the urban environment shapes and transforms their lives. It is also a community change initiative that seeks to develop stronger environmental awareness among young people; foster meaningful child and youth participation in community affairs and decision making; and nurture positive relationships between young people and "enabling adults" to improve the local environment.

CRP 3430 Affordable Housing Policy and Programs (also CRP 6430)
Fall. 3 credits. S-U or letter grades. R. Pendall. Overview of federal, state, and local policies and programs to deliver affordable housing to low-income people; public housing, vouchers, inclusionary zoning, rent control, and much more. Lectures, debates, short papers, and term paper.

CRP 3500 Introduction to Environmental Planning (also CRP 6500)
Fall. 3 credits. S. Schmidt. Introduction to problems facing planners and decision makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying, and risk analysis.

CRP 3502 Suburbia (also CRP 6502)
Fall or spring. 3 credits. A. Forsyth. Cultural commentators love to hate suburbia but the suburban parts of metropolitan areas are expanding around the globe. Readings, films, and lectures cover topics including suburban history, design planning, ecology, social organization, politics, and culture. Students will use photography, mapping, discussions, and brief papers to develop their own views of suburbia.

CRP 3504 Comparative Urban Development (also CRP 6504)
Fall or spring. 3 credits. S. Schmidt. This course examines the changing structural and institutional landscape of urban planning and development as practiced in cities and regions in specific areas outside the U.S., with a particular focus placed on how these institutional arrangements and conditions compare with the U.S.

CRP 3506 Environmental Planning Seminar (also CRP 6506)
Fall or spring. 3 credits. E. Thorndike. This course deals with current topics in environmental planning. Wilderness and wildland resources have been under assault by the Congress, the "Wise Use" movement, property-rights activists, pollutants, and the actions of urbanists. The seminar considers historical and philosophical foundations and political factors that affect decisions about environmental policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined.

CRP 3600 Post-industrial Cities and Towns of North America (also LA 2600/6660, CRP 6660)
CRP 3601 Museum and the Public Sphere (also CRP 6601)
Fall or spring. 4 credits. J. Chusid. Evaluates different types of museums (art, science, history, arboreta, etc.), and their constantly evolving missions in contemporary societies. The material is addressed through site visits, lectures by faculty and guests, readings, case studies and a team semester-long project. Issues covered include the nature of collections; the nature of the audience; the purpose and role of museums; political and cultural questions about collecting, history and interpretation; governance structure and the core ethical and intellectual values and positions implied or expressed by the institutions. Students will also undertake a comprehensive planning project for a local museum, to be presented to the client at the end of the semester.

CRP 3650 Gender and Globalization (also FGSS 3650)
Fall. 3 credits. L. Beneria. For description, see FGSS 3600.

CRP 3670 Seminar in American Urban History (also CRP 6670)
Fall or spring. 3 credits. Prerequisite: permission from M. Tomlan. Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 3680 The History of Urban Form in America (also CRP 6680)
Fall or spring. 3 credits. Letter grades. M. Tomlan. Covers the history of city planning in America from colonial times to the early 20th century, including brief reviews of European influences on urban form. Lectures, discussions, and short papers.

CRP 3700 The Regional Question: The Case of Italy
Spring. 4 credits, variable. Prerequisite: Rome Program participants, majors in urban and regional studies. Staff. The "regional question" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy’s integration into the European Union affects and is affected by its regional issues will be considered.

CRP 3720 20th-Century Italy: Politics and Society
Spring. 3 credits. S-U or letter grades for out-of-department students only. Staff. Comprehensive survey of Italian society today, starting with Italy’s geography and the historical forces that shaped the nation. Discussion includes north-south tensions and such broad features of Italian social life as community structure, urban development, and family forms. The course also reviews selected institutional issues, such as gender, the system of education, problems of criminality and justice, economic reform, social class, religion, and politics.

CRP 3770 The City in Brazil (also CRP 6670)
Summer. 3 credits. S-U or letter grades. W. Goldsmith. Students are taught in Brazil by professors from Cornell and the Instituto de Pesquisa e Planejamento Urbano e Regional (IPPUR), at the Federal University of Rio de Janeiro. Students will live in three Brazilian cities, on site with local scholars, top city officials, and activists. In Belem de Para, at the mouth of the Amazon River, the focus is on the environment and development. In Brasilia, the focus is on modernist planning of the new national capital with its signature Plano Piloto, the separated satellites cities, and migration from the Brazilian Northeast. In Rio de Janeiro, the focus is on housing, transportation, and the informal economy in the context of metropolitan growth and decline.

CRP 3780 Recycling and Resource Management (also CRP 5780)
Spring. 3 credits. S-U or letter grades. Not offered every year. Staff. Advanced resource-recycling and management systems are examined to the development of a sustainable society. This course reviews the political, technological, and economic strategies necessary for cities and communities to achieve a closed-loop resource-management system. Drawing from readings, speakers, and field trips that examine the cutting edge of recycling-program development, the course provides students with comprehensive exposure to leading practitioners and best practices in the recycling field. Open to undergraduate and graduate students. Graduate students have additional research requirements.

CRP 3800 Environmental Politics
CRP 3810 Principles of Spatial Design and Aesthetics (also CRP 5810)
CRP 3840 Green Cities (also CRP 5840, LA 4950)
Fall. 4 credits. S-U or letter grades. Not offered every year. S. Schmidt. For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life.
that are ecologically sound. This course examines the history and future of urban ecology and the technology and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as preconditions to transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. Graduate students have additional research requirements.

**CRP 3850 Special Topic: Pursuing a Municipal Policy Agenda Promoting Prosperity, Equity, and Sustainability**

Fall. 3 credits. Letter grades only. Offered in New York City. J. Nettleton. Students will investigate the structural changes taking place in the New York regional economy and the impact these changes are having on the spatial structure of the city. This background information will be used to identify environmental, economic, and social policy issues confronting local civic leaders. Special attention will be given to policy questions that affect economic growth, income and wealth distribution among social groups, environmental sustainability, and citizen participation in policy-making.

**CRP 3851 Special Topic: Remaking of New York City: Identity Formation, Image Making, and Community Building in the City's Newest Immigrant Communities**

Fall. 3 credits. Letter grades only. Offered in New York City. S. Beck. Students will learn about the history, culture, politics, and social life of NYC's newest immigrant communities through an immersion in the contemporary art, poetry, stories, and dance being produced by its most prolific young artists. Weekly visits to the studios, galleries, and performance spaces of these communities will be a central aspect of this experientially based course.

**CRP 3860 Planning for Sustainable Transportation (also CRP 6860)**

Spring. 3 credits. S-U or letter grades. Staff. Explores issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with auto-dominated systems, and key challenges to development sustainable transport systems; and (3) looks at regulatory, design, and market-based approaches to reducing automobile dependency, introducing creative sustainable solutions from around the world.

**CRP 3900 Professional Planning Colloquium I (also CRP 7850)**

Fall. 1 credit. Staff. Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a three- to five-page paper about the lecture series.

**CRP 4040 Urban Economics (also CRP 5040)**

Spring. 4 credits. Prerequisite: microeconomics course. K. Donaghy. Analyzes urban phenomena from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time is spent in discussing problems of cities in developing countries.

**CRP 4080 Introduction to Geographic Information Systems (GIS) (also CRP 5080)**

Spring. 4 credits. S. Schmidt. Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include: fundamentals of spatial analysis, overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

**CRP 4120 Devolution, Privatization, and the New Public Management (also CRP 6120, AEM 4330/6330, FGSS 4110/6110)**

Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S-U or letter grades. Offered every other year. M. Warner. Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

**CRP 4160 European City: The Public Sphere and Public Space**

Spring. 4 credits, variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing; Rome Program participants. S-U or letter grades for nonmajors. Staff. Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state, the city to the nation, the national to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and justified? Areas addressed are protected, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

**CRP 4170 Economic Development: Firms, Industries, and Regions (also CRP 5170)**

Fall. 4 credits. S. Christopherson. Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multilayer and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

**CRP 4440 Resource Management and Environmental Law (also CRP 5440, NTRRES 4440)**

Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor. R. Booth. Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, administrative regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

**CRP 4480 Social Policy and Social Welfare (also CRP 5480)**

Spring. 4 credits. Not offered every year. S. Christopherson. Addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social-welfare controversies. The first part of the course introduces principles that guide the development of social policy, including fairness and justice. Various concerns of society are examined with reference to their influence on the nature and extent of social-welfare provision, comparing the United States with other industrialized countries. The second part examines how economic change and government policy affect social provision in the United States.

**CRP 4510 Environmental Law (also CRP 5510)**

**CRP 4530 Environmental Aspects of International Urban Planning (also CRP 6830)**

Fall. 4 credits. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences. Staff. This seminar examines the ways in which roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations—formulate environmental debates and design conservation and remediation programs and policies in the Third World.

**CRP 4570 Community Service Fieldwork**

Fall or spring. 4 credits, variable. Prerequisite: permission of instructor. Staff.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

**CRP 4590 Legal Aspects of Land Use Planning (also CRP 5590)**
Spring. 4 credits. R. Booth.
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

**CRP 4740 Urban Transformations in the Global South (also CRP 6740)**
Fall or spring. 4 credits. S-U or letter grades. W. Goldsmith.
Economic globalization and the post-colonial political order are continually reshaping urban societies and landscapes in the global South, often by relegating everyday life to the margins and shrouding it in illegality. This course focuses on the spatial, social, and political dimensions of urban transformations, paying particular attention to such topics as competition among cities for international capital and its implications for sociospatial organization; dynamic interrelations between informality in local labor markets and in housing urban environmental challenges and municipal efforts to address them; and issues related to governance, social movements, and new formulation of citizenship.

**CRP 4770 Issues in African Development (also CRP 6770)**
Fall and spring. 1 credit. S-U grades only. M. Njoku.
Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

**CRP 4900 Student-Faculty Research**
Fall or spring. 4 credits, variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S-U grades only. Staff.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

**CRP 4920 Honors Thesis Research**
Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honor students by department faculty. Staff. Each selected student works with his or her advisor.

**CRP 4930 Honors Thesis Writing**
Fall or spring. 4 credits. Prerequisite: CRP 4920. Staff.
Each selected student works with his or her advisor.

**CRP 4940 Professional Practice Seminar: New York City**
Fall. 12 credits, variable. Offered in New York City. Staff.
Students will work with program faculty in devising a detailed learning plan that identifies the new knowledge, skills, and capacities they seek to gain through their New York City-based professional internship experience. Students will be placed in public, private, and non-profit organizations where they will engage in challenging professional activities designed to assist them in acquiring these new competencies. Students will participate in a weekly reflective seminar where they will systematically reflect upon their field-based learning experiences to prepare them to complete a detailed learning portfolio and capstone project through which they can demonstrate their mastery of the theoretical, conceptual, methodological, and policy content identified in their individualized learning plans. Students will be introduced to key concepts and methods in adult learning, experiential education, field-based research methods, and organizational behavior to empower them to function as both self-directed and reciprocal learners.

**CRP 4970 Independent Study**
Fall or spring. 4 credits. Prerequisite: junior or senior standing; permission of instructor. Staff.

**Graduate Courses and Seminars**
Courses numbered from 5000 to 5990 and 6000 to 6990 are generally considered advanced. Upper-level undergraduate courses are numbered from 3000 to 4990. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 5000 and above.)

**CRP 5040 Urban Economics (also CRP 4040)**
Spring. 4 credits. Not offered every year. Prerequisite: microeconomics course. K. Donaghy.
For description, see CRP 4040.

**CRP 5071 City and Regional Planning Workshop**
Fall or spring. 4 credits. Staff.
City and Regional Planning workshop courses focus on planning issues and problems that combine several of the topics undertaken in the various workshop categories. Topics may include public policy issues regarding land use, transportation, public space, municipal services, environmental impact, housing and economic development, and public participation.

**CRP 5072 Land Use, Environmental Planning, and Urban Design Workshop**
Fall or spring. 4 credits. Staff. Land Use and Environmental Planning workshop courses focus on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of natural landscapes, cities and regions. Topics of study include, among other, development of land use and natural conservation plans, design and implementation of “smart growth” policies, evaluation of infrastructure requirements, strategies for making cities more environmentally sustainable, design and analysis of public spaces, strategies for increasing housing opportunities.

**CRP 5073 Historic Preservation Planning Workshop**
Fall or spring. 4 credits. Staff. Historic Preservation Planning workshop courses take students into the field to engage in a range of problems, from conducting a historic resources survey working in a city, town, or village in the region, to developing a scheme for revitalization of an entire neighborhood, to a site-specific economic analysis for the renovation of a surplus school.

**CRP 5074 Economic and Community Development Workshop**
Fall or spring. 4 credits. Staff. Economic and Community Development workshop courses focus on the economics of neighborhoods, cities and regions with the intent of producing more informed and effective economic development policy. Topics of study include, among others, the application of analytical tools needed to produce first-rate economic development plans, the special needs of excluded, poor and segregated communities, use of quantitative and qualitative methods to address social inequalities, the politics of planning, relationships between economic development and community development.

**CRP 5075 Real Estate Workshop**
Fall or spring. 4 credits. Staff. Student are asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real world case studies and require professional level reports suitable for oral and written presentations.

**CRP 5076 International Planning and Development Workshop**
Fall or spring. 4 credits. Staff. International Planning and Development courses focus on urban, regional, and international development processes and their implications for people’s lives and livelihoods in diverse international contexts. Particular attention is paid to critical assessment of programs that reflect a commitment to environmental sustainability, economic vitality, and social justice.

**CRP 5080 Introduction to Geographic Information Systems (GIS) (also CRP 4080)**
Spring. 4 credits. S. Schmidt.
For description, see CRP 4080.

**CRP 5090 Community Development Seminar (also CRP 3090)**
Spring. 3 credits. K. Reardon.
For description, see CRP 3090.

**CRP 5120 Public and Spatial Economics for Planners**
Spring. 3 credits. No prior knowledge of economics necessary. I. Aziz.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public–nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in...
subsequent courses in city and regional planning.

CRP 5100 Introduction to Planning Practice and History
Fall. 4 credits. J. Forester.
Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 5170 Economic Development: Firms, Industries, and Regions (also CRP 4170)
Fall. 4 credits. S. Christopherson.
For description, see CRP 4170.

CRP 5180 Politics of Community Development (also CRP 3180)
Spring. 3 credits. P. Clavel.
For description, see CRP 3810.

CRP 5190 Urban Theory and Spatial Development
Spring. 3 credits. W. Goldsmith.
Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 5200 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits. Not offered every year.
Staff.
Introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics include matrix algebra, probability, sampling, estimation, and regression, and the use of a microcomputer statistical package.

CRP 5210 Mathematical Foundation for Planning Analysis
Fall. 1 credit. Meets for two hours, once each week, for approximately half the semester. Prerequisite: permission of department. S-U grades only. Not offered every year.
Staff.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis.

CRP 5220 Post-Fieldwork Writing Seminar in Urban Policy (also CRP 3220)
Spring. 3 credits. Prerequisite: successful completion of Cornell Urban Scholars, Adult Literacy, or Urban Semester Programs or permission of instructor(s). S-U or letter grades. R. Kiely.
For description, see CRP 5320.

CRP 5250 Introductory Methods of Planning Analysis
Fall. 4 credits. R. Pendall.
Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include: descriptive and inferential statistics, mapping, and observation. Research lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 5260 Overview: Quantitative Methods in Policy Planning (also CRP 3260)
Fall and spring. 3 credits. S-U or letter grades.
For description, see CRP 3260.

CRP 5290 Mathematics for Planners
Fall. 4 credits. variables. S-U or letter grades. Not offered every year.
Staff.
Covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences, and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 5300 Neighborhood Planning Workshop (also CRP 3300)
Spring. 4 credits. K. Reardon.
For description, see CRP 3500.

CRP 5320 Real Estate Development Process
Fall. 3 credits. Letter grades. Fee for case studies paid by B. Olson.
Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 5330 Real Estate Marketing and Management
Fall. 3 credits. R. Abrams.
Focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 5370 Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S-U grades only. D. Funk.
Designed to bring students weekly into direct contact with real-estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 5440 Resource Management and Environmental Law (also CRP/NTRES 4440)
Spring. 4 credits. R. Booth.
For description, see CRP 4440.

CRP 5460 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits. J. Forester.
Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 5480 Social Policy and Social Welfare (also CRP 4480)
Spring. 4 credits. Not offered every year.
S. Christopherson.
For description, see CRP 4480.

CRP 5510 Environmental Law (also CRP 4510)

CRP 5520 Land-Use Planning
Fall. 3 credits. R. Pendall.
Covers surveys, analyses, and plan-making techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasizes residential, commercial, and industrial activities and community facilities, and housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 5530 Land-Use Regulations
Spring. 3 credits. R. Pendall.
This seminar covers the essentials of “smart growth,” zoning, and subdivision, and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 5540 Introduction to Environmental Planning (also CRP 3540)
Fall. 3 credits. S. Schmidt.
For description, see CRP 3540.

CRP 5560 Design in Real Estate Development
Spring. 3 credits. S-U or letter grades. H. Richardson.
Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 5590 Legal Aspects of Land Use Planning (also CRP 4590)
Spring. 4 credits. R. Booth.
For description, see CRP 4590.

CRP 5600 Documentation for Preservation
Fall. 3 credits. M. Tomlan.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 5620 Perspectives on Preservation
Fall. 3 credits. J. Chusid.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.
CRP 5620 Problems in Contemporary Preservation Practice  
Spring. Variable credit. J. Chusid. Review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 5640 Building Materials Conservation  
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Chusid. Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

CRP 5650 Fieldwork or Workshop in History and Preservation  
Fall or spring. Variable credit. Staff. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 5660 Planning and Preservation Practice  
Fall. 1 credit. Prerequisite: graduate standing in CRP programs or M.P.S./R.E. or permission of instructors. S-U grades only. R. Pendall and M. Tomlan. Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large Eastern U.S. cities.

CRP 5670 Measured Drawing  
Spring. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation. J. Chusid. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 5780 Recycling and Resource Management (also CRP 3780)  
Spring. 3 credits. S-U or letter grades. Staff. For description, see CRP 3780.

CRP 5810 Principles of Spatial Design and Aesthetics (also CRP 3810)  
CRP 5840 Green Cities (also CRP 3840, LA 4950)  
Fall. 4 credits. S-U or letter grades. Not offered every year. S. Schmidt. For description, see CRP 3840.

CRP 5850 Sustainable Panama: An Interdisciplinary Workshop Course on the Future of the Panama Canal Metropolitan Landscape  
Winter. 4 credits. R. Trancik. For description, see Lorrie Walker in 106 W. Sibley Hall.

CRP 6011 Ethics, Development, and Globalization (also CRP 3011)  
Fall or spring. 4 credits. Staff. For description, see CRP 3011.

CRP 6050 Urban Public Finance  
Fall. 4 credits. Prerequisite: exposure to microeconomics. Not offered every year. Staff. Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 6070 GIS Applications Workshop  
Fall. 4 credits. Prerequisites: introductory GIS course or permission of instructor. Staff. Advanced GIS course that focuses on GIS applications and projects for one or more clients. During some semesters students work on their own projects. Contact the instructor directly to learn about project options for the current semester.

CRP 6101 Race, Space, and Place (also CRP 3101)  
Fall or spring. 3 credits. C. Lai. For description, see CRP 3101.

CRP 6102 Asian American Politics and Public Policy (also CRP 3102)  
Fall or spring. 3 credits. C. Lai. For description, see CRP 3102.

CRP 6105 (also CRP 3105) Urban Political Economy Seminar  
Fall or spring. 3 credits. Staff. For description, see CRP 3105.

CRP 6120 Devolution, Privatization, and the New Public Management (also CRP 4120, AEM 4330/6330, FGSS 4110/6110)  
Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S-U or letter grades. Offered every other year. M. Warner. For description, see CRP 4120.

CRP 6140 Gender and International Development (also FGSS 6140)  
CRP 6150 Current Issues and Debates on NGOs  
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. N. Kudva. This seminar examines a range of topics that are key to understanding NGO actions: their effectiveness at service provision and advocacy; their political role in constructing social capital and strengthening civil society; their relationship with the state and with donor agencies; and issues related to organizational design for success. The intention is to gain a broad-based understanding of the role and development of NGOs. The emphasis throughout will be to critically evaluate the literature, research, and accounts on NGOs as both institutional actors in the development arena and as bounded organizations at the local level: a task that is complicated by the heterogeneity of contexts and organizational types.

CRP 6210 Quantitative Techniques for Policy Analysis and Program Management  
Spring. 4 credits. D. Lewis. Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 6270 Regional Economical Impact Analysis (also CRP 3270)  
Fall. 3 credits. Letter grades. Staff. For description, see CRP 3270.

CRP 6320 Methods of Regional Science and Planning I  
Spring. 4 credits. variable. Staff. Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. Where appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 6350 Workshop: State Economic Development Strategies  
Fall or spring. 4 credits. S-U or letter grades. S. Christopherson. The purpose of this workshop is twofold: (1) to provide students with research tools useful in developing state-level economic-development strategies; and (2) to provide a critical understanding of the primary economic-development strategy used by U.S. state policymakers: firm-specific subsidies. The course consists of lecture and discussion meetings. The workshop sessions include exercises in qualitative information gathering on economic-development topics, use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 6370 Regional Development Planning: An International Perspective  
CRP 6380 Planning and the Global Knowledge Economy: Sustainability Issues  
CRP 6411 Growing Up In Cities (also CRP 3411)  
Fall or spring. 4 credits. Staff. For description, see CRP 3411.

CRP 6420 The Micro-Politics of Participatory Planning Practices  
Spring. 4 credits. variable. J. Forester. This seminar explores issues of "practice" (rhetoric and negotiation, interpretation and judgment, narrative and recognition) as they influence democratic deliberations involving questions of ethics and argument, participation and identity, historical trauma and working-through, and more. The approach taken can be called a "critical pragmatism." Practitioners’ oral histories are used to investigate the challenges of participatory planning practices.

CRP 6430 Affordable Housing Policy and Programs (also CRP 3430)  
Fall. 3 credits. S-U or letter grades. R. Pendall. For description, see CRP 3430.

CRP 6502 (also CRP 3502) Suburbia  
Fall or spring. 3 credits. Staff. For description, see CRP 3502.
Opportunity.

on an actual property and market course includes a semester-long project based presentations from visiting professionals. The discussed. Classes are supplemented by markets are also explored. Composition of competitive housing products in today's construction issues, marketing, and sales project financing and feasibility, schedule and product selection and design considerations, feasibility, land planning and acquisition, finished product. Topics include market from site acquisition through delivery of the construction. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues, analysis of financing techniques, and consequences when deals go bad, including work out and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner.

Real Estate Law
Spring. 3 credits. A. Klausner.

Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

Residential Development
Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson.

Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land planning and acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.
CRP 7850 Professional Planning Colloquium I (also CRP 3900) Fall. 1 credit. Staff.
For description, see CRP 3900.

CRP 7940 Planning Internships Fall, spring, or summer. 12 credits, variable. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 7950 Professional Writing and Publishing (Colloqu) Fall or spring. 2 credits. S-U grades only.
Not offered every year. Staff.
Individual and group projects culminating in the production of a professional journal.

CRP 7970 Graduate Independent Study Fall or spring. 4 credits, variable. Staff.
Prerequisites: graduate student standing and permission of instructor. Staff.
For description, see department coordinator, 106 West Sibley Hall.

CRP 8000 Advanced Seminar in Urban and Regional Theory I Fall. 5 credits. S. Christopherson.
Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.

CRP 8010 Advanced Seminar in Urban and Regional Theory II [CRP 8100 Advanced Planning Theory]

CRP 8300 Seminar in Regional Science, Planning, and Policy Analysis Fall or spring. 4 credits, variable. S-U grades only. Staff.
Provides an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered vary each year. Empirical and analytical research are emphasized. Students are expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 8900 Planning Research Seminar I Fall or spring. 2 credits. Staff.
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 8910 Master's Thesis in Regional Science Fall or spring. 12 credits, variable. S-U or letter grades. Hours TBA. Regional Science faculty. Staff.

CRP 8920 Master's Thesis, Project, or Research Paper Fall or spring. 10 credits, variable. S-U or letter grades. Staff.

CRP 8950 Master's Thesis in Preservation Planning Fall or spring. 6 credits, variable. Staff.

CRP 9920 Doctoral Dissertation Fall or spring. 2 credits, variable. Staff.

Special Topic Courses Fall or spring. Variable credit. Staff.
Typical topics are:

CRP 6090 Urban and Regional Theory
CRP 6190 Planning Theory and Politics
CRP 6290 Quantitative Methods and Analysis
CRP 6390 Regional Development Planning
CRP 6490 Social-Policy Planning
CRP 6590 Urban Development Planning
CRP 6690 History and Preservation
CRP 6790 Planning and Developing Regions
CRP 6890 Environmental Planning
CRP 6990 Regional Science
CRP 7190 Planning Theory and Politics

LANDSCAPE ARCHITECTURE

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program

Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
Note: All of the following courses are offered through the College of Agriculture and Life Sciences except LANAR 4970, 5240, and 5250.

LA 1410 Grounding in Landscape Architecture Fall. 4 credits.

LA 1420 Grounding in Landscape Architecture Spring. 4 credits.

LA 2010 Medium of the Landscape Fall. 5 credits.

LA 2020 Medium of the Landscape Spring. 5 credits.

LA 2150 Writing Seminar: Engaging Places Fall. 4 credits.

LA 2520 Daily Life in Ancient Israel Spring. 3 credits.

LA 2610 Fieldwork in Urban Archaeology (also CRP 2610) Fall. 4 credits.

LA 2620 Laboratory in Landscape Archaeology (also ARKEO 2620) Spring. 3 credits.

LA 2660 Jerusalem through the Ages Fall. 4 credits.

LA 2820 Photography and the American Landscape Fall. 4 credits.

LA 3010 Integrating Theory and Practice I Fall. 5 credits.

LA 3020 Integrating Theory and Practice Fall. 5 credits.

LA 3160 Site Engineering II Fall. 2 credits.

LA 3180 Site Construction Spring. 5 credits.

LA 3600 Pre-Industrial Cities and Towns of North America (also CRP 3600/6660, LA 6660) Spring. 5 credits.

LA 4010 Advanced Synthesis: Project Design Fall. 5 credits.

LA 4020 Integrating Theory and Practice II Spring. 5 credits.

LA 4030 Directed Study: The Concentration (also LA 6030) Fall or spring. 1 credit.
transportation planning, national parks, and other open-space designs.

**LA 5450 The Parks and Fora of Imperial Rome**
Spring. 3 credits.

**LA 5820 Photography and the American Landscape Architecture**
Fall. 3 credits.

**LA 5900 Theoretical Foundations**
Fall. 3 credits.

**LA 5980 Graduate Teaching**
Fall or spring. 1–2 credits.

**LA 6010 Integrating Theory and Practice I**
Fall. 5 credits. Prerequisite: graduate standing.

**LA 6020 Integrating Theory and Practice II**
Spring. 5 credits. Prerequisite: graduate standing.

**LA 6030 Directed Study: The Concentration (also LA 4030)**
Fall or spring. 1 credit.

**LA 6160 Site Engineering**
Fall. 2 credits.

**LA 6180 Site Construction**
Spring, weeks 8–15. 5 credits.

**LA 6660 Pre-Industrial Cities and Towns of North America (also CRP 3600/6660, LA 2600)**

**LA 6900 Methods of Landscape Architectural Inquiry**
Fall or spring. 1–3 credits.

**LA 6940 Special Topics in Landscape Architecture**
Fall or spring. 1–3 credits.

**LA 7010 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 5550)**
Fall. 5 credits.

**LA 7020 Advanced Design Studio**
Spring. 5 credits.

**LA 7920 Landscape Preservation: Theory and Practice**
Fall. 3 credits.

**LA 8000 Master's Thesis in Landscape Architecture**
Fall or spring. 9 credits.

**Chen, Xiaowen, M.F.A., Illinois State U. Visiting Assoc. Prof., Art**

**Chi, Lily H., Ph.D., McGill U. (Canada). Assoc. Prof., Architecture**

**Christopherson, Susan M., Ph.D., U. of California, Berkeley. Prof., City and Regional Planning**

**Chusid, Jeffrey, M.Arch., U. of California, Berkeley. Assoc. Prof., City and Regional Planning**

Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture

Zissovici, John, M. Arch., Cornell U. Assoc. Prof., Architecture
BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by 30 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/?p=38.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), www.biology.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic advising for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole, Mass., or aboard the schooner Robert C. Seamans or brigantine Corwith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIOG 1109–1110, 1105–1106, or 1101 and 1103 plus 1102 and 1104, 1107–1108 or from specified courses in chemistry or physics.

Switching between BIOG 1109–1110 and either BIOG 1101–1104 or 1105–1106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIOG 1101–1104 but allowed in BIOG 1105–1106.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHEW publication 86–23, revised 1996; see p. 7, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3523. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . .) at the first meeting of the course.

ADVANCED PLACEMENT

For information on credit for advanced placement in biological sciences, see www.biology.cornell.edu/advising/ap.html.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall. Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year.

Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology advisor and to take advantage of the advising and counseling resources of the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–5 must be taken for a letter grade. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S-U grades only or if the student's advisor grants permission.

1. Introductory biology for majors

   (one year): BIOG 1101 and 1103 plus 1102 and 1104, or 1105–1106. BIOG 1107–1108, offered during the eight-week Cornell summer session for 8 credits, also satisfies the introductory biology requirement for majors.

2. General chemistry: CHEM 2070–2080 or 2150. Students who, via advanced placement, take only CHEM 2080 or only 2150 should be aware that some professional and graduate schools require 8 credits of general chemistry. These students may wish to take both CHEM 2150 and 2080 or 2150 and
Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.

3. **College mathematics** (one year): one semester of calculus (MATH 1106, 1110, 1910, or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (MATH 1120, 1920, or their equivalents).
   b. a course in finite mathematics (MATH 1105).
   c. a course in statistics (BTRY 3010, MATH 1710, AEM 2100, ILR 2100, PSYCH 3500, PAM 2100, ECON 3190, ECON 3210, SOC 3010).

4. **Organic chemistry**: CHEM 1570 and 2510, or 3570–3580 and 2510, or 3570–3580 and 3010, or 3590–3600 and 2510, or 3590–3600 and 3010.

5. **Physics**: PHYS 1101–1102, 2207–2208, 8, or 1112–2213. Those who take PHYS 1112–2213 are advised to complete PHYS 2214 as well.

6. **Genetics**: BIOGD 2810.

7. **Biochemistry**: BIOBM 3300, or 3310 and 3320, or 3330.

8. **Evolutionary biology**: BIOEE 2780 or BIOI 4880. Note: BIOI 2410 Botany is a prerequisite course to BIOI 4880.

9. **A program of study** selected from the outline below.

   Although not required for the biological sciences major, a course in statistics is recommended for all biology students. Students should consult their faculty advisors when choosing appropriate courses in statistics.

   **Note**: Core courses cannot count toward the program of study requirements.

### Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. Whereas the core requirements of the biology curriculum provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study requirement can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology advisor. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related disciplines, many of which are at an advanced level (3000 or higher). Because biology is an experimental science, most programs of study require one or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIOG 4990). The possible programs of study and their requirements are as follows:

1. **Animal Physiology**: BIOAP 3110 Introductory Animal Physiology, BIOAP 3160 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 6 credit hours must be a laboratory course:
   a. Lecture courses: BEE 4540 Physiological Engineering; ANSC 3000 Animal Reproduction and Development; ANSC 4100 Nutritional Physiology and Metabolism; ANSC 4270 Fundamentals of Endocrinology; BIOG 3050 Basic Immunology; BIOAP 2140 Biological Basis of Sex Differences; BIOAP 4580 Mammalian Physiology; BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIOAP 4890 Mammalian Embryology; BIOBM 4070 Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOBM 4510 Eukaryotic Cell Proliferation; BIOBM 4834 Molecular Aspects of Development; BIOGD 3850 Developmental Biology; BIOGD 4000 A Genomics Approach to Studying Life; BIOGD 4010 Genomic Analysis; BIOGD 6100 Genomes as Chromosomes; BIOGD 6120 Overview of Model Genetic Organisms; BIONB 3220 Hormones and Behavior; BIONB 3260 The Visual System; BIONB 4920 Sensory Function; NS 3310 Physiological and Biochemical Bases of Human Nutrition.

   b. Laboratory courses: BEE 4540 Physiological Engineering; ANSC 3010 Animal Reproduction and Development; BIOG 4010 Introduction to Scanning Microscopy; BIOG 4030 Transmission Electron Microscopy for Biologists; BIOAP 4130 Histology: The Biology of the Tissues; BIOAP 3390 Animal Physiology Laboratory; BIOAP 4160 Cellular Physiology and Genomics Laboratory; BIOBM 4400 Laboratory in Biochemistry and Molecular Biology; BIONB 4010 Principles of Neurophysiology.

2. **Biochemistry**: BIOBM 4400 Laboratory in Biochemistry and Molecular Biology; physical chemistry (CHEM 2870–2880 or 3890–3900 or 3890–3880; 6 credits of organic chemistry (CHEM 3570–3580 or CHEM 3590–3600); plus one of the following two alternatives. Students wanting to maximize their background in chemistry should take CHEM 3000 Quantitative Chemistry and CHEM 3010 Honors Experimental Chemistry I (Students who choose this option should not take CHEM 2510). Students wanting to gain further depth in biochemistry and related disciplines should take BIOBM 4320 Survey of Cell Biology and either CHEM 3000 Quantitative Chemistry or CHEM 2520 Elementary Experimental Organic Chemistry. Students choosing the first alternative are encouraged to take BIOBM 4320.

   **Notes:**
   - CHEM 2880 is designed for biologists. Five hours of biochemistry are recommended (3310 and 3320, or 3300 and 3340 or 3330 and 3340). Students interested in graduate work in biochemistry should take PHYS 2207–2208 and should consider taking CHEM 3890–3900 and its prerequisites. They should be sure to complete CHEM 2070–2080 or 2150–2160 during their freshman year.
   - Biology majors in the College of Agriculture and Life Sciences who select the biochemistry program are allowed to take up to 61 credit hours in the endowed colleges because of the high number of required endowed courses for this program of study.

3. **Computational Biology**: Computation has become essential to biological research. Genomic databases, protein databanks, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that are transforming almost all of biology.

   Problems investigated by computational biologists include topics as diverse as the genetics of disease susceptibility; comparing entire genomes to reveal the evolutionary history of life; predicting the structure, motions, and interactions of proteins; designing new therapeutic drugs; modeling the complex signaling mechanisms within cells; predicting how ecosystems will respond to climate change; and designing recovery plans for endangered species. The computational biologist must have skills in mathematics, statistics, and the physical sciences as well as in biology. A key goal in training is to develop the ability to relate biological processes to computational models. Cornell faculty work primarily in four subareas of computational biology: biomolecular structure, bioinformatics and data mining, ecology and evolutionary biology, and statistical and computational methods for modeling biological systems. Specific topics of study include DNA databases, protein structure and function, computational neuroscience; biomechanics, population genetics, and management of natural and agricultural systems.

   Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional course work in mathematics and computer programming, a "bridging" course aimed at connecting biology to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in the more rigorous courses in the physical and mathematical sciences and may wish to take additional courses in these areas.

   Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is great, and increasing, demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems. The program is also an excellent preparation for graduate study in any area of biology or computational biology.
## Required Courses for Program of Study in Computational Biology

a. One course in computer programming (CS 1110, CS 1112, CS 1113, CS 1114) Introduction to Computer Programming, or EE 1510, Introduction to Computer Programming.

b. One additional course in mathematics (MATH 2210 Linear Algebra; or MATH 2510 Linear Algebra with Applications; or MATH 2940 Linear Algebra for Engineers; or MATH 4200 Differential Equations and Dynamical Systems; or BTRY 4070 Principles of Probability and Statistics; or BTRY 4080 Theory of Probability; or BTRY 4210 Matrix Computation).

c. One of the following bridging courses, i.e., a course in mathematical modeling applied to biology

- BIOE 3620 Dynamic Models in Biology
- BIOE 4000 Theoretical Ecology
- BIONB 3300 Introduction to Computational Neuroscience
- BTRY 4820 Statistical Genomics
- BTRY 4830 Quantitative Genomics
- BTRY 4840 Computational Genomics

CS 4520 Introduction to Bioinformatics

NTRES 3100 Applied Population Ecology

NTRES 4110 Quantitative Ecology and Management of Fisheries Resources

d. One course from the following list of advanced courses, or an additional “bridging” course numbered 4000 or above:

- BIOBM 6310 Protein Structure and Function
- BIOGD 4810 Population Genetics
- BIOGD 4840 Molecular Evolution
- BIOGD 4870 Human Genomics
- BIONB 4220 Modeling Behavioral Evolution
- BIOPL 4400 Phylogenetic Systematics

BTRY 4070 Principles of Probability and Statistics

BTRY 4080 Theory of Probability

BTRY 4090 Theory of Statistics

BTRY 4790 Probabilistic Graphical Models (also CS 4782)

BTRY 6520 Computationally Intensive Statistical Inference

CS 2110 Object-Oriented Programming and Data Structures

CS 4210 Numerical Analysis and Differential Equations

CS 4220 Numerical Analysis: Linear and Non-Linear Problems

CS 6522 Biological Sequence Analysis

MATH 4200 Differential Equations and Dynamical Systems

NTRES 4120 Wildlife Population Analysis: Techniques and Models

NTRES 6700 Spatial Statistics

ORIE 3500 Engineering Probability and Statistics II

ORIE 3510 Introductory Engineering Stochastic Processes

Notes:

1. It is strongly recommended that students in this POS use PHYS 2207/2208 to satisfy the Core physics requirement.

2. It is strongly recommended that students complete the Core organic chemistry requirement using the CHEM 1570/2510 option, and that the time saved be used to take either CS 2110 or a second mathematics course from the list above.

3. MATH 2210 Linear Algebra, MATH 2310 Linear Algebra with Applications, or MATH 4200 Differential Equations and Dynamical Systems is recommended for bridging course BIOE 4600.

4. One course may not be used to satisfy two different requirements simultaneously. For example, BTRY 4080 can be used to satisfy either requirement (2) or requirement (4), but not both.

5. Students who use BTRY 4080 to fulfill the additional mathematics requirement should not use ORIE 3500 Engineering Probability and Statistics II to fulfill the requirement for an advanced course.

6. Biology majors in the College of Agriculture and Life Sciences who select this Program of Study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required courses for this Program of Study.

7. One course must be chosen from list (a) and one course must be taken from list (b) or (c). The program of study in Ecology and Evolutionary Biology: BIOE 2610 Ecology and the Environment. Effective fall semester 2005, new students must also complete 10 credits from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list.

- Principles: BIOE 4530 Speciation; BIOE 4580 Community Ecology; BIOE 4600 Theoretical Ecology; BIOE 4640 Macroevolution; BIOE 4800/ENTOM 4700 Ecological Genetics; BIOE 4780 Ecosystem Biology; NTRES 3100 Applied Population Ecology

- Organisms: BIOE 2740 The Vertebrates: Structure, Function, and Evolution; BIOE 3730 Biodiversity and Biology of the Marine Invertebrates; or BIOE 3760 Marine Invertebrate Zoology; BIOE 4500 and 4501 Mammalogy, lec and lab; BIOE 4700 and 4701 Herpetology lec and lab; BIOE 4750 Ornithology; BIOE 4760 Biology of Fishes; ENTOM 2120 Insect Biology; BIOI 2410 Introductory Entomology; BIOI 4840 Plant Evolution and the Fossil Record; PLPA 3090 Fungi; BIOE 4490 Marine Botany.

- Ecological and Evolutionary Processes: BIOE 2630 Field Ecology; BIOE 2650 Tropical Field Ecology and Behavior; NS/ANTHR 2750 Human Biology and Evolution; BIOE/BIONB/ENTOM 3690 Chemical Ecology; BIOE/EAS 3500 Dynamics of Marine Ecosystems; BIOE/MATH 3620 Dynamic Models in Biology; BIOE 4600 Plant Behavior—Induced Plant Responses to Biotic Stress; BIOE/ENTOM 4570 Insect Ecology; BIOE/NTRES 4560 Stream Ecology; BIOE 4570 and 4571 Limnology; Ecology of Lakes; lec and lab; BIOE/EAS 4620 Marine Ecology; BIOE 4660 and 4661 Physiological Plant Ecology; lec and lab; BIOE/HORT 4730 Ecology of Agricultural Systems; NTRES 4210 Forest Ecology; BIOE/4130 Research in Marine Biology, Nature 24220 and 2421 Wetland Ecology and Management, lec and lab; BIONM 4180 Microbial Ecology; CSS/HORT 4660 Soil Ecology; BIOE/ENTOM 4400 Phylogenetic Systematics; BIOI 4470 Molecular Systematics; BIOE/ENTOM 4530 Principles and Practice of Historical Biogeography; BIOE/EAS 4750 Paleobiology; BIOGD 4840 Molecular Evolution.

Note: Students also are encouraged to gain experience in some aspect of field biology through course work at a biological field station and can apply up to 6 credits in the place of courses from lists (b) or (c). For example, students may apply 6 credits from the following courses taken at the Shoals Marine Laboratory (BIOE): BIOE 3890 Field Microbial Ecology; BIOE 3900 Coastal Ecology and Bioclimates; BIOE 3210 Anatomy and Function of Marine Vertebrates; BIOE 3740 Field Ornithology; BIOE 3770 Diversity of Fishes; BIOE 4770 Marine Vertebrates; and BIOE courses in lists b and c. The Ecology and Evolutionary Biology program of study offers a specialization in Marine Biology and Oceanography (for a description, see “Courses in Marine Science”). The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses (Fundamentals in Tropical Biology and Field Research in Tropical Biology) that can count as two 3-credit courses toward the concentration. Six credits can be applied from the 15-week fall “Semester in Environmental Science” program offered by the Woods Hole Marine Biological Laboratory.

5. General Biology: The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–9 on pages 155–6. These 13 credits must include:

- One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of advisor.

- A course with a laboratory.

- A minimum of two upper-level (3000 and above) courses of 2 or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIOE 4980 may not be used to fulfill the requirements of this program.
study. BIOG 4990 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study. Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 4130 Histology could count in all three areas: as a course in the Animal Physiology program of study, as an upper-level course, and as a course with a lab.

6. Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOGD 3850 Developmental Biology; any BIOGD course of 4000 level or higher; BIOJM 4802 from the faculty advisor. 

7. Insect Biology: ENTOM 2120 Insect Biology plus a minimum of three additional courses totaling at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.

Group a: ENTOM 3310 Insect Phylogeny and Evolution; ENTOM 3340 Larval Insect Biology; ENTOM 3520 Medical and Veterinary Entomology; ENTOM 4440 Integrated Pest Management; ENTOM 4550 Insect Ecology; ENTOM 4630 Invertebrate Pathology; ENTOM 4850 Insect Physiology

Group b: ENTOM 3150 Spider Biology; ENTOM 3250 Insect Behavior; ENTOM 3440 Insect Conservation Biology; ENTOM 3600 Chemical Ecology; ENTOM 5700 Pesticides, Environment, and Human Health; ENTOM 4530 Principles and Practice of Historical Biogeography; NTRGES 4560 Stream Ecology; ENTOM 4700 Ecological Genetics; ENTOM 4770 Biological Control; ENTOM 4900 Insect Toxicology

8. Microbiology: A student in the Microbiology program of study must complete BIOM 2900 General Microbiology, Lec; BIOM 2910 General Microbiology, Lab. At least 8 additional credits are required, which must include at least one of the following courses: BIOM 4140 Bacterial Diversity; BIOM 4160 Bacterial Physiology; BIOM 4180 MicrobialEcology; BIOM 4850 Bacterial Genetics.

Additional approved courses are included in the list below. Students are invited to complete their requirements in one of the following areas of interest: (a) Prokaryotic Biology, (b) Molecular Microbiology and Biotechnology, and (c) Pathogenic Microbiology. Courses acceptable to the program of study in any of the areas related to a particular area of interest are:

Prokaryotic Biology: BIOM 3910 Advanced Microbiology Laboratory; BIOM 4140 Bacterial Diversity; BIOM 4160 Bacterial Physiology; and BIOM 4180 Microbial Ecology.

Molecular Microbiology and Biotechnology: BIOM 3910 Advanced Microbiology Laboratory; BIOM 4140 Bacterial Diversity; BIOM 4160 Bacterial Physiology, and BIOM 4200 Multicellular Organisms; BIOM 4850 Bacterial Genetics; and BIOM 3940 Applied and Food Microbiology.

Pathogenic Microbiology: BIOM 4040 Pathogenic Bacteriology and Mycology; BIOM 4050 Principles of Viral Pathology; BIOM 4160 Bacterial Physiology; BIOM 4200 Multicellular Organisms; BIOM 4850 Bacterial Genetics; and BIOM 3940 Applied and Food Microbiology.

10. Neurobiology and Behavior: The two-semester introductory course sequence Neurobiology and Behavior I and II (BIONB 2210 and 2220) with discussion section (4 credits per semester) and 7 additional credits. The 7 additional credits must include at least one advanced course from the BIONB offerings. Topics: Neurobiology and Behavior I and II (BIONB 4890, 4900), BIOM 3210, and PSYCH 4230 may be used as supplemental credits but do not qualify as advanced courses.

Note: Students who declare the program of study in Neurobiology and Behavior after taking BIONB 2210 or 2220 for only 3 credits must take the 1-credit discussion section in BIONB 2210 and 2220. To arrange this, the student should consult the professors in charge of the two courses.

11. Nutrition: NS 3310 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 1220 Nutrition and the Life Cycle; NS 3150 Obesity and the Regulation of Body Weight; BIOG 3570–3580 or 3590–3600; NS 3470 Human Growth and Development; NS 4210 Nutrition and Exercise; NS 6030 (alternate years) Mineral Nutrition; Metabolic, Health, and Environmental Aspects; NS 6140 Topics in Maternal and Child Nutrition; NS 6530 Micronutrients: Function, Homeostasis, and Metabolism; and NS 6320 Regulation of Macronutrient Metabolism. Some courses require NS 1150 Nutrition, Health, and Society, which may be used as part of the additional 9 credits.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits will count toward the 100 hours required in AAS if those credits fulfill major requirements.

12. Plant Biology: Students choose one area of study from the following two options: Option (a) Botany: Students are required to take BIONB 2410 Introductory Botany. Students should then choose, with the aid of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIONB 4240...
13. **Systematics and Biotic Diversity**: A minimum of 13 credits from the following two groups, including at least 7 credits from group a and three from group b and at least two laboratory courses (marked with **). BIOG 4990 Independent Undergraduate Research in Biology, with approval of the advisor, can be used in fulfillment of up to 4 credits in group (a), and can count as one laboratory course if it has a laboratory component of 2 or more credits.

- **Group A**
  - BIOG 3400 (3 credits)
  - BIOG 3405 (3 credits)
  - BIOG 3410 (3 credits)
  - BIOG 3420 (3 credits)
  - BIOG 3430 (3 credits)
  - BIOG 3431 (3 credits)

- **Group B**
  - BIOG 3500 (3 credits)
  - BIOG 3510 (3 credits)
  - BIOG 3520 (3 credits)
  - BIOG 3530 (3 credits)
  - BIOG 3540 (3 credits)

**The Minor in Biological Sciences**

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to design a course of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking either all biology core courses or biology core courses and an additional 3 credits from the lists of approved program of study courses found on pages 159–162 of this catalog.

**Biology core courses**

1. **Biochemistry**: BIOBM 3300, 3310–3320, or one year of general chemistry (CHEM 1570 or 3570–3580) are prerequisites.
2. **Evolutionary biology**: BIOEE 4530, 4640, or 4790
3. **Paleobiology**: BIOPL 4400
4. **Phylogenetic Systematics**: BIOPL 4420
5. **Current Topics in Ethnobiology**: BIOPL 4480
6. **Plant Cell Biology**: BIOPL 4520
7. **Systematics of Tropical Plants and Field Laboratory**: BIOPL 4521
8. **Systematics of Tropical Plants**: BIOPL 4522
9. **Plant Development**: BIOPL 4400
10. **Domestication, and Diversity**: BIOPL 4220
11. **Molecular Plant-Pathogen Interactions II**: BIOPL 4822
12. **Molecular Plant-Pathogen Interactions I**: BIOPL 4822
13. **Molecular Plant-Microbe Interactions**: BIOPL 4822
14. **Plant Gene Evolution**: BIOPL 4822
15. **Genetic Engineering of Plants**: BIOPL 4822
16. **Metabolomics and Systems Biology**: BIOPL 4822
17. **Plant Molecular Biology**: BIOPL 4822
18. **Molecular Plant-Pathogen Interactions III**: BIOPL 4822
19. **Molecular Plant-Pathogen Interactions II**: BIOPL 4822
20. **Molecular Plant-Pathogen Interactions I**: BIOPL 4822
21. **Molecular Plant-Microbe Interactions**: BIOPL 4822
22. **Plant Gene Evolution**: BIOPL 4822
23. **Genetic Engineering of Plants**: BIOPL 4822
24. **Molecular Plant-Pathogen Interactions III**: BIOPL 4822
25. **Molecular Plant-Pathogen Interactions II**: BIOPL 4822
26. **Molecular Plant-Microbe Interactions**: BIOPL 4822
27. **Plant Gene Evolution**: BIOPL 4822
28. **Genetic Engineering of Plants**: BIOPL 4822
29. **Molecular Plant-Pathogen Interactions III**: BIOPL 4822
30. **Molecular Plant-Pathogen Interactions II**: BIOPL 4822
31. **Molecular Plant-Microbe Interactions**: BIOPL 4822
32. **Plant Gene Evolution**: BIOPL 4822
33. **Genetic Engineering of Plants**: BIOPL 4822
34. **Molecular Plant-Pathogen Interactions III**: BIOPL 4822

**Notes**

- **BIOG 4990 Independent Research** may not be used to fulfill any requirement for the minor. S/U grading is allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.
- External transfer students must complete the core biology courses at Cornell. Students who are fulfilling the minor requirements under Option 2 must complete a minimum of one program of study course of at least 3 credits at Cornell.
- All courses for the minor must be taken for a letter grade unless a course is offered S/U only.
- Applications for the minor are located in 216 Stimson Hall. See Bonnie Comella, Jeff McCaffrey, or Wendy Aquadro for academic advising and for certifying completion of the minor.

**Independent Research and Honors Program**

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIOG 2990, an S/U course designed to introduce students to research. After the first semester, students enroll in BIOG 4990. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research done off campus unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the programs of study in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in life science research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Biology majors planning on graduating with honors must apply to the Biology Honors Program in the spring of their junior year. Applications and information are available in the Office of Undergraduate Biology in 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 90 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually earns credit for research in BIOG 4990 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.0 Cornell cumulative and science GPA.
through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and research advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program.

Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee, which meets monthly during the academic year. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or see an academic advisor in the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the Biology and Society major should see pages 487–494 in the College of Arts and Sciences section of this catalog.

TRANSFERRING CREDIT

Biology majors are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell.

External transfer students are limited to transferring one core biology course and one course of up to 3 credits toward their program of study. See the Office of Undergraduate Biology for approval procedures.

Students who matriculated to Cornell as freshmen and Study Abroad students may transfer program of study courses at the discretion of their advisor. Study Abroad students must obtain approval from the Office of Undergraduate Biology, Director of Advising, to transfer biology core courses.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIOG)

Three introductory biology course sequences are taught during the academic year: BIOG 1101–1104, 1105–1106, and 1107–1110; and one during the eight-week summer session: BIOG 1107–1108. BIOG 1101–1104, 1105–1106, and 1107–1108 are intended for biological sciences majors and other students needing 8 credits from an introductory course sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing “one year of introductory biology for majors” as a prerequisite. BIOG 1109–1110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing “one year of introductory biology” as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

BIOG 1101-1102 Biological Sciences, Lectures

1101, fall; 1102, spring. 2 credits each semester. Corequisite: BIOG 1103 (fall) or 1104 (spring). Prerequisite: for 1102, D or better in 1101 or permission of instructor. May not be taken for credit after BIOG 1105–1106 or 1109–1110. S-U or letter grades by permission of instructor. For lect of fall semester, F Aug. 29. No admittance after second week of classes. Evening prelms: fall, Sept. 25 and Nov. 4; spring, Feb. 19 and March 31. Fall, staff; spring, staff.

Designed for students who intend to specialize in biological sciences. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory, and discussions of plant and animal systems are integrated.

BIOG 1103-1104 Biological Sciences, Laboratory

1103, fall; 1104, spring. 2 credits each semester. Corequisite: BIOG 1101 (fall) or 1102 (spring). Prerequisite: for 1104, D or better in 1103 or permission of instructor. Students register for labs courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. First lab of fall: week of Sept. 1; first lab of spring: week of Jan. 19. S-U or letter grades by permission of instructor.

K.-C. Chen.

Designed to provide lab experience with major biological phenomena to support an understanding of the important concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry of cells, plant biology and a scientific method and poster development. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, students dissect a doubly pithed frog (pinning is done by the staff). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIOG 1105-1106 Introductory Biology

1105, fall; 1106, spring. 4 credits each semester. 2 credits by permission of instructor. Limited to 200 students. Taking 1105–1106 in sequence preferred but not required. May not be taken for credit after BIOG 1101–1104 or 1109–1110. No admittance after first week of classes. First lect of fall semester R Aug. 28, 9:05; additional study and lab. D. Campbell.

Designed primarily for biology majors, preprofessionals, and other students who desire a broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in BIOG 1105. BIOG 1106 covers genetics, development, ecology, evolution, and behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predissected specimens, students who object to dissections should take BIOG 1101–1104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam. Web site: instruc1.cit.cornell.edu/courses/biog105.

BIOG 1107-1108 General Biology

Summer, 8-week session: 1107, weeks 1–4; 1108, weeks 5–8. 4 credits each. 1107–1108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school. Prerequisite: one year of college or permission of instructor; for BIOG 1108, a grade of D or better in the prerequisite courses (BIOG 1101, 1103, 1105, or 1107). Fee for weeks 1–4: $25; for weeks 5–8, $25. Staff.

Designed for students who plan further study in biology. 1107 covers biological metabolism, first at the molecular level and then progressively to the organism system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 1108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 1107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.
BIOG 1109–1110 Biological Principles
1109, fall; 1110, spring. 3 credits each semester includes lecture and lab. Limited to 500 students. Nonmajors survey course, not appropriate for major in biological sciences or preprofessional requirement. Both BIOG 1109 and 1110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills Arts and Sciences distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in content, BIOG 1109 may not be taken after BIOG 1102 or 1107, and BIOG 1110 may not be taken after BIOG 1101, 1105, or equivalent. Note: This course may not satisfy prerequisite for upper-level courses in biology. Letter grades only. Prerequisites: permission of the instructor.

BIOG 2990 Introduction to Research Methods in Biology
Fall, spring, or summer. Variable credit; max. 3 suggested. S-U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology. 216 Simons Hall. Applications available in OUB and at www.bio.cornell.edu. Add deadline is three days before university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable. Intended for students who are new to undergraduate research. Students enrolled in BIOG 2990 may be reading scientific literature, learning research techniques, or assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIOG 3050 Basic Immunology Lectures (also VETMI 3150)
Fall. 3 credits. Highly recommended: basic courses in microbiology, biochemistry, and genetics. S-U or letter grades. Lec. J. A. Appleton. For description, see VETMI 3150.

BIOG 4000 Undergraduate Seminar in Biology
Fall or spring. Variable credit; 1–3 assigned for individual seminar offerings; participation in Weill Cornell Medical College in Qatar required. S-U or letter grades. Staff. Specialized seminars on topics of interest to undergraduates studying at Weill Cornell Medical College in Qatar.

BIOG 4040 Planning for Graduate Study in Biology
Fall. 1 credit. S-U grades only. L. Southard. For students who plan to pursue a graduate degree leading to a research career. Selected topics include information on academic and industrial research careers, selecting appropriate graduate programs, and options for funding. Features faculty, graduate student, and outside speakers. Students write and receive feedback on personal statements.

BIOG 4080 Presentation Skills for Biologists
Spring. 1 credit. S-U grades only. J. A. Appleton. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program. L. Southard and G. Hess.

Multiple topics and sections will be offered each semester.

BIOG 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor.

Written by Cornell faculty members, this course is designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOG 4990 Independent Undergraduate Research in Biology
Fall, spring, or summer. Variable credit. S-U or letter grades. Note: Arts students may not register for more than 6 credits per semester with one supervisor. 1–4 credits per semester with one supervisor. Students in CALS may use up to 15 credits of independent study (BIOG 4990, 4980) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity, and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester of BIOG 2990 or equivalent. S-U grades by permission of instructor and Office of Undergraduate Biology.
For students with previous undergraduate experience conducting biological research at Cornell. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. Add deadline is three days before university deadline. Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

**BIOG 6000 Graduate Seminar in Biology**

Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U or letter grades. Staff.

Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

**ANIMAL PHYSIOLOGY (BIOAP)**

**BIOAP 1250 Biology Seminar**

Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOAP 2140 The Biological Basis of Sex Differences (also BSOC 2141, FGSS 2140)**

Fall. 3 credits. Prerequisite: one year introductory biology. S-U or letter grades. Offered alternate years; next offered 2010–2011. J. E. Fortune.

Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction; where possible, special attention is given to studying the human behavior, mental, and physical capabilities). Current evidence on the effects of gender on nonreproductive aspects of life is discussed. This course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

**BIOAP 3110 Introductory Animal Physiology (also VTBMS 3460)**

Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S-U or letter grades by permission of instructor. Evening prelims. M. Baustian.

General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

**BIOAP 3120 Farm Animal Behavior (also ANSC 3050)**

Spring. 2 credits. Prerequisites: one year introductory biology, and introductory animal physiology (ANSC 1100 or equivalent is sufficient or BIOAP 3110). Recommended: at least one animal production course or equivalent experience. S-U or letter grades. P. Perry and K. A. Houpt.

For description, see ANSC 3050.

**BIOAP 3160 Cellular Physiology**

Spring. 3 credits. Pre- or corequisite: BIOBM 3510 and 3520 or 3530. Evening prelims. A. Quaroni.

A comprehensive course covering the general characteristics of eukaryotic cells, the structure, composition, and function of subcellular organelles, and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, cell-cell communication, extracellular matrix, and carcinogenesis.

**BIOAP 3190 Animal Physiology Experimentation**

Fall. 4 credits. Limited to 40 students per lab sec. Prerequisite: BIOAP 3110 or permission of instructor. For pre-med, pre-vet juniors and seniors and graduate students interested in biomedical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff.

Student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes, physiological research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection, and real-time computer recording and analysis. Experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems.

**BIOAP 4130 Histology: The Biology of the Tissues**

Spring. 4 credits. Prerequisite: one year introductory biology. S-U or letter grades. Offered alternate years; next offered 2009–2010. S. Suarez and L. Mizer.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of analytic morphology at the cell and tissue levels. Emphasizes dynamic interrelations of structure, composition, and function in cells and tissues.

**BIOAP 4160 Cell Physiology and Genomics Laboratory**

Spring. 4 credits. Limited to 24 students. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical science. Pre- or corequisite: BIOAP 3160 or BIOBM 4320 or permission of instructor. Letter grades only. N. A. Lorr, H.-H. Chuang, and staff.

The course emphasizes the application of molecular biology and analytical methods, including microscopy, to investigation of physiological mechanisms of cellular excitability. Students learn manipulation of nucleic acids including molecular cloning, RT-PCR, qRT-PCR and microarray analysis, heterologous expression systems including Xenopus oocytes and cultured mammalian cells, characterization of proteins using antibodies, and analysis of ion channels, receptors, and signal transduction pathways by measuring ionic currents and membrane potentials in the Xenopus oocyte expression system. Students also learn critical reading of original research articles. Students will conduct an independent project in the latter part of the semester using methods and systems introduced during the course.

