Accreditation
Cornell University is accredited by the Middle States Commission on Higher Education.

A copy of the most recent reaffirmation of Cornell's accreditation can be found at dpb.cornell.edu/accreditation.htm. Requests to review additional documentation supporting Cornell's accreditation should be addressed to Marin Clarkberg, Associate Director, Institutional Research and Planning, Cornell University, 441 Day Hall, Ithaca, NY 14853-2801, mec30@cornell.edu.
Introduction

Courses of Study (www.cornell.edu/academics/courses.cfm), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings, and procedures. Students also should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs, and requirements. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

It is not possible to keep this single volume completely up-to-date. The most current information regarding course descriptions, schedules, sections, rooms, credits, and registration procedures may be found at www.cornell.edu/academics/courses.cfm, which also includes the Course and Time/Room Rosters. Students are also advised to consult individual college and department offices for up-to-date course information.

Cornell community members are expected to comply with all university policies, including the Code of Conduct and the Code of Academic Integrity available at www.policy.cornell.edu. The following are offices and sources of information about admission to Cornell University.

Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 255-5241, admissions.cornell.edu.

Graduate School, 145 Caldwell Hall, Ithaca, NY 14853-2602, 255-5820, gradschool.cornell.edu, gradschool@cornell.edu.

College of Veterinary Medicine, Office of Student and Academic Services, Cornell University, S2009 Thurman Hall, Ithaca, NY 14853-6401, 255-3700, www.vet.cornell.edu/prospective.htm.

Graduate School of Medical Sciences of Cornell University, Office of Admissions, 445 E. 69th Street, New York, NY 10021, 212-746-6565, www.biomedsci.cornell.edu, wgms@med.cornell.edu.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty. To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State and university health requirements;
- have no holds from their college, the Office of the Judicial Administrator, Gannett Health Services, or the bursar.

Individuals must become registered students by the end of the third week of the semester or their access to services and education will be terminated and they will be subject to a $350 late fee, then $25 per week after the sixth week plus any finance charges.

Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes, reside in university-owned residences, or use any other university services. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

LEAVES AND WITHDRAWALS

Students wishing to take a leave from their college are required to apply for a voluntary Leave of Absence (LOA) with an expected return date. Students who do not apply for and receive approval for a LOA will be automatically withdrawn from the university following the fifth week of the semester and may be required to apply for readmission. Withdrawn students and students on a LOA may not enroll in course work with the university (e.g., extramural studies, summer/winter session). Students on a LOA are not eligible for privileges afforded to full-time registered students, including housing, dining, library, and transit privileges.

Students may withdraw from the university at their own discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted by the student's college upon recommendation by Gannett Health Services.

Bursar Information

TUITION, FEES, AND EXPENSES

Tuition for Academic Year 2009–2010

Endowed Divisions

Undergraduate

Architecture, Art, and Planning $37,750

Arts and Sciences

Engineering

Hotel Administration

Graduate

Graduate School (with chair in an endowed college) $29,500

Johnson Graduate School of Management Two-Year Program entering students $47,150

second-year students $46,700

Professional

Law School

entering and second-year students $48,950

third-year students $48,050

LL.M. one-year program students $51,530

Contract Divisions (tuition rates are tentative)

Undergraduate

Agriculture and Life Sciences $21,610

Human Ecology

Industrial and Labor Relations $37,750

Graduate and Professional Students

Graduate School (with chair in a contract college) $20,800

Veterinary Medicine

New York State resident DVM $26,500

Nonresident DVM $39,500

Graduate, Ph.D. $20,800

Student Activities Fee (Tentative)

Undergraduate students $204

Graduate and professional students $70
Summer Session (2009) $970 per credit*

In Absentia Fees
Undergraduate $200 per semester
Graduate and Professional $200 per semester
Law and Management $75 per semester

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

* Residency status is determined at the time of admission by the college. Change in residency status is determined by the university bursar following matriculation. The deadline for submission of requests for the Fall 2009 semester is June 1, 2009. The deadline for the Spring 2010 semester is November 1, 2009. Further information and an application can be found at www.bursar.cornell.edu.

**Regular session rate. Special program rates may vary.

Admission application fees and forms may be found at www.cornell.edu/admissions.

Tuition Refund Policy
Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. All students refer to the “Proration Schedule for Withdrawals and Leaves of Absence” below.

Repayment policy. Students receiving financial aid from the university who withdraw during a semester will have their aid revoked, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. Cornell is authorized to offset any credit balances against any debts owed by the student to the university.

Proration Schedule for Withdrawals and Leaves of Absence

Special programs, such as Cornell Abroad and Executive MBA, may follow their own tuition refund policies for withdrawals and leaves of absence. Please refer to the appropriate program office for details regarding those policies.

BILLING AND PAYMENT

Billing
Electronic billing (E-billing) is the official method of billing. Paper bills will not be sent. Tuition and room and board charges will be billed in July and December and must be paid before registration. The due date for these semester bills will normally be 5 to 10 working days before registration day. All other charges, credits, and payments will appear on monthly statements.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All payments are due by the due date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

The Office of the Bursar conducts all business directly with the student. Monthly charges, as well as any awards, grants, scholarships, and loans, are listed and billed under the student’s name. Refund checks and direct deposit refunds are also drawn in the name of the student. Cornell is also authorized to offset any credit balances against any debts owed by the student to the university.

Payments
An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student’s bill by several departments and offices of the university. Because the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall (tel. 255-2336; fax 255-6442; uco-bursar@cornell.edu; www.bursar.cornell.edu). Bursar account information may be viewed real time on Student Center.

Student Record Privacy Statement: Annual Notification Under FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. Further details may be found in Cornell Policy 4.5 Access to Student Information, available at www.policy.cornell.edu/Vol._4.5.cfm. These rights include:

1. The right to inspect and review the student’s education records within 45 days of the day the university receives a request for access.

Students should submit to the office of the university registrar, written requests that identify the record(s) they wish to inspect. The university official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.

2. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent:

a. Disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic (including emeritus faculty), research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.
A school official has a legitimate educational interest if the official needs to review an education record to fulfill his or her professional responsibility.

b. Upon request, to officials of another school in which a student seeks or intends to enroll.

c. To parents or legal guardians of dependent students as that term is defined in the Internal Revenue Code. In general, the university does not make education records available to the parents of a student. However, where the university believes that it is in a dependent student's best interests, information from the student's education records may, at the university's discretion, be released to the parents or legal guardians of such a dependent student. Such disclosure generally will be limited to information about a student's official status at the university, but parents or legal guardians of a dependent student may also be notified upon the authorization of the dean of the student's college, or the Vice President for Student and Academic Services, or the Dean of Students, or their designees in the following cases:

• when a student has voluntarily withdrawn from the university or has been required by the university to withdraw;
• when a student has been placed on academic warning;
• when the student's academic good standing or promotion is at issue;
• when a student engages in alcohol-or-drug-related behavior that violates Cornell policies;
• when a student has been placed on disciplinary probation or restriction;
• in exceptional cases when a student otherwise engages in behavior calling into question the appropriateness of the student's continued enrollment in the university.

Unless otherwise indicated in writing by the student at the time of registration, or thereafter, the university will presume that a full-time undergraduate student is a dependent as that term is defined in the Internal Revenue Code. Undergraduate students who are not financially dependent and do not wish to permit their parents or legal guardian access to their education records should advise the Office of the University Registrar in writing and provide evidence of financial independence. Graduate and professional students are not assumed to be financially dependent upon their parents or legal guardian for these purposes.

d. Disclosure of directory information. Cornell University has defined directory information to include the following: name, local address, local telephone listing, e-mail address, photograph, major field of study and college attended, dates of attendance, enrollment status, participation in officially recognized activities and sports, weight and height (of members of athletic teams), and any degrees earned and awards received. Directory information may be released unless the student updates his/her privacy settings on Student Center. Students who wish to suppress their directory information from the printed telephone directory must perform this update within 10 days of the date of official university registration. Students may rescind their no-release request at any time by writing to the Office of the University Registrar or on Student Center.

3. The right to request the amendment of the student's education record that the student believes is inaccurate.

Students may ask the office of the university registrar to amend a record that they believe is inaccurate. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate.

If the university decides not to amend the record as requested by the student, the university will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by Cornell University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-5001

Financial Aid and Federal Loans Satisfactory Academic Progress Policy for Undergraduate Students

Federal regulations (General Provision CRF 668.1) require that Cornell University review the academic progress of students who apply for and/or receive financial assistance. This includes but is not limited to the William D. Ford Federal Direct Loan program and all Cornell grants. To be making satisfactory academic progress toward a degree, students must maintain specified grade point averages and proceed through the program at a pace leading to completion within a specified time frame. This applies to each financial aid applicant, whether a previous aid recipient or not. Failure to make satisfactory academic progress may affect your eligibility for financial aid. The specific requirements for GPA and credit hours can be found by reviewing the complete policy on the Office of Financial Aid and Student Employment web site, finaid.cornell.edu.

Use of Animals for Courses

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered. The use of live vertebrates in instruction is reviewed and approved by the Institutional Animal Care and Use Committee (IACUC) (www.iacuc.cornell.edu).

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet titled the Code of Academic Integrity and Acknowledging the Work of Others is available from the office of the dean of faculty, and at www.policy.cornell.edu/Code_of_Academic_Integrity.cfm.
Advanced Placement

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen and that counts toward the degree and degree requirements as specified by the individual college at Cornell. Its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their course of study.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from the following:

1. The requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, N.J. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on pages 9-10.

2. Acceptable performance on a Cornell department exam (offered only in some subjects, usually during orientation).

3. A regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments accept credit from virtually all accredited colleges; some do not.

4. GCE Advanced Level and International Baccalaureate Examinations are listed on page 11.

Note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described in paragraph 1 or 2 above.

The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement in its subject. The Advanced Placement credit for those who meet the standards, and determines which Cornell courses the credit places students out of. The final decision for awarding advanced placement credit at Cornell and applying it to degree requirements rests with each individual college (consult the relevant college sections of Courses of Study). Students need not accept advanced placement, although forfeiting the advantage of moving quickly into advanced courses affects one’s overall education. If they take the Cornell course they have placed out of, they relinquish the advanced placement credit.

Advanced placement examinations. Entering first-year students should have their scores from CEEB Advanced Placement Examinations sent to their college or school registrar’s office (see list below).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both on the basis of departmental examinations given on campus during Orientation Week. A schedule of these examinations appears in the orientation booklet mailed in late summer to entering students. The departments that award advanced placement and credit on the basis of departmental examinations are shown on pages 9-12. Students need to register for those examinations in the relevant department.

Transfer of credit. Entering first-year students who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course syllabi to their college or school office (see the list below).

Written inquiries. Students can address questions to departments, schools, or college offices by adding Ilion, NY 14855 to the addresses given in the following sections.

College of Agriculture and Life Sciences
140 Roberts Hall

College of Architecture, Art, and Planning

CREDIT AND PLACEMENT

The tables on the following pages summarize how credit and placement are determined for most subjects. Supplementary information for some subjects is also provided.

International Credentials

The policies currently in effect for General Certificate of Education (GCE) "A" Level Examinations and International Baccalaureate Higher Level Examinations are summarized in the table on pages 9 and 10. Students may submit results of the French Baccalaureat or German Abitur for possible credit depending on the stream or specialization followed. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during Orientation Week.

The table lists subjects and the marks for which credit will be awarded.

†Cornell Advanced Standing Examination. Contact Callean Hile, 303 Morrill Hall, for French, Italian, and Spanish. Contact Miriam Zubal, 183 Goldwin Smith Hall, for German.
International Baccalaureate (IB) Higher-Level Examinations are awarded advanced standing and credit on receipt of the examination results from the I.B. Office.

Anthropology subject to departmental review

Biology see www.biology.cornell.edu

Chemical and Physical Systems 6 or 7 8 credits (PHYS 1101 and 1102)
Chemistry 6 or 7 4 credits (CHEM 2070 or 2090)
Computer Science 6 or 7 4 credits (CS 1110)
Economics 6 or 7 6 credits (ECON 1110 and 1120)
English Literature 7 3 credits and placement out of one first-year writing seminar
History 6 or 7 4 credits
Mathematics 6 or 7 4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. (Engineering and BEE students receive no credit.)

Music by departmental examination

Philosophy subject to department review

Physical Science 6 or 7 8 credits (4 credits, CHEM 2060; 4 credits, PHYS 1010)
Physics 6 or 7 4 credits (PHYS 1101, 1112, or 2207). (Students may receive credit for only one of the courses in each group: [PHYS 1101, 1112, 1116, 2207] OR [PHYS 1102, 2208, 2213, 2217].)

General Certificate of Education (GCE) Advanced ("A") Level Examination are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to receive credit.

Biology see www.biology.cornell.edu
Chemistry A 8 credits (CHEM 2070 or 2090 and 2080) B 4 credits (CHEM 2070 or 2090)
Economics A 6 credits (ECON 1110 and 1120)
English Literature A 3 credits and placement out of one first-year writing seminar B 3 credits (excluding Arts and Sciences students)
Mathematics A, B, or C 4 credits and placement out of MATH 1106 and 1110. Students may obtain more credit by taking the Mathematics Department placement exam during orientation week. Students who take the A level exam in Singapore will receive 8 credits and placement out of MATH 1106, 1110, 1120, 1220, and 1910. (Engineering and BEE students receive 4 credits.)

Music by departmental examination

Philosophy subject to department review

Physics A or B 4 credits for PHYS 1101, 1112, or 2207. 4 additional credits for PHYS 2213 are awarded for a combination of grades of A or B and a minimum of 8 advanced placement or advanced standing credits in mathematics. Students planning to major in physics are encouraged to enroll in PHYS 1116. Students taking 1116 do not receive 4 credits for 1112. Students taking 2217 do not receive credit for 2213. Students in the College of Engineering should refer to www.engineering.cornell.edu/student-services/academic-advising/ap-credit/index.cfm for credit and placement information.

SUPPLEMENTARY INFORMATION

Chemistry and Chemical Biology

The Department of Chemistry and Chemical Biology offers two 8-credit sequences that satisfy prerequisites for further work in the department: CHEM 2070–2080 (2090 for engineering students) and 2150–2160. CHEM 2150–2160 is intended for students with a solid background in chemistry and strong math skills.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination or an international examination, or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to 4 credits. A student may earn 4 or 8 credits by suitable performance on the departmental examinations. To take the departmental examinations (exams are offered at the beginning of each semester), students must sign up beforehand in the Chemistry and Chemical Biology Office of Undergraduate Studies, 131 Baker Laboratory, or online at www.chem.cornell.edu/cref/advpreg.aspx.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her advisor, and the professors teaching the courses. Questions may also be directed to the director of undergraduate studies, in G50 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking CHEM 2150–2160 and should consult the CHEM 2150 instructor or department staff.

Computer Science

Students who receive a score of 4 or 5 on the AB version of the CEEB Advanced Placement Examination in computer science, a score of 5 on the AP exam, or a score of 6 or 7 on the IB exam will receive 4 advanced placement credits and may take CS 2110. These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering.

Freshmen may also earn 4 credits by suitable performance on a departmental examination, given during Orientation Week. To take the departmental examination, students need only show up at the time and location indicated on the Orientation Week Schedule; advanced sign-up is not necessary.

Mathematics (Calculus)

For guidance in selecting an appropriate course, please consult First Steps in Math, published on the Mathematics Department web site (www.math.cornell.edu) under Courses.
The calculus courses MATH 1110, 1120, and 1910 cover substantially the same topics as calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary-school students who have had the equivalent of at least one semester of calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (Calc AB or Calc BC) during their senior year.

The Department of Mathematics offers a placement examination during orientation week that covers the material of the AP Calculus program. The department exam should be taken by
1. students who have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination; or
2. students who believe that their placement is incorrect.

Students are strongly urged to take the departmental placement exam even if they feel that their grasp of the material is uncertain. The placement information is useful in any case, and the grade on the test does not become a part of the student's record. No advance registration is required for the departmental examination is necessary. (A separate placement exam for students in the College of Engineering or the BEE program will be announced during the academic briefings.)

Students who have been awarded advanced placement credit for calculus may not also receive academic credit for similar courses taken at Cornell.

Students who are in neither the College of Engineering nor in the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Students who have 4 AP credits for calculus will forfeit those credits if they take MATH 1106 or 1110. Students who have 8 AP credits for calculus will forfeit 4 credits if they take MATH 1120, 1220, or 1910 and all 8 credits if they take MATH 1106 or 1110.

Students in the College of Engineering or the Biological and Environmental Engineering (BEE) program of the College of Agriculture and Life Sciences. Engineering students will take the engineering calculus sequence, which assumes students have one semester of calculus experience before entering Cornell. Because the engineering sequence is more advanced than other sequences at Cornell, engineering students may receive at most 4 AP credits, which they will forfeit if they take MATH 1910, the first course in the sequence.

Modern Foreign Languages

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement Credit” under “Foreign Language Requirements” in the College of Arts and Sciences section of this catalog. Students whose SAT II or AP scores are two years old or more, or who have had a year of formal study or substantial informal study since they last took a placement test should take the Cornell placement test again during orientation week if they plan to continue course work.

Advanced standing credit may be earned as follows:
1. Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB earn 3 credits and are eligible to take the Cornell Advanced Standing Examination (CASE).
2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take the Cornell Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of 3 credits.
3. For formal language work done after high school at an accredited college, credit is considered by the relevant department on submission of a syllabus and transcript. Note that credit transfer and placement are the result of different processes. Students wishing to enroll in a language course at Cornell are required to take the placement test.
4. Native speakers of languages other than English may, if an examination by the appropriate department is available, be granted a maximum of 3 credits in a foreign language.

Information about times and places of placement tests is available in the orientation booklet and from Academic and Career Counseling Services at sao.cornell.edu/orientation/placement.htm. For more information, see "College of Arts and Sciences" on language course placement, or contact Callan Hile, 303 Morrill Hall, for French, Italian, and Spanish (placement tests in French, Italian, and Spanish are available at coll.lrc.cornell.edu). Miriam Zahed, CoY Goldwirtt Smith Hall, for German. Doreen Silva, 226 Morrill Hall, for Russian. Kim Robinson, 388 Rockefeller Hall, for Asian languages, Nava Scharf, 409 White Hall, for Hebrew; or Munther Younes, 409 White Hall, for Arabic.

Music

Advanced placement and credit are awarded only in music theory, and only on the basis of an examination administered by the Department of Music, that is, credit cannot be earned on the basis of the AP, IB, or other examinations from outside Cornell, nor on the basis of course work done elsewhere. Outstanding performance on the departmental examination will earn students 3 credits and placement directly into MUSIC 2102. In rare instances students may place into MUSIC 3101, in which case they will earn 6 credits. The placement examination is normally administered on the Sunday during fall orientation week and, when necessary, at the beginning of the spring semester. For more information about the examination, see the departmental web site.

Physics

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (Physics B or Physics C), certain international examinations, or the departmental examination (offered only during orientation week, appointment required). For information about the departmental examination, consult the director of undergraduate studies, 115 Clark Hall (physcscdus@cornell.edu).

Students who have been awarded advanced placement credit for statistics may not also receive academic credit for similar courses taken at Cornell. In particular, they will forfeit those credits if they take AEM 2100, HADM 2201, ILRST/STSCI 2100, MATH 1710, or PAM 2100.