**BIOAP 4250 Gamete Physiology and Fertilization (also ANSC 4250)**

Fall. 2 credits. Prerequisite: ANSC 2400 or equivalent. Letter grades only. Offered alternate years, next offered 2009–2010. J. E. Parks.

For description, see ANSC 4250.

**BIOAP 4270 Fundamentals of Endocrinology (also ANSC 4270)**

Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Letter grades only. Offered alternate years; next offered 2009–2010. P. A. Johnson.

For description, see ANSC 4270.

**BIOAP 4580 Mammalian Physiology**

Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or equivalent. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelims. K. W. Beyenbach.

The course offers a treatment of selected topics in vertebrate and human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course concluding lectures will illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the underlying roots of their molecular etiology. Weekly problem sets count 50 percent of the final grade.

**BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects (also NS 4750)**

Spring. 3 credits. Prerequisites: BIOBM 3300, 3310–3320, or 3330 (may be taken concurrently). S-U or letter grades. Offered alternate years; next offered 2009–2010. D. Noden and P. Stover.

Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

**BIOAP 4890 Mammalian Embryology (also BIOGD 4890)**

Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.
BIOAP 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of the instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOAP 7140 Cardiac Electrophysiology
Fall. 1 credit. S-U grades only. Offered alternate years. R. Gilmour. Survey of cardiac potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasizes nonlinear dynamic aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 7150 Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 3110 or equivalent. S-U or letter grades. Offered alternate years. K. A. Houpt. Emphasizes stress in domestic animals.

BIOAP 7200 Animal Physiology and Anatomy Seminar
Spring and fall. 1 credit each semester. Prerequisite: admission to graduate field of physiology. S-U or letter grades. R. Davisson. Designed to train graduate students in the field of physiology to become professional scientists. Students are required to give a seminar on their research. Advice and feedback are provided. Throughout the semester, advice is provided on subjects such as preparation of manuscripts, seminars, and grant proposals.

BIOAP 7570 Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and strong interest in reproductive biology. S-U or letter grades. J. E. Fortune, P. A. Johnson, and staff. Team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, sperm physiology/function); female reproductive function (endocrinology, ovarian development and function, oocyte physiology/function); fertilization and gamete transport; pregnancy; parturition; lactation; aging; reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 7940 Special Topics in Physiology
Fall or spring. 1 or 2 credits per topic; may be repeated for credit. Enrollment in each topic may be limited. S-U or letter grades by permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics.

BIOCH 4040 Stem Cells and Veterinary Biotechnology
Fall or spring. 3 credits. Prerequisites: one year introductory biology, one year organic chemistry, and CHEM 1570 or 3570–3580 (CHEM 1570 or 3570 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S-U or letter grades by permission of instructor. Lec. D. P. Schutte and M. W. Feinberg. Theoretical and practical aspects of stem cell research and its applications in veterinary medicine and regenerative medicine.

BIOCH 5320 Principles of Molecular Biology
Spring. 3 credits. Prerequisites: one year introductory biology, one year organic chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S-U or letter grades. Offered alternate years. R. Gilmour. Comprehensive course on molecular biology that covers the structure and properties of DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technique, genomics, and proteomics.

BIOG 4990 Undergraduate Research in Biology (BIOG 4990)
S-U or letter grades by permission of the class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S-U or letter grades. Offered alternate years. J. E. Fortune, P. A. Johnson, and staff. Credit may be awarded to a maximum of two consecutive semesters.

BIOBM 1250 Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOBM 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOGD 1320)
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lec. J. Blankenship. Six professors discuss their research and promising new areas for research in the future.

BIOBM 3300–3320 Principles of Biochemistry, Individualized Instruction
Fall or spring. 4 credits. Prerequisites: one year introductory biology and one year general chemistry and CHEM 1570 or 3570–3580 (CHEM 3580 may be taken concurrently) or equivalent, or permission of instructor. Recommended: concurrent registration in BIOBM 3340. May not be taken for credit after BIOBM 3310, 3320, 3330, or 3350. S-U or letter grades. Evenings only. Fall, Oct. 2 and Nov. 4; spring, Feb. 19 and March 31. J. E. Blankenship, P. C. Hinkle, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures, autotutorial format.

BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570 or 3570–3580 (CHEM 1570 or 3570 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3350. S-U grades by permission of instructor. Lec.; evening prelim Oct 23 G. W. Feinberg. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated lecture format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 3320 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year introductory biology and previous or concurrent registration in organic chemistry; or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S-U or letter grades by permission of instructor. Lec. B. K. Tye. Comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technology, genomics, and proteomics.

BIOBM 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer, six-week session. 4 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 3300, 3310, or 3320. S. Elly. Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 3340 Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: BIOBM 3350 or 3310–3320 (BIOBM 3320 may be taken concurrently). Corequisite: BIOBM 3340. J. E. Blankenship, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 3390 Research Practicum in Molecular and Cellular Biology
Fall or spring. 4 credits. Limited to 12 students. Prerequisites: genetics (BIOGD 2810 or biochemistry (BIOBM 3300 or BIOBM 3310 or BIOBM 3320 or BIOBM 3350) and permission of instructor. Lec. Letter grades. M. Inada. Organizational meeting to schedule open lab times on first day of class. A laboratory course that integrates ongoing faculty research to introduce students to a productive research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology; biochemistry; genetics; genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.
BIOBM 4310 Frontiers in Biophysics
Fall, full day oflec, S. Sept. 13, 9 a.m.-4 p.m., Racker Room, Biotechnology Bldg. 0.5 credit. S-U grades only. G. Feigenson and staff.
Overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates considering a career in biophysics and for graduate students interested in biophysics research opportunities at Cornell.

BIOBM 4320 Survey of Cell Biology
Spring, 3 credits. Prerequisite: BIOBM 3300, 3330, or 3310, and previous or concurrent registration in 3320, or equivalent. Recommended: BIOGD 2810. Lec. Evening prelims Mar. 3 and Apr. 16. V. M. Vogt.
Survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 4370, BIOGD 4830, and BIOBM 6320, 6360, and 6390.

BIOBM 4340 Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320. Recommended: BIOGD 4320. S-U or letter grades. Lec. S. Ely.
Lecture topics emphasize transgenic animal and plant systems that constitute marketed or near-market applications such as production of pharmaceuticals in milk, edible and nuclease acid vaccines, gene therapy, and high-tech agricultural products. Additional non-transgenic topics will include cancer treatments and relevant aspects of the human genome projects. An overview of human immunology and its relationship to drug development will be provided. Students will also explore relevant scientific literature.

BIOBM 4350–4360 Undergraduate Biochemistry Seminar
1 credit; may be repeated. Prerequisites: upperclass standing; BIOBM 3300, 3330, or 3310–3320, or written permission of instructor. S-U grades only. D. Wilson.
Selected papers from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOBM 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOGD/TOX 4370)
Spring. Variable credit; students may take lec or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisite: BIOG 1101–1102 or 1105–1106 and BIOBM 3300 or 3310–3320. Recommended: BIOGD 2810 and BIOBM 4320. S-U or letter grades. L. Lee.
Covers a wide spectrum of issues related to cell proliferation in eukaryotes. Lectures include various aspects of the regulation of cell division cycle and signal transduction pathways, with additional topics on oncogenesis, cell aging, and cell death. The facts as well as concepts and logics behind findings are presented in the lectures. Research articles are analyzed and discussed in depth during discussion sections.

BIOBM 4380 The RNA World
Spring, 3 credits. Prerequisites: BIOBM 3300 or 3310/3320 or 5330, or permission of instructor. A. Ke.
Part of the excitement about “the RNA world” stems from the notion that RNA is ancient and that the evolution of life as we know it depended upon RNA evolving both informational and catalytic capabilities. This course explores these ideas but more generally provides a comprehensive introduction to RNA biology. Many of the most interesting topics in the RNA biology, such as the mechanism of the RNA interference and its widespread applications, will be covered in detail. Other topics require consideration of essential RNA-protein complexes such as ribosomes, spliceosomes, telomerase, and signal recognition particles. Classical experiments as well as up-to-date research are covered in this course. A portion of each class is devoted to discussion and questions.

BIOBM 4390 Molecular Basis of Human Disease (also BIOGD 4390)
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 3300, 3310–3320, or 3350) and genetics (e.g., BIOGD 2810) or permission of instructor. Recommended: cell biology (e.g., BIOBM 4320 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). S-U or letter grades. Lec. W. L. Kraus.
This course examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics are selected from hereditary, autoimmune, and degenerative diseases, as well as metastatic cancer. The study of human genetics is approached with an emphasis on methods used to identify the genetic causes of diseases that have been proposed in other courses. In addition, the methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmaceutical and genetic therapies for treating the diseases, are presented. A portion of the lecture periods will be devoted to discussion and practice questions.

BIOBM 4400 Laboratory in Biochemistry and Molecular Biology
Fall, spring, or summer (three-week session). 4 credits. Limited enrollment. Priority given to undergraduate biology majors in Biochemistry or Molecular and Cell Biology programs of study and to graduate students with minor in field of biochemistry. Prerequisites: BIOBM 3300 or 3330 or 3310–3320 (at least one of 3310–3320 completed but one may be taken concurrently). S. Ely and H. Nivison.
Experiments related to molecular biology (includes PCR, DNA cloning, hybridization analysis, restriction mapping, and DNA sequence analysis), protein purification and analysis (salt fractionation, ion exchange chromatography, affinity chromatography, SDS-PAGE, and immunoblotting), and determination of enzyme kinetic parameters.

BIOBM 4430 Experimental Molecular Neurobiology (also BIOBM 4300)
For description, see BIOBM 4300.

BIOBM 4500 Principles of Chemical Biology (also CHEM 4550)
Fall. 3 credits. Prerequisites: CHEM 3570–3580 or 3590–3600 or equivalent. Next offered 2009–2010. T. P. Begley.
For description, see CHEM 4550.

BIOBM 4834 Molecular Aspects of Plant Development I (also F&ML 4834)
Fall. 1 credit. 12 lec TBA. J. B. Nasrallah.
For description, see BIOL 4834.

BIOBM 4850 Bacterial Genetics (also BIOIM/BIOGD 4850)
Fall. 2 or 3 credits; optional credit for registered students with permission of instructor to review previous material. Prerequisite: BIOGD 2810. Recommended: BIOI 2900 and BIOBM 3300 or 3310 and 3320 or 3330. Lec. J. E. Peters.
For description, see BIOI 4850.

BIOBM 4980 Teaching Experience
Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of the instructor. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOBM 6310 Protein Structure, Dynamics, and Function
Fall. 3 credits. Prerequisites: BIOBM 3300 or 3350 or 3310–3320 and organic chemistry. Recommended: physical chemistry course; S-U or letter grades. L. Nicholson.
Presentations on the basic principles of protein structure, dynamics, and function. Specific topics include protein stability, dynamics, evolution, molecular recognition, basic enzyme kinetics, and spectroscopic tools for studying proteins.

BIOBM 6330 Biosynthesis of Macromolecules
Fall. 2 credits. Prerequisite: BIOBM 3300 or 3330 or 3310–3320. Recommended: BIOGD 2810. Lec. J. W. Roberts and D. B. Wilson.
Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 6360 Functional Organization of Eukaryotic Cells
Spring. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320, and 4320, or equivalents. Lec. W. J. Brown.
Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell...
sibility. Together with BIOBM 4370, 632, and 6390 this course provides broad coverage of the cell biology subject area.

**BIOBM 6390 The Nucleus**
Spring. 2 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320, or equivalent. Recommended: BIOGD 2810. Lec. J. T. Lis. Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cell biological levels.

**BIOBM 6410 Laboratory in Plant Molecular Biology (also BIOPL 6410)**
Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, J. Nasrallah, K. Van Wijk, and staff. For description, see BIOPL 6410.

**[BIOBM 7300 Protein NMR Spectroscopy (also VETMM 7070)]**
Spring. 2 credits. Prerequisites: CHEM 3890 and 3900, or 2870 and 2880, or permission of instructor. S-U grades by permission. Offered alternate years; next offered 2009–2010. Lec. L. K. Nicholson and R. E. Oswald. Students acquire the tools necessary for understanding multidimensional NMR of proteins. NMR fundamentals and schemes for magnetization transfer, water suppression, decoupling, and others are presented.

**[BIOBM 7380 Macromolecular Crystallography (also CHEM 7880)]**
Fall. 3 credits. Prerequisite: permission of instructor. Lec. Next offered 2009–2010. S. E. Ealick. For description, see CHEM 7880.

**BIOBM 7510 Ethical Issues and Professional Responsibilities**
Spring. 1 credit. Prerequisite: graduate students beyond first year. S-U grades only. Organizational meeting first W of semester. Sen. P. Hinkle. Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

**BIOBM 7940 Current Topics in Biochemistry**
Fall or spring. 0.5 or 1 credit for each topic; may be repeated for credit. Prerequisite: BIOBM 3300 or 3350 or 3310–3320 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the course and time roster published at the beginning of each semester or the department mini-courses web site, www.mbg.cornell.edu/cals/mbg/about/courses/mini-courses.cfm.

**BIOBM 8300 Biochemistry Seminar**
Fall or spring. 0 credits. Prerequisite: graduate students in Biochemistry, Molecular, and Cell Biology. Lec open to everyone. V. Vogt. Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

**BIOBM 8310 Advanced Biochemical Methods I**
Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab and disc. Organizational meeting first F of semester 10/10. T. C. Huffaker. The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOBM 8320). Students must enroll separately for each half.

**BIOBM 8320 Advanced Biochemical Methods II**
Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular, and cell biology. S-U grades only. Lab. V. Vogt. Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

**BIOBM 8330 Research Seminar in Biochemistry**
Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S-U grades only. W. L. Kraus and M. M. Vogt. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**BIOBM 8360 Methods and Logic in Biochemistry, Molecular, and Cell Biology, Part I**
Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular, and cell biology. S-U grades only. Sen. and disc. G. P. Hess. Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular and cell biology.

**BIOBM 8380 Scientific Communication and Quantitation in Biochemistry, Molecular, and Cell Biology (BMCB)**
Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genetics and development. S-U grades only. D. Shalloway. Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

**Related Courses in Other Departments**
Lipids (BIOAP 6190, NS 6020)
Teaching Experience (BIOG 4980)
Undergraduate Research in Biology (BIOG 4990)

**ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)**

**BIOEE 1250 Biology Seminar**
Fall or spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOEE 1540 Introductory Oceanography, Lectures (also EAS 1540)**
Fall. 3 credits; optional 1-credit laboratory offered as BIOEE/EAS 1550. S-U or letter grades. B. C. Monger. For description, see EAS 1540.

**BIOEE 1550 Introductory Oceanography, Laboratory (also EAS 1550)**
Fall. 1 credit. Corequisite: BIOEE/EAS 1540. S-U or letter grades. B. C. Monger. For description, see EAS 1550.

**BIOEE 2070 Evolution (also HIST 2870, STS 2871)**
Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 2780. Does not meet evolutionary biology requirement for biological sciences major. S-U or letter grades. W. B. Provine. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**BIOEE 2510 Ecology and the Environment**
Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S-U or letter grades. Fall: A. Kelsey, C. L. Goodale, and staff. Summer: A. T. Vawter. Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines. Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are examined through classroom lectures and discussion and through a series of lab and field experiences in natural habitats around Ithaca. Ecological principles are applied extensively to current environmental problems and issues.
BIOEE 2630 Field Ecology
Fall. 3 credits. Pre- or corequisite: BIOEE 2610. Letter grades only. One weekend field trip. A. Agrawal.
Field exercises designed to give students direct experience with fieldwork, with an emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and predators on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

[BIOEE 2640 Tropical Field Ornithology]
Winter, two-week, full-time course. 3 credits. Limited to 12 students; minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S-U or letter grades. Daily fieldwork, disc, reading, and individual project. Next offered 2009–2010. A. A. Dhondt.

BIOEE 2650 Tropical Field Ecology and Behavior
Winter, field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. Letter grades only. J. Lovette and D. Rubenstein. Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

[BIOEE 2670 Introduction to Conservation Biology]
Fall. 3 credits. Intended for both science and nonscience majors. May not be taken for credit after NTRES 4100. Completion of BIOEE 2670 not required for NTRES 4100. S-U or letter grades. One Sat. a.m. field trip. Offered alternate years; next offered 2009–2010. J. W. Fitzpatrick.

BIOEE 2740 The Vertebrates: Structure, Function, and Evolution
Spring. 4 credits. Prerequisite: one year introductory biology, Fed: $25. S-U or letter grades. K. R. Zamudio. Introductory course in vertebrate organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOEE 2780 Evolutionary Biology
Fall or spring. 3 or 4 credits. 4-credit option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. (Students may not preregister for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; first-semester freshmen by permission of instructor. S-U or letter grades. One all-day Sat. field trip. Evening prelims: spring, Feb. 26 and Mar. 31. Fall, I. J. Lovette; spring, staff.
Considers explanations for patterns of diversity and for the apparent good fit of organisms to the environment. Topics include the genetic and developmental bases of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

[BIOEE 2850 Dynamics of Marine Ecosystems (also EAS 3500)]
Fall. 5 credits. Limited to 25 students. Prerequisites: one year of calculus and semester of oceanography (i.e., BIOEE/EAS 1540), or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. C. H. Greene and R. W. Howarth.
For description, see EAS 3500.

BIOEE 3510 Conservation Oceanography (also EAS 3510)
Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad and Environmental Sciences Semester in Hawaii; one semester of calculus and two semesters of biology or permission of instructor. Letter grades only. C. H. Greene, C. D. Harvell, and B. C. Monger.
For description, see EAS 3510.

[BIOEE 3620 Dynamic Models in Biology (also MATH 3620)]
Spring. 4 credits. Prerequisites: two semesters introductory biology (BIOG 1101–1102, 1105–1106, 1107–1108, 1109–1110 or equivalent) and completion of mathematics requirements for Biological Sciences major or equivalent. S-U or letter grades. Offered alternate years; next offered 2009–2010. S. P. Ellner and J. M. Guckenheimer.

BIOEE 3630 Field Methods in Ornithological Research
Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: introductory biology or equivalent, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S-U or letter grades. D. W. Winkler and staff.
Detailed, hands-on experience with the methods commonly used in ornithological field research, focusing on different methodologies used to obtain data on organismal structure and function, life history characteristics, and behavior. While being immersed in ongoing, intense research program in the Ithaca area, students learn about the types of evolutionary and ecological questions that can be addressed through use of different research methodologies, experimental design, and basic statistical analysis techniques.

BIOEE 3690 Chemical Ecology (also BIONB/ENTOM 3690)
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. A. Kessler, A. Agrawal, G. Jander, and J. S. Thaler.
Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include: plant defenses, microbial warfare, communication in marine organisms, and human pheromones.

BIOEE 3710 Human Paleontology (also ANTH 3114)
Fall. 3 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Occasional field trips.
K. A. R. Kennedy.
Broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

[BIOEE 3720 Biodiversity and Biology of the Marine Invertebrates]
Fall (but course must be taken previous summer at Shoals Marine Laboratory (SML), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily and evening lec, lab, and fieldwork. Total cost for room, board, and overhead at SML $1,200. Offered alternate years; offered 2009–2010. C. D. Harvell.)

[BIOEE 4050 Biology of the Neotropics]
Spring. 2 credits. Limited to 18 students. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. Next offered 2009–2010. A. S. Flecker.

[BIOEE 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses]
Spring. 3 credits. Limited to 12 students. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. Next offered 2009–2010. A. Kessler.
How do plants respond to herbivore attack? What are the molecular, plant hormonal, metabolic mechanisms of these responses? What ecological consequences do these responses have for the fitness of the plants and their attackers? The course provides an overview of the plant’s myriad responses to herbivores and compares them with responses to pathogens. It gives an introduction to the study of induced plant responses in the lectures as well as practical independent and group-intensive work.
BIOEE 4500 Mammalogy, Lectures  
Spring. 3 credits. Recommended. BIOEE 2740. Letter grades; S-U grades by permission only. Offered alternate years. B. A. McGuire. 
Lectures cover the evolution, diversity, functional morphology, behavior, ecology, and biogeography of living mammals. Selective coverage of mammalian fossils, conservation status, domestication, and diseases.

BIOEE 4501 Mammalogy, Laboratory  
Spring. 1 credit. Limited to 16 students. Pre- or corequisite: BIOEE 4500. Letter grades; S-U grades by permission only. Fee: $20. Travel to Cornell University Museum of Vertebrates (CUMV) at the Laboratory of Ornithology is necessary. One all-day field trip may be scheduled. Offered alternate years. B. A. McGuire. 
Laboratory topics include systemsatics, morphology, reproductive biology, locomotion, and behavior. Focus is on terrestrial mammals of North America. Most laboratories involve studies of skeletons and museum specimens; dissection of preserved material is possible. Live animals may be studied in the field and used in the laboratory for nondestructive experiments and demonstrations.

BIOEE 4530 Speciation  
Spring. 4 credits. Limited to 40 students. Prerequisites: BIOEE 2780 and BIOGD 2810 or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years. R. G. Harrison. 
Advanced course in evolutionary biology focusing on the pattern and process of speciation and the nature and origin of intrinsic barriers to gene exchange. Lecture topics include species concepts and definitions, the history of ideas about speciation, the biological basis of intrinsic barriers to gene exchange, current models for the origin of such barriers, genetic architecture of speciation, rates of speciation. Emphasis is on developing a rigorous conceptual framework for discussing speciation and on detailed analysis of a series of case histories.

BIOEE 4550 Insect Ecology (also ENTOM 4550)  
Fall. 4 credits. Recommended: ENTOM 2120 or BIOEE 2610 or permission of instructor. S-U or letter grades. Offered alternate years. J. S. Thaler. 
For description, see ENTOM 4550.

[BIOEE 4560 Stream Ecology (also NTRES 4560)]  
Fall. 4 credits. Limited to 40 students. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. Field project with lab papers. One Sat. field trip. Offered alternate years; next offered 2009–2010. A. S. Flecker and C. E. Kraft. 
For description, see NTRES 4560.

[BIOEE 4570 Limnology: Ecology of Lakes, Lectures]  
Spring. 3 credits. Prerequisite: BIOEE 2610 or written permission of instructor. Recommended: introductory chemistry. Letter grades; S-U grades by permission only. Offered alternate years; next offered 2009–2010. N. G. Hairston, Jr.

[BIOEE 4571 Limnology: Ecology of Lakes, Laboratory]  
Spring. 2 credits. Pre- or corequisite: BIOEE 4570. Letter grades; S-U grades by permission only. One weekend field trip. Fee for food on field trip: $15. Offered alternate years; next offered 2009–2010. N. G. Hairston, Jr. and staff.

[BIOEE 4580 Community Ecology]  
Spring. 4 credits. Prerequisites: BIOEE 2610, 2780, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. M. A. Geber and A. Agrawal.

[BIOEE 4600 Theoretical Ecology]  
Spring. 4 credits. Limited enrollment. Prerequisites: completion of Biological Sciences mathematics requirement or equivalent, and either one additional semester of mathematics, statistics, or modeling (e.g., BEE 2600/4530/4750, NTRES 3100/4110, BION 4220) or permission of instructor. S-U or letter grades. Offered alternate years. S. P. Ellner. 
Introduction to the models used to construct ecological theory and analyze data on ecological dynamics, and to the mathematical and computer methods used to analyze these models. Applications from individual decision-making through multiplex and spatial dynamics introduce the main themes in theoretical ecology: optimization, dynamics, and the links between process and pattern. The lab includes instruction in computer programming and review of mathematical methods.

BIOEE 4620 Marine Ecology (also EAS 4620)  
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Letter grades; S-U grades by permission only. Offered alternate years. C. D. Harvell and C. H. Greene. 
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, especially polar seas, temperate coastal waters, and tropical coral reefs.

[BIOEE 4640 Macroevolution]  
Spring. 4 credits. Limited to 35 students. Prerequisite: BIOEE 2780 or permission of instructor. Interested graduate students strongly encouraged to preregister. Letter grades; S-U grades by permission only. Offered alternate years; next offered 2009–2010. A. R. McCune. 

[BIOEE 4660 Physiological Plant Ecology, Lectures]  
Spring. 3 credits. Limited to 30 students. Prerequisite: BIOEE 2610 or introductory plant physiology. Letter grades; S-U grades by permission only. Offered alternate years. J. P. Sparks. 
Detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology, life history and physiology; the evolution of physiological performance; and physiology at the population, community, and ecosystem levels. Readings draw from the primary literature and textbooks.

BIOEE 4661 Physiological Plant Ecology, Laboratory  
Spring. 2 credits. Limited to 15 students. Pre- or corequisite: BIOEE 4660. Letter grades only. Offered alternate years. J. P. Sparks. 
Detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover topics such as sign and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of three hours per week in additional lab time for this course.

BIOEE 4670 Seminar in the History of Biology (also HIST 4150, BSOC/STS 4471)  
Fall or summer (six-week session). 4 credits. Limited to 18 students. S-U or letter grades. W. B. Provine. 
Specific topics change each year.

[BIOEE 4690 Food, Agriculture, and Society (also BSOC/STS 4691)]  
Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S-U or letter grades. Next offered 2010–2011. A. G. Power.

BIOEE 4700 Herpetology, Lectures  
Spring. 2 credits. Limited to 50 students. Recommended: BIOEE 2740 and concurrent enrollment in BIOEE 4701. Letter grades; S-U grades by permission only. Offered alternate years. H. W. Greene. 
Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology.

BIOEE 4701 Herpetology, Laboratory  
Spring. 2 credits. Limited to 35 students. Pre- or corequisite: BIOEE 4700. Letter grades; S-U grades by permission only. Fee: $30. Occasional field trips and special projects. Offered alternate years. H. W. Greene. 
Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

BIOEE 4730 Ecology of Agricultural Systems (also HORT 4730)  
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 2610 or permission of instructor. S-U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. L. E. Drinkwater. 
Analysis of the ecological processes operating in agricultural systems, with an emphasis on understanding relationships between agroecosystem structure and function and interactions among organisms. Examines agroecological theory and research through readings and discussions. The first part of this
course emphasizes understanding biogeochemical processes, population and community ecology with emphasis on plant-herbivore and plant-microbial interactions, and evolutionary processes in agroecosystems. The latter part focuses on the application of ecological knowledge to design and management of multifunctional agroecosystems. Field trips to local farms and case studies from both the tropics and the temperate zone are used to illustrate important concepts.

**[BIOEE 4750 Ornithology](#)**

**[BIOEE 4760 Biology of Fishes](#)**

Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 2740 or equivalent experience in vertebrate zoology. Letter grades; S-U grades by permission only. Small lab fee may be required. Two field trips. Offered alternate years. A. R. McCauley.

Introduction to the study of fishes: their structure, physiology and functional morphology, behavior, ecology, diversity, evolution, classification, and identification. Emphasizes marine fishes from different habitats (temperate, tropical coral reef, intertidal, and deep sea); local freshwater species; and interesting freshwater fishes from around the world, especially South America and Africa. Two field trips, including one full-day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

**[BIOEE 4770 Marine Invertebrates Seminar](#)**

Fall. 1 credit. Prerequisite: BIOEE 3750 or permission of instructor. S-U grades only. Offered alternate years; next offered 2009–2010. C. D. Harvell and J. G. Morin.

**[BIOEE 4780 Ecosystem Biology](#)**

Spring. 4 credits. Prerequisite: BIOEE 2610 or equivalent. S-U or letter grades. Offered alternate years. C. L. Goodale and staff.

Analyzes ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Considers anthropogenic effects on ecosystems, such as from acid precipitation and nitrogen pollution. Also analyzes climate change and regional environmental change from an ecosystem perspective.

**[BIOEE 4790 Paleobiology (also EAS 4790)](#)**

Spring. 4 credits. Prerequisites: one year introductory biology for majors and either BIOEE 2740, 3730, or permission of instructor. S-U or letter grades. W. D. Allmon.

For description, see EAS 4790.

**[BIOEE 4800 Ecological Genetics (also ENTOM 4700)](#)**

Spring. 3 credits. Prerequisite: BIOEE 2780. Recommended: introductory course in genetics and/or statistics. S-U or letter grades. B. P. Lazzaro.

For description, see ENTOM 4700.

**[BIOEE 4900 Topics in Marine Biology](#)**

Spring. 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates, S-U or letter grades. Offered alternate years. J. G. Morin and M. J. Shulman.

Seminars on courses selected in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**[BIOEE 4980 Teaching Experience](#)**

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

**[BIOEE 6600 Field Studies in Ecology and Evolutionary Biology](#)**

Fall or spring. Variable credit. Prerequisites: BIOEE 2610, taxon-oriented course, and permission of instructor. Letter grades; S-U grades by permission only. Lec and field trips TBA. Estimated costs: TBA. Staff.

Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**[BIOEE 6601 Tropical Field Ecology](#)**

Spring. 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater organisms. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing: TBA. Offered alternate years. C. D. Harvell, J. P. Sparks, and N. G. Hairston, Jr.

Field trip to the big island of Hawaii, the Yucatan Coast of Mexico, or similar environment; credit with instructors for planned location. Students employ experimental approaches to study ecological and evolutionary questions across a range of tropical biomes.

**[BIOEE 6602 Graduate Field Course in Ecology](#)**

Spring. 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years; next offered 2009–2010. J. P. Sparks.

**[BIOEE 6610–6611 Environmental Policy](#)**

(also ALS 6610–6611, BSOC 4611–4612)

6610, fall; 6611, spring. 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only; D. Pimentel.

Focuses on complex environmental issues. Ten to 12 students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

**[BIOEE 6680 Principles of Biogeochemistry](#)**

Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. R. W. Howarth and C. L. Goodale.

**[BIOEE 6710 Palaeoanthropology of South Asia (also ANTHR 6371, ASIAN 6671)](#)**

**[BIOEE 6730 Human Evolution: Concepts, History, and Theory (also ANTHR 6373)](#)**

Spring. 3 credits. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Next offered 2009–2010. K. A. R. Kennedy.

**[BIOEE 6750 Current Topics in Plant Molecular Ecology](#)**

Fall. 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: graduate standing or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. A. Kessler.

**[BIOEE 7600 Special Topics in Evolution and Ecology](#)**

Fall or spring. 1–3 credits; may be repeated for credit. Limited enrollment. Letter grades; S-U grades by permission only. Staff.

Independent or group-intensive study of special topics of current interest. Content varies each semester.

**[BIOEE 7610 Microsatellite DNA: Techniques](#)**

Fall. 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail S. M. Bogdanowicz (smb31) by end of Aug. if interested. S-U grades only. Fee: TBA. R. G. Harrison and S. M. Bogdanowicz.

---

---

Thus far, every study has been published.
Construct and screen genomic DNA libraries for microsatellite loci. Lectures and group discussions regarding microsatellite isolation, characterization, and evolution. Informal presentations of student research projects.

**BIOEE 7640 Plant-Insect Interactions Seminar**
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. A. Agrawal, J. S. Thaler, and A. Kessler. Group-intensive study of current research in plant-insect interactions. Topics vary from semester to semester, but include: chemical defense, coevolution, insect community structure, population regulation, biocorrolence, tritrophic interactions, and mutualism.

**BIOEE 7670 Current Topics in Ecology and Evolutionary Biology**
Fall. 4 credits. Prerequisite: for undergraduates, permission of instructor. S-U grades only. P. P. Feeny. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**BIOEE 7700 Workshop in Biogeochemistry**
Fall or spring. 1–3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 6680. S-U grades only. Staff. Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

**BIOEE 7800 Graduate Seminar in Ornithology (also NTRES 7800)**
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S-U grades only. J. J. Lovette, A. A. Dhome, D. W. Winkler, and J. L. Dickinson. Group intensive study of current research in ornithology. Topics vary from semester to semester.

**BIOEE 8990 M.S. Thesis Research**
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S-U or letter grades. E&EB field faculty. Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

**BIOEE 9990 Ph.D. Dissertation Research**
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S-U or letter grades. E&EB field faculty. Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

**Related Courses in Other Departments**
Ethics and the Environment (BSOC/STS 2061, PHIL 2460)
Physical Hydrology for Ecosystems (BEE 3710)

**BIOGD 1250 Biology Seminar**
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOGD 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOBM 1320)**
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S-U grades only. Lect. J. Blankenship.
For description, see BIOBM 1320.

**BIOGD 2800 Lectures in Genetics**
Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lect, lab. Highly recommended: problem-solving sessions. T. D. Fox, R. J. MacIntyre, and D. Nero.
For description, see BIOGD 2810.

**BIOGD 2810 Genetics**
Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lect. Highly recommended: problem-solving sessions. T. D. Fox, R. J. MacIntyre, and D. Nero.
General introduction to the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, linkage, recombination, structure, mutations, and manipulation, as well as analysis of genomes in individuals and populations.

**BIOGD 2820 Human Genetics**
Spring. 2 or 3 credits, 2 credits if taken after BIOGD 2810. Prerequisite: one year introductory biology or equivalent. S-U or letter grades. Lect. M. L. Goldberg. Designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 3850 Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. K. Liu.
Introduction to the morphogenetic, molecular and cellular, and genetic aspects of the developmental biology of animals.

BIOGD 3940 Circadian Rhythms (also BIOMI/BIOBM 3940)
Fall, 2–3 credits. Prerequisite: ENTM 2120 or BIOB 2810 or BIOB 2210 or 2220 or permission of instructor. S-U or letter grades. Lec. K. Lee.
This course will explore a fundamental feature of living organisms found in all kingdoms: how the cellular 24-hour biological clock operates and influences the biological activities. The course will cover fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators of model organisms including cyanobacteria, fungi, insects, plants, and mammals. One-credit (optional) lab module offered in conjunction with lec.

BIOGD 3990 Research Practicum in Molecular and Cellular Biology
Fall or spring. 4 credits. Limited to 12 students. Prerequisites: genetics (BIOGD 2810) or biochemistry (BIOBM 3300 or BIOB 3510 or BIOB 3520 or BIOBM 3530) and permission of instructor. Lec. Letter grades. M. Inada.
Organizational meeting to schedule open lab times on first day of class. A laboratory course that integrates ongoing faculty research to introduce students to a project-based research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology, biochemistry, genetics, genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.

BIOGD 4000 Genomics
Fall. 3 credits. Prerequisites: one year introductory biology plus BIOGD 2810 or 3300 or 3350 or 3510/3520 or permission of instructor. S-U or letter grades. Lec. W. Liu.
Introduction to principles underlying the organization of genomes and the methods of studying them, emphasizing genome-wide approaches to research. Covers the application of genomics methodologies for addressing issues including gene regulation, evolution, complex systems, genetics and gene: phenotype relationships. Landmark and timely genomics papers and other research developments will be discussed. Basic bioinformatics tools will be incorporated.

BIOGD 4010 Genomic Analysis
Spring. 3 credits. Prerequisites: BIOGD 4000 or permission of instructor. Lec. T. P. O’Brien.
Overview of approaches and tools used in genomics research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include genome sequencing and assembly, high-throughput sequencing, comparative genomics, genetic variation and complex traits, expression profiling and proteomics, genome modification and transgenesis, modeling network structure and dynamics. Discussions will explore how genomic tools and approaches can be integrated to study biological systems.

BIOGD 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOBM/TOX 4370)
Spring. Variable credit; students may take lec for 2 credits or lec and disc for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisites: BIOG 1101–1102 and BIOB 3500 or 3510/3520. Recommended: BIOGD 2810 and BIOBM 4520. S-U or letter grades. S. Lee.
For description, see BIOBM 4370.

BIOGD 4390 Molecular Basis of Human Disease (also BIOBM 4390)
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOB 3500, 3330/3320, or 3350) and genetics (e.g., BIOGD 2810) or permission of instructor. Recommended: cell biology (e.g., BIOBM 4520 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). S-U or letter grades. Lec. K. Lee.
This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOGD 4400 Stem Cell Biology: Basic Science and Clinical Applications
Spring. 3 credits. Limited to 30 students. Prerequisites: BIOGD 4520 or BIOGD 3850 or permission of instructor. S-U; grades by permission of instructor. Lec. T. Tumbar.
This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOGD 4500 Vertebrate Development
Fall. 3 credits. Prerequisites: BIOGD 2810, and either BIOBM 4520 or BIOGD 3850. S-U or letter grades. M. J. Garcia-Garcia.
This course explores the developmental mechanisms employed by vertebrate organisms. Topics include the detailed analysis of the genetic, molecular, and cellular events underlying development in frogs, fish, mice, and humans. Course readings include original research articles. Students are encouraged to participate in class discussions.

BIOGD 4610 Development and Evolution
Spring. 3 credits. Prerequisites: BIOEE 2780, BIOGD 2810, BIOB 3330 or 3300 or 3350. Recommended: BIOGD 3850. Lec. Offered alternate years. M. Wolfnner.
This course explores the molecular and genetic pathways and mechanisms that regulate animal development, and how they are modified through evolution to result in the dazzling array of forms and functions seen in the animal kingdom.

BIOGD 4810 Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 2810, BIOEE 2780, or equivalents. Lec, disc. C. F. Aquadro.
Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation and what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of natural and domesticated populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 4820 Human Genetics and Society
Fall. 4 credits. Limited to 24 students. Prerequisite: biological sciences majors; priority given to seniors studying genetics and molecular and cellular biology; BIOGD 2810 and BIOB 3300 or 3350 or 3510 and 3320. M. Inada.
Presentation of some of the science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, pre-symptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, human cloning, forensic uses of genetics, and therapy for genetic diseases. Students lead some discussions. There is a major writing component to the course.

BIOGD 4825 Molecular Biology of Plant Organelles (also BIOL 4825)
Spring. 1 credit. Prerequisites: BIOL 4831 or BIOGD 2810 and permission of instructor. S-U or letter grades. M. R. Hanson and D. B. Stern.
For description, see BIOL 4825.

BIOGD 4840 Molecular Evolution
Spring. 3 credits. Prerequisites: BIOGD 2810. Lec. D. Barbash.
Explores the various processes by which DNA and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over time scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and development of genomes from microbes to higher eukaryotes including humans, and the relationship between molecular evolution at the sequence level and the evolution of developmental pathways and systems.

BIOGD 4850 Bacterial Genetics (also BIOMI/BIOBM 4850)
Fall or spring. 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOMI 2900 and BIOBM 3500 or 3510 and 3520 or 3330. J. E. Peters.
For description, see BIOMI 4850.
BIOGD 4860 Eukaryotic Genetics
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 2810, BIOBM 3300 or 3530 or 3510 and 3520. S-U or letter grades. E. E. Adler. Develops skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome organization. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOGD 4870 Human Genomics
Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. A. G. Clark. Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of the whole genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic information. Focuses on the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as homologous recombination, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of problem sets and a term paper.

BIOGD 4890 Mammalian Embryology (also BIOAP 4890)
Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years; next offered 2009–2010. D. M. Noden. Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histogenesis of each organ system.

BIOGD 4900 Manipulating the Mouse Genome (also NS 4900)
Fall. 2 credits. Course meets during first half of semester (R 1.25–3.20; Aug. 25–Oct. 4) and provides background information for VTBIM 7010 Mouse Pathology and Transgenesis, which meets during second half. Students interested in both courses must register for them separately. Prerequisites: BIOGD 2810 and BIOBM 3300, 3320, or 3530 or NS 3200. Letter grades only. P. D. Soloway. Functional genomic analysis has benefited enormously from experimental manipulation of the genomes of many organisms. The mouse has been the model of choice for such studies in mammals. This course explores the tools available for experimental manipulation of the mouse genome, including transgenesis, gene targeting, gene trapping, chemical mutagenesis, and cloning by nuclear transplant. Also discussed are use of recombinant inbred mice for complex trait analysis. Readings from the scientific literature focus on seminal applications of these methods.

BIOGD 6080 Epigenetics (also NS 6080)
Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300, 3530, or 3510 or NS 3200. Letter grades only. Planned W F 11:15–12:15; occasional evening meetings for student presentations. P. D. Soloway.

Epigenetic effects refer to reversible alterations in chromatin structure that can stably and heritably influence gene expression. These changes include covalent modifications to DNA itself or to proteins bound to DNA as well as noncovalent remodeling of chromatin. This course examines selected epigenetic phenomena described in several eukaryotes, mechanisms regulating these effects, and their phenotypic consequences when normal regulation is lost. Reading materials are from current literature, and participation in class discussion is required.

BIOGD 6100 Genomes as Chromosomes
Fall. 3 credits. Limited to 15 students. Prerequisites: BIOGD 2810 and BIOBM 3500 or 3530 or 3510/352 or equivalent by permission of instructor. Letter grades only. Offered alternate years. T. P. O’Brien and P. E. Cohen. The eukaryotic genome is partitioned into discrete structural units, the chromosomes. The course examines how chromosome organization is related to chromatin structure, gene expression, DNA replication, repair and stability. Special emphasis is placed on how the linear arrangement of sequence features along the chromosomes and regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

BIOGD 6110 Genome Maintenance (also NS 6110)
Fall. 1 credit. Meets only during second half of semester beginning Oct. 15. Limited to 25 students. Prerequisites: BIOGD 2810, as well as BIOBM 3300, or 3530, or 3510/352 (or equivalents). S-U or letter grades. Next offered 2009–2010. R. Weiss. The course focuses on the molecular mechanisms utilized by eukaryotic cells to preserve genomic integrity. Topics to be discussed include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addressed will be how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, especially cancer.

BIOGD 6120 Overview of Model Genetic Organisms
Spring, 2nd 6 weeks of semester. 1 credit. Limited to 20 students. Prerequisites: BIOGD 2810 or 4000 or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. J. Schimenti and staff. Presents the features of various model organisms and their relative merits for conducting various types of genomics/genetics research. Model systems discussed include: yeast, Arabidopsis, Drosophila, C. elegans, zebrafish, and mice.

BIOGD 6130 Genomics and Society
Spring, weeks 10–13. 1 credit. Prerequisite: BIOGD 2810 or BIOGD 4000 or permission of instructor. S-U or letter grades. Disc. S. Kresovich and S. Tanksley. A multidisciplinary examination of four to six selected topics that relate to the applications of biologic insights derived from genomic analysis. Technical, scientific, ethical, political, and/or social aspects of each topic will be considered from various perspectives.

BIOGD 6200 Evolutionary Genomics of Bacteria
Spring. 1 credit. M. Stanhope. Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and animal importance. The course will include lectures, discussion of relevant scientific literature, and a bioinformatics session.

BIOGD 6380 Filamentous Fungal Genomics and Development (also PLPA 6380)
Spring, last four weeks of semester. 1 credit. S-U or letter grades. Prerequisite: BIOGD 2810 or equivalent, or permission of instructor. Lec. Offered alternate years. B. G. Turgeon. For description, see PLPA 6380.

BIOGD 6870 Developmental Genetics
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 2810 and 3850 or equivalents. S-U or letter grades. Lec TBA. Offered alternate years. K. J. Kemphues. Course focuses on methods of genetic analysis of fruitflies, nematodes, mice, and fish to understand mechanisms of development. No text. Lectures and problems from literature.

BIOGD 6890 Cellular Basis of Development
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 2810, 3850, or either BIOBM 3300 or 3310–3320. Lec. S-U or letter grades. Next offered 2010–2011. J. Liu. Focuses on the integration of different cellular processes in various developmental contexts. Topics include cell polarity, cell migration, cell adhesion and fusion, cell growth and proliferation, cell-cell communication, and cell death. Students are required to read current literature and participate in discussions in class.

BIOGD 7800 Current Topics in Genetics and Development
Fall or spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S-U grades only, by permission of instructor. Seminar TBA. Staff.

BIOGD 7810 Problems in Genetics and Development
Fall. 2 credits. Prerequisite: first-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.
BIOGD 7820–7830 Current Genetics/Development Topics  
Spring, 0.5 or 1 credit for each topic; may be repeated for credit. S-U grades only. Lect and sem on specialized topics. Staff.

BIOGD 7840 Introduction to Quantitative Analysis  
Fall. 1 credit. Letter grades only. E. Alani (organizer), A. Clark, C. Bustamante, and M. Goldberg. The goal of this course is to introduce bioinformatic and probability/statistical tools at an intuitive level that will be meaningful to first-year graduate students in Genetics and Development.

BIOGD 7860 Research Seminar in Genetics and Development  
Fall and spring. 1 credit. Requirement for, and limited to second-year and beyond graduate students in genetics and development. S-U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIOGD 7870 Seminar in Genetics and Development  
Fall and spring. 1 credit. Prerequisite: graduate students in Genetics and Development. S-U grades only. Sem, TBA. Staff. Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

BIOMI 1720 Bioscientific Terminology  
Summer and winter. 3 credits. Letter grades only.

BIOMI 2900 General Microbiology Lectures  
Fall, spring, or summer (six-week session). 3 credits. Prerequisites: one year introductory biology for majors and one year college chemistry, or equivalent. Highly recommended: concurrent registration in BIOMI 2910. W. C. Ghiorse. Comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Some material may overlap with BIOGD 2810 and BIOBM 3300. Also covers applied aspects of microbiology such as biotechnology, the role of microorganisms in environmental processes, and medical microbiology. 4-credit option: Interested students complete four modules that last three weeks each: (1) environmental microbiology, (2) pathogenic microbiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 2940 Applied and Food Microbiology (also FDSC 3940)  
Fall. 2–3 credits. Prerequisites: BIOMI 2900, 2910, and BIOMI 3300 or 3310 or 3330. Priority given to biological sciences students in microbiology program of study. W. C. Ghiorse, J. P. Shapleigh, and S. H. Zinder. Illustrates basic principles of experimental microbiology. The course is organized into four modules that last three weeks each: (1) ecology, (2) physiology, (3) genetics, and (4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 3970 Environmental Microbiology  
Fall. 3 credits. Prerequisites: BIOMI 2900 or 2910 or BIOMI 3300 or permission of instructor. Offered alternate odd-numbered years. E. L. Madsen. Discusses the biological properties, evolution, and behavior of microorganisms in natural systems in relation to past and present environmental conditions on Earth. Also considers the functional role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutant chemicals, wastewater treatment, environmental biotechnology, and astrobiology.

BIOMI 4040 Pathogenic Bacteriology and Mycology (also VETMI 4040)  
Spring. 2 or 3 credits; 3 credits with lec and sem. Prerequisites: BIOMI 2900 and 2910; for undergraduates, permission of instructor. Highly recommended: BIOMI 3050. Offered alternate even years. D. Debbie. For description, see VETMI 4040.

BIOMI 4090 Principles of Virology (also VETMI/PLPA 4090)  
Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor. Recommended: BIOMI 3300–3320, 4320. Letter grades only. G. R. Whittaker and S. G. Lazarowitz. For description, see VETMI 4090.
BIOMI 4140 Prokaryotic Diversity
Spring. 3 credits. Prerequisites: BIOM 2900 and 2910. Recommended: BIOM 3300 or 3310 or 3330. Offered alternate odd-numbered years. S. H. Zinder.

Consideration of prokaryotic evolutionary biology, physiology, ecology, genetics, and practical potential of important groups of prokaryotes. Topics include prokaryotic phylogeny, the evolution of diverse mechanisms of energy conservation, fixations of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 4160 Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOM 2900, 2910, and BIOM 3300 or 3310, or equivalents. Offered alternate even years; next offered 2009–2010. J. P. Shapleigh.

Focuses on physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

BIOMI 4180 Microbial Ecology
Spring. 3 credits. Prerequisites: BIOM 2900 and 2910, or 3370 and permission of instructor, and BIOM 3300 or 3310 and 3320. R. E. Angert.

Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current biochemical and macromolecule sequence-based methods to assess community diversity and microbial activity in a variety of ecosystems. Other topics discussed include bacterial growth and survival, population biology, and microbial interactions.

BIOMI 4200 Microbial Genomics
Spring. 2 credits. Prerequisites: BIOM 2900, BIOMG 2810, BIOM 3500, or equivalent. Offered alternate odd-numbered years. J. P. Shapleigh and J. D. Helmann.

Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

BIOMI 4310 Medical Parasitology (also VETMI 4310)
Fall. 2 credits. Prerequisites: zoology and biology courses. D. Bowman.

For description, see VETMI 4310.

BIOMI 4480 Symbiotic Associations: Evolution and Ecology (also PLPA 4480)
Spring. 3 credits. Prerequisites: two semesters of introductory biology (BIOG 1101–1102, BIOL 1105–1106, BIOL 1107–1108, or BIOL 1109–1110), and BIOM 2900 or permission of instructor. Letter grades only. T. E. Pawlowska.

For description, see PLPA 4480.

BIOMI 4650 Bacterial Genetics (also BIOG/BIOM 4850)
Fall. 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOM 2800 or BIOM 3300 and 3310 or 3330. J. E. Peters.

Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through positive and negative regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 4680 Genomics of Bacterium-Host Interactions (also PLPA 4680)
Fall, second half of semester. 1 credit. Prerequisites: BIOM 2900 or equivalent or permission of instructor. Letter grades only. A. Collmer and S. Winans.

For description, see PLPA 4680.

BIOMI 6100 Introduction to Chemical and Environmental Toxicology (also TOX 6100)
Fall. 5 credits. Prerequisite: graduate standing in field or permission of instructor. Letter grades only. A. Hay.

Introduction to the general principles of toxicology including the sources, mechanisms, and targets of toxins. Gives special attention to the interaction between toxic agents and biological systems at both the organismal and ecological level. The effects of both anthropogenic and natural toxins are examined with respect to genetic and developmental toxicity as well as carcinogenesis and specific organ toxicity.

BIOMI 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BEE 6430)
Spring, eight weeks. 2 credits. Prerequisite: third- and fourth-year veterinary students. Letter grades only. D. D. Bowman.

For description, see VTMED 6430.

BIOMI 6901 Prokaryotic Biology: Microbial Structure and Function
Fall, 4 weeks/8 lec. 1 credit. J. P. Shapleigh.

Discusses those macromolecules and assemblages of macromolecules that together define the structure of the prokaryotic cell. This includes external structures, such as cell wall, flagella, pili, and peptidoglycan and internal structures such as specialized vesicles and other large complexes.

BIOMI 6902 Prokaryotic Biology: Environmental Microbiology
Fall, 4 weeks/8 lec. 1 credit. E. L. Madsen.

Core course of concepts, methods, and current literature that reveals the multidisciplinary nature of environmental microbiology and its relationship to prokaryotic biology. Discusses the crucial roles that microorganisms play in catalyzing biogeochemical reactions throughout the biosphere.

BIOMI 6903 Prokaryotic Biology: Microbial Physiology/Diversity
Fall, 4 weeks/8 lec. 1 credit. S. H. Zinder.

Reviews the major energy-conserving modes of metabolism and their phylogenetic distributions among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

BIOMI 6904 Prokaryotic Biology: Microbial Genetics
Spring, 4 weeks/8 lec. 1 credit. J. D. Helmann.

Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, chromosome transformation, transduction, transposition, recombination, repair, and mutagenesis.

BIOMI 6905 Prokaryotic Biology: Microbial Pathogenesis
Spring, 4 weeks/8 lec. 1 credit. S. C. Winans.

Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the role of both specific and non-specific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 6990 Toxicology Journal Club Sec 01—Environmental Toxicology (TOX 6990)
Spring. 1 credit. Required for toxicology students until post A exam. A. G. Hay.

BIOMI 7250 Mechanisms of Microbial Pathogenesis (also VETMI 7250)
Spring. 3 credits. Prerequisites: for undergraduates, written permission of instructor; BIOM 4040, 4090, or equivalent. Highly recommended: completion of two of the three courses. D. Debbie, M. Hesse, H. Marquis, J. Parker, M. Scidmore, and G. Whittaker.

For description, see VETMI 7250.

BIOMI 7910 Advanced Topics in Microbiology
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Sec 01 Bacterial Genetics, S. C. Winans; Sec 02 Environmental Microbiology, E. R. Angert.

Reading and presentation by graduate students of current literature in selected areas of modern microbiology.

BIOMI 7960 Current Topics in Microbiology
Fall and spring. 0.5 or 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lec. Staff Lectures and seminars on special topics in microbiology.

BIOMI 7970 Scientific Communication Skills
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S-U grades only. Staff.

The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor.
Feedback for improving the presentation and peer evaluations are emphasized.

**BIOMI 7980 Graduate Research Seminar in Microbiology**
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S-U grades only. Staff. All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

**BIOMI 7990 Microbiology Seminar**
Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.

**Related Courses in Other Departments**

Introduction to Scanning Electron Microscopy (BIOG 4010)
Fungi (PLPA 3090)
Light and Video Microscopy for Biologists (BIOG 4500)
Limnology: Ecology of Lakes, Lectures (BIOEE 4570)
Magical Mushrooms, Mischievous Molds (PLPA 2010)
Microbiology for Environmental Engineering (CEE 4510)
Plant Virology (PLPA 6450)
Principles of Biogeochemistry (BIOEE 6680)

**NEUROBIOLOGY AND BEHAVIOR (BIOMI)**

**BIOMI 1110 Brain Mind and Behavior (also PSYCH/COGST 1110)**
Spring. 3 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. Planned M W F 9:05. E. Adkins-Regan and R. R. Hoy. For description, see COGST 1110.

**BIOMI 1220 FWS: Special Topics in Neurobiology and Behavior**

**BIOMI 1250 Biology Seminar**
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOMI 2210 Neurobiology and Behavior I: Introduction to Behavior**
Fall. 3, 4, or 5 credits with one disc per week; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIOMI 2220. S-U or letter grades. Planned M W F 12:20; disc TBA. R. A. Raguso and staff. General introduction to the field of animal behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, orientation and navigation, and hormonal mechanisms of behavior.

**BIOMI 2213 Neurobiology and Behavior I: Introduction to Behavior**
Summer, six-week session. 3 or 4 credits; 4 credits with one disc per week. Limited to 30 students. Prerequisite: one year introductory college biology. S-U or letter grades. Course fee: none. Planned M–F 11:15. E. Adkins-Regan. Graduate seminar for students majoring in neuroscience, zoology, or psychology. Some discussion sections include invertebrate vision.

**BIOMI 2220 Neurobiology and Behavior II: Introduction to Neurobiology**
Spring. 3 or 4 credits; 4 credits with disc and written projects; 4-credit option required of students studying neurobiology and behavior. Limited to 15 students per disc; priority given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year introductory biology for majors and one year of chemistry. May be taken independently of BIOMI 2210. S-U or letter grades. Planned M W F 12:20; disc TBA. J. R. Fetcho and staff. General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

**BIOMI 3210 State of the Planet**
Spring. 3 credits. Prerequisites: none. S-U grades only. Planned M W F 1:25–2:15. T. Eisner, M. L. Zeeman, and D. P. McCobb. This interdisciplinary course is intended for any student with concern for the global crises we collectively face. During this course you will be introduced to current data and engaged in analysis of those data, establish a global context for your specialized education, and be provided with a toolbox to bring awareness, analysis and action to your lives and careers beyond graduation.

**BIOMI 3220 Hormones and Behavior (also PSYCH 3220/7220)**
Fall. 3 credits. Limited to 60 students. Prerequisites: junior or senior standing; any one of the following: PSYCH 2240 or BIOMI 2210 or 2220 or one year introductory biology plus psychology course. Two less sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 7220. Planned M W F 11:15. E. Adkins-Regan. For description, see PSYCH 3220.

**BIOMI 3230 Methods in Animal Behavior**
Fall. 4 credits. Limited to 24 students. Prerequisite: BIOMI 2210. Letter grades only. Offered alternate years; next offered 2009–2010. Planned M W 1:25–4:25. Staff. Hands-on lab/field course in methods for studying animal behavior. Topics include sound recording, videography radio-tracking, mapping, capture/marking methods, and behavioral statistics.

**BIOMI 3240 Biopsychology Laboratory (also PSYCH 3240)**
Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 2240 or BIOMI 2210 or 2220, and permission of instructor. Planned T R 1:25–4:25. Letter grades only. T. J. DeVoogd. For description, see PSYCH 3240.

**BIOMI 3250 Insect Behavior (also ENTOM 3250)**
Spring. 3 credits. Limited to 50 students. Prerequisite: ENTOM 2120 or BIOMI 2210. Intended for juniors, seniors, and beginning graduate students. S-U or letter grades. Planned T R 10:10–11:25. Offered alternate years. L. S. Rayor. For description, see ENTOM 3250.

**BIOMI 3260 The Visual System**
Spring. 4 credits. Limited to 25 students. Prerequisite: BIOMI 2220 or BIOP 3110 or permission of instructor. S-U or letter grades. Planned M W 10:10–11:25. Offered alternate years; next offered 2009–2010. H. C. Howland. The visual systems of vertebrates are discussed in breadth and depth as well as some aspects of invertebrate vision.

**BIOMI 3290 Biopsychology of Learning and Memory (also PSYCH 3320/6320)**
Spring. 3 credits. Limited to 65 students. Prerequisites: one year of biology and either a biopsychology course or BIOMI 2220. S-U or letter grades. Graduate students, see PSYCH 6320. Planned M W F 11:15. T. J. DeVoogd. For description, see PSYCH 3320.

**BIOMI 3320 Ecology of Animal Behavior (also BIOISM 3290)**
Summer. 4 credits. Limited to 18 students. Prerequisite: one year introductory college biology. Recommended: ecology, psychology, or behavior course. S-U or
BIONB 3300 Introduction to Computational Neuroscience (also PSYCH/COGST/BME 3300)
Fall. 3 or 4 credits. Prerequisites include lab TBA, permission of instructor, or computer simulation exercises. Limited to 25 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades. Offered alternate years. Planned M W 2:55–4:10. Lab TBA. C. Linster.

BIONB 3310 Human Sociobiology
Spring. 3 credits. Limited to 100 students. Prerequisite: BIONB 2210 or PSYCH 2230 or permission of instructor. S-U or letter grades. Offered alternate years. Planned M W 9:05–10:10. P. Barclay.

BIONB 3360 Chemical Ecology (also BIOEE/ENTOM 3690)
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. K. Adler.

BIONB 3390 Drugs and the Brain
Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 2220 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry. S-U or letter grades. Planned T R 10:10–11:25, disc TBA. Offered alternate years; next offered 2009–2010. R. M. Harris-Warrick.

BIONB 3390 Chemical Ecology (also BIOEE/ENTOM 3690)
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. A. Agrawal, G. Jander, A. Kessler, and J. Thaler.

BIONB 3900 Drugs and the Brain
Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 2220 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry. S-U or letter grades. Planned T R 10:10–11:25, disc TBA. Offered alternate years; next offered 2009–2010. R. M. Harris-Warrick.

BIONB 3940 Circadian Rhythms (also BIOG/ENTOM/PLPA 3940)
Fall. 2 or 3 credits (for optional lab sec see PLPA 3941). Prerequisite: 200-level biology course. S-U or letter grades. Planned T R 10:10–11:25, sess lab R 1:25–4:25 for 3-credit option. K. Lee.

BIONB 3960 Introduction to Sensory Systems (also PSYCH 3960/6960)
Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S-U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2009–2010. B. P. Haldern.

BIONB 4130 Molecules of Social Behavior and Emotion

BIONB 4200 Topics in Neurobiology and Behavior
Fall or spring. Variable credit; may be repeated for credit. Primarily for undergraduates. S-U or letter grades. Staff.

BIONB 4205 Topics in Neurobiology and Behavior: Darwinian Medicine Seminar
We explore how and why a Darwinian approach to medicine can provide us with important insights and a more complete understanding of health and disease than that offered solely by a traditional approach to medicine. We consider evolutionary explanations for such phenomena as normal (healthy) and diseased body reactions in pregnancy, why we are sometimes vulnerable to obesity, why we are especially vulnerable to infectious diseases, why cultures respond differently to diseases, what evolutionary forces have molded our reproductive systems, why we exhibit allergies and cancer, mental diseases, and how and why we age. This course seeks to provide both pre-med and non-premed students with a Darwinian methodology for understanding health and disease. Premed students will undoubtedly eventually find it useful in their practices, and all will find the logical and broad practical in their everyday lives. A lecture is given on each topic, followed by interactive, student-led discussions where students are given an opportunity to research the topic of their choosing. Grades are based on class participation, short written summaries of each topical area, and a PowerPoint presentation of a self-selected topic.

BIONB 4210 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 4310/6310)
Fall. 3 or 4 credits. 4-credit option involves term paper or creation of relevant website. Limited to 35 students. Prerequisites: introductory course in biology or psychology, plus second course in perception, neuroscience, cognitive science, or biopsychology. Planned T R 10:10–11:25. B. P. Halpenny.

BIONB 4220 Modeling Behavioral Evolution
Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 2210, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S-U or letter grades. Planned T R 2:55–4:10; computer lab TBA. Offered alternate years; next offered 2009–2010. H. K. Reeve.

BIONB 4230 Cognitive Neuroscience (also PSYCH 4250/6250)
Fall. 4 credits. Limited to 20 students. Prerequisites: introductory biology; biopsychology or neuroscience (e.g., PSYCH 2230 or BIONB 2210); and introductory course in perception, cognition, or language (PSYCH 1200, 2090, 2140, or 2150 essential). S-U or letter grades. Graduate students, see PSYCH 6250. Planned M W F 9:05. One lab in sheep brain dissection. Offered alternate years. B. L. Finlay.

BIONB 4240 Neuroethology (also PSYCH 4240)
Fall. 4 credits. Limited to 50 students. Prerequisites: BIONB 2210 and 2220; or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. C. D. Hopkins.
A comparative approach to the study of neural circuits involved in animal behavior: echolocation, sound localization, communication and signal recognition, bird song, central pattern generators, command neurons, and other topics.

BIONB 4250 Molecular Neurophysiology
Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades. Planned T R 2:55–4:10. Offered alternate years; next offered 2009–2010. D. P. McCobb.
Structure/function of ion channels responsible for electrical signals in, e.g., learning/memory, sensing heat and jalapenos, epilepsy, directional plant growth.

BIONB 4260 Animal Communication
How and why do animals communicate (topics include signal evolution, environmental effects on communication, cooperation vs. conflict signals, signal honesty, interspecific communication).
BIONB 4270 Darwinian Medicine
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 2210 and BIOEE 2610 or 2780, and permission of instructor. Letter grades only. Planned T R 2:30–4:25. Offered alternate years. P. W. Sherman. Writing-intensive advanced course for upper-division students interested in Darwinian medicine. Lectures, discussions, and student presentations examine topics including adaptation, intragenomic conflict, evolution of infectious disease, genetic diseases, virulence, sexuality, neuroendocrinology, stress, diet and disease, allergy, fever, morning sickness, lactose intolerance, depression and other mental illnesses, cancer, menopause, and senescence.

BIONB 4280 Clinical Neurobiology
Fall. 5 credits. Limited to 20 students. Prerequisites: two courses from BIONB 2220, BIOGD 2810, BIOMB 3500 or 3510; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S-U or letter grades. Planned M W 2:30–4:25. Offered alternate years. R. Booker. The goal of this course is to provide students with an appreciation of the current challenges facing the study and treatment of neurodegenerative diseases. The focus is on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neurodegenerative diseases, including but not limited to Alzheimer’s disease, Parkinson’s disease, neural ischemia, depression, ADHD, eating disorders, and AIDS-related dementia. The course provides a health context that enriches the student’s learning experience in other advanced courses in the biological sciences. Guest speakers include faculty members from across the Ithaca campus and the Weill College of Medicine, Departments of Neurology and Neurosciences.

[BIONB 4290 Olfaction and Taste: Structure and Function (also PSYCH 4200)]
Spring. 3 or 4 credits; 4-credit option requires term paper. Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 6290. Prerequisite: one 100-level course in biophysics or equivalent. Planned T R 10:10–11:25. Offered alternate years; next offered 2009–2010. B. P. Halpern. For description, see PSYCH 4290.

BIONB 4300 Experimental Molecular Neurobiology
Spring. 4 credits. Limited to 12 students. Prerequisites: BIOMB 3500 or 3510. Recommended: BIOGD 2810. Letter grades only. Lab T (for times see www.nnb. cornell.edu/Faculty/deitcher/BioNB_430.html). Offered alternate years. D. L. Deitcher. Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, DNA sequencing, and protein interactions. Experiments emphasize how molecular techniques can be applied to studying neurological problems.

[BIONB 4310 Genes and Behavior]

BIONB 4320 Genetics and Evolution of Behavior
Spring. 3 credits. Limited to 20 students. Prerequisite: BIONB 2210. Letter grades only. Planned T R 2:55–4:10. Offered alternate years. K. Shaffer. The astounding diversity of animal behaviors provides an endless source of fascination. This multidisciplinary course examines our current understanding of the evolution of such behavior, focusing on how and why behaviors evolve. Course material assists an integration of molecular genetic, population genetic and phylogenetic perspectives, emphasizing the animal diversity found in natural systems. Topics include the evolution of feeding, sexual, parental, social and predator-prey behaviors. Part lecture, part discussion with active-learning component.

BIONB 4440 Neural Computation (also PSYCH 4440)
Spring. 3 credits; limited to 10 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades. Planned T R 2:30–3:20, lab T R 3:35–4:25. Offered alternate years. T. A. Cleland. For description, see PSYCH 4440.

[BIONB 4460/4461 Plant Behavior—Induced Plant Responses to Biotic Stresses]
BIONB 4700 Biophysical Methods (also AE/EN 4670)
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: knowledge of cellular biology. Letter grades only. Planned M W 2:45–4:15. M. Lindau. For description, see AEP 4700.

BIONB 4900 Principles of Neurophysiology (also BME 4910)
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 2220 or written permission of instructor. S-U or letter grades for students outside the Neurobiology and Behavior concentration and graduate students, by permission of instructor. Planned M W 10:10; lab planned M or T 12:30–2:25. R. T. Johnson. Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. See instruct1.cit.cornell.edu/courses/bionb/4901/index.html.

BIONB 4920 Sensory Function (also PSYCH 4920/6920)
Spring. 4 credits. Limited to 25 students. Prerequisite: 3000-level course in biophysics, or BIONB 2220, or BIOAP 3110, or equivalent; knowledge of elementary physics, chemistry, and behavior. S-U or letter grades. Graduate students, see PSYCH 6920. Planned M W F 10:10. Offered alternate years. H. C. Howland and B. P. Halpern. For description, see PSYCH 4920.

[BIONB 4930 Developmental Neurobiology]
Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 2220 or permission of instructor. S-U or letter grades by permission of instructor. Planned M W 2:55–4:10. Offered alternate years; next offered 2009–2010. R. Booker. Focuses on both the morphological and molecular basis of neurodevelopment. Assigned readings are taken from original journal and review articles.

BIONB 4940 Brain Evolution and Behavior
Spring. 3 credits. Limited to 50 students. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 2220 or equivalent. S-U or letter grades. Offered alternate years; next offered 2009–2010. A. H. Bass. Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors.

BIONB 4950 Molecular and Genetic Approaches to Neurobiology
Fall. 5 credits. Limited to 25 students. Prerequisites: junior, senior, or graduate standing; BIONB 2220 and BIOBM 3300 or 3320. Letter grades only. Planned T R 2:55–4:10. Offered alternate years. D. L. Deitcher. Focuses on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, learning and memory, and neurodiseases.

BIONB 4960 Bioacoustic Signals in Animals and Man
Fall. 4 credits. Limited to 12 students. Prerequisites: junior, senior, or graduate standing; one year introductory biology, PHYS 1101–1102 or 2207–2208, and permission of instructor. S-U or letter grades. Planned M W 9:05; lab TBA. Offered alternate years; next offered 2009–2010. C. W. Clark and R. R. Hoy. Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems.

BIONB 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of the instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.
Evolution of Human Behavior (PSYCH 3260)
Topics in Biological Anthropology (ANTHR 4390)
Primate Behavior and Ecology (ANTHR 3390)
Teaching Experience (BIOG 4980)
The Brain and Sleep (PSYCH 4400/6400)
Independent Undergraduate Research in Biology (BIOG 4990)
OTS Undergraduate Semester Abroad Programs
Shoals Marine Laboratory Program
Spider Biology: Life on a Silken Thread (ENTOM 2150)

PLANT BIOLOGY (BIOPL)

BIOPL 1120 Issues in Social Biology: from Diet to Diseases, DNA to Defrauds
Fall and spring. 3 credits. S-U or letter grades. P. J. Davies.
An analysis of current issues of biological relevance and the biological science behind these issues. Topics will include issues such as food and nutrition, antioxidants, organic produce, disease prevention, athletic enhancers, genetic testing, cancer, stem cells and animal cloning, genetically modified crops, bacteria and antibiotics, viruses, risk, statistics and epidemiology, photosynthesis and global warming, extinction and overpopulation, invasive species, resource over-utilization. The topics will vary according to current issues.

BIOPL 1250 Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S-U grades only. Staff.
A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOPL 2400 Green World/Blue Planet
Fall. 3 credits. S-U or letter grades. Lect. T. Silva.
Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOPL 2410 Introductory Botany
Fall. 3 credits. Lect. Lab. K. J. Niklas.
Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOPL 2420 Plant Function and Growth Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function, suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: one year introductory biology and/or BIOPL 2410. Corequisite for plant science undergraduates (and highly recommended for other science majors): BIOPL 2440. Recommended: one year introductory chemistry. May not be taken for credit after BIOPL 3420 except by written permission of instructor. S-U or letter grades. Evening prelims. P. J. Davies.
How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

BIOPL 2421 Plant Function and Growth, Laboratory
Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOPL 2420. May not be taken for credit after BIOPL 3440. Disc and lab; students must take lab and disc on same day. T. Silva.
Experiments exemplify concepts covered in BIOPL 2420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

BIOPL 2430 Taxonomy of Cultivated Plants (also HORT 4340)
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 2480. Lect. Lab. Offered alternate years. M. A. Luckow.
Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

**BIOL 2450 Plant Biology**  
Summer, six-week session. 3 credits.  
Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

**BIOL 2470 Ethnobiology**

**BIOL 2480 Taxonomy of Vascular Plants**  
Spring, 4 credits. Prerequisite: one year introductory biology. May not be taken for credit after BIOL 2430. S-U or letter grades. Lec. Lab. Offered alternate years; next offered 2009–2010. J. I. Davis.  
Introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory presents an overview of vascular plant diversity, with particular attention to the flowering plants.

**BIOL 3420 Plant Physiology, Lectures**  
Spring, 3 credits. Prerequisites: one year introductory biology. Corequisite: BIOL 3440 or written permission of instructor. May not be taken for credit after BIOL 2420 unless written permission obtained from instructor. Lec. T. G. Owens.  
Integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant-water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

**BIOL 3421 Plant Physiology, Laboratory**  
Spring, 2 credits. Corequisite: BIOL 3420.  
May not be taken for credit after BIOL 2440. Similar to BIOL 2440 but at more advanced level. Lab, disc. T. Silva.  
Experiments exemplify concepts covered in BIOL 3420 and offer experience in a variety of biochemical and biological techniques, from the cellular to whole plant level, with emphasis on experimental design.

**BIOL 3430 Molecular Biology and Genetic Engineering of Plants**  
Spring, 2 credits. Prerequisite: one year general biology or permission of instructor. S-U or letter grades. Lec. M. E. Nasrallah.  
Introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology; gene expression systems; and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

**BIOL 3431 Laboratory in Molecular Biology and Genetic Engineering of Plants**  
Spring, 2 credits. Limited to 24 students. Prerequisite: BIOL 3430 or permission of instructor. Recommended: concurrent enrollment in BIOL 3430. S-U or letter grades. Lab, M. E. Nasrallah.  
Companion to BIOL 3430 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

**BIOL 3450 Plant Anatomy**  
Fall, 4 credits. Limited to 15 students. Prerequisite: one year introductory biology or a semester of botany. Lec, lab. Next offered 2009–2010. A. Gandolfo.  
Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOL 3480 The Healing Forest**  
Spring, 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lec/disc. Offered alternate years. Staff.

**BIOL 3590 Biology of Grasses**  
Spring 2 credits. Prerequisite: one year introductory biology or course in plant systematics or permission of instructor. S-U or letter grades. Lec. Lab. Offered alternate years. J. I. Davis.  
Systematics and related aspects of the biology of the graminoid plants (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human disturbed environments are discussed, as are the origins of cultivated species.

**BIOL 3600 Strategies and Methods in Drug Discovery**  
Spring, 2 credits. Prerequisite: one year introductory biology and organic chemistry course or permission of instructor. S-U or letter grades. M. A. Aregullin.  
Covers strategies and methodologies in chemotaxonomy, chemical ecology, and ethnobotany, as they are used in chemical prospecting for new pharmaceuticals. Discusses the biosynthesis and distribution of plant secondary metabolites, the use of techniques in isolation and structure elucidation of natural products, and biological assays in the discovery of chemicals with pharmacological activity.

**BIOL 4010 Introduction to Scanning Electron Microscopy**

**BIOL 4030 Transmission Electron Microscopy for Biologists**

**BIOL 4040 Crop Evolution, Domestication and Diversity (also PLBR/IARD 4040)**  
Fall. 2 credits. Prerequisites: BIOGD 2810 or PLBR 2250 or permission of instructor. S-U or letter grades. Lec. S. Kresovich. For description, see PLBR 4040.

**BIOL 4220 Plant Development**  
Fall. 2 credits. Lec. Prerequisites: course work in molecular biology (e.g., BIOMB 3500, 3510/3520, or 3350), and genetics (e.g., BIOGD 2810) or permission of instructor. S-U or letter grades. J. Hua.  
Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

**BIOL 4400 Phylogenetic Systematics (also ENTOM 4400)**  
Spring, 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec, lab. Offered alternate years. K. C. Nixon.  
Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOL 4420 Current Topics in Ethnobiology**  
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U or letter grades. Lec/disc. Offered alternate years. Staff.

**BIOL 4430 Topics and Research Methods in Systematics**  
Fall or spring. 1–2 credits; 1 credit per sec. Prerequisite: written permission of instructor. S-U or letter grades. K. C. Nixon.  
Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division’s catalog supplement issued at the beginning of the semester.

**BIOL 4440 Plant Cell Biology**  
Fall. 4 credits. Limited to 24 students. Prerequisites: one year introductory biology or permission of instructor. Lec, labs. R. O. Wayne.  
Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and mobility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**BIOL 4470 Molecular Systematics**  
Fall. 3 credits. Prerequisites: BIOEE 2780 or BIOL 2810 or BIOMB 3300, or BIOMB 3320 or written permission of instructor. Lec. Offered alternate years; next offered 2009–2010. J. J. Doyle.  
Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelle genomes is described from the standpoint of their suitability for systematic and evolutionary studies.
**[BIOPL 4480] Plant Evolution and the Fossil Record**

Spring. 3 credits. Prerequisite: BIOPL 2410 or equivalent, or permission of instructor. Lec, lab. Offered alternate years. K. J. Niday and W. L. Crepet. Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

**[BIOPL 4490] Green Signals and Triggers—The Plant Hormones (also HORT 4490)**

Spring. 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOPL 2420 or 3420) or permission of instructor. S-U or letter grades. Offered alternate years; next offered 2009–2010. P. J. Davies. Study of plant hormones and how they regulate plant growth and development. Topics include production, physiology, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

**[BIOPL 4500] Light and Video Microscopy for Biologists**

Fall. 3 credits. Limited to 12 students. Prerequisites: one year introductory biology and permission of instructor. Lec, lab. R. O. Wayne. Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contrast, fluorescence, polarization, interference, differential interference, and modulation contrast microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance, and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

**[BIOPL 4520] Systematics of Tropical Plants**

Fall. 3 credits. Prerequisite: BIOPL 2430 or 2480. Letter grades only. Lec, lab. Offered every three years. K. C. Nixon. The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context in lectures, discussions, and laboratory. Emphasis is on providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

**[BIOPL 4521] Systematics of Tropical Plants: Field Laboratory**

Spring. 1 credit. Limited to 15 students. Prerequisite: BIOPL 4520 or permission of instructor. Letter grades only. For more details and application, contact L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. K. C. Nixon. Intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification combined with laboratory analysis of available materials in a “whole-biology” context. Two-week field trip over winter break.

**[BIOPL 4530] Principles and Practice of Historical Biogeography (also ENTOM 4530)**

Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S-U or letter grades. Lec, lab. Offered alternate years: next offered 2009–2010. J. K. Liebherr and M. A. Luckow. For description, see ENTOM 4530.

**[BIOPL 4620] Plant Biochemistry**

Spring. 3 credits. Prerequisites: BIOPL 2420 or 3420 or equivalent and BIOBM 3500 or 3510 or equivalent or permission of instructor. Letter grades only. Lec. J. Rose and K. Van Wijk. Focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Examples include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

**[BIOPL 4821] Molecular Plant-Pathogen Interactions I and II (also PLPA 4821)**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. A. Collmer and B. G. Turgeon, odd years; S. G. Lazarowitz and G. Martin, even years. For description, see PLPA 4821 and 4822.

**[BIOPL 4823] Molecular Plant-Microbe Interactions (also BIOE 4640, PLPA 4822)**

Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. 12 lec. Offered alternate years; next offered 2009–2010. S. C. Winans. Focuses on the interactions of Agrobacteria and Rhizobias with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobias-plant interactions include regulation of nitrogenase activity and expression, organization and function of the syn plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

**[BIOPL 4824] Plant Gene Evolution and Phylogeny**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. Offered alternate years. J. J. Doyle. Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

**[BIOPL 4825] Molecular Biology of Plant Organelles (also BIOGD 4825)**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. Offered alternate years. R. Turgenev. At some point, most research projects involve structural analysis. This may necessitate hand sectioning, in situ hybridization, electron microscopy, confocal imaging, or any of a host of other possibilities. The key to success is having a proper foundation so that the correct choice of procedures can be made. This course provides an overview of the theory of practical light and electron microscopy focusing on plant tissue preparation, hand and microtome sectioning, staining, optical techniques, histochemistry, and the localization of macromolecules. Students will gain an appreciation of the potentials and limitations of available methods and learn how these methods can be combined to answer specific research questions. The course will consist of six lectures and four two-hour labs, plus a short project.

**[BIOPL 4826] Plant Biotechnology (also PLBR 4826)**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. Offered alternate years. R. Turgenev. Dealing with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**[BIOPL 4827] Plant Cell Walls: Structure to Proteome**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. 12 lec. Offered alternate years; next offered 2009–2010. J. Rose. Examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include wall biosynthesis, wall structure and composition, regulation of cell expansion and differentiation; defense against pathogens and signaling; the apoplast as a metabolically active subcellular compartment; and analytical techniques: from basic to proteomics.

**[BIOPL 4828] Plant Imaging**

Spring. 1 credit. 4 weeks. Limited to 12 students. Priority given to graduate students. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3520, or equivalents. Recommended: BIOB 3130. S-U or letter grades. Offered alternate years. R. Turgenev. This course provides an overview of the theory of practical light and electron microscopy focusing on plant tissue preparation, hand and microtome sectioning, staining, optical techniques, histochemistry, and the localization of macromolecules. Students will gain an appreciation of the potentials and limitations of available methods and learn how these methods can be combined to answer specific research questions. The course will consist of six lectures and four two-hour labs, plus a short project.
**BIOPL 4829 Light Signal Transduction in Plants**
Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. 12 lec. Offered alternate years, next offered 2009–2010. T. Brutnell.

In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity is carefully monitored by the plant to avoid neighboring vegetation, set the circadian clock, and adjust photosynthesis rates. This course focuses on recent studies that have illuminated the molecular basis of light signal transduction in higher plants. Readings are assigned from current literature with an emphasis on those that use genomics tools such as microarray analysis to address fundamental questions in red/far-red and blue light signal transduction.

**BIOPL 4831 Concepts and Techniques in Plant Molecular Biology (also PLPA/PLBR 4831)**
Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Lec. S-U or letter grades. S. R. McCouch, J. Giovannoni, and J. Rose.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 4830 (fall) and BIOPL 4820 (spring) series. The course is divided into three sections: (1) Gene discovery: covers genetic, molecular, and genomic approaches to the isolation of plant genes; (2) Gene characterization: covers DNA sequence analysis, assessment of gene expression, functional genomics approaches, and production of transgenic plants; (3) Analysis and characterization of proteins and metabolites: includes proteomics approaches to the analysis of plant proteins, protein-protein interactions, and metabolic profiling through emerging metabolomic techniques. This course consists of two lectures and one day of discussion per week. Course material is coordinated with BIOPL 4610 (lab). Emphasis is on understanding techniques and approaches appropriate for different experiments and objectives.

**BIOPL 4832 Proteomics in Plant Biology**
Fall. 2 credits. Lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. K. van Wijk.

Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools in proteomics; comparative proteomics; phospholipid mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

**BIOPL 4833 Plant Genome Organization (also PLBR 4833)**
Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. Offered alternate years. S. D. Tanksley.

Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

**BIOPL 4834 Molecular Aspects of Plant Development I (also BIOBM 4834)**
Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. J. B. Nasrallah.

Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and functional differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. It is a companion to BIOPL 4835 (Molecular Plant-Microbe Interactions).

**BIOPL 4835 Molecular Breeding (also PLBR 4835)**
Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. Next offered 2009–2010. S. D. Tanksley.

Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

**BIOPL 4836 Plant Senescence (also HORT 6252)**
Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S-U or letter grades. S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes of senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

**BIOPL 4980 Teaching Experience**
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not substitute for this course. S–U or letter grades. (12 lec). S. Gan.

**BIOPL 6410 Laboratory in Plant Molecular Biology (also BIOBM 6410)**
Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S-U grades by permission of instructor. Lab. M. R. Hanson, H. Wang, T. Brutnell, G. Jander, J. Hua, M. Scanlon, and K. van Wijk.

Includes selected experiments on gene expression, bioinformatic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

**BIOPL 6420 Plant Mineral Nutrition (also CSS 6420)**
Spring. 3 credits. Prerequisite: BIOPL 3420 or equivalent. Lec. Offered alternate years. O. K. Batamaniuk, L. V. Kochian, and R. M. Welch.

For description, see CSS 6420.

**BIOPL 6470 Systematic Biology Journal Club**
Fall or spring. 1 credit; may be repeated for credit. Intended for graduate students and advanced undergraduates in systematic biology. S-U grades only. Disc TBA. Bailey Hortorum staff.

Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

**BIOPL 6490 Solute Transport in Plants (also BEE 6490)**
Fall. 3 credits. Letter grades only. Lec. Offered alternate years. R. M. Spanwick.

For description, see BEE 6490.

**BIOPL 6510 Water Transport in Plants (also BEE 6470)**
Fall. 2 credits. Letter grades only. Lec. Offered alternate years; next offered 2009–2010. R. M. Spanwick.

For description, see BEE 6470.

**BIOPL 6540 Botanical Nomenclature**
Fall. 3 credits. Prerequisite: written permission of instructor. S-U or letter grades. Lec and disc. Offered alternate years; next offered 2009–2010. J. Revel.

Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

**BIOPL 6560 Topics in Plant Evolution**
Spring or fall. 4 credits. Prerequisite: BIOPL 4880 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years. K. J. Niklas.

Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

**BIOPL 7400 Plant Biology Seminar**
Fall and spring. 0 credits (no official enrollment). Requirement for graduate students doing work in plant biology. W. L. Crepet.

Lectures on current research in plant biology, presented by visitors and staff.

**BIOPL 7410 Problems in Plant Cell and Molecular Biology**
Fall. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc.

**BIOPL 7430 Problems in Plant Molecular Biology**
Fall and spring. 0 credits (no official enrollment). Requirement for graduate students doing work in plant biology. W. L. Crepet.

Lectures on current research in plant biology, presented by visitors and staff.
Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

**BIOPL 7420 Current Papers in Plant Biology**
Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S-U grades only. Sem. Staff.

**BIOPL 7430 Faculty Research in Plant Cell and Molecular Biology**
Fall. 1 credit. Prerequisite: graduate standing or permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc. TBA. Staff. Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

**BIOPL 7440 Graduate Research in Plant Cell and Molecular Biology**
Fall or spring. 1 credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students in Plant Cell and Molecular Biology. Sem. Staff. Each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation.

**BIOPL 7450 Seminar in Systematic Botany**
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades only. Sem. Bailey Hortorium staff. Seminar with student presentations of current topics in systematics.

**BIOPL 7460 Seminar in Systematic Botany: Student Research**
Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorium staff. Student-led seminar presentation based on his or her thesis research or a related topic.

**BIOPL 7490 Graduate Research in Botany**
Fall or spring. Variable credit; may be repeated for credit. S-U or letter grades. Staff. Similar to BIOG 4990 but intended for graduate students who are working with faculty members on an individual basis.

**Related Courses in Other Departments**
- Current Topics in Plant Molecular Ecology (BIOEE 6750)
- Fungi (PLPA 3090)
- Seaweeds, Plankton, and Seagrass: The Ecology and Systematics of Marine Plants (BIOSM 4490)
- Fungal Biology (PLPA 6490)
- Physiological Plant Ecology, Lectures and Laboratory (BIOEE 4660/468)
- Plant Behavior–Induced Plant Responses to Biotic Stresses (BIOEE 4460)
- Plant Cytogenetics Laboratory (PLBR 4460)
- Undergraduate Research in Biology (BIOG 4990)

**COURSES IN MARINE SCIENCE**
Cornell offers an extensive listing of undergraduate courses in marine science. Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology, the undergraduate specialization in ocean sciences, and the summer program of courses offered by the Shoals Marine Laboratory. For further information on all of these programs contact the Shoals Marine Laboratory, G14 Simson Hall, or at www.sml.cornell.edu.

**Undergraduate Specialization in Marine Biology**
Biological sciences majors in the Ecology and Evolutionary Biology program of study have the option of specializing their program of study in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:
1. BIOEE 1540 The Sea: An Introduction to Oceanography
2. BIOSM 3640 Field Marine Science or BIOSM 3750 Field Marine Biology and Ecology
3. At least one 4000-level BIOSM field course at the Shoals Marine Laboratory, particularly BIOSM 4100 Animal Social Behavior, BIOSM 4150 Research in Marine Biology, BIOSM 4400 Marine Botany, BIOSM 4720 Marine Phylogenetics, and BIOSM 4770 Anatomy and Function of Marine Vertebrates.
4. BIOE 4620 Marine Ecology

**Undergraduate Specialization in Ocean Sciences**
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:
- BIOSM 3080 Field Microbial Ecology
- BIOSM 3090 Climates and Ecosystems
- BIOSM 3100 Marine Symbiosis
- BIOSM 3120 Biology of the Lobster
- BIOSM 3290 Ecology of Animal Behavior
- BIOSM 3640 Field Marine Science
- BIOSM 3650 Underwater Research
- BIOEE 3730 Biology of the Marine Invertebrates
- BIOSM 3740 Field Ornithology
- BIOSM 3750 Field Marine Biology and Ecology
- BIOSM 3760 Marine Invertebrate Zoology (Note: Not same as BIOEE 3730)
- BIOSM 3770 Diversity of Fishes
- BIOSM 3820 Comparative Embryology and Life History Strategies
- BIOSM 4130 Research in Marine Biology
- BIOSM 4450 Forensics Science for Marine Biologists
- BIOSM 4490 Marine Botany
- BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies
- BIOSM 4770 Marine Vertebrates
- BIOEE 4570 Limnology
- BIOEE 4620 Marine Ecology
- BIOEE 4780 Ecosystem Biology
- BIOE 4900 Topics in Marine Biology
- EAS 3750 Sedimentology and Stratigraphy
- EAS 4550 Geochemistry
- EAS 4750 Special Topics in Oceanography
- EAS 4790 Paleobiology

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

**SEA Semester**
SEA courses must be taken concurrently. This program is run by Sea Education Association in Woods Hole, Mass. Contact SEA @ 800-552-3633.
- BIOSM 3660 SEA: Introduction to Oceanography
- BIOSM 3670 SEA: Introduction to Maritime Studies
- BIOSM 3680 SEA: Introduction to Nautical Science
- BIOSM 3690 SEA: Practical Oceanography I
- BIOSM 3700 SEA: Practical Oceanography II
- BIOSM 3720 SEA: Practical Oceanography III
- BIOSM 3780 SEA: Oceans and Climate: Oceans in the Global Carbon Cycle
- BIOSM 3790 SEA: Ocean Science and Public Policy
- BIOSM 3800 SEA: Oceanographic Field Methods
- BIOSM 3810 SEA: Independent Research in Oceans and Climate
- BIOSM 3860 SEA: Maritime History and Culture
- BIOSM 3710 SEA: Marine Environmental History
SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255–3717

Shoals Marine Laboratory (SML) provides a unique opportunity to explore marine sciences on Appledore Island, Maine, and island noted for its biota, geology, and history. SML has established a national reputation for excellence and is North America’s largest marine field station focusing on undergraduate education.

The summer population on Appledore Island is limited to one hundred people at any one time. Most educators and faculty members literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are in marine sciences but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands or the mainland, and collecting and research excursions aboard the laboratory’s 47-foot research vessel, John M. Kingsbury, or the 36-foot research vessel, John B. Heizer. Field experience is integral to all courses, using Appledore’s extensive intertidal and subtidal zones and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected based not only on their academic excellence but also on their ability to teach in the field. Many guest lecturers including engineers, coastal planners, and specialists from private industry, government, as well as the academic community visit Appledore during the season. The SML main administrative office is located at Cornell’s Ithaca campus, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions.

The following marine sciences courses are currently administered by the Cornell Marine Programs Office. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

BIOSM 1110  A Marine Approach to Introductory Biology
Summer. 8 credits. Prerequisite: score of 4 or higher on AP Biology Exam (which fulfills introductory biology requirement for biology majors). Letter grades only.
W. E. Bennis, J. B. Heizer, and D. Taylor.
A four-week course for pre-freshmen at Shoals Marine Lab (SML) on Appledore Island in the Gulf of Maine including daily fieldwork, boat trips, outdoor adventure, and practices for sustainable living. Intensive lectures, laboratory, and fieldwork occur in a learning environment emphasizing field building, project design and execution, and collaboration with faculty and peers. We explore four major themes—ecology, behavior, development, and genomics—and connect them using examples from evolution. Social issues discussed range from global environmental change to sustainable fisheries, emerging infectious diseases, and stem cell research.

BIOSM 1230 Ocean Sciences
An inquiry-based, hands-on introduction to marine biology using the rocky intertidal and open sea as a natural laboratory. Students will learn the skills necessary for success in science courses: understanding disciplinary discourse; reading scientific papers critically; generating scientific hypotheses; designing experiments and interpreting data using basic statistics; and constructing, presenting, and understanding data in graphs and tables. Students will learn and apply these skills to field exercises centered on textbooks, primary literature, lectures, seminars and discussions.

BIOSM 1600 The Oceanography of the Gulf of Maine
Summer. 3 credits. Limited to 24 students. S-U or letter grades. A two-week course offered aboard a SEA vessel and at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details or an application, contact SML office, G14 Stimson Hall or web site (www.sml.cornell.edu) or Sea Education Association office, P.O. Box 6, Woods Hole, MA 02543, 800-552-3633 X 770 or web site: www.sea.edu. Daily lec, lab, and fieldwork for two weeks. S. Rensselaer, SEA and SML staff.
Exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for advanced high school students. Students spend 10 days aboard the Sea Education Association’s sailing vessels round trip between Woods Hole, Mass., and the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory collecting data characteristic of the Isles of Shoals coastal environment.

BIOSM 1610 Introduction to Marine Science
Allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

BIOSM 1620 Marine Environmental Science
Summer. 4 credits. Prerequisite: open to high school rising junior and senior students who have successfully completed two high school science courses. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for 14 days. M. Johnson.
Environmental studies have become an integral component of high school programs all around the country; however, opportunities to apply this course work to the marine environment are limited. Marine Environmental Science focuses on coastal marine habitats, with an emphasis on issues as they relate to global habitats and concerns. Laboratory exercises and fieldwork include explorations along Appledore Island’s rocky intertidal zone and excursions to neighboring islands to observe harbor seal and seabird colonies. Offshore cruises include oceanographic sampling exercises and field trips to seabird and whale foraging grounds. Lectures and discussions expose students to topics ranging from fishes to fisheries, seaweeds to lobsters, and plankton to whales. Fundamental scientific research methods and equipment are introduced, and each student has the opportunity to be involved in group research projects.

BIOSM 2040 Biological Illustration
Summer. 2 credits. Prerequisite: none. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. B. Ober, C. Garrison, and J. Gibson.
General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. Provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 2100 Boats for Biologists
Summer. 2 credits. Prerequisite: open to all undergraduate and graduate students. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bennis.
Marine and freshwater biologists rely on boats—small and large—for transportation, environmental sampling, data collection, and other tasks. This course offers biologists at all stages of their careers a chance to learn basic boat handling, piloting, navigation, and common sampling techniques to enhance their opportunities for research and education. This course meets all graduation requirements for basic small boat handling by state-specific agencies and National Association of Boating Law Administrators.

BIOSM 2250 Sustainability in the 21st Century
Summer. 4 credits. Prerequisite: open to all undergraduate and graduate students. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Cornell, UNH, SML faculty and staff.
Students will consider the imperative of institutionalizing sustainability. Through guest lectures and fieldwork, they will grapple with
challenges inherent to the field, devising strategies to enhance sustainability on Appledore Island. Topics include: systems thinking, food and fisheries, engineering and energy, and climate science.

**BIOSM 2760 Seabird Ecology and Conservation**
Summer. 2 credits. Prerequisite: one year college-level biology. S-U or letter grades. A one-week course offered at Sholes Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. J. Ellis. Combines lectures from specialists (e.g., ecologists and wildlife veterinarians) with a variety of field-based activities related to seabird ecology and conservation. Topics will include: seabird identification, behavioral studies, census techniques, population threats (e.g., fisheries bycatch, pollution), and restoration. A field trip to a nearby seabird restoration island will be included.

**BIOSM 2770 Introduction to Marine Conservation Biology**
Summer. 2 credits. Prerequisite: college-level introductory biology or equivalent S-U or letter grades. A one-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. H. Weeks and K. Flessa. Students will study the construction to the examination and analysis of marine biological resource conservation and management issues. Class will address principles and problems through readings, laboratory modeling exercises and lectures. Students are required to be familiar with the New England region, and explore potential pathways to success through readings and field trip.

**BIOSM 3080 Field Microbial Ecology**
Summer. 4 credits. Prerequisite: introductory biology or permission of instructor. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. E. Zettler and L. A. Zettler. The microbial world dominates the biosphere in terms of biomass, diversity, and metabolic flexibility. This course will introduce students to collecting, observing, and identifying live representatives of these fascinating microbial organisms including bacteria, protists, fungi, and microcrustaceans. Taxonomy and ecology of the basic groups of microorganisms will be covered while students learn to collect in the field for observation, experimentation and isolation.

**BIOSM 3090 Coastal Ecology and Bioclimates**
Summer. 4 credits. Prerequisite: one year college-level biology; background preferred in physics/physical geography. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details or an application, contact SML office. G14 Stimson Hall. Daily lec, lab, and fieldwork for two weeks. G. Courtin. Study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. One will be able to describe the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 3100 Marine Symbiosis**
Summer. 4 credits. Prerequisite: one full year college-level biology. Recommended: background in microbiology or cell biology. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. SML faculty. Introduction to the concepts of symbiosis as applied to marine organisms, with an emphasis on microbial symbionts. Students develop the ability to analyze symbioses using a comprehensive set of criteria, including duration, propagation, specificity, integration and modes of interaction. Morning lectures are followed by afternoons collecting, preparing and studying live specimens. Each student learns to use a variety of light microscopic techniques, and contributes, through fieldwork and written reports, to a comprehensive survey of symbiotic associations on and around Appledore Island.

**BIOSM 3120 Biology of the Lobster**
Summer. 2 credits. Prerequisite: one year of college level biology. S-U or letter grades. A one-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. J. Factor. An introduction to the biology of the American lobster, *Homarus americanus*. The course will include an overview of this ecologically and economically important species, as well as cover several major topics in depth, each taught by a lobster biologist expert in that field. Topics may include life history, larval development and metamorphosis, anatomy, physiological adaptation, fisheries and fishing methods, feeding mechanisms, ecology, and behavior. Course will include lecture, laboratory, discussion, and the natural field environment of Appledore Island.

**BIOSM 3200 Functional Morphology of Marine Organisms**
Summer. 4 credits. Prerequisite: one year introductory biology or one semester introductory biology, general zoology, and general botany only. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. F. Fish. A study of the structure, form, and function of morphological adaptations in marine plants and animals as examined through a mechanical and ecological perspective. The course will investigate the biomechanics of marine organisms through lecture, laboratory demonstrations, and independent research projects.

**BIOSM 3210 Anatomy and Function of Marine Vertebrates**
Summer. 4 credits. Prerequisite: college-level introductory biology or equivalent. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, EEBH faculty, and F. Fish. Course includes introductions to vertebrae systematics, paleontology and evolution, vertebrae development, and functional morphology. Students will do comparative study of the anatomy of marine vertebrates, including: hagfishes; lampreys; sharks, skates, rays and chimaeras; ray finned fishes; lobe-finned fishes; marine reptiles, birds, and mammals. All 10 organ systems of vertebrates will be detailed in lecture and laboratory exercises. Dissection is required. Grades will be based on quizzes, essay exams, practical exams, class participation, and research projects.

**BIOSM 3290 Ecology of Animal Behavior (also BIONB 3290)**
Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. H. Weeks, J. Waldvogel, and W. Kimler. The ecological significance of behaviors of coastal organisms with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

**BIOSM 3640 Field Marine Science (FMS)**
Summer. 8 credits. Prerequisite: one year college-level biology. S-U or letter grades. A four-week course offered twice each summer at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Students may not take FMS after taking FMBE (BIOSM 3750). Daily lec, lab, and fieldwork for four weeks. Three core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. J. Factor, R. Zecheman, S. Morris, W. E. Bemis, and E. Zettler. Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activities on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 3750) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

**BIOSM 3650 Underwater Research**
Summer. 4 credits. Prerequisites: one year college-level biology, recognized SCUBA certification, and medical exam. S-U or letter grades. A two-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. J. Coyer, J. Grabowski, and E. Calvert. Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.
BIOE 3730  Biology of the Marine Invertebrates  
Fall (but course must be taken previous summer at Shoals Marine Laboratory (SML), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily lec, lab, and fieldwork. Offered alternate years. C. D. Harvell.

BIOSM 3740  Field Ornithology  
Summer. 4 credits. Prerequisite: one year college-level biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. D. Bonter. Introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 3750  Field Marine Biology and Ecology (FMBE)  
Summer. 8 credits. Prerequisites: one full year college-level biology. S-U or letter grades. A four-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for four weeks. K. A. Miller and C. Sikich. Designed for students seeking an introduction to the marine sciences and marine ecology. FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and the laboratory, field, and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 3640).

[BIOSM 3760  Marine Invertebrate Zoology  
Summer. 6 credits. Prerequisite: one year introductory biology and permission of instructors. Students may not take BIOE 3760 after taking BIOE 3730. S-U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Offered alternate years; next offered summer 2010. J. Morin. Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. Emphasizes the evolution of form and function, and the ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. Appledore Island's unique location provides an on-shore venue for the study of freshly collected and in situ representatives of most of the major phyla.]

BIOSM 3770  Diversity of Fishes  
Summer. 6 credits. Prerequisite: one full year college-level biology. Recommended: background in vertebrate biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. B. Collette. Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course emphasizes the diversity of fishes in two aspects, diversity of evolutionary strategies, and the functional adaptations of fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and osteology of teleost fishes and identification of local species. Each student selects a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

BIOSM 3820  Comparative Embryology and Life History Strategies  
Summer. 2 credits. Prerequisite: introductory biology or equivalent. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, EE&B faculty. Includes fieldwork, culture methods, histology, microscopy, and photomicrography. Students will do comparative study of invertebrate and vertebrate embryos in the context of life-history strategies. This course emphasizes marine species from Gulf of Maine. Topics include: gametogenesis, fertilization, cleavage, gastrulation, organogenesis, cytodifferentiation and larval biology. Student projects will detail embryology and life history of specific species.

BIOSM 4100  Animal Social Behavior  
Summer. 2 credits. Prerequisite: introductory biology or equivalent. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. T. Seeley, P. Sherman, and J. Sherman. An introduction to the study of animal behavior in the field by focusing on the behavior of the herring gulls nesting on Appledore Island. Topics will include natural selection and behavior, levels of analysis, animal communication, territoriality, kin recognition, orientation, and mating systems. The Herring Gull's World, the classic book of Nobel Laureate Niko Tinbergen, will be read and discussed. Methods of measuring behavior and designing experiments will be taught, and students will conduct individual research projects.

BIOSM 4130  Research in Marine Biology  
Summer. 6 credits. Prerequisite: one year college-level biology. Recommended: experience in ecology or physiology. S-U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. D. Taylor, D. Pudge, and A. Todgham. A hands-on course in which students explore the marine environment around Appledore Island via field and laboratory experiments of their own design, unique in that students learn practical skills that are required of all biologists, such as generating hypotheses, experimental design, data collection, statistical analysis, group decision-making, writing scientific papers, and communicating results to others. The class will work together on several experiments inspired by student observations (SML), original research, lectures, and data collected by previous classes. Phenomena investigated in previous years include: predator-prey interactions, vertical migration in zooplankton, biomechanical design of gastropod behavior, photosynthesis, and adaptation to intertidal stressors such as desiccation, temperature, and wave action. Students will gain practical experience with laboratory, field, and remote sensing equipment, and will study a diverse range of marine organisms including vertebrates, invertebrates and algae. Each student will take responsibility for writing up the results from one experiment and will present the results in a scientific symposium at the end of the course. This course is highly recommended for undergraduates interested in independent research or considering graduate education in biology, as well as science educators seeking experience in inquiry-based learning.

BIOSM 4450  Forensic Science for Marine Biologists  
Summer. 2 credits. Prerequisite: satisfactory completion of college-level course in biology, ecology, or marine science. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. Lord, R. Haebler, R. Kenney, W. Rodriguez, and I. Sidor. Forensic science represents the unique merging of scientific insight and the law. Forensic Science for Marine Biologists provides a field-oriented introduction to the forensic science domain and the utilization of marine biology within the justice system. Students receive comprehensive instruction concerning the recognition, documentation, collection, and preservation of physical evidence. Additionally, students develop practical incident response, scene management, and forensic teamwork skills.

BIOSM 4490  Marine Botany  
Summer. 4 credits. Prerequisite: BIOSM 3640 or one year introductory biology. S-U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. R. Zechman. Overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

BIOSM 4650  Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies  
Summer. 2 credits. Prerequisite: vertebrates or comparative anatomy and ichthyology or permission of SML director. S-U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. D. Dagit and W. E. Bemis. The last 30 years have produced an explosion of new information on the biology of the approximately 1,000 living species of sharks, skates, rays, and chimaeras, which collectively make up the group Chondrichthyes. This
course will cover advanced topics in the evolution, diversity, anatomy, functional morphology, neurobiology, sensory systems, behavior, reproduction, development, and conservation of cartilaginous fishes.

**BIOSM 4720 Marine Phylogenomics**
Summer. 4 credits. Prerequisite: one year introductory biology. Recommended: genetics and/or cell biology with laboratory components. Helpful: evolutionary biology, ecology vertebrate/invertebrate zoology. Letter grades only. A two-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. A. Shedlock.

An introduction to basic concepts in systematic biology, evolutionary genetics, molecular ecology, and conservation biology emphasizing the natural history of marine organisms. Students integrate field sampling techniques, taxonomy, and curation of specimens from Appledore Island and surrounding waters with molecular diagnostics completed in the laboratory. Standard methods for DNA purification, amplification, sequencing, and genotyping are used to address questions about population structure, kinship, and species phylogeny.

**BIOSM 4770 Marine Vertebrates**
Summer. 6 credits. Prerequisites: vertebrate biology course or equivalent course at level from which applicant can demonstrate knowledge of basic vertebrate anatomy, physiology, and systematics, or permission of instructor. S/U or letter grades. A three-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. J. Heiser.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics include systematics of fishes of the Gulf of Maine; elasmobranch physiology; interpretation of life history and parameters from otolith microstructure; teleost skeletomuscular structure and function; population biology and the contemporary Gulf of Maine fishery; Mesozoic marine reptiles; the biology of sea turtles in cold water; coloniality in sea birds; avian adaptations to life at sea; evolution and systematics of marine mammals; diving physiology; and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

**BIOSM 4950 Research Methods in Marine Biology**
Summer. 1 credit. Corequisite: BIOSM 4990 or permission of instructor. Primarily for undergraduates. An eight-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Weekly sem for eight weeks. SML faculty. Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 4990.

**BIOSM 4990 Research in Biology**
Summer. Variable credit; 2 credits per seven days on site. A three-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. SML faculty.

Section A: Independent Biological Research: Independent study with a member of the Shools Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

**BIOSM 6500 Field Marine Ecology and Environmental Science for Teachers**
Summer. 2 credits. Prerequisite: one year college-level biology. Recommended: teaching experience. A one-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for one week. SML faculty.

Intended for teachers of grades 6–12 but also open to undergraduate junior and senior students interested in teaching. Teachers develop hands-on, experiential approaches to the marine sciences, with an emphasis on coastal and environmental issues. Extensions to freshwater ecology also are included. Fieldwork is expanded with numerous excursions to the rocky intertidal and with off-shore ocean sampling. Lectures focus on biodiversity, adaptations, predator-prey interactions, environmental sustainability, and how to engage and motivate students with aquatic projects.

**BIOSM 6990 Research in Biology for Teachers**
Summer. 2 credits per week. Prerequisite: BIOSM 6500. One-week course offered at Shools Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Opportunity for teachers who have taken BIOSM 6500 to return to Shools to pursue in greater depth a topic of their choosing under the direction of the BIOSM 6500 faculty.

**SEA Semester**
Sea Education Association (SEA) offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Robert C. Seamans or the SSV Corwith Cramer. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester or SEA Summer Session. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence. For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 or call 800-552-3633 ext. 770. Program costs are to be paid in regular Cornell tuition and fees.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**SEA Basic Semester**
**BIOSM 3660 SEA Introduction to Oceanography** 3 credits. Corequisites: BIOSM 3670 and 3680. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOSM 3670 SEA Introduction to Maritime Studies** 3 credits. Corequisites: BIOSM 3660 and 3670. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 3680 SEA Introduction to Nautical Science** 3 credits. Corequisites: BIOSM 3660 and 3670. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**BIOSM 3690 SEA Practical Oceanography I** 4 credits. Prerequisite: BIOSM 3660. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOSM 3700 SEA Practical Oceanography II** 4 credits. Prerequisites: BIOSM 3680 and 3690. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.
The impact of European expansion.

Patterns of settlement and development, and since just before Europeans arrived at the end of the 15th century. Student will see how the physical nature of the region has influenced patterns of settlement and development and the impact of European expansion.

This course seeks to provide students with a fundamental understanding of the intersection between climate change and governmental policy and the interrelationship between science and governmental policy. After an introduction to the development of maritime law and sovereignty on the high seas, students will examine why societies funded oceanic research.

This course provides upper-level study focused on oceanography and climate, including the design and completion of an independent research project that is comparable in scope to an undergraduate senior thesis research.

In this course, students will explore political, cultural and social changes in the Caribbean since just before Europeans arrived at the end of the 15th century. Student will see how the physical nature of the region has influenced patterns of settlement and development and the impact of European expansion.

COMPUTING AND INFORMATION SCIENCE

ADMINISTRATION
Robert Constable, dean
Juris Hartmanis, senior associate dean
Jennifer Wofford, assistant dean for educational programs

INTRODUCTION
Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the program in Information Science, and interdisciplinary programs in computational biology, computational science and engineering, game design, and computing in the arts. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit.

Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS
Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology
The program of study in computational biology is part of the biological sciences major offered through the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and information sciences. It is designed for students who want to emphasize basic biological science.

The concentration in computational molecular biology is offered by the Department of Computer Science to students enrolled in the College of Arts and Sciences and the College of Engineering. It provides core training in computer science and biology. It is designed for students who want to emphasize computational science.

The concentration in statistical genomics is offered by the Department of Biological Statistics and Computational Biology to students enrolled in the College of Agriculture and Life Sciences. It provides training in statistics, biology, and computer science. It is designed for students who want to emphasize statistics and bioinformatics.

The concentration in mathematical biology is offered by the Department of Mathematics and is open to students enrolled in the College of Arts and Sciences. It provides training in mathematics, biology, and computer science. It is designed for students who want to emphasize mathematics.

Computational Science and Engineering
Computational science and engineering is an emerging CIS program. Numerous courses are taught throughout the university. Topics include numerical methods, modeling and simulation, and real-time computing and control.

Computer Science
All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include programming languages and compilation, computing systems, artificial intelligence, natural language processing, computer graphics, computer vision, databases and digital libraries, networks, bioinformatics, the theory of algorithms, scientific computing, computational logic, architecture, and security.

The Department of Computer Science offers the computer science major to students in the College of Arts and Sciences and the College of Engineering, the computer science minor to students across colleges, and the Master of Engineering (M.Eng.) degree in computer science.

Minors
Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

Computing in the Arts
An undergraduate minor in Computing in the Arts offers students opportunities to use computers to realize works of art, to study the perception of artistic phenomena, and to think about new, computer-influenced paradigms and metaphors for the experiences of making and appreciating art. Faculty from several departments across the university offer courses toward the minor, drawing on disciplines in the arts, computing, the social sciences, the humanities, and the physical sciences. Tracks are available for students pursuing this minor in: computer science, music, psychology, dance, and film. This minor is offered through the College of Arts and Sciences and coordinated by the Department of Computer Science. Students across colleges are eligible to pursue this program of study.

Game Design
The undeniable popularity of games draws the attention of academia, industry, and even the government on areas of design, development, and social impact. The game industry, like the film industry, is an unmistakable force in entertainment. Like filmmaking, game design can thrive and evolve only with the support of a strong academic foundation. The Game Design minor is offered by the Department of Computer Science for students who anticipate that game design will have a prominent role to play in their academic and professional career. Overwhelming interest also sparked the creation of the Game Design Initiative at Cornell University (GDIAC) in 2003. This organization is a group of students, faculty, alumni, and community members who are devoted to the establishment of game design as an academic discipline. Students across colleges are eligible to pursue the Game Design minor.

Information Science
The interdisciplinary program Information Science studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called “human-centered systems” because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks, information discovery, knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of
collecting, preserving, and distributing information; information system design; cognition and learning; social informatics; and cultural studies of computation.

The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in Information Science, Systems, and Technology (ISS), which is offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering. For details about the IS and ISS majors, please refer to the respective colleges.

The minor in information science is available to students in all undergraduate colleges.

Statistical Science

The university-wide Department of Statistical Science coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

The department is organized into four units: Biological Statistics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural biostatistics, economic and social statistics, epidemiology, manufacturing statistics, quality control and reliability, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

The department offers an undergraduate major and minor in Biometry and Statistics through the Department of Biological Statistics and Computational Biology in the College of Agriculture and Life Sciences. It also offers a minor in Engineering Statistics through the School of Operations Research and Information Engineering in the College of Engineering. Undergraduate majors and minors are under development for other colleges. For information, contact the undergraduate coordinator, 301 Malott Hall, 255-8066.

Students interested in graduate study in statistics and probability can apply to the graduate field of statistics or to one of the other graduate programs that offer related course work. Students in the field of statistics plan their graduate programs with the assistance of their special committee. For detailed information on opportunities for graduate study, contact the director of graduate studies, 301 Malott Hall.

The department offers a Master of Professional Studies (MPS) in applied statistics for students pursuing careers in business, industry, and government. The MPS program has three main components: a two-semester core course, STSCI 5010 and 5020, covering a wide range of statistical applications, computing, and consulting; an in-depth statistical analysis MPS project supported by the core course; and required course work, including a two-semester course sequence in mathematical probability and statistics, and elective course work selected from offerings in this and other departments at Cornell. The M.P.S. program offers two options: Statistical Analysis and Data-Centered Systems. A statistical consulting service is offered by the faculty of DSS and the Cornell Statistical Consulting Unit (CSCU), 255-1926. There is no charge to members of the Cornell community for using the Statistical Consulting Service. It provides guidance to researchers in a broad variety of fields on designing experiments, collecting and analyzing data, and drawing appropriate conclusions from the results of their studies. Statistical computing consulting is also available through the Office of Statistical Consulting, B21 Savage Hall, 255-1926.

The INFORMATION SCIENCE MINOR

A minor in information science is available to students in the Colleges of Agriculture and Life Sciences, Architecture, Art, and Planning (available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations. Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student’s college and, in a few cases, a student’s major. Students interested in pursuing the information science minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation date, and (intended) major to minor@infosci.cornell.edu. See www.infosci.cornell.edu/ugrad.html for the most up-to-date description of the minor and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems study the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examine information in its economic, legal, political, cultural, and social contexts. Information systems study the computer science problems of representing, storing, manipulating, and using digital information.

The minor has been designed to ensure that students have substantial grounding in all three of these areas. To this end, the requirements for the undergraduate minor are as follows: All courses must be chosen from the course lists below. In addition, a letter grade of at least C is required; S/U courses are not allowed.

Note: Course credits from institutions other than Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 2700 or CEE 3040. Hotel students must take ENGRD 2700 Hospitality Quantitative Analysis. All other students can meet this requirement with any one of the following:

- MATH 1710 Statistical Theory and Application in the Real World
- STSCI 2100 Introductory Statistics
- AEM 2100 Introductory Statistics
- PAM 2100 Introduction to Statistics
- HADM 2201 Hospitality Quantitative Analysis
- ENGRD 2700 Basic Engineering Probability and Statistics
- BTRY 3010 Statistical Methods I
- SOC 3010 Evaluating Statistical Evidence
- CEE 3040 Uncertainty Analysis in Engineering
- ILRST 3120 Applied Regression Methods
- ECON 3190 Introduction to Statistics and Probability
- PSYCH 3500 Statistics and Research Design

Human-Centered Systems

- COGST 1101 Introduction to Cognitive Science
- PSYCH 2050 Perception
- INFO 2140 Cognitive Psychology
- INFO 2450 Psychology of Social Computing
- PSYCH 2800 Introduction to Social Psychology
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 3450 Human-Computer Interaction Design

Statistics

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:

- ENGRD 2700 Basic Engineering Probability and Statistics
- CEE 3040 Uncertainty Analysis in Engineering

Hotel students must take:

- HADM 2201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:

- MATH 1710 Statistical Theory and Application in the Real World
- STSCI 2100 Introductory Statistics
- AEM 2100 Introductory Statistics
- PAM 2100 Introduction to Statistics
- HADM 2201 Hospitality Quantitative Analysis
- ENGRD 2700 Basic Engineering Probability and Statistics
- BTRY 3010 Statistical Methods I
- SOC 3010 Evaluating Statistical Evidence
- CEE 3040 Uncertainty Analysis in Engineering
- ILRST 3120 Applied Regression Methods
- ECON 3190 Introduction to Statistics and Probability
- PSYCH 3500 Statistics and Research Design

Human-Centered Systems

- COGST 1101 Introduction to Cognitive Science
- PSYCH 2050 Perception
- INFO 2140 Cognitive Psychology
- INFO 2450 Psychology of Social Computing
- PSYCH 2800 Introduction to Social Psychology
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 3450 Human-Computer Interaction Design
**Computing and Information Science (CIS) - 2008–2009**

- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology in Collaboration
- PSYCH 3800 Social Cognition
- PSYCH 4130 Information Processing: Conscious and Unconscious
- PSYCH 4160 Modeling Perception and Cognition
- INFO 4400 Advanced Human-Computer Interaction Design
- INFO 4450 Seminar in Computer-Mediated Communication
- INFO 4500 Language and Technology
- DEA 4700 Applied Ergonomic Methods

**Social Systems**

- INFO 2040 Networks
- STS 2501 Technology in Society
- INFO 2921 Inventing an Information Society
- ECON 3010 Microeconomics*
- SOC 3040 Social Networks and Social Processes
- ECON 3130 Intermediate Microeconomic Theory*
- INFO 3200 New Media and Society
- AEM 3220 Technology, Information, and Business Strategy*
- INFO 3490 Media Technologies
- INFO 3551 Computers: From the 17th Century to the Dotcom Boom
- INFO 3561 Computing Cultures
- INFO 3660 History and Theory of Digital Art
- ECON 3680 Game Theory*
- INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology
- STS 4111 Knowledge, Technology, and Property
- INFO 4144 Responsive Environments
- ECON 4490 Economic Decisions Under Uncertainty
- COMM 4280 Communication Law
- INFO 4290 Copyright in the Digital Age
- ORIE 4350 Introduction to Game Theory*
- INFO 4470 Social and Economic Data
- HADM 4489 The Law of the Internet and E-Commerce
- ECON 4760/4770 Decision Theory I and II
- INFO 4850 Computational Methods for Complex Networks
- INFO 5150 Culture, Law, and Politics of the Internet
- HADM 5574 Strategic Information Systems*

*Only one of ECON 3010 and 3130 can be taken for IS credit. Only one of ORIE 4350 and ECON 3680 can be taken for IS credit. Only one of AEM 3220 and HADM 5574 may be taken for IS credit.

**Information Systems**

- INFO 1301 Introduction to Programming and Web Applications
- INFO 1302 Introduction to Designing Web Applications* (equivalent to one course)
- INFO 1700 Computation, Information, and Intelligence
- CS 2110 Computers and Programming*
- INFO 2300 Intermediate Design and Programming for the Web*
- CIS 3000 Introduction to Computer Game Design
- INFO 3300 Data-Driven Web Applications
- INFO 4500 Information Retrieval
- INFO 4502 Web Information Systems
- CS 4320 Introduction to Database Systems
- LING 4424 Computational Linguistics
- LING 4474 Introduction to Natural Language Processing
- CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- ORIE 4740 Statistical Data Mining I
- CS 4780 Machine Learning
- ORIE 4800 Information Technology
- ORIE 4810 Delivering OR Solutions with Information Technology
- ORIE 4850 Application of Operations Research and Game Theory to Information Technology
- CS 5150 Software Engineering
- INFO 5300 Architecture of Large-Scale Information Systems
- CS 5430 System Security
- ECE 5620 Fundamental Information Theory
- CS 5780 Empirical Methods in Machine Learning and Data Mining

*The following exceptions apply:
- INFO 1301 and 1302: Engineering students and Computer Science majors may not use these courses for the minor.
- INFO 2300: Computer Science majors may not use this course for the minor.
- CS 2110: Students for whom this is a required major course may not use it for the minor, e.g., Computer Science or Operations Research and Information Engineering majors.

**Computing and Information Science (CIS) Courses**

**CIS 1121** Introduction to MATLAB (also EAS 1121)
Fall, spring. 2 credits. Corequisite: MATH 1110, 1190, or equivalent. No programming experience assumed.
Introduction to elementary computer programming concepts using MATLAB. Topics include problem analysis, development of algorithms, selection, iteration, functions, and arrays. Examples and assignments are chosen to build an appreciation for computational science. The goal is for each student to develop a facility with MATLAB that will be useful in other courses whenever there is a need for computer problem solving or visualization.

**CIS 1610** Computing in the Arts (also CS/ENGRD 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits.
For description, see CS 1610.

**CIS 1620** Visual Imaging in the Electronic Age (also ARCH 4509, ART 1700, CS/ENGRD 1620)
Fall. 3 credits.
For description, see ART 1700.

**CIS 1900** Virtual Worlds
Fall. 4 credits.
Survey covering the technology, design, and application of virtual worlds for education, training, and entertainment. Lectures and readings introduce the various aspects of computing and information science, including hardware, software, interactive design, usability, and the context in which this new social communication environment is used. Lab sessions, students serve in teams as online mentors (no travel required) to middle school students in after-school CYFair (CyberYouthFair) programs. These programs focus on participatory, project-based learning using collaborative virtual world environments and online information tools for data analysis and visualization.