Course Enrollment

PREENROLLMENT

Course enrollment for each semester at Cornell takes place partway through the preceding semester using an online application through Student Center. Dates are announced in advance and are posted on Student Center. Students are expected to meet with their faculty advisors before this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.
COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. Courses may be added, dropped, or changed online through Student Center. Permission-only courses and courses with specific add/drop procedures will be handled using a written add/drop form. The form is completed by the student and signed by both the student's advisor and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, the School of Continuing Education and Summer Sessions, the Department of Physical Education and Athletics, and First-Year Writing Seminars have different course enrollment and add/drop policies. See the chart below for their course add/drop/change fees.

EXPLANATION OF COURSE NUMBERING SYSTEMS AND SUBJECT CODES

1100 level—introductory course, no prerequisites, open to all qualified students.  
2000 level—lower-division course, open to freshmen and sophomores, may have prerequisites.  
3000 level—upper-division course, open to juniors and seniors, prerequisites.  
4000 level—upper-division course, open to seniors and graduate students.  
5000 level—professional level (e.g., management, law, veterinary medicine).  
6000 level—professional and graduate-level course, open to upper-division students.  
7000 level—graduate-level course.  
8000 level—master's level, thesis, research.  
9000 level—doctoral level, thesis, research.  

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses.

Agriculture and Life Sciences  
Architecture, Art, and Planning  
Arts and Sciences  
Engineering  
Hotel Administration  
Human Ecology  
Industrial and Labor Relations  
Nutritional Sciences  
Officer Education  

Group 2: Graduate professional divisions.

Law  
Management  
Veterinary Medicine  

No courses are offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.  
Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments.  
All courses are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

**Class Attendance, Meeting Times, and Examinations**

**CLASS ATTENDANCE AND MEETING TIMES**

Students are expected to be present throughout each semester at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

**Absences because of religious beliefs.** In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up examinations, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

</table>
On Monday, Tuesday, Wednesday, and Thursday the hours of 4:25 p.m. to 7:30 p.m., on Fridays the hours after 4:25 p.m., on Saturday the hours after 12:05 p.m., and all day Sunday shall be free from all formal undergraduate class examinations.

Evening preliminary examinations which will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each semester.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (e.g., athletic, musical, theatrical, or employment).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

**FINAL EXAMINATIONS**

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available online at www.cornell.edu/academics/courses.cfm.

**General Rules Governing Final Examinations**

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the Office of the University Registrar without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to offer an alternate examination during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) during the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular semester and should not be required to be submitted during study period but rather well into the examination period.

**The university policies governing study period and final examinations are:**

1. Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation, or conference) be conducted or due during the period set aside for final examinations.

2. Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one 24-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, such as illness or death in the family.

3. Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following semester, to afford students such right of review.

**EVENING PRELIMINARY EXAMINATIONS**

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, religious, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 515 Day Hall.

**Grading Guidelines**

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D–; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a yearlong course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ =4.3
- A+ =4.0
- A– =3.7
- B+ =3.3
- B– =3.0
- C+ =2.3
- C– =2.0
- D+ =1.3
- D =1.0
- F =0.0

This is how a semester average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Quality</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 103</td>
<td>B+</td>
<td>3.3</td>
<td>x 3 = 9.9</td>
</tr>
<tr>
<td>ENGL 151</td>
<td>C–</td>
<td>1.7</td>
<td>x 3 = 5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0</td>
<td>x 4 = 12.0</td>
</tr>
<tr>
<td>PAM 100</td>
<td>B</td>
<td>3.0</td>
<td>x 3 = 9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0</td>
<td>x 3 = 6.0</td>
</tr>
</tbody>
</table>

**S–U GRADES**

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

a. the S–U system have symbol equivalents which are uniform within the university: S means C– or above; U means D+, D, D–, or failure.

b. S–U options be chosen by the student during the first three weeks of the semester.

c. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S–U. Any change in grading options must be announced by the instructor within the first two weeks of the semester.

d. course requirements (required reading, term paper, etc.) be the same for students electing S–U grades as for those electing letter grades."

The rules for the S–U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences: (1) Must have 100 credit hours with A, B, C, D grades (prorated for transfer students). (2) The S–U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (3) Freshmen are limited to one optional S–U per semester.
Architecture, Art, and Planning. (1) All courses specifically required for a degree are excluded. Various departments may designate specific required courses where S–U will be permitted. (2) In a course designated as S or U, the entire class is graded S–U. The instructor must announce this decision within the first two weeks of class. (3) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (1) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (2) Permission of instructor. (3) A minimum of 80 of the 120 hours required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (1) The course in question must be offered with an S–U option. (2) The student must have completed at least one full semester of study at Cornell. Freshmen may not take any courses on an S–U basis during their first semester with the exception of courses graded S–U only such as physical education, ROTC, supplemental courses, and writing workshops. (3) The proposed S–U course must count as either a liberal studies distribution or an approved elective in the Engineering curriculum. (4) Students may elect to enroll S–U in only one course each semester in which the choice between letter grade and S–U is an option. (Additional courses offered “S–U only” may be taken in the same semester as the “elected S–U” course.) (5) After the end of the third week of classes, the grading option may not be changed nor will students be permitted to add a course in which they were previously enrolled (in the current semester) under a different grading option. Note: Courses graded S–U do not count toward eligibility on the Dean’s List and may weaken a student’s chances for acceptance into graduate school. Questions regarding the S–U grading option should be addressed to Engineering Advising.

Graduate School. (1) Seminars and thesis research courses are usually graded S–U, and should be registered accordingly or a grade error results at semester’s end. Other courses may be registered as S–U only if offered as S–U option.

Hotel. (1) A maximum of 4 S–U credit hours per semester, not including those only offered S–U, which may only be in non-career track courses (M.M.H.) or nonconcentration, non-hotel elective courses (B.S.). (2) A maximum of 6 credits taken S–U toward distribution elective requirements.

Human Ecology. (1) Not part of student’s major. (2) May be used in the 9 credit hours required outside the major in Human Ecology courses. (3) Not part of hours required in humanities, natural sciences, and social sciences. (4) A department may approve S–U grading in specific courses if approved by Educational Policies Committee. (5) Total of 12 credits in S–U courses (not counting physical education) may be counted toward degree requirements during a student’s college career.

Industrial and Labor Relations. (1) This option may be elected, if available in ILR electives, or in out-of-college electives but not including directed studies. (2) Degree requirements include a minimum of 105 letter grade (A+ to D–) credits. (3) Student must also be in good academic standing. (4) A U grade is considered the equivalent of an F in determining a student’s academic status. (5) Limited to two courses per semester, not to exceed four hours in any one course. Internal Transfer. (1) S–U grades permitted only when it is the only option or (2) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Late. Each J.D. student, after the first year, may elect to take up to two upper-class courses on an S–U basis. Students must make this election in writing to the registrar’s office within two weeks of the end of the add/drop period. If made, the election shall be irrevocable. Students may not make this election in courses that they use to satisfy the Law School’s upper-class writing or professional responsibility requirements. Instructors may designate specific courses that they teach as not eligible for the S–U election.

Veterinary Medicine. (1) There is one foundation course in the veterinary curriculum that is offered on an S–U basis only. All required core foundation courses must be taken for a letter grade. (2) Elective courses for veterinary students may be offered on an S–U basis at the option of the professor. S–U optionally graded courses must be chosen within the add/drop deadline.

INCOMPLETE
The grade of incomplete is appropriate only when two basic conditions are met:
1. the student has a substantial equity at a passing level in the course with respect to work completed; and
2. the student has been prevented by circumstances beyond the student’s control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student’s own discretion.

While it is the student’s responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student’s college for completing the course work. Several institutions require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up before the deadline and that the grade has been properly recorded with the student’s college registrar.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts may be requested at registrar.sas.cornell.edu. There is no fee except for overnight and/or express mail services.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student’s college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar’s office.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student’s responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two semesters of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of semesters satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell. Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team, or performing in the marching band.
Physical education is a requirement of the first two terms at Cornell. Students must register for it in each semester, except those in which postponements are granted, until the requirement is satisfied.
Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding 20 hours per week). Gannett Health Services can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.
Day Hall (255-4386).

requirements, students should contact the Internal Transfer Division. Tuition and fees for sponsorship to ITD, so that if direct letter of sponsorship. Students are encouraged in ITD and essentially guarantee admission if many cases, colleges formally sponsor students application for internal transfer to the ITD. In submit a copy of their target college's interview with the division's director and...and Fitness for the original swimming requirement.

Swim Test

The Faculty Advisory Committee on Athletics and Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Beginning Swimming and Water Safety in his or her program of physical education before electives can be chosen. A swim test hold will be placed on the student's record until he or she has passed the swim test or fulfilled the requirement by satisfactory attendance in two semesters of Beginning Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the Faculty Advisory Committee on Athletics and Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Certified First Responder, Emergency Medical Technician, or Wellness and Fitness for the original swimming requirement.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they’ve been admitted, and may decide to transfer from one college to another within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should contact the Internal Transfer Division (ITD). Generally, students whose current curriculum differs substantially from that of their target college, or students with below-average records, are not eligible for direct transfer but can apply for sponsorship to the ITD.

To apply for sponsorship, candidates must interview with the division's director and submit a copy of their target college's application for internal transfer to the ITD. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Students are encouraged to apply simultaneously for direct transfer and for sponsorship to ITD, so that if direct transfer is denied, their target college may offer the opportunity of being sponsored in the Internal Transfer Division. Tuition and fees for students sponsored in ITD are the same as those of the sponsoring college.

For more information about internal transfer requirements, students should contact the admissions office of their target college and the office of the Internal Transfer Division, 220 Day Hall (255-4391).

Service-Learning Course Guide

Service-learning courses at Cornell are offered from various colleges and disciplines to engage students, faculty, and community partners on issues relating to poverty, literacy, education, access, health care, immigration, hunger, affordable housing, environment, and others. Service-learning courses are academically rigorous and offer students opportunities to link theory and practice through structured public service activities in collaboration with local communities, and thus gain further understanding and appreciation of the discipline, while achieving an enhanced sense of civic responsibility.

Through Service-learning, students gain hands-on problem-solving skills, develop an aptitude for critical thinking, and become active citizens in our democratic society. The Cornell Public Service Center (PSC) serves as the hub of public service and civic engagement activities on campus. For students and faculty members who are interested or engaged in public service, public scholarship, and civic engagement, the Public Service Center has developed a comprehensive list of Service-learning courses on campus. For more information, please visit www.psc.cornell.edu.

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE PROFESSORS-AT-LARGE

726 University Avenue (255-0832)
adwhiteprofessors.cornell.edu

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Andrew D. White Professor-at-Large engages in a variety of activities including public lectures, ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. They serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2010

Aldous, David, statistician
Leeson, Lynn Hershman, digital artist
Peskin, Charles, mathematician
Sala, Oswald, ecologist
Tibi, Bassam, Islamst

Term Ending in 2011

Sims, Lowery Stokes, art curator

Term Ending in 2012

Angier, Natalie, science writer

Term Ending in 2013

Lalldhar Brahimi, diplomat
Sir Partha Dasgupta, economist
Shri KulKarni, astronomer

FLANK H. T. RHODES CLASS OF '56 UNIVERSITY PROFESSORSHIP

To commemorate their 40th reunion, the Class of 1956 initiated an endowment to create the Frank H. T. Rhodes Class of ’56 University Professorship in honor of Cornell’s ninth president (1977–1995). The purpose of the Rhodes Class of ’56 Professorship is to strengthen the undergraduate experience by bringing to the university individuals from every walk of life who represent excellence of achievement and to create opportunities for interaction with undergraduates. The endowment also makes it possible to create public events related to the professorship such as lectures, performances, films, art exhibits, or conferences. Rhodes Class of ’56 Professors are full members of the faculty while in residence. Appointments are awarded for a period of one to five years. During each year of their appointment, Rhodes Class of ’56 Professors visit the campus for a week to engage in a variety of activities including public lectures, ongoing courses, and collaborative research.

Current Appointments

Eisenman, Peter, architect
Grandin, Temple, associate professor of animal science
Moses, Robert Parris, civil rights leader and founder of the Algebra Project
Zinni, Anthony, USMC four-star general (retired)

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4355)

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student’s program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.
Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center’s members. Detailed descriptions of these courses can be found in the listings of the individual departments.

**Selected Applied Mathematics Courses**

**Basic Graduate Courses in Mathematics and Applied Mathematics**

- **MATH 4130** Honors Introduction to Analysis I
- **MATH 4140** Honors Introduction to Analysis II
- **MATH 4330** Honors Linear Algebra
- **MATH 4340** Honors Introduction to Algebra
- **MATH 6110** Real Analysis
- **MATH 6120** Complex Analysis
- **MATH 6150** Mathematical Methods in Physics
- **MATH 6210** Measure Theory and Lebesgue Integration
- **MATH 6220** Applied Functional Analysis
- **MATH 6310-6320** Algebra
- **MATH 6330** Noncommutative Algebra
- **MATH 6340** Commutative Algebra
- **MATH 6510** Algebraic Topology
- **MATH 6610** Geometric Topology
- **TAM 6100, 6110** Methods of Applied Mathematics I, II, III
- **TAM 6130** Asymptotics and Perturbation Methods

**Analysis (and Differential Equations)**

- **MATH 4280** Introduction to Partial Differential Equations
- **MATH 6170** Dynamical Systems
- **MATH 6180** Smooth Ergodic Theory
- **MATH 6190-6200** Partial Differential Equations
- **MATH 6520-6550** Differentiable Manifolds I and II
- **MATH 6620** Riemannian Geometry
- **MATH 7110-7120** Seminar in Analysis
- **MATH 7130** Functional Analysis
- **MATH 7140** Fourier Analysis
- **MATH 7170** Applied Dynamical Systems

**Logic and Theory of Computing**

- **CS 5220** Introduction to Parallel Computing
- **CS 6706** Reasoning about Uncertainty
- **CS 6810** Theory of Computing
- **CS 7192** Seminar in Programming Refinement Logics
- **MATH 4860** Applied Logic (also CS 4860)
- **MATH 6810** Logic
- **MATH 7810-7820** Seminar in Logic
- **MATH 7830** Model Theory
- **MATH 7840** Recursion Theory
- **MATH 7870** Set Theory
- **MATH 7880** Topics in Applied Logic

**Numerical Mathematics and Operations Research**

- **CS 4220** Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)
- **CS 6210** Matrix Computations
- **CS 6220** Sparse Matrix Computations
- **CS 6240** Numerical Solution of Differential Equations
- **CS 6670** Machine Vision
- **CS 6820** Analysis of Algorithms
- **MATH 4250** Numerical Analysis and Differential Equations (also CS 4210)
- **ORIE 6355** Scheduling Theory
- **ORIE 6360-6310** Mathematical Programming, I and II
- **ORIE 6520** Nonlinear Programming
- **ORIE 6525** Interior-Point Methods for Mathematical Programming

**Discrete Mathematics and Geometry**

- **MATH 4410** Introduction to Combinatorics I
- **MATH 4420** Introduction to Combinatorics II
- **MATH 4550** Applicable Geometry
- **ORIE 6528** Convex Analysis
- **ORIE 6530** Graph Theory and Network Flows
- **ORIE 6536** Integer Programming

**Information Communication and Control Theory**

- **CHEM 4720** Feedback Control Systems (also ECE 4720, MAE 4780)
- **ECE 4110** Random Signals in Communications and Signal Processing
- **ECE 4250** Digital Signal Processing
- **ECE 4670** Digital Communication Receiver Design
- **ECE 5210** Theory of Linear Systems (also MAE 5210)
- **ECE 5620** Fundamental Information Theory
- **ECE 5640** Detection and Estimation
- **ECE 5670** Digital Communications
- **ECE 5800** Control and Optimization of Information Networks

**Mathematical Biology**

- **BIOE 4600** Theoretical Ecology
- **BTRY 6970** Individual Graduate Study in Biometry and Statistics

**Mathematical Economics**

- **ECON 6190** Econometrics I
- **ECON 6200** Econometrics II
- **ECON 7100** Stochastic Economics: Concepts and Techniques
- **ECON 7170** Mathematical Economics
- **ECON 7180** Topics in Mathematical Economics
- **ECON 7190-7200** Advanced Topics in Econometrics

**Mechanics and Dynamics**

- **CHEM 7310** Advanced Fluid Mechanics and Heat Transfer
- **CHEM 7510** Mathematical Methods of Chemical Engineering Analysis
- **CHEM 7530** Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
- **MAE 6010** Foundations of Fluid Dynamics and Aerodynamics
- **MAE 7340** Analysis of Turbulent Flows
- **MAE 7370** Computational Fluid Mechanics and Heat Transfer
- **TAM 5700** Intermediate Dynamics
- **TAM 5780** Nonlinear Dynamics and Chaos
- **TAM 6710** Hamiltonian Dynamics
- **TAM 6720** Celestial Mechanics (also ASTRO 6570)
- **TAM 6730** Mechanics of the Solar System (also ASTRO 6571)
- **TAM 6750** Nonlinear Vibrations
- **TAM 7510** Continuum Mechanics and Thermodynamics
- **TAM 7520** Nonlinear Elasticity
- **TAM 7760** Applied Dynamical Systems (also MATH 7170)

**Probability and Statistics**

- **ECE 4110** Random Signals in Communications and Signal Processing
- **ECE 5620** Fundamental Information Theory
- **ECE 5660** Fundamentals of Networks
- **MATH 6710-6720** Probability Theory
- **MATH 6740** Introduction to Mathematical Statistics
- **MATH 7770-7780** Stochastic Processes
- **ORIE 5560** Queueing Systems: Theory and Applications
- **ORIE 5580** Applied Time-Series Analysis
- **ORIE 6510** Probability
- **ORIE 6540** Applied Stochastic Processes
- **ORIE 6620** Advanced Stochastic Processes

**Theoretical/Mathematical Physics/Chemistry**

- **CHEM 7920** Molecular Collision Theory
- **CHEM 7930** Quantum Mechanics I
- **CHEM 7940** Quantum Mechanics II
- **CHEM 7960** Statistical Mechanics
- **CHEM 7980** Bonding in Molecules
- **PHYS 6553-6554** General Relativity (also ASTRO 6509-6510)
- **PHYS 6561** Classical Electrodynamics
- **PHYS 6562** Statistical Mechanics
- **PHYS 6572** Quantum Mechanics I
- **PHYS 6574** Applications of Quantum Mechanics II
- **PHYS 7651-7652** Relativistic Quantum Field Theory

**MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES**

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage and support comparative and interdisciplinary research on international subjects. Currently, it supports four U.S. Department of Education Title VI National Resource Centers and 15 other international programs. While some programs offer study of geographic regions, others focus on such topics as international agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. More than 800 faculty members voluntarily collaborate with the center and its associated programs. Undergraduate students may choose from a variety of minors such as international relations, Latin American studies, modern European studies, French studies, East Asian studies, South Asian studies, Southeast Asian studies, global health, or international agriculture and rural development.

In its ongoing effort to anticipate and respond to changing global circumstances and perspectives, the center applies its resources to new pilot activities and initiatives that bring faculty members and students together across traditional disciplines and departmental boundaries. As part of its Foreign Policy Initiative, the center has formed a network of 58 faculty members, brought experts to campus to speak on topical themes as part of a Distinguished Speaker Series, and provided seed funding for activities in foreign policy studies. The center also organizes semi-annual seed grants competitions for faculty and programs to advance international studies at Cornell and support faculty to mobilize additional external support.

Each year the center brings an eminent world leader to campus as the Henry E. and Nancy Horron Bartels World Affairs Fellow to deliver a public lecture, meet with classes, and interact informally with faculty members and students. The center also hosts a Current Events Roundtable each June that enables Cornell alumni to join faculty members in discussions of key world events.
Graduate students' overseas field research is supported through the center's annual travel grant competition as well as the Fulbright fellowship program and the Fulbright-Hays awards, which are both administered by the center.

Web sites of many international programs are hosted by the center along with the university's International Gateway (www.international.cornell.edu), a web site created by the center to showcase Cornell’s international dimensions.

An undergraduate course, Issues behind the News: An Interdisciplinary Analysis of International Current Events, is coordinated by the center and offered by the Department of Government of the College of Arts and Sciences. The center invites faculty from across the university to deepen students' understanding of issues on the front pages of newspapers as events unfold during the semester.

CENTER FOR THE STUDY OF INEQUALITY
365 Uris Hall
254–8674 (tel.)
inequality@cornell.edu
www.inequality.cornell.edu

The Center for the Study of Inequality (CSI) fosters basic and applied research on social and economic inequalities as well as the processes by which such inequalities change and persist. The study of inequality lies at the heart of current debates about segregation, affirmative action, the “glass ceiling,” globalization, and any number of other contemporary policy issues. In recent years, public and scholarly interest in issues of inequality has intensified, not merely because of historic increases in income inequality in the United States and other advanced industrial countries, but also because inequalities of race, ethnicity, and gender are evolving in equally dramatic and complicated ways. The mission of CSI is to support research and teaching relevant to issues of inequality, to disseminate findings resulting from this research, and to otherwise facilitate the study of inequality in the United States and throughout the world.

Minor in Inequality Studies
The minor in inequality studies allows undergraduate students to supplement their studies for their major with a coherent program of courses oriented toward the study of inequality. The minor is organized into tracks examining such topics as globalization and inequality; social policy; the ethics of inequality; poverty and economic development; social movements, education and inequality; race and ethnicity in comparative perspective; and the family and inequality. The minor is open to students enrolled in any of the seven Cornell undergraduate colleges. When the requirements of the minor are met, an official note is made on the student’s academic record (see www.inequality.cornell.edu/academics for further information).

Symposia and Lecture Series
CSI regularly sponsors symposia, workshops, and lecture series that draw attention to the most pressing problems and controversies in the field. The current schedule of events is listed on the center's web site (www.inequality.cornell.edu).

For more information about CSI, contact us at 254-8674 or inequality@cornell.edu.

COGNITIVE SCIENCE
287G Uris Hall
255-6431
cogst@cornell.edu
www.cogsci.cornell.edu

Cognitive Science focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Science draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of Cognitive Science is primarily represented by faculty members in the following departments: Communication, Computer Science, Design and Environmental Analysis, Economics, Education, Electrical and Computer Engineering, Human Development, Information Science, Linguistics, Mathematics, Mechanical and Aerospace Engineering, Neurobiology and Behavior, Philosophy, Psychology, and Sociology, as well as the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate minor in Cognitive Science in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see the Cognitive Science Program under College of Arts and Sciences and/or contact Julie Simmons-Lynch, program coordinator (255-6431 or cogst@cornell.edu).

Graduate Programs
Cornell offers a graduate field minor in Cognitive Science. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in Cognitive Science to combine faculty members from such fields as philosophy, computer science, linguistics, psychology, or neurobiolgy and behavior on common committees. For further information on the graduate field of Cognitive Science, contact Morten Christiansen, director of graduate studies (255-3570, mhc27@cornell.edu).
ed) and/or contact Julie Simmons-Lynch, program coordinator, 278G Urs Hall, Office of Cognitive Science (255-6431 or cogst@cornell.edu).

Courses
Courses from across the university that are relevant to the Cognitive Science Program are listed in this catalog in the Cognitive Science Program section under Arts and Sciences.

CORNELL ABROAD
300 Caldwell Hall
255–6224 (tel.)
255-8700 (fax)
cuabroad@cornell.edu
www.cuabroad.cornell.edu

Study abroad is an integral part of a Cornell education. Those aspiring to lead in this century need, more than ever before, knowledge and experience of the diverse world beyond the boundaries of their home country. To help students develop the knowledge, skills, and attitudes necessary for informed citizenship in today's world, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree.

Qualified students study abroad through programs administered by Cornell and other institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisors. To earn credit for overseas study during the fall and/or spring semester(s), students must apply through Cornell Abroad, whose staff members assist in the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges study in more than 40 countries each year. The following list includes programs chosen frequently by students with college approval; programs preceded by an asterisk (*) are managed by or affiliated with Cornell.

AFRICA
Botswana, Cameroon, Ghana, Kenya, Madagascar, Mali, South Africa, Tanzania, Uganda: CET Study Abroad

Ghana: University of Ghana (through CIEE); NYU

Kenya: Wildlife Management (School for Field Studies); University of Nairobi; Minnesota Studies in International Development

ASIA
China: Chinese University of Hong Kong; *Cornell FALCON at Peking University; Inter-University Program for Chinese Language Studies at Tsinghua University, Beijing; Peking, Nanjing, and East China Normal Universities (CIEE); International Chinese Language Program at National Taiwan University; IES, CET, and the Alliance for Global Education in Beijing or Shanghai; Hong Kong University of Science and Technology; Syracuse or Columbia University program at Tsinghua University; *CAPS at Peking University

India: School for International Training; St. Stephen's College Delhi (through Brown or Rutgers University); CIEE at University of Hyderabad; IES Delhi; Alliance for Global Education in Pune

Indonesia: SIT Study Abroad, Bali

Japan: *Kyoto Consortium for Japanese Studies; International Christian University and other university programs; IES Tokyo; CIEE Tokyo at Sophia University; Kyushu University

Korea: Yonsei University; Ewha University

Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University

Thailand: Khon Kaen University (CIEE)

Vietnam: University of Hanoi (CIEE), CET

AUSTRALIA AND NEW ZEALAND
Australia: Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales; Sydney; University of Queensland; Brisbane; University of Western Australia, Perth; School for Field Studies Tropical Rainforest Studies; Sydney Internship (Arcadia, Boston University)

New Zealand: Otago, Auckland, Massey, Canterbury, and Lincoln Universities; EcoQuest

EUROPE
Czech Republic: UPCES (CERGE-EI) at Charles University; CET program in Jewish Studies, CIEE Prague

Denmark: *Danish Institute for Study Abroad (DIS)

France: *EDUCO (Cornell, Duke, and Emory in Paris) at Université de Paris VII, Paris IV, Paris I, Institut d'Études Politiques de Paris ("Sciences Po")

Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University); IES Business and International Affairs, Paris

Germany: *Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg; Heidelberg University

Greece: College Year in Athens; Arcadia

Hungary: Central European University; CIEE Budapest; Budapest Semester in Math

Ireland: Trinity College Dublin and the National University Colleges of Dublin, Galway, and Cork

Italy: *Bologna Consortium Studies Program; *Cornell College of Architecture, Art, and Planning in Rome; Arcadia University in Florence at the Accademia Italiana; Boston University in Padova; IIES Milan and Rome; Intercollegiate Center for Classical Studies in Rome or Sicily; Syracuse University in Florence

Netherlands: University of Amsterdam; Leiden University

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian), Smolny College, Math in Moscow

Spain: *Cornell–Michigan–Penn program at the University of Seville; *Consortium for Advanced Studies in Barcelona; various language and culture programs

Sweden: The Swedish Program at the University of Stockholm

United Kingdom: *Direct enrollment at: the University of Birmingham; University of Bristol; Cambridge University; City University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Manchester; University of Oxford; University of St. Andrews, University of Sussex; University of Warwick; University of York; University of London: King's College, University College (including the School of Slavonic and East European Studies), Imperial College of Science and Technology, the London School of Economics and Political Science; and the School of Oriental and African Studies, the University of the Arts (including London College of Fashion), as well as other universities and art schools of choice.

Externally sponsored programs in the UK include the British American Drama Academy; the Arcadia, Boston, and Rochester University internships; and the Harsard Parliamentary Internship Programme.

Students studying in the United Kingdom enjoy a variety of services, and cultural activities, provided by the Cornell–Brown–Penn Centre in London.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
Argentina, Chile, or Peru: various university-based study abroad programs, through the Institute for Study Abroad of Butler University or CIEE

Brazil, Chile, Ecuador, Mexico, Nicaragua, Panama, Peru: School for International Training (SIT)

Costa Rica: Organization for Tropical Studies (OTS) Semester Abroad in tropical biology, School for Field Studies; CIEE

Ecuador: Minnesota Studies in International Development

Ecuador, Jamaica, or Mexico: International Partnership for Service Learning (IPSL)

Honduras: Escuela Agrícola Panamericana (Zamorano)
Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad; Agriculture and Life Sciences, Architecture, Art, and Planning, Engineering, and Hotel Administration students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The application deadline for study abroad in the fall 2010 semester and the 2010–2011 academic year is February 15, 2010, for all programs except Oxford and Cambridge, for which the deadline to study at those universities for the academic year in 2010–2011 is November 1, 2009. Many universities and programs admit on a rolling basis before and after these dates. Students planning to study abroad in the spring semester should initiate the application process during the preceding spring. Early application may improve your chances of admission. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad and are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a normal full load of courses abroad, according to the standards of the institution or program overseas, and usually receive 30 credits per year, or 12 to 20 credits per semester. The colleges review course work taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the Cornell transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. Foreign grades are not converted to Cornell/ American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require the equivalent of at least two years of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Hungary, Israel, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell requires students who participate in programs in a non-English-speaking country with English-language course work to take at least one language course as part of their program of study and strongly encourages them to take more. Students should consult with their college study abroad advisors about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, before study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in halls of residence for university students, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad in Cornell-managed programs pay a fixed Cornell Abroad Tuition per semester, which covers tuition, housing during term (with some exceptions), orientation, program-sponsored trips and events, and administrative and financial aid costs, including emergency medical evacuation and repatriation coverage. It may include other items (e.g., meals, commuter passes) depending on the program. Students pay other costs (e.g., airfare and personal expenses) directly. Different fee levels for Cornell programs reflect the relative costs of operation.

Pending approval by the Board of Trustees, in 2009–2010 the Cornell Abroad Tuition for students participating in the Berlin Consortium for German Studies, the Cornell Nepal Study Program, EDUCO (Emory, Duke, and Cornell in Paris), or the Michigan–Cornell–Penn Program in Seville is $21,950.

For the Denmark Institute for Study Abroad (DIS), the Cornell Abroad Tuition is $23,490 per semester, and for the Kyoto Consortium for Japanese Studies (KCJS), the Tuition is $28,525 per semester. For the Bologna Consortium Studies Programs (BCSPS), the Tuition is $16,345 per semester for academic-year students and $18,995 for spring-only participants. For the Consortium for Advanced Studies in Barcelona (CASIB) the fee is $22,250 for fall and $25,900 for spring.

Students studying in all other programs in 2009–2010 pay the tuition and other costs charged by their programs and a Cornell International Program Tuition (CIPT) of $4,995 per semester. The CIPT covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students. Students studying in the United Kingdom and Israel on direct enrollment programs at British and Israeli universities pay a Cornell International Program Tuition of $5,410. This higher amount covers the cost of on-site support services provided by Cornell Abroad.

Financial Aid
Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for two semesters of financial aid, consistent with general university aid policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree. Some programs abroad offer need-based and merit-based scholarships; there are also external sources of aid for which Cornell Abroad students are eligible.

Other Locations
Cornell students are by no means limited to the locations listed above or to the programs identified for other countries. In recent years, they have also studied in Austria, Croatia, Dominican Republic, Finland, Mongolia, Poland, Portugal, Switzerland, Tajikistan, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad. They are expected to have a cumulative grade point average of 3.0 or above. Over 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 60 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors may be unable to count study abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad during their sophomore, junior, or senior year. Junior year is the traditional choice, but second-semester sophomore year or first-semester senior year abroad is increasingly popular. To ensure preparation, it is important to begin planning for study abroad as early as freshman year. Although semester-long programs are usually available, academic-year programs are highly recommended.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered by other institutions and available at Cornell Abroad, 300 McGraw Hall, where students are encouraged to consult the library of study abroad materials, talk with staff members, and attend information meetings. The Cornell Abroad web site is an excellent resource for links to universities and programs worldwide, as well as for applications and comprehensive information on all aspects of study abroad. Students meet with the study abroad advisors in their colleges to discuss how they will meet college degree requirements.

Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. College Approval Forms are signed by both the faculty advisor and the college study abroad advisor. Arts and Sciences,
Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff of Cornell Abroad will work in close coordination with representatives abroad and receive information regarding safety and security conditions worldwide through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not normally recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student safety and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about the policies of those institutions regarding the completion of academic work and the potential financial implications of premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the number of credits to be awarded, will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (300 Caldwell Hall); Richard Gaulton, Ph.D., director; Kristen Grace, Ph.D., associate director; Libby Okhiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabs and evaluations, books, videotapes and CDs, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad web site (www.cuabroad.cornell.edu), which incorporates links to universities, programs, and resources worldwide as well as a database of cost estimates. In the early weeks of every semester, students and faculty and staff members discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad web site (www.cuabroad.cornell.edu). The director and associate director are available at Cornell Abroad for individual advising.

College Study Abroad Advisors

Agriculture and Life Sciences: Christine Potter, 140 Roberts Hall; Architecture, Art, and Planning: Melanie Holland, B-1 West Sibley Hall; Agriculture Sciences: Dean Pat Wasyliv, 55 Uphoff Smith Hall; Engineering: Engineering Advising, 167 Olin Hall; Hotel Administration: Barbara Lang, 180 Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer Hall; Industrial and Labor Relations: Kevin Harris, 101 Ives Hall.

CORNELL IN WASHINGTON PROGRAM

M101 McGraw Hall
255-4900
ciw.cornell.edu

Cornell in Washington is a unique opportunity for students in any major or with any career interest. Qualified juniors and seniors in all colleges can earn full academic credit—and grades that count in their GPAs—for a semester in Washington, D.C., taking small, seminar courses from Cornell faculty members, conducting research, getting real-life work experience, and living at the Cornell Center near Dupont Circle.

Washington, as the center of much of the nation’s political energy, is an ideal place to be part of American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington’s rich collection of libraries, museums, theaters and art galleries offers an opportunity to enjoy and explore American cultural life, present and past. Washington’s vast financial, technology, and health-related sectors create endless opportunities in those arenas, as well.

In addition to working at a self-selected externship, Cornell in Washington students enroll in one of two core courses—Studies in Public Policy or Studies in the American Experience—that involve a major research project on a topic of their choice. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars carry appropriate credit toward fulfillment of major, distribution, and other academic requirements.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, DC 20037. The academic and administrative space is located on the first floor and 27 residential units for approximately 60 students are on the upper floors.

Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition of their home college, and remain eligible for financial aid.

Housing

Apartments are rented at the Cornell Center. All are fully furnished (except for dishes, cookware, towels, and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each one-bedroom apartment. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the center, and street parking is not permissible.

Applications

Students may apply online at ciw.cornell.edu or obtain an application from the Cornell in Washington program office at M101 McGraw Hall. Applications should be submitted the semester before participation.

Summer in Washington

A modified program involving courses and internships is available during the summer. Students earn 6 to 8 credits depending on their course selection.

Information

The Cornell in Washington program web site is located at ciw.cornell.edu. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing, and other features of the program may be obtained at either the Cornell in Washington program office at M101 McGraw Hall, 607-255-4900, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, 202-466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS

294 Caldwell Hall
255-0818 (tel.)
255-5240 (fax)
cipa@cornell.edu

The Cornell Institute for Public Affairs (CIPA) offers a university-wide two-year program of graduate professional studies leading to the master of public administration (M.P.A.) degree. CIPA leverages the vast academic and professional resources of Cornell to train the next generation of leaders working at the intersections of the public, private, and nonprofit sectors.

CIPA fellows (graduate students) have the opportunity to study public policy and program management from a cross-disciplinary perspective. Students gain an understanding of the political and administrative processes through which issues, problems, and policies are formulated; the economic and fiscal basis for government action in a market economy; and the analytical tools for assessing policy implications. They study the behavior of both public and private organizations and their management. They also develop sensitivity to the moral and ethical dimensions of policy issues.

Faculty Members

The depth and flexibility of the program is reflected in the growing number of affiliated faculty members. CIPA is not confined within a single school or college, but spans the entire university. More than 100 field faculty members, representing 25 departments, welcome CIPA fellows into their courses and serve on professional report/thesis committees. The core faculty is the heart of the CIPA structure. With broad representation from across the university, the core faculty bring an academic richness to CIPA that transcends disciplinary boundaries. These faculty members provide instruction in the foundation courses. Core faculty members include David B. Lewis, CIPA director, City and Regional Planning; Richard Booth, City and Regional Planning; Nancy Brooks, City and Regional Planning; Nancy Chau, Applied Economics and Management; Gary S. Fields, the John P. Windmuller Chair in International and Comparative Labor; Neena Kudva, City and Regional Planning; (Daniel) Pete Louchs, Civil and Environmental Engineering; Theodore J. Lowi, the John L. Senior Professor of American Institutions in the Department of Government; Kathryn S. March, Anthropology; Norman Uphoff, Government; and Jerome Ziegler,
Department of Policy Analysis and Management.

**M.P.A. Program Flexibility**

The two-year master of public administration (M.P.A.) degree program consists of 16 courses; CIPA fellows typically take four courses per semester for four semesters. Although the M.P.A. program offers a basic structure for study, each CIPA fellow works closely with a faculty advisor to design an individualized program based on his or her specific area of interest. Courses may be taken through the program in any department or college in the university.

**Advising**

Upon entering the M.P.A. program, each fellow is assigned a program advisor based on his or her area of interest. These advisors are drawn from the CIPA core faculty. They assist fellows in designing their individual program of study and selecting their courses. The assignment of advisors is meant to assist new students in getting a strong start with their studies. Once familiar with the resources available, students are welcome to ask another core faculty member to be their program advisor.

Toward the end of their first year, when they select their professional report/thesis topic, CIPA fellows choose a report/thesis advisor from among the more than 100 faculty members in the field of public affairs. The advisor guides the fellow in research and writing.

**Foundation Course Work**

To develop a foundation of basic concepts and capabilities for the study of public policy, CIPA fellows take three courses in each of the following three subject areas:

- Administration, Politics, and Public Policy
- Economics and Public Finance
- Quantitative Analysis

At least one of the three courses in each subject area must be a core foundation course—a course taught by a CIPA core faculty member.

**Concentration Course Work**

Concentration course work enables fellows to focus on a specific area of public policy study. Students choose their course of study—domestic or international—from the following options:

- Environmental Policy
- Finance and Fiscal Policy
- Government, Politics, and Policy Studies
- Human Rights and Social Justice
- International Development Studies
- Public and Nonprofit Management
- Science and Technology Policy
- Social Policy

Fellows select a concentration during the latter half of the first year of course work.