**CIS 3000 Introduction to Computer Game Design**
Spring. 4 credits. Prerequisites: students must satisfy at least one of the following, according to their area of interest (art, music, or programming): Art: ART 2501 or equivalent; Music: CS 111x or INFO 1301–1302, MUSIC 1421 or equivalent; Programming: CS/ENGRD 2110 or equivalent. Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of game design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, and musicians collaborate to produce an original computer game.

**CIS 4002 Advanced Projects in Game Design**
Spring. 3 credits. Prerequisites: CIS 3000 and permission of instructor. Project-based follow-up course to CIS 3000. Students work in a multidisciplinary team to develop an original computer game or an application that explores innovative game technology. Students have the goal of submitting their work to a contest or conference. Grading is based on completion of project plans and documentation, teamwork, presentations and demonstrations, class participation, and quality of final projects. Instructional meetings are arranged based on student and instructor schedules.
CIS 4205 Effective Use of High-Performance Computing
Spring, usually weeks 1–7. 2 credits. Prerequisites: proficiency in C, C++, Fortran, or Fortran 90. S-U grades only. An introduction to high-performance computing (HPC) for graduate students or advanced undergraduate students who will use HPC as a tool in their research. Various HPC architectural platforms are described with a focus on computational clusters. Students learn how to identify and exploit the various types of parallelism in algorithms and legacy applications. Understanding how to measure speedup and efficiency and how various bottlenecks affect them are covered. Parallel programming with MPI, OpenMP, and task-farming techniques such as the use of web services are covered in detail. The goal of the class is for students to gain practical HPC experience for use in their specific fields of research.

CIS 4206 Introduction to Scripting in Python and Perl
Spring, usually weeks 8–14. 2 credits. Prerequisites: basic computer programming skills or permission of instructor. S-U grades only. Scientific computing today requires heterogeneous systems, software, and data to be used together in many different ways, based on desired results. Researchers commonly develop work-flows that control the processing of data and/or experiments from beginning to the desired results. The “glue” that often links the various stages of these workflows is scripting languages. In this course we explore scripting with two of the most popular scripting languages, Perl and Python, from the basics to specific types of functions/capabilities that are useful in the development of plans for internships and student projects.

CIS 4999 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduate students. Fall, spring. Prerequisite: enrollment may be limited. For description, see SYSEN 7682.

CIS 7970 Topics in CIS/IGERT Seminars
Fall, spring, 1 credit. S-U grades only. Discusses diverse topics in nonlinear systems. The seminar is oriented to the requirements for the IGERT Program in Nonlinear Systems, a National Science Foundation-supported graduate training program. Includes a mixture of student, faculty, and visitor presentations and development of plans for internships and student projects.

CIS 7999 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member. Independent research or master of engineering project.

CIS 6229 Computational Methods for Nonlinear Systems (also PHYS 7682)
Fall. 4 credits. Enrollment may be limited. For description, see PHYS 7682.

CS 1109 Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S-U grades only. Designed for students who intend to take CS 111x but are not adequately prepared for it. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students who have previous programming experience and students who do not intend to take CS 111x should not take this course.

CS 1110 Introduction to Computing Using Java
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience. Programming and problem solving using Java. Emphasizes principles of software development, style, and testing. Topics include object-oriented concepts, procedures and functions, iteration, arrays, strings, algorithms, exceptions, GUIs (graphical user interfaces). Weekly labs provide guided practice on the computer, with staff present to help. Assignments use graphics and GUIs to help develop fluency and understanding.

CS 1112 Introduction to Computing Using MATLAB
Fall, spring. 4 credits. Corequisite: MATH 1110, 1190, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

CS 1130 Transition to Object-Oriented Programming—Honors
Fall, spring. 1 credit. Prerequisite: one course in programming. S-U grades only. Introduction to object-oriented concepts using Java. Assumes programming knowledge in a language like MATLAB, C, C++, or Fortran. Students who have learned Java but were not exposed heavily to OO are welcome.

CS 1132 Transition to MATLAB
Fall, spring. 1 credit. Prerequisite: one course in programming. S-U grades only. Introduction to MATLAB and scientific computing. Covers the MATLAB environment, development of algorithms and programs. MATLAB. Emphasizes the systematic development of algorithms and programs. Covers the MATLAB environment, development of algorithms and programs.

CS 1134 Introduction to Computing in the Arts (also CS 1610, 1910, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

CS 1135 Using MATLAB and Robotics
Fall, spring. 4 credits. Prerequisite: some programming experience. Next offered 2009–2010. Honors-level introduction to computer science using camera-controlled robots using MATLAB. Emphasis is on modular design of programs and on fundamental algorithms. Extensive laboratory experiments with cameras and robots, including Sony Aibo. Example projects include controlling a robot by pointing a light stick and making a robot recognize simple colored objects.

CS 1301 Introduction to Programming Web Applications
Fall, weeks 1–7. 2 credits. Students must enroll in both CS 1301 and 1302. For description, see INFO 1301.

CS 1302 Introduction to Designing Web Applications
Fall, weeks 8–14. 2 credits. Students must enroll in both CS 1301 and 1302. Prerequisite: CS 1301 or equivalent knowledge. For description, see INFO 1302.

CS 1610 Computing in the Arts (also CIS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts. Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and
music. It looks at ways of breaking things apart and sampling and ways of putting things together and resynthesizing, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 1701. MUSC 1414.

**CS 20 Advanced UNIX Programming and Tools**

Fall, Spring, and Summer. 1 credit. Prerequisite: CS 1110 or equivalent experience. S-U grades only. Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

**CS 2042 Unix Tools**

Fall, Spring, and Summer. 1 credit. Prerequisite: one programming course or equivalent programming experience. S-U grades only. Introduction to Unix, emphasizing tools for file management, communication, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.

**CS 2044 Advanced UNIX Programming and Tools**

Spring, usually weeks 5–8. 1 credit. Prerequisite: CS 2042 or equivalent. S-U grades only. Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take CS 2042 first.

**CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)**

Fall, Spring, summer. 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1113 or CS 1112 if completed before fall 2007 or equivalent course in Java or C++. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interfaces, algorithm analysis (asymptotic complexity, big-O notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

**CS 2111 Programming Practicum**

Fall, Spring. 1 credit. Pre- or corequisite: CS/ENGRD 2110. Letter grades only. Project course that introduces students to the ways of software engineering using the Java programming language. The course requires the design and implementation of several large programs.

**CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)**

Spring. 3 credits. Prerequisite: CS 1501 and 1502 strongly recommended. For description, see INFO 2300.

**CS 2800 Discrete Structures**

Fall, Spring. 3 credits. Pre- or corequisite: one programming course or permission of instructor. Covers the mathematics that underlies most of computer science. Topics include mathematical induction, logical proof, propositional and predicate calculus; combinatorics and discrete mathematics; basic probability theory; basic number theory; sets, functions, and relations; partially ordered sets, and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

**CS 2850 Networks (also ECON/INFO 2040, SOC 2090)**

Spring. 4 credits. Prerequisites: none. For description, see ECON 2040.

**CS 3110 Data Structures and Functional Programming**

Fall, Spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. S-U grades only. Should not be taken concurrently with CS 3410 or 3420. Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covers techniques for analyzing program performance and correctness.

**CS 3220 Introduction to Scientific Computation (also ENGRD 3220)**

Spring, Summer. 3 credits. Prerequisites: One programming course and MATH 2210 or 2940, knowledge of discrete probability and random variables at the level of CS 2900. Introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

**CS 3300 Data-Driven Web Applications (also INFO 3300)**

Spring. 3 credits. Prerequisite: CS/ENGRI 2110. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321. For description, see INFO 3300.

**CS 3410 Systems Programming**

Fall. 4 credits. Prerequisite: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110. Introduction to systems programming, computer organization, and the hardware/software interface. Topics include representation of information, machine and assembly languages, processor organization, memory management, input/output mechanisms, and basic network programming. Also covered are techniques for analyzing program performance and optimization.

**CS 3420 Computer Organization (also ECE 3140)**

Spring. 4 credits. Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110. For description, see ECE 3140.

**CS 3700 Explorations in Artificial Intelligence (also INFO 3720)**

Spring. 3 credits. Prerequisites: MATH 1110 or equivalent, statistics course, and CS/ENGRI 2110 or permission of instructor. Next offered 2009–2010. For description, see INFO 3720.

**CS 3740 Computational Linguistics (also COGST 4240, LING 4424)**

Fall. 4 credits. Recommended: CS 2042. For description, see LING 4424.

**CS 3810 Introduction to Theory of Computing**

Fall, Summer. 3 credits. Prerequisite: CS 2800 or permission of instructor. Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

**CS 4110 Programming Languages and Logics**

Fall. 4 credits. Prerequisite: CS 3110 or permission of instructor. Next offered 2009–2010. Introduction to the theory, design, and implementation of programming languages.
Topics include operational semantics, type systems, higher-order function, scope, lambda calculus, laziness, exceptions, side effects, continuations, objects, and modules. Also discussed are logic programming, concurrency, and distributed and persistent programming.

[CS 4120 Introduction to Compilers]  
Spring. 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3410 or 3420. Corequisite: CS 4121.  
Introduction to the specification and implementation of modern compilers. Topics include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages.

[CS 4121 Practicum in Compilers]  
Spring. 2 credits. Corequisite: CS 4120.  
Compiler implementation project related to CS 4120.

[CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)]  
Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.  
Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages and disadvantages of each method. Applications are presented throughout the course.

[CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)]  
Spring. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.  
Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages and disadvantages of each method. Applications are presented throughout the course.

[CS 4221 Practicum in Database Systems]  
Fall. 2 credits. Prerequisite: CS 4210.  
Students build part of a real database system in C++.

[CS 4410 Operating Systems]  
Spring. 3 credits. Prerequisite: CS 3410 or 3420.  
Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

[CS 4411 Practicum in Operating Systems]  
Spring. 2 credits. Corequisite: CS 4410.  
Studies the practical aspects of operating systems through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

[CS 4420 Computer Architecture (also ECE 475750)]  
Fall. 4 credits. Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.  
For description, see ECE 4750.

[CS 4450 Computer Networks]  
Spring. 4 credits. Pre- or corequisite: CS 4410 or permission of instructor.  
Introduction to computer networks with an emphasis on fundamentals. Detailed introduction to networking protocols for reliable data transfer, flow control, congestion control, naming and addressing, routing, and security. Fundamentals of layered protocols and techniques for protocol design and implementation. Course material is supplemented by network measurement projects, protocol simulations, and a substantial protocol implementation project running over sockets that makes use of C or C++.

[CS 4520 Introduction to Bioinformatics]  
Spring. 4 credits. Prerequisites: CS/ENGRD 2110 and CS 2800.  
Overview of the goals, tools, and techniques used in bioinformatics, a field that applies ideas from computer science, mathematical modeling, and statistics in order to make sense of the huge datasets that typify modern biology. Topics include a brief introduction to molecular biology, DNA sequencing, sequence alignment and multiple alignment, similarity searches and their statistics, phylogeny, gene regulation and motif finding, gene finding, and genome rearrangements. Much of the course is devoted to an in-depth study of the algorithms behind popular computational tools such as Smith-Waterman, BLAST, CLUSTALW, Genscan, and MEME.

[CS 4620 Introduction to Computer Graphics (also ARCH 3704)]  
Fall. 4 credits. Prerequisite: CS/ENGRD 2110.  
Introduction to the principles of computer graphics in two and three dimensions. Topics include digital images, filtering and anti-aliasing, 2-D and 3-D affine geometry, ray tracing, perspective and 3-D viewing, the graphics pipeline, curves and surfaces, and human visual perception. Homework assignments require some Java programming. May be taken with or without concurrent enrollment in CS 4621.

[CS 4621 Computer Graphics Practicum]  
Fall. 2 credits. Pre- or corequisite: CS 4620.  
Provides CS 4620 students with hands-on experience in computer graphics programming on modern graphics hardware. A semester-long project involves building a substantial interactive 3D system. The course uses Java and OpenGL for code development.

[CS 4700 Foundations of Artificial Intelligence]  
Fall. 3 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 (or equivalent).  
Challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

[CS 4701 Practicum in Artificial Intelligence]  
Fall. 2 credits. Pre- or corequisite: CS 4700.  
Project portion of CS 4700. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetics algorithms, planning, and truth maintenance.

[CS 4702 Artificial Intelligence: Uncertainty and Multi-Agent Systems]  
Spring. 4 credits. Prerequisites: CS/ENGRD 2110 and CS 2800 or equivalent.  
A key issue in the design of intelligent systems is how to deal with uncertain or incomplete information, as obtained, for example, through (noisy) sensory input. The first half of this course focuses on how to represent and reason with uncertain information. The second half covers the study and design of multi-agent systems. Topics include Bayesian networks, dynamic Bayesian networks, belief propagation, Markov random fields, exact and approximate probabilistic inference methods, Markov Chain Monte Carlo methods, connections to statistical physics and information science, adversarial reasoning and planning in multi-agent systems, and game theoretic notions underlying multi-agent systems. This course complements CS 4700 but is given as a self-contained unit.

[CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)]  
Spring. 4 credits. Prerequisite: CS 2110.  
Computationally oriented introduction to natural language processing, the goal of which is to enable computers to use human languages as input, output, or both. Possible topics include parsing, grammar induction, information retrieval, and machine translation.

[CS 4780 Machine Learning]  
Spring. 4 credits. Prerequisites: CS 2100, CS 2800, or basic probability theory and basic knowledge of linear algebra. Next offered 2009-2010.  
Machine learning is concerned with the question of how to make computers learn from experience. The ability to learn is not only central to most aspects of intelligent
behavior, but machine learning techniques have become key components of many software systems. For example, machine learning techniques are used to create spam filters, to analyze customer purchase data, and to explore new domains of science. This course introduces the fundamental set of techniques and algorithms that constitute machine learning as of today, including classification methods like decision trees and support vector machines, parametric Bayesian learning and hidden Markov models, as well as unsupervised learning and reinforcement learning. The course discusses algorithms and methods and provides an introduction to the theory of machine learning.

**CS 4782 Probabilistic Graphical Models (also BTRY 4790)**
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); course in statistical methods recommended but not required (BTRY 4090 or equivalent). For description, see BTRY 4790.

**CS 4812 Quantum Computation (also PHYS 4481/7681)**
Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. Next offered 2009–2010. For description, see PHYS 4481.

**CS 4820 Introduction to Analysis of Algorithms**
Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110. Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Example applications are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), computational complexity focusing on NP-complete algorithmic techniques for intractable problems (including identification of structured special cases, approximation algorithms, and local search heuristics).

**CS 4830 Introduction to Cryptography**
Fall. 4 credits. Prerequisites: CS 2800 (or equivalent), CS 3810 (or mathematical maturity), or permission of instructor. Introductory course in cryptography. Topics include one-way functions, encryption, digital signatures, pseudo-random number generation, zero-knowledge and basic protocols. Emphasizes fundamental notions and constructions with proofs or security based on precise definitions and assumptions.

**CS 4850 Mathematical Foundations for the Information Age**
Spring. 4 credits. Prerequisite: CS 3810. Covers the mathematical foundations underlying modeling and searching of the web and other complex networks, discovering trends, data mining, and making recommendations based on user behavior. Topics include random graphs; tail bounds; branching processes; spectral analysis; clustering; learning mixtures of distributions; extracting information from large, high dimensional, and noisy data; VC dimension; latent semantic indexing; and collaborative filtering.

**CS 4860 Applied Logic (also MATH 4860)**
Spring. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3520, 4320, 4340, 4810), and some additional computer mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

**CS 4999 Independent Reading and Research**
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

**CS 5150 Software Engineering**
Spring. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++. Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professional software project management, and the legal framework for software development.

**CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)**
Spring. 4 credits. Prerequisite: CS/INFO 5300 or CS 4320. For description, see INFO 5300.

**CS 5410 Intermediate Computer Systems**
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2008. Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in CS 4999 or 7999.

**CS 5420 Parallel Computer Architecture (also ECE 6270)**
Fall. 4 credits. Prerequisite: ECE 4750. For description, see ECE 5720.

**CS 5430 System Security**
Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with JAVA, C, or C* programming languages. Next offered spring 2009. Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as didactical alternatives for implementing the properties that comprise “trustworthiness” in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

**CS 5450 Advanced Computer Networks (also CS 6450)**
Fall or spring. 4 credits. Prerequisite: CS 4450 or permission of instructor. Offered fall 2008. Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice-over IP, header compression, security, and extreme networking environments (fast, slow, big, long). Emphasizes both research and the latest standards. A project with research content is required. (CS 5450 is for M.Eng. students; CS 6450 for Ph.D. students.)

**CS 5560 Interactive Computer Graphics**
Spring. 4 credits. Prerequisite: CS 4620. Next offered 2009–2010. Methods for interactive computer graphics, targeting applications including games, visualization, design, and immersive environments. Topics include programming graphics processing units (GPUs), shading models, advanced texturing, shadow algorithms, advanced lighting, hierarchical acceleration structures, and animation.

**CS 5564 Computer Animation (also ART 2703, CIS 5640)**
Fall. 4 credits. Prerequisites: none. Next offered 2009–2010. For description, see ART 2703.

**CS 5564 Advanced Animation (also ART 3702, CIS 5642)**
Spring. 4 credits. Prerequisites: none. Next offered 2009–2010. For description, see ART 3702.

**CS 5643 Physically Based Animation for Computer Graphics**
Spring. 4 credits. Prerequisites: CS/ENGRD 5220 and/or CS 4620 or permission of instructor. Offered alternate years. Modern computer animation and interactive digital entertainment are making increasingly sophisticated use of tools from scientific and engineering computing. This course introduces students to common physically based modeling techniques for animation of virtual characters, fluids and gases, rigid and deformable solids, and other systems. Aspects of interactive simulation and multi-sensory feedback are also discussed. A hands-on programming approach is taken, with an emphasis on small interactive computer programs.

**CS 5722 Heuristic Methods for Optimization (also CEE 5290, ORIE 5640)**
Fall or spring. 3 or 4 credits. Prerequisites: CS/ENGRD 5210 or 5220 and/or CS 4620 or permission of instructor. Next offered 2009–2010. Offered alternate years. For description, see CEE 5290.

**CS 5780 Empirical Methods in Machine Learning and Data Mining**
Fall or spring. 4 credits. Prerequisites: CS 2800 and 3110 or equivalent. Next offered 2009–2010. This implementation-oriented course presents a broad introduction to current algorithms and approaches in machine learning, knowledge discovery, and data mining and their application to real-world learning and decision-making tasks. The course also covers experimental methods for comparing learning.
algorithms, for understanding and explaining their differences, and for exploring the conditions under which each is most appropriate.

CS 5846 Decision Theory I (also ECON 4760/6760)
Fall. 4 credits. Prerequisite: mathematical sophistication.
For description, see ECON 4760.

CS 6121 Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Study of programming paradigms: functional, imperative, concurrent, and logic. Programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications of programming methodology.

CS 6210 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor.
Offered alternate years; next offered 2009–2010.
Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

CS 6220 Sparse Matrix Computations
Fall. 4 credits. Prerequisite: CS 6210.
Methods for large sparse matrix problems. Krylov subspace techniques are featured, e.g., conjugate gradients, Lanczos, Arnoldi. Applications from differential equations and optimization methods based on random sampling are also covered. Assignments in MATLAB.

CS 6240 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210) and differential equations, and knowledge of MATLAB.

CS 6320 Database Management Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.
Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

CS 6322 Advanced Database Systems
Fall. 4 credits.
Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

CS 6410 Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor.
Offered fall 2008.
Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

CS 6450 Research in Computer Networks
Fall. 4 credits. Prerequisite: CS 4450 or permission of instructor. Offered fall 2008.
Examines advanced computer network topics such as overlay and P2P networking, reliable multicast, mobility, voice over IP, header compression, security, and extreme networking environments (fast, slow, big, long). The emphasis is on both research and the latest standards. A project with research content is required. CS 6450 is for Ph.D. students; CS 5450 is for M.Eng. students.

CS 6460 Peer-to-Peer Systems
Spring. 4 credits. Recommended: CS 6410.

CS 6522 Biological Sequence Analysis
Fall. 4 credits. Prerequisites: none.
Typically concentrates on one topic in biological sequence analysis, providing an in-depth analysis of the algorithmic and statistical challenges in that area. The selected topics vary from year to year.

CS 6620 Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: CS 4620 and 4621 or 5620 or permission of instructor.
State-of-the-art techniques for high-quality rendering in graphics. Focus on practical rendering algorithms that have had (or are poised to have) big impact in industry. Covers core rendering techniques used in simulation, games, and movies. Topics include photon mapping, environment map lighting, precomputed radiance transfer, radiosity, scalable rendering, GPU global illumination including shadow algorithms, hierarchical acceleration structures, interactive ray tracing on modern architectures including multicomputer processors and GPUs, cinematic relighting for movie rendering, and perceptually based rendering. Focus is on practical rendering algorithms for graphics applications.

CS 6630 Realistic Image Synthesis
Fall or spring. 3 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, probability and statistics, vector calculus, and programming.
Advanced course in realistic image synthesis, focusing on the computation of physically accurate images. Topics include radiometry; Monte Carlo methods, models for light reflection from surfaces and scattering in volumes, and algorithms for global illuminations.

CS 6650 Computational Motion
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing.
Offered alternate years.
Covers computational aspects of motion, broadly construed. Topics include the computer representation, modeling, analysis, and simulation of motion, and its relationship to various areas, including computational geometry, motion generation, physical simulation, computer animation, robotics, biology, computer vision, acoustics, and spatio-temporal databases. Students implement several of the algorithms covered in the course and complete a final project.

CS 6670 Machine Vision
Fall or spring. 4 credits. Prerequisites: Ph.D. and MATH 2210 or equivalent.
Next offered spring 2010.
Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

CS 6700 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: CS 4700 or permission of instructor.
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

CS 6740 Advanced Language Technologies (also INFO 6300)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites. Offered fall 2008.
Graduate-level introduction to technologies for the computational treatment of information in human-language form, covering modern natural-language processing (NLP) and/or information retrieval (IR). Possible topics include latent semantic analysis (LSA); clickthrough data for web search, language modeling, text categorization and clustering, information extraction, computational syntactic and semantic formalisms, grammar induction, and machine translation.

CS 6764 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010–2011.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues include common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, modeling resource-bounded reasoning, and connections to game theory.

CS 6766 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2009–2010.
Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of
probability, combining knowledge and probability, probability and adversarial, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief, and decision theory.]

[CS 6780 Advanced Topics in Machine Learning]
Fall or spring, 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor.
Extends and complements CS 6780 and 5780, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

[CS 6782 Probabilistic Graphical Models (also BTRY 6790)]
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). For description, see BTRY 6790.

[CS 6810 Theory of Computing]
Spring. 4 credits. Prerequisites: CS 5810 and CS 4820 or 6820 or permission of instructor.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

[CS 6820 Analysis of Algorithms]
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.
Methodology for developing and analyzing efficient algorithms. Understanding the inherent complexity of natural problems via polynomial-time algorithms, advanced data structures, randomized algorithms, approximation algorithms, and NP-completeness. Additional topics may include algebraic and number theoretic algorithms, circuit lower bounds, online algorithms, or algorithmic game theory.

[CS 6822 Advanced Topics in Theory of Computing]
Fall or spring, 4 credits. Prerequisite: CS 6810, 6820, or 6830 recommended, depending on the topic. Next offered spring 2009.
An advanced study of current topics in the theory of computing. Topics may include algorithms, complexity, logic, cryptography, or theories of networks, information, and learning. Course may be repeated for credit.

[CS 6830 Cryptography]
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs). Graduate introduction to cryptography. Topics include encryption, digital signatures, pseudorandom number generation, zero-knowledge, and basic protocols. Emphasizes fundamental concepts and proof techniques.

[CS 6840 Algorithmic Game Theory]
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered 2009–2010.
Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the interaction and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multiauction.

[CS 6850 The Structure of Information Networks (also INFO 6850)]
Fall or spring. 4 credits. Prerequisite: CS 4820.
For description, see INFO 6850.

[CS 7090 Computer Science Colloquium]
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S-U grades only. Weekly meeting for the discussion and study of important topics in the field.

[CS 7190 Seminar in Programming Languages]
Fall, spring. 4 credits. Prerequisite: CS 6110 or permission of instructor. S-U grades only.

[CS 7192 Seminar in Programming Refinement Logics]
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

[CS 7320 Topics in Database Systems]
Fall, spring. 4 credits. S-U grades only.

[CS 7390 Database Seminar]
Spring. 1 credit. Prerequisite: CS 6322 or permission of instructor. S-U grades only.

[CS 7410 Topics in Systems]
Fall or spring. 3 credits. Prerequisite: permission of instructor.

[CS 7490 Systems Research Seminar]
Fall, spring. 1 credit. S-U grades only.

[CS 7690 Computer Graphics Seminar]
Fall, spring. 3 credits.

[CS 7726 Evolutionary Computation and Design Automation (also MAE 6500)]
Fall. 4 credits. Prerequisite: programming experience or permission of instructor. Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include

artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

[CS 7772 Seminar in Artificial Intelligence]
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

[CS 7794 Seminar in Natural Language Understanding]
Fall, spring. 2 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

[CS 7890 Seminar in Theory of Algorithms and Computing]
Fall, spring. 4 credits. Prerequisite: permission of a computer science advisor.
Independent research or master of engineering project.

[CS 7999 Thesis Research]
Fall, spring. Prerequisite: permission of a computer science advisor.
Doctoral research.

INFORMATION SCIENCE (INFO)

INFO 1301 Introduction to Programming Web Applications
Fall, weeks 1–7. 2 credits. Students must enroll in both INFO 1301 and 1302. Building functional and effective web sites that support users’ needs and capabilities requires a mixture of technical, design, and analytical skills. This course lays the foundation for proficient web design by covering the technical skills involved, including XHTML, the markup language used to encode web pages, and PHP, a programming language for building interactive web sites. This is an introductory programming course, and no programming background is assumed. Students in 1301 must be co-registered in INFO 1302, which builds on the programming expertise developed in 1301 to develop web design and usability skills.

INFO 1302 Introduction to Designing Web Applications
Fall, weeks 8–14. 2 credits. Students must enroll in both INFO 1301 and 1302. Prerequisite: successful completion of INFO 1301. Building functional and effective web sites that support users’ needs and capabilities requires a mixture of technical, design, and analytical skills. This course builds on the technical skills developed in INFO 1301 to develop full competency in web design. Students develop design and analytical skills including critical analysis, support for usability, user-centered design, and methods for visual layout. Skills will be developed in a studio and project-based format focused on the construction of compelling, functional web sites. To take this course students must either have received a passing grade in INFO 1301, or prove proficiency in PHP programming via a qualifying exam.
INFO 2040 Networks (also ECON 2040, SOC 2120)  
Spring. 4 credits.  
For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140)  
Fall. 4 credits. Limited to 175 students.  
Prerequisite: sophomore standing.  
Graduate students, see INFO 6140 or COGST 6150.  
For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)  
Spring. 3 credits. Prerequisite: INFO 1301 and 1302 strongly recommended.  
Web programming requires the cooperation of two machines: the one in front of the viewer (client) and the one delivering the content (server). CS 1300 concentrates almost exclusively on the client side. The main emphasis in CS 2300 is learning about server-side processing. Students begin by looking at interactions with databases, learning about querying both on paper and via SQL, and then, through a succession of projects, learn how to apply this understanding to the creation of an interactive data-driven site via the use of an integrated web development tool such as ColdFusion. Also considered are techniques to enhance security, privacy, and reliability and ways of incorporating other programs. Toward the end of the course, students are shown how these development tools are working. Design issues are emphasized. A major component of the course is the creation of a substantial web site.

INFO 2310 Topics in Web Programming and Design  
Fall, weeks 1–10. 1 credit. Prerequisite: INFO 2300.  
For description, see INFO 2310 in CIS section.

INFO 2450 Psychology of Social Computing (also COMM 2450)  
Fall, summer. 3 credits.  
For description, see COMM 2450.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGR 2980, HIST 2920, STS 2921)  
Spring. 3 credits.  
For description, see ENGRG 2980:0.

INFO 2950 Mathematical Methods for Information Science  
Fall. 4 credits. Corequisite: MATH 2310 or equivalent.  
Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 3200 New Media and Society (also COMM 3200) (CA)  
Spring. 3 credits.  
For description, see COMM 3200.

INFO 3300 Data-Driven Web Applications (also CS 3300)  
Fall. 3 credits. Prerequisite: CS 2110.  
Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems.

INFO 3450 Human-Computer Interaction Design (also COMM 3450)  
Spring. 3 credits.  
For description, see COMM 3450.

INFO 3490 Media Technologies (also COMM 3490, STS 3491)  
Spring. 3 credits. Offered odd-numbered years.  
For description, see COMM 3490.

INFO 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)  
Fall. 4 credits.  
For description, see STS 3551.

INFO 3650 Technology in Collaboration (also COMM 3650)  
Spring. 3 credits. Prerequisite: COMM/INFO 2450.  
For description, see COMM 3650.

INFO 3660 History and Theory of Digital Art (also ARTH 3650) (CA)  
Fall. 4 credits.  
For description, see ARTH 3650.

INFO 3720 Explorations in Artificial Intelligence (also CS 3700)  
Spring. 3 credits. Prerequisites: MATH 1110 or equivalent, an information science–approved statistics course, and CS 2110 or permission of instructor.  
How do computers solve tasks as diverse as playing chess or blackjack, control autonomous space missions such as NASA's Deep Space One, plan the route for a driverless car as in the DARPA Grand Challenge race, perform content-based selection of music programs, or solve Sudoku, the latest puzzle craze? This course introduces students to a range of computational modeling approaches and solution strategies using examples from AI and Information Science. Covers different formalisms such as logical representations, constraint-based languages, mathematical programming, and multi-agent approaches (including adversarial games). Emphasis is on modeling, not on algorithms, but efficiency issues (complexity) are highlighted as part of the modeling approaches. Students also learn about the tradeoffs in modeling choices.

INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology (also STS 3871)  
INFO 4144 Responsive Environments (also ARTH 4144) (CA)  
For description, see ARTH 4144.

INFO 4290 Copyright in the Digital Age (also COMM 4290)  
Fall. 3 credits. Offered odd-numbered years; next offered 2009–2010.  
For description, see COMM 4290.

INFO 4300 Information Retrieval (also CS 4300)  
Fall. 5 credits. Prerequisite: CS/ENGRD 2110 or equivalent.  
Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

INFO 4302 Web Information Systems (also CS 4302)  
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.  
Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

INFO 4350 Seminar on Applications of Information Science (also INFO 6350)  
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 2110 or equivalent, and experience using information systems. Undergraduates and master's students should register for INFO 4350; Ph.D. students should register for INFO 6350.  
This course brings together the interdisciplinarity of information science—technological, sociological, legal, economic, and political—through a series of case studies of applications and areas of current research. The case studies are explored through reading and discussion of recent articles on aspects of information science, both social and technical. Many of the case studies build on the Information Science seminar series and on current work at Cornell.

INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400)  
Fall. 3 credits. For description, see COMM 4400.

INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450)  
Fall. 5 credits. Prerequisite: COMM/INFO 2450.  
For description, see COMM 4450.
INFO 4470 Social and Economic Data (also IRLRE 4470)
Spring. 4 credits. Prerequisites: calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.
Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and non-sampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American Community Survey. The course is appropriate for upper-level undergraduate, professional master’s, and doctoral students who will be users of data produced from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

INFO 4500 Language and Technology (also CODIM 4500)
Spring. 3 credits. Prerequisites: COMM 2450 or permission of instructor. Next offered 2009–2010.
For description, see COMM 4500.

INFO 4850 Computational Methods for Complex Networks
Spring. 3 credits. Prerequisites: ECON/INFO 2040/SOC 2000 or CS 2850 or equivalent knowledge; CS 2110 or INFO 2300 or equivalent knowledge of basic programming.

INFO 4900 Independent Reading and Research
Fall, spring. 1–4 credits.
Independent reading and research for undergraduates.

INFO 4910 Teaching in Information Science, Systems, and Technology
Fall. 4 credits.
Involves working as a T.A. in a course in the information science, systems, and technology major.

INFO 5150 Culture, Law, and Politics of the Internet
Fall. 4 credits.
Explores the culture, law, and politics of the Internet. Highlighted issues include: net neutrality, free speech, Internet governance, domain naming, intellectual property, DMCA compliance, transaction security, and the development of institutional as well as national policy for the Internet.

INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)
Spring. 4 credits. Prerequisite: INFO/CS 3500 or CS 4520.
Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, .Net, J2EE, ASPs, Servlets, XML, and SOAP.

INFO 6002 Critical Technical Practices
INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)
Fall. 4 credits.
For description, see PSYCH 6140.

INFO 6144 Responsive Environments (also ARTH 6144)
For description, see ARTH 6144.

INFO 6300 Advanced Language Technologies (also CS 6740)
Fall or spring. 3 credits. Prerequisites: permission of instructor. Neither INFO/CS 4500 nor CS 4740 are prerequisites.
Offered fall 2008.
For description, see CS 6740 in CIS section.

INFO 6350 Seminar on Applications of Information Science (also INFO 4390)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming. At least CS 2110 or equivalent, and experience using information systems. Undergraduates and master’s students should register for INFO 4350. Ph.D. students for INFO 6350.
For description, see INFO 4350.

INFO 6400 Human-Computer Interaction Design (also COMM 6400)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6400.

INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6450.

INFO 6648 Speech Synthesis by Rule (also LING 6648)
Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor.
For description, see LING 6648.

INFO 6650 Language and Technology (also COMM 6500)
For description, see COMM 6500.

INFO 6850 The Structure of Information Networks (also CS 6850)
Fall or spring. 4 credits. Prerequisite: CS 4820. Offered fall 2009.
Information networks such as the World Wide Web are characterized by the interplay between heterogeneous content and a complex underlying link structure. This course covers recent research on algorithms for analyzing such networks and models that abstract their basic properties. Topics include combinatorial and probabilistic techniques for link analysis, centralized and decentralized search algorithms, generative models for networks, and connections with work in the areas of social networks and citation analysis.

INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member.
Thesis research for post-A exam Ph.D. students.

DEPARTMENT OF STATISTICAL SCIENCE
301 Malott Hall
255-8066

STSCI 2010 Introductory Statistics
Fall or spring. 4 credits.
Introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, and contingency tables.
STSCI 5010–5020  Applied Statistical Analysis

Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science.
Prerequisite: enrollment in M.P.S. program. Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project.
Fall (STSCI 5010). 4 credits. Letter grades only.
Topics include but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms.
Spring (STSCI 5020). 4 credits. Letter grades only.
Topics include but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

STSCI 6000  Statistics Seminar

Fall and spring. 1 credit. Pre- or corequisite: BTRY 4090 or permission of instructor. S-U grades only.

CONTINUING EDUCATION INFORMATION SERVICE

This service provides free information, counseling, and referral to adults who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell. For information, write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801; call 607 255-4987; e-mail cusce@cornell.edu; or fax 607 255-9697.

CORNELL IN WASHINGTON PROGRAM

Cornell in Washington offers undergraduates the opportunity to combine the strengths of Cornell with all of the best parts of living and learning in Washington, D.C. Students take courses in the fall, spring, or summer for credit, work as externs, and complete substantial research projects, all the while enjoying the rich opportunities available in the nation’s capital. For information, write to Cornell in Washington, M101 McGraw Hall, Ithaca, NY 14853-6010; call 607 255-4090; e-mail cwash@cornell.edu; or visit www.ciw.cornell.edu.

DISTANCE LEARNING

Need a flexible schedule? Have a full-time job? Planning to travel during winter break or during the summer? Don’t let any of these stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away. Distance learning courses may include a web-based component, videotapes, and/or CD-ROMs. Students interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but students have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl.

For faculty members interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to the course. Services are tailored to individual needs and ongoing support is available. Visit www.sce.cornell.edu/dl/ to see what’s possible.

CyberTower features three online program series, with new offerings added every month:

• **Study Rooms** contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty and fellow CyberTower users.

• **Forums** are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month’s featured guest.

• **Views and Reviews** are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news.

To explore CyberTower, simply log on to cybertower.cornell.edu. It’s all free and is a great way to see what Cornell has to offer.

EXECUTIVE AND PROFESSIONAL PROGRAMS

The school presents short, high-level professional updates on campus, online, and in locations worldwide. These courses are taught by Cornell faculty and senior research staff in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, call 607 255-7250; e-mail cusce@cornell.edu; fax 607 255-8942; or visit www.sce.cornell.edu/exec/.

EXTRAMURAL STUDY

Cornell students whose studies have been interrupted may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff, faculty, “townies,” and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school’s Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating courses and study with world-renowned faculty members. If you’d like to take advantage of Cornell’s extensive course offerings but don’t need college credit, you may register through the Visitors Program and receive a 90 percent discount on tuition.

For information, write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801; call 607 255-4987; e-mail cusce@cornell.edu; fax 607 255-9697; or visit www.sce.cornell.edu/exmu/.
SPECIAL PROGRAMS
If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, call 607 255-7259; e-mail cusp@cornell.edu; fax 607 255-8942; or visit www.sce.cornell.edu/sp/.

On-Campus Special Programs Roster
AEM Certificate in Business Management
Architecture
Art in the Modern World
Asian Language Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
Biological Sciences Undergraduate Research Program
CCMR Institute for Chemistry Teachers (CICT)
CNS Institute for Physics Teachers (CIPT)
Cornell Institute for Biology Teachers (CIBT)
Education
Engineering Cooperative Education Program
English for International Students and Scholars
Freshman Summer Start
Industrial and Labor Relations: Strategic Corporate Research
Intensive Arabic Program
Landscape Architecture: Site Grading
Leadership Program for Veterinary Students
Nanobiotechnology Institute for Teachers
Prefreshman Summer Program
Satellite Remote Sensing Applications in Biological Oceanography
School of Hotel Administration Executive Education Programs
Teaching Writing
Telluride Association Summer Program

Off-Campus Special Programs Roster
Field Archaeology in New York State
Architecture: Western Europe, South America, and the Mediterranean
Art Studio and Creative Writing Workshop in Rome, Italy
Theatre, Film, and Dance in Europe: Dublin/Paris/Rome
High Technology Entrepreneurship Program in Silicon Valley
Human Ecology: Urban Semester Program—Fieldwork in Diversity, Professional Practice, and Service: The Culture of Medicine/Community and Public Service/Business and Finance
International Business Program in Hong Kong
Investment Management Program
Latin American Studies: Quechua
Marine Science: Shools Marine Laboratory, Maine
Preflaw Program in New York City
Summer in Washington
Preflaw Program in New York City
Investment Management Program

Campus to Careers
The job market's tough. The economy's tight. You've been thinking it's time to get serious about your future . . . .

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:

• Expand your career opportunities
• Strengthen your résumé and skills
• Develop professional contacts
• Take focused, intensive classes
• Learn from distinguished professors, alumni, practitioners, and executives
• Study in Washington, D.C., New York City, Silicon Valley, Hong Kong, or on the Cornell campus in Ithaca
• Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp/.

Campus-to-Careers Programs Roster
AEM Certificate in Business Management
High Technology Entrepreneurship Program in Silicon Valley
International Business Program in Hong Kong
Investment Management Program
Preflaw Program in New York City
Summer in Washington

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
Cornell's award-winning programs for high school students offer one-, three-, four-, and six-week programs for talented sophomores, juniors, and seniors from around the world. Participants live on our beautiful campus, take college classes with leading Cornell faculty, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it's been the best summer of their life.

For information, call 607 255-6203; e-mail summer_college@cornell.edu; fax 607 255-6665; or visit www.summercollege.cornell.edu.

WINTER SESSION
Cornell undergraduate and graduate students, as well as employees and area residents, can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter-session students may enroll in scheduled courses or design individualized study with a faculty member. For information, write to Winter Session, B20 Day Hall, Ithaca, NY 14853-2801; call 607 255-4987; e-mail cusce@cornell.edu; fax 607 255-9697; or visit www.sce.cornell.edu/ws/. If a course also is offered through distance learning, the course title will be followed by DL.

Winter Session Course Roster
AEM 2400 Marketing DL
AMST 2020 Popular Culture in the United States, 1945 to Present DL
ART 3702 Special Topics in Art Studio (off campus)
ARTH 2600 Introduction to Art History: The Modern Era
ASIAN 2250 Introduction to Asian Religions
ASRC 1100–1101 Swahili (off campus)
BIOEE 2640 Tropical Field Ornithology (off campus)
BIOEE 2650 Tropical Field Ecology and Behavior (off campus)
COMM 2630 Organizational Writing
COMM 2720 Principles of Public Relations and Advertising DL
CRP 3850/5850 Special Topics (off campus)
ECON 1110 Introductory Microeconomics DL
ECON 1120 Introductory Macroeconomics
ENGL 2810 Creative Writing
ENGL 2880 Expository Writing
GOVT 1615 Introduction to Political Philosophy DL
GOVT 3141 Prisons DL
ORIE 3150 Financial and Managerial Accounting

CORNELL UNIVERSITY SUMMER SESSION
Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes. Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And, all with time left over for travel or a summer job.

Summer Session offers the practical benefits of fulfilling requirements, accelerating your degree, gaining personal and professional growth, or easing your fall/spring course load. It's also the perfect time to take advantage of the area's stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picinic, or enjoy a sunset concert on the Arts Quad.
However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, call 607 255–4987; e-mail cusce@cornell.edu; or visit our web site at www.summer.cornell.edu.

**Summer Session Course Roster**

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by DL.

**African Studies**

ASRC 1104–1105 Elementary Arabic
ASRC 1106–2101 Intermediate Arabic
ASRC 1100–1101 Swahili
ASRC 2300 African Cultures and Civilizations

**American Indian Studies**

AIS 2220 Field Course in Iroquois Archaeology

**American Studies**

AMST 1240 Democracy and Its Discontents: Political Traditions in the United States
AMST 2020 Popular Culture in the United States, 1945 to Present DL
AMST 2525 Islam in America
AMST 3128 America’s Changing Faces
AMST 3140 History of American Foreign Policy, 1912 to the Present
AMST 3141 Prisons DL

**Animal Science**

ANSC 1120 Sustainable Animal Husbandry
ANSC 2140 Captive Raptor Management and Propagation

**Anthropology**

ANTHR 2112 Cosmology of Native North America
ANTHR 2220 Field Course in Iroquois Archaeology
ANTHR 3415 Art in the Modern World
ANTHR 3799 Women in Asia: Sex and Gender in Cross-Cultural Perspective

**Applied Economics and Management**

AEM 2190 Introduction to Applied Portfolio Management
AEM 2200 Introduction to Business Management
AEM 2210 Financial Accounting
AEM 2240 Principles of Finance
AEM 2260 AEM Certificate in Business Management Special Activities
AEM 2270 Introduction to International Business
AEM 2400 Marketing DL
AEM 3200 Business Law I

**Archaeology**

ARKEO 1200 Ancient Peoples and Places
ARKEO 2220 Field Course in Iroquois Archaeology
ARKEO 3003 Island Archaeology
ARKEO 3302 Archaeology Under Water

Other field study opportunities are usually available through this department.

**Architecture**

ARCH 1110 Introduction to Architecture: Design Studio
ARCH 1300 An Introduction to Architecture: Lectures

Consult the Department of Architecture office for a complete list of summer design offerings including foreign study opportunities.

**Art**

ART 1101 Art as Experience
ART 1201 Introductory Painting
ART 1401 Introductory Sculpture
ART 1501–1503 Drawing I and II
ART 1550 Drawing in Rome
ART 1601 Photography I
ART 1608 Black-and-White Photography
ART 1609 Color Photography
ART 1701 Electronic Imaging in Art
ART 2201 Painting II
ART 2401 Sculpture II
ART 2601 Photography II
ART 2603 Color Photography
ART 3601 Photography III
ART 3702 Special Topics in Art Studio

**Asian Studies**

ASIAN 2225 Literature, Politics, and Genocide in Cambodia DL
ASIAN 2279 Chinese Mythology

See also “On-Campus Special Programs Roster” above for a list of Asian language offerings.

**Astronomy**

ASTRO 1105 An Introduction to the Universe
ASTRO 1106 Essential Ideas in Relativity and Cosmology

**Biological and Environmental Engineering**

BEE 3299 Sustainable Development DL

**Biological Sciences**

Ecology and Evolutionary Biology

BIOEE 2070 Evolution
BIOEE 2610 Ecology and the Environment
BIOEE 4670 Seminar in the History of Biology

**Microbiology**

BIOMI 1720 Bioscientific Terminology
BIOMI 2900–2910 General Microbiology

**Molecular Biology and Genetics**

BIOG 6020 Molecular Biology for Teachers
BIOGD 2800 Lectures in Genetics
BIOGD 2810 Genetics
BIOBM 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
BIOBM 4320 Survey of Cell Biology
BIOBM 4400 Laboratory in Biochemistry and Molecular Biology

**Neurobiology and Behavior**

BIOG 1107–1108 General Biology
BIONB 2210 Neurobiology and Behavior I: Introduction to Behavior
BIONB 4200 Topics in Neurobiology and Behavior

**Plant Biology**

BIOPL 2450 Plant Biology

**Shoals Marine Laboratory**

See course listings under Shoals Marine Laboratory in this catalog.

**Biology and Society**

BSOC 4471 Seminar in the History of Biology

**Biometry and Statistics**

BTRY 3010 Biological Statistics I
BTRY 6010 Statistical Methods I

**Chemistry and Chemical Biology**

CHEM 1560 Introduction to General Chemistry
CHEM 1570 Introduction to Organic and Biological Chemistry
CHEM 2070–2080 General Chemistry
CHEM 2510 Introduction to Experimental Organic Chemistry
CHEM 3570–3580 Organic Chemistry for the Life Sciences
CHEM 5010 Contemporary Chemistry for Teachers

City and Regional Planning
CRP 4080/5080 Introduction to Geographic Information Systems (GIS) DL

Classics
CLASS 1692 Anatomy of Bioscientific Terminology
CLASS 2604 Greek Mythology
CLASS 2681–2682 History of Rome

Cognitive Studies
COGST 1101 Introduction to Cognitive Science

Communication

INDEPENDENT STUDY

Have a special interest you'd like to pursue?  
Want to do research and get credit for it?  
Need a particular course to graduate on time?  
Consider independent study.

Independent study encompasses courses of  
your own design, special topics courses,  
undergraduate research, or any regular course  
from the fall and spring semesters not being  
offered. If you can find a professor willing to  
supervise your study, all you need to do is  
pick up the application for independent study  
(available on the web at www.summer.cornell.  
edu or from the Summer Session office) and  
register in B20 Day Hall at least two weeks  
prior to beginning the independent study  
course. Also, please let the Summer Session  
office know if there are courses you would  
like to see offered next summer (call 607  
255-4987 or e-mail cusce@cornell.edu).
Institutional research on the environment, seeks to catalyze interdisciplinary and multi-
faceted research to address complex environmental issues. The facilities of this program include tools for
exploring the design and fabrication of novel nanoscale structures for electronic, structural biology, chemistry, materials science,
and physics.

Cornell Nanoscale Science and Technology Facility (part of the National Science Foundation–funded National Nanofabrication Users Network) This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications. Information Assurance Institute. The institute’s activities are aimed at developing a science and technology base to enhance information assurance, reliability, security, and trustworthiness in networked information systems.

Institute for the Study of the Continents. This interdisciplinary organization promotes research in deep seismic exploration of the structure, composition, and evolution of the continents.

Intelligent Information Systems Institute. IISI seeks to stimulate research in computer- and data-intensive methods for intelligent decision-making systems, to foster collaboration, and to play a leadership role in the research and dissemination results in its core areas.

Kavli Institute at Cornell for Nanoscale Science. KIC addresses challenges and opportunities for the science of very small structures and fosters collaborative multidisciplinary research in this area.

Laboratory of Atomic and Solid State Physics. This is a major center for research in the area of condensed matter physics and other related areas.

Laboratory of Plasma Studies. LPS is a center for research in plasma physics.

MCEER. This facility was established by the National Science Foundation and a group of universities to study the response and design of structures in earthquake environments.

Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.

COLLEGE OF ENGINEERING

ADMINISTRATION

W. Kent Fuchs, dean
David Gries, associate dean for undergraduate programs
Christopher K. Ober, associate dean for research and graduate studies
Richard Allmendinger, associate dean for diversity
Deborah Cox, assistant dean for strategic planning, assessment, and new initiatives
Betsy East, assistant dean for student services
Cathy Dowe, associate dean for administration
Tim Dougherty, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, and the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers, institutes, and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

Alliance for Nanomedical Technologies. The alliance brings together collaborative teams of academic scientists and industrial affiliates to explore the design and fabrication of novel nanomedical devices.

Center for Advanced Computing, CAC is a supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Center for Applied Mathematics. This cross-disciplinary center administers a graduate program.

Center for Nanoscale Systems. The mission of this National Science Foundation Nanoscience and Technology Center is to develop innovative nanoscale systems to revolutionize information technology and to further nanoscience technology. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.

Center for Radiophysics and Space Research. This interdisciplinary unit facilitates research in astronomy and the space sciences.

Cornell Center for the Environment. The center seeks to catalyze interdisciplinary and multi-institutional research on the environment, connect Cornell's environmental research capacity to needs around the world, and engage Cornell's scientific talent as new issues arise.

Cornell Center for Materials Research. CCMR is an interdisciplinary center, with substantial support from the National Science Foundation, that performs state-of-the-art materials research and provides sophisticated scientific measurement and characterization equipment.

Cornell High Energy Synchrotron Source. CHESS is a high-energy synchrotron radiation laboratory operated in conjunction with the university’s high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanoscale Science and Technology Facility (part of the National Science Foundation–funded National Nanofabrication Users Network) This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications. Information Assurance Institute. The institute’s activities are aimed at developing a science and technology base to enhance information assurance, reliability, security, and trustworthiness in networked information systems.

Institute for the Study of the Continents. This interdisciplinary organization promotes research in deep seismic exploration of the structure, composition, and evolution of the continents.

Intelligent Information Systems Institute. IISI seeks to stimulate research in computer- and data-intensive methods for intelligent decision-making systems, to foster collaboration, and to play a leadership role in the research and dissemination results in its core areas.

Kavli Institute at Cornell for Nanoscale Science. KIC addresses challenges and opportunities for the science of very small structures and fosters collaborative multidisciplinary research in this area.

Laboratory of Atomic and Solid State Physics. This is a major center for research in the area of condensed matter physics and other related areas.

Laboratory of Plasma Studies. LPS is a center for research in plasma physics.

MCEER. This facility was established by the National Science Foundation and a group of universities to study the response and design of structures in earthquake environments.

Nanobiotechnology Center. The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.
DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (with field designation) (M.Eng.), master of science (M.S.), and doctor of philosophy (Ph.D.). General academic information concerning the B.S. degree is given below under "Undergraduate Study." The student pursues the degree in one of 13 majors. The majors are described under "Engineering Majors." Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M. Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S. M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see "Master of Engineering Degree Programs."

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science.

UNDERGRADUATE STUDY

Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:* biological engineering (BE)* chemical engineering (ChemE) civil engineering (CE) computer science (CS) electrical and computer engineering (ECE) engineering physics (EP) environmental engineering (EnVE) independent major (IM) information science, systems, and technology (ISSS)—with options in information science and management science materials science and engineering (MSE) mechanical engineering (ME) operations research and engineering (ORE) science of earth systems (SES) Criteria for affiliation with the majors are described under "Affiliation with a Major." The majors are described under "Undergraduate Engineering Majors."

Most of the majors have a corresponding minor, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, information science, and business. See the main section, "Engineering Minors."

*The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

*Students may major in biological engineering through the College of Engineering or the College of Agriculture and Life Sciences (CALS). Students who do so through the College of Agriculture and Life Sciences are jointly enrolled with the College of Engineering for their last two years.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major). Contact a faculty member in the graduate field of nuclear science and engineering who is most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostrov.

Graduation Requirements

To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2008–2009 edition of the Engineering Undergraduate Handbook.)

</tbody>
</table>

From 124 to 134 credits are required for graduation, depending on the major (see "Engineering Majors").

*Technical-writing courses may simultaneously fulfill another requirement.

Mathematics

The normal program in mathematics includes MATH 1910, 1920, 2930 or 2940 (depending on the major), and a major-specific math course. At least C– must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C– the second time will result in withdrawal from the College of Engineering. Courses that are taken a second time do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 1112, 2213, and 2214 or the corresponding honors courses (PHYS 1116, 2217, and 2218). Engineering students must attain at least C– in each math prerequisite of a physics course before taking the physics course (e.g., C– in MATH 1910 before taking PHYS 1112 and C– in MATH 1920 before taking PHYS 2213). The following substitutions are allowed for PHYS 2214: ChemE, CE, CS, ISST, and SES majors: CHEM 2080. BE and EnVE majors: CHEM 1570 or 5570. ORE majors: CHEM 2080, CS 2800, or MATH 3040, 3110, or 3560.

Chemistry

CHEM 2090 is required. The content is the same as that of CHEM 2070, but Engineering students are expected to take 2090.

Typically, CHEM 2090 is taken during the freshman year, but students who wish to complete the physics program (PHYS 1112, 2213, and 2214) first may postpone CHEM 2090 until the sophomore year.

Students considering chemical engineering must take CHEM 2090 in the fall of their freshman year and CHEM 2080 in the spring semester. Students considering the Science of Earth Systems major or a health-related career such as medicine should take the CHEM 2090–2080 sequence.

Computing

Students learn about computing using two programming languages by taking one of two sequences: (1) CS 1110 and CS 1132 or (2) CS 1112 (BE majors may take BEE 1510 instead) and CS 1130. The first course is taken in the first year. The second course, a 1-credit S–U course, is taken as soon as possible thereafter but no later than the fourth semester.

First-Year Writing Seminars

Each semester of their freshman year, students choose a first-year writing seminar from over 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also ensure beginning students the benefits of a small class.

Technical Writing

Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP/ for more information.

1. ENGRC 3500 or 3550
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing
will satisfy the technical-writing requirement.

3. An officially designated Writing-Intensive (W-I) engineering course:
   - ENGRD/AEP 2640
   - CHEM 4320
   - MSE 4050 and 4060 (both)
   - MSE 4090 and 4060 (both)
   - MAE 4272
   - BEE 4530
   - BEE 4730 with co-registration in BEE 4930
   - BEE 4890

4. ENGRD 3020, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB’s Subcommittee on Technical Writing, the instructor may have students co-register in ENGRD 302, which may be taken more than once with different courses by permission of the engineering instructor.

5. COMM 2600, 2630, or 3520, taught by the Department of Communication (in the College of Agriculture and Life Sciences).

6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB’s Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Introduction-to-Engineering Course

An introduction-to-engineering course (designated ENGRD) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.

Engineering Distribution

Two engineering distribution (ENGRD) courses (6-8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. Scientific computing
   - ENGRD 2110 Object Oriented Programming and Data Structures
   - ENGRD 3200 Engineering Computation
   - ENGRD 3510 Numerical Methods in Computational Molecular Biology
   - ENGRD 3220 Introduction to Scientific Computation

2. Materials science
   - ENGRD 2610 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   - ENGRD 2620 Electronic Materials for the Information Age

3. Mechanics
   - ENGRD 2020 Mechanics of Solids
   - ENGRD 2050 Dynamics
   - Majors in Engineering Physics may substitute AEP 3530 for ENGRD 2050.

4. Probability and statistics
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - Majors in Electrical and Computer Engineering may substitute ECE 5100 or MATH 4710 for ENGRD 2700.
   - Majors in Civil Engineering, Biological Engineering, and Environmental Engineering may substitute CEE 3040 for ENGRD 2700.

5. Electrical sciences
   - ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
   - ENGRD 2300 Introduction to Digital Logic Design
   - ENGRD 2640 Computer-Instrumentation Design

6. Thermodynamics and energy balances
   - ENGRD 2190 Mass and Energy Balances
   - ENGRD 2210 Thermodynamics

7. Earth and life sciences
   - ENGRD 2510 Engineering for a Sustainable Society
   - ENGRD 2600 Principles of Biological Engineering

8. Biology and chemistry
   - ENGRD 2520/AEP 2520 The Physics of Life
   - BIOG 1101 and 1103 Biological Sciences, Lab and Lecture
   - BIOG 1105 Introductory Biology
   - BIOG 1107 General Biology (summer only)
   - CHEM 3890 Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

Biological Engineering: ENGRD 2020
   - Chemical Engineering: ENGRD 2190
   - Civil Engineering: ENGRD 2020
   - Computer Science: ENGRD 2110 (co-enrollment in CS 2111 highly recommended)
   - Electrical and Computer Engineering: ENGRD 2300
   - Environmental Engineering: ENGRD 2020
   - Geological Sciences: ENGRD 2010
   - Information Science, Systems, and Technology: ENGRD 2700
   - Materials Science and Engineering: ENGRD 2610 or ENGRD 2620
   - Mechanical Engineering: ENGRD 2020
   - Operations Research and Engineering: ENGRD 2700

Some majors require additional distribution courses after affiliation.

Liberal Studies Distribution

Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a truly liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

- The six courses must be chosen from at least three of the following six groups.
- At least two of the six courses must be at the 2000 level or higher.

Utilize the current Courses of Study as the master list of approved Liberal Studies courses. Additional approved courses and unacceptable courses can be viewed at www.engineering.cornell.edu/student-services/academic-advising/index.cfm. Lists of additional approved courses and unacceptable courses are also available in Engineering Advising, 167 Olin Hall.

Group 1. Cultural Analysis (CA)

Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)

Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, and scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)

Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical
questions that concern the nature of justice, the good life, or human values in general.

**Group 5. Social and Behavioral Analysis (SBA)**

Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Group 6. Foreign Languages (not literature courses)**

Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

**Electives**

- **Advisor-approved electives:** 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of the engineer, advisors generally accept the following as approved electives:
  1. One introduction-to-engineering course (ENGRI)
  2. Engineering distribution courses
  3. Courses stressing written or oral communication
  4. Upper-level engineering courses
  5. Advanced courses in mathematics
  6. Rigorous courses in the biological and physical sciences
  7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives)
  8. Courses that expand the major or another part of the curriculum.
  9. Up to 6 credits of advisor-approved electives may come from ROTC courses at the 300 level or higher.

- **Major-approved electives:** 9 credits (approved by the major and faculty advisors in the major). Refer to the major curricula for descriptions of courses in this category.

- **Outside-the-major electives:** 9 credits of courses outside the major to ensure breadth of engineering studies

**Social Issues of Technology**

It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the “Science and Technology Studies” undergraduate area of concentration (see “Interdisciplinary Centers and Programs”). These courses may provide students with important perspectives on their studies and their future careers.

**Engineering Advising**

Entering first-year students are assigned a faculty advisor (who may or may not be in their intended major), who remains their advisor until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising in 167 Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general advising and academic counseling. Other student services offices located in Olin Hall are Engineering Learning Initiatives and Diversity Programs in Engineering (DPE) and the primary resources for academic counseling, support, tutoring, and networking opportunities.

**First-Year Requirements**

During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:

- **MATH 1910 and 1920**
- **Two of:** CHEM 2090, 2080, PHYS 1112, 2213, 2214* (or the Honors equivalent)
- **One of:** CS 111X
- **Two first-year writing seminars**
- **One introduction to engineering (ENGRI) course**
- **Two physical education courses**

*Students with an interest in pre-med (or other health-related careers), chemical engineering, or Science of Earth Systems should enroll in the CHEM 2090–2080 sequence during their first year.

**Affiliation with a Major**

Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation form. To affiliate, students must (1) make good progress toward completing required courses in the common curriculum, (2) have a GPA ≥ 2.0, and (3) have satisfied the major’s course and grade requirements as specified below:

(Majors may impose alternative affiliation requirements for students applying for affiliation later than the first semester of the sophomore year.)