**Practical Experience, Internships, Off-Campus Study, and/or Public Service Exchange**

Experiential learning is an integral component of CIPA’s educational strategy, and a practical experience such as an internship is a requirement for obtaining the M.P.A. degree. Internships allow students to apply training in a practical environment and establish contacts for permanent employment. CIPA’s Office of Professional Development provides assistance to fellows in finding internships that match their interests, expertise, and professional goals. Appropriate internships are available in public policy— or public affairs-related organizations in both the public and private sector. In recent years, 98 percent of fellows actively searching for an internship find one. Organizations include:

- Deloitte and Touche
- Government Accountability Office
- New York City Office of Management and Budget
- The Overseas Private Investment Corporation
- United Nations
- U.S. Agency for International Development
- U.S. Congress
- U.S. Congressional Research Service
- U.S. Department of State
- World Food Program
- state, local, and urban municipal governments
- nongovernmental organizations and think tanks worldwide
- private sector consulting firms

CIPA fellows also have the opportunity to gain professional experience off-campus, while taking a semester of courses for credit, through the following three programs:

- Cornell in Rome
- Cornell in Washington
- Cornell–Nepal Study Program

In 2008, two additional opportunities for study abroad became available in Mexico City, Mexico, and Budapest, Hungary. Fellows may also fulfill the practical experience requirement by participating in the Public Service Exchange, a unique service learning partnership with nonprofit and government organizations; providing fellows with the opportunity to engage in the supervised practice of public policy. For more information, see www.pse.cipa.cornell.edu.

**Professional Writing Requirement**

As a culmination of studies in the M.P.A. program, each fellow develops and submits either a professional report or thesis. Typically, the report or thesis grows out of a fellow’s specific area of concentration and often incorporates work done during the summer internship or an off-campus study program. Both the CIPA professional report and the thesis require the student to synthesize and apply his or her education to formulate a solution to a policy problem. The thesis places a greater emphasis on problem definition and literature review, while the professional report emphasizes feasibility, practitioner accessibility, and adapting a student’s writing to the professional culture and standard practices of the client organization. The level of work expected for the M.P.A. thesis or professional report is equivalent to one or two semester-long courses.

**Co-Curricular Activities**

CIPA fellows gain practical skills by organizing, managing, and participating in a variety of professional development activities on campus. These provide fellows with opportunities to share work experience with other fellows, and to meet practitioners and distinguished faculty members in the field of public affairs. These student-led initiatives include:

- **Point of View (POV):** The CIPA Public Affairs television program, POV is part talk show and part debate show. Fellows work in all aspects of TV production and presentation, gaining invaluable experience for the media exposure they will encounter as public-policy professionals.
- **The Current:** CIPA fellows publish a journal of student policy research. Working on The Current offers fellows a firsthand view of the rigors of publishing academic work, and also provides a foundation in professional writing and editing—necessary skills for preparing reports and position papers, and publishing research findings.

**Complementary Degrees**

CIPA fellows may elect to combine their M.P.A. program with study for a complementary degree such as a J.D. from the Cornell Law School, an M.B.A. from the Graduate School of Management, an M.M.H. from the Hotel School, or an M.R.P. in the field of City and Regional Planning. Admission to the complementary degree program is independent from admission into CIPA.

**Accelerated Master’s Program**

An accelerated program for Cornell undergraduates allows advanced students to apply to CIPA in their junior year, begin CIPA-related course work in their senior year, and complete the M.P.A. in just one year beyond their undergraduate studies.

**Residence Requirement**

Fellows are required to spend four semesters of study in residence to complete the M.P.A. Those who enroll in the Cornell Accelerated Master’s Program can earn the equivalent of two semesters in residence during their senior year.

**Admission**

The CIPA program seeks diversity in its student body, drawing from a pool of applicants who have studied in a wide range of disciplines. No specific background or undergraduate major is required, although individuals with previous work experience in policy making or implementation are strongly encouraged to apply. Admission to CIPA is selective. A faculty committee evaluates individual applications based on the following:

- overall academic record
- potential for public-policy leadership as evidenced by professional work;
- community, extracurricular, or other relevant experience (a copy of one’s current résumé is an application requirement)
**GENERAL INFORMATION - 2009–2010**

- GRE scores
- two letters of recommendation
- an extensive written statement of purpose, as outlined on the CIPA web site: www.cipa.cornell.edu

Applicants for whom English is a second language will need to achieve the following minimum scores on the new (2005) Internet-based test version of the TOEFL: writing 20, listening 15, reading 20, speaking 22.

Although CIPA has a policy of rolling admission, applications should be submitted by the end of January to be considered for financial aid. For more information, contact the Cornell Institute for Public Affairs, 294 Caldwell Hall (tel: 255-8018; fax: 255-5240; cipa@cornell.edu; www.cipa.cornell.edu).

**Financial Aid**

CIPA provides some funding to more than 80 percent of its students. The institute itself, however, is unable to provide full support for any individual student. Fellows often win support from Fulbright, Truman, World Bank, and other programs. Areas of concentration include development, finance, investments, and real estate marketing and management, along with real estate finance and investments, communication in real estate, managerial process, real estate finance and investments, and real estate development.

**CORNELL PLANTATIONS**

One Plantations Road
255-2400
plantations@cornell.edu
www.plantations.cornell.edu

**Introduction**

Cornell Plantations is Cornell University’s arboretum, botanic garden, natural areas, and many on-campus gardens—places of exceptional beauty, diversity, and learning opportunities. Areas managed include over 4,000 acres of natural areas on and off campus in addition to the 150 acres in the F. R. Newman Arboretum and the 25 acres of botanical gardens in and around central campus.

Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell’s academic programs and research in disciplines such as ecology and evolutionary biology, landscape architecture, ornamental horticulture, and bioengineering. While many of Cornell Plantations’ resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these natural areas for classes and research can be made by calling Cornell Plantations. Cornell Plantations has something for everyone! We’re also the many places that non-horticultural students and faculty members visit for classes ranging from art, literature, and women’s issues, to nutrition.

**Credit Courses**

Cornell Plantations offers two for-credit courses: HORT 4800 Plantations Full Lecture Series and HORT 4850 Public Garden Management. HORT 4800 is a 1-credit S–U lecture series offered each fall. HORT 4850 is a 3-credit course offered alternate spring semesters. Cornell Plantations also offers noncredit classes and workshops such as botanical illustration, arts and crafts, gardening techniques, and ecology walks; visit www.plantations.cornell.edu, or call 255-2400 for more information.

**Internships**

Cornell Plantations’ internship program is just for you, the Cornell University student! Since the 1990s, more than 100 university students have been working side by side with Plantations’ knowledgeable staff, learning and having fun. A number of positions in various areas are available each year, beginning after finals in May. All positions strive to build on classroom learning through hands-on work, encouraging students’ interests in horticulture and the natural world. Visit our web site for details.

**Master’s Program**

Cornell Plantations’ master of professional studies program offers fully funded fellowships in public garden leadership. Visit our web site for program details.

**Planning a Visit**

To discover all that is Cornell Plantations, visit www.plantations.cornell.edu or pick up a visitor’s map or a copy of the Cornell Plantations Path Guide at the Garden Gift Shop in the Lewis Education Center just below Tower Road. The Path Guide and accompanying video are also available at the Cornell Store.

**PROGRAM ON ETHICS AND PUBLIC LIFE**

240 Goldwin Smith Hall
255-8515

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL seeks to enhance and facilitate the discussion of ethical issues by students whose central emotional interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually and practically fruitful at the same time. It offers a minor in law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

For information about the Program on Ethics and Public Life, visit the program’s web site, www.arts.cornell.edu/epl.

**PROGRAM IN REAL ESTATE**

114 West Sibley Hall
255-7110

The two-year master of professional studies in real estate (M.P.S./RE) degree program is an interdisciplinary program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. The Program in Real Estate at Cornell University is home to the graduate program in real estate as well as the Cornell Real Estate Council, which is the centerpoint of academic and industry-related real estate activities on and off campus. The real estate field faculty is composed of 23 faculty members selected from several different colleges that are directly involved in and responsible for the design, delivery, and administration of the real estate curriculum.

The professional study of real estate is concerned with the design, development, finance, law, management, marketing, transactions, deal structuring, and many other aspects of the real estate business. Real estate professionals also contribute an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Students take core courses in principles of real estate, the real estate development process, real estate finance and investments, communication in real estate, managerial finance, residential development, real estate law, construction planning and operations, design in real estate development, transactions and deal restructuring, and real estate marketing and management, along with a weekly industry seminar. Elective courses are taken in a chosen area of concentration and to fulfill a leadership and management distribution requirement. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University. Areas of concentration include development, finance, investments, real estate consulting, sustainable development, property and asset management, real estate marketing and market analysis, international real estate concentrations, and others. Students complete real-world, semester-long project workshops during their second and fourth semesters.

**Admissions**

Applicants to the Program in Real Estate must have completed a bachelor’s degree with a good academic record. Applicants must submit a résumé plus two letters of recommendation, either from faculty members familiar with the
applicant's academic work or, if appropriate, professional recommendations based on work experience. Competitive scores for the GMAT are required. Extensive and relevant work experience will receive favorable consideration. International students for whom English is a second language will need to achieve a minimum TOEFL score set by the Cornell Graduate School. There is no work experience required for admission; however, it is strongly preferred that applicants have at least some industry-related work experience, with three to five years' experience typical. Applications are reviewed on a rolling basis. The financial aid priority and dual-degrees applicant deadline is January 15, and the regular application deadline is March 15; otherwise, applications will be accepted until June 1. For more information, contact the admissions coordinator at 255-7110 or real_state@cornell.edu

SCIENCE OF EARTH SYSTEMS: AN INTERCOLLEGE MAJOR

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, sufficient natural resources to meet the needs of a rapidly growing world population, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. Our society is challenged to identify the best path for achieving a sustainable balance between human actions and the natural Earth system. To meet this challenge and to withstand the fundamental process of the Earth system, modern Earth sciences probe the interconnections of the biosphere, hydrosphere, atmosphere, and lithosphere.

The Science of Earth Systems (SES) major emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges of modern science and as the necessary foundation for the future management of our home planet. In this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the 21st century. Graduates of Cornell's SES program are well prepared for several career and advanced study options:

• Advanced degree in teaching, for example, earth science at the middle or high school level.
• Medical school. The emphasis on basic sciences in the SES curriculum makes the SES major a suitable springboard for a career in medicine.
• Graduate studies leading to the M.S. and/or Ph.D. in any of the earth science sub-disciplines (e.g., atmospheric science, geological sciences/geophysics, biogeochemistry, hydrology, oceanography).
• Employment in environmentally oriented careers in both the private and public sector at the B.S. or B.A. level as such as environmental consulting and science writing.
• Employment in natural resource industries, including fossil fuels and water. These fields usually require an M.S. degree.
• Graduate degree in environmental law or policy. These fields value students with an understanding of the science behind legal and policy decisions.

The SES Curriculum

The SES curriculum provides strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. The requirements for the major are as follows:

1. Basic Math and Sciences
   a. MATH 1110–1120, or MATH 1910–1920
   b. PHYS 2207–2208, or PHYS 1112–2213
   c. CHEM 2070–2080 or CHEM 2090–2080 (or 2070–1570)
   d. one year of biology: BIOG 1101/1103 and 1102/1104 (or 1105–1106) or BIOG 1109 and 1110, or BIOE/EAS 1540, or EAS 1700

2. Required introductory course: EAS 2200

3. Earth System Core Courses

   The core courses emphasize the interconnectedness of the Earth system. These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and on the boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:
   - EAS 3010 Evolution of the Earth System
   - EAS 3030/NTRES 3030 Introduction to Biogeochemistry
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics

4. Concentration Courses

   Four intermediate to advanced-level courses (3000 level and up) are selected that build on the core courses and have prerequisites among the "Basic Math and Sciences" courses listed above. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. These concentration courses build depth and provide the student with specific expertise in some facet of earth system science. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/observational/laboratory experience

   Exposure to the basic observations of earth science, whether directly outdoors in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include:
   - Courses given in the Hawaii Environmental Semester program;
   - Courses given by the Sholes Marine Laboratory;
   - EAS 2500 Meteorological Observations and Instruments;
   - EAS 3520 Synoptic Meteorology I;
   - EAS 4170 Field Mapping in Argentina;
   - EAS 4370 Geophysical Field Methods;
   - EAS 4910 and/or 4920 Undergraduate Research, total 3 credits with appropriate choice of project;

Field courses taught by another college or university (3-credit minimum)

Cornell Field Program in Earth and Environmental Systems: Semester in Hawaii

Cornell University offers a spring-semester program of environmental and Earth systems study on the Big Island of Hawaii. The Hawaiian Islands are an outstanding natural laboratory where students can explore a variety of ecosystems, examine their development over time, witness human influences on plant and animal communities, and experience geologic processes such as active volcanism and seismicity. Students spend most of their time in the field, gaining hands-on experience probing the interaction between earth, ocean, atmosphere, and biosphere. This is an ideal opportunity to apply fundamental concepts of geology, chemistry, and biology in a real-world setting. Students enrolled in the Environmental Semester Program will complete 19 credit hours of course work during the spring semester. For Cornell students majoring in Science of Earth Systems, EAS 3220, EAS 3400, and EAS 3510 satisfy degree requirements for the major.

For more information contact Professor John Cisne, Department of Earth and Atmospheric Science, john.cisne@cornell.edu, and visit www.eas.cornell.edu.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Cornell offers a highly ranked accredited general undergraduate business degree program as well as world-renowned business-related programs in five other colleges and schools. Because the choices are so broad, students are encouraged to explore the offerings carefully to identify the program that best matches their business career goals. (Graduate study is available in the Johnson Graduate School of Management as well as in

www.eas.cornell.edu
graduate fields associated with each of the undergraduate options.)

**Applied Economics and Management** The Department of Applied Economics and Management (AEM) in the College of Agriculture and Life Sciences is home to Cornell's only undergraduate degree that is accredited by AACSB International—The Association to Advance Collegiate Schools of Business. AEM's undergraduate program offers a broad, flexible curriculum that reflects the department's analytical, applied economics approach. Students choose among 10 specializations: finance, marketing, strategy, accounting, entrepreneurship, agribusiness management, food industry management, environment and natural resources, international trade and development, and applied economics (aem.cornell.edu).

**Arts and Sciences** Many of the liberal arts majors offered by the College of Arts and Sciences provide students with a background for a successful business career. In particular are majors in economics, mathematics, sociology, and psychology. Economics focuses on the production, distribution, and consumption of goods and services; monetary systems; and economic theories. Students interested in the human dimensions of business can choose sociology or psychology. Mathematics majors can choose concentrations in computer science, operations research, statistics, or economics to prepare for careers in areas such as actuarial science or finance (www.arts.cornell.edu).

**Engineering** Many of today's business managers hold engineering degrees. Each of the College of Engineering's 13 majors prepares students for business careers. Operational Engineering and Information Science, Systems and Technology are the most business-oriented engineering degree programs, preparing graduates for careers in areas such as investment banking and process engineering. Engineering students in any major can take a business-oriented minor in areas such as industrial systems and information technology, and operations research and management science. A new business minor for engineering students is also offered by the Department of Applied Economics and Management (www.engineering.cornell.edu).

**Hotel Administration** The School of Hotel Administration offers the world's premier hospitality management program. Its rigorous core business curriculum includes courses in finance and accounting, real estate development; facilities management, planning, and design; food and beverage management; marketing, tourism, and strategy; information systems; operational and organizational behavior; human resource management; managerial communication; and law. The school's 155-room conference hotel gives students the opportunity to apply what they learn in a real-world business and its Practice Credit requirement further ensures a balance between classroom learning and real-world practice (www.hoteschool.cornell.edu).

**Human Ecology** The College of Human Ecology offers three business-oriented majors. The fiber science and apparel design major prepares students for careers in the fashion industry, for example, as a retail executive or merchandise buyer. Students majoring in design and environmental analysis can choose the facility planning and management option to prepare for careers as facility planners and workplace strategists in consulting and real estate firms and large corporations. The policy analysis and management major offers concentrations focusing on health, consumer policy, and family and social welfare, and its graduates pursue careers as policy makers, analysts, and managers in both the public and private sectors (www.human.cornell.edu).

**Industrial and Labor Relations** The School of Industrial and Labor Relations (ILR) focuses on the "people" side of business. Its professional-level curriculum provides a strong social science foundation in organizational behavior; human resource studies; collective bargaining; labor, law, and labor history; labor economics; international and comparative labor; and social statistics. Most ILR graduates begin careers in management, consulting, and public policy; four out of 10 graduates go on to law school or other graduate programs (www.ilr.cornell.edu).

**Related Areas**

**Entrepreneurship@Cornell** This university-wide program is open to all Cornell students interested in eventually starting their own businesses or working for venture capital firms. Entrepreneurship-related courses are offered by all seven undergraduate colleges and schools as well as by the Johnson Graduate School of Management, the Law School, and the College of Veterinary Medicine (eship.cornell.edu).

**International Programs** Several additional programs allow business students to focus on a particular geographic area. Majors and concentrations are offered in Latin Studies, French Studies, German Studies, China and Asia-Pacific Studies, Asian and African Studies (all in the College of Arts and Sciences). The College of Agriculture and Life Sciences offers an interdisciplinary program in international agriculture and rural development.

**PRELAW STUDY**

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and therefore it usually involves no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and unerringly in both speech and writing. First-year writing seminars, required of nearly all Cornell first-year students, are designed to develop these skills. English literature and composition, and a year of English language and literature should be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

**PREMEDICAL STUDY**

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that particular undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, and physics, and all must be taken with a lab. A year of English composition (or a first-year writing seminar) is also required. In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from,
subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

**PREVETERINARY STUDY**

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of D.V.M. Admissions, College of Veterinary Medicine, Cornell University, S2-009 Schurman Hall, Ithaca, NY 14853–6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Office of Multicultural and Diversity Programs, College of Agriculture and Life Sciences, 140 Roberts Hall, Ithaca, NY 14853.
INTRODUCTION

College Focus

The College of Agriculture and Life Sciences offers men and women broad-based educational programs to provide them with technical, management, and leadership skills in four primary areas of focus. These areas were developed in response to the global challenges of the 21st century. They are fluid, overlapping, and interdependent and represent agriculture and life sciences at its broadest and most dynamic meaning. These four areas are:

• Land-grant, or agricultural sciences
• Applied social sciences
• Environmental sciences
• New life sciences

Faculty members challenge students with educational programs that promote problem-solving, basic and applied research, extension, and outreach. The programs are geared to the discovery and dissemination of knowledge for the purpose of advancing agriculture and food systems, health and nutrition, food security, biological sciences, education, communication, natural resources and environmental quality, and community, urban, and rural development throughout New York State, the nation, and the world.

Administration

Susan A. Henry, dean
Barbara A. Knuth, senior associate dean
Jan P. Nyrop, senior associate dean
Margaret H. Ferguson, associate dean for finance and administrative services
Michael P. Riley, associate dean for alumni affairs, development, and communications
Donald R. Viands, associate dean and director of academic programs
Mark W. Wysocki, associate director of academic programs
Jeffrey J. Doyle, director of undergraduate biology
Michael P. Hoffmann, associate dean and director of the Cornell University Agricultural Experiment Station
Helene R. Dillard, associate dean and director of cooperative extension
Christopher B. Watkins, associate director of cooperative extension
Glenn J. Applebee, associate director of cooperative extension
W. Ronnie Coffman, director of international programs
James E. Haldeman, senior associate director of international programs
Terry W. Tucker, associate director of international programs

Alice Pell, director of Cornell International Institute for Food, Agriculture, and Development

Department Chairs

Animal science: W. Ronald Butler, 149 Morrison Hall
Applied economics and management: Loren W. Tauer, 154 Warren Hall
Biological and environmental engineering: Daniel J. Amdahl, 104 Riley-Robb Hall; Beth A. Ahner, associate chair, 202 Riley-Robb Hall
Biostatistics and computational biology: James Booth, 1178 Comstock Hall
Communication: Geri K. Gay, 339 Kennedy Hall
Crop and soil sciences: Harold van Es, 235 Emerson Hall
Development sociology: Max Pfeffer, 133A Warren Hall
Earth and atmospheric sciences: Larry D. Brown, 3120 Snee Hall; Arthur T. DeGaetano, associate chair, 1119 Bradford Hall
Ecology and evolutionary biology: Nelson G. Hairston, Jr., E345 Corson Hall
Education: Arthur L. Wilson, 435 Kennedy Hall
Entomology: Jeffrey G. Scott, 2130 Comstock Hall
Food science: Kathryn J. Boor, 114 Stocking Hall
Horticulture: Marvin P. Pritts, 134A Plant Science Bldg.
Horticulture: Peter J. Trowbridge, 445 Kennedy Hall
Microbiology: William C. Ghiorse, B76C Wing Hall
Molecular biology and genetics: Kenneth J. Kemphues, 107A Biotechnology Bldg.
Natural resources: Marianne E. Krasny, 118 Fernow Hall
Neurobiology and behavior: Kraig Adler, W363A S. G. Mudd Hall
Plant biology: William L. Crepet, 412 Mann Library
Plant breeding and genetics: Mark E. Sorrells, 241 Emerson Hall
Statistical sciences: Martin T. Wells, 1190 Comstock Hall

Student Services

Office of Academic Programs

The College of Agriculture and Life Sciences (CALS) provides a variety of services for students, faculty, and alumni. These services include academic advising, consultation, and support appropriate to each student's academic circumstances. Students seek advising, consultation, and support on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management.

Academic advising is available for students who are interested in international study, need to file petitions, wish to waive college academic regulations, have disability concerns, are experiencing academic difficulties, take or return from leave of absence, or have requests for tutoring.

The staff coordinates new student orientation, award ceremonies, commencement activities, and the activities of Ho-Nun-De-Kah, the college's honor society.

The staff is available on a walk-in basis as well as by appointment in 140 Roberts Hall. Visit www.cals.cornell.edu/advising. Counseling and Advising staff: Lisa Ryan, Bonnie Shelley, Pamela Torelli, and Christine Potter.

The Office of Multicultural and Diversity Programs serves to monitor, support, and influence policy on behalf of all underrepresented students within the College of Agriculture and Life Sciences. This population is defined as encompassing, but not limited to, all African American, Latin American, Asian American, and Native American students. Its constituency includes students, faculty, and the general public. In the past academic year this represented approximately 20 percent of the college’s undergraduate population. Additionally, the Office is charged with monitoring and programming for the Educational Opportunity Program (EOP). EOP is a state-supported program intended to assist New York State students who meet economic and academic criteria set by the college, State Programs.
Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Multicultural and Diversity Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, Life Science Strategies Center, and the State Programs Office. Other university connections include the University Career Center and the Office of Financial Aid regarding concerns of the underrepresented students. The director provides support for the CALS Diversity Committee. The director together with peer advisors carries out the duties of the office. The staff acts as a major advocacy group as well as an information and referral center.

Given the college’s policy on nonexclusionary programming, the Office of Multicultural and Diversity Programs is also responsible for some functions that serve the college’s entire population. At present, that includes general college diversity activities, serving as the college’s prehealth advisor, and providing ongoing support at all levels for the Office of Counseling and Advising.

The CALS Registrar’s Office ensures the accuracy, confidentiality, and reliability of student records and serves as an important link between the university’s and college’s policies, procedures, and the student. The Registrar’s Office maintains student records and review degree progress on a semester basis, maintains the Dean’s List, evaluates and applies non-Cornell credit (transfer credit, study abroad credit, and advanced placement credit), provides registration and enrollment information, consults individually with students on college graduation requirements, and schedules all CALS courses. Specific information can be found at www.cals.cornell.edu/current/register.

The CALS Registrar’s Office holds walk-in hours to assist students with any registrar-related issue. Walk-in hours are Tuesdays from 9:00 to 11:00 a.m. and Wednesdays from 2:00 to 4:00 p.m. in 140 Roberts Hall. No appointment is necessary during these times.

Registrar’s Office staff: Torrey Jacobs, Shawa Lockwood, and Adrienne Wilson.

The Office of Career Development offers a variety of helpful services to all students and alumni of the college. Career development includes self-assessment, career exploration, decision making, and transition to employment or further study. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including web sites, career information books, employer internship files, employer directories, and job listings. Alumni Career Link is a database of more than 500 college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as résumé writing, cover letter writing, and interview skills are presented throughout the semester and are available on DVD. An active on-campus recruiting program brings more than 50 employers to campus each year to interview students for full-time and summer jobs. Additionally, the office provides information on hundreds of internships. The office, in conjunction with a network of college faculty and staff members, assists students throughout their undergraduate years and beyond. For further information, students should contact Amy Benedict-Augustine, Laurie Gillespie, Jennifer DeRosa, Jo-Lynn Buchanan, or Derek Tulbison in 177 Roberts Hall.

The CALS Admissions Office is responsible for admitting and enrolling a talented and diverse class of students each year. The process and outcome must reflect and support the college mission and help to meet college and institutional enrollment goals. This includes freshman, transfer, and intra-university transfer student processes. The office hosts on- and off-campus information sessions for prospective students, evaluates and makes decisions on more than 5,000 applications each year, and coordinates events for admitted students. The Admissions Office staff advises and supports the CALS Ambassador program. The office is located in 177 Roberts Hall. Staff members include Ann LaFave, Cathy Sheils, Tara Bubble, Jared Rivers, Jeri Nyrop, Erica Walters, Victoria Watts, and Victoria Parker.

Students

Undergraduate enrollment is approximately 3,200, with about 57 percent in the upper division. Each year about 850 students graduate, while 648 freshmen and 275 new transfer students enroll. College faculty members serve as chairs of the Special Committees of roughly 1,000 graduate students.

Admission

A significant factor taken into consideration by the CALS admissions committee is how well a student's academic interests relate to the mission of the college. If you decide to apply for admission to the College of Agriculture and Life Sciences, we'll ask you to choose from more than 20 major fields of study. As a part of the application process, you'll be asked to write about your academic interests and to articulate how you see your interests blending into our programs that contribute to the mission of the college. Majors fall within these broad areas: life sciences, environment, social sciences, and agriculture and food. Appropriateness for the college must also align with high academic achievement. While approximately 60 percent of CALS students come from New York State, about 40 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 26 percent are self-identified as members of ethnic groups.

The CALS Admissions Office is in 177 Roberts Hall (255-2036; www.cals.cornell.edu/admissions; e-mail: als_admissions@cornell.edu).

Transfer Students

All accepted transfer credit must be from an accredited college or university. Transfer credit is awarded based on review of official transcripts. Additional course information may be required. Contact the CALS Registrar’s Office for information. A maximum of 60 non-Cornell credits may be transferred.

Approximately 30 percent of CALS undergraduate students are transfers who have completed part of their collegiate work at community colleges, two- and four-year institutions. Detailed information on transfer admission is available on the CALS Admissions web site.

Intra-University Transfer

A Cornell student in good standing may apply for an intra-university transfer to pursue an academic program unavailable in his or her current college. Guidelines are available on the CALS Admissions web site. The procedure involves attending an information session, meeting with a faculty member in the proposed area of study, and submitting an application and essay.

Consideration is given to students who have demonstrated an interest in their proposed new field of study by taking appropriate prerequisite courses. Academic achievement is also considered. Students need to spend two semesters in their home college before applying. In certain cases, a student may be referred to the Internal Transfer Division (ITD) to study for one semester before entering the college. During this trial semester, the student will achieve a predetermined grade point average and take approved courses to assure acceptance.

Special Students

A limited number of nondegree candidates who want to take courses in the college are admitted each year. Applicants should complete the Cornell transfer application process. For more information and guidelines, students should contact the CALS Admissions Office.

Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, Semester in Environmental Science with the Marine Biology Laboratory, field study in Human Ecology or Industrial and Labor Relations, Capital Semester, Cornell in Washington, and IPM internship.

Facilities

The College of Agriculture and Life Sciences is located on the upper campus on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, burns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the New York State Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, Cornell University Agricultural Experiment Station, and Cornell Cooperative Extension. Included in the Office of Academic Programs are the director and associate director of the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Multicultural and Diversity Programs, and the Registrar's Office.

Mann Library, with its extensive collections of materials in the agricultural and life sciences,
is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Mann Library.

DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of bachelor of science, master of science, and doctor of philosophy. Professional degrees include the master of professional studies, master of landscape architecture, and master of arts in teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Department.

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in 24 major programs. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. Students are admitted into a single major but afterwards may pursue and graduate with two or more majors within the College of Agriculture and Life Sciences.

Students need an advisor in each major. Course requirements for double majors may overlap. The Counseling and Advising Office (140 Roberts Hall) and department representatives have a form for students to complete to officially recognize the double major. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations in the major.

Majors

Agricultural sciences: Antonio DiTommaso, 903 Bradford Hall, ad7@cornell.edu

Agricultural science education: William Camp, 416 Kennedy Hall, wgc4@cornell.edu

Animal science: W. Bruce Currie, 434 Morrison Hall, wbc1@cornell.edu

Applied economics and management: Dale Grossman, 114 Warren Hall, dag4@cornell.edu

Atmospheric science: Mark Wysocki, 1114 Bradford Hall, mw3@cornell.edu

Biological engineering: Michael Walter, 207 Riley-Robb Hall, mtv2@cornell.edu

Biological sciences: Jeffrey Doyle, 404 Mann Library, jdy5@cornell.edu; Bonnie Cornella, 216 Stimson Hall, bec3@cornell.edu

Biology and society: Brian Chabot, 102 Little Rice, bfc1@cornell.edu

Biometry and statistics: Steven Schwager, 1194 Comstock Hall, ssj5@cornell.edu

Communication: Danielle Dean, 334 Kennedy Hall, dynj@cornell.edu

Crop and soil sciences: Antonio DiTommaso, 905 Bradford Hall, ad7@cornell.edu

Minors

Students in the College of Agriculture and Life Sciences may pursue one or more minor fields of study in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the student's major. Minor fields of study do not require an academic advisor, but each minor field has a contact person who will provide information and verify on the application to graduate that the student will successfully complete the requirements of the minor by graduation. Students may complete as many minors as they wish; the requirements of minors may overlap. Minors are described along with the majors later in the CALS section of this catalog. Not all majors or departments offer minors. Minors available in CALS can be found on the CALS counseling and advising web site (cals.cornell.edu). For minors outside of CALS, please consult with the specific department.

Early Enrollment in Cornell Graduate Programs

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the bachelor of science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to file an application for dual-enrollment and to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty advisor as part of their undergraduate program. Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

The Department of Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate (BSLA) and graduate levels (MLA I) as well as a second professional graduate degree program (MLA II). The curricula for both the undergraduate and graduate programs are accredited by the Landscape Architecture Accreditation Board (LAAB). The graduate program is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.

Graduate Fields of Study

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are listed. For more information on graduate programs, please refer to the Graduate Bulletin, or www.gradschool.cornell.edu. Information following this list refers to undergraduate studies.

Agriculture and life sciences [M.P.S. (agr.): Don Viands, 151 Roberts Hall, drv3@cornell.edu]

Agricultural economics: David Just, 254 Warren Hall, dj4@cornell.edu

Animal breeding: John Pollak, B-47 Morrison Hall, cp6@cornell.edu

Animal science: Richard Quaas, B-47 Morrison Hall, rql@cornell.edu

Atmospheric sciences: Daniel Wilks, 1113 Bradford Hall, dsw5@cornell.edu

Biochemistry, molecular, and cell biology: Volker Vogt, 358 Biotechnology Bldg., vmv1@cornell.edu

Biological and environmental engineering: Antje Baumeister, 506 Riley-Robb Hall, ab25@cornell.edu

Biometry: Robert Strawderman, 1172 Comstock Hall, rls5@cornell.edu

Biophysics: Gerald W. Feigenson, 201 Biotechnology Bldg., gwf3@cornell.edu

Communication: Jeff Hancock, 320 Kennedy Hall, jhh34@cornell.edu

Development sociology: acting DGS, Charles Geisler, 237 Warren Hall, cgg2@cornell.edu

Ecology and evolutionary biology: Monica Geber, E-413 Corson Hall, mag9@cornell.edu

Education [also M.A.T.]: John Sipple, 412 Kennedy Hall, js281@cornell.edu

Entomology: Cole Gilbert, 6136 Comstock Hall, cg23@cornell.edu

Environmental toxicology: Andrew Yen, 612 Stocking Hall, ayl3@cornell.edu

Food science and technology: Martin Wiedmann, 412 Stocking Hall, mw16@cornell.edu

Genetics and development: Bik Tye, 325 Biotechnology Bldg., bty16@cornell.edu

Plant breeding: Walter DeJong, 309 Bradfield Hall, wsd2@cornell.edu
Plant pathology: Michael Milgroom, 357 Plant Science Bldg., mmg5@cornell.edu
Plant protection [M.P.S. agr.]: William Reissig, Barton Laboratory, Geneva Campus, whr1@cornell.edu
Soil and crop sciences: Dan Buckley, 705 Bradfield Hall, db28@cornell.edu
Statistics: Robert Strawderman, 1172 Comstock Hall, rs54@cornell.edu
Zoology: Susan Suarez, T5002B Vet Research Tower, sss7@cornell.edu

O P P O R T U N I T I E S  I N  R E S E A R C H

Undergraduate Research
A multitude of opportunities to be engaged in research exists across the College of Agriculture and Life Sciences and the university.

Students may be able to work on a faculty member's research project for pay. Opportunities can be explored by contacting individual faculty members; departmental offices; the CALS Career Development Office, or Cornell Career Services, in 103 Barnes Hall. Another option is to receive credit through a 4990-level course within a department by conducting your own research project under a faculty mentor. More than 600 students each year conduct research for credit. Upperclass students usually have the course background to engage in research, but freshmen and sophomores also may be equipped to do some types of research. Off-campus research experiences are also available for pay or as internships.

The following web sites provide information about research and internships:

CALS Career Development Office: www.cals.cornell.edu/cals/current/career
CALS Undergraduate Research Opportunities: www.cals.cornell.edu/cals/current/student-research/undergrad (information on how to explore research opportunities)
CALS Research Honors Program: www.cals.cornell.edu/cals/current/student-research/honors
CALS Undergraduate and Graduate Student Grants Proposal Development: www.cals.cornell.edu/cals/current/student-research/grants
CALS Undergraduate Minority Research: www.cals.cornell.edu/cals/current/student-research/minority
CALS Internship Guidelines: www.cals.cornell.edu/cals/current/student-research/internship
Undergraduate Research @ Cornell: www.research.cornell.edu/undergrad
Cornell Undergraduate Research Board: www.research.cornell.edu/curb (student organization to promote and facilitate undergraduate research)

Biological Sciences: wwwbiology.cornell.edu

Research Honors Program
The Research Honors Program provides students with a special opportunity to work with a faculty mentor to experience the research process. Successful completion requires a thesis written in the style of a master's thesis or scholarly journal article. Original honors research may be suitable for publication in a professional journal. Students may volunteer to publish their theses in the Internet-First University Press if it does not interfere with other plans, such as patenting or publishing in another journal. During each summer the CALS Research Honors Abstracts is published (on the web beginning 2009) as a compilation of honors theses abstracts. The bachelor of science degree with "distinction in research" is conferred upon those students who, in addition to having completed the requirements for the B.S. degree, have satisfactorily completed the honors program and have been recommended for the degree by the honors committee. Research may be done in these program areas: animal sciences, biological sciences, biology & society, entomology, information science, landscape studies, natural resources, nutritional sciences, physical sciences, plant sciences, and social sciences. Each program area has its own requirements in addition to the college requirements. After reviewing the requirements of each program area (below), students' questions may be directed toward the appropriate program area chair. Consult "Undergraduate Research Opportunities" on the web (cals.cornell.edu/cals/current/student-research/undergrad) for information about identifying a research topic, conferring with a faculty member, and undergraduate funding opportunities.

Honors Program Requirements
An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of those 55 at Cornell. In addition, the student must have attained a cumulative Cornell GPA of at least 3.0 (unless otherwise noted by a particular program) at the time of entry.

Interested students must submit a written application and thesis proposal early in the first semester of their senior year; however, they are encouraged to make arrangements with a faculty member during the second semester of their junior year. Several program areas require students to submit their applications and thesis proposal to the program area honors committee chair by the end of the third week, while other program areas have students submit the application and proposal to the CALS Registrar's office by the end of the sixth week. It is the student's responsibility to know the deadlines and submission procedures for the particular program area of interest. Application forms are available from the CALS Registrar in 140 Roberts Hall or from the web at www.cals.cornell.edu/cals/current/student-research/honors. Applications for biological sciences students can be picked up at 200 Stimson Hall, and for biology & society students at 306 Rockefeller Hall.

Before the completed application is submitted, signatures of approval are required in the following order: faculty research mentor, academic advisor, and research honors program area chair. After the college registrar verifies the student's GPA, the student will be officially enrolled in the honors program. Additional requirements for application and completion of the program are described under each program area.

Academic credit also may be earned by enrolling in an appropriate independent research course (required by some program areas). When applying for admission to the program, the student must submit a budget and a modest request for research funds (up to $350). If approved, the funding will be transferred to a departmental account of the student's research advisor to support the student's research. This funding is not to be used as a student salary. Additional funding opportunities are described at cals.cornell.edu/cals/current/student-research/undergrad.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the research program committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the Research Honors Program are not eligible for distinction in research by participating in a program offered by another college or administrative unit.

The research honors committee for each program area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with "distinction in research." At or near the completion of their research, students are required to give an oral presentation or poster session during an
****In addition, students are required to submit a written thesis to the Animal Sciences Research Honors Committee by their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential research honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished by the second semester of the junior year.
- Students are encouraged to implement some research during the junior year and/or summer before the senior year.
- Register for ANSC 4991 Undergraduate Research.
- Participate in ANSC 4020 Seminar in Animal Sciences during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the Animal Sciences Research Honors Committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the Animal Sciences Research Honors Committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the research committee.
- Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. Permission form to allow the thesis to be made available online can be obtained from the honors committee chair.

**Biological Sciences**

Students interested in the Research Honors Program in the biological sciences should consult with their faculty advisors and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Information on faculty research, applications, and program requirements may be obtained from the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biologist.cornell.edu/cals/current/student-research/honors.

**Biological Society**

Faculty committee: B. Chabot, chair

The Research Honors Program in Biology & Society is designed to provide independent research opportunities for academically talented undergraduate students in biology & society. Students who enroll in this program are expected, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students participating in the program should find the experience intellectually stimulating and rewarding whether or not they intend to pursue a research career.

Biology & Society students are considered for entry into the research honors program at the end of the second semester of the junior year. Application forms for the program are available in the Biology & Society office, 306 Rockefeller Hall. To qualify for the Biology & Society Research Honors Program, a student must have an overall Cornell cumulative GPA of at least 3.3, have formulated a research topic, and have found a project supervisor (with a Cornell academic appointment) and a Biology & Society faculty member willing to serve as his or her advisor. The director of undergraduate studies will appoint a third reader of the completed research thesis. Applications will be reviewed by a committee headed by the director of undergraduate studies, who will notify students directly of the outcome. Students will be permitted to register for the research honors program only by permission of the biology & society program. Students must enroll for two semesters for 4 credits each in BOSC, ALS, or HE 4991–4992, Honors Project I and II. More information on the honors program is available in the Biology & Society office, 306 Rockefeller Hall (255-6047).