**Major Courses and Minimum Grade Requirements**

<table>
<thead>
<tr>
<th>Biological Engineering</th>
<th>Courses and Minimum Grade Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>GPA ≥ 2.5 and at most one grade below C– in math, science, and engineering courses. Completion of ENGRD 2600 or 2510 and Intro Biology Sequence by end of the sophomore year with grade of at least C– in all courses. (Also applies to transfer students).</td>
<td></td>
</tr>
<tr>
<td>Chemical Engineering</td>
<td>At most one grade below C– in chemistry, math, physics, and chemical engineering courses. GPA ≥ 2.2 in math, science, and engineering courses.</td>
</tr>
</tbody>
</table>

**Civil Engineering**

GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 2020 (or ENGRD 2510, for students who do not take ENGRD 2020 before affiliation).

**Computer Science**

At least C in all completed CS and math courses. GPA ≥ 2.5 in CS 2110, 2111, and 2800. GPA ≥ 2.5 in MATH 1920 and CS 2800. Visit the CS undergraduate office web site for alternative affiliation criteria.

**Electrical and Computer Engineering**

At least C+ in MATH 2930, PHYS 2213, and one of ECE/ENGRD 2100, ENGRD 2210*, or ECE/ENGRD 2300. GPA ≥ 2.5 in (if completed): MATH 1920, 2930, 2940, PHYS 2213, ENGRD 2110, ECE/ENGRD 2590, ECE/ENGRD 2100, ECE 2200.

**Engineering Physics**

At least B– in all required math and physics courses.

**Environmental Engineering**

GPA ≥ 2.0 in all engineering and science courses. At least C– in ENGRD 2510.

**Information Science, Systems, and Technology**

At least C in two of MATH 2940, CS 2110, and ORIE/ENGRD 2700. Courses must be taken for a letter grade. GPA ≥ 2.3 in completed engineering math, engineering distribution, and ISST major courses, which must be taken at Cornell. For a repeated course, the most recent grade will be used.

**Materials Science and Engineering**

At least C– in required physics, chemistry, and math courses. At least C in ENGRD 2610 or ENGRD 2620.

**Mechanical Engineering**

At least C– in ENGRD 2020, ENGRD 2210*, and all completed required math, science, and computer science courses. GPA ≥ 2.5 in MATH 2930, PHYS 2213, ENGRD 2020, and ENGRD 2210 (if ENGRD 2210 was taken). For students entering prior to fall 2005, see affiliation requirements at www.mae.cornell.edu.

At least C in each of ENGRD 2700 and MATH 2900. GPA ≥ 2.0 in math, science, and engineering courses (both overall and in the term immediately before affiliation). At least C– in all ORIE courses completed thus far. Good academic standing in the College of Engineering.
Most engineering majors have a corresponding department for information on minors offered on the student's transcript. Not all departments subject to limitations placed by the department in any college that offers them, Engineering Minors.

Discussion of this major in "Undergraduate education in scope and substance and should logically connected nonengineering area. The secondary area (≥ 16 credits), which may be any subject area offered by a school or department of the college, and an educationally related interdisciplinary area.

The dual-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliated with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥ 32 credits), which may be any subject area offered by a school or department of the college, and an educationally related secondary area (≥ 16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in "Undergraduate Engineering Majors."

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

Most engineering majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, information science, and business. See "Engineering Minors."

Engineering Communications Program
424 Hollister Hall, 255-8558, www.engineering.cornell.edu/ECP

The Engineering Communications Program (ECP), provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean's Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

The Diversity Programs in Engineering office operates programs at the undergraduate, graduate, and postgraduate levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities, women, and other underrepresented groups in Engineering. DPE serves as a resource center for academic support, career placement, graduate school preparation, and overall student success.

The office participates in a university-wide pre-freshman summer program (Engineering Summer Scholars Program) for admitted students, coordinates two summer program initiatives for high school students, CURIE (www.engineering.cornell.edu/curie) and CATALYST (www.engineering.cornell.edu/catalyst), and also provides specialized instruction, in collaboration with Engineering Advising and Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

The DPE office sponsors networking events throughout the academic year that allow company representatives from all over the United States to meet students from diverse populations. Summer internships and permanent jobs frequently result from these events.

In addition, the DPE office coordinates various trips, recreational activities, seminars, lectures, and workshops on a wide range of topics that are relevant to academic and extracurricular life in the university setting.

Engineering Learning Initiatives

The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, cooperative learning, research opportunities, and leadership development.

Academic Excellence Workshops (AEWs) offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour collaborative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience with a faculty mentor. Students and faculty may apply for funding to cover student stipend and expense costs for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in many first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

LeaderShape, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a week-long retreat held in May of each year.

Engineering Cooperative Education and Career Services
201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices

This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search process through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national employers visit the office to recruit technical interns and graduates; additional job opportunities are posted on Cornell's electronic job posting service. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in engineering-related or research before they graduate. By supplementing course work with carefully monitored, paid positions, Co-op students can explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering an
equivalent of five semesters before starting the first work term. (Exceptions may be made for transfer students and others pursuing an accelerated curriculum.) Students majoring in computer science or biological engineering, but not registered in the College of Engineering, are also eligible. In most cases, a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semester course work on campus during the summer after sophomore year and begin the first Co-op work term the following fall. They complete the sixth semester on campus with their classmates and then return to their Co-op employer (but not necessarily to the same department or location) the following summer to complete a second work term. Students then spend the senior year on campus, graduating on schedule with their class. Students who have flexible course curriculums may prefer to complete one 28-week spring/summer or summer/fall Co-op work term during the junior year.

International Programs
An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today's engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years. Currently, the college has study abroad agreements with École Centrale Paris, France; Cantabria, Spain; and the Hong Kong University of Science and Technology and is also working with IIT Kanpur, India, and the National University of Singapore. The college is working to facilitate study abroad in Dresden, Germany; and Guadalajara, Mexico. Students who plan to study abroad apply through Cornell Abroad; see the Cornell Abroad program description in the introductory section of Courses of Study. Visit www.engineering.cornell.edu/studyabroad and Engineering Advising, 107 Olin Hall, for the latest information. In addition, the college is working on developing international Co-op and internship work experiences. For information, visit the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. See “Master of Engineering Degrees” for details.

Lester Knight Scholarship Program
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See “Master of Engineering Degrees” for details.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced (“A”) Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell’s departmental placement examinations, given during orientation week before the beginning of fall-semester classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:

1. enroll in a more advanced course in the same subject right away.
2. substitute an elective course from a different area.
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 1910, 1920 are required.
First-semester math (MATH 1910). AP credit may be earned by:

- a score of 4 or 5 on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-semester math.

First-year math (MATH 1920). AP credit may be earned by:

- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 1112 and 2213 are required.
PHYS 1112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam with successful completion of a high school-level calculus course, or
- a passing score on the Cornell departmental exam for PHYS 1112.

Note: MATH 2930 is a prerequisite for PHYS 2214.

PHYS 2213. AP credit may be earned by a score of 5 on the Electricity and Magnetism portion of the AP C exam.

PHYS 1116, 2217, and 2218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus.

- a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 2217 or 2218 are strongly advised to start with PHYS 1116. Even for a student with a 5 on both Physics C AP tests, 1116 will not be boring. Students may not simultaneously receive credit for PHYS 1116 and AP credit for PHYS 1112, or credit for PHYS 2217 and AP credit for PHYS 2213. For advice or more information, contact the departmental representative at 255-6016.

Chemistry: CHEM 2090 is required.

CHEM 2090. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for chemistry.

Note: Students who obtain AP credit for CHEM 2090 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 2150. Those who are offered AP credit for CHEM 2090 and then elect to take CHEM 2150 will also receive academic credit for CHEM 2090. Students may want to discuss this option with their faculty advisor.

Computing:

- CS 1110 or CS 1113 or CS 1112 or CS 1114, together with CS 1132 or CS 1130, are required. AP credit may be earned for CS 1110 by:
  - a score of 5 on the CEEB or a score of 4 or 5 on the AB exam, or
  - a passing score on the Cornell departmental exam for CS 1110.

Biology:

- Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
  - 8 credits will be offered to students who receive a 5 on the CEEB AP exam;
  - 4 credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-year writing seminar:

- Two first-year writing seminars are required.

- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution:

- Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the liberal
studies distribution cannot be used to fulfill the "upper-level" liberal studies requirements.

Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE).

Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam (in any language), the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits.

Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language category of the liberal studies distribution or may meet an approved elective requirement, contingent on discussions with the faculty advisor.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A"")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

A more detailed description of the college’s policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.

2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-semester classes must be requested in a written petition to the college’s Committee on Academic Standards, Petitions, and Credit (ASPAC).

A more detailed description of the college’s regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students as well as the Engineering Undergraduate Handbook, both available from Engineering Advising, 167 Olin Hall, and at www.engineering.cornell.edu/student-services/academic-advising/index.cfm.

Transfer Credit for Transfer Students

Transfer students may transfer up to 56 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments. Students must complete the transfer credit award process by the end of their first semester at Cornell, or their registration will be blocked for the next semester until the process is completed.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this means depends on the major.

Engineering students not yet affiliated with a major must meet the following standards at the end of each semester to be considered in good academic standing. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions,
3. Semester GPA
2. At least C– in the math course

Academic Progress
The total number of credits required for graduation range from 124 to 134, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C– in their four required math courses. If at least C– is not attained, the course must be repeated immediately. Failure to achieve at least C– the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

S–U Grades
Many courses may be taken either for a letter grade or for an S–U (satisfactory or unsatisfactory) grade designation. Under the S–U option, students earning the letter grade equivalent of at least C– in a course will receive a grade of S; those earning less than C– receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an S–U grade option under the following conditions:

• The course in question must be offered with an S–U option.
• The student must previously have completed at least one full semester of study at Cornell.
• The proposed S–U course must count as either a liberal studies distribution or an advisor-approved elective in the engineering curriculum.

Students may enroll S–U in only one course each semester in which the choice between letter grade and S–U is an option. (Additional courses offered "S–U grades only" may be taken in the same semester as the elected S–U course.)

The choice of grading option for any course is made initially during the pre-enrollment period and may be changed until the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option. (Grading options may be changed online for most courses. A properly completed add/drop form must be used to change a grade option for a permission-only course.)

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters in residence. Students who wish to transfer into the College of Engineering must spend at least four semesters in their engineering curriculum.

Students who wish to transfer into the College of Engineering may apply at Engineering Advising, 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Transfer students who would enter the college must be accepted by a major as part of the admission process.

Leaves of Absence
A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising. The first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

A leave of absence is granted for at least six months and not more than two years. A leave of absence granted during a semester goes into effect on the day it is requested. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are...
A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn. Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intramural transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student’s academic background and depends on available space in the college and in the student’s major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

### ENGINEERING MAJORS

This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA $\geq 2.0$. Most majors have a higher GPA requirement and may have other requirements.

#### Honors Program within Majors

Many of the engineering majors supplement the major with an honors program.

#### Eligibility

The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. To enter an honors program, the student must be on track to graduate with distinction, and a student who does not stay on track to graduate with distinction is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted.

### Rejoining the College

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

### Withdrawal from the College

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each.

**Voluntary withdrawal:** Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

**Medical leave:** Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are given for at least six months and up to two years with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing will also be subject to review both at the time the leave is granted and upon the student’s return.

**Required leave:** A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student’s return by one semester (or, in unusual circumstances, one year).

**Rejoining the College**

Students who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

**Withdrawal from the College**

Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

**Medical leave:** Medical leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Such leaves are given for at least six months and up to two years with the understanding that the student may return at the beginning of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing will also be subject to review both at the time the leave is granted and upon the student’s return.

**Required leave:** A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student’s return by one semester (or, in unusual circumstances, one year).

**Rejoining the College**

Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

**Withdrawal from the College**

A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each.

**Voluntary withdrawal:** Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.
careers in consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers who have studied biology, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Biological Engineering major is designed to educate the next generation of engineers to meet these challenges.

The academic requirements* for students majoring in Biological Engineering are outlined below.

**Basic Subjects**

**Credits**

- MATH 1910**, 1920, 2930, 2940
- Calculus for Engineers and Engineering Mathematics 16
- PHYS 1112, 2213
- CHEM 2090* General Chemistry 4
- CHEM 1570 or 3570* Organic Chemistry 3
- BEE 1510 Introduction to Computer Programming or CS 1112, and CS 1130 5
- Biological Sciences* 15
  - Introductory (BIOG 1101–1104 recommended) 8
  - Biological science electives at or above 2000 level to complete 15 credits
- Biochemistry or Microbiology required
- Major-required courses 46
  - BEE 1200 The BEE Experience or ENGRG 1050 (counted as an advisor-approved elective) 1
  - ENGRD 2020 Mechanics of Solids 4
  - BEE 2600 Biological Engineering Analysis or BEE 2510 Environmental Engineering Analysis 3
  - BEE 3500 Biological and Environmental Transport Processes 3
  - BEE 2220 or ENGRD 2210 Thermodynamics 3
  - ENGRD 2700 or CEE 3040 Engineering Statistics and Probability 3–4
  - BEE 3350 or CEE 3310 Fluid Mechanics 4
- Concentration courses (three courses, minimum of 9 credits, chosen from one of the following BE concentrations): Biomedical Engineering, Bioprocess Engineering, or Bio-Environmental Engineering***
- Major-approved Engineering Electives (one course must be a BEE Capstone course and one course must be a BEE lab experience course):** (Engineering courses at 2000 level or above to bring the total of required plus engineering electives to complete 46 credits)
  - Liberal studies (two first-year writing seminars and six liberal studies electives) 24
  - Advisor-approved electives 6
- Total (minimum) 127

* *Basic accredited curriculum. See also the section on minors. Information on preprofessional study for medicine, dentistry, and veterinary medicine is available at www.career.cornell.edu.

** Students must have a competency in calculus equivalent to MATH 1110 before they attempt MATH 1910.

*** See department web page for a current list of approved courses.

Students must satisfy the College of Engineering Technical Writing requirement by including one of the approved courses in their program of study.

**Biological Engineering Honors Program**

The B.S. degree with honors is granted to biomedical engineering majors who graduate with distinction from the College of Engineering and satisfy the Honors requirements given at the beginning of the section “Engineering Majors.”

The Honors program requires completion of 9 credits beyond the B.S. degree requirements drawn from the following, with at least 6 credits in the first category:

1. A significant research experience or honors project under the supervision of a BEE faculty member using BEE 4991 BEE Honors Research completed in their senior year. A written senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 4980 Undergraduate Teaching.

3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 4000+ and graduate level.

**CHEMICAL ENGINEERING**

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 2080 during the freshman year. The program for the last three years is as follows:

**Semester 3**

**Credits**

- MATH 2930 Engineering Mathematics 4
- PHYS 2213 Physics II, Heat/Thermodynamics 4
- CHEM 3890 Physical Chemistry I (engineering distribution) 4
- ENGRD 2190 Mass and Energy Balances (engineering distribution) 3
- Liberal Studies Distribution 3

**Semester 4**

- MATH 2940 Linear Algebra for Engineers 4
- CHEM 3520 Fluid Mechanics 3
- CHEM 3900 Honors Physical Chemistry II (major) 6
- CHEM 2900 Introductory Physical Chemistry Laboratory (major) 6
- Biology elective* 3
- Liberal Studies Distribution 3

**Semester 5**

- CS 1130 or CS 1132 Transition to MATLAB 1
- CHEM 3570 Organic Chemistry for the Life Sciences 3
- CHEM 2510 Introduction to Experimental Organic Chemistry 2
- CHEM 3130 Chemical Engineering Thermodynamics 3
- CHEM 3240 Heat and Mass Transfer 3
- Liberal Studies Distribution 3

**Semester 6**

- Advanced science elective** 3
- CHEM 3010 Nonresident Lectures 1
- CHEM 3320 Analysis of Separation Processes 3
- CHEM 3720 Introduction to Process Dynamics and Control 2
- CHEM 3900 Reaction Kinetics and Reactor Design 3
- Liberal Studies Distribution 3

**Semester 7**

- CHEM 4320 Chemical Engineering Laboratory 4
- Electives*** 9
- Liberal Studies Distribution 3

**Semester 8**

- CHEM 4620 Chemical Process Design 4
- Liberal Studies Distribution 3
- Electives*** 3
- Approved elective 3

* Every student must complete one of the following options for the biology elective: (1) CHEM 2880 Biomedical Engineering: Fundamentals and Applications, (2) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam. (5) 4 credits of a pre-med biology sequence: BIOL 1101 Biological Sciences, Lec (fall, 2 credits) and BIOL 1103 Biological Sciences, Lab (fall, 2 credits), BIOL 1102 Biological Sciences, Lec (spring, 2 credits) and BIOL 1104 Biological Sciences, Lab (spring, 2 credits), BIOL 1105 Introductory Biology (fall, 4 credits), BIOL 1106 Introductory Biology (spring, 4 credits), BIOL 1107 General Biology (summer, first half of eight-week session, 4 credits) or BIOL 1108 General Biology (summer, second half of eight-week session, 4 credits, 4) 3 credits of microbiology: BIOMI 2900 General Microbiology (fall, spring, or summer six-week session, 3 credits), (5) 4 credits of biochemistry: BIOMI 3500 Principles of Biochemistry, Individual Instruction (fall or spring, 4 credits) or BIOMI 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology (summer
Admission Requirements

Students planning to affiliate with this major must complete ENGRD 2020 Mechanics of Solids (or, for students following the Environmental Concentration, ENGRD 2510) with at least C-. It is strongly recommended that ENGRD 2020 be taken as an engineering distribution course during the first semester of the sophomore year.

Engineering Distribution Courses

 Majors are required to take ENGRD 2020 Mechanics of Solids as an engineering distribution course. For the second engineering distribution course, one of the following is recommended:
- ENGRD 2100 Introduction to Mechanical Properties of Materials, for students interested in structural engineering and geotechnical engineering.
- ENGRD 2210 Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology.
- ENGRD 2110 Object Oriented Programming and Data Structures, for students interested in transportation.
- ENGRD 2510 Engineering for a Sustainable Society, for students interested in environmental engineering.

Major Program

Students may substitute CHEM 2080 or CHEM 1570 for PHYS 2214. The following nine courses are required in addition to those required for the Common Curriculum. (Students interested in the Environmental Concentration should follow the course requirements for the Environmental Engineering Major and should refer to the CEE Undergraduate Handbook for requirements specific to CE majors. CE majors should take CHEM 3410.)

Core Courses

</table>

Additional requirements include a minimum major-approved elective (and three design electives from a list of approved courses that is available in the school office). In addition, students must complete one technical communications course from among the courses designated ENGRG or approved communications courses. If the technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional major-approved elective must be taken.

ENGRD 2030 and ENGRD 3200 can be used to satisfy a major requirement. If a student elects to use one of these courses as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

*ENGRD 2700 may be substituted by petition for CEE 3040 in the major, but only if ENGRD 2700 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.

**Students may substitute CEE 3520 or CEE 4710 for either CEE 3510 or 3610. If they also complete either CEE 4730 or 4740. However, CEE 3720 or CEE 4710 then counts as a core course only and not as a CEE design course or major-approved elective. Students may also substitute CEE 4610 for CEE 3510 if they also take two of these three courses: CEE 4650, CEE 4640 and 4650. However, then CEE 4610 counts as a core course only and not as a CEE design course or major-approved elective.

Civil Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., ENGRG 4700 Peer Teaching in Engineering or CEE 4010 Undergraduate Teaching in CEE (1–3 credits per semester).

3. Advanced or graduate courses at the 5000 level or above.

Procedures

Application to the program shall be by a registration form for CEE 4000 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

Computer Science

Offered by the Department of Computer Science

Contact: 303 Upson Hall, 255-0882, ww.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.
Computer science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:
- MATH 1910, 1920, and 2940
- three courses in introductory computing, either CS 1110, CS 1132, CS 2110 or CS 1112, CS 1030, CS 2110
- a 1-credit project (CS 2111)
- a seven-course computer science core (CS 2600, 3110, 3410, or 4420; one of 3220, 4210, or 4220, 3810, 4410, and 4820)
- two 4000+ level computer science electives (CS 4999 not allowed)
- a computer science project course (CS 4121, 4211, 4411, 4450, 4621, 4701, 5150, 5410, or 6670)
- a math elective course (e.g., ENGRD 2700, MATH 2930, MATH 3000+, TAM 3100)
- two 3000+ level courses (major-approved electives) that are technical in nature
- a three-course specialization in a topic area other than computer science, all numbered 3000 level or greater

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

**Computer Science Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one CS course (at least 3 credit hours) at or above the 5000 level with a grade of A– or better (no seminars)
2. at least two 3-credit semesters of CS 4999 (independent research), with grades of A– or better each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The subject line for this message should read “HONORS TRACK.” Address related questions to the same e-mail address; call or stop by 303 Upson Hall, 255-0982; or visit www.cs.cornell.edu/ugrad for more information on eligibility.

---

**ELECTRICAL AND COMPUTER ENGINEERING**

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision, power systems control; communications, networks, information theory and coding, signal processing and optimization; electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics; electromagnetics, radiophysics, space sciences, and plasmas.

ECE majors must take ECE/ENGRD 2300 as an engineering distribution course and are encouraged, but not required, to take ENGRD 2110 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 2100 and ECE/ENGRD 2300 are taught in both the fall and spring semesters.

**Course Credits**

**Major-required courses**

ECE/ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers 4

ECE 2200 Signals and Information 4

ECE 3030 Electromagnetic Fields and Waves 4

ECE 3100 Introduction to Probability and Random Signals 4

ECE 3140/CS 3420 or 3410 Computer Organization 4

ECE 3150 Introduction to Microelectronics 4

**Major-approved electives**

(Credit minimum in the following categories)

Advanced ECE electives† (six lecture courses) 9

Outside ECE electives‡ (two 400-level electives) 9

Total minimum major credits 53

ECE 3100 satisfies the major requirement of probability and statistics.

†These electives must include two 4000-level Electrical and Computer Engineering courses and at least two additional courses at the 4000 level or above. The remaining electives may not include independent project courses, such as ECE 3910, 3920, 4910, or 4920, and must be at the 3000 level or above in Electrical and Computer Engineering.

Courses that meet the CDE requirement are described in the Engineering Undergraduate Handbook. The list changes frequently. An updated list of courses that meet the CDE requirements will be posted each semester on the bulletin board outside 222 Phillips Hall.

All courses must have a college-level prerequisite.

Must include one course at the 3000 level or above (see Electrical and Computer Engineering Web Handbook for details).

Undergraduate concentration is achieved through the various Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

**Academic Standards**

Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.3 every semester.

2. At least C– in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.

3. Satisfactory completion of MATH 2940, PHYS 2214, and two of ENGRD/ECE 2100, ECE 2200, and ENGRD/ECE 2300 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

**Electrical and Computer Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements:

Students must apply during the first three weeks of the sixth semester. They must achieve at least a B in the three required courses taken for honors designation.

**Honors Seminar**

Prospective honors students must take an honors seminar in the spring semester of their junior year, for a letter grade and 2 credits. The honors seminar consists of a weekly series of introductory research lectures by ECE faculty members. Each honors seminar enrollee will write two short papers on topics covered in the lecture series. Many ECE faculty members will give a lecture or short series of lectures as part of the honors seminar.

**Honors Project**

A student in the honors program is required to accumulate at least 3 credit hours from a senior-year honors project with an ECE faculty member, consisting of either design, research, or directed reading at the 400 level. All honors projects emphasize the development of communication skills. Design- and reading-oriented honors projects explicitly require a written submission summarizing and concluding the project.

**Additional Course Work**

At least 3 credit hours are required of advanced (senior level) ECE course work that has at least a 3.000-level prerequisite. These credit hours are in addition to any credit hours required as part of the ECE major.

The requirement for at least 9 credits over and above the 130 credits required for a B.S.
degree means that an honors degree requires 139 credit hours.

**ENGINEERING PHYSICS**

Offered by the School of Applied and Engineering Physics

Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers in development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state device development, technical management, and financial consulting. A number of EP graduates go on to advanced study in all those areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics.

The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The engineering physics (EP) major is designed for students who want to pursue careers in development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state device development, technical management, and financial consulting. A number of EP graduates go on to advanced study in all those areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics.

The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR/AEP 1110 Lasers and Photonics; ENGR/AEP 1200 Introduction to Nanoscience and Nanoengineering; ENGRD/AEP 2640 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); AEP 3330 Modern Experimental Optics (a junior/senior course); PHYS 4110 Advanced Experimental Physics; and AEP 4380 Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 1112 or 1116 during their first semester (if AP credits permit) and to satisfy the technical writing requirement with the engineering distribution course ENGRD 2640. EP students need to take only one engineering distribution course, since AEP 1010 taken in the junior year, counts as the second one. EP students are advised to take AEP 3630 (taking ECE 2100 and 2300, 4 credits each, can satisfy AEP 3630. Count ECE 2100 as an approved elective and ECE 2300 as AEP 3630) in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least A– in MATH 1920 may wish to explore accelerating their math requirements so as to enroll in AEP 3210 and 3220 in the sophomore year. For advice on this option, consult with the AEP associate director.

In addition to the requirements of the Engineering Common Curriculum, the major requirements are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AEP 3330 Mechanics of Particles and Solid Bodies</td>
<td>4</td>
</tr>
<tr>
<td>AEP 3550 Intermediate Electromagnetism</td>
<td>2</td>
</tr>
<tr>
<td>AEP 3560 Intermediate Electrodynamics</td>
<td>4</td>
</tr>
<tr>
<td>AEP 3610 Introductory Quantum Mechanics</td>
<td>2</td>
</tr>
<tr>
<td>AEP 3620 Intermediate Quantum Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>AEP 3630 Electronic Circuits</td>
<td>4</td>
</tr>
<tr>
<td>AEP 4230 Statistical Thermodynamics</td>
<td>4</td>
</tr>
<tr>
<td>AEP 4340 Continuum Physics</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 4410 Advanced Experimental Physics</td>
<td>4</td>
</tr>
<tr>
<td>AEP 3210 Mathematical Physics I</td>
<td>4</td>
</tr>
<tr>
<td>AEP 3220 Mathematical Physics II</td>
<td>4</td>
</tr>
</tbody>
</table>

Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (300 or above).

Total major credits=58 credit hours minimum

1. The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to take an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation.

Two of the 4 credits of PHYS 4410 required for the B.S. degree in EP can be satisfied by completing AEP/PHY 3330 or ASTRO 4410. The remaining 2 credits of PHYS 4410 can then be satisfied by taking PHYS 4400 for 2 credits, provided that the experiments completed in PHYS 4400 do not overlap with those in AEP/PHY 3330 or ASTRO 4410. (A list of experiments that are not appropriate will be prepared by AEP faculty and made available in the AEP office.) If a student chooses this option, AEP/PHY 3330 or ASTRO 4410 may also count as a technical elective, provided the remaining three technical electives are 4 credits each.

Choosing elective courses. The EP major provides the student with a strong opportunity to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in a number of advanced technical and scientific areas. With at least seven electives in the sophomore, junior, and senior years, EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of AEP, Clark Hall. Students are advised to consult with their EP advisor, a professor active in their area of interest, or with the associate director of the school.

Electives need not be all formal course work. Qualified students are encouraged to undertake independent study under the direction of a member of the faculty (AEP 4900). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

**Academic Standing**

Students are expected to pass every course in which they are registered, to earn at least C– in specifically required courses, and to attain a semester GPA ≥ 2.3 each semester.

**Engineering Physics Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the following requirements:

1. At least 8 credits of major-approved electives at the 4000 level or higher with at least A– in each, not counting credits given for item 2.

2. Two semesters of AEP 4900 or an equivalent course, with at least 2 credits the first semester and 4 credits the second. The student will complete an independent research project or senior thesis under the supervision of an engineering or science faculty member.

The level of work required for successful completion is to be determined by a faculty committee. The student must complete an independent research project or senior thesis under the supervision of an engineering or science faculty member.

The level of work required for successful completion is to be determined by a faculty committee. The student must complete an independent research project or senior thesis under the supervision of an engineering or science faculty member.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

**Procedures**

Before enrolling in AEP 4900 or the equivalent, submit a brief proposal outlining the topic and scope of the project or thesis and an honors advisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the AEP Honors Committee and either approved or returned to the candidate with a list of deficiencies. The proposed project or thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral
report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the AEP Honors Committee. Following completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee, and at least one other departmental faculty member, along with the other honors candidates. A copy of the final report is to be given to the chair of the AEP Honors Committee. The final research project course grade will be assigned by the faculty supervisor after consultation with the chair of the Honors Committee. At least A– is required for successful completion of the honors requirement.

ENVIRONMENTAL ENGINEERING
Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering.

Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

Students matriculating in the College of Engineering (COE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to graduate with this major will be taking the following courses:

Three Environmental design electives chosen from the list of approved courses 9-credit minimum

Two major-approved engineering electives to complete total credit requirement‡‡ 6
First-year writing seminar 6
Two approved electives 6
Liberal studies 18
Total credits (minimum) 126

**COE matriculated students must complete one ENGR IXXX course their first year. CALS matriculated students may complete BEE 1510 and BEE 1200 to meet the requirement.

*BEE 1510 and 1200 together (5 credits) satisfy the ENGR requirement for CALS–matriculated first-year students. Students using BEE 1200 and BEE 1510 to satisfy the ENGR requirement must make up the 2-credit difference with engineering course work.

***Students using this course as a second engineering distribution must take an additional major-approved elective. BIOG 1090 is not an engineering distribution course.

††ENGRI 2700 (f,s,3) may be accepted (by petition) to substitute for CEE 3040 if taken prior to affiliation with the Environmental Engineering major or if necessary because of scheduling conflicts caused by co-op or study abroad.

‡‡Students must complete two ENGR courses.

†††Students may take BIOMI 2900 Introduction to Microbiology in place of CEE 4510.

††‡If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then it may be used to satisfy both requirements.

‡‡The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and renewable energy systems. The respective lists are available at the departmental offices.

Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

INDEPENDENT MAJOR

Offered by the Independent Major Committee
Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. This major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a
second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-curriculum requirements and approved electives.

Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

Offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISST) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISST major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISST major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISST major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both CS and ISST or ORIE and ISST.

Engineering distribution courses

Majors are required to take ENGRD 2700 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 2110 Computers and Programming is required for the major and is recommended as the second engineering distribution course.

DEA 4700 Applied Ergonomic Methods

*Students who take PSYCH 3420 or 4160 may also count their prerequisite, PSYCH 2050 or 2140. Students who take PSYCH 3800 may also count PSYCH 2800. At most one of these 2000-level prerequisites can be counted.
MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 2610 or 2620 before enrolling in the major. It is highly recommended that the course be taken as an engineering distribution during the sophomore year.

The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

Students complete a series of electives to develop knowledge of materials, such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, which are selected from various engineering and science departments.

Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures or ENGRD 2620 Electronic Materials for the Information Age
2. 13 required major courses:
   - MSE 2060 Atomic and Molecular Structure of Matter
   - MSE 2610 or MSE 2620 (whichever was not taken as a distribution course)
   - MSE 3010 Materials Chemistry
   - MSE 3050 Thermodynamics of Condensed Systems
   - MSE 3040 Kinetics, Diffusion, and Phase Transformations
   - MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
   - MSE 3070 Materials Design Concepts I
   - MSE 3110 Junior Lab I
   - MSE 3120 Junior Lab II
   - MSE 4020 Mechanical Properties of Materials, Processing, and Design
   - MSE 4050/4050 Senior Materials Lab I or Senior Thesis I

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, mae@cornell.edu, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas in which mechanical engineers work. The program covers both major streams of mechanical engineering.

1. Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

2. Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, energy and the environment, and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 2020 (also TAM 2020) as an engineering distribution course. ENGRD 2210/MAE 2210 is required for the major and is recommended as the second
Required courses
MAE 2120 Mechanical Properties and Selection of Engineering Materials
ENGRD 2210 Thermodynamics
MAE 2250 Mechanical Synthesis
ENGRD 2030 Dynamics
MAE 3780 Mechatronics or ENGRD 2100 Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 3360 Electronic Circuits
MAE 3230 Introductory Fluid Mechanics
MAE 3240 Heat Transfer
MAE 3250 Analysis of Mechanical and Aerospace Structures
MAE 3260 System Dynamics
MAE 3272 Mechanical Property and Performance Laboratory
MAE 4272 Fluids/Heat Transfer Laboratory
MAE 4280 Engineering Design
MAE 4291 Supervised Senior Design Experience

Electives
Students should use the flexibility provided by the major-approved electives, advisor-approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (3000+) MAE courses. Two of these must be a concentration of MAE's upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
- Aerospace engineering, MAE 3050, 3060, 4150, 4230, 5060, 5070
- Biomechanics, MAE 4640, 4660, 5680
- Energy and the environment, MAE 4020, 4230, 4490, 4550, 4590, 5010, 5430
- Engineering materials, MAE 3120, 3130, 4040, 4140, 4550, 4640, 4700, 5130
- Mechanical systems and design, MAE 3790*, 4150, 4170, 4700, 4770, 4800, 5200**
- Thermo-fluids engineering, MAE 4230, 4490, 4530, 5010, 5430
- Vehicle engineering, MAE 3050, 3060, 4140, 4250, 4490, 4860, 5060, 5070

*Students who took MAE 3780 as a required course (see above) may not use it again as a major-approved elective.

** MAE 5200 is a 2-credit course. If it is used in a concentration, another course or courses in the concentration must be selected so that the total number of credits in the concentration is 6 or greater.

One major-approved elective must be a senior design elective involving MAE 4291 “Supervised Senior Design Experience.” One way to satisfy this requirement is to take a 3+ credit section of MAE 4291, directed by a faculty member as a individual or team exercise. The other option is to take a senior design elective course (MAE 4000, 4020, 4230, 4700, or 4860) along with the corresponding 1-credit section of MAE 4291.

One of the major-approved electives must be an approved upper-level math course taken after MATH 2940. The course must include some statistics. Currently, the approved courses are TAM 3100, ENGRD 2700, CEE 3040, and ENGRD 3200.

One of the major-approved electives, the "technical elective," may be any course at an appropriate level, chosen from engineering, math, or science disciplines (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted; advisors may approve such courses as advisor-approved electives.

MAE 4980 may not be used as a major-approved elective.

Advisor-approved electives
To maximize flexibility (i.e., the option for study abroad, Co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester. Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 3000 or above or co-listed in an academic department are allowed as AA electives. Students must document AA electives approved before MAE affiliation within a month of registration as an MAE student. The faculty encourages students to consider the following as possible AA electives:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>TAM 3100</td>
<td>Thermodynamics</td>
</tr>
<tr>
<td>ENGRD 2700</td>

<tr>
<td>MAE 4291</td>
<td>Supervised Senior Design Experience</td>
</tr>
</tbody>
</table>

Advisors may approve such courses as advisor-approved electives.

Other considerations
It is recommended that humanities, arts, and social sciences electives include studies in history of technology, societal impacts of technology, history, foreign languages, ethics, communications, political science, aesthetics, economics, and/or architecture.

The Sibley School encourages its students to spend a semester or year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale Paris.

The technical-writing requirement of the common curriculum is satisfied by MAE 4272. A limited set of second- and third-year courses is offered each summer under the auspices of the School of Continuing Education and Summer Sessions and the Engineering Cooperative Education Program.

Preparation in Aerospace Engineering
There is no separate undergraduate major in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering minor or concentration, for example spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example: electrical and computer engineering, engineering physics, or the physical sciences. Subjects recommended as preparation for aerospace engineering endeavors include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

Operations Research and Engineering
Offered by the School of Operations Research and Information Engineering
Contact: 205 Rhodes Hall, 255-5088, www.orie.cornell.edu
This major provides a broad education in the techniques and modeling concepts needed to design, analyze, and operate complex systems. The major prepares students for a wide range of careers including operations research, information engineering, entrepreneurship, operations management, consulting, financial engineering, financial services, and engineering management.

The foundation of the major is the development of basic skills in statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take ORIE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, financial engineering, and their applications.

Because of the wide range of career goals among ORIE students, and the large number of electives, students should consult with their major advisors to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.
A student who intends to affiliate with the major in operations research and engineering should take ENGRD 2700 Basic Engineering Probability and Statistics after completing MATH 1920; MATH 2940 should be completed before or concurrently with ENGRD 2700. OR&E affiliates are required to complete MATH 1910, 1920, and 2940 (or their subject matter equivalents.) Either MATH 2930, CS 2800, or MATH 30-40 may be used to satisfy the fourth-semester mathematics requirement. Students should discuss with their advisors which of these three courses is most appropriate to their future program of study in OR&E. The following considerations should be considered.

1. MATH 2940 (differential equations) is essential for advanced study in financial engineering. Also, MATH 2930 is a prerequisite for PHYS 2214, thus students who do not take MATH 2930 must plan to take CHEM 2080.

2. CS 2800 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.

3. MATH 3040 covers fundamentals of formal proof techniques; this material is recommended for students who intend to do advanced (Ph.D.-level) study in operations research or a related field. Early consultation with a faculty member or the associate director for undergraduate studies may be helpful in making appropriate choices.

The required courses for the OR&E major and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Semester 2 or 3</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 2110 Computers and Programming</td>
<td>3</td>
</tr>
<tr>
<td>ENGRD 2700 Basic Engineering Probability and Statistics</td>
<td>3</td>
</tr>
<tr>
<td>Semester 4</td>
<td></td>
</tr>
<tr>
<td>ORIE 3120 Industrial Data and Systems Analysis*</td>
<td>4</td>
</tr>
<tr>
<td>Semester 5</td>
<td></td>
</tr>
<tr>
<td>ORIE 3300 Optimization I</td>
<td>4</td>
</tr>
<tr>
<td>ORIE 3500 Engineering Probability and Statistics II</td>
<td>4</td>
</tr>
<tr>
<td>Behavioral Science (Organizational Behavior)?</td>
<td>3</td>
</tr>
<tr>
<td>Liberal elective</td>
<td>3</td>
</tr>
<tr>
<td>Advisor-approved elective</td>
<td>3</td>
</tr>
<tr>
<td>Semester 6</td>
<td></td>
</tr>
<tr>
<td>ORIE 3150 Financial and Managerial Accounting (may be taken in semester 4)</td>
<td>4</td>
</tr>
<tr>
<td>ORIE 3310 Optimization II</td>
<td>4</td>
</tr>
<tr>
<td>ORIE 3510 Introductory Engineering Stochastic Processes I</td>
<td>4</td>
</tr>
<tr>
<td>Major-approved elective</td>
<td>3</td>
</tr>
<tr>
<td>Liberal elective</td>
<td>3</td>
</tr>
</tbody>
</table>

*It is highly recommended that ORIE 3120 be taken in semester 4. If the student’s schedule does not permit this, the course may be taken in semester 6 or 8.

†The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 5540 (offered only in the fall), which is recommended for those considering a graduate business degree, ILROR 1220, and 1750, ILROR 1115, ENGRG 3550 (which also satisfies the technical writing requirement), and others.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

- ORIE 4580 Simulation Modeling and Analysis
- Three upper-level ORIE electives as described below

Two major-approved electives (at least 3 credits must be outside ORIE)

Liberal electives

One advisor-approved elective

Available ORIE electives are as follows:

- Manufacturing and distribution systems: ORIE 4150, 4800, 4810, 4850, 5100, 5120, 5122, 5126 and JGSM MBA 6410
- Optimization methods: ORIE 4154, 4300, 4320, 4350, 4350, 4360, and 4370
- Applied probability and statistics: ORIE 4520, 4540, 4710 (2 credits), 4740, 4711 (2 credits), 4712 (2 credits), 5550, 5560, and 5770
- Financial engineering: ORIE 4600, 4630, 5600, 5610, 5620, and 5640

Academic Standing

Each student in the OR&E major should obtain a passing grade in every course; at least C– in ORIE 3300 and 3510, in particular) may not be taken until a grade of C– or better is achieved in the prerequisite course. Failure to achieve at least C– in the second attempt will generally result in withdrawal from the major.

Operations Research and Engineering Honors Program

The B.S. degree with honors is granted to students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

- The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:
  1. Advanced courses in ORIE at the 5000 level or above.
  2. A significant research experience or honors project under the direct supervision of an ORIE faculty member using ORIE 4999 ORIE Project. A significant written report must be submitted as part of this component.

- A significant teaching experience under the direct supervision of a faculty member in ORIE using ORIE 4990 Teaching in ORIE.

Procedures

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

SCIENCE OF EARTH SYSTEMS

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. Natural hazards such as earthquakes, hurricanes, and volcanic eruptions can alter the course of history with little prior warning. As the human population grows, understanding the Earth and its resources becomes progressively more important to both future policymakers and ordinary citizens, who must find new sources of energy and sustain the quality of our environment. Because the human need to understand the Earth is so pervasive and the earth system is so multifaceted, the major covers the spectrum of modern earth sciences, including the structure, composition, and evolution of our planet; the planetary processes producing weather and climate; and processes on and near the earth’s surface where the interactions of water, life, rock, and air produce our planetary environment.

The major is built on a rigorous introduction to this broad spectrum plus a concentration chosen by the student to obtain expertise in an area of interest and relevance to the student’s career plans.

The major prepares students for a number of career paths including further graduate study in geology, geophysics, geochemistry, biogeochemistry, atmospheric sciences, ocean sciences, hydrology, or environmental sciences and engineering. Careers dealing with energy and mineral resources, natural hazards, weather and climate, ocean sciences, or environmental sciences are possible in academic research groups, governmental agencies, and the private sector. The major also prepares students for careers in environmental policy, law or medicine, science in the media, and K–12 science teaching.

Requirements for the Major

This major has the same requirements as the Science of Earth Systems major in other Cornell undergraduate colleges. The major includes strong preparation in math, physics, chemistry, and biology. A second semester of chemistry (CHEM 2080 or CHEM 1570) is required with PHYS 2214 optional. Two semesters of biology are required (either BIOG 1101/1103–1102/1104 or BIOG 1109–1110). A second semester of biology can be replaced by CHEM 1570 if CHEM 2080 is also selected.

A required introductory course in earth science is satisfied by EAS 2200. The core courses emphasize the interconnectedness of the Earth system, and...
are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. The major requires three of the following four core courses.

EAS 3010 Evolution of the Earth System  
EAS 3030 Biogeochemistry  
EAS 3040 Interior of the Earth  
EAS 3050 Climate Dynamics

The concentration is achieved by completion of four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses may be required to complete the concentration courses, depending upon the student's choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four defined areas of specialization include geology, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also design other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with the student's advisor and with approval of the Director of Undergraduate Studies. For concentrations beyond the four first named, approval by the SES Curriculum Committee is needed.

Exposure to the basic observations of earth science, whether directly in the out-of-doors, or indirectly by the many advanced techniques of remote sensing of our planet, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Three credits of appropriate course work are required. Possibilities include the following:

Courses in the Hawaii Environmental Semester Program; or
Courses given by the Shoals Marine Laboratory; or
EAS 2500 Meteorological Observations and Instruments; or
EAS 3520 Synoptic Meteorology I; or
EAS 4170 Field Mapping in Argentina
EAS 4370 Geophysical Field Methods; or
EAS 4910 and/or EAS 4920 Undergraduate Research with appropriate choice of project; or
Field course or courses taught by another college or university (e.g., Semester at Sea). Students should discuss with their faculty advisor whether the fourth core course listed above or the course used to fulfill the observation/field requirement may also be used to satisfy the concentration.

For more information contact Professor John Cisne, Department of Earth and Atmospheric Sciences, john.cisne@cornell.edu, or visit www.eas.cornell.edu.

Field Study in Hawaii
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Science of Earth Systems major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Science of Earth Systems major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii/

Science of Earth Systems Honors Program
The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the requirements of an honors thesis involving research (EAS 4910–4920 or 4990, 2 or more credits each) of breadth, depth, and quality. A written proposal of the honors project must be accepted by the student's advisor and the director of undergraduate studies early in the first semester of the student's senior year.

ENGINEERING MINORS
Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students' major. Completed minors will appear on the student's transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

An engineering minor recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. However, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor requires:
- successful completion of all requirements for an undergraduate degree.
- enrollment in a major that approves participation in the minor.
- satisfactory completion of six courses (at least 18 credits) in a college-approved minor.

Students may apply for certification of a minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor appears on the Cornell transcript following graduation.

The College of Engineering offers minors in the following areas (offering units are indicated in parentheses):
- Aerospace Engineering (MAE)
- Applied Mathematics (TAM)
- Biological Engineering (BEE)
- Biomedical Engineering (BME)
- Civil Infrastructure (CEE)
- Computer Science (CS)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
- Engineering Statistics (ORIE)
- Environmental Engineering (BEE/CEE)
- Geological Sciences (EAS)
- Game Design (CS)
- Industrial Systems and Information Technology (ORIE)
- Information Science (INFO)
- Materials Science and Engineering (MSE)
- Mechanical Engineering (MAE)
- Operations Research and Management Science (ORIE)

Additional information on specific minors can be found below, in the Engineering Undergraduate Handbook, in the undergraduate major office of the department or school offering the minor, and in Engineering Advising.

MINOR: AEROSPACE ENGINEERING
Offered by: Sibley School of Mechanical and Aerospace Engineering  
Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in Mechanical Engineering before taking courses toward the minor.

The aerospace engineering minor develops the engineering analysis and design skills necessary for creating and understanding aerospace vehicles and their subsystems. The minor includes diverse topics relevant to applications both in the earth's atmosphere (e.g., aerodynamics) and in space (e.g., spacecraft thermal systems or orbital mechanics). Students in this minor will take at least four core aerospace courses, along with up to two supporting courses in engineering fundamentals or courses with applicability to aeronautics and spacecraft.

Academic Standards: A grade of at least C– in each course. If a course is offered only S–U, a grade of S is acceptable.

Requirements:
Six courses from the lists below; each worth at least 3 credits, must be completed. No substitutions will be accepted from other departments at Cornell or elsewhere.
### Rules for selecting courses:

1. **Rules for ME majors:**
   - a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   - b. Select at most two courses from group B. No courses from group C may be used.
   - c. Use at most four courses to satisfy both the Aerospace Minor requirements and the BSME degree requirements. The major concentration courses may not be among these overlapped courses.

2. **Rules for other majors:**
   - a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   - b. Select at most two courses from group B.
   - c. Do not use any courses to satisfy requirements of both the Mechanical Engineering Minor and the Aerospace Engineering Minor.

#### Group A: Core Aerospace Engineering

- MAE 3050 Intro to Aeronautics
- MAE 3060 Spacecraft Engineering
- MAE/EE 4150 GPS: Theory and Design

#### Group B: Courses Applicable to Aerospace Engineering

- MAE 4170/5170 Introduction to Robotics: Dynamics, Control, Design
- MAE 4550/CEE 4770/MSE 5550/TAM 4550 Introduction to Composite Materials
- MAE 4700/5700 Finite Element Analysis for Mechanical and Aerospace Design or CEE 4720 Introduction to the Finite Element Method
- MAE 4770/5770 Engineering Vibrations
- MAE 4780/5780/CHME 4720/ECE 4720 Feedback Control Systems
- MAE 5430 Combustion Processes
- MAE 5710 Applied Dynamics or TAM 5700 Intermediate Dynamics

#### Group C: Fundamentals

- ENGRD 2020
- ENGRD 2030
- MAE 2120

### ENGRD/MAE 2210

- MAE 3230
- MAE 3240
- MAE 3250
- MAE 3260
- MAE 3780 or ECE 2110/ENGRD 2100 or PHYS 3360

### MINOR: APPLIED MATHEMATICS

**Offered by the Department of Theoretical and Applied Mathematics**

Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.tam.cornell.edu/Undergrad.html

All undergraduates are eligible to participate in this minor.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses beyond MATH 2940, to be chosen as follows:

- a. At most one course from any one of the groups 1, 2, 3, or 4.
- b. At least three courses from groups 5 and 6.

**Academic standards:** At least C in each course in the minor.

#### Requirements

1. **Analysis**
   - AEP 3210 Mathematical Physics I
   - MATH 3210 Manifolds and Differential Forms
   - MATH 4200 Differential Equations and Dynamical Systems
   - TAM 3100 Introduction to Applied Mathematics I

2. **Computational Methods**
   - CS 4210 Numerical Analysis
   - ENGRD 3220 Introduction to Scientific Computation
   - ENGRD 3200 Engineering Computation
   - ORIE 3300 Optimization I

3. **Probability and Statistics**
   - CEE 3040 Uncertainty Analysis in Engineering
   - ECE 3100 Introduction to Probability and Random Signals
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - MATH 4710 Basic Probability
   - ORIE 3500 Engineering Probability and Statistics II

4. **Applications**
   - AEP 3330 Mechanics of Particles and Solid Bodies
   - CEE 3310 Fluid Mechanics
   - CEE 3710 Modeling of Structural Systems
   - CHME 3230 Fluid Mechanics
   - CS 2800 Discrete Structures
   - CS 2850 Networks
   - ECE 3200 Networks and Systems
   - ECE 4250 Digital Signal Processing
   - MAE 3230 Introductory Fluid Mechanics
   - MSE 3030 Thermodynamics of Condensed Systems

5. **Advanced courses**

- Only one of these three may be chosen:
  - AEP 3220 Mathematical Physics II
  - MATH 4220 Applied Complex Analysis
  - TAM 3110 Introduction to Applied Mathematics II

- Only one of the following two may be chosen:
  - ECE 4110 Random Signals in Communications and Signal Processing
  - ORIE 3510 Introductory Engineering Stochastic Processes I

- Only one of the following two may be chosen:
  - MAE 5700 Applied Mechanics
  - TAM 5700 Intermediate Dynamics

Also, you may choose from:

- CS 3810 Introduction to Theory of Computing
- CS 4510 Introduction to Computational Biophysics
- CS 4820 Introduction to the Analysis of Algorithms
- ORIE 3310 Optimization II
- ORIE 4330 Discrete Models
- ORIE 4530 Introduction to Game Theory
- ORIE 4520 Introductory Engineering Stochastic Processes II
- ORIE 5600 Financial Engineering with Stochastic Calculus I
- ORIE 5610 Financial Engineering with Stochastic Calculus II
- TAM 5780 Nonlinear Dynamics and Chaos
- TAM 6100 Methods of Applied Mathematics I
- TAM 6110 Methods of Applied Mathematics II

6. **Mathematics courses**

- Any 3000+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:
  - a. MATH 3230 or 4200, if any course from group 1 is chosen
  - b. MATH 4710, if any course from group 3 is chosen
  - c. MATH 4220, if TAM 3110 or AEP 3220 is chosen from group 5
  - d. Only one of the following may be chosen:
    - MATH 3320 Algebra and Number Theory
    - MATH 3360 Applicable Algebra
MINOR: BIOLOGICAL ENGINEERING
Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu
Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.

Educational objectives of the minor:
Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.

Academic standards: At least C– in each course in the minor and a GPA $\geq 2.0$ in all courses in the minor.

Requirements
At least six courses (18 credits), with at least three courses and 9 credits taught in BEE as follows:

BEE 3500 Biological and Environmental Transport Processes (3 credits); required

I. Biology Foundation (at least one but no more than two courses)
   BIOBM 3500 or 3310–3320 Biochemistry
   BIOMI 2900 Microbiology
   BIONB 2220 Neurobiology

II. Biological Engineering Core (at least one but no more than two courses)
   BEE 2600 Principles of Biological Engineering
   BEE 3500 Biological and Environmental Transport Processes
   BEE 3600 Molecular and Cellular Bioengineering
   BEE 3310 Bio-fluid Mechanics

III. Biological Engineering Concentration Electives (minimum of 3 courses)
Choose any three courses from the concentration lists below. Courses appearing in more than one concentration do not double count. BEE 3600 may be taken as either a concentration elective or a core course.

Biomedical Engineering Concentration
AEP 4700 Biophysical Methods (also BIONB 4700)
BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)
BEE 3650 Properties of Biological Materials
BEE 4500 Bioinstrumentation

BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)
BEE 4540 Physiological Engineering
BEE 4590 Biosensors and Bioanalytical Techniques
BME 3300 Introduction to Computational Neurosciences (also BIONB/PSYCH/COGST 3300)
BME 4040 Biomedical System Design (also ECE 4020)
BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4590)
BME 5650 Biomechanical Systems—Analysis and Design (also MAE 5650)
CHEM 4810 Biomedical Engineering (also BME 4810)
ECE 5780 Computer Analysis of Biomedical Images
MAE 4630 Neuromuscular Biomechanics (also BME 4630)
MAE 4640 Orthopaedic Tissue Mechanics
MSE 4610 Biomedical Materials and Their Applications

Bioprocess Engineering Concentration
BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)
BEE 4500 Bioinstrumentation
BEE 4530 Computer Aided Engineering: Applications to Biomedical Processes (also MAE 4530)
BEE 4590 Biosensors and Bioanalytical Techniques
BEE 4640 Bioprocesses
BEE 4680 Metabolic Engineering
CHEM 3000 Quantitative Chemistry (does not count for Engineering credit)
CHEM 3320 Analysis of Separation Processes
CHEM 5420 Bioanalytical Techniques

Biocatalysis
BEE 3710 Physical Hydrology for Ecosystems
BEE 4530 Principles of Aquaculture
BEE 4710 Introduction to Groundwater (also EAS 4710)
BEE 4730 Watershed Engineering
BEE 4780 Ecological Engineering
BEE 6510 Bioremediation Engineering
BEE 4720 Water Supply Engineering

MINOR: BIOMEDICAL ENGINEERING
Offered by the Department of Biomedical Engineering (BME)
Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/undergraduate/biomedminor.cfm
All undergraduates in any college are eligible to participate in this minor. Students may participate in only one of these areas of interest: the biological engineering minor or the biomedical engineering minor.

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The discipline includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in this rapidly growing area.

Students are asked to complete a form declaring their interest in the minor with the biomedical engineering undergraduate minor coordinator in 120 Olin Hall. On the form you will be asked to choose a BME faculty advisor that you can consult about the BME minor plan.

Academic standards: At least C– in each course in the minor. A cumulative GPA $\geq 2.0$ for all courses in the minor.

Requirements
The 1-credit Bioengineering Seminar as well as at least six courses (18 credits) from the five categories listed below; two courses need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering, 4. Biomedical engineering analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories represented. At least four of the six courses must not be specifically required major degree courses or cross-listings.

Required course: BEE/BME 5010 Bioengineering Seminar (1 credit, 1 semester)

Category 1. Introductory biology (maximum of 4 credits and one course grouping toward the BME minor)

A score of 5 on (CEEB) Advanced Placement Biology
A score of 4 on (CEEB) Advanced Placement Biology and ENGRI 1310: Introduction to Biomedical Engineering
A score of 4 on (CEEB) Advanced Placement Biology and BLOG 1104 or BLOG 1104 Biological Sciences, Laboratory
BLOG 1101, 1102, 1103, and 1104 Biological Sciences
BLOG 1105 and 1106 Introductory Biology
BLOG 1107 and 1108 General Biology
Category 2. Advanced biology
BIOAP 3110/VTBMS 3460 Introductory Animal Physiology Lectures
BIOBM 3300 Principles of Biochemistry, Individualized Instruction
BIOBM 3310 Principles of Biochemistry, Proteins and Metabolism
BIOBM 3320 Principles of Biochemistry, Molecular Biology
BIOBM 3330 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology
BIOGD 2810 Genetics
BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology
BIOMI 2900 General Microbiology

Category 3. Molecular and cellular biomedical engineering
AEP 2520/ENGRD 2520 The Physics of Life
BEE 3600/BME 3600 Molecular and Cellular Biomeengineering
BME 3010/CHEME 4010* Molecular Principles of Biomedical Engineering
BME 3020/CHEME 4020* Cellular Principles of Biomedical Engineering

Category 4. BME analysis of physiological systems
BEE 4540 Physiological Engineering
BIONB 3300/CHEM 3300/COGST 3300/PSYCH 3300 Introduction to Computational Neuroscience
BIONB 4910/BME 4910 Principles of Neurophysiology
BME 4010/MAE 4660* Biomedical Engineering of Metabolic and Structural Systems
BME 4020* Electrical and Chemical Physiology
CHEM 4810/BME 4810 Biomedical Engineering
MAE 4640/BME 4640 Orthopaedic Tissue Mechanics

Category 5. Biomedical engineering applications
AEP 4700/BIONB 4700/BME 5700 Biophysical Methods
BEE 3650 Properties of Biological Materials
BEE 4500 Bioinstrumentation
BEE 4530/MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes
BEE 4590 Biosensors and Bioanalytical Techniques
BME 4110 Science and Technology Approaches to Problems in Human Health
BME 5810/MAE 5680 Soft Tissue Biomechanics
CS 3510/BIOBM 3510/ENGRD 3510 Numerical Methods in Computational Molecular Biology

ECE 5020/BME 5020 Biomedical System Design
ECE 5780 Computer Analysis of Biomedical Images
MSE 4610 Biological Materials and Their Applications
MSE 5620/BME 5620 Biomineralization: The Formation and Properties of Inorganic Biomaterials
FSAD 4390/BME 5390 Biomedical Materials and Devices for Human Body Repair

Students interested in professional practice as biomedical engineers should consider an M.Eng. degree in BME. The recommended sequence for admission is as follows: two courses from categories 1 and 2, BME 3010, 3020, 4010, and 4020. The program requires students to have a knowledge of molecular and cellular biomedical engineering, and of biomedical engineering analysis of physiological systems.

MINOR: CIVIL INFRASTRUCTURE
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors except civil engineering may participate in this minor. The minor in civil infrastructure is intended to introduce undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development, maintenance, and operation of the built environment that is vital for any modern economy.

Academic standards: At least C in each course in the minor

Requirements
At least six courses (18 credits) chosen as follows:
1. Required courses
CS/ENGRD 2110 Computers and Programming
One of the following:
CS/ENGRD 3220 Introduction to Scientific Computing
CS 4210 Numerical Analysis and Differential Equations, or
CS 4220 Numerical Analysis: Linear and Nonlinear Equations
One of the following:
CS 3410 Systems Programming, or
CS 3420/ECE 3120 Computer Organization
2. Additional courses
Three CS courses numbered 3000 or higher with the following exceptions:
CS 4999 and seminars are excluded
CS 2800 is allowed
Cross-listed courses cannot be applied to the minor unless taken under the CS rubric, with the sole exception of ECE 3140. All qualifying courses must be taken at Cornell for a letter grade. No substitutions allowed.

MINOR: ELECTRICAL AND COMPUTER ENGINEERING
Offered by the School of Electrical and Computer Engineering
Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu

Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor, but MSE students must receive prior written approval from both MSE and ECE, via petition. This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.