**Important Deadlines**

Note: If the following dates fall on a weekend, the deadline is the preceding Friday.

- May 9: Two bound copies of completed and defended thesis submitted to director of undergraduate studies.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. Permission form to allow the thesis to be made available online can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors theses.

**Entomology**

Faculty committee: C. Gilbert, chair

The Program. A research honors program in entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences. The student need not be majoring in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for studying a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for research honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for research honors study.

Research honors students have the option of earning academic credit by enrolling in ENTON 4991 Honors Research in Entomology during any semester while working toward a research honors thesis. Credits and grades for satisfying requirements of ENTON 4991 should be discussed with the thesis advisor (following page.)

Note: Enrolling in independent study course, either ENTON 4970, 4990, or 4991, is not a requirement for graduating with distinction in research honors in entomology.

**Sequence of Requirements**

The Entomology Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Discuss the matter with his or her academic advisor, preferably in the junior year. This schedule makes it possible to carefully plan a research project and implement some research during the junior year and/or summer before the senior year.
2. Select an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. This need not be the student’s academic advisor. The academic advisor will be of assistance in determining which faculty entomologist has expertise most compatible with the interests of the student.

**Appropriate Event.** Some departments have seminar series when presentations may be given. The Cornell Undergraduate Research Board (CURB) Forum is another venue for presentations.

For more information, go to www.cals.cornell.edu/cals/current/student-research/honors.
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objectives or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.

4. Submit a completed application and proposal approved by the honors project supervisor to the chair of the Entomology Research Honors Committee no later than the end of the fifth week of the first semester of the senior year. Earlier submission is encouraged. Applications are available from the CALS registrar, 140 Roberts Hall. These applications include an opportunity to request a modest amount of funding from the CALS honors program. These funds are distributed only one time per year (in late fall).

5. Submit a brief progress report, approved by the project supervisor, to the Entomology Research Honors Committee by mid-term of the semester in which the student will complete his or her graduation requirements.

6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (as a Juggatea seminar) in the last semester of the senior year.

7. Submit two copies of the final honors thesis (as approved by the thesis supervisor) to the chair of the Entomology Research Honors Committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty advisor and one other referee selected by the chair of the honors committee.

8. Referees will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the Entomology Research Honors Committee chair no later than the last day of classes. Referees should include a recommendation to the Entomology Research Honors Committee chair regarding acceptability of the honors thesis. The approved honors theses will be bound and housed in the Entomology Library in Comstock Hall.

9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

The complete text of this section can be found at www.entomology.cornell.edu/public/It hacCampus/EduTraining/Undergrad/EntomHonors.html.

Information Science
Students should follow the CALS social sciences guidelines to obtain research honors in information science.

Landscape Studies
Faculty committee: P. J. Crowbridge, chair
The research honors program in landscape studies offers outstanding undergraduates in CALS the opportunity to work with a member of the landscape architecture faculty to pursue supervised independent research in design, the cultural landscape, landscape archaeology, environmental design, and community-based planning and design. The student need not be in the landscape architecture professional design curriculum. The subject matter and nature of the research experience may be quite varied. Students participating should find the experience intellectually stimulating and rewarding, whether or not they intend to pursue a research career. The guidance and supervision of a faculty member with substantial interest and expertise in the subject is essential to the success of the project. It is expected that the research will require significant effort and creative input by the student in its design and execution and in reporting the results.

Students who consider this option should be aware that honors research is undertaken above and beyond any of the requirements for graduation in the major of landscape architecture. It involves a number of deadlines and a considerable time commitment. Before signing on for research honors, students need to consult with their academic advisor to make sure that honors research projects will not interfere with other academic or professional objectives, such as job applications, preparation of portfolios, or application to graduate school. These may need to be deferred until the thesis is complete. Students are responsible for meeting deadlines and being prepared for presentations and other meetings.

Although honors research credits for spring semester junior year and both semesters senior year are designated a letter grade, individual mentors may choose the R grade for work in progress until the project has been fully completed. Grade is determined by each student’s mentor. The designation of “distinction in research” on the diploma is awarded at the recommendation of the faculty advisor and other referees to the honors committee chair. An outline of activities for both years is given below.

The Landscape Studies Research Honors Committee requires that an undergraduate who is interested in embarking on a research honors project proceed with the following steps:

1. Junior year: Identify a potential research honors project sponsor and secure that faculty member’s commitment to sponsor the student in the research project. This should be accomplished early in the second semester of the junior year and be finalized by the end of the spring semester. Pre-register during the spring for the research honors program (LA 4991).

2. Work with a faculty advisor to identify and formulate a research problem. If the faculty advisor is not in the Department of Landscape Architecture, select a co-advisor from the department to ensure that the research is consistent with the field.

3. Submit a completed application and proposal (approved by the honors project supervisor and the chair of the research honors committee) no later than the end of the fourth week of the first semester of the senior year. Earlier submissions are encouraged. These will be reviewed by ad hoc committee members, and successful thesis proposals will be submitted to the college honors committee by the sixth week.

4. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.

5. Submit an outline of the thesis to the chair of the committee by the end of January for a May graduation.

6. Submit a draft to the readers by April 15. Describe and summarize the work within the range of formats used in the master’s thesis program or professional journals in design or research. This version will be reviewed by the faculty supervisor and two ad hoc reviewers, and the student will be able to incorporate the committee’s comments and suggestions into the final version, which will be due the last day of classes. Referees prepare a recommendation to the honors committee chair regarding the acceptability of the honors thesis.

7. Give oral presentations to the group of other honors research students and invited faculty members. Both presentations are during the student’s senior year.

8. Send two bound copies of the completed and defended thesis to the honors committee chair by May 13.

9. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

10. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.
Natural Resources
Faculty director. J. B. Yavitt, chair.

The research honors program in natural resources involves original, independent research that generates novel findings in applied ecology and resource policy and management. Students learn how to design and carry out research under the direct supervision and guidance of a faculty member or senior research associate in the department. Most students in the program begin their research before the start of the senior year, often in the summer after their junior year. Students may enroll and receive credit in independent study (NTRES 4991 Honors Research in Natural Resources) during their honors research. The research findings are presented in a written thesis that is reviewed by two experts in the field. Many theses have been published in leading journals in the disciplinary area of the research. Although the format is not prescribed, the thesis usually consists of a short introduction, relevant materials and methods, a concise presentation of the meaningful data, a discussion, and the student's interpretation of the conclusions. Students also give an oral presentation of their research findings in a special symposium hosted by the department in early May.

Students should adhere to the following schedule.

Junior Year
1. File an informal application with the faculty director. The application includes a project description and advisor information.
2. Sixth week of fall semester: Submit formal application to faculty director (16 Fernow Hall).
3. March 31: Thesis should be close to completion.
4. April 15: Submit two copies of the thesis to the faculty director for ad hoc reviews.
5. May 4: Pick up ad hoc reviewers' comments from the faculty director.
6. May 15: Submit two copies of the final thesis: one for the college, one for the program director.
7. Week of May 25: Students will be notified of the decision, and the faculty director will recommend that each approved student graduate with "Distinction in Research."
8. Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.
9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Nutritional Sciences
Faculty committee: J. T. Brenna.

The research honors program in the Division of Nutritional Sciences is a structured experience that (1) successful completion of NS 3980, (2) conducting a research project through which the student becomes intellectually engaged in the whole research process, (3) completing a written thesis that reports the research, and (4) giving an oral presentation of the project at the undergraduate honors symposium. Students must maintain a minimum grade point average to graduate with honors in research.

The research honors program is an excellent opportunity for students who are highly interested in research and wish to commit substantial time and intellectual energy to a project that will span about four semesters of their undergraduate experience. Honors students experience a circumscribed opportunity of participating in a project to generate new knowledge on a topic that interests them and reporting the project findings. By working with faculty mentors and other researchers, they develop skills in research methods and data analysis. Students also learn that research projects are labor intensive and that writing research reports, such as the honors thesis, is a vital, but time-consuming, aspect of the research process. This intensive research experience is not suitable for all students, and those who wish a less intensive research experience may conduct research with a faculty member under NS 4010.

Students interested in the program should take NS 3980 as early in their program as possible. Students may review program requirements at the DNS Honors Research Program web site (www.nutrition.cornell.edu/dns7_undergradhonres.html) or contact Professor Brenna. Acceptance into the research honors program occurs when the student (1) is accepted into a faculty member's research program and (2) submits a research proposal abstract that is approved by the director of the research honors program. Students interested in the program typically spend the spring sophomore semester and fall junior semester exploring honors project opportunities with prospective faculty mentors. Students are responsible for contacting faculty members and applying to their research programs, although some guidance in this process will be provided in NS 3980. By the fall of the junior year, the student is expected to have identified their faculty member and be working with him or her on a proposed project, which is due early in the spring junior semester.

Students receive academic credit for work on their honors project under NS 4990. The 6 required credits may be taken over several semesters. How much time is spent on the project each semester is the decision of the student and the faculty mentor. For each three to four hours of work per week, the faculty mentor usually will assign one hour of academic credit. This applies to the preparation of the research plan and necessary library research (usually completed during the junior year) as well as the carrying out of the research itself and preparation of the thesis.

The research honors project is the major component of the research honors program. It should be well defined and sufficiently circumscribed to give the student the opportunity to develop the research plan, execute the research, and write an acceptable thesis within the limited time available to students carrying full academic loads. Typically, the project is designed early in the junior year and conducted in the spring junior semester and fall senior semester. Students may arrange with their faculty mentor to work on the project during the summer. The spring senior semester is usually devoted to writing the thesis (at least 25 pages). The student works with the faculty mentor to prepare a draft of the thesis, which is submitted before spring break to a second faculty member for evaluation. When comments are received from the reader, the student must revise the thesis to meet the criteria for acceptance. The student presents the thesis at the Honors Student Symposium at the end of the semester.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor's name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Physical Sciences
Faculty committee: S. J. Mulvaney, chair; C. D. Bustamante.

The research honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Biological and Environmental Engineering, Food Science, Earth and Atmospheric Sciences, or Biological Statistics and Computational Biology.

In addition to meeting the requirements of the college, the student is expected to:
1. Identify a thesis advisor and thesis topic before the end of the junior year.
2. Work with the thesis advisor to prepare a budget, short research proposal (2-3 pages), and application form. These materials must be reviewed by the Physical Sciences committee chair by the end of the third week of senior year.
3. Enroll in the program for a minimum of two semesters.
4. Enroll in the appropriate departmental undergraduate research course for a total of at least 6 credits.
5. Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).

6. Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.

7. Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by four weeks before the end of classes in the semester in which graduation is expected.

8. Students may volunteer to submit electronically to the honors committee a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

9. In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

There is no required format, but the thesis is usually written in the form of a research journal article or a master’s thesis.

Further details of the program can be obtained from the chair of the Physical Sciences Research Honors Committee.

**Plant Sciences**

Students perform independent scientific research under the guidance of faculty members in the fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Research Honors Committee a project proposal (two to three pages) that includes a title; a brief background of the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student’s undergraduate tenure is feasible.

A brief progress report will be made to the committee usually during the third week of the spring semester. Research presentations are recommended (e.g., Cornell Undergraduate Research Board Spring Forum, department seminars, poster sessions, open house meetings).

Successful completion of the research honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to the recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with distinction in research.

The research honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the associate dean and director of academic programs and to the college registrar that the student be graduated with distinction in research. One copy of the accepted report will be returned to the student with review comments from the committee.

Students may volunteer to submit electronically to the honors committee chair a copy of their final approved thesis (in pdf or Word format) for Mann Library. Mann Library has given CALS the opportunity to have theses available to the public electronically if this does not interfere with other plans, such as patenting or publishing in another journal. A permission form to allow the thesis to be made available online at Mann Library can be obtained from the honors committee chair.

In addition, students are required to submit electronically to the honors committee chair their thesis title, research advisor’s name, and abstract (in Word format). During each summer, the CALS Research Honors Abstracts publication is published (on the web beginning 2009) as a compilation of research honors thesis abstracts.

Additiona guidelines may be found at www.css.cornell.edu/Programs/PlantSciHon.

**Social Sciences**

Social Sciences Program Area Faculty Committee: N. Chau, chair (NetID: hyc3); A. A. Gonzales, T. D. Park, and C. W. Scherer

**Overview**

Research projects in the social sciences include applied economics and management, communication, development sociology, education, and information science. Students are accepted into the social sciences research honors program of the College of Agriculture and Life Sciences after meeting all the college criteria described above, after evaluation of the student’s written application, and on approval of a detailed thesis proposal.

The program provides an excellent opportunity for students to pursue independent study and research under the guidance/mentorship of a faculty member. Previously approved theses covered a wide range of topics and methodologies. A complete list can be found at http://ecommons.library.cornell.edu/handle/1813/2937.

**Guidelines and Due Dates**

**A. Application and Proposal:**

Students must submit one hard copy of the completed application and proposal to the social science program area faculty committee chair two semesters before their prospective graduation date (see deadlines below). Late applications will not be considered.

**Graduation Date**

**Proposal Due Date**

- December 2009: February 16, 2009
- May 2010: September 15, 2009
- December 2010: February 15, 2010
- May 2011: September 15, 2010
- December 2011: February 15, 2011

Students are strongly encouraged to meet with faculty during their junior year in order to identify someone to serve as their honors thesis advisor. Honors thesis faculty advisors must be members of the graduate faculty. Exceptions may be granted for persons with special expertise pending petition to the committee.

Working with their honors thesis advisor, students should begin developing their thesis proposal during the second semester of their junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and the faculty advisor. Second, the honors committee reviews the proposal to determine whether it is consistent with honors thesis requirements and to make suggestions for improvement.

The proposal should be 5 to 10 typed, double-spaced pages and include the following:

1. **Research Topic:** State the problem to be studied or the topic of interest. Review the basic literature and the background of the problem or topic; include a more extensive bibliography to be consulted.

2. **Research Questions/Empirical Hypotheses:** Specify the proposed questions to be answered or hypotheses to be tested empirically via the collection of data and a mode of analysis accepted in the social sciences.

3. **Research Methods:** Discuss the models to be constructed (if any), sampling procedures, data collection procedures (including measurement instruments and survey or experimental designs, if appropriate), and proposed methods of analysis.

4. **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important. State any practical applications expected as a result of the research.

Students accepted into the honors program should register for credit directed by the honors thesis faculty advisor (e.g., AEM 4991, COMM 4991, DSOC 4991, EDUC 4991).

**B. Final Submission for Review and Approval Requirements:**

Honors theses should be written according to the form of any standard journal within the appropriate field. Distinction in research is awarded upon approval of the research honors thesis by the committee. Both the results of the research and the methodology (or the logical argument by which the results were achieved) must be reported. Reviews of
OFF-CAMPUS OPPORTUNITIES
Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution should refer to the non-Cornell credit policies on p. 37. Information about enrolling at another institution outside of the United States can be found under "Study Abroad."

Albany Programs
Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Two formalized opportunities are available. The Assembly Intern Program is offered in the spring semester and provides placement with a staff member of the New York State Assembly. The Senate Assistants Program also occurs during the spring semester and has placements with New York State senators and selected staff. Each program has an academic component as well. Check the individual folders in the internship files in the CALS Career Development Office, 177 Roberts Hall.

Applications are collected and processed by the CALS Career Development Office, 177 Roberts Hall, in the semester before assignments. Those accepted should plan a program of study in consultation with their faculty advisor. At least 12 credits must be carried to meet the full-time residency requirement. To receive academic credit for the Assembly Intern Program, students enroll in ALS 3920. To receive academic credit for the Senate Assistants Program, students enroll in ALS 4960. Information and applications are available in the CALS Career Development Office, 177 Roberts Hall.

Cornell in Washington
The Cornell in Washington program offers students in all majors an opportunity to earn full academic credit for a semester in Washington, D.C. Students take part in a public policy or humanities seminar, serve as externs in federal agencies, congressional offices, or nongovernmental organizations, carry out individual research projects, and take one or two electives. The required externships and all course enrollments are arranged through, and approved by, the Cornell in Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 4998 and cannot receive credit for the externship experience alone. For further information, see p. 22, inquire at M101 McGraw Hall, 255-4390, or visit www.ciw.cornell.edu.

Marine Biological Laboratory’s (MBL) Semester in Environmental Science
The Marine Biological Laboratory’s (MBL) Semester in Environmental Science is a semester-long program held each fall in Woods Hole, Mass. This is a multi-university and college program run by the staff of the Ecosystems Center of the MBL. Approximately 15–20 students interact intensively with the world-class research facility of the Ecosystems Center in a mixture of classroom, laboratory, and field-research activities. The major foci of the program are on biogeochemistry, ecosystem science, and the impacts of land use and global change on the environment. Students spend about 20 hours each week conducting intensive, hands-on field and lab work in coastal forests, freshwater ponds, and estuaries, and complete an independent research project as part of the curriculum. The MBL is one of the oldest (founded in 1888) and most distinguished biological field stations in North America. Cornell credit for up to 16 credits is offered. More information on the program can be obtained from the Cornell department (Prof. Bob Howarth, E309 Corson Hall, 255-6175) or from the director of the program (Dr. Ken Foreman, MBL Ecosystems Center, 508-289-7777; courses.mbl.edu/SES).

SEA Semester
The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is 12 weeks in length. Courses are directly transferrable and listed in Courses of Study under BIOSM. Six weeks are spent in Woods Hole, Mass., and the following six weeks are spent on either one of the two sailing research vessels the SSV Robert Seamans or the SSV Cornwell Cramer. SEA offers four unique programs. SEA Semester: Ocean Exploration, SEA Semester: Oceans and Climate, SEA Semester: Documenting Change in the Caribbean, and SEA Semester: Sustainability in Polynesian Island Cultures and Ecosystems. SEA Semester: Ocean Exploration is also offered as a 12-credit, eight-week summer program. For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 (1-800-552-3635 x 770) or visit www.sea.edu. CALS students should file an intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory (SML)
The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, N.H., in the Gulf of Maine. SML provides a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to “Courses in Marine Science,” in the section Shoals Marine Laboratory (BIOSM), for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Simonson Hall, 255-3717, or visit www.sml.cornell.edu.

Internships
Several departments in the college offer supervised internships for academic credit. Internships may be granted for pay and/or credit with a limit of up to 3 credits per internship and no more than 6 credits total allowed for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The number of credits awarded should reflect the amount of knowledge gained per internship and/or following the CALS guidelines for assigning credits. The 6-credit allotment includes transfer credit and credit from other internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, post-secondary, and Cooperative Extension teaching internships in the Department of Education. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. Note that a maximum of 15 (prorated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate research. For internships not governed by an established internship course, the student must enroll in a 4970-level course for the number of credits assigned.

To ensure a fair and manageable system to deal with internships, the College of Agriculture and Life Sciences has set forth guidelines to serve as minimum requirements for a student to receive internship credit.
1. Credit will be assigned or accepted only in cases in which a Cornell faculty member is directly involved in determining both the course content and in evaluating the student's work.

2. The internship should be purposeful, provide opportunities for reflection, present a continual challenge to the student, and incorporate active learning, with the student an active participant in all stages of the experience from planning to evaluation.