Other related courses
CEE 5950 Construction Planning and Operations
*Other CEE courses may be approved by petition in advance
**MINOR: ENGINEERING MANAGEMENT**

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

Students affiliated with all majors are eligible to participate in this minor. CEE students may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective. ORE students have some specific restrictions and requirements as noted below. This minor focuses on giving students a basic understanding of engineering economics, accounting, statistics, project management methods, and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses (3):
   - CEE 3240 Engineering Economics and Management
   - or ORIE 4150 Economic Analysis of Engineering Systems
   - ORIE 3150 Financial and Managerial Accounting
   - or ENGRD 2700 Basic Engineering Probability and Statistics
   - or CEE 3100 Introduction to Probability and Random Signals

2. Additional courses—choose any three:
   - CEE 4060 Civil Infrastructure Systems
   - CEE 4920 Engineers for a Sustainable World: Engineering in International Development
   - CEE 5930 Engineering Management Methods
   - CEE 5940 Economic Methods for Engineering Management
   - CEE 5950 Construction Planning and Operations
   - CEE 5960 Management Issues in Forensic Engineering
   - CEE 5970 Risk Analysis and Management
   - CEE 5980 Introduction to Decision Analysis
   - NBA 5070 Entrepreneurship for Scientists and Engineers
   - or MAE/ENGRG 4610/ORIE 4152 Entrepreneurship for Engineers
   - or BEE 4890 Engineering Entrepreneurship, Management and Ethics

   ORIE students must substitute NCC 5560 or NBA 5000 for ORIE 3500

2. Additional courses—choose any three:
   - CEE 4520 Water Supply Engineering
   - BEE/ENGRD 2510 Engineering for a Sustainable Society
   - or BEE/ENGRD 2510 Engineering for a Sustainable Society
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis

   Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Students majoring in biological engineering or civil engineering are eligible if they are not following the environmental concentration offered by those majors. Eligible civil engineering majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

**Academic standards:** At least C in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3500 Basic Engineering Probability and Statistics II or CEE 3100 Introduction to Probability and Random Signals

2. Additional courses—choose any four:
   - ORIE 3150 Financial and Managerial Accounting
   - ORIE 4150 Economic Analysis of Engineering Systems
   - ORIE 4152 Entrepreneurship for Engineers
   - or BEE 4890 Engineering Entrepreneurship, Management and Ethics
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis
   - or ENGRD 2100 Introduction to Decision Analysis

   Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Students majoring in biological engineering or civil engineering are eligible if they are not following the environmental concentration offered by those majors. Eligible civil engineering majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation’s resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

**Academic standards:** At least C in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group.

**Group A. Environmental engineering processes**

- BEE/ENGRD 2510 Engineering for a Sustainable Society
- CEE 3510 Environmental Quality Engineering
- CEE 4510 Microbiology for Environmental Engineering
- CEE 4520 Water Supply Engineering
MINOR: GAME DESIGN
Offered by the Department of Computer Science
See: gdiac.cis.cornell.edu/courses.php
Requirements:
At least six (6) courses (18-credit minimum) chosen as follows:
Required courses: Complete the following two courses:
• CIS 3000 Introduction to Computer Game Design
• CIS 4002 Advanced Projects in Game Design
Additional Courses: Choose four of the following 12 courses:
CS-focused courses:
• CS/ENGRD 2110 Object-Oriented Programming and Data Structures
• CS 4450 Computer Networks
• ARCH 3704/CS 4620 Introduction to Computer Graphics
• CS 4700 Foundations of Artificial Intelligence
• CS 5620 Interactive Computer Graphics
• CS 5643 Physically Based Animation for Computer Graphics
Other courses:
• ART 2750/CS 5640 (CS 5640 not allowed) Advanced Animation
• COMM 4220 Psychology of Entertainment Media
• ECE 4760 Designing with Microcontrollers
• COMM/INFO 3450 Human-Computer Interaction
• COMM/INFO 4400 Advanced Human-Computer Interaction Design
• COGST 3420/PSCYH 3420/VISST 3422 Human Perception: Applications to Computer Graphics, Art, and Visual Display

Academic Standards
At least a letter grade of C is required for each course in the minor.
Note: CS majors cannot take courses from the CS-focused list for the Game Design minor.

MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY
Offered by the School of Operations Research and Information Engineering
Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu
Students affiliated with any major except Information Science, Systems, and Technology are eligible to participate in this minor.
The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.
The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.
**Academic standards:** At least C in all courses for the minor; S–U courses are not allowed.

**Requirements**

Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- **Statistics:** one course (must be ENGRD 2700 or CEE 3040)
- **Information Systems:** one course
- **Human-Centered Systems:** one course
- **Social Systems:** one course
- **Elective:** one additional course from either Human-Centered Systems or Social Systems

**Statistics**

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

- ENGRD 2700 Basic Engineering Probability and Statistics
- CEE 3040 Uncertainty Analysis in Engineering

**Information Systems**

- INFO 1700 Computation, Information, and Intelligence

**MINOR: MATERIALS SCIENCE AND ENGINEERING**

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students affiliated with all majors except materials science and engineering are eligible to participate in this minor.

Materials properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides students with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

**Academic standards:** At least C in each course in the minor.

**Requirements**

At least six courses (18 credits), chosen as follows:

1. **ENGRD 2610 Mechanical Properties of Materials:** From Nanodevices to Superstructures, or ENGRD 2620 Electronic Materials for the Information Age

2. **Two of:**
   - MSE 2600 Atomic and Molecular Structure of Matter
   - MSE 3010 Materials Chemistry
   - MSE 3030 Thermodynamics of Condensed Systems
   - MSE 3040 Kinetics, Diffusion, and Phase Transformations
   - MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
   - MSE 4020 Mechanical Properties of Materials, Processing, and Design

3. **Three electives chosen from:**
   - Any MSE course at the 3000 level or above.

Selected courses in materials properties and processing (at the 3000 level or above) from AEP, CHEM, CEE, ECE, MAE, PHYS, and CHEM, as approved by the MSE undergraduate major coordinator.
MINOR: MECHANICAL ENGINEERING
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 108 Upson Hall, 255-5375, www.mae.cornell.edu

Students affiliated with all majors except MAE are eligible to participate in this minor. Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in mechanical engineering before taking courses toward the minor.

Academic standards: At least C– in each course in the minor.

Requirements
At least six courses (≥ 18 credits) from among the following: MAE courses at the 2000 level or above; ENGRD 2020 Mechanics of Solids; ENGRD 2030 Dynamics.

Rules for selecting courses:
1. The selection of courses must satisfy the following three requirements.
   a. At least two courses must be numbered above 3000.
   b. At least one course must be either (i) numbered above 5000 or (ii) numbered above 3260 and have as a prerequisite ENGRD 2020, 2030, or a MAE course.
   c. Each course must be worth at least 3 credits.
2. All courses used to satisfy the MAE minor must be MAE courses, ENGRD 2020 or 2030. No substitutions will be accepted from other departments at Cornell or elsewhere. Transfer credit may not be used to satisfy the MAE minor. MAE 1110 Naval Ship Systems, or MAE 4980 Teaching Experience in Mechanical Engineering, may not be used toward satisfying the M.E. minor.

MINOR: SCIENCE OF EARTH SYSTEMS
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

Students affiliated with all majors except science of earth systems are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. At least three of these courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3300 Optimization I
   - ORIE 3310 Optimization II
   - ORIE 3500 Engineering Probability and Statistics II
   - ORIE 3510 Introduction to Engineering Stochastic Processes I
   - ORIE 4580 Simulation Modeling and Analysis
2. Any ORIE courses at the 3000 level or higher. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE
Offered by the School of Operations Research and Information Engineering
Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

Operations research and management science supports decision making through modeling and analysis of complex systems. This understanding is used to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools of operations research and management science, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is to provide a broad knowledge of the fundamentals, rather than to train the student in a particular application domain. With this preparation, students can adjust their advanced courses and pursue either methodological or application-oriented areas most relevant to their educational goals.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. At least three of these courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3300 Optimization I
   - ORIE 3310 Optimization II
   - ORIE 3500 Engineering Probability and Statistics II
   - ORIE 3510 Introduction to Engineering Stochastic Processes I
   - ORIE 4580 Simulation Modeling and Analysis
2. Any ORIE courses at the 3000 level or higher. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MASTER OF ENGINEERING DEGREES

The M.Eng. is a professional degree usually completed in two semesters. The curriculum offers advanced training, is practice-oriented, and is designed to assist engineers in development of their professional careers. Completion of the M.Eng. degree requires a design project rather than thesis research. The M.Eng. provides the technical expertise and leadership skills needed in business, government, and industry.

The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit):

M.Eng. (Aerospace Engineering): mechanical and aerospace engineering
M.Eng. (Biological and Environmental Engineering): biological and environmental engineering
M.Eng. (Biomedical Engineering): biomedical engineering
M.Eng. (Chemical Engineering): chemical and biomolecular engineering
M.Eng. (Civil and Environmental Engineering): civil and environmental engineering
M.Eng. (Computer Science): computer science
M.Eng. (Electrical and Computer Engineering): electrical and computer engineering
M.Eng. (Engineering Management): civil and environmental engineering
M.Eng. (Engineering Mechanics): theoretical and applied mechanics
M.Eng. (Engineering Physics): applied and engineering physics
M.Eng. (Geological Sciences): earth and atmospheric sciences
M.Eng. (Materials Science and Engineering): materials science and engineering
M.Eng. (Mechanical Engineering): mechanical and aerospace engineering
M.Eng. (Operations Research and Information Engineering): operations research and information engineering
M.Eng. (Systems Engineering): systems engineering

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:

- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements.

A list of links and general
admission information is posted on www.engr.cornell.edu/grad/MEng.
Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester in both programs, finishing up their B.S. degree and also doing their first semester of the M.Eng. program.

Master of Engineering Minors and Concentrations
The following M.Eng. minors and concentrations are offered:

Minors
- bioengineering
- manufacturing
- engineering management
- systems engineering

Concentrations
- information technology
- financial engineering
- applied operations research
- data mining and analytical marketing
- technology management for ECE
- semester in strategic operations
- complex system development
- nanosystems

A table indicates which minors and concentrations are available to students and contains detailed descriptions: www.engineering.cornell.edu/student-services/rgs/upload/MEng-Minors-and-Concentrations-Grid.pdf.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the 12-month M.B.A. program of the Johnson Graduate School of Management (JGSM).

Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion. For further details, visit Engineering Advising (167 Olin Hall), the M.Eng. office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers two options or categories of financial support:
- Undergraduate Knight Scholarship
- Alumni Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng. M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact BGS or refer to the Knight Scholarship web site (www.engr.cornell.edu/knightscholarships) for program specifics.

MASTER OF ENGINEERING (AEROSPACE ENGINEERING)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, aeronautics, propulsion, fluid mechanics, thermodynamics, structures, and materials. A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the MAE Master of Engineering committee. An individual student’s curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in aerospace engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program. Credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the MAE master of engineering chair.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering minors.

MASTER OF ENGINEERING (BIOMEDICAL ENGINEERING)
Offered by the Department of Biomedical Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in biomedical engineering will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. (Biomedical Engineering) with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire in-depth knowledge of an essential area of biomedical engineering
as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 3010, 3020, 4010, and 4020 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate coursework (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

3. Knowledge of business practices and techniques for pollution abatement and control. This knowledge may have already been acquired by students as undergraduates. If not, then CHEM 5720 or CHEM 6610 or other courses covering these topics are required.

MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL ENGINEERING)
Offered by the School of Civil and Environmental Engineering
Contact: 219 Hollister Hall, 255-7560, www. cee.cornell.edu
The Master of Engineering degree is a course work and project-oriented program. It is normally completed in two semesters of intensive study. Thirty credit hours are required, consisting of course work in a major concentration and a supporting area, as well as a design project.

Students may focus their studies in one of six major subject areas: environmental and water resource systems engineering, environmental fluid mechanics and hydrology, environmental processes, geotechnical engineering, structural engineering, and transportation systems engineering. Courses in supporting areas come from many disciplines, including architecture, computer science, economics, engineering management, historic preservation, materials science, microbiology and operations research to name just a few.

2. A minimum of 3 credits of an individual or group project, CHEM 5650.

MASTER OF ENGINEERING (CHEMICAL ENGINEERING)
Offered by the School of Chemical and Biomolecular Engineering
Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu
This degree is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, math, chemistry, physics, and business administration. Some courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described at the beginning of the section “Master of Engineering Degrees.”

Specific requirements include

1. 12 credits in CHEME courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEM 7110, 7310, and 7510 and the remainder in chemical and biomolecular engineering applications (partial list: CHEME 4800, 4810, 4840, 5200, 5209, 5430, 5720, 6310, 6400, and 6610).

2. A minimum of 3 credits of an individual or group project, CHEM 5650.

3. Knowledge of business practices and techniques for pollution abatement and control. This knowledge may have already been acquired by students as undergraduates. If not, then CHEM 5720 or CHEM 6610 or other courses covering these topics are required.

MASTER OF ENGINEERING (COMPUTER SCIENCE)
Offered by the Department of Computer Science
Contact: 322 Upson Hall, 255-8720, www.ccs. cornell.edu/grad/meng
The M.Eng. program in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in systems design and implementation in major areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. In fact, slightly under half the courses may be taken outside the computer science department (many students choose to take several business administration courses).

Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semester. It applies to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. “early admit” program.

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. See “Master of Engineering Degrees.”

MASTER OF ENGINEERING (ELECTRICAL AND COMPUTER ENGINEERING)
Offered by the School of Electrical and Computer Engineering
Contact: Student Services Office, 223 Phillips Hall, 255-8414, www.ece.cornell.edu/aca- meng.cfm
The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects but may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical and Computer Engineering) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING (ENGINEERING MANAGEMENT)
The M.Eng. (Engineering Management) program is designed for engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action.

A student's program of study is designed individually in consultation with an academic advisor and then submitted to the school’s Professional Degree Committee for approval.
For the M.Eng. (Engineering Management) program, the requirements are:

1. Three core courses: These include: CEE 5800 Project Management, CEE 5930 Engineering Management Methods, and CEE 5910 Management Project.
2. Two focus courses, from a list that includes CEE 5960, CEE 5970, CEE 5980, and CEE 6900.
3. Two managerial breadth courses, including one in finance/accounting and one focused on behavior.
4. Three disciplinary or functional electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master of Engineering and Master of Business Administration degrees. See the beginning of the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING (ENGINEERING MECHANICS)
Offered by the Department of Theoretical and Applied Mechanics
Contact: 212 Kimball Hall, 255-0988, www.tam.cornell.edu/meng1.html

This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries such as the finite element method.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: TAM has many laboratories related to research areas and courses of study for the M.Eng. program:

- Ultrasonic and Materials Characterization Laboratory—Wolfgang Sachse
- Bio-robotics and Locomotion Laboratory—Andy Ruina
- Granular Flow Research Laboratory—Jim Jenkins
- Composites Laboratory—Leigh Phoenix and Petru Petrina
- Fracture Mechanics Laboratory—Alan Zehnder
- Dynamics Laboratory—Dan Mittler
- Mechanics of Solids Laboratory—Dan Mittler
- Biological Fluid Dynamics Laboratory—Jane Wang

Course Work:
(project 10–12 credit hours)

Current Interesting Projects

1. Animal, Human and Robotic Locomotion—Andy Ruina
2. Dynamical Systems—Richard Rand
3. Stress Rupture Testing of High-Performance Fibers and Yarns—S. Leigh Phoenix
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—K. Bingham Cadby
5. Fracture and Reliability—Hui, Phoenix, Zehnder
6. Response Theory—K. Bingham Cadby
7. Nuclear Reactor Theory—K. Bingham Cadby

MAE 5700 Finite Element Analyses for Mechanical and Aerospace Design | 4 |
CEE 6720 Introduction to the Finite Element Method | 3 |

MASTER OF ENGINEERING (ENGINEERING PHYSICS)
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project.

Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics.

Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base.

Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng. program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng. requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C– in each course, and distributed as follows:

1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied math,
statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (4000) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

MASTER OF ENGINEERING
(GEOLOGICAL SCIENCES)
Offered by the Department of Earth and Atmospheric Sciences
Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The one-year M.Eng. (Geological Sciences) degree program provides future professional geologists and engineers with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Individual programs are developed within two established concentrations in geohydrology and environmental geophysics.

Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the geohydrology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student’s background. No courses may be required in some categories, and the categories may be adjusted to the student’s interest and needs. Alternatives to numerical modeling in the geohydrology option could be chemical or environmental chemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level.

At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over a third of the program (12 of 30 credits) and must constitute at least 3 credits. The design project must involve a significant geological component and lead to concrete conclusions or recommendations of an engineering nature. The project topic can be drawn from a student’s nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geohydrology would normally involve groundwater flow and mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geoelectrical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING
(MATERIALS SCIENCE AND ENGINEERING)
Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials Science and Engineering) program. This 30-credit program includes course work and a master’s design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MSE. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling) beyond the MSE undergraduate requirements.

MASTER OF ENGINEERING
(MECHANICAL ENGINEERING)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Mechanical Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the chair of the MAE Master of Engineering committee. An individual student’s curriculum includes a 4- to 8-credit design course, a minimum of 12 credits in mechanical engineering or a closely related field, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the MAE master of engineering chair.

The technical electives may be courses of appropriate level in math, physics, chemistry, or engineering; a maximum of 3 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems manufacturing minors.

MASTER OF ENGINEERING
(OPRERATIONS RESEARCH AND INFORMATION ENGINEERING)
Offered by the School of Operations Research and Information Engineering
Contact: 201 Rhodes Hall, 255-9128, www.orie.cornell.edu

This professional degree program stresses applications of operations research. The centerpiece of the program is a team-based project on a significant real-world problem. The course work centers on additional study of analytical techniques, with particular emphasis on the design or improvement of systems and processes in manufacturing, information, finance, and service organizations.

General admission and degree requirements are described in the introductory “Degree Programs” section. The ORIE M.Eng. program is designed to serve two groups of students: graduates of the undergraduate major in ORE who wish to deepen their practical knowledge of the field, and qualified undergraduates from other fields at Cornell and programs in the United States and abroad who want to complement their engineering or technical backgrounds with a solid foundation in operations research and information engineering.

For admission, the entering student should have completed an introductory course in probability and statistics, an intermediate-level course in computer science, as well as four semesters of mathematics, including differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration, the entering student must also have completed an intermediate-level probability course and a basic finance course.

Program requirements include a core of ORIE courses plus technical electives chosen from a broad array of offerings. There are several concentrations, each requiring a particular set of electives plus a specific project course. The concentrations include applied operations research, financial engineering, information technology, strategic operations (which
incorporates the Semester in Strategic Operations immersion at JGSM, data mining and analytical marketing, and manufacturing and industrial engineering. Students may also minor in systems engineering. Several of these options are offered jointly with other Cornell departments and schools and provide the opportunity to interact with students and specialists in other engineering fields and in business. For information about the manufacturing and industrial engineering concentration, contact the Center for Manufacturing Enterprise, 291 Grumman Hall, 255-5545; about the Semester in Strategic Operations, 304 Sage Hall, 255-4691; about systems engineering, 280 Rhodes Hall, 254-8998; and for all others, 201 Rhodes Hall, 255-9128. The applied operations research concentration is designed to be completed in two semesters. The financial engineering concentration is highly specialized and typically requires three semesters to complete. This permits an industry internship in the summer between semesters as well as a third semester of study in New York City.

For scheduling reasons, certain other concentrations may entail an additional summer or semester, depending on the student’s preparation.

The manner in which the M.Eng. project requirement is met depends on the chosen concentration. Common elements in all project experiences include working as part of a team of three to five students on an engineering design problem, meeting with a faculty advisor on a regular basis, and presenting the final results to the project sponsor. Most projects have industrial client sponsors and address problems that actually exist in practice.

Applicants who already hold graduate degrees in other fields may be interested in the possibility of completing both an M.Eng. and an M.B.A program within a period of two years, possibly with intervening work experience. This possibility incorporates the Johnson Graduate School of Management (JGSM) “Accelerated MBA” (formerly Twelve-Month Option).

Additional program requirements are described in the Master of Engineering Handbook and on the web. For further details, see the contact information at the beginning of this section.

MASTER OF ENGINEERING (SYSTEMS ENGINEERING)

Offered by The Systems Engineering Program
Contact: 206 Rhodes Hall, 254-8998, www.systemseng.cornell.edu

Today’s engineering environment is increasingly complex and rapidly changing. Due in part to emerging technologies and globalization, engineers must think in terms of complex, integrated, globally optimized solutions to devise designs that address the complexity of the real world. Success in this environment requires a comprehensive understanding of systems engineering.

The Systems Engineering Program emphasizes the fundamentals of requirements analysis, systems architecture, product development, project management, optimization, simulation, and systems analysis. The program's strength in these areas helps promote an understanding of the systems process throughout an organization and prepares students to transition from designing and managing independent engineering components and projects to creating integrated solutions that meet customer needs.

The M.Eng. (Systems Engineering) program is designed for students with a solid disciplinary background who want to specialize in Systems Engineering. It requires a minimum of 30 credit hours. Students must complete the following required courses:

- Applied Systems Engineering (5 credits)
- Systems Architecture, Behavior, and Optimization (3 credits)
- Project Management (CEE 5800) (4 credits)
- Systems Engineering Design Project (6–8 credits)

Approved electives account for the remaining credits to reach the minimum of 30 credits required for the degree and are to be chosen from the following areas:

- Systems Modeling and Analysis (at least one course)
- Courses that enrich the understanding of generic methods to design and analyze systems including courses in simulation, feedback and control, decision-making, or risk analysis.
- Systems Applications
- Courses that provide depth in the design and operation of specific systems such as power, communication, software, manufacturing, or transportation.
- Systems Management (at most one course)
- Courses that enhance student understanding of the management activities and processes which are necessary to successfully design and operate systems.

In addition to the Master of Engineering degree in Systems Engineering, the Systems Engineering Program offers a second course of study: the minor in Systems Engineering. The SE minor is designed for students who want a concentration in Systems Engineering as part of the Master of Engineering degree in another engineering discipline.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a four-digit number.

Engineering Communications ENGRC
Engineering Distribution ENGRD
Engineering General Interest ENGRG
Engineering Introductions ENGRI
Biological and Environmental Engineering BEE
Applied and Engineering Physics AEP
Chemical and Biomolecular Engineering CHHEME
Civil and Environmental Engineering CEE
Computer Science CS
Computing and Information Science CIS
Earth and Atmospheric Sciences EAS
Electrical and Computer Engineering ECE
Information Science INFO
Materials Science and Engineering MSE
Mechanical and Aerospace Engineering MAE
Nuclear Science and Engineering NSE
Operations Research and Information Engineering ORIE
Systems Engineering SYSEN
Theoretical and Applied Mechanics TAM

ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

ENGRC 3020  Writing-intensive Opportunity: Practicum in Technical Writing
Fall, spring. 1 credit.
One-credit attachment to an existing engineering course that is not one of the officially designated W-I courses. It may be taken more than once, with different courses by permission of a particular engineering faculty member.

ENGRC 3340  Independent Study in Engineering Communications
1–3 credits, variable. Letter grades. TBA with instructor.
Members of the ECP occasionally give independent (also called “directed”) studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP
instructor to pursue an aspect of professional communications in more depth than is possible in the ECP's regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

**ENGRD 2300 Introduction to Digital Logic Design (also ECE 2300)**

Fall, spring, 4 credits. Prerequisite: CS 1110 or CS 1112. Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

**ENGRD 2510 Engineering for a Sustainable Society (also BEE 2510)**

Fall. 3 credits. Pre- or corequisite: MATH 2930. B. A. Ahner. Courses on contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering to reduce energy and mass balances in environmental sciences. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

**ENGR 3350 Communications for Engineering Managers (LA)**

Fall, spring. 3 credits. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Intended for juniors and seniors. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and major affiliation.

This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and customers. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

**ENGR 3500 Engineering Communications (LA)**

Fall and spring. 3 credits. Designed for juniors and seniors. Fulfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per sec. Prerequisite: two first-year writing seminars and affiliation with a major.

This course prepares students for important communication activities. They write various types of documents (e.g., letters, memos, executive summaries, problem analyses, proposals, progress reports), give oral presentations, and incorporate graphics in their oral and written work. Students learn how to communicate specialized information to different audiences (e.g., technical and nontechnical people, colleagues and clients, peers and supervisors, in-house departments, and government agencies), work in teams, and address organizational and ethical issues. The course material is drawn from professional contexts, principally engineering, and it generates lively discussion. The class size ensures close attention to each student's work. (Note: Absences are limited to three, after which sharp penalties occur.)

**Engineering Distribution Courses**

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or corequisites.

**ENGRD 2020 Mechanics of Solids (also TAM 2020)**

Fall, spring. 4 credits. Prerequisite: PHYS 1112. Co-registration in MATH 2930, or permission of instructor. All students must take a lab section. Staff.

Covers principles of statics, force systems, and equilibrium; frames; mechanics of deforming solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, thermal stress, stretching; bending and torsion of bars. Laboratory experiments demonstrate basic principles of solid mechanics.

**ENGRD 2030 Dynamics (also TAM 2030)**

Fall, spring. 3 credits. Prerequisite: ENGRD/TAM 2020, co-registration in MATH 2930, or permission of instructor. All students must take a lab and a section.

Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a rotating frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope. Laboratory experiments demonstrate basic principles of dynamics.

**ENGR 2100 Introduction to Circuits for Electrical and Computer Engineers (also ECE 2100)**

Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must take a lab and a section.

First course in electrical circuits and electronics. Establishes the fundamental properties of circuits with application to modern electronic technologies. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

**ENGR 2110 Object-Oriented Programming and Data Structures (also CS AEP 2520)**

Fall, spring, summer. 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1112 if completed before fall 2007, or equivalent course in Java or C++.

Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, sub-typing), graphical user interface design (asymptotic complexity, big \(O\) notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

**ENGRD 2190 Mass and Energy Balances (also CHEM 2190)**

Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

**ENGRD 2210 Thermodynamics (also MAE 2210)**

Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 1920, Calculus for Engineers, and PHYS 1112, Physics I, Mechanics.

Presents the definitions, concepts, and laws of thermodynamics. Topics considered include the first and second laws, thermodynamic property relationships, and applications to vapor and gas power systems, refrigeration, and heat pump systems. Examples and problems are related to contemporary aspects of energy and power generation and to broader environmental issues.
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 2610</td>
<td>Mechanical Properties of Materials: From Nanodevices to Superstructures (also MEE 2610)</td>
<td>Fall. 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. Topics include the relationship of elastic, plastic, and fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature on materials properties, and considerations for design and optimal performance of materials in engineered objects and biological tissues.</td>
</tr>
<tr>
<td>ENGRD 2620</td>
<td>Electronic Materials for the Information Age (also MSE 2620)</td>
<td>Spring. 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor. G. Malliaras. Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal/semiconductor and semiconductor/ semiconductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.</td>
</tr>
<tr>
<td>ENGRD 2640</td>
<td>Computer-Instrumentation Design (also AEP 2640)</td>
<td>Fall, spring. 3 credits. Prerequisite: CS 1110; permission of instructor for seniors. 1 lec, 1 lab. T. Cool. Covers the use of a small computer in an engineering or scientific research lab. The experiments and devices investigated include: analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW are used for control and interfacing to hardware. Students develop effective written communication skills in the context of science and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.</td>
</tr>
<tr>
<td>ENGRD 2700</td>
<td>Basic Engineering Probability and Statistics</td>
<td>Fall, spring, summer. 3 credits. Prerequisite: MATH 1910 and MATH 2940. MATH 2940 should be completed before or concurrently with ENGRD 2700. Gives students a working knowledge of basic probability and statistics and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.</td>
</tr>
<tr>
<td>ENGRD 3200</td>
<td>Engineering Computation</td>
<td>Spring. 3 credits. Prerequisite: CS 1112 and MATH 2930. Corequisite: MATH 2940. Recommended: completion of MATH 2940. P. J. Diamentis. Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include: Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.</td>
</tr>
<tr>
<td>ENGRG 1060</td>
<td>Exploration in Engineering Seminar</td>
<td>Summer. 1 credit. Designed for junior and senior high-school students. Introduction to several engineering fields, such as: bioengineering, chemical engineering, civil engineering, computer science, earth sciences, electrical and computer engineering, engineering physics, materials science, mechanical engineering, operations research. Hands-on experience in weekly labs, as well as design projects to introduce concepts of the engineering design process.</td>
</tr>
<tr>
<td>ENGRG 1091</td>
<td>Cooperative Workshop for MATH 1910</td>
<td>Fall. 1 credit. Corequisite: MATH 1910. S-U grades only. Academic Excellence Workshop for MATH 1910. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1910.</td>
</tr>
<tr>
<td>ENGRG 1092</td>
<td>Cooperative Workshop for MATH 1920</td>
<td>Fall, spring. 1 credit. Corequisite: MATH 1920. S-U grades only. Academic Excellence Workshop for MATH 1920. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1920.</td>
</tr>
<tr>
<td>ENGRG 1093</td>
<td>Cooperative Workshop for MATH 2930</td>
<td>Fall, spring. 1 credit. Corequisite: MATH 2930. S-U grades only. Academic Excellence Workshop for MATH 2930. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2930.</td>
</tr>
<tr>
<td>ENGRG 1094</td>
<td>Cooperative Workshop for MATH 2940</td>
<td>Fall, spring. 1 credit. Corequisite: MATH 2940. S-U grades only. Academic Excellence Workshop for MATH 2940. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2940.</td>
</tr>
<tr>
<td>ENGRG 1095</td>
<td>Cooperative Workshop for CS 2110</td>
<td>Fall, spring. 1 credit. Corequisite: CS 2110. S-U grades only. Academic Excellence Workshop for CS 2110. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 2110.</td>
</tr>
<tr>
<td>ENGRG 1096</td>
<td>Cooperative Workshop for CS 1110</td>
<td>Fall, spring. 1 credit. Corequisite: CS 1110. S-U grades only. Academic Excellence Workshop for CS 1110. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1110.</td>
</tr>
<tr>
<td>ENGRG 1097</td>
<td>Cooperative Workshop for CS 1112</td>
<td>Fall, spring. 1 credit. Corequisite: CS 1112. S-U grades only. Academic Excellence Workshop for CS 1112. Weekly two-hour cooperative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1112.</td>
</tr>
</tbody>
</table>
ENGRG 2350  Career Development for Engineering  
Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing. Introduces concepts and techniques that can be used now and in the future to set appropriate personal and professional career goals.

ENGRG 2500  Technology in Society (also ECE/HIST 2500, STS 2501)  
Fall. 3 credits. Approved for humanities distribution. Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government’s regulation of technology; the origins of mass production; and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 2980  Inviting an Information Society (also ECE/AMST 2980, HIST 2980, STSINFO 2980)  
Spring. 3 credits. Approved for humanities distribution. Explores the history of information technology from the 1890s to the present by considering the technological and social history of telecommunications, the electric-power industry, radio, television, computers, and the Internet. Emphasis is on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 3220  Engineering Economics and Management (also CEE 3230)  
Spring, sometimes offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. Students must register under CEE 3230. D. P. Loucks.

Introduction to engineering and business economics investment alternatives and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

ENGRG 3570  Engineering in American Culture (also AMST/HIST 3570, STS 3571)  
Fall. 4 credits. Approved for humanities distribution. Next offered 2008–2009. The history of engineering in the United States from 1800 to the present. Investigates the education of engineers, how engineering changed from a masculine profession to one more open to women, the building of engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry loading using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying the effects of structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGRG 3600  Ethical and Social Issues in Engineering (also STS 3601)  
Spring. 3 credits. Open to sophomores. Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle blowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 4610  Entrepreneurship for Engineers (also MAE 4610, ORIE 4152)  
Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor. For description, see MAE 4610.

ENGRG 6780  Teaching Seminar  
Fall, spring. 1 credit. S–U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participants must be concurrently fulfilling a TA assignment. Requirements include participation in the College of Engineering’s TA Development Program, consisting of an initial one- and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and, reflective journal on teaching experiences. Designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses  
Courses in this category are first-year level courses intended to introduce students to various aspects of engineering. They have no prerequisites and most are cross-listed with a department.

ENGRG 1100  Lasers and Photonics (also AEP 1100)  
Fall. 3 credits. Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course revisits the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a nitrogen laser and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGRG 1101  Engineering Applications of Operations Research  
Fall, spring. 3, 3 credits. Not open to ORIE upper-level majors. Introduction to the problems and methods of operations research and industrial engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGRG 1110  Nanotechnology (also MSE 1110)  
Fall. 3 credits. E. Giannelis. Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunication to biotechnology.

ENGRG 1120  Introduction to Chemical Engineering (also CHEM 1120)  
Fall. 3 credits. Prerequisite: first-year standing. T. M. Duncan. Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRG 1130  Water Treatment Design (also CEE 1130)  
Spring. 3 credits. M. E. Weber-Shirk. Students learn how to design: reservoirs to provide water during droughts, aqueducts to transport water, and water treatment plants to prevent waterborne diseases. The course includes field trips and a capstone project: a computer-controlled miniature water treatment plant, and exploring new technologies for making safe drinking water.

ENGRG 1160  Modern Structures (also CEE 1160)  
Fall. 3 credits. W. Aquino. Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry loading using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structures fail in earthquakes and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying the effects of structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGRG 1170  Introduction to Mechanical Engineering (also MAE 1170)  
Fall. 3 credits. Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of dynamics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGRG 1180  Design Integration: DVDs and iPods (also TAM 1180)  
Spring. 3 credits. Next offered 2009–2010. W. Sachse. This course examines the broad range of systems and engineering technologies required to build today’s remarkable music/data and video sources.]
ENGRI 1190 Biomaterials for the Skeletal System (also MSE 1190)
Fall. 3 credits. D. Grubb.
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and their synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGRI 1200 Introduction to Nanoscience and Nanotechnology (also AEP 1200)
Fall. Spring. 3 credits.
Lecture/laboratory course designed to introduce first-year students to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—what they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., "top-down" and "bottom-up" approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record material particles when confined to nanoscale solid state; surfaces; behavior of light and nanotechnology—what they are and why. Also covers "bottom-up" approaches to nanofabrication; how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record material particles when confined to nanoscale solid state; surfaces; behavior of light and nanotechnology—what they are and why.

ENGRI 1220 Earthquake! (also EAS 1220)
Spring. 3 credits. L. Brown.
Explores the science of natural hazards and strategic resources. Covers techniques for locating and characterizing earthquakes, and assesses the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; and the historical importance of such resources. Includes seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGRI 1250 Introduction to Signals and Telecommunications
Spring. 3 credits.
Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation of historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGRI 1270 Introduction to Entrepreneurship and Enterprise Engineering (also MAE 1270)
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisite: none.
A solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGRI 1310 Introduction to Biomedical Engineering (also BME 1310)
Spring. 3 credits. Prerequisite: freshman or sophomore standing, C. B. Schaffer and 2090, and co-registration in or completion of PHYS 2213. L. Pollack. For description, see ENGRD 2520.
Modern biology and medicine is undergoing a revolution as quantitative principles of measurement, analysis, and design are introduced to help solve a variety of scientific and medical problems. This course will provide an introduction to the study of biological systems with a quantitative perspective from the molecular to the cellular to the organism scale, as well as to the design of practical devices for studying biological systems and treating disease. Collaborative work will be a key element in all aspects of the course, from the lectures and labs, to the assignments and term project.

ENGRI 1610 Computing in the Arts (also ART 1700, CIS/CS 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. Complements ART 1701+ and MUSIC 1421+. S–U or letter grades. Texts: Mathematical Physics by Butkov.
A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in AEP 3210 and 3220. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LaTeX.
AEP 3300 Modern Experimental Optics (also PHYS 3300)
Fall. 4 credits. Limited enrollment. Prerequisite: PHYS 2214 or equivalent. E. Bodenschatz.
Practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

AEP 3330 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 3210 or equivalent or permission of instructor. Staff.
Covers Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of Classical Dynamics by Marion and Thorton.)

AEP 3550 Intermediate Electromagnetism
Fall, beginning third week of Oct.; summer; second half of semester. 2 credits. Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.
Intermediate-level course on electromagnetic theory with a focus on statics. Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, solutions to Laplace's equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

AEP 3560 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: AEP 3550 and co-registration with AEP 3220, or permission of instructor.

AEP 3610 Introductory Quantum Mechanics
Fall, through second week of Oct.; summer, first half of semester. 2 credits. Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.
Introductory course on the theory of quantum mechanics. Topics include waves, Schrödinger's equation and the concept of the wavefunction, simple potentials, and the harmonic oscillator model. Emphasis is on developing an intuitive understanding of quantum mechanics.

AEP 3620 Intermediate Quantum Mechanics
Spring. 4 credits. Prerequisite: AEP 3610 or PHYS 3316 and co-registration with AEP 3220 or permission of instructor.
Continuation of AEP 3610 covering more advanced material in quantum mechanics. Topics include operator formalism and matrix representation, angular momentum and spin, the hydrogen atom, techniques for solving Schrödinger's equation including perturbation theory, two- and three-particle systems, interaction with radiation, and identical particles.

AEP 3620 Electronic Circuits (also PHYS 3360)
Fall, spring. 4 credits. Prerequisites: PHYS 2208 or 2213 or permission of instructor. No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded. 1 lec, 2 labs. Fall: E. Kirkland; spring: Staff.
Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinatorial (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

AEP 4230 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester-physics sequence, familiarity with quantum mechanics (AEP 3610 or PHYS 3316) and one year junior-level mathematics. Staff.
Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems, Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Introductory Statistical Mechanics by Bowley and Sanchez.

AEP 4340 Continuum Physics
Spring. 4 credits. Prerequisites: AEP 3330 and 3560 or equivalent. Staff.

AEP 4380 Computational Engineering Physics
Spring. 3 credits. Prerequisites: CS 1100 or 1112, AEP 3210, 3330, 3550, 3610, or equivalent, or permission of instructor; co-registration in 3620 permitted. Staff.
Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

AEP 4440 Quantum and Nonlinear Optics
Spring. 4 credits. Prerequisites: AEP 3560, 3620, or equivalent. Staff.
Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guidance in waveguides, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonant and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, and ultra-intense laser-matter interactions.

AEP 4500 Introductory Solid State Physics (also PHYS 4454)
Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 4443, AEP 3620, or CHEM 7990. Staff.
Introduces the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel or Solid State Physics by Ashcroft and Mermin.

AEP 4700 Biophysical Methods (also BIONB 4700)
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only.
Overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, and biological disciplines who seek an introduction to modern biophysical experimental methods.

AEP 4840 Introduction to Controlled Fusion: Principles and Technology (also ECE/NSE 4840, MAE 4590)
Spring. 3 credits. On demand. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.
For description, see NSE 4840.
AEP 4900–4910 Independent Study in Engineering Physics
Fall. spring. Credit TBA.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details TBA with respective faculty member.

AEP 5500 Applied Solid State Physics
Spring. 3 credits. Prerequisites: AEP 3560, 3620, 4220, 4500 or equivalent.
Directed at students who have had an introductory solid state physics course at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and quantum mechanical effects. The course stresses the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

AEP 5710 Biophysical Methods Advanced Laboratory
Spring. First three weeks of Jan. or TBA during spring semester. 3 credits.
Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter grades only. M. Lindau.
Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The course is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)
Spring. On demand. 4 credits.
Prerequisites: ECE 5810 and AEP 6060.
For description, see ECE 5820.

AEP 6330 Nuclear Reactor Engineering (also NSE 6330)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Gady.
For description, see NSE 6330.

AEP 6610 Nanocharacterization
Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before registering.
Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties of the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

AEP 6620 Micro/Nano-fabrication and Processing
Spring. 3 credits.
Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces. Focus is on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

AEP 6630 Nanobiotechnology (also BIOG 6630, MSE 5630)
Spring. 3 credits. Letter grades only. Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. The course is on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NPTC associate institutes.

AEP 7110 Principles of Diffraction (also MSE 6710)
Fall. 3 credits. Letter grades only. J. D. Brock.
Graduate-level introduction to diffraction/scattering phenomena in the context of solid-state and soft condensed-matter systems. The primary topic is using the scattering and absorption of neutron, electron, and X-ray beams to study physical systems. Particular emphasis is placed on issues related to synchrotron X-ray sources. Specific topics that are covered in the course include: elastic and inelastic scattering; diffraction from two- and three-dimensional periodic lattices; the Fourier representation of scattering centers and the effects of thermal vibrations and disorder; diffraction, reflectivity, or scattering from surface layers; diffraction or scattering from gases and amorphous materials; small angle scattering; X-ray absorption spectroscopy; resonant (e.g., magnetic) scattering; novel techniques using coherent X-ray beams; and a survey of dynamical diffraction from perfect and imperfect lattices.

AEP 7510 M.Eng. Project
Fall, spring. 6–12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

AEP 7530 Special Topics Seminar in Applied Physics
Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics.

Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

AEP 7810 Advanced Plasma Physics I: Cosmic Plasma Physics
AEP 7820 Advanced Plasma Physics II (also ECE 6820)
Spring. 3 credits. Prerequisite: ECE 5810. C. E. Seyler.
For description, see ECE 6820.

BIOLICAL AND ENVIRONMENTAL ENGINEERING

For complete course descriptions, see "Biological and Environmental Engineering" under "College of Agriculture and Life Sciences" or visit the department web site, www.bee.cornell.edu.

BEE 1130 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Limited to 20 students per lab.

BEE 1140 Introduction to Wood Construction
Fall. 3 credits. Limited to 16 students per lab.

BEE 1150 Advanced Metal Fabrication Techniques
Spring. 1–2 credits. Prerequisite: BEE 1130 permission of instructor.

BEE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050. Prerequisite: BEE majors or permission of instructor.

BEE 1510 Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per lab and rec. Pre- or corequisite: MATH 1910 or equivalent. No previous programming experience assumed.

BEE 2220 Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 1920, BIOG 1110, PHYS 2213, and chemistry course completed or concurrent.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)
Fall. 3 credits. Pre- or corequisite: MATH 2930.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930.
### BEE 3050 Principles of Navigation (also NAVS 3050)
Spring. 4 credits. Three classes each week (lec-rec-project work).

### BEE 3299 Sustainable Development: A Web-Based Course
Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S–U or letter grades.

### BEE 3310 Bio-Fluid Mechanics
Fall. 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence.

### BEE 3500 Biological and Environmental Transport Processes
Fall. 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course.

### BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)
Spring. 3 credits. Prerequisites: BEE 2600, biochemistry, linear algebra, ordinary differential equations, or permission of instructor.

### BEE 3650 Properties of Biological Materials
Spring. 3 credits. Pre- or corequisite: ENGRD 2020.

### BEE 3710 Physical Hydrology for Ecosystems
Spring. 3 credits. Prerequisite: MATH 1920 or permission of instructor. Offered alternate years.

### BEE 4010 Renewable Energy Systems
Spring. 3 credits. Prerequisite: college physics.

### BEE 4270 Water Sampling and Measurement
Fall. 3 credits. Prerequisites: fluids or hydrology course and MATH 1910. Next offered 2009–2010.

### BEE 4350 Principles of Aquaculture
Spring. 3 credits. Prerequisite: at least junior standing.

### BEE 4500 Bioinstrumentation
Spring. 4 credits. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor.

### BEE 4520 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)
Spring. 3 credits. Prerequisite: heat and mass transfer course (BEE 3500 or equivalent).

### BEE 4540 Physiological Engineering

### BEE 4590 Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor.

### BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, BEE 2500 or equivalent, Mass and Energy Balances, or permission of instructor.

### BEE 4640 Bioseparation Processes
Fall. 3 credits. Prerequisites: introductory biochemistry and physics, MATH 1920, BEE 2600 or equivalent, or permission of instructor. Offered alternate years.

### BEE 4710 Introduction to Groundwater (also EAS 4710)
Spring. 3 credits. Prerequisites: MATH 2930, fluid mechanics or hydrology course. S–U or letter grades. Next offered 2009–2010.

### BEE 4730 Watershed Engineering
Fall. 3 credits. Prerequisites: fluid mechanics or hydrology course.

### BEE 4740 Water and Landscape Engineering Applications
Spring. 3 credits. Prerequisite: fluids or hydrology course or permission of instructor.

### BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming course and one year of calculus.

### BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

### BEE 4780 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Next offered 2009–2010.

### BEE 4800 Introduction to Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S–U or letter grades.

### BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Prerequisite: ENGRD 2020.

### BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor.

### BEE 4870 Sustainable Energy Systems
Fall. 3 credits. Prerequisites: MATH 2930 and thermodynamics course.

### BEE 4890 Entrepreneurial Management for Engineers
Spring. 4 credits. Prerequisites: ENGRD 2700 or CEE 3040 or equivalent highly recommended; junior standing.

### BEE 4900 Biofuels: The Economic and Environmental Interactions (also AEM 6900)
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S–U or letter grades.

### BEE 4930 Technical Writing for Engineers
Fall. 1 credit. Corequisite: BEE 4730.

### BEE 4960 Capstone Design in Biological and Environmental Engineering
Fall, spring. 1 credit. Corequisite: BEE 4730 or 4780, or 4910.

### BEE 4970 Individual Study in Biological and Environmental Engineering
Fall, spring. 1–4 credits. Prerequisites: written permission of instructor and adequate ability and training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

### BEE 4980 Undergraduate Teaching
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

### BEE 4990 Undergraduate Research
Fall, spring. 1–4 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall).

### BEE 4991 Honors Research
Fall, spring. 1–6 credits. Prerequisite: enrollment in BEE Honors Research Program.

### BEE 5010 Bioengineering Seminar (also BME 5010)
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S–U grades only.

### BEE 5330 Engineering Professionalism
Spring. 1–2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will be graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam. Lec only for first 10 weeks of semester. S–U or letter grades.

### BEE 5900 M.P.S. Project
Fall, spring. 1–6 credits. Requirement for all M.P.S. candidates in field.

### BEE 5950 Master of Engineering Design Project
Fall, spring. 3–6 credits. Prerequisite: admission to M.Eng. degree program.

### BEE 6420 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 6430)
Spring. Eight weeks. 2 credits. Prerequisites: limited to third- and fourth-year veterinary students.

### BEE 6470 Water Transport in Plants (also BIOPL 6510)
Fall. 2 credits. Offered alternate years; next offered 2009–2010.

### BEE 6490 Solute Transport in Plants (also BIOPL 6490)
Fall. 3 credits. Offered alternate years.

### BEE 6510 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisite: BIOMI 2900 or BIORM 3510 or permission of instructor. Next offered 2009–2010.

### BEE 6550 Thermodynamics and Its Applications
Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Offered alternate years; next offered 2009–2010.
BIOMEDICAL ENGINEERING

BME 1310 Introduction to Biomedical Engineering (also ENGR 1310)
Fall. 3 credits. Prerequisite: freshman or sophomore standing. C. B. Schaffer and S. D. Archer.

For description, see ENGR 1310.

BME 3010 Molecular Principles of Biomedical Engineering (also CHEME 4010)
Fall. 3 credits. Prerequisite: basic biology such as BIOC 1110, BIOCMB 3300, or BIOM 2900. Lec and lab. M. Jin and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 3020 Cellular Principles of Biomedical Engineering (also CHEME 4020)
Spring. 3 credits. Prerequisite: BME 3010 or course work in basic biology such as BIOC 1110, BIOCMB 3300, or BIOM 2900 plus mathematics through differential equations (e.g., MATH 2210 or 2940), or permission of instructor. Lec and lab. C. Fischbach-Teschl and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

BME 3300 Introduction to Computational Neuroscience (also BIONB/PSYCH/COGST 3300)
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students.

Prerequisites: BIONB 2220 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2009–2010.

BME 3600 Molecular and Cellular Bioengineering (also BEE 3600)
Spring. 3 credits. Prerequisite: BEE 2600, biochemistry course, linear algebra, ordinary differential equations, or permission of instructor.

For description, see BEE 3600.

BME 4010 Biomedical Engineering Analysis of Metabolic and Structural Systems (also MAE 4660)
Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. J. Bonassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 4020 Electrical and Chemical Physiology
Spring. 3 credits. Prerequisite: BME 3010, 3020, or 4010 or biology background or permission of instructor. Lec and lab. D. Lipsett and S. D. Archer.

Focuses on understanding how circulating agents and bioelectric activity comprises inter- and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 4110 Science and Technology Approaches to Problems in Human Health
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and M. G. Kaplitt.

Provides an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the Weill Cornell Medical College will discuss health problems they are unable to treat as well as they would like, then Cornell University and Weill faculty will discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

BME 4640 Orthopaedic Tissue Mechanics (also MAE 4640)
Spring. 3 credits. Prerequisites: ENGRD 2200 and MAE 3250 or permission of instructor. Offered alternate years.

For description, see MAE 4640.

BME 4810 Biomedical Engineering (also CHEME 4810)
Spring. 3 credits. Prerequisite: CHEMF 3240 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEME 4810.

BME 4900 Independent Undergraduate Project in Biomedical Engineering
Fall. spring. Variable credit. Research or projects by an individual or a small group of undergraduates.

BME 4910 Principles of Neurophysiology (also BIONB 4910)
Spring. 4 credits. Limited to 20 students.

Prerequisite: BION 2220 or written permission of instructor. S–U or letter grades for graduate students by permission of instructor. B. R. Johnson.

For description, see BIONB 4910.

BME 5010 Bioengineering Seminar (also BEE 5010)
Fall. spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff.

Gives the engineer-in-training a BROAD overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give students a working knowledge of how abstracts are written and revised. Sessions may occasionally be held outside of scheduled times.
BME 5020 Biomedical System Design (also ECE 5020)
Spring. 1–4 credits. Pre- or corequisites: at least one of ECE 4250, 4760, 4530.
J. C. Belina.
For description, see ECE 5020.

BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)
Spring. 2–3 credits. Prerequisites: junior or senior standing; college natural science requirement (chemistry or biology).
C. C. Chu.
For description, see FSAD 4390.

BME 5500 Product Engineering and Design in Biomedical Engineering
Fall. 3 credits. Prerequisite: graduate standing; requirement for M.Eng. students majoring in BME. D. Lipson.
A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

BME 5620 Biomimeralization (also MSE 5620)
Spring. 3 credits. L. Estoff.
For description, see MSE 5620.

[BME 5650 Biomechanical Systems—Analysis and Design (also MAE 5650)]

BME 5700 Biophysical Methods (also BIONE/AEP 4700)
Fall. 5 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only.
M. Lindau.
For description, see AEP 4700.

BME 5710 Analytical Techniques for Material Science (also MSE 5710)
Spring. 3 credits. D. Grubb.
For description, see MSE 5710.

BME 5780 Computer Analysis of Biomed Images (also ECE 5780)
Spring. 4 credits. Prerequisite: permission of instructor. A. P. Reeves.
For description, see ECE 5780.

BME 5810 Soft Tissue Biomech (also MAE 5680)
Fall. 3 credits. Prerequisites: graduate standing; seniors by permission of instructor. J. T. Butcher.
Introduces concepts of biomechanics applied to understanding the material behavior of soft tissues. Topics include finite strain nonlinearities, constitutive frameworks, and experimental methodologies. Tissues to be modeled include tendons, blood vessels, heart valves, cartilage, and engineered tissues.

BME 5830 Cell-Biomaterials Interactions
Spring. 3 credits. Prerequisites: BME 3010, concurrent with 3020, or permission of instructor. C. Reinhart-King.
Biological principles underlying biomaterial design and cell adhesive behavior, incorporating biomechanical analysis across the molecular, cellular, and tissue length scales.

[BME 5850 Current Practice in Tissue Engineering]
Spring. 3 credits. Prerequisites: BME 3010 or 4010 (or BME 5200 as corequisite). Next offered 2010. C. Fischbach-Teschl.
Covers fundamental biological principles and engineering concepts underlying the field of tissue engineering and describes specific strategies to engineer tissues for clinical use along with examples.

BME 5910 Design Project
Fall, spring. 3–6 credits. Requirement for M.Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course. D. Lipson and staff.
Design and conduct (or direct the evaluation of a biomedical engineering device or therapeutic strategy. Team projects are encouraged.

BME 5930 Independent Design Project
Fall and spring. Variable credit. Prerequisite: graduate standing. D. Lipson and staff.
Graduate-level nontenuse research or studies on special projects in biomedical engineering.

BME 6180 Principles of Medical Imaging (also AWD 6180)
Fall. 1–3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics. One-credit version requires attendance the first five weeks of lectures on nonmathematical description of imaging principles and field trips to Cornell University Hospital for Animals (CUHA) to see imaging in practical practice. Three-credit version requires attendance for the entire semester. The later part of the lectures focus on mathematical description of imaging principles. The formulations of spatial encoding and image contrast are presented for all major medical imaging modalities: x-ray, CT, MR, SPECT/PET, US. The inverse problem between detected signal and image source will be discussed and the concepts of image resolution, SNR, and scan time will be illustrated analytically and quantitatively for all modalities.

BME 6260 Biomedical Optics, Imaging, and Spectroscopy
Spring. 3 credits. Prerequisites: introductory physics, calculus and biology. W. R. Zipfel.
Fundamentals of optical systems design, application and analysis concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, dispersion elements, optical fibers, detectors and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, deconvolution and interference, all in relation to biomedical microscopy, spectroscopy and bioanalytical techniques.

[BME 6310 Engineering Principles for Drug Delivery (also CHEM 6310)]

BME 6410 Biomedical Engineering Analysis of Proteins for Medicine
Spring. 3 credits. Prerequisites: graduate standing and background in biology and chemistry. M. Jin.
Protein engineering principles applied to developing molecules for biotherapeutics and biophysical studies. Course topics include general overview on biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentation for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 6501 Natural Engineering: Developmental Paradigms for Regenerative Medicine
Spring. 1–3 credits. Prerequisite: graduate student standing. J. T. Butcher.
The course will be in two modules. The first module, a 1-credit course, will cover the embryonic development and fetal maturation of several major organ systems, including lung, heart, vascular, and bone from an engineer's perspective (evolutionary conservation, major signaling pathways involved, etc.). The second module, a 2-credit course, will build upon the first module by highlighting engineering approaches to study developmental biology (systems biology, mechanical testing, micro-environmental control, genetic manipulation, tissue engineering, etc.). We will also identify relationships between developmental biology and postnatal disease, as well as explore developmental biology-based approaches for regenerative medicine (directed stem cell differentiation, mechanical conditioning, matrix-based differentiation, etc.). Material will be drawn largely from primary literature. Students will have regular manuscript reviews, two midterms, and a final project analyzing the natural engineering of a different organ system.

BME 6640 Mechanics of Bone (also MAE 6640)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
Offered alternate years. L. Bonassar.
Covers introductory concepts in tissue engineering, including polymeric biomaterials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissue, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

BME 6670 Nanobiotechnology (also AEP/BIOG 6630, MSE 5630)
Fall. 3 credits. Letter grades only.
M. L. Shuler and H. C. Hoch.
Upper-level undergraduate and graduate-level course that covers the basics of biology and
the principles and practice of microfabrication techniques. Course lectures are largely from guest faculty with expertise in the presented topic areas. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures are teleconferenced to NBTC associate institutes.

**BME 7030 Graduate Student Teaching Experience**  
Fall, spring. Variable credit. S–U or letter grades. Staff. Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

**BME 7110 Fundamentals of Biomedical Engineering Research I**  
Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipfel and staff. First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

**BME 7120 Fundamentals of Biomedical Engineering Research II**  
Spring. 3 credits. Prerequisite: BME 7110 or permission of instructor. W. L. Olbricht and staff. Continuation of BME 7110.

**BME 7160 Immersion Experience in Medical Research and Clinical Practice**  
Fall and spring. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang. Seven-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

**BME 7310 Advanced Biomedical Engineering Analysis of Biological Systems**  
Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk. Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

**BME 7600 Nucleic Acid Engineering (also BEE 7600)**  
Spring. 2 credits. Prerequisite: graduate standing; BEE 3600 or permission of instructor. Next offered 2010. D. Luo. For description, see BEE 7600.

**BME 7900 Biomedical Engineering Seminar**  
Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler. Research-based seminars. May meet with other seminar series as appropriate.

**BME 8999 M.S. Thesis Research**  
Fall. spring. Variable. credit. Thesis research for the M.S. degree in BME.

**BME 9999 Ph.D. Thesis Research**  
Fall, spring. Variable credit. Thesis research for the Ph.D. degree in BME.

**CHEMICAL AND BIOMOLECULAR ENGINEERING**

**CHEME 1120 Introduction to Chemical Engineering (also ENGR 1120)**  
Fall. 3 credits. Prerequisite: freshman standing. T. M. Duncan. Course in the Introduction to Engineering series. For description, see ENGR 1120.

**CHEME 2190 Mass and Energy Balances (also ENGRD 2190)**  
Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. S. Daniel. For description, see ENGRD 2190.

**CHEME 2880 Biomedical Engineering: Fundamentals and Applications**

**CHEME 3010 Nonresident Lectures**  
Spring, 1 credit. P. Clancy. Lectures from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

**CHEME 3130 Chemical Engineering Thermodynamics**  
Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanrath. Studies the first and second laws and their consequences for chemical systems. Covers thermodynamic properties of pure fluids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; and power cycles and refrigeration.

**CHEME 3230 Fluid Mechanics**  

**CHEME 3240 Heat and Mass Transfer**  
Fall. 3 credits. Prerequisite: CHEME 3230. A. D. Stroock. Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

**CHEME 3320 Analysis of Separation Processes**  
Spring. 3 credits. Prerequisites: CHEME 3150 and 3240. Y. L. Joo. Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

**CHEME 3720 Introduction to Process Dynamics and Control**  
Spring. 2 credits. Prerequisites: CHEME 3150 and 3230. A. B. Anton. Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

**CHEME 3900 Chemical Kinetics and Reactor Design**  
Spring. 3 credits. Prerequisites: CHEME 3130 and 3230. T. M. Duncan. Study of chemical reaction kinetics and principles of reactor design for chemical processes.

**CHEME 4010 Molecular Principles of Biomedical Engineering (also BME 3010)**  
Fall. 3 credits. Prerequisite: BIOG 1110 or BIOBM 3300. M. Jin. For description, see BME 3010.

**CHEME 4020 Cellular Principles of Biomedical Engineering (also BME 3020)**  
Spring. 3 credits. Staff. For description, see BME 3020.

**CHEME 4130 Introduction to Nuclear Science and Engineering (also AEP/ECE/MAE/NSE/TAM 4130)**  
Fall. 3 credits. B. Cady. For description, see TAM 4130.

**CHEME 4320 Chemical Engineering Laboratory**  
Fall. 4 credits. Prerequisites: CHEME 3230, 3240, 3520, and 3900. A. M. Center and staff. Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

**CHEME 4620 Chemical Process Design**  
Spring. 4 credits. Prerequisite: CHEME 4320. A. M. Center and staff. Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

**CHEME 4700 Process Control Strategies**  
Spring. 3 credits. A. M. Center. Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.
CHEME 4720 Feedback Control Systems
(Also ECE 4720, MAE 4780)
Fall. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor.
For description, see MAE 4780.

CHEME 4800 Chemical Processing of Electronic Materials

CHEME 4810 Biomedical Engineering
(Also BME 4810)
Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor.
W. L. Olbricht.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, motility, secretion, signaling, and growth.

CHEME 4840 Microchemical and Microfluidic Systems
Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. J. R. Engstrom.
Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 4900 Undergraduate Projects in Chemical Engineering
Fall. Spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEME 4990 Senior Seminar
Fall. Spring. 1 credit. Prerequisite: CHEME seniors. Staff.
Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquium and Seminars in Physiological and Related Fields," which includes the weekly seminars in, for example, Chemical and Biomolecular Engineering, Chemistry and Chemical Biology, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 5203 Introduction to Polymer Processing (module)
Spring, second third of semester. 1 credit. L. A. Archer.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

CHEME 5204 Turbomachinery Applications (module)
Fall, last third of semester. 1 credit. A. M. Center.
Introduction to pumps, compressors, steam turbines and gas turbines. How they are specified and selected for services in the chemical process industries.

CHEME 5205 Chemical Engineering Tools and Equipment (module)
Spring, first third of semester. 1 credit. A. M. Center.
Introduces the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and trouble-shooting methods frequently used by chemical engineers.

CHEME 5207 Introduction to Petroleum Refining (module)
Fall, second third of semester. 1 credit. A. M. Center.
Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

CHEME 5208 Renewable Resources from Agriculture-Sugarcane as a Feedstock (module)
Spring, last third of semester. 1 credit. Next offered 2010–2011.
Maximizing the value of a renewable resource by control of inputs and final product use.

CHEME 5430 Biomolecular Engineering of Bioprocesses
Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. No prior background in biological sciences required. M. P. DeLisa.
Discusses principles involved in using biomolecules (e.g., antibodies, enzymes, DNA) and living organisms (e.g., bacteria, yeast, tissue cultures) for engineering biological processes. Primary emphasis is on development and production of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

CHEME 5640 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEME 3900 or equivalent. D. L. Koch.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 5650 Design Project
Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 5720 Managing New Business Development
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. Staff.
Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 5870 Energy Seminar I (Also MAE 5450, ECE 5870)
Fall. 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5870.

CHEME 5880 Energy Seminar II (Also MAE 5460, ECE 5880)
Fall. 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5880.

CHEME 5999 Special Projects in Chemical Engineering
Fall, Spring. Variable credit. Prerequisite: graduate standing.
Nonthesis research or studies on special problems in chemical engineering.

CHEME 6240 Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: undergraduate fluid or continuum mechanics (e.g., MAE 3230), CHEM 5250, AEP 4340 or permission of instructor. B. L. Kirby.
For description, see MAE 5240.

CHEME 6310 Engineering Principles for Drug Delivery (Also BME 6310)

CHEME 6400 Polymeric Materials
Fall. 3 credits. C. Cohen.
Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEME 6440 Aerosols and Colloids
Fall. 3 credits. D. L. Koch.
Dynamics of micro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, theological and phase behaviors, and their role in technologies including paints, foods, health-care products, drug delivery, composite materials and air pollution control.

CHEME 6610 Air Pollution Control
Spring. 3 credits. P. H. Steen.
Covers origin of air pollutants, U.S. emission standards, dispersion equations; design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

CHEME 6640 Energy Economics
Fall. 3 credits. A. J. Hunter.
Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEME 6650 Energy Engineering
Spring. 3 credits. A. J. Hunter.
Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.
CHEME 7110 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 3800–3900 and CHEME 3130 or equivalent. F. A. Escolledo.
Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEME 7130 Chemical Kinetics and Transport
Spring. 5 credits. Prerequisite: CHEME 3900 or equivalent. C. Cohen and A. D. Stroock.
Topics include phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEME 7310 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEME 3290–3240 or equivalent. Y. L. Joo.
Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEME 7410 Selected Topics in Biochemical Engineering
Fall, spring. 1 credit; may be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLisa.
Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 7450 Physical Polymer Science I
Fall. 3 credits. Corequisite: CHEME 7110 or equivalent. Offered alternate years. L. A. Archer.
Thermodynamic properties of solutions from both classical and scaling approaches. Characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels; polymer melts.

CHEME 7510 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. Staff.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEME 7510 or equivalent. Offered alternate years. P. H. Steen.
Topics include elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems (AUTO).

CHEME 7900 Seminar
Fall, spring. 1 credit each semester. Requirement for all graduate students in field of chemical and biomolecular engineering.
General chemical engineering seminar.

CHEME 7920 Principles and Practices of Graduate Research
Fall. 1 credit. M. P. DeLisa and A. D. Stroock.
A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files) and reporting research (writing a technical paper and oral presentations).

CHEME 8999 Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEME 9999 Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environment, and Engineering Systems and Management. Each area has several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The school also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 1130 Water Treatment Design (also ENGRD 1130) (s,3) CEE 1160 Modern Structures (also ENGR 1160) (f,3) CEE 3040 Uncertainty Analysis in Engineering (f,4)
CEE 3080 Introduction to CADD (f,s,1) CEE 3090 Special Topics in Civil and Environmental Engineering (f,s,5,3)
CEE 3200 Engineering Computation (formerly CEE/ENGRI 3200) (also ENGRG 3200) (s,3)
CEE 3230 Engineering Economics and Management (also ENGRG 3230) (s,3)
CEE 4000 Senior Honors Thesis (f,s,3,5,3)
CEE 4010 Undergraduate Engineering Teaching in CEE (f,s,3)

Civil Infrastructure
See also: CEE 1160, 3040, 3080, 3200, and 5950

Geotechnical Engineering
CEE 3410 Introduction to Geotechnical Engineering (f,4)
CEE 4400 Foundation Engineering (f,3)
CEE 4410 Retaining Structures and Slopes (s,3)
CEE 4440 Environmental Site and Remediation Engineering (s,5)
CEE 5041/5042 Design Project in Geotech/ Structures (s,3)
CEE 6045 Special Topics in Geotechnical Engineering (f,s,3)
CEE 6070 Seminar—Civil Infrastructure (f,s,1)
CEE 6400 Foundation Engineering (f,5)
CEE 6410 Retaining Structures and Slopes (s,3)
CEE 6440 Environmental Site and Remediation Engineering (s,5)
CEE 7040 Research in Geotechnical Engineering (f,s,3)
CEE 7400 Engineering Behavior of Soils (f,3)
CEE 7410 Rock Engineering (f,3)
CEE 7440 Advanced Foundation Engineering (s,2)
CEE 7450 Soil Dynamics (s,5)
CEE 7460 Embankment Dam Engineering (s,2)
CEE 8400 Thesis—Geotechnical Engineering (f,s,3)

Structural Engineering
CEE 1160 Modern Structures (f,3)
CEE 3710 Structural Modeling and Behavior (s,4)
CEE 3720 Intermediate Solid Mechanics (f,4)
CEE 4710 Fundamentals of Structural Mechanics (f,4)
CEE 4720 Introduction to the Finite Element Method (f,3)
CEE 4730 Design of Concrete Structures (f,4)
CEE 4740 Design of Steel Structures (s,4)
CEE 4750 Concrete Materials and Construction (s,3)
CEE 4770 Introduction to Composite Materials (f,3)
CEE 4780 Structural Dynamics and Earthquake Engineering (s,3)
CEE 4810 LRFD-Based Engineering of Wood Structures (s,3)
CEE 5071/5072 Design Project in Structural Engineering (f,s,3)
CEE 6070 Seminar—Civil Infrastructure (f,s,1)
CEE 6075 Special Topics in Structural Engineering (f,s,5)
CEE 6710 Fundamentals of Structural Mechanics (f,3)
CEE 6720 Introduction to the Finite Element Method (f,3)
CEE 6730 Design of Concrete Structures (f,4)
CEE 6750 Concrete Materials and Construction (s,5)
CEE 6760 Advanced Composite Materials (s,4)
CEE 6770 Engineering Analysis (f,3)
CEE 6780 Structural Dynamics and Earthquake Engineering (s,3)
CEE 6790 Evaluation and Failure of Structures (s,5)
CEE 7070 Research in Structural Engineering (f,s,var.)
CEE 7073 Civil and Environmental Engineering Materials Project (f,s,var.)
CEE 7700 Engineering Fracture Mechanics (f,3)
CEE 7710 Stochastic Mechanics in Science and Engineering (f,5)
CEE 7720 Random Vibration (f,3)
CEE 7730 Structural Reliability (f,3)
CEE 7740 Advanced Structural Concrete (f,3)
CEE 7750 Nonlinear Finite Element Analysis (s,3)
CEE 7760 Advanced Topics in Stability (s,3)
CEE 7770 Computational Solids and Structural Mechanics (s,4)
CEE 7790 Advanced Behavior of Metal Structures (f,4)
CEE 8700 Thesis—Structural Engineering (f,s,var.)

Environment
See also CEE 1130, 3200, 3040, and 4920

Environmental Engineering
CEE 1130 Water Treatment Design (s,3)
CEE 2550 AguaClara: Sustainable Water Supply Project (f,s,3)
CEE 3510 Environmental Quality Engineering (s,3)
CEE 4510 Microbiology for Environmental Engineering (f,3)
CEE 4520 Water Supply Engineering (f,3)
CEE 4530 Laboratory Research in Environmental Engineering (f,3)
CEE 4540 Sustainable Small-Scale Water Supplies (f,3)
CEE 4550 AguaClara: Sustainable Water Supply Project (f,s,3)
CEE 5051/5052 Design Project in Environmental Engineering (f,s,3)
CEE 6020 Seminar—Water Resources and Environmental Engineering (f,1)
CEE 6051 Seminar—Environmental Quality Engineering (s,1)
CEE 6055 Special Topics in Environmental Engineering (f,s,3)
CEE 6530 Water Chemistry for Environmental Engineering (f,3)
CEE 6540 Aquatic Chemistry (s,3)
CEE 6550 Transport, Mixing, and Transformation in the Environment (f,3)
CEE 6560 Physical/Chemical Process (f,3)
CEE 6570 Biological Processes (s,3)
CEE 6580 Biodegradation and Biocatalysis (s,3)
CEE 7050 Research in Environmental Engineering (f,s,3)
CEE 7360 Turbulences and Turbulent Mixing in Environmental Stratified Flows (s,3)
CEE 8500 Thesis—Environmental Engineering (f,s,3)

Environmental Systems
See Engineering Systems and Management mission areas for a listing of courses in Environmental and Public Systems.

Environmental Fluid Mechanics and Hydrology
CEE 3310 Fluid Mechanics (f,su,4)
CEE 3320 Hydraulic Engineering (s,4)
CEE 4320 Hydrology (s,3)
CEE 4350 Coastal Engineering (s,3)
CEE 4360 Case Studies in Environmental Fluid Mechanics (s,4)
CEE 4370 Experimental Methods in Fluid Dynamics (s,3)
CEE 6020 Seminar—Water Resources and Environmental Engineering (f,1)
CEE 6030 Seminar—Hydraulics (s,1)
CEE 6035 Special Topics in Hydraulics (f,s,3)
CEE 6290 Advanced Numerical Methods for Engineers (f,3)
CEE 6300 Computational Fluid Dynamics and Environmental Flows (s,3)
CEE 6310 Computational Simulation of Flow and Transport in the Environment (s,3)
CEE 6320 Hydrology (s,3)
CEE 6350 Flow in Porous Media and Groundwater (f,3)
CEE 6340 Boundary Layer Meteorology (f,3)
CEE 6350 Small and Finite Amplitude Water Waves (s,3)
CEE 6360 Environmental Fluid Mechanics (s,3)
CEE 6370 Experimental Methods in Fluid Dynamics (s,4)
CEE 6550 Transport, Mixing, and Transformation in the Environment (f,3)
CEE 7030 Research in Hydraulics (f,s,3)
CEE 8300 Thesis—Fluid Mechanics and Hydrology (f,s,3)

Environmental Engineering Systems and Management
See also CEE 3040.

Engineering Management
CEE 4920 Engineers for a Sustainable World (f,3)
CEE 5900 Project Management (f,3)
CEE 5910/5920 Engineering Management Project (f,s,3)
CEE 5930 Engineering Management Methods (f,3)
CEE 5940 Economic Methods for Engineering and Management (f,3)
CEE 5950 Construction Planning and Operations (f,3)
CEE 5960 Management Issues in Forensic Engineering (f,3)
CEE 5970 Risk Analysis and Management (s,3)
CEE 6095 Special Topics in Engineering Management (f,s,3)
CEE 6090 Creativity, Innovation, and Leadership (s,3)

Environmental and Public Systems
CEE 3230 Engineering Economics and Management (also ENGRG 3230) (f,su,3)
CEE 4650 Environment/Energy and Transportation Planning and Management (s,3)
CEE 5021/5022 Design Project in Environmental or Water Resource Systems (f,3)
CEE 5970 Risk Analysis and Management (s,3)
CEE 6021 Seminar—Environmental and Water Resources Systems Analysis (s,1)
CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis (f,s,3)
CEE 6200 Water Resources Systems Engineering (s,3)
CEE 6210 Stochastic Hydrology (s,3)
CEE 6230 Environmental Quality Systems Engineering (f,3)
CEE 6360 Environmental Fluid Mechanics (s,4)
CEE 6650 Environment/Energy and Transportation Planning and Management (s,3)
CEE 6930 Public Systems Modeling (f,4)
CEE 7020 Environmental and Water Resources Systems Analysis Research (f,s,3)
CEE 8200 Thesis—Environmental and Water Resources Systems (f,s,3)

Remote Sensing
CEE 4110 Remote Sensing: Resource Inventory Methods (also CSS 4110) (s,3)
CEE 6015 Special Topics—Remote Sensing (f,s,3)
CEE 6100 Remote Sensing Fundamentals (also CSS 6100) (f,3)
CEE 6150 Digital Image Processing (s,3)
CEE 7010 Research—Remote Sensing (f,s,3)
CEE 8100 Thesis—Remote Sensing (f,s,3)

Systems Engineering
CEE 4060 Civil Infrastructure Systems (f,3)
CEE 5240 Applied Systems Engineering (also CS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100) (f,3)
CEE 5252 Systems Architecture, Behavior, and Optimization (also CS 5050, ECE/ORIE 5130, MAE 5920, SYSEN 5200) (s,3)
CEE 5290 Heuristic Methods for Optimization (also CS/CIS 5720, ORIE 5340) (f,s,3)
CEE 6080 Seminar—Engineering Systems and Management (f,s,3)
CEE 6660 Civil Infrastructure Systems (f,3)
CEE 6790 Environmental Engineering (s,3)
Transportation

CEE 3610 Introduction to Transportation Engineering (s,su,3)
CEE 4610 Urban Transportation Planning and Modeling (s,3)
CEE 4630 Transportation and Information Technology (f,3)
CEE 4640 Transportation Systems Design (s,3)
CEE 4650 Environment/Energy and Transportation Planning and Management (s,3)
CEE 5061/5062 Design Project in Transportation Engineering (f,s,3)
CEE 6060 Seminar—Transportation (f,s,1)
CEE 6065 Special Topics in Transportation (f,s,3)
CEE 6070 Urban Transportation Planning and Modeling (s,3)
CEE 6620 Urban Transportation Network and Design and Analysis (f,3)
CEE 6630 Network Flows and Algorithms (s,3)
CEE 6650 Environment/Energy and Transportation Planning and Management (s,3)
CEE 7620 Practicum in Modeling Transportation Systems (f,3)
CEE 8600 Thesis—Transportation Engineering (f,s,3, var.)

CEE 1130 Water Treatment Design (also ENGR 1130)
Spring. 3 credits. Students must register under ENGR 1130. M. L. Weber-Shirk. Course in Introduction to Engineering series. For description, see ENGR 1130.

CEE 1160 Modern Structures (also ENGR 1160)
Fall. 3 credits. Students must register under ENGR 1160. W. Aquino. Course in Introduction to Engineering series. For description, see ENGR 1160.

CEE 2550 AguaClara: Sustainable Water Supply Project
Fall. 3 credits. Meets with CEE 4550. M. L. Weber-Shirk. Course in Introduction to Engineering series. For description, see CEE 4550.

CEE 3040 Uncertainty Analysis in Engineering
Fall. 4 credits. Prerequisite: first-year calculus. J. R. Stedinger. Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Applications include structural reliability, windspeed/flood distributions, pollutant concentrations, and models of vehicle arrivals.

CEE 3080 Introduction to CADD
Fall, spring. 1 credit. Prerequisites: attendance at a first meeting of one section; permission of instructor given after the first week of section meetings. No pre-enrollment allowed. Priority given to engineering students. Course begins first Mon. of each semester. Staff.

CEE 3610 Introduction to Transportation Engineering
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg and J. Mbwana. Introduces technological, economic, and social aspects of transportation. Emphasizes design and functioning of transportation systems and their components. Covers supply-demand interactions; system planning, design, and management; traffic flow; intersection control and network analysis; institutional and energy issues; and environmental impacts.

CEE 3710 Structural Modeling and Behavior
Spring. 4 credits. Prerequisite: ENGR 2020. Corequisite: MATH 2940. Staff. Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/ manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 3720 Intermediate Solid Mechanics
Fall. 4 credits. Prerequisites: MATH 2940, CEE 3710. D. Warner. The course presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course will be a synergy of mathematical modeling, computer simulations, and physical experimentation.

CEE 4000 Senior Honors Thesis
Fall. 3 credits. For students admitted to CEE Honors Program. D. Warner. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 4010 Undergraduate Engineering Teaching in CEE
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 4060 Civil Infrastructure Systems
Fall. 3 credits. Prerequisites: probability and statistics (CEE 3040 or equivalent), or permission of instructor. Recommended: engineering economics (CEE 3230 or equivalent) course. F. Vanek. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Focuses on systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.
CEE 4110 Remote Sensing: Resource Inventory Methods (also CSS 4110) Spring. 3 credits. Prerequisite: permission of instructor. Staff. For description, see CSS 4110.

CEE 4320 Hydrology Spring. 3 credits. Prerequisite: CEE 3310. Intended for undergraduates. LeC concurrent with CEE 6320. W. H. Brutsaert. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 6320.

CEE 4350 Coastal Engineering Spring. 4 credits. Prerequisite: CEE 3310. Taught based on demand; contact professor if interested in course. P. L-F. Liu. Covers the following topics: review of hydromynamics, small-amplitude wave theory; wave statistics; wave-structure interactions; coastal processes.

CEE 4360 Case Studies in Environmental Fluid Mechanics Spring. 4 credits. Prerequisite: CEE 3310 or equivalent. Next offered 2009–2010. E. A. Cowen. An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory—and field—based studies (Cayuga Lake and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on a laboratory/field projects. Course includes a design project.

CEE 4370 Experimental Methods in Fluid Dynamics Spring. 3 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen. Same as CEE 6370 but no project required. For description, see CEE 6370.

CEE 4400 Foundation Engineering Fall. 3 credits. Prerequisite: CEE 3410. P. H. Kallaway. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 4410 Retaining Structures and Slopes Spring. 3 credits. Prerequisite: CEE 3410. T. D. O’Rourke. Covers earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 4440 Environmental Site and Remediation Engineering Spring. 3 credits. Prerequisite: CEE 3410. Next offered 2009–2010. T. D. O’Rourke. Covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 4510 Microbiology for Environmental Engineering Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. R. E. Richardson. Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of Bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; bioremediation, bioenergy, molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 2900 or equivalent.

CEE 4530 Laboratory Research in Environmental Engineering Fall. 3 credits. Prerequisite: CEE 3510 or permission of instructor. J. J. Bisogni, J. M. Gossett, and A. E. Richardson. Laboratory investigations of reactor flow characteristics; acid rain/late chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

CEE 4540 Sustainable Small-Scale Water Supplies Fall. 3 credits. M. L. Weber-Shirk. This course covers the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

CEE 4550 AguaClara: Sustainable Water Supply Project Fall, spring. 3 credits. Prerequisite or corequisite: CEE 4520, 4530, or 4540. Meets with CEE 2550. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in Honduras. For more information see aguacalar.cee.cornell.edu.

CEE 4610 Urban Transportation Planning and Modeling Spring. 3 credits. J. R. Mbwanza. Improving the use of existing facilities transportation infrastructure has become an important objective in transportation engineering and planning. Examines the role of information technologies for effective infrastructure utilization and planning. Focuses specific attention on analyses paradigms to evaluate the benefits of information technologies in transportation systems.

CEE 4640 Transportation Systems Design Spring. 3 credits. Prerequisites: CEE 3610 and CEE 4060 or permission of instructor. M. A. Turnquist. Analysis of capacity and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including congestion pricing. Focus on decision making: networks, and investment strategies.

CEE 4650 Environment/Energy and Transportation Planning and Management Spring. 3 credits. Prerequisites: CEE 3610 or permission of instructor. H. O. Gao. For description, see CEE 6650.

CEE 4710 Fundamentals of Structural Mechanics Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. Next offered 2009–2010. Staff. Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity: numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 4720 Introduction to the Finite Element Method Fall. 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis. Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 4730 Design of Concrete Structures Fall. 4 credits. C. C. Hover. Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements will be replaced with a reinforced concrete framing system. The course explore gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 4740 Design of Steel Structures Spring. 4 credits. Prerequisite: ENGRD 2020 or permission of instructor. C. Earls.
An introductory course focused on the use of solid and structural mechanics to qualify elementary steel building and bridge behavior to enable design.

CEE 4750 Concrete Materials and Construction
Spring. 3 credits. K. C. Hover.
Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

[CEE 4760 Evaluation and Failure of Structures]
Spring. 3 credits. Prerequisites: ENGRD 2020, 2610, and 2030; CEE 3710 and 4730.
Staff.
This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., stress wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.

CEE 4770 Introduction to Composite Materials (also MAE/TAM 4550, MSE 5550)
Fall. 3 credits. P. Petrina.
For description, see TAM 4550.

CEE 4780 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. Enrollment limited to juniors and seniors. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 4810 LRFD-Based Engineering of Wood Structures (also BEE 4791)
Spring. 3 credits. Prerequisite: ENGRD 2020.
For description, see BEE 4810 under "College of Agriculture and Life Sciences."

CEE 4920 Engineers for a Sustainable World: Engineering in International Development
Fall. 3 credits. F. Vanek and P. Doing.
Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local, and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 5021–5022 Design Project
Fall, spring. 3 credits each semester.
Requirement for students in M.Eng. (civil and environmental) program. Staff.
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 5021–5022 Project in Environmental and Water Resources Systems
Fall, spring. 3 credits each semester. Staff.

CEE 5031–5032 Project in Environmental Fluid Mechanics and Hydrology
Staff.

CEE 5041–5042 Project in Geotechnical Engineering
F. H. Kulhawy.
Design of major geotechnical engineering projects.

CEE 5051–5052 Agua Clara: Sustainable Water Supply Project
M. Weber-Shirk.
For more information, seeaguaclarapce.cornell.edu.

CEE 5061–5062 Project in Transportation Engineering
Systems analysis of a substantial transportation service.

CEE 5071–5072 Project in Structural Engineering
C. Earls.
A project-centered course focusing on the design of a major engineering structure.

CEE 5100–5101 Project in Civil Infrastructure Systems
Fall, spring. 3 credits each semester.

CEE 5240 Applied Systems Engineering (also CS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5100)
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. Roundy.
For description, see SYSEN 5100.

CEE 5252 System Architecture, Behavior, and Optimization (also CS 5050, ECE 5130, ORIE 5142, MAE 5920, SYSEN 5200)
Spring. 3 credits. Prerequisites: CEE 5240/CS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5200. Staff.
For description, see SYSEN 5200.

CEE 5290 Heuristic Methods for Optimization (also CS/CIS 5720 ORIE 5530)
Fall. 3 or 4 credits.

CEE 5900 Project Management
Fall, spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focuses on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter.

CEE 5910 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. Staff.
Intensive evaluation of the management aspects of a major engineering project or system.

CEE 5920 Engineering Management Methods
Spring. 3 credits. Prerequisites: CEE 3230 and 3040 or equivalent. M. A. Turnquist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in operations, forecasting, and resource allocation.

CEE 5930 Engineering Management
Spring. 3 credits. Prerequisites: CEE 3230 and 3040 or equivalent. M. A. Turnquist.
Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in operations, forecasting, and resource allocation.

CEE 5940 Economic Methods for Engineering and Management (also ECON 4940)

CEE 5950 Construction Planning and Operations
Fall. 3 credits. P. G. Carr.
The course prepares students for responsibilities in overseeing the engineering and management of construction; on time—on budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction programs. Students study the contracts for engineering, architecture, and construction; focusing on cost estimation and schedule control, responsibilities and risks, and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.

CEE 5960 Management Issues in Forensic Engineering
Fall. 3 credits.
Introduction to Management issues in Forensic Engineering, Contract Administration and...
Dispute Resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer's standard of care and design obligations are explored. The engineer's technical and ethical duties to the client, the contractors, and the public are examined.

**CEE 5970 Risk Analysis and Management (also TOX 5970)**

Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CEE 3040, ENGRD 2700, ILRST 2100, BTRY 3010, or AEM 2100); two semesters of calculus; senior or graduate standing or permission of instructor. J. R. Stedinger.

Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze safety, environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, nuclear hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

**CEE 6015 Special Topics in Remote Sensing**

On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

**CEE 6020 Environmental Seminar**

Fall. 1 credit. Staff. Presents topics of current interest.

**CEE 6021 Seminar—Environmental and Water Resources Systems Analysis**

Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.

Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

**CEE 6025 Special Topics in Environmental and Water Resources Systems Analysis**

Offered on demand. 1–6 credits. D. P. Loucks.

Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

**CEE 6030 Seminar—Hydraulics**

Spring. 1 credit. Requirement for graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. Staff. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

**CEE 6035 Special Topics in Hydraulics**

On demand. 1–6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

**CEE 6045 Special Topics in Geotechnical Engineering**

On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

**CEE 6051 Seminar—Environmental Quality Engineering**

Spring. 1 credit. Prerequisite: graduate students in environmental engineering. R. E. Richardson.

Presentation and discussion of current research in environmental engineering.

**CEE 6055 Special Topics in Environmental Engineering**

On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

**CEE 6060 Seminar—Transportation System Engineering**

Fall, spring. 1 credit. Staff. Presents topics of current interest.

**CEE 6065 Special Topics in Transportation Data**

On demand. 1–6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

**CEE 6070 Seminar—Civil Infrastructure**

Fall, spring. 1 credit. Requirement for first-year graduate students. Staff. Presents topics of current interest.

**CEE 6075 Special Topics in Structural Engineering**

On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

**CEE 6080 Seminar—Engineering Systems and Management**

Fall, spring. 1 credit. Staff. Presents topics of current interest.

**CEE 6095 Special Topics in Engineering Management**

On demand. 1–6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

**CEE 6100 Remote Sensing Fundamentals (also CSS 6100)**

Fall. 3 credits. W. D. Philpot.

Introduction to the principles, equipment, and methods used in remote sensory interpretation of earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

**CEE 6150 Digital Image Processing**

Spring. 3 credits. W. D. Philpot.

An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

**CEE 6200 Water-Resources Systems Engineering**

Spring. 3 credits. Prerequisites: CEE 3250 and 5970 or BEE 4750. D. P. Loucks.

Development and application of deterministic and stochastic optimization and simulation models for aiding in water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, ecological habitat restoration, and water-quality prediction and control.

**CEE 6210 Stochastic Hydrology**

Spring. 3 credits. Prerequisites: CEE 3040 or permission of instructor. Offered on demand. J. R. Stedinger.

Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include: maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operation optimization models.

**CEE 6230 Environmental Quality Systems Engineering**

Fall. 3 credits. Prerequisites: MATH 2940, optimization, and graduate standing or permission of instructor. C. A. Shoemaker.

Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include: regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

**CEE 6290 Numerical Methods for Engineers**

Fall. 3 credits. P. J. Diamessis.

The primary focus is algorithm implementation within the context of engineering applications (spanning fluid and solid/fracture mechanics and beyond). Student projects will include parallel implementation using resources at the Theory Center. Course topics will include: Sources of error and error propagation, eigenvalue/eigenvector computation, solution of linear systems via direct or iterative methods and issues of parallel implementation, least squares approximation of lab/simulation data, solution of non-linear equations, interpolation in one and two dimensions, fast Fourier transforms (serial vs. parallel) and wavelets.

**CEE 6300 Computational Fluid Dynamics for Environmental Flows**

Spring. 3 credits. Course offered on demand. Please contact professor if interested in this course. P. J. Diamessis.

Higher-order spatial discretization schemes (spectral and compact-finite difference). One-dimensional nonlinear convection, diffusion, and Burger’s equations (Burgers eqn., Korteweg-DeVries eqn. and Shallow Water eqns.) and
implications for environmental fluid flow simulations. Two-dimensional problems and fast iterative solvers. Numerical solution of the incompressible Navier-Stokes equations in an environmental/geophysical context. Advanced topics may include: Introduction to turbulence subgrid scale modeling in stratified/rotating flow, free surface flow modeling and representation of complex topography.

CEE 6310 Computational Simulation of Flow and Transport in the Environment
Spring. 3 credits. Prerequisites: MATH 2940 or equivalent, ENGRD 3200 or experience in numerical methods and programming, and elementary fluid mechanics.

Staff. Covers fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective diffusion in one, two, and three dimensions; anisotropy; and additional terms for reactive substances. Teaches various numerical methods including finite difference, finite elements, and boundary elements.

CEE 6320 Hydrology
Spring. 3 credits. Prerequisite: CEE 3510. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes; hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

[C EE 6340 Boundary Layer Meteorology] Fall. 3 credits. Prerequisite: CEE 3510 or permission of instructor. Next offered 2008–2009. Please contact professor if interested in this course. W. H. Brutsaert. Physical processes in the lower atmospheric environment: turbulent transport in the atmosphere; boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy; flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

[C EE 6350 Small and Finite Amplitude Water Waves] Spring. 3 credits. Taught based on demand; please contact professor if interested in this course. W. Liu. Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

CEE 6360 Environmental Fluid Mechanics
Spring. 3 credits. Taught based on demand; please contact professor if interested in this course. E. A. Cowen. Covers analytic and dimensional perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

CEE 6370 Experimental Methods in Fluid Dynamics (also MAE 6272)
Spring. 4 credits. Pre- or corequisites: CEE 3510 or equivalent and CEE 3040 or equivalent. E. A. Cowen. Introduction to experimental data collection and analysis, in particular as they pertain to fluid flow. Covers control of experimental testing, analog and digital data acquisition systems, separate sampling theory, digital signal processing, and uncertainty analysis. Also covers experimental devices, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

CEE 6400 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 3410. F. H. Kulhawy.

Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 6410 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 3410. T. D. O’Rourke.

Covers Earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavations and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 6440 Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 3410 or equivalent or permission of instructor. Next offered 2009–2010. T. D. O’Rourke. Covers principles of hydrogeology, contaminant migration, and remediation technologies relating to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 6530 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. J. J. Bisogni. Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 6540 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 6530 or CHEM 2870–2880. J. J. Bisogni. Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 6530.

CEE 6550 Transport, Mixing, and Transformation in the Environment

CEE 6560 Physical/Chemical Process Remediation Engineering
Fall. 3 credits. Prerequisite: CEE 6530 or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 6570 Biological Processes
Spring. 3 credits. Prerequisites: introductory microbiology and CEE 6560, or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioenergetics analysis, stoichiometry, biokinetic, and design of biological treatment processes.

CEE 6580 Biodegradation and Biocatalysis
Spring. 3 credits. Prerequisites: CEE 4510 or BIOMI 2900 or equivalent; CEE 3510 or CHEM 3500 or permission of instructor. R. E. Richardson. Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired biocconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Student teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.
the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 6750 Concrete Materials and Construction
Spring. 3 credits. K. C. Hover. Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, concrete mixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 6760 Advanced Composite Materials (also TAM 6550, MAE/MSE 6550)
Spring. 4 credits. CEE 4770/MAE 4550/MAE 5550/TAM 4550 not a prerequisite but excellent background.
For description, see TAM 6550.

CEE 6770 Engineering Analysis
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2009–2010.
M. D. Grigoriu.

CEE 6780 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu.
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

CEE 6790 Evaluation and Failure of Structures

CEE 6860 Civil Infrastructure Systems
Fall. 3 credits. Prerequisites: probability and statistics course (CEE 3040 or equivalent), or permission of instructor. Recommended: engineering economics course (CEE 3230 or equivalent). S–U or letter grades. F. Vanek. Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 6900 Creativity, Innovation, and Leadership
Spring. 3 credits. Pre- or corequisite: CEE 5800 or permission of instructor. F. J. Wayno.
Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in both. Not incidentally, the course will also help students who take it to become more creative themselves. The course is highly participative and has a flow that moves from the individual—to the group—to the organization, with theory; research results, and practical skills—development woven seamlessly together.

CEE 6910 Principles of Project Leadership (also SYSEN 6910)
Spring. 3 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the “technical” tools of project management (e.g., methods for planning, scheduling, and control) and the “human” side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter. Offered as a distance learning course only.

CEE 6930 Public Systems Modeling
Fall. 4 credits. D. P. Loucks.
An introduction to the art of model building and use, especially related to public sector planning and management issues. The course will focus on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this “modeling technology” is to help us generate and communicate information that can assist and better inform public decision making.

CEE 6940 Research in Engineering Management
On demand. 1–6 credits. Staff.
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7010 Research—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work is in the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 7020 Environmental and Water Resources Systems Analysis Research
On demand. 1–6 credits. Staff.
The student may select an area of investigation in environmental or water resources systems problems.

CEE 7030 Research in Environmental Fluid Mechanics and Hydrology
On demand. 1–6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

CEE 7040 Research in Geotechnical Engineering
On demand. 1–6 credits. Staff.
For students who want to pursue a particular geotechnical topic in considerable depth.

CEE 7050 Research in Environmental Engineering
On demand. 1–6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of
laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

**CEE 7070 Research in Structural Engineering**
On demand. 1–6 credits. Staff.
Pursues a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

**CEE 7073 Civil and Environmental Engineering Materials Project**
On demand. 1–3 credits. Staff.
Individual projects or reading and study assignments involving engineering materials.

**CEE 7360 Turbulence and Turbulent Mixing in Environmental Stratified Flows**
Spring. 3 credits. Prerequisite: CEE 6550 or a second course in fluid mechanics or with instructor's permission. Course offered on demand. Please contact professor if interested in the course. P. J. Diemans.
Fundamentals of stably stratified flows, stratified homogeneous turbulence (spectra, lengthscales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include: fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.

**CEE 7400 Engineering Behavior of Soils**
Fall. 3 credits. Prerequisite: CEE 3410. H. E. Stewart.

**CEE 7410 Rock Engineering**
Fall. 3 credits. Prerequisite: CEE 3410 or permission of instructor. Recommended: Introductory geology. T. D. O'Rourke.
Geological and mineralogical classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers: stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

**CEE 7440 Advanced Foundation Engineering**
Spring. 2 credits. Prerequisite: CEE 6400.
Continuation of CEE 6400, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

**CEE 7450 Soil Dynamics**
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

**CEE 7460 Embankment Dam Engineering**
Spring. 2 credits. Prerequisites: CEE 6410 and 7410, or permission of instructor. Next offered 2009–2010. F. H. Kulhawy.

**CEE 7620 Practicum in Modeling Transportation Systems**
Fall. 3 credits. Prerequisites: CEE 6610, 6620, and 6630. L. K. Noizick.
Continuation of CEE 6400, with detailed analysis; design of foundations on, and including metals, concrete, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

**CEE 7710 Stochastic Mechanics in Science and Engineering**
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2009–2010. M. D. Grigoriu.
Review of probability theory, stochastic processes, and its formula with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations with random/deterministic coefficients and random/deterministic input. Applications include: solution of Laplace, transport, Schrodinger, and other differential partial differential equations; dynamic systems subjected to Gaussian and non-Gaussian noise; random eigenvalue problems; and homogenization, structure evolution, and pattern formation for random heterogeneous and random media.

**CEE 7720 Random Vibration**
Fall. 3 credits. Prerequisites: MAE 3260 and ENGRD 2700, or equivalent, and permission of instructor. Next offered 2008–2009. M. D. Grigoriu.
Reviews random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolomogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

**CEE 7730 Structural Reliability**
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2009–2010. M. D. Grigoriu.
Review of probability theory, practical measures for structural reliability, second-moment reliability, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.

**CEE 7740 Advanced Structural Concrete**
Fall. 3 credits. Next offered 2009–2010. Staff.
Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, tension, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.

**CEE 7750 Nonlinear Finite Element Analysis**
Spring. 3 credits. W. Aquino.
Covers fundamental aspects of nonlinear finite element analysis including geometric and material nonlinearity. Also covers total and updated lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

**CEE 7760 Advanced Topics in Stability**
Spring. 3 credits. Prerequisite: CEE 3740 or equivalent. Next offered 2009–2010. C. Earls.

**CEE 7770 Computational Solid and Structural Mechanics**
Spring. 3 credits. Staff.
This course covers the formulation and numerical solution of problems of solids and structures using the finite element method. Topics include a review of solid mechanics: nonlinear kinematics, invariance, first and second law of thermodynamics, and constitutive equations with internal variables; strong forms and weak forms; implicit and explicit algorithms; variants of Newton's method; and Lagrangian and Eulerian formulations. Application topics are chosen from the following areas: 3D finite elasticity, fully nonlinear beams and shells, distributed and discrete damage, contact-impact, and plasticity.

**CEE 7790 Advanced Behavior of Metal Structures**
Fall. 4 credits. Prerequisite: CEE 3410 or permission of instructor. C. Earls.
An advanced course focused on the use of solid and structural mechanics to quantify more complex aspects of metal structure behavior so as to enable more sophisticated approach to design.

**CEE 8100 Thesis—Remote Sensing**
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. W. D. Philipot.
The student selects a thesis research topic in conjunction with others working on the same topic.

**CEE 8200 Thesis—Environmental and Water Resource Systems**
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.
in conjunction with others working on the same topic.

**CEE 8300 Thesis—Environmental Fluid Mechanics and Hydrology**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**CEE 8400 Thesis—Geotechnical Engineering**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**CEE 8500 Thesis—Environmental Engineering**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**CEE 8600 Thesis—Transportation Systems Engineering**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**CEE 8700 Thesis—Structural Engineering**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**CEE 8800 Thesis—Civil Infrastructure Systems**

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.

The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

**Computer Science**

The Department of Computer Science is part of the College of Arts and Sciences, Computing and Information Science (CIS), and the College of Engineering. For complete course descriptions, see the Computer Science listing in the CIS section.

**CS 1109 Fundamental Programming Concepts**

Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

**CS 1110 Introduction to Computing Using Java**

Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus), but no programming experience.

**CS 1112 Introduction to Computing Using MATLAB**

Fall, spring, 4 credits. Corequisite: MATH 1110, 1119, or equivalent. Assumes student is comfortable with mathematics (at the level of one semester of calculus) but has no prior programming experience.

**CS 1113 Computing Using Java—Honors**

Fall or spring. 4 credits.

**CS 1114 Introduction to Computing Using MATLAB and Robotics**

Spring. 4 credits. Prerequisite: some programming experience. Next offered 2009–2010.

**CS 1130 Transition to Object-Oriented Programming**

Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

**CS 1132 Transition to MATLAB**

Fall, spring, summer. 1 credit. Prerequisite: one course in programming. S–U grades only.

**CS 1301 Introduction to Programming Applications**

Fall, weeks 1–7. 2 credits. Students must enroll in both CS 1301 and 1302. For description, see INFO 1301 in CIS section.

**CS 1302 Introduction to Designing Web Applications**

Fall, weeks 8–14. 2 credits. Students must enroll in both CS 1301 and 1302. Prerequisite: CS 1301 or equivalent knowledge. For description, see INFO 1302 in CIS section.

**CS 1610 Computing in the Arts**

Fall, 3 credits. Recommended: good comfort level with computers and some of the arts.

**CS 1620 Visual Imaging in the Electronic Age**

Fall. 3 credits. For description, see ART 1700.

**CS 1710 Introduction to Cognitive Science**

Fall, summer. 3 credits. Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 is taken first. S–U grades only.

**CS 2022 C++ Programming**

Fall, 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

**CS 2026 Introduction to C#**

Spring, usually weeks 5–8. 1 credit. Prerequisite: CS/ENGRD 2110 or equivalent experience. S–U grades only.

**CS 2042 Unix Tools**

Fall, usually weeks 5–8. 1 credit. Prerequisite: one programming course or equivalent programming experience. S–U grades only.

**CS 2044 Advanced UNIX Programming and Tools**

Spring, usually weeks 5–8. 1 credit. Prerequisite: CS 2042 or equivalent. S–U grades only.

**CS 2110 Object-Oriented Programming and Data Structures**

Fall, spring, summer. 3 credits. Prerequisite: CS 1110, CS 1130, or CS 1113 or CS 1112 if completed before Fall 2007 or equivalent course in Java or C++.

**CS 2111 Programming Practicum**

Fall, spring. 1 credit. Prerequisite: one course in programming or permission of instructor.

**CS 2300 Intermediate Design and Programming for the Web**

Spring. 3 credits. Prerequisite: CS 1301 and 1302 strongly recommended. For description, see INFO 2300 in CIS section.

**CS 2300 Discrete Structures**

Fall, spring. 3 credits. Prerequisite: one course in programming or permission of instructor.

**CS 2550 Networks**

Spring. 4 credits. Prerequisite: none. For description, see CS 2500.

**CS 3110 Data Structures and Functional Programming**

Fall, spring. 4 credits. Prerequisite: CS 2110 and 2111 or equivalent programming experience. Prerequisite: CS 2800. Should not be taken concurrently with CS 3410 or 3420.

**CS 3220 Introduction to Scientific Computation**

Spring, summer. 3 credits. Prerequisite: one programming course and MATH 2210 or 2940; knowledge of discrete probability and random variables at level of CS 2800.

</tbody>
</table>
[CS 5780] Empirical Methods in Machine Learning and Data Mining
Fall or spring. 4 credits. Prerequisites: CS 2800 and 3110 or equivalent. Next offered 2009–2010.

[CS 5846] Decision Theory I (also ECON 4760/6760)
Fall. 4 credits. Prerequisite: mathematical sophistication. For description, see ECON 4760.

[CS 6110] Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

[CS 6210] Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years; next offered 2009–2010.

[CS 6220] Sparse Matrix Computation
Fall. 4 credits. Prerequisite: CS 6210. Offered alternate years.

[CS 6240] Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210), differential equations, and knowledge of MATLAB.

[CS 6250] Database Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.

[CS 6262] Advanced Database Systems
Fall. 4 credits.

[CS 6410] Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2008.

[CS 6450] Research in Computer Networks
Fall or spring. 4 credits. Prerequisite: CS 4450 or permission of instructor. Next offered fall 2008.

[CS 6460] Peer-to-Peer Systems

[CS 6522] Biological Sequence Analysis
Fall. 4 credits. Prerequisite: none.

[CS 6620] Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisite: CS 4620 and 4621 or 5620 or permission of instructor.

[CS 6630] Realistic Image Synthesis
Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus.

[CS 6650] Computational Motion
Fall. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered alternate years.

[CS 6670] Machine Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Next offered 2009–2010.

[CS 6700] Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: CS 4700 or permission of instructor. Next offered 2009–2010.

[CS 6740] Advanced Language Technologies (also INFO 6300)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites. Next offered fall 2008.

[CS 6746] Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010–2011.

[CS 6766] Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2009–2010.

[CS 6780] Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor. Next offered 2009–2010.

[CS 6782] Probabilistic Graphical Models (also BTRY 6790)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4600 or equivalent). For description, see BTRY 6790.

[CS 6810] Theory of Computing
Spring. 4 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor.

[CS 6820] Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

[CS 6822] Advanced Topics in Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 6820 or permission of instructor. Next offered spring 2009.

[CS 6830] Cryptography
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematical proofs).

[CS 6840] Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Next offered 2009–2010.

[CS 6850] The Structure of Information Networks (also INFO 6850)
Fall or spring. 4 credits. Prerequisite: CS 4820.

[CS 7090] Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

[CS 7190] Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: CS 6110 or permission of instructor. S–U grades only.

[CS 7192] Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

[CS 7220] Topics in Database Systems
Fall, spring. 4 credits. S–U grades only.

[CS 7390] Database Seminar
Spring. 1 credit. S–U grades only. Prerequisite: CS 6322 or permission of instructor.

[CS 7410] Topics in Systems
Fall or spring. 3 credits. Prerequisite: permission of instructor.

[CS 7490] Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

[CS 7690] Computer Graphics Seminar
Fall, spring. 3 credits.

[CS 7726] Evolutionary Computation and Design Automation (also MAE 6500)
Fall. 4 credits. Prerequisite: programming experience or permission of instructor.

[CS 7790] Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7794] Seminar in Natural Language Understanding
Fall, spring. 2 credits.

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7999] Independent Research
Fall, spring. Prerequisite: permission of computer science advisor. Independent research or master of engineering project.

[CS 9999] Thesis Research
Fall, spring. Prerequisite: permission of computer science advisor. S–U grades only. Doctoral research.

**EARTH AND ATMOSPHERIC SCIENCES**

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or College of Agriculture and Life Sciences section.

EAS 1101 Introductory Geological Sciences (To Know Earth)
Fall. 3 credits. C. Andronicos.

EAS 1108 Earth in the News
Summer. 3 credits. S. L. Losh.

EAS 1109 Dinosaurs
Fall. 1 credit. J. L. Cisne.

EAS 1190 Fossil Preparation
Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Cisne.

EAS 1220 Earthquake! (also ENGR 1220)
Spring. 3 credits. L. Brown.

<tr>
<td>EAS 4010</td>
<td>Fundamentals of Energy and Mineral Resources</td>
<td>Fall. 3 credits. Previous course in geology helpful but not necessary. L. Cathles.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4040</td>
<td>Geodynamics</td>
<td>Spring. 3 credits. Prerequisite: calculus and calculus-based physics course or permission of instructor. Offered alternate years. J. Phipps Morgan.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4050</td>
<td>Active Tectonics</td>
<td>Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. S-U or letter grades. Offered alternate years; next offered 2009–2010. R. Lohman.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4170</td>
<td>Field Mapping in Argentina</td>
<td>Summer. 3 credits. Prerequisites: introductory EAS course and EAS 4260 or EAS 3040. Offered alternate years. S. Mahlburg Kay.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4250</td>
<td>European Discovery of Impacts and Explosive Volcanism</td>
<td>Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. Offered alternate years. C. Andronicos.</td>
<td>4</td>
<td></td>
</tr>
<tr>
<td>EAS 4340</td>
<td>Exploration Geophysics</td>
<td>Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years. L. D. Brown.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4350</td>
<td>Statistical Methods in Meteorology and Climatology</td>
<td>Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4370</td>
<td>Geophysical Field Methods (also ARKEO 4370)</td>
<td>Fall. 3 credits. Prerequisite: PHYS 2208 or 2213 or permission of instructor. Offered alternate years; next offered 2009–2010. J. Phipps Morgan.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4400</td>
<td>Seminar: Climate Science, Impacts and Mitigation</td>
<td>Fall. 2 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2009–2010. N. Mahowald.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>EAS 4470</td>
<td>Physical Meteorology</td>
<td>Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years; next offered 2009–2010. A. T. DeGaetano.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4510</td>
<td>Synoptic Meteorology II</td>
<td>Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>EAS 4530</td>
<td>Mineralogy</td>
<td>Fall. 4 credits. Prerequisites: EAS 1101 or 2200 and CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.</td>
<td>4</td>
<td></td>
</tr>
<tr>
<td>EAS 4540</td>

</tbody>
</table>
EAS 6930  Special Topics in Geological Sciences
Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff.

EAS 7000–7990  Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

EAS 7110  Upper Atmospheric and Space Physics
Fall or spring. 1–6 credits. L. H. Lysell. Seminar.

EAS 7220  Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 7310  Advanced Topics in Remote Sensing and Geophysics
M. Pritchard.

EAS 7330  Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 7500  Satellite Remote Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

EAS 7510  Petrology and Geochemistry
R. W. Kay.

EAS 7550  Advanced Topics in Tectonics and Geochemistry
Fall. 3 credits. J. Phipps Morgan.

EAS 7570  Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 7620  Advanced Topics in Paleobiology
W. D. Allmon.

EAS 7710  Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 7730  Paleobiology
J. L. Cisne.

EAS 7750  Advanced Topics in Oceanography
C. H. Greene.

EAS 7800  Earthquake Record Reading
Fall. M. Barazangi.

EAS 7810  Exploration Geophysics
L. D. Brown.

EAS 7930  Andes-Himalaya Seminar

EAS 7950  Low-Temperature Geochemistry
1–5 credits. S–U grades only. L. A. Derry.

EAS 7960  Geochemistry of the Solid Earth
W. M. White.

EAS 7970  Fluid-Rock Interactions
L. M. Cathles.

EAS 7990  Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EAS 8500  Master’s-Level Thesis Research in Atmospheric Science
Fall, spring. Credit. S–U grades only. Graduate faculty. Thesis research for atmospheric science master’s students.

EAS 9500  Graduate-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. students only. Exams: before ‘A’ exam has been passed.

EAS 9510  Doctoral-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. candidates. After ‘A’ exam has been passed.

ELECTRICAL AND COMPUTER ENGINEERING

ECE 2910–2920  Sophomore Electrical and Computer Engineering Group Projects
2930–2939, fall; 2940–2949, spring. 1–8 credits.

ECE 2990  Inventing an Information Society (also AMST/ENGRG 2980, HIST 2920, INFO 2921, STS 2921)
Spring. 3 credits. Approved for humanities distribution. For description, see ENGRG 2980.

ECE 3030  Electromagnetic Fields and Waves
Fall, summer. 4 credits. Prerequisites: grade of C or better in: PHYS 2213, PHYS 2214, MATH 2930, MATH 2940, and ECE/ENGRD 2100. Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell’s equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, methods of images, reflection, refraction at media interfaces; guided waves in transmission lines, Smith charts, transients, metallic and dielectric waveguides, radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

ECE 3060  Introduction to Quantum and Statistical Physics
Fall, 4 credits. Prerequisites: PHYS 2214, MATH 2940, and ECE 3150 or co-registration.

ECE 3100  Introduction to Probability and Random Signals
Fall, summer. 4 credits. Prerequisite: MATH 2940. May be used in place of ENGRD 2700 to satisfy engineering distribution requirement.

ECE 3110  Introduction to Probability as a Basis for Modeling Random Phenomena and Signals, Calculating the Response of Systems, and Making Estimates, Inferences, and Decisions in the Presence of Chance and Uncertainty. Applications are given in such areas as communications, device modeling, and information theory. Material includes:
analyze and design basic transistor modules in digital and analog circuits including biasing, amplifiers, filters, logic gates, and memory. We will introduce intuitive design methods to map circuit specifications to transistor topology, as well as first-order time-constant estimation. SPICE and measurement tabs will accompany the progress in lectures for hands-on experiences.

**ECE 3200 Networks and Systems**
Fall. 4 credits. Prerequisites: ECE 2200 and MATH 2940. Next offered 2009–2010. Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

**ECE 3250 Fundamental ECE Mathematics**
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 2200 or permission of instructor.
Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions; linear algebra; inner products and orthogonal representations; basic ideas from multivariable calculus; and elementary convex analysis.

**ECE 3910–3920 Junior Electrical and Computer Engineering Independent Project**
3910, fall; 3920, spring. 1–8 credits. For description, see ECE 3910–3920.

**ECE 3930–3939; 3940–3949 Junior Electrical and Computer Engineering Group Project**
3930–3939; fall; 3940–3949, spring. 1–8 credits. For description, see ECE 3930–3939; 3940–3949.

**ECE 4070 Physics of Semiconductors and Nanostructures**
Spring. 4 credits. Prerequisites: ECE 3060 or AEP 3610 and AEP 4230.
This course covers the basic state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equation, semiconductor homo- and heterojunctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high frequency response of electrons in solids and plasmons.

**ECE 4110 Random Signals in Communications and Signal Processing**
Fall. 4 credits. Prerequisite: ECE 2200 and ECE 3100 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queueing processes, power spectral densities, Gaussian random process. Element of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ECE 4130 Introduction to Nuclear Science and Engineering (also MAE 4580, TAM 4130)**
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940. For description, see TAM 4130.

**ECE 4150 GPS: Theory and Design (also MAE 4150)**
Fall. 4 credits. Culminating design experience (CDE) course. Prerequisite: a 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260). Analysis of GPS operating principles and engineering practice with a culminating design exercise: Navigational algorithms, receiver analysis, error investigation, dilution of precision, antennas, differential GPS.

**ECE 4210 Signal Processing Algorithms in Support of Painting Analysis**
Fall. 3 credits. Prerequisites: ECE 2200 and MATH 2940. Recommended. ECE 3250.
The analysis of fine art paintings by art historians and conservation specialists involves the close examination of various images (e.g., visible light, x-ray) of the painting. This course will focus on the paintings of Vincent Van Gogh and highlight case studies of recent technical examinations. The signal processing tasks encountered will be extracted and rudimentary solutions proposed based on fundamental signal processing techniques. Students will assess and apply “starter” schemes, performing (a) periodicity extraction (e.g., for canvas thread counting), (b) set membership discrimination (e.g., for artist identification), and (c) multiple image alignment (e.g., for x-ray stitching). In this emerging application for signal processing, several of these tasks have no widely adopted computer-assisted schemes. MATLAB will be used for implementation of the algorithms on high-resolution image data provided by the Van Gogh Museum (Amsterdam, the Netherlands).

**ECE 4250 Digital Signal Processing**
Fall. 4 credits. Prerequisites: ECE 2200 and 3100.
Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are then covered, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

**ECE 4260 Applications of Signal Processing**
Spring. 4 credits. Culminating Design Experience (CDE) course. Prerequisite: ECE 4250 or permission of instructor.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.
ECE 4300 Lasers and Optical Electronics  
Fall. 4 credits. Prerequisite: ECE 3030 or equivalent.  
Introduction to the operation and application of lasers. Cover diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

ECE 4320 MicroElectro Mechanical Systems (MEMS)  
Fall. 4 credits. Prerequisite: ECE 3150 or permission of instructor.  
Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/m-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ECE 4330 Microwave Theory, Devices, and Applications  
Fall. 4 credits. Prerequisite: ECE 3030.  
Introduction to the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course will cover the considerations that must be appreciated when the operating frequency approaches or exceeds GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for active and passive elements as well as low noise amplifier design.

ECE 4370 Fiber and Integrated Optics  
Spring. 4 credits. Culuminating design experience (CDE) course. Prerequisite: ECE 3030 or equivalent.  
Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides and analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

ECE 4450 Computer Networks and Telecommunications  
Fall. 4 credits. Prerequisites: ECE 3140 or CS 3420 and a course in probability.  
Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics that are covered include data transmission and data encoding, data link control, circuit vs. packet switching. Asynchronous Transfer Mode, local area network technology, network interconnections, protocol (OSI and TCP/IP), network security, and multimedia. Emphasis is placed on performance evaluation.

ECE 4510 Electric Power Systems I  
Fall. 4 credits. Prerequisite: ECE 3200 or equivalent.  
Acquaints students with modern electric power system analysis and control. Stresses applications techniques appropriate for the restructured industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement systems.

ECE 4520 Electric Power Systems II  
Spring. 4 credits. Prerequisite: ECE 3200 or permission of instructor.  
Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation objectives and methods. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

ECE 4530 Analog Integrated Circuit Design  
Fall. 4 credits. Culuminating design experience (CDE) course. Prerequisite: ECE 3150 or equivalent.  
Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Last techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

ECE 4570 Silicon Device Fundamentals  
Fall. 4 credits. Prerequisites: ECE 3150 and 3060 or MSE 2620 or AEP 4500.  
The course teaches fundamental principles on semiconductor carrier statistics, band diagrams, pn-junction diodes, heterojunctions, Schottky diodes, BJTs, MOS capacitor and MOSFET. Emphasis is put on the MOSFET designs for advanced VLSI technology from its physical structure, accurate modeling, manufacturability and applications. Device designs will include short channel effects, gate-stack alternatives, band engineering, and strain engineering. By using computer simulation and actual data, the course will culminate in a design project dealing with technical concerns in current VLSI industry. The goal for this course is to train circuit, device, and process engineers for semiconductor technology research and development.

ECE 4670 Digital Communication Receiver Design  
Fall. 4 credits. Culuminating design experience (CDE) course. Prerequisite: ECE 2200.  
Next offered 2009–2010. Introduction to broadband digital receiver design. Topics include PAM and QAM modulation and down-conversion, pulse-shaping, matched filtering, carrier frequency and phase recovery, band-timing synchronization, packet marker synchronization, adaptive linear equalization, and coding. Course project: composition and testing of a MATLAB-based software receiver.

ECE 4680 Telecommunication Systems  
Spring. 4 credits. Prerequisite: ECE 4670 or permission of instructor. Recommended: ECE 4110. Next offered 2009–2010.  
Quadrature amplitude modulation receiver design, including I/Q mismatch compensation, carrier recovery (using Costas loop and phase-locked loop), baud-timing (using bandwidth power optimization), and adaptive equalization (trained, blind, fractionally spaced, and using decision feedback).

ECE 4720 Feedback Control Systems (also CHEME 4720, MAE 4780)  
Fall, spring. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor.  
For description, see MAE 4780.

ECE 4740 Digital VLSI Design  
Spring. 4 credits. Prerequisite: ECE 3150.  
Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include: CMOS logic, layout, and timing, computer-aided design and analysis tools, and electrical and performance considerations.

ECE 4750 Computer Architecture (also CS 4420)  
Fall. 4 credits. Culuminating design experience (CDE) course. Prerequisites: ENGRD 2300 and ECE 3140/CS 3420. Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance memory hierarchies. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.

ECE 4760 Digital Systems Design Using Microcontrollers  
Spring. 4 credits. Culuminating design experience (CDE) course. Prerequisite: ECE 3140/CS 3420. ECE 3150 highly recommended.  
Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction on the hardware and high-level design tools to be employed.

ECE 4820 Plasma Processing of Electronic Materials (also MSE 4820)  
Spring. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Offered if sufficient demand.  
Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing are discussed in detail.
ECE 4840  Introduction to Controlled Fusion: Principles and Technology (also MAE 4950, NSE 4840)
Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and physical sciences.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: fuels and conditions required for fusion power and basic fusion-reactor concepts; fundamentals of aspects of plasma physics relevant to fusion plasmas and basic engineering problems for a fusion reactor; and an engineering analysis of proposed magnetic and/or interlial confinement fusion-reactor designs.

ECE 4870  Introduction to Radar and Remote Sensing (also EAS 4870)
Fall. 3 credits. Prerequisites: ECE 2200 and 4860 (or grade of B or better in ECE 3050). For description, see EAS 4870 in the College of Arts and Sciences.

ECE 4880  Radio Frequency (RF) Circuits and Systems
Spring. 4 credits. Prerequisite: ECE 3150 or equivalent.
Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio, and radar astronomy. Computer-aided circuit analysis. Six laboratory sessions.

ECE 4910–4920  Senior Electrical and Computer Independent Engineering Project
4910, fall; 4920, spring. 1–8 credits.
For description, see ECE 2910–2920.

ECE 4930–4939; 4940–4949  Senior Electrical and Computer Engineering Group Project
4930–4939, fall; 4940–4949, spring. 1–8 credits.
For description, see ECE 2930–2939, 2940–2949.

ECE 4950–4990  Special Topics in Electrical and Computer Engineering
Spring. 1–4 credits.
Seminar, special interest, or temporary course.

ECE 5020  Biomedical System Design (also BME 5020)
Spring. 4 credits. Co- or prerequisite: at least one of ECE 4250, 4760, 4530.
Introduces techniques of measuring and conditioning low-level (biological) signals. Topics include special signal to noise improvement circuits for analog signals, techniques to remove common-mode and correlated noise, and computer-aided techniques for analyzing sampled data. Final six or seven weeks devoted to designing/prototyping a safe and effective “ambulatory microprocessor-controlled blood pressure monitor.” Formal design document is required.

ECE 5120  Applied Systems Engineering I (also CEE/CS 5040, MAE 5910, ORIE 5120, SYSEN 5100)
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.
For description, see MAE 5910.

ECE 5130  Applied Systems Engineering II (also CEE/CS 5050, MAE 5920, ORIE 5130, SYSEN 5200)
Spring. 3 credits. Prerequisite: ECE 5240/CS 5040, ECE/EE ORIE 5120, or MAE 5910.
For description, see MAE 5920.

ECE 5180  Principles of Medical Imaging (also VTMED 6180, BME 6180)
Fall. 1–3 credits. Prerequisites: 3-credit enrollment requires functional knowledge and skills of linear algebra, calculus, Fourier transformation, and calculus-based physics.
For description, see BME 6180.

ECE 5210  Theory of Linear Systems (also MAE 5210)
Fall. 3 credits. Prerequisite: MAE 3260, ECE 5200, or permission of instructor. Recommended: good background in linear algebra and calculus/complex variable equations. For description, see MAE 5210.

ECE 5310  Applied Quantum Optics for Photonics and Optoelectronics
Spring. 4 credits. Prerequisites: ECE 3060 and 4070, or PHYS 443. Next offered 2009–2010.
Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photonic states, vacuum fluctuations, noise and quantum Langevin equations, matter-phonon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

ECE 5330  Semiconductor Lasers
Fall. 4 credits. Prerequisites: ECE 4300, ECE 4570, or permission of instructor.
Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research topics. A term project and paper are required.

ECE 5350  Semiconductor Physics
Fall. 4 credits. Prerequisites: ECE 4070 and 4570, or permission of instructor. Offered alternate years from ECE 5370.
Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects.

ECE 5360  Nanofabrication of Semiconductor Devices (also MSE 5410)
Fall. 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.
Introduction to modern nanofabrication technologies used to produce integrated circuits. Students perform a series of fabrication steps including lithography, metallization, plasma etching and annealing to realize working semiconductor devices (Schottky diodes, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each will be tested to verify the success (or failure) of the fabrication process.

ECE 5370  Nanoscale Devices, Circuits, and Physics
Fall. 4 credits. Prerequisites: ECE 4570 or permission of instructor. Offered alternate years from ECE 5350; next offered 2009–2010.
An integrated study connecting semiconductor physics with properties of electronic and optic devices at the nanoscale and the use of electronic devices in circuits. Topics include electronic and optic phenomena in confined structures and in nanoscale limits — single electron phenomena, nanoscale quantum and size effects such as in tunneling and optical transitions, transistor operation in limited scattering limits, plasmonics, molecular transport, interface effects, and the unification of device attributes with implementation in circuits.

ECE 5470  Computer Vision
Fall. 4 credits. Prerequisites: ECE 2200 (or CS 2800 and 3420) or permission of instructor.
Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

ECE 5480  Digital Image Processing
Spring. 4 credits. Prerequisites: ECE 4110, ECE 4250, and familiarity with linear algebra. Next offered 2009–2010.
Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis is placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ECE 5540  Advanced Analog VLSI Circuit Design
Spring. 4 credits. Prerequisite: ECE 4530.
Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog systems, and Nyquist-rate data converter design.

ECE 5580  Compound Semiconductor Electronics
Spring. 3 or 4 credits. 4 with a project.
Prerequisite: ECE 4570 or equivalent.
Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices, including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor
devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ECE 5620 Fundamental Information Theory
Spring. 4 credits. Prerequisite: ECE 4110 or equivalent.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length coding. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

[ECE 5640 Detection and Estimation](#)
Spring. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor. Next offered 2009–2010.

ECE 5660 Fundamentals of Networks
Fall. 4 credits. Prerequisite: ECE 3100 or equivalent course in probability. Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols' operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov Chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and wired networks are illustrated by examples from numerous practical systems. Discussions of some classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

ECE 5680 Mobile Communication Systems
Spring. 4 credits. Prerequisites: ECE 4110 and 4670.
Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

ECE 5720 Parallel Computer Architecture (also CS 5722)
Fall. 4 credits. Prerequisite: ECE 4750.
Principles and trade-offs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

[ECE 5740 Advanced Digital VLSI](#)
Fall. 4 credits. Prerequisites: ECE 3140 and ECE 4740. Next offered 2009–2010.
Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as computer programs, circuit compilation, and electrical optimizations. Students will complete a group project of the design of a microprocessor.

ECE 5750 Advanced Microprocessor Architecture
Spring. 4 credits. Prerequisite: ECE 4750 or CS 4420.
This course is a revised version of the former ECE 575 High-Performance Microprocessor Architecture. In addition to performance enhancement techniques of modern single- and multicores, the course will also cover reconfigurable architecture, on-chip interconnect, and non-performance issues such as security and verification.

ECE 5760 Advanced Microcontroller Design
Fall. 4 credits. Prerequisites: ECE 4750 and ECE 4760 or equivalent.
Design of system-on-chip applications. Students working in pairs design, debug, and construct several systems that illustrate the design of embedded processors with custom peripherals running a real-time operating system. The content focuses on laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

ECE 5780 Computer Analysis of Biometric Images
Spring. 4 credits. Prerequisite: permission of instructor, engineering, biomedical, or biology background.
Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

ECE 5790 Advanced High-Speed and RF Integrated Circuits
Spring. 4 credits. Prerequisites: ECE 4330 and ECE 4530.
Principles of analog integrated circuit design in the Giga-Hertz frequency range. This course covers the fundamental understanding of high-frequency circuit building blocks such as low noise amplifiers, mixers, oscillators, phase locked loops, frequency synthesizers, clock and data recoveries, and power amplifiers. Additionally, courses some of the traditional microwave building blocks such as transmission lines and distributed circuit elements are essential parts of today's high speed integrated circuits, the course will briefly cover them. Throughout the course, a systematic review of advanced wireless and wireline applications would be covered. The course emphasizes physical understanding and intuitive design methods as well as qualitative techniques and computer simulations. The course has collaborative class projects, based on real-world problems.

ECE 5810 Introduction to Plasma Physics
Fall. 4 credits. Prerequisite: ECE 3030 or equivalent. First-year graduate-level course; open to exceptional seniors.
Topics include plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

ECE 5820 Advanced Plasma Physics
Fall. 4 credits. Prerequisite: ECE 5810. Boltzmann and Vlasov equations; waves in hot magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; nonlinear phenomena: solitons, nonlinear waves, tearing, and reconnection.

ECE 5830 Introduction to Technical Management
Fall. 3 credits. Prerequisite: industrial experience or equivalent (summer work or school work). This course is taught from the perspective of a chief technology officer and is targeted at M. Eng. and management students interested in ‘real world’ problems. It provides an introduction via case examples to the technical, management, and organizational issues of developing and marketing products in high-tech businesses. The focus is on the unique nature of this type of business, including managing with high risk/uncertainty levels, learning to manage very diverse project teams, and recognizing technical versus market success in order to make good business decisions.

ECE 5840 Advanced GPS Receiver Design
Spring. 4 credits. Prerequisite: ECE 4150 or MAE 4150.
GPS receiver design from the RF section to the observables is investigated and implemented in MATLAB software. Creation of C/A code, upsampling, down conversion, code correlation, acquisition, tracking, and interpreting the navigation message. Students start with the digitized GPS bandwidth and build a software receiver to create the navigation solution as the final project.

ECE 5870 Energy Seminar I (also CHEM 5870, MAE 5450)
Fall. 1 credit.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Topics include: energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.
ECE 5880  Energy Seminar II (also CHEM 5880, MAE 5460)
Spring. 1 credit.
For description, see ECE 5870; however, different speakers and/or topics are discussed in ECE 5880.

ECE 5930-5990  Advanced Topics in Electrical and Computer Engineering
Fall, spring. 1–4 credits.
Seminar, special interest, or temporary course.

ECE 6100  Graduate Seminar in Medical Instrumentation
Fall. 1 credit. S–U grades only. Offered alternate years; next offered 2009–2010.
The seminar will provide a format for identifying, investigating, and discussing state-of-the-art developments related to instrumentation, analysis techniques, and simulation sciences as they apply to biomedical problems and solutions.

ECE 6680  Foundations of Probability and Probabilistic Reasoning
Spring. 3 credits. Prerequisites: a course in standard probability such as ECE 3100, ECE 4110, ORIE 6510 and some exposure to statistical reasoning, such as ECE 5606. Offered alternate years. Next offered 2009–2010.
An examination of issues in the interpretations and axiomatizations of probability and of the connections between probability and probabilistic reasoning. Emphasis will be placed upon such alternative mathematical models of probability as are provided by modal, order relations, interval-valued, and sets of measures. These models will be related to interpretations of probability that include the familiar frequency of occurrence, computational complexity, classical, subjective, epistemic, and propensity. This course requires only a familiarity with standard numerical probability and some of its applications. However, mathematical maturity, in the sense of comfort when faced with new mathematical ideas that will be fully defined, will be valuable in dealing with new probability concepts.

ECE 6850  Seminar in GPS and GNSS
Fall. spring. 1–3 credits. Prerequisite: ECE/MAE 4150 or equivalent.
Seminar in GPS (Global Positioning System) and GNSS (Global Navigation Satellite Systems) science and engineering. Current topics in receiver design such as low signal acquisition, ambiguity resolution, and software receivers and topics in GPS science such as space weather effects on GPS and the use of GPS for remote sensing. Students typically make one presentation during the semester.

ECE 6930  Master of Engineering Design
Fall and spring. 3–9 credits. Two-semester course: must enroll both semesters; will receive R grade for first semester. For students enrolled in M.Eng. (Electrical and Computer Engineering) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 6970–6980  Master of Engineering Research
6970. fall, 6980. spring. 7 credits.
Prerequisite: For students enrolled in M.Eng. (Electrical) degree Research Track program. Must enroll both semesters.
Project designed for the M.Eng. student in the Research Track program and more resembles a research thesis. Students will work closely with an ECE Graduate Field Faculty member on a common area of interest. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 7910–7920  Thesis Research
7910. fall, 7920. spring. 1–15 credits. For students enrolled in master’s or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

ECE 7950–7990  Master of Engineering Thesis Research
7950. fall; 7960, spring. 1–15 credits. For students enrolled in master’s or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY

INFO 1301  Introduction to Programming Web Applications
Fall, weeks 1–7. 2 credits. Students must enroll in both INFO 1301 and 1302.
For description, see INFO 1301 in CIS section.

INFO 1302  Introduction to Designing Web Applications
Fall, weeks 8–14. 2 credits. Students must enroll in both INFO 1301 and 1302.
Prerequisite: successful completion of INFO 1301.
For description, see INFO 1302 in CIS section.

INFO 2040  Networks (also ECON 2040, SOC 2120) (SBA)
Spring. 4 credits.
For description, see ECON 2040.

INFO 2140  Cognitive Psychology (also CS/PSYCH 2140) (KCM)
Fall. 4 credits. Limited to 175 students.
Prerequisite: sophomore standing.
Graduate students, see INFO 6140.
For description, see PSYCH 2140.

INFO 2300  Intermediate Design and Programming for the Web (also CS 2300)
Spring. 3 credits. Prerequisite: INFO 1301 and 1302 strongly recommended.
For description, see INFO 2300 in CIS section.

INFO 2310 Topics in Web Programming and Design
Fall. weeks 1–10. 1 credit.
Prerequisite: INFO 2300.
For description, see INFO 2310 in CIS section.

INFO 2450  Psychology of Social Computing (also COMM 2450) (SBA)
Fall, summer. 3 credits.
For description, see COMM 2450.

INFO 2921  Inventing an Information Society (also AMST/ECE/ENGRG 2980, HIST 2920, STS 2921)
Spring. 3 credits.
For description, see ENGRG 2980.

INFO 2950  Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 2310 or equivalent.
For description, see INFO 2950 in CIS section.

INFO 3200  New Media and Society (also COMM 3200)
Spring. 3 credits.
For description, see COMM 3200.

INFO 3300  Data-Driven Web Applications (also CS 3300)
Spring. 3 credits. Prerequisite: CS 2110.
For description, see INFO 3300 in CIS section.

INFO 3450  Human–Computer Interaction Design (also COMM 3450) (SBA)
Spring. 3 credits.
For description, see COMM 3450.

INFO 3490  Media Technologies (also COMM 3490, STS 3491) (CA)
Spring. 3 credits. Offered odd-numbered years.
For description, see COMM 3491.

INFO 3551  Computers: From the 17th Century to the Dotcom Boom (also STS 3551) (HA)
Fall. 4 credits.
For description, see STS 3551.

INFO 3650  Technology in Collaboration (also COMM 3650)
Spring. 3 credits. Prerequisite: COMM/INFO 2450.
For description, see COMM 3650.

INFO 3660  History and Theory of Digital Art (also ARTH 3650) (CA)
Fall. 4 credits. Next offered 2009–2010.
For description, see ARTH 3650.

INFO 3720  Explorations in Artificial Intelligence (also CS 3700)
Spring. 3 credits. Prerequisites: MATH 1110 or equivalent, an information science approved statistics course, and CS 2110 or permission of instructor. Next offered 2009–2010.
For description, see INFO 3720 in CIS section.

INFO 3871  The Automatic Lifestyle: Consumer Culture and Technology (also STS 3871) (CA)

INFO 4290  Copyright in the Digital Age (also COMM 4290)
Fall. 3 credits. Offered odd-numbered years.
For description, see COMM 4290.

INFO 4300  Information Retrieval (also CS 4300)
Fall. 3 credits. Prerequisite: CS/ENGRD 2110 or equivalent.
For description, see INFO 4300 in CIS section.

INFO 4302  Web Information Systems (also CS 4302)
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.
For description, see INFO 4302 in CIS section.
INFO 4350 Seminar on Applications of Information Science (also INFO 6390)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 2110 or equivalent; experience using information systems. Undergraduate and master's students should register for INFO 4350; Ph.D. students should register for INFO 6350.
For description, see INFO 4350 in CIS section.

INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400) (SBA)
Fall. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4400.

[INFO 4144 Responsive Environments (also ARTH 4144) (CA)]
For description, see ARTH 4144.

[INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450)]
Fall. 3 credits. Prerequisite: INFO 2450. Next offered 2009–2010.
For description, see COMM 4450.

INFO 4470 Social and Economic Data (also ILLRLE 4470)
Spring. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, one upper-level social science course, or permission of instructor. For description, see INFO 4470 in CIS section.

INFO 4500 Language and Technology (also COMM 4500) (SBA)
Spring. 3 credits. Prerequisite: INFO 2450 or permission of instructor. Next offered 2009–2010.
For description, see COMM 4500.

[INFO 4850 Computational Methods for Complex Networks]
Spring. 3 credits. Prerequisites (2): ECON/INFO 2040/SOC 2090/CS 2850 or equivalent knowledge; CS 2110 or INFO 2500 or equivalent knowledge of basic programming.
For description, see INFO 4850 in CIS section.

INFO 4900 Independent Reading and Research
Fall, spring. 1–4 credits.

INFO 4910 Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.

INFO 5150 Culture, Law, and Politics of the Internet
Fall. 4 credits.
For description, see INFO 5150 in CIS section.

INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)
Spring. 4 credits. Prerequisite: INFO 3300 or CS 4320.
For description, see INFO 5300 in CIS section.

[INFO 6002 Critical Technical Practices]

INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)
Fall. 4 credits.
For description, see PSYCH 6140.

[INFO 6144 Responsive Environments (also ARTH 6144)]
For description, see ARTH 6144.

INFO 6300 Advanced Language Technologies (also CS 6740)
Fall or spring. Next offered fall 2008. 3 credits. Prerequisite: permission of instructor. Neither INFO/CS 4350 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.

INFO 6350 Seminar on Applications of Information Science (also INFO 4350)
Spring. 3 credits. Prerequisites: background in computing, data structures, and programming at level of CS 2110 or equivalent; experience in using information systems. Undergraduates and master's students should register for INFO 4350; Ph.D. students should register for INFO 6350.
For description, see INFO 4350 in CIS section.

INFO 6400 Human-Computer Interaction Design (also COMM 6400)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see COMM 6400.

[INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2009–2010.
For description, see COMM 6450.

INFO 6648 Speech Synthesis by Rule (also LING 6648)
Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. For description, see LING 6648.

[INFO 6500 Language and Technology (also COMM 6500)]
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2009–2010.
For description, see COMM 6500.

INFO 6580 The Structure of Information Networks (also CS 6850)
Fall. 4 credits. Prerequisite: CS 4820.
For description, see INFO 6850 in CIS section.

INFO 7090 IS Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

INFO 7470 Social and Economic Data (GR-RDC) (also ILLRLE 7400)
Spring. 4 credits. Prerequisite: Ph.D. and research master's students.
For description, see INFO 7470 in CIS section.

INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Independent research for M.Eng. students and pre-A exam Ph.D. students.

INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Thesis research for post-A exam Ph.D. students.

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MSE 1110 Nanotechnology (also ENGR 1110)
Fall. 3 credits. E. Giannelis.
Course in Introduction to Engineering series. For description, see ENGR 1110.

MSE 1180 Design Integration: DVDs and iPods (also ENGR/TAM 1180)
Spring. 3 credits. Course in Introduction to Engineering series. For description see ENGR 1180.

MSE 1190 Biomaterials for the Skeletal Systems (also ENGR 1190)
Fall. 3 credits. D. Grubb.
Course in Introduction to Engineering series. For description, see ENGR 1190.

MSE 1810 MSE At Cornell: an Introduction for Freshman
Spring. 1 credit. S–U or letter grade; grade based on class participation and a course project. C. Umbach.
Introduces materials science and engineering to students considering MSE as their major. Lectures by MSE professors, alumni, and industrial researchers. Topics covered: MSE major requirements as preparation for real-world engineering. Cutting-edge MSE research involving undergraduates. Industrial R&D. Tours of Cornell centers and MSE facilities.

MSE & E 1910-1920 Research Involvement Ia and Ib
Fall, 1910; spring, 1920. 3 credits each semester. Prerequisite: approval of department. Staff.
For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 2060 Atomic and Molecular Structure of Matter (also MAE 3130)
Spring. 4 credits. C. Liddell.
Discusses the basic elements of structure, order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction.

MSE 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also ENGRD 2610)
Fall. 3 credits. Prerequisite: MATH 1910. Corequisites: PHYS 1112 or permission of instructor. S. P. Baker.
For description, see ENGRD 2610.

MSE 2620 Electronic Materials for the Information Age (also ENGRD 2620)
Spring. 3 credits. Prerequisite: MATH 1920. Corequisites: PHYS 2213 or permission of instructor. C. Umbach.
For description, see ENGRD 2620.

MSE 2910-2920 Research Involvement IIa and IIb
2910, fall. 2920, spring. 3 credits each semester. Prerequisite: approval of department. Staff.
Supervised independent research project in association with faculty members and faculty research groups of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized. Each semester may be taken as a continuation of a previous project or as a one-semester affiliation with a research group.

**MSE 3010 Materials Chemistry (also MSE 5810)**
Fall. 3 credits. L. Estroff. Provides a molecular understanding of materials properties, quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

**MSE 3030 Thermodynamics of Condensed Systems (also MSE 5830)**
Fall. 4 credits. Prerequisites: PHYS 2214 and MATH 2940. M. O. Thompson. Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibrium, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solution systems, and defects. Introduces electrochemistry and fuel/power cells.

**MSE 3040 Kinetics, Diffusion, and Phase Transformations (also MSE 5840)**
Spring. 4 credits. Prerequisite: MSE 3030 or permission of instructor. R. Hennig. Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electrotransport; interfaces and microstructure; nucleation and growth, growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

**MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 5850)**
Spring. 3 credits. Prerequisite: MSE 2060 and MSE 2620 or permission of instructor. R. B. van Dover. Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magnetoresistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

**MSE 3070 Materials Design Concepts I**
Fall. 2 credits. C. Umbach. For description, see MSE 4070.

**MSE 3110 Junior Laboratory I**
Fall. 1 credit. D. Ast. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in chemistry of materials and thermodynamics of condensed systems.

**MSE 3120 Junior Laboratory II**
Spring. 1 credit. D. Ast. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and electronic, magnetic, and dielectric properties of materials.

**MSE 3910-3920 Research Involvement I and II**
Fall. 3910: 3 credits. 3920: 3 credits each semester. Prerequisite: departmental approval. Staff. For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

**MSE 4020 Mechanical Properties of Materials, Processing, and Design (also MAE 3120, MSE 5820)**
Fall. 5 credits. Prerequisite: MSE 2060, Corequisite: MSE 5840 or permission of instructor. D. Ast. Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials, how mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep deformation, fracture, and fatigue.

**MSE 4030-4040 Senior Materials Laboratory I and II**
4030, fall: 4 credits. 4040, spring. 3 credits each semester. Staff. Practical laboratory covering the analysis and characterization of materials and processing. Emphasis is on design of experiments for evaluation of materials’ properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

**MSE 4050-4060 Senior Thesis I and II**
4050, fall: 4060, spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. M. Thompson. Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

**MSE 4070 Materials Design Concepts II**
Fall. 2 credits. C. Umbach. Introduces materials design in the context of real world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

**MSE 4100 Physical Metallurgy and Applications (also MSE 6100)**
Spring. 3 credits. Prerequisites: MSE 2060, 3910, 3940 or permission of instructor. S. Baker. Next offered 2009–2010. Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include: thin films and patterned structures for use in microelectronic, mechanical systems, superalloys for high temperature engine applications, shape memory alloys for biomedical applications, and others.

**MSE 4330 Materials for Energy Production, Storage, and Conversion (also MSE 5330)**
Fall. 3 credits. Next offered 2009–2010. R. Dieckmann. Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring the emission of pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

**MSE 4610 Biomedical Materials and Their Applications**
Spring. 3 credits. D. Grubb. Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, case studies involving physiological systems are considered, and design of artificial parts and materials are investigated. Constraints such as methods of production, economical, regulatory approval, and legal liabilities are included. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation about a case study.

**MSE 4810 Technology Management (also MSE 5870)**
Spring. 3 credits. E. P. Giannelis. Designed to provide students in engineering and the sciences with the knowledge and analytical skills to manage RD for a strategic competitive advantage. Most organizations recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of case studies, readings, discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology, policy, and society.
MSE 4820  Plasma Processing of Electronic Materials (also ECE 4820)
Spring. 3 credits. Prerequisites: PHYS 2123 and 2214 or equivalents. Offered if sufficient demand.
For description, see ECE 4820.

MSE 4870  Ethics and Technology
Spring. 1 credit. Staff.
Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

MSE 4890  Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 5890)
Fall. 3 credits. C. Liddell.
Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneous structure, layered, hollow, porous, and heterojunction structures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and micromembranes. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.

MSE 4910–4920  Research Involvement IVA and IVB
4910, fall; 4920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.
For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4950  Undergraduate Teaching Involvement
Fall. spring. Variable credit. Staff.
Gives credit to students who help in the laboratory portions of select MSE courses. The number of credits earned is determined by the teaching load and is typically 1–3.

MSE 5010–5020  Special Project
Fall. spring. 6 credits. Staff.
Master of Engineering Research project.

[MSE 5120  Mechanical Properties of Thin Films (also MAE 5130)]
Spring. 3 credits. Prerequisite: A course similar to ENGRD 2610 or permission of instructor. S. P. Baker. Next offered 2009–2010.
Stresses, elastic and plastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.

MSE 5210  Properties of Solid Polymers
Fall. 3 credits. Prerequisite: ENGRD 2610. Corequisite: MSE 5030 or permission of instructor. C. Ober.

[MSE 5230  Physics of Soft Materials]
Fall. 3 credits. Next offered 2009–2010.
U. Wiesner.
The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order and terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.

[MSE 5250  Organic Optoelectronics]
The course begins with an overview of relevant materials, from small aromatic molecules to conjugated polymers. We then discuss their optoelectronic properties, including topics from photophysics (absorption, emission, photogeneration, recombination), charge transport and injection (doping, hopping, disorder) and nonlinear optics. Molecular conduction mechanisms are reviewed. Their applications in electrophotography, light-emitting diodes, lasers, photovoltaic cells, thin film transistors are then discussed.

MSE 5310  Introduction to Ceramics
Spring. 3 credits. Prerequisites: all MSE 2000- and 3000-level core courses. R. Dieckmann.
Covers ceramic processes and products, structure of ceramic crystals, structure of glasses, structural defects (point defects, dislocations), surfaces, interfaces and grain boundaries, diffusion in ionic materials (atomistic and phenomenological approach), relationships between diffusion and point defect structure), chemical phase diagrams, phase transformations. Emphasizes physicochemical aspects of the different topics.

[MSE 5330  Materials for Energy Production, Storage, and Conversion (also MSE 5330)]
Fall. 3 credits. Next offered 2009–2010.
R. Dieckmann.
For description, see MSE 4330.

[MSE 5410  Nanofabrication of Semiconductor Devices (also ECE 5360)]
Fall. 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.
For description, see ECE 5360.

[MSE 5420  Flexible Electronics]
Flexible electronics holds the promise of transformative developments in: (1) flat panel lighting (low cost, low energy), (2) energy production systems (solar), and (3) infrastructure control and monitoring (sensing, energy control, hazard monitoring). Practical realization of flexible circuits will require dramatic progress in new materials that are compatible with flexible media and amenable to facile and low temperature processing as well as major advances in manufacturing technologies such as roll-to-roll processing. This course will discuss these and other developments.

[MSE 5430  Thin-Film Materials Science]
Provides fundamental information on the deposition, properties, reaction, and evaluation of thin films. Topics include deposition techniques, surface energies, stress in thin films, surface kinetics, homoepitaxy, heteroepitaxy and surfactant and optical properties, Schottky barriers, solid phase regrowth, interdiffusion, thin film reactions, and electromigration. The recommended textbook is Electronic Thin Film Science for Electrical Engineers and Material Scientists by Tu, Mayer, and Feldman.

MSE 5450  Magnetic and Ferroelectric Materials
Fall. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalent. R. B. van Dover.
Topics include magnetic fields, the microscopic origins of magnetism, ferromagnetic materials and properties and applications of magnetic materials. The properties of ferroelectric materials are also covered, and applications of ferroelectrics in electronics technology are explored.

MSE 5490  Nanofabrication: Making It Small
Spring. 3 credits. Prerequisites: CHEM 2090, MATH 1920. M. Thompson.
This course provides an introduction to principles and practice of nanofabrication techniques, combining lectures with hands-on laboratory fabrication. A range of nanosystems will be explored from microelectronic circuits to MEMS sensors and/or microfluidics. Fundamentals common to all fabrication, including lithography, deposition, and etching processes are explored in lectures and lab exercises. New developments in “soft” microstamp lithography and self-assembly methods are discussed. In the final project students build one of several nanosystems depending on their particular interests.

MSE 5550  Introduction to Composite Materials (also CEE/MAE/TAM 4550)
Fall. 3 credits. P. Petrina.
For description, see TAM 4550.

MSE 5620  Biomineralization: The Formation and Properties of Inorganic Biomaterials
Spring. 3 credits. Prerequisites: MSE 3010 or CHEM 1570 or CHEM 3570–3580 or equivalent or permission of instructor. L. Estroff.
This course will examine the wide variety of mineralized materials made by biological organisms including mollusk shells, mammalian bone and teeth, silica bodies in plants, and magnetotactic bacteria. The focus will be on the molecular and biological mechanisms that lead to the formation of these materials as
well as their unique materials properties (mechanical, optical, magnetic).

MSE 5630 Nanobiotechnology (also AEP/BIOG 6630) Fall. 3 credits.
For description, see BME 6670.

[MSE 5710 Analytical Techniques for Material Science]
Survey of modern analytical techniques used to determine composition and structure of near-surface and bulk materials. Interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation. Techniques covered include ion scattering, Auger electron spectroscopy, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, and X-ray techniques. Selection and design of experiments.

[MSE 5720 Computational Materials Science]
Fall. 3 credits. Prerequisite: MSE 3030/6030 or equivalent. R. Hennig. Next offered 2009–2010.
Computational methods for predicting the behavior of condensed matter systems, including Monte Carlo, molecular dynamics, and phase field approaches. Extraction of physical parameters from simulation results and limitations of computational methods. Survey of interatomic potential development and quantum-mechanical ab-initio techniques. Examples drawn from surface and condensed phase systems.

MSE 5810 Materials Chemistry (also MSE 3010, MAE 3120)
Spring. 3 credits. L. Estroff. For description, see MSE 3010.

MSE 5820 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, MAE 3120)
Fall. 3 credits. Corequisite: MSE 5840 or permission of instructor. S. Ast. For description, see MSE 4020.

MSE 5830 Thermodynamics of Condensed Systems (also MSE 3030)
Fall. 4 credits. M. O. Thompson. For description, see MSE 3030.

MSE 5840 Kinetics, Diffusion, and Phase Transformation (also MSE 3040)
Spring. 4 credits. Prerequisite: MSE 5830 or permission of instructor. R. Hennig. For description, see MSE 3040.

MSE 5850 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 3050)
Spring. 3 credits. R. B. van Dover. For description, see MSE 3050.

MSE 5870 Technology Management (also MSE 4810)
Spring. 3 credits. E. P. Giannelis. For description, see MSE 4810.

MSE 5890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 4890)
Fall. 3 credits. C. Liddell. For description, see MSE 4890.

Graduate Core Courses

MSE 6010 Chemistry of Materials
Spring. 3 credits. Prerequisite: thermodynamics coursework at level of MSE 3030. U. Wiesner.
In this course modern developments in materials chemistry are taught and discussed. This includes symmetry aspects of chemical bonding, self-assembly, sol–gel chemistry, mesostructured and mesoporous solids, low-dimensional nanomaterials and bioorganic chemistry.

MSE 6020 Elasticity, Plasticity, and Fracture
Spring. 3 credits.
An advanced overview of mechanical properties of materials combining concepts from continuum mechanics, atomic structure, thermodynamics, and kinetics. Topics include: elastic properties of crystals, glasses, and polymers; mechanical damping; plastic deformation in metals and polymers; creep deformation; fracture in brittle and ductile materials; the effects of temperature, time, and thermomechanical history on properties; metals, ceramics, polymers, and composites; and models and scaling laws for mechanical behavior.

MSE 6030 Thermodynamics of Materials

MSE 6040 Kinetics of Reactions in Condensed Matter
Spring. 3 credits. R. Dieckmann. Phenomenological and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids. Cartesian tensors are utilized for fields and properties. Covers phase stability and transformations; nucleation and growth, spinodal decomposition and displacive transformations; phase croushing processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems; grain-boundary migration controlled kinetics; viscosity, anelasticity, and diffusional creep.

MSE 6050 Electronic Properties of Materials
Spring. 3 credits. D. Schom. Develops concepts of band structure in crystalline and non-crystalline materials from a real-space as well as reciprocal space perspective, and reconciles the two approaches. Mathematical complexity is kept to a minimum. Specific topics include electronic properties of low-dimensionalality materials (surfaces, quantum wires, quantum dots), optical properties of metals and insulators, and electronic properties of exotic materials such as oxide and organic semiconductors. Technological applications to be addressed include switching devices, magnetism, superconductivity, and photonics, depending on student interests.

MSE 6060 Condensed Matter Structure
Fall. 3 credits. Prerequisite: course at level of MSE 2060. Next offered 2009–2010. J. Blakely.
Focuses on ways to characterize structure. Includes lectures by several faculty on structural determination on a wide range of materials. Elements of structure at length scales ranging from sub-nanometer to millimeter. Descriptions of structure in crystals, liquids, amorphous solids/glasses. Short- and long-range order, microstructures, cellular structures, domains, domain boundaries, 2-phase and composite structures. Techniques to probe structure: “direct” microscopy, real space imaging, including probe microscopies, optical, electron and X-ray methods. Indirect methods based on analysis of diffraction fields, Fourier/reversal space. Examples of application may include polymer structure, metal grain textures, dislocation arrays, cellular structure, structure of biological membranes, nano-composite structures, surfaces, interfaces and grain boundaries in semiconductors, structure of photonic materials, domain structures in ferroelectrics and ferromagnetics, biological materials.

Related Course in Another Department

Introductory Solid State Physics (PHYS 4454, AEP 4800)

Further Graduate Courses

[MSE 6100 Physical Metallurgy and Applications (also MSE 4100)]
Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor. S. Baker. Next offered 2009–2010. For description, see MSE 4100.

MSE 6210 Advanced Inorganic Chemistry II: Solid State Chemistry (also CHEM 6070)
Spring. 4 credits. Prerequisite: CHEM 6050 or permission of instructor. S. Lee. For description, see CHEM 6070.

MSE 6650 Composite Materials (also MAE/TAM 6650)
Spring. 4 credits. Staff. For description, see TAM 6650.

MSE 6650 Principles of Tissue Engineering (also MAE/BME 6650)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see BME 6650.

MSE 6710 Principles of Diffraction (also AEP 7110)
Spring. 3 credits. Letter grades only. Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock. For description, see AEP 7110.

[MSE 6810 Surfaces and Interfaces in Materials]
Deals with special topics in surface and interface science. The main topics are: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface steps, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation, and other surface reactions.

Specialty Courses

MSE 8000 Research in Materials Science
Fall, spring. Credit TBA. Staff. Independent research in materials science under the guidance of a member of the staff.

MSE 8010 Materials Science and Engineering Colloquium
Fall and spring. 1 credit each semester. Enrollment limited to MSE Ph.D. students. Staff.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MSE 8020 Materials Science Research Seminars**
Fall, spring. 2 credits each semester.
Prerequisite: graduate students involved in research projects. Staff.
Short presentations on research in progress by students and staff.

**MECHANICAL AND AEROSPACE ENGINEERING**

**MAE 1110 Naval Ship Systems (also NAVS 2020)**
Fall. 3 credits.
For description, see NAVS 2020.

**MAE 1130 Introduction to Computer-Aided Manufacture (CAM)**
Fall, approx. eight weeks (total 15 hrs. of instruction and 15 hrs. of lab). 1 credit. Limited enrollment. Prerequisites: MAE 2250 or equivalent experience and completion of Emerson Lab Product Realization Facility's CNC seminars. An Introduction to CNC Machining and CNC Programming; or permission of instructor. Completes the introduction to the fundamentals of computer-aided manufacture (CAM) seminars through the use of computer numerical control (CNC) programming. The course is the hands-on component of the three-part series on CAM. Provides practical applications of CAM via G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Lab's Product Realization Facility for team or research projects. May not be used to fulfill any MAE requirement.

**MAE 1170 Introduction to Mechanical Engineering (also ENGR 1170)**
Fall. 3 credits. 2 lec and 1 lab per week.
Course in Introduction to Engineering series. For description, see ENGR 1170.

**MAE 1270 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR 1270)**
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none.
For description, see ENGR 1270.

**MAE 2120 Mechanical Properties and Selection of Engineering Materials**
Spring; may be offered in summer. 3 credits. Prerequisites: ENGRD/TAAM 2010 (Statics) with minimum of C– (strictly enforced); MATLAB programming at level of CS 1112 or CS 1132. Mechanics of deformable bodies and a reinforcement of the concept of “simple engineering elements” for mechanical analysis associated with design. Introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue and environmental effects are developed. A general introduction to the selection of material associated with mechanical design is provided with candidate material systems coming from metals, polymers, ceramics and/or composites. A general overview of material processing is presented within this context of material selection.

**MAE 2210 Thermodynamics (also ENGRD 2210)**
Fall, spring, may be offered in summer. 3 credits. Prerequisites: MATH 1920 Calculus for Engineers and PHYS 1112 Physics I: Mechanics, or permission of instructor. For description, see ENGRD 2210.

**MAE 2250 Mechanical Synthesis**
Spring. 4 credits. Prerequisite: ENGRD 2030. Pre- or corequisites: ENGRD 2030 and 2210. Lab fee.
Hands-on introduction on the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical dissection used to demonstrate successful product design and function. Basic instruction in CAD and technical sketching.

**MAE 3050 Introduction to Aeronautics**
Fall. 3 credits. Prerequisite: TAM/ENGRD 2030. Pre- or corequisites: one of the following thermodynamics classes: ENGRD 2210 or EEE 2220 and one of the following fluid mechanics classes: MAE 3230 or CHEM 3240 or EEE 3310 or ECE 3310; upper-level engineers or permission of instructor.

**MAE 3060 Spacecraft Engineering**
Spring. 3 credits. Prerequisite: ENGRD 2030 or junior or senior MAE or ECE students or permission of instructor.
Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics covered include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

**MAE 3120 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, 5820)**
Fall. 4 credits.
For description, see MSE 4020.

**MAE 3130 Atomic and Molecular Structure of Matter (also MSE 2060, MSE 5810)**
Spring. 4 credits.
For description, see MSE 2060.

**MAE 3230 Introductory Fluid Mechanics**
Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 2030 and ENGRD 2210 and pre- or co-registration in ENGRD 2210, or permission of instructor. Limited to ME majors and those officially registered for the AE or ME minor. Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli’s equation, potential flows, simple visous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

**MAE 3240 Heat Transfer**
Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: MAE 3230 or permission of instructor. Topics include discussion of steady and unsteady heat conduction, forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boiling.

**MAE 3250 Analysis of Mechanical and Aerospace Structures**
Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: ENGRD 2030 and MAE 2120. Topics in mechanics of materials applied to analysis and design of structural components encountered in mechanical and aerospace systems, including multiaxial stress states, statically indeterminate structures, torsion and bending of nonsymmetric or curved members, stability and stress concentrations. Solution strategies include both analytical and finite element methods.

**MAE 3260 System Dynamics**
Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 2930, MATH 2940, ENGRD 2030; junior standing. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

**MAE 3272 Mechanical Property and Performance Laboratory**
Spring. 2 credits. Prerequisites: MAE 2120, 3250.
This course provides an introduction to the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.
MAE 3780  Mechatronics
Fall. 3 credits. Prerequisite: MATH 2930, PHYS 2213, or permission of instructor. At the intersection of mechanical and electrical engineering, Mechatronics involves technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; diodes; transistors; MOSFETS; and power amplification; pulse width modulation; transduction; mechanical and electromechanical devices such as electromagnetic systems; piezoelectric and shape memory material transformation; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming. Lab experiments culminate in the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

[M]AE 4000  Components and Systems: Engineering in a Social Context (also STS 4001)
Spring. 3 credits. Prerequisites: upper-class standing, two years of college physics, Offered alternate years; next offered 2009–2010. Addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, the course investigates interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems. "Senior Design Elective" if students sign up for the corresponding section of MAE 4291. Co-meets with MAE 5000.

MAE 4040  Materials Selection for Clean Mechanical Designs
Spring. 3 credits. Prerequisites: MAE 2120, MAE 3250. Pre- or corequisite MAE 3272. "Senior Design Elective" for M.E. students who enroll concurrently or after MAE 4291. Offered alternate years. Advanced material selection concepts, which build of the fundamentals of materials index developed in MAE 2120 and 3250, including processes and shape selection, hybrid materials, and industrial design. Includes a brief overview of current clean technologies and the basics of life cycle and environmentally conscious design. Two main themes are: (1) application of materials-selection basics and concepts of life-cycle design to current design limitations associated with various clean technologies and (2) determination of the mechanical properties of various emerging green materials.

[MAE 4140  Mechanics of Lightweight Vehicles
Fall. 3 credits. Prerequisites: MAE 2120, 3250, and 2722 or equivalent; senior standing in MAE. "Senior Design Elective" for M.E. students who enroll in the corresponding section of MAE 4291. Offered alternate years; next offered 2009–2010. Covers fundamentals of vehicle mechanics for several classes of vehicles (bicycles, light cars, airframes). Topics include: types of vehicle structures; pertinent aspects of mechanical behavior including elastic and inelastic responses; static and dynamic behavior of vehicles under elastic loading; and mechanisms of crashworthiness. Lectures cover essential background material for understanding of vehicle mechanics. Labs provide hands-on experiences in the major components of the course.

MAE 4150  GPS: Theory and Design (also ECE 4150)
Fall. 4 credits. Prerequisites: 3000-level engineering course with advanced math content (e.g., ECE 3030 or MAE 3260). For description, see ECE 4150.

MAE 4170  Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits. Prerequisite: MAE 3280 or equivalent; engineering mechanics at level of MATH 2930 and MATH 2940 (Engineering Mathematics); some course in dynamics at level of TAM/ENGRD 2050 (Dynamics); familiarity with control concepts typical of MAE 3260 (System Dynamics). Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics. Design of end effectors, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators. Design of PD controllers, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-code are used. Co-meets with MAE 5170.

MAE 4230  Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: MAE 3220 (Introductory Fluid Mechanics) or CEE 3310/BEE 3310 or permission of instructor. This course builds on the foundation of MAE 3230. Emphasis is placed on both the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, buoyancy, instabilities, and turbulence. "Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291. Co-meets with MAE 5230.

MAE 4250  FSAE Automotive Design Project
Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders. Prerequisite: MAE or ECE juniors and seniors or permission of instructor. Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

"Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291.

MAE 4272  Fluids/Heat Transfer Laboratory
Fall. 3 credits. Fulfills technical-writing requirement. Prerequisites: MAE 3230, 3240. Laboratory exercises in fluid mechanics and the thermal sciences. Measurements of flame temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, airfoil stall, fluid visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Lab written assignments with extensive feedback.

MAE 4291  Supervised Senior Design Experience
Fall, spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing or permission of instructor; taken concurrently or after MAE 4280. Letter grades only. Substantial design experience based on the knowledge and skills acquired in earlier course work in incorporating engineering standards and realistic constraints. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as "Senior Design Elective" (MAE 4000, 4020, 4040, 4140, 4230, 4250, 4700, 4860) or are directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

MAE 4300  Professional Practice in Mechanical Engineering
Fall. 2 credits. Prerequisite: senior standing in MAE or permission of instructor. This course is required for M.E. seniors, replacing MAE 428. Professional practice and broader impacts of the mechanical engineering profession are presented through a series of lectures and invited talks, supplemented by assignments and projects. Topics include: professional ethics, product liability, intellectual property, career/educational paths, contemporary issues facing mechanical engineers, and engineering successes and failures, along with the global, societal, environmental and/or economic aspects and impact of engineering.

[MAE 4490  Combustion Engines and Fuel Cells
Spring. 3 credits. Prerequisites: ENGRD 2210 and MAE 3230. Offered alternate years; next offered 2009–2010. Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion knock. Formation and control of undesirable exhaust emissions.

MAE 4530  Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 4530)
Spring. 3 credits. Fulfills technical elective requirement for MAE students. Prerequisite: Heat and Mass Transfer (BEE 3500, Biological and Environmental Transport Processes, or CHEM 3240, Heat and Mass Transfer, or MAE 3240, Heat Transfer) or equivalent. For description, see BEE 4530.
MAE 4550 Introduction to Composite Materials (also CEE 4770, MSE 5550, TAM 4550)
Fall. 4 credits.
For description, see TAM 4550.

MAE 4570 Space Systems and National Security
Fall. 3 credits. Prerequisite: upper-level standing and MATH 2090 and ENGRD 2050 or permission of instructor.
This course is intended to provide an overview of the implications of space for national security and vice versa. It will consider subjects such as an overview of United States space usage, how the United States monitors what is in space, specific national security applications of space systems, vulnerabilities of space systems, anti-satellite and space weapons, the relationship between missile defenses and space weapons, and the current debate over how the United States can best preserve the benefits it receives from the use of space.

MAE 4580 Introduction to Nuclear Science and Engineering (also ECE/TAM 4130)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.
For description, see TAM 4130.

MAE 4590 Introduction to Controlled Fusion Principles and Technology (also AEP/ECE 4840)
Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences. Offered alternate years.
For description, see ECE 4840.

MAE 4610 Entrepreneurship for Engineers (also ENGRG 4610, ORIE 4152)
Fall. 3 credits. Limited enrollment.
Prerequisite: upper-level engineers or permission of instructor.
Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business plans, technology forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial plans and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the "red meat" of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

[MAE 4630 Neuromuscular Biomechanics (also BME 4630)]

MAE 4640 Orthopaedic Tissue Mechanics (also BME 4640)
Spring. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and MAE 3250 Mechanical Design and Analysis or permission of instructor. Co-meets with MAE 5660. Offered alternate years.
Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and how these properties relate to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

MAE 4660 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 4010)
Fall. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and previous coursework in biology or permission of instructor.
For description, see BME 4010.

MAE 4700 Finite Element Analysis for Mechanical and Aerospace Design
Fall. 3 credits. Fulfills senior design requirement for MAE students. Limited enrollment. Prerequisite: senior standing or permission of instructor. Evening exams.
Term project. Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace structures. Prediction of load, deflection, stress, strain, and temperature distributions. Major emphasis on underlying mechanics and numerical methods. Introduction to computational aspects via educational and commercial software (such as MATLAB and ANSYS). Selected mechanical and aerospace applications in the areas of trusses, beams, frames, heat transfer (steady state and transient), and elasticity (static and dynamic).
Term project. "Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291. Co-meets with MAE 5700.

MAE 4770 Engineering Vibrations
Spring. 3 credits. Pre- or corequisite: MAE 3260 or permission of instructor. Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived from Newton's law and Lagrange's equations. Eigenanalysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated.
Co-meets with MAE 5770.

MAE 4780 Feedback Control Systems (also CHEM 4780, also MME 4780)
Fall. 4 credits. Prerequisites: CHEM 3720 or MAE 3260 or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. Co-meets with MAE 5780.

MAE 4860 Automotive Engineering
Spring. 3 credits. Prerequisites: ENGRD 2020 or permission of instructor. Selected topics in the analysis and design of vehicle components of vehicle systems. Emphasis on automobiles. Engines, transmissions, suspension, brakes, and aerodynamics will be discussed.
The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches. "Senior Design Elective" if M.E. seniors enroll in the corresponding section of MAE 4291.

MAE 4900 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. 4 variable credits. Prerequisite: undergraduate standing and permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

MAE 4980 Teaching Experience in Mechanical Engineering
Fall. 3 variable credits. Prerequisite: permission of instructor.
Students serve as teaching assistants in Cornell mechanical engineering courses or in local middle school technology classes. Cannot be used to fulfill M.E. technical elective or M.E. major elective requirements but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor.

[MAE 5000 Components and Systems: Engineering in a Social Context]
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Offered alternate years; next offered 2009–2010. Co-meets with MAE 4000. For description, see MAE 4000.

MAE 5010 Future Energy Systems
Spring. 3 credits. Prerequisites: ENGRD 2210 (Thermodynamics) or equivalent. Recommended: MAE 3200 (Introductory Fluid Mechanics), MAE 3240 (Heat Transfer), or equivalent open to graduate or senior standing or permission of instructor.
Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lower-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

[MAE 5060 Aerospace Propulsion Systems]
Spring. 3 credits. Prerequisite: MAE 3050 (Introduction to Aeronautics) or permission of instructor. Offered alternate years; next offered 2009–2010.

MAE 5070 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: MAE 3050 (Introduction to Aeronautics) and MAE 3260 (System Dynamics) or permission of instructor. Offered alternate years.
MAE 5130 Mechanical Properties of Thin Films (also MSE 5120)
Spring. 3 credits. Offered alternate years; next offered 2009–2010. For description, see MSE 5120.

MAE 5170 Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits. Graduate version of MAE 4170. Co-meets with MAE 4170. For description, see MAE 4170.

MAE 5200 Dimensional Tolerancing in Mechanical Design
Fall, seven-week half term. 2 credits. Prerequisites: MAE 2250 or an equivalent CAD–based design course, plus 2.5 years of engineering mathematics through probability and statistics. Next offered 2009–2010. Designers use dimensional tolerances to limit spatial variations in mechanical parts and assemblies; the primary goals are interchangeability in assembly, performance, and cost. This course covers traditional limit tolerances briefly but focuses mainly on modern geometric tolerances and their role in assembly control. Students learn how to represent assemblies in terms of mating and relational constraints, design tolerances, and inspection gauges from part and assembly specifications, and understand the limitations and future directions of tolerancing technology.

MAE 5210 Theory of Linear Systems (also ECE 5210)
Fall. 3 credits. Prerequisite: ECE 5200 or permission of instructor. Recommended: good background in linear algebra and linear differential equations. State-space and multi-input–multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley–Hamilton theorem. Controllability, observability, stability, realizability theory. At the level of Linear Systems by Kailath.

MAE 5230 Intermediate Fluid Dynamics
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Intended for M Eng. students who wish to take a fluid dynamics course including implementation of commercial computational fluid dynamics packages. Complements material in MAE 6010 and 6020. For description of topics covered, see MAE 4230. Includes a 1-credit CDF design project due at the end of the semester. Students desiring to write their own computational fluid dynamics software should consider one or more of MAE 6360, 7500, and 7570. Co-meets with MAE 4230.

MAE 5240 Physics of Micro- and Nanoscale Fluid Mechanics (also CHEM 5240)
Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Introduction to fluid mechanics in micro- and nanofabricated devices. Physicochemical hydrodynamics, electrokinetic effects, capillarity, continuum breakdown, micro- and nanofluidic applications in chemistry and life sciences. Co-meets with MAE 6240.

MAE 5430 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics covered include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex reacting systems, turbulent flames, fuel cells, or combustion of solids.

MAE 5459 Energy Seminar I (also ECE 5870)
Fall. 1 credit. For description, see ECE 5870.

MAE 5469 Energy Seminar II (also ECE 5860)
Spring. 1 credit. For description, see ECE 5880.

MAE 5630 Neuromuscular Biomechanics
MAE 5640 Orthopaedic Tissue Mechanics
Spring. 3 credits. Graduate version of MAE 4610. Offered alternate years. For description see MAE 4610.

MAE 5650 Biomechanical Systems—Analysis and Design (also BME 5650)
MAE 5680 Soft Tissue Biomechanics
Fall. 3 credits. For description, see BME 5680.

MAE 5700 Finite Element Analysis for Mechanical and Aerospace Design
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening exams. Term project. Graduate version of MAE 4700 requires additional programming assignment. Co-meets with MAE 4700. For description, see MAE 4700.

MAE 5710 Applied Dynamics
Fall. 3 credits. Prerequisites: graduate standing, seniors with ENGRD/TAM 203, MAE 3260 or permission of instructor. Next offered 2009–2010. Introduces multibody dynamics; dynamics of rigid bodies: Newton–Euler methods, Lagrangian dynamics, principle of virtual power (Kane–Jourdain methods); and applications to robotics, space dynamics of satellites, electric-mechanical systems. Introduction to multibody simulation using Working Model.

MAE 5770 Engineering Vibrations
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of MAE 4770. Co-meets with MAE 4770. For description, see MAE 4770.

MAE 5780 Feedback Control Systems
Fall. 4 credits. Graduate version of MAE 4780. Co-meets with MAE 4780. For description, see MAE 4780.

MAE 5910 Applied Systems Engineering (also CEE/CS 5040, ECE 5120, ORIE 5140, SYSEN 5100)
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by course instructor. For description, see SYSEN 5100.

MAE 5920 System Architecture, Behavior, and Optimization (also CEE/CS 5050, ECE 5130, ORIE 5142, SYSEN 5200)
Spring. 3 credits. Prerequisites: senior or graduate standing and completion of Applied Systems Engineering I (CEE 5240, CS 5040, ECE 5120, ORIE 5140, MAE 5910, or SYSEN 5100) or permission of instructor. For description, see SYSEN 5200.

MAE 5930 Systems Engineering for the Design and Operation of Reliable Systems (also SYSEN 5300)
Fall. 3 credits. Prerequisites: MAE 5910 and either ENGRD 2700 or CEE 3040. For description, see SYSEN 5300.

MAE 5949 Enterprise Engineering Colloquium (also ORIE 9100–9101)
Fall, spring. 1 credit each semester. Usually S–U grades. For description, see ORIE 9100–9101.

MAE 6010 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics; surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow; tensor analysis, derivation of the Navier–Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

MAE 6020 Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: MAE 6010. Analysis and discussion of a wide range of specific flows and flow regimes characterized by high Reynolds number are provided. Potential flows, conformal transformations, slender-body theory, and Kelvin’s impulse are included. Laminar viscous flows are studied, including fully diffused flows, exact solutions, and boundary layers. Compressible flows are treated, including propagation and viscous decay of sound and shock waves and their decay, and the method of characteristics for analysis of such problems. Stratified flows, especially gravity and capillary waves, are analyzed. Stability of a particular high Reynolds number flow is discussed. Finally, certain low Reynolds number flows associated with creeping motions or with ultra-small scale are described.

MAE 6060 Spacecraft Dynamics and Mission Design
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 2940 is required; some experience with MATLAB is expected. Offered alternate years. The focus is on spacecraft attitude dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data.

MAE 6080 Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2009–2010.
Behavior of an ideal gas is considered at the microscopic level. Introduction to kinetic theory—the velocity distribution function, molecular collisions, and Boltzmann equation; to quantum theory—postulates of quantum mechanics, rigid rotor, harmonic oscillator, one-electron and multi-electron atoms and molecular structure; and to statistical mechanics—the partition function, relation to thermodynamics, calculations of thermodynamic properties.

**MAE 6240 Physics of Micro- and Nanoscale Fluid Mechanics**
Fall. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3250) or permission of instructor. Graduate version of MAE 5240. Includes additional 1-credit design project. Co-meets with MAE 5240.

For description, see MAE 5240.

**[MAE 6270 Experimental Methods in Fluid Dynamics (also CEE 6370)]**
For description, see CEE 6370.

**MAE 6310 Turbulence and Turbulent Flows**
Fall. 4 credits. Prerequisite: MAE 6010 (Foundations of Fluid Dynamics and Aerodynamics), graduate standing, or permission of instructor.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

**MAE 6320 Multiphase Turbulence: Particulates, Drops, and Polymer Suspensions**

**[MAE 6340 Computational Combustion]**
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. S. B. Pope. Next offered 2009–2010.
Examines laminar and turbulent flames and the fundamental chemical and transport processes involved. Emphasis is on using computational tools (Chemkin and Fluent) to calculate flame properties, which are compared to experimental data. Topics covered include thermodynamic equilibrium, chemical kinetics, reactor studies, conservation equations, transport properties, laminar premixed and non-premixed flames, turbulent jets, turbulence modeling, and PDF models of non-premixed turbulent combustion. A knowledge of classical turbulence (as at the level of MAE 5430, Combustion Processes, is useful but not required.)

**MAE 6450 Turbulent Reactive Flow**
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Next offered 2009–2010.
Large turbulent reactive flows occur in combustion devices, the chemical process industry, the atmosphere, oceans, and elsewhere. In the last decade, substantial progress has been made in the understanding of these flows, through both experimental and computational approaches. This course focuses on turbulent combustion and describes the different phenomena involved, the basis on which the governing equations, experimental techniques and observations, and a range of modeling approaches. Class meets, on average, twice per week.

**[MAE 6480 Air Quality and Atmospheric Chemistry (also EAS 6480)]**
Fall. 3 credits. Prerequisites: first-year chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent); graduate standing or permission of instructor. Next offered 2009–2010.
Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change. Students will examine the receptor relationship of major air pollutants with an emphasis on the physical and chemical fundamentals of atmospheric transport and transformation. Topics include photochemical smog, atmospheric aerosols, atmospheric transport and deposition, emissions from energy systems, introduction to air quality monitoring and modeling, and air quality management.

**MAE 6500 Evolutionary Computation and Design Automation (also CS 7726)**
Fall. 4 credits. Not offered every year.
For description, see CS 7726.

**[MAE 6510 Conduction and Radiation Heat Transfer]**
Fall, weeks 1–7. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. Next offered 2009–2010.
An advanced treatment of heat conduction and thermal radiation from a theoretical perspective. Topics include: development of the conductive transport equation in integral and differential forms; the transport theorem; solutions for steady state and transient conditions; moving boundary effects including melting and solidification; introduction to radiation including black body and gray body radiation, the radiative transport equation and radiation in an absorbing and scattering medium. At the level of Conduction Heat Transfer, by V. Arpaci, and Radiation Heat Transfer, by E. M. Sparrow and R. D. Cess.

**[MAE 6520 Convection Heat Transfer]**
Fall, weeks 8–14. 2 credits. Prerequisite: graduate standing; undergraduates by permission of instructor. Next offered 2009–2010.
An advanced treatment of convection heat transfer from a theoretical perspective. Topics include: conservation of linear momentum in integral and differential forms; boundary layer flows with emphasis on laminar conditions (some introduction to turbulence also included); internal and external flows; forced and free convection; theoretical solutions and scale analysis. At the level of Convection Heat Transfer, by A. Bejan, and Convective Heat and Mass Transfer, by W. M. Kays et al.

**MAE 6550 Composite Materials (also TAM/MSE 6550)**
Spring. 4 credits.
For description, see TAM 6550.

**[MAE 6560 Nanoscale Energy Transport and Conversion]**
Spring. 4 credits. Prerequisites: graduate undergraduate heat transfer recommended (e.g., MAE 3240) or permission of instructor. Next offered 2009–2010.
As electronic, optoelectronic, photonic and fluidic devices shrink from the microscale down to the nanoscale, the mechanisms for transmitting heat, light and energy become dramatically different. This course aims to provide a detailed look at thermal, electrical and optical energy transport and conversion mechanisms at the nanoscale. Topics to be covered include: a brief review of macroscopic models, microscopic picture of energy carriers, material waves, energy quantization and energy states in solids, statistical thermodynamics and probability distribution functions as related to thermal energy storage, energy transport by waves and classical particle descriptions of transport processes and energy conversion and exchange processes between carriers.

**[MAE 6630 Neural Control (also BME 6630)]**

**[MAE 6640 Mechanics of Bone (also BME 6640)]**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2009–2010.
Covers current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.

**MAE 6650 Principles of Tissue Engineering (also BME/MAE 6650)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. L. Bonassar. For description, see BME 6650.

**[MAE 6750 System Identification and Control]**

**[MAE 6760 Model-Based Estimation]**
Spring. 4 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D. students or permission of instructor. Offered alternate years; next offered 2009–2010.
Covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are least-squares estimation for general problems and Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented.

**MAE 6780 Multivariable Control Theory**
Spring. 4 credits. Prerequisites: MAE 4780 or 5780 or ECE 4720 (Feedback Control Systems) and MAE 5210 (Theory of Linear Systems), or permission of instructor; strong background in classical control, linear algebra, and state space models. Introduction to multivariable feedback control theory in both time and frequency domain. Primary topics include state space methods, model based compensators, performance and robustness of multivariable systems, model reduction, Linear Quadratic and H-infinity optimal control, and random processes and Kalman filtering for control. Additional topics at the discretion of the instructor include uncertainty management, worst case/robust control, discrete time control, optimal control, and nonlinear control.
MAE 6900 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Variable credit. Prerequisite: candidacy for the M.Eng degree in mechanical or aerospace engineering or approval of faculty member offering project.
Project-based course in the area of mechanical or aerospace engineering under the guidance of a faculty member.

MAE 6950 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit TBA. Prerequisites: graduate standing and permission of instructor. Special lectures by faculty members on topics of current research.

MAE 7110 X-Ray Diffraction Methods for Engineering Materials
Fall. 4 credits. Prerequisites: graduate standing or permission of instructor. We develop a general understanding of diffraction methods employed for understanding the state of crystalline materials. The focus will be on x-ray diffraction and the determination of crystal orientation and lattice strains. We conduct diffraction experiments at the CCMR x-ray facility and examine synchrotron x-ray data. We develop MATLAB-based methods for reducing diffraction data and extracting distributions of orientation and lattice strain.

MAE 7120 Mechanics of Materials with Oriented Microstructures
Spring. 4 credits. Prerequisites: TAM 6630 or equivalents. Offered alternate years. The focus of this course is the evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries; mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro scales; methods for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformations; applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.

MAE 7140 Computational Sensorics: Information Technologies for Complex Continuum Systems
Spring. 4 credits. Prerequisite: TAM 6630 or equivalents. Offered alternate years. The focus of this course is the evaluation of mechanical properties from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries; mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro scales; methods for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformations; applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.

MAE 7340 Analysis of Turbulent Flows

MAE 7370 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience. Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

MAE 7910 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each semester. For graduate students involved in research projects. S-U grades only. Presentation on research in progress by faculty and students.

MAE 7999 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each semester; credit limited to graduate students. All students and staff are invited to attend. Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

MAE 8900 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NAE 4310 Introduction to Nuclear Science and Engineering (also AEP/CHEME/ECE/TAM 4130, MAE 4560)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940. For description, see TAM 4130.

NAE 4840 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE 4840, MAE 4950)
Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. D. A. Hammer. For description, see ECE 4840.

NAE 5450 Energy Seminar (also ECE 5870, MAE 5450)
Fall, spring. 1 credit each semester; credit both semesters. D. A. Hammer. For description, see ECE 5870.

NAE 5900 Independent Study
Fall, spring. 1–4 credits. Letter or S–U grades. Staff. Independent study or project under guidance of a faculty member.

NAE 5910 Project
Fall, spring. 1–6 credits. Staff. Master of engineering or other project under guidance of a faculty member.

NAE 6330 Nuclear Reactor Engineering (also AEP 6330)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady. The fundamentals of nuclear reactor engineering, reactor sitting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.
OPERATIONS RESEARCH AND INFORMATION ENGINEERING

ORIE 3120 Industrial Data and Systems Analysis
Spring. 4 credits. Prerequisite: ENGRD 2700.
Database and statistical techniques for data mining, graphical display, and predictive analysis in the context of industrial systems (manufacturing and distribution). Database techniques include structured query language (SQL), procedural event-based programming (Visual Basic), and graphical information systems. Statistical techniques include multiple linear regression, classification, logistic regression, and time series forecasting. Industrial systems analysis includes factor analysis, principal component analysis, materials planning, cost estimation, inventory planning, and quality engineering.

ORIE 3150 Financial and Managerial Accounting
Fall, spring, summer, and winter. 4 credits.
Covers principles of accounting, financial reports, financial transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, and economic analysis of short-term decisions.

ORIE 3300 Optimization I
Fall and summer. 4 credits. Prerequisite: ORIE 3300 or equivalent.
Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation, materials planning, cost estimation, inventory planning, and quality engineering.

ORIE 3310 Optimization II
Spring and summer. 4 credits. Prerequisite: ORIE 3300 or equivalent.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer programming, dynamic programming, and network optimization. Formulation and modeling are stressed as well as numerous applications.

ORIE 3500 Engineering Probability and Statistics II
Fall and summer. 4 credits. Prerequisite: ENGRD 2700 or equivalent.