3. Before a student begins the internship, a learning contract needs to be written between the Cornell faculty internship advisor on campus, the supervisor at the location, and the student. This contract should state the conditions of the work assignments, supervisor, learning goals, number of credits, and methods of evaluation of the work. A contract form can be obtained from the college Registrar's Office, or departments may have their own.

4. Students should further develop the internship experience based on the college Experiential Learning Criteria, which can be found at cals.cornell.edu/cals/teaching/elr.

5. Students need to keep their faculty internship advisor updated on the progress of the internship while away from campus.

Arrangements should be made with the offering department for assignment of a faculty mentor for planning the program of work and for evaluating student performance. Individual departments may add more requirements to the internship based on specific needs such as time constraints, faculty workloads, and the relationship of the internship to the goals of the department. The specific terms of the contract should be recorded, using the independent study, research, teaching, and internship form, available in 140 Roberts Hall.

Pay and Credit for Undergraduate Research, Teaching, and Internships

Research: students can receive pay or credit or they can partition it so that they receive pay for part of the research and credit for the other as long as the work does not overlap.

Undergraduate Teaching Assistant: students can receive either pay or credit, but they cannot partition it.

Internships: students may receive both pay and credit for the same internship experience.

Study Abroad

Each year almost 200 CALS undergraduates spend a semester or year studying abroad. Students enroll directly in universities in Australia, participate in fieldwork in Africa, or explore the wonders of a foreign city while participating in an internship. CALS recognizes that students study abroad for a variety of reasons and, as a result, offers a great deal of choice for its students. Students may want to study abroad to broaden their worldview, boost employment prospects, learn a new language, gain independence, discover a new educational system, or all of the above! A variety of options is available. Students can choose from:

- a CALS exchange program in a variety of universities around the world that have been created especially for CALS students. For a list of the programs available, visit www.cals/current/abroad-exchange/index.cfm;
- a study abroad program through the Cornell Abroad office;
- an international study tour as part of a CALS course, or a summer program.

CALS exchange programs are unique agreements created with other prestigious universities around the world. CALS students participating in an exchange program pay only their Cornell tuition, with no additional administrative fees.

Study abroad opportunities offered through the Cornell Abroad office are vast, ranging from a traditional university in London to field study in Africa. For information about specific programs, costs, and more, visit their office in 300 Caldwell Hall or go to www.cuabroad.cornell.edu.

Whether participating in a CALS exchange or a program through Cornell Abroad, all CALS students interested in studying abroad must receive approval from their faculty advisor and meet with the college study abroad advisor to review the college policies and to receive college approval. College policies can be viewed at www.cals.cornell.edu/cals/current/abroad-exchange/index.cfm.

Study abroad advising hours are held in the Counseling and Advising Office, 140 Roberts Hall.

Ithaca College and Wells College Exchange Programs

The Cornell University–Ithaca College Exchange Program is a reciprocal arrangement that allows matriculated full-time students, with prior approval and within stated stipulations, to cross-register at the other institution. No additional tuition is charged except in the case of undergraduate students enrolled during any one semester for a total of more than 18 credits (Cornell and Ithaca College combined). Those students are subject to additional tuition per-credit basis. This arrangement is available during the fall and spring semesters only and is contingent upon space availability. A maximum of 12 credits may be taken through this program.

Cornell University also has a reciprocal arrangement with Wells College in Aurora, NY. For further information, contact the Cornell School of Continuing Education office, B20 Day Hall, 255-4987, or on the web at www.sce.cornell.edu/exmu.

GRADUATION REQUIREMENTS FOR THE BACHELOR OF SCIENCE

Graduation Requirements

1. Credit Requirements

   A. Minimum total credits: 120 academic credits are required for graduation.

   Important Exceptions:

   • Repeated courses increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
   • Review or supplemental courses (e.g., 1000- to 1099-level) increase the number of credits required for graduation by the number of credits in the course. These credits do not count toward the minimum 12 credits required for full-time status.
   • Physical education courses do not count toward 120 credits for graduation. They do not count toward the minimum 12 credits required for full-time status.

   B. Minimum credits at Cornell: 60 academic credits must be completed at Cornell.

   C. Maximum non-Cornell credits: 60 non-Cornell credits (AP, CASE, transfer, Cornell Abroad, and exchange credits) can be applied toward degree requirements.

   D. Minimum credits from College of Agriculture and Life Sciences: 55 CALS credits are required for graduation. CALS credits include all courses from departments within CALS and courses offered in the Biological Sciences, Earth and Atmospheric Sciences, Information Science, and Nutritional Sciences Departments. Specifically, courses offered under the following subject prefixes count as CALS credits: AGSCI, AIS, ALS, AEM, ANSC, BEE, BIOG, BIOAP, BIOBM, BIOEE, BIOGD, BIOMI, BIOMS, BIONB, BIOPL, BIOM, BTRY, COMM, CSS, DSOC, EAS, EDUC, ENTOM, FDSC, HORT, IARD, INFO, LA, NS, NTRS, PLBR, PLPA, SNES, VIEN.

   E. Maximum 55 endowed credits: CALS students are limited to 55 credits from the endowed colleges. If an academic program requires additional credits, permission may be requested by contacting the CALS Registrar's Office (607-255-2017, 140 Roberts Hall, cals_registrar@cornell.edu).

   F. Minimum letter-graded credits: 100 (prorated based on non-Cornell credits).*

   G. Maximum credits earned through independent study, research, teaching assistantships, and/or internships: 15 credits of "unstructured" course work can be applied toward graduation requirements (prorated based on non-Cornell credits) (i.e., a minimum of 100 "structured" credits are required for graduation).

*The prorated formula is available at www.cals.cornell.edu/current/registrar.
A. Students are expected to enroll in at least
Minimum cumulative GPA: 2.00 or above
Please be advised that prorated tuition
in order for a student to be considered for
All of the following conditions must be met
D. Students in the ninth and final semester
C. Students are expected to complete the
remaining full tuition per credit hour.

All of the following conditions must be met in order for a student to be considered for prorated tuition:
1. The prorated semester is the ninth and final semester of study.
2. The student is in good academic standing with the college and the major.
3. Maximum of 11 credit hours of course work are allowed under prorated tuition. Students cannot exceed the number of credits approved or full tuition will be charged, and no refund will be allowed if fewer credits than applied for are completed.
4. Approval of the student’s faculty advisor, the college registrar, and the university registrar is required for all requests. Note that approval is conditional until grades are finalized at the end of the semester immediately preceding the prorated semester. Should those grades indicate that more than the requested number of prorated tuition credits are required for graduation, prorated tuition will be adjusted accordingly.
5. Students applying to be prorated in the fall semester are encouraged to submit the application by May 1. The final deadline is June 1. Students applying to be prorated in the spring semester are encouraged to submit the application by December 15. The final deadline is January 15. Please be advised that prorated tuition may impact the student’s financial aid, student loans, scholarships, non-Cornell health insurance programs, athletic eligibility, or other considerations. It is the responsibility of the student to resolve and rectify these situations prior to submitting this petition.

4. Grade-Point Average (GPA) Requirements
Minimum cumulative GPA: 2.00 or above must be maintained. The cumulative GPA includes all grades earned at Cornell.

5. Schedule Requirements
A. Students are expected to enroll in at least one CALS course each semester until 55 CALS credits have been earned.

B. Freshmen may not enroll in more than 18 credits, not including physical education.
C. Freshmen are limited to one S–U course per semester.
D. PE and supplemental course work do not count toward the 12-credit minimum required for full-time status.
E. To add more than 18 academic credits to a student’s schedule, advisor permission must be obtained through an add/drop slip to add more course work.

6. Distribution Requirements
The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical and life sciences, students develop their understanding and appreciation of the physical sciences, enhance their quantitative reasoning skills, and gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will affect their work and role in society. Written and oral expression is designed to help students become competent and confident in the use of oral and written communication to express themselves and their ideas. Please note: Credits received for independent study, field, teaching, research, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be review or supplemental in the discipline, such as 1000- to 1099-level courses, will not be counted in the distribution areas.

Physical and Life Sciences, 18 credits in at least three disciplines of which 6 credits must be introductory biology and 3 credits in chemistry or physics.
Introductory Biology: BIOG 1101–1104, 1105–1106, 1107–1108, 1109–1110, BIOSM 1110 (summer)
Beginning fall 2008, students majoring in Applied Economics and Management, Communication, Development Sociology, Information Science, and Landscape Architecture have the option of fulfilling 6 credits of introductory biology by either taking courses listed above or newly developed courses. See www.cals.cornell.edu/cals/current/Registrar/current-Students/cals-graduation/biology.cfm for the most up-to-date list of courses. Students should consult with their advisors to clarify major requirements.

Social Sciences and Humanities. Students must complete four courses of 3 or more credits each from the following seven categories of courses in the humanities and social sciences.
• At least one course must be completed from three different categories.
• No more than two courses in the same department will be counted toward the distribution requirement.
• For freshmen entering in fall 2008 or later, one course MUST be in the human diversity (D) category.

Categories:
• Cultural Analysis (CA)
• Human Diversity (D)
• Historical Analysis (HA)
• Knowledge, Cognition, and Moral Reasoning (KCM)
• Literature and the Arts (LA)
• Social and Behavioral Analysis (SBA)
• Foreign Language (FL)

Detailed descriptions follow.

Social Sciences and Humanities: Category Descriptions

Cultural Analysis (CA)
These courses study human life in particular cultural contexts through interpretative analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual),
identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), power and politics (states, colonialism, inequality).

**Historical Analysis (HA)**

These courses interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, scientific—through time. The focus may be on groups of people, dominant or subordinate, a specific country or region, an event, a process, or a time period.

**Knowledge, Cognition, and Moral Reasoning (KCM)**

These courses investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to interact and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.

**Literature and the Arts (LA)**

These courses explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks in creative writing, performing arts, and media such as film and video. These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

**Social and Behavioral Analysis (SBA)**

These courses examine human life in its social context through the use of social scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religious or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigmas, conflict resolution).

**Foreign Language (FL)**

These courses are taught by the following departments: Africana Studies and Research Center (ASRC—language only), Asian Studies (BENG, BURM, CHIN, HINDI, INDO, JAPAN, KHMER, KOREA, SANSK, TAG, THAI, and VIET), Classics (CLASS—language only), German Studies (GERST—language only), DUTCH, and SWED), Linguistics (LING—languages only), Near Eastern Studies (NES—languages only), Romance Studies (CATAL, FREN, ITAL, PORT, QUECH, and SPAN), and Russian Studies (RUSSA, HUNGR, POLSH, SELBR, and UKRAN).

**Human Diversity (D)**

These courses address several of the college’s stated goals for undergraduate education. Specifically, the expectation that in the course of earning a degree, students will enhance their abilities to communicate with people of different cultural perspectives; to listen carefully and respectfully to the views of others, especially views with which they disagree; and to employ ethical reasoning in judging ideas, actions, and their implications. These courses explore the challenges of building a diverse society, and/or examine the various processes that marginalize people and produce unequal power relations in terms of race, nationality, ethnicity, sexuality, religion, gender, age, or economic status.

**Written and Oral Expression.** 9 credits total, of which at least 6 must be in written expression. Oral expression is not required by the college (it may be for some majors); all 9 credits may be in written expression. Courses in written and oral expression may be selected from the following:

- **Oral Expression**
  - COMM 2010, 2030
  - ENTM 3350

**First-Year Writing Seminars**

AEM 2000

COMM 1310, 2630, 3520, 3600

ENG 2800, 2810, 2880, 2890, 3820–3850, 3890, 3890

LA 2150

**Quantitative Literacy Requirement**

Faculty legislation requires minimum competency in quantitative literacy to complete a degree in the College of Agriculture and Life Sciences. This requirement can be satisfied in one of three ways:

- Earning a score of 4 or 5 on the AP Calculus exam; or
- Transferring an approved calculus or statistics course with a grade of “C” or better; or
- Taking an approved math or statistics course at Cornell.

A complete listing of approved math and statistics courses is available online at www.cals.cornell.edu/current/registrar. Pre-approval forms are available in CALS Registrar’s Office.

**Non-Cornell Credit Policies**

1. Non-Cornell credit includes:
   - advanced placement credit (see p. 8 for further details);
   - credit earned at an accredited college or university;
   - credit earned through the Ithaca College and Wells College Exchange Programs;
   - credit earned through a Cornell Abroad or CALS exchange program.

2. Non-Cornell credit is accepted by CALS when:
   - the credits are earned at an accredited institution;
   - the credits do not duplicate course work already completed at Cornell;
   - the credits are earned before matriculating into CALS or during the summer or winter session or through Cornell Abroad or an approved exchange program;
   - the credits have not been applied toward high school graduation requirements (except for AP exam credit, see p. 8);
   - the grade earned is “C” or better; and
   - an official transcript is sent directly to the CALS Registrar’s Office from the college/university where the credits were completed.

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript for such work. Students who have taken such courses may, however, earn credit by taking an appropriate examination as described on pp. 9–12 of this catalog. For CALS-specific policies, see College Credit Earned While in High School.

3. A student may apply a maximum of 60 non-Cornell credits toward his or her graduation requirements.

- If more than 60 non-Cornell credits have been completed, the CALS Registrar’s Office will work with the student to determine which credits best fulfill CALS graduation requirements.
- Advanced placement credits are limited to 30 credits.
- Cornell Abroad (not CALS exchange) credits are limited to 15 credits per semester, 30 per academic year.

4. Non-Cornell credits are recorded on the graduation summary and may be applied toward CALS credits, distribution requirements, and major requirements.

- Non-Cornell courses that are similar to courses offered in CALS are recorded as CALS credits toward graduation summary and count toward the minimum of 55 CALS credits required for graduation.
- Non-Cornell courses that are equivalent to Cornell courses that fulfill distribution requirements are recorded under the appropriate distribution area on the graduation summary.
- Non-Cornell courses that are equivalent to endowed courses can be applied toward distribution requirements or general electives; however, these credits do not count against the maximum of 55 endowed credit hours.
- If a course has no comparable course at Cornell, staff in the CALS Registrar’s Office determine how the credit should be applied.
- Faculty advisors determine how non-Cornell credit will be applied toward major requirements; the CALS Registrar’s Office determines how non-Cornell credit will be applied toward CALS graduation requirements.

5. Students who have already matriculated into CALS and are planning to take courses at another institution should
College Credit Earned While in High School

If a student is enrolled in a college or university course during his or her high school years, transfer credit will be given only if all the following criteria are met:

1. Course cannot be used to fulfill high school graduation requirements.
2. Course/section must be a standard course available to all students registered in the college.
3. If taught in a high school, the high school must be a satellite location, one of several options available to all students taking the course.
4. Instructor must be a faculty member (includes adjunct) at the offering college.
5. An official transcript must be sent to the CALS Registrar's Office by the offering institution. It is the student’s responsibility to request an official transcript.
6. Both the college form and high school form must be provided to confirm that all credit earned in high school meets these criteria. It is the student’s responsibility to request that the college and high school complete these forms. Forms are available in the CALS Registrar’s Office, 140 Roberts Hall.

Each condition must be met for credit to be accepted.

Appropriate AP exams identifying a student who wishes to either graduate in a previous semester. Both grades will be recorded and calculated as part of their cumulative GPA. If a student retakes a course in which a passing grade was earned, both grades will be recorded and calculated as part of their cumulative GPA. However, repeating a course increases the number of credits required for graduation by the number of credits in the course.

Incompletes

Students must not enroll again for a course in which they received an incomplete. Instead, work for that course should be completed without further enrollment. The student files a manual grade form with the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Enrollment Changes

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student using the online add/drop through Student Center or the official course drop and add form at the CALS Registrar’s Office, 140 Roberts Hall. Approval of the faculty advisor may be required to change course enrollment. Department or course instructor approval may be required for select courses.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the semester, and may drop courses until the end of the seventh week.

ACADEMIC POLICIES AND PROCEDURES

Registration

All students must register with the university at the beginning of each semester. In order to be considered a registered student by the university, a student must:
• complete course enrollment according to individual college requirements;
• settle all financial accounts, including current semester tuition;
• clear any holds, whether these are from the Bursar's Office, Gannett Health Center, the judicial administrator, or the dean of your college; and
• satisfy New York State health requirements.

Students can check their registration status using Student Center. The first screen in Student Center will indicate whether you are registered and will list any holds that need to be cleared, including the correct office to visit to have the holds removed. Students are expected to register by the fifth week of the semester. Failure to register may result in termination of your Cornell services such as, but not limited to, library access, meal plans, door access, Blackboard, and bus service. You may be considered withdrawn by the college. Only registered students are entitled to attend classes and have access to services.

Course Enrollment

Students will receive course enrollment information from the university registrar. After planning a schedule of courses in consultation with their faculty advisor, students pre-enroll by computer.

To enroll in courses that involve independent study, teaching, internships, or research, a student must file an independent study form, available in the CALS Registrar’s Office, 140 Roberts Hall.

Repeated Courses

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their cumulative GPA. It is the student’s responsibility to complete Part I of the Application to Graduate with all advisors. Faculty Advisor Responsibilities: It is the faculty advisor’s responsibility to complete Part II of the Application to Graduate with the student, listing any outstanding requirements on the application (including courses in which the student is currently enrolled); and answer any student questions regarding major requirements.

CALS Registrar's Office Responsibilities:

It is the responsibility of the CALS Registrar’s Office to update the graduation summary of seniors before each student’s final fall semester. The CALS Registrar’s Office staff is available to review degree requirements during walk-in hours and by appointment.

Commencement Information:

Commencement information will be provided to all graduating seniors directly by the Commencement Office. Information is also available at www.commencement.cornell.edu.
Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings; students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1. Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.
2. Students are guilty of violating the code if they
   • knowingly represent the work of others as their own.
   • use or obtain unauthorized assistance in any academic work.
   • give fraudulent assistance to another student.
   • fabricate data in support of laboratory or field work.
   • forge a signature to certify completion or approval.
   • submit the same work for two different courses without advance permission.
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, or similar aids.
   • in any other manner violate the principle of absolute integrity.
3. Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
4. Faculty members fulfill their responsibility to
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.
   • make clear the conditions under which examinations are to be given.
   • make clear the consequences of violating any aspects of the code.
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently.
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials.
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course.
   • monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s.
   • keep their faculty appointments up to date and perform the same level of teaching, advising, counseling, and research as is expected of others.
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor.

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows. The full code may be found at http://cuiinfo.cornell.edu/Academic/AIC.html.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor Dale Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office, 140 Roberts Hall.

Academic Honors

The college encourages high academic achievement and recognizes outstanding students in several ways:

1. Dean’s List. Each semester, students are recognized for academic excellence by inclusion on the Dean’s List. Eligibility for the Dean’s List in the College of Agriculture and Life Sciences is determined by the following criteria:
   a. a minimum course load for the semester of 12 letter-graded credits;
   b. completion of at least one CALS course;
   c. achievement of a semester GPA of at least 3.50; and
   d. achievement of an S grade, or a C- or better grade in each course (including physical education), with no incompletes. Dean’s List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

2. Bachelor of Science with Honors
   a. Students receiving a cumulative GPA of 4.00 or greater (based on the cumulative Cornell GPA) will graduate “summa cum laude.”
   b. Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.00 (based on the cumulative Cornell GPA) will graduate “magna cum laude.”
   c. Students receiving a cumulative GPA of greater than or equal to 3.50 and less than 3.75 (based on the cumulative Cornell GPA) will graduate “cum laude.”

3. Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the research honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Research Honors Program.

4. Ho-Nun-De-Kah. Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 15 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community. Visit Ho-Nun-De-Kah’s web site at www.rso.cornell.edu/hndk.

5. Golden Key is an international honor society that recognizes and encourages scholastic achievement and excellence in all undergraduate fields of study. Juniors and seniors in the top 15 percent of their class are invited to membership. Visit Golden Key’s web site at www.rso.cornell.edu/gkhiks.

Academic Standing

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing students on probation, granting students leaves of absence, advising students to withdraw, or suspending or expelling students.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:
   • semester GPA of at least 2.00
   • cumulative GPA of at least 2.00
   • satisfactory completion of 12 or more credits per semester
   • reasonable progress toward completion of major and distribution requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C (2.00) or higher are prima facie evidence of satisfactory progress and good academic standing.

Petitions Procedures

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee
Withdrawal
A student who wishes to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good academic standing. Students who have withdrawn and who later decide to return must apply to the CALS Admissions Office.

MAJOR FIELDS OF STUDY
The college curriculum consists of 24 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development and to focus on particular disciplinary concepts as well as critical thinking. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers that require knowledge of food systems and natural resources. Such careers may include the production and marketing of plant/animal foods, agricultural education in secondary schools, organic farming, cooperative extension, and crop consultation. By providing students with focused categories of courses from which to choose, the Agricultural Sciences program is designed to allow students to work with their advisor in developing a curriculum that best fits the needs of each individual. The program allows students to focus on one or two areas of concentration while gaining a broad exposure to the agricultural courses across the college.

All students are required to take the core courses in sustainable agriculture, soil science, and integrated pest management, as well as gain practical experience by completing an internship and a “hands-on” experiential learning capstone course addressing real problems in agricultural science. Concentrations requiring at least 12 credits are available in Animal Science, Applied Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

Students graduating with an Agricultural Sciences major will be trained to address complex global agricultural issues of today and will have a knowledge base that leads to employment in a variety of fields. The required emphasis on one of the concentration areas also allows students to become experts in the area of agriculture that is most exciting to them.

Since students in the Agricultural Sciences program come from across the college, we create a family of students who take courses, study, learn, and discuss together as a group. We do this by organizing activities that facilitate learning in an interdisciplinary setting, such as inviting guest speakers from various sectors of the agricultural industry to lead discussions, offering professional development workshops to train students for the workforce, and hosting social events for students in the major. Opportunities are also available in research and outreach experiences, and in summer employment, which serve to enrich the students’ practical experience.

Animal Sciences
The Animal Sciences program area offers a coordinated group of courses dealing with the principles of animal genetics, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Department of Animal Science has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisor. In this way it is possible to concentrate on one species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy business or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be designed to meet a student’s career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Juniors and seniors whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a select group of students.
Students declaring a minor in animal science will arrange for a formal academic advisor in animal science at least three semesters before graduating. It is expected that the minor will be satisfied by completing at least 12 credit hours of animal science courses (at least 6 of which must be taken at Cornell), the makeup of which will be determined in consultation with the advisor. For example, it is recommended that students completing the minor will assemble courses (or demonstrate having the equivalent from elsewhere) including some basic and applied biology of animals (anatomy, physiology, nutrition, genetics) along with a selection of intermediate or advanced offerings from the animal science curriculum. Satisfactory completion of minor requirements will be verified by the minor advisor's signature on the petition to graduate.

For information, contact Deloris Bevins in 149 Morrison Hall, dgbl@cornell.edu.

**Applied Economics and Management**

**Minors**

Through the Department of Applied Economics and Management, CALS students may complete a minor program of study in one of eight different subject areas: Agribusiness Management, Business, Environmental and Natural Resource Economics, Finance, Marketing, Food Industry Management, Applied Economics, and International Trade and Development. The minors consist of at least 18 credits of required course. Students should contact the Department of Applied Economics and Management for more detailed information and to enroll in one of these minor programs of study. These minors are not open to students outside CALS. For those lacking time to incorporate all the minor requirements during the regular school year, up to three of the required courses can be taken during summer session.

**Atmospheric Science**

Atmospheric science is the study of the atmosphere and the processes that shape weather and climate. The curriculum emphasizes the scientific study of the behavior of weather and climate, and applications to the important practical problems of weather forecasting and climate prediction. Students develop a fundamental understanding of atmospheric processes and acquire skill and experience in the analysis, interpretation, and forecasting of meteorological events. All students are required to complete a minimum of four semesters of calculus, two semesters of physics, and a semester each of chemistry, computer science, and statistics.

Atmospheric science courses are offered through the Department of Earth and Atmospheric Sciences (EAS). The requirements for the B.S. in atmospheric science through the College of Agriculture and Life Sciences are as follows:

1. **Atmospheric science:**
   a. EAS 3410, 3420, 3520, 4470, 4510
   b. See tracks listed below for additional required courses

2. **Mathematics, statistics, and computer science:**
   a. MATH 1110, 1120, (1920 or 2130), 2930
   b. AEM 2100 or equivalent
   c. EAS 2900 or equivalent

3. **Basic physical sciences:**
   a. PHYS 2207, 2208, or equivalent
   b. CHEM 1560

4. **Tracks**

**Courses satisfying the requirements for a major or minor in atmospheric science may not be taken S–U.**

**Biological Sciences**

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The Office of Undergraduate Biology in 216 Stimson Hall provides student services that are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include either general biology or one of the following concentrations: animal physiology, biochemistry, computational biology, ecology and evolutionary biology, genetics and development, insect biology, molecular and cell biology, microbiology, neurobiology and behavior, nutrition, plant biology, and plant and systems and biotic diversity. Students interested in the marine sciences should consult the Shoals Marine Laboratory office, G14 Stimson Hall, 255-3717, for academic advising. For more details about the biology curriculum see the section in this catalog on biological sciences or visit www.biology.cornell.edu. For details regarding the minor in biological sciences, please refer to the Biological Sciences section of this catalog.

**Biological and Environmental Engineering**

The Department of Biological and Environmental Engineering (BEE) offers majors in biological engineering and environmental engineering. BEE faculty and students address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world’s natural resources, including water, soil, air, biodiversity, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering majors in the Department of Biological and Environmental Engineering have a unique focus on biological systems and the environment that is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal studies. The program leads to a bachelor of science degree in biological engineering or environmental engineering, which is awarded jointly by the Colleges of Engineering and Agriculture and Life Sciences.
Engineering students take courses in mathematics, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (solid mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and engineering design. They may select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students may further strengthen their programs by completing an engineering minor. Students preparing for medical school should take additional lab-based courses in biology, biochemistry, and organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills and collaborative problem-solving.

Specific course requirements and other information for the biological engineering major and the environmental engineering major are described in the College of Engineering section of this publication. Further information is also available at the undergraduate program office in BEE Student Services, 207 Riley-Robb Hall, or at www.bee.cornell.edu.

The department also offers technology concentrations in biological engineering technology and environmental engineering technology within the Interdisciplinary Studies Major in CALS. The technology concentrations emphasize technical applications of biological, environmental, physical, and life sciences. Students take courses in basic biological and physical sciences and mathematics, and choose electives in engineering and technology, agriculture, business, social sciences, and liberal studies.

Many engineering and technology students participate in undergraduate teaching and research, internships, independent study, project teams, and study abroad. Students should have a strong aptitude for the physical and life sciences and mathematics and an interest in the complex social issues that surround technology. Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate programs in engineering and science, as well as the professional fields like medicine, business, and law.

The living world is all around us and within us. The biological revolution continues and it has given rise to a growing demand for people who combine knowledge of biology, environmental science, and social science and who can communicate effectively, who are sensitive to the needs of people, and who are interested in the challenges facing society. The Department of Biological and Environmental Engineering is preparing the next generation to meet these challenges.

Specific course distribution requirements for the concentrations in biological engineering technology and environmental engineering technology include the following:

1. Basic Subjects

   a. Calculus  8
   b. Chemistry  7
   c. Physics  8
   d. Computer applications  4
   e. Statistics or probability  3
   f. Introductory biological sciences*  6–8
   g. Written and oral expression*  9
   h. Social sciences and humanities*  12
   *Required of CALS majors.

2. Advanced and Applied Subjects

   a. Five courses (15 credits) in the biological, environmental, or agricultural sciences  15
   b. Five courses (15 credits) in technology. Three courses from the list of approved technology courses.**
   *One course must be chosen from the list of approved laboratory courses.**
   **Contact department for a list of approved courses.

3. Electives

   Additional courses to complete College of Agriculture and Life Sciences requirements

4. Total (minimum) 120

   For further details on the biological and environmental technology concentrations, contact the BEE department undergraduate programs office at 207 Riley-Robb Hall, 607-255-2173 or at www.bee.cornell.edu.

**Biology & Society**

The Biology & Society program area is designed for students who wish to combine the study of biology with perspectives from the social sciences and humanities. Many of the most critical social issues of our time, from the implications of genetic engineering to the impact of global climate change, have biological processes at their core. At the same time these issues are inherently social, involving complex relationships among people, institutions, laws, and beliefs. The Biology & Society field of study provides the skills and perspectives necessary to confront problems with biological, social, and ethical dimensions. In consultation with a faculty member, students are expected to select their courses in the field to meet their own goals and interests. For a description of the Biology & Society requirements and courses, see “Biology & Society” under the College of Arts and Sciences in this publication or visit www.sts.cornell.edu.

Students who elect Biology & Society as their major field of study graduate from Cornell with well-developed writing and analytical skills and a knowledge base that can lead to employment in a variety of fields. Many graduates have accepted positions as health counselors, writers, or policy analysts and researchers for government organizations, medical institutions, consumer or environmental groups, or scientific research institutes. Students have found that Biology & Society is also excellent preparation for professional training in medicine, law, and health services administration and for graduate programs in such fields as genetic counseling, nutrition, clinical psychology, public health, environmental studies, anthropology, sociology, and other related fields.

**Admissions**

Students in CALS may be admitted provisionally into this field of study when they apply to the college. Full admission depends on completing introductory biology and completing an application. Students transferring into this field of study will need to complete introductory biology and to submit an application during their sophomore year. The application includes:

1. A one- to two-page statement explaining the student’s intellectual interests in Biology & Society and why it is consistent with his or her academic goals and interests.
2. A selected theme.
3. A tentative plan of courses fulfilling Biology & Society requirements, including courses taken and those planned.
4. A transcript of work taken at Cornell University and/or elsewhere, current as of the date of application.

The faculty admissions committee reviews applications twice a year, once each during the fall and spring semesters. A faculty advisor is assigned on admittance to the field. Approximately 60 faculty members from three colleges serve as advisors to Biology & Society students. The major program is coordinated for students in all colleges through the Biology & Society Office, 306 Rockefeller Hall, where students can get information, specific course requirements, and application forms. Faculty advisors are available to discuss the Biology & Society requirements.

**Requirements for the program** are listed below. A full description and listings of courses that satisfy the requirements can be obtained in 306 Rockefeller Hall or at www.sts.cornell.edu. See also “Biology & Society” in the College of Arts and Sciences section of this publication.

**Biology & Society requirements:**

1. Introductory biology (1101–1104, 1105–1106, or 1107–1108)
2. College calculus (one course)
3. Ethics (one course)
4. Two social sciences/humanities foundation courses
5. Three biology foundation courses
6. One biology depth course
7. Statistics (one course)
8. Core course
9. Five theme courses (a coherent group of five courses relevant to the student’s special interest in Biology & Society, including a senior seminar that serves as a capstone course for the program).

Students should develop their theme and select their courses in consultation with a member of the Biology & Society faculty. A list of the faculty is available in 306 Rockefeller Hall. Further information may be obtained at www.sts.cornell.edu.
Biometry and Statistics

Quantitative prediction and interpretation are increasingly essential components of biological, physical, and social sciences. Complex patterns, structures, and interactions raise fundamental and fascinating questions that can be addressed only using mathematical, statistical, and computational methods. The wealth of data that can be acquired using modern methodologies to address these questions, in turn, requires substantive quantitative approaches to make possible appropriate analysis and interpretation. Computational power, meanwhile, continues to increase exponentially, providing the means for sophisticated analysis of complex phenomena.

The Biometry and Statistics major, in the Department of Biological Statistics and Computational Biology, focuses on the application of statistical and mathematical techniques to the sciences. Biometry applies statistics and mathematics to problems with a biological component, as seen in agricultural, environmental, biological, and medical science. Statistics is concerned with quantitave aspects of scientific investigation: design, measurement, summarization of data, and reaching conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of an applied statistician or computational biologist can encompass research, teaching, consulting, and computing in almost any combination and in a wide variety of fields of application. Opportunities for employment are abundant in academics, government, and businesses ranging from large corporations to small firms; salaries are usually excellent. Experience gained through summer employment, undergraduate research, or work as an undergraduate teaching assistant is highly recommended. For further details on the Biometry and Statistics major/minor, please contact the Director of Undergraduate Studies, Professor Steven J. Schwarz (1198 Comstock Hall), at sjsp@cornell.edu or go to www.bscb.cornell.edu.

Requirements for the Major (beyond the college requirements)

Nine core courses, plus either the Statistics or the Statistical Genomics concentration. Only courses for which the student receives a grade of C- or better will count toward the major in biometry and statistics.

Core Courses:

- BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics

Math Courses:

- MATH 1110 Calculus I
- MATH 1120 or 1220 or 1910 Calculus II
- MATH 2210 or 2220 or 2310 or 2940 Linear Algebra
- MATH 1920 or 2130 or 2240 Multivariable Calculus

CS 1112 Introduction to Computer Programming or BEE 1510 Introduction to Computing

Statistics concentration: Students must complete three advanced courses in statistics, computer science, operations research, or computational biology, including at least two from the list below (for complete list, go to www.bscb.cornell.edu/majReq.php):

- BTRY/ILRST 4110 Statistical Methods III: Categorical Data Analysis
- BTRY 6040/ILRST 6140 Statistical Methods IV: Applied Design
- BTRY 6150 Applied Functional Data Analysis
- ILRST 6150 Structural Equations
- ILRST 6190 Hierarchical Linear Models
- NTRES 4110 Quantitative Ecology and Management of Fisheries Resources
- NTRES 4120 Wildlife Population Analysis
- NTRES 6700 Spatial Statistics
- ORIE 4510 and 4520 Stochastic Processes
- ORIE 4740 Statistical Data Mining
- ORIE 5550 Applied Time-Series Analysis

Statistical genomics concentration:

Students must complete two courses from BTRY 4820 Statistical Genomics, BTRY 4830 Quantitative Genomics and Genetics, and BTRY 4840 Computational Genomics, and BTRY 4850 Computational Genomics; BIOGD 2810 Genetics; and in addition, they must complete one course from the advanced courses previously listed (for complete list go to www.bsck.cornell.edu/majReq.php).

Supplementary concentration: Each biometry and statistics major is strongly encouraged to supplement the required courses with a concentration in an area of interest to the student, consisting of a cohesive set of courses chosen by the student. It is the student’s responsibility to develop this concentration, with advice from the faculty, particularly the student’s faculty advisor. It will be helpful to discuss the selection of courses with the director of undergraduate studies or undergraduate advising coordinator of a department closely linked with the chosen concentration.

The Minor

A minor in biometry and statistics is available to all undergraduate students in CALS. To complete the program, students must submit a minor program of study form, available in 1198 Comstock Hall. Each student will retain a copy of the form and will be responsible for planning the minor program of study in conjunction with the advisor in the student’s major and a BSCB faculty advisor. Students and advisors in other departments should contact the director of undergraduate studies in the Department of Biological Statistics and Computational Biology if they have general questions about Biometry and Statistics courses or the minor. A BSCB faculty member will supervise and assist each minor in course selection.

Requirements for the minor

- BTRY 3010 Biological Statistics I or BTRY 6010 Statistical Methods I
- BTRY 3020 Biological Statistics II or BTRY 6020 Statistical Methods II
- BTRY 4080 Theory of Probability
- BTRY 4090 Theory of Statistics
- MATH 1110 Calculus I
- MATH 1120 or 1220 or 1910 Calculus II
- MATH 1920 or 2130 or 2240 Linear Algebra and Multivariable Calculus

One additional statistics elective from the advanced statistics course list given above.

A minimum of 31 credits is needed to complete the minor. Only courses for which the student receives a grade of C- or better will count toward the minor in biometry and statistics.

Communication

Communication majors at Cornell study communication in three main areas: science, media, and technology. Students gain a strong core in the theory of communication processes, including attitude, knowledge, and behavior change, public opinion, and information systems. They develop applied oral and written communication skills; they learn how communication systems work in society and in their personal and professional lives; they apply their understanding of communication to solving problems, sustaining the environment, reaching the public with new knowledge, and managing intricate networks of technologies.

Communication majors learn how:

- communication influences attitudes, opinions, and behaviors
- mass media work in our society
- to use, evaluate, and design communication technologies
- to apply their understanding of communication to solving problems in science, the environment, government, industry, health, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice.

Required freshman courses

Fall semester

- COMM 1101 Cases in Communication

Spring semester

- COMM 1300 Visual Communication
- COMM 1310 Writing about Communication

This set of courses provides students with a basic understanding of communication and communication processes.
Required sophomore courses
COMM 2010 Oral Communication
COMM 2820 Research Methods in Communication Studies

Two of the four Focus Area introductory courses:
COMM 2200 Media Communication
COMM 2450 Communication and Technology
COMM 2760 Persuasion and Social Influence
COMM 2850 Communication, Environment, Science, and Health

After completing the courses in the core curriculum, all majors take an additional 18 credits in communication distributed among advanced writing and presentation courses, electives, and focus area requirements. Students must also complete 3 credits of college-level statistics. In consultation with their advisers, students concentrate in one of four defined focus areas appropriate to specific educational and career goals.

1. Communication, environment, science, and health (CESH): Students focusing in CESH will investigate how communication influences public understanding of science, health, environmental, and risk-related issues. While exploring conceptual and theoretical issues, students will learn specific skills for communicating science, health, environmental, and risk information to a variety of audiences. Possible career paths include public information officer, science writer, environmental educator/outreach specialist, environmental or health-risk communicator, and business, legal, and other graduate study.

2. Communication media studies (CMS): Students focusing in CMS will investigate the forces that shape media in contemporary society, investigating how what we see and hear comes to be. They will also analyze and understand the psychological, social, and cultural processes that are in turn affected by media, from politics to entertainment to news. To the very question of what we understand as real about ourselves and true about the world around us. Students may pursue careers in the media industries, in designing the laws and policies regarding media, in business, legal, or other graduate study, or in the service of making media better; most of all, they will be more informed and astute citizens in a highly mediated world.

3. Communication and information technologies (CIT): Students focusing in CIT will explore the social and psychological dimensions of the design, use, and evaluation of communication and information technologies, how people form and manage impressions and relate to each other in cyberspace, the uses of language in online interaction, and how people coordinate work in virtual teams, as well as people's interface and information needs. Possible career paths include information systems designer, research analyst, user interface designer, software designer, usability specialist, technology writer, and business, legal, and other graduate study.

4. Communication and social influence (CSI): Students focusing in CSI will use communication principles to analyze issues and situations involving groups, organizations, and selected audiences to design, implement, and evaluate appropriate communication programs. Courses stress the positive, ethical, and effective uses of communication in human affairs. This focus area would be appropriate for students interested in using communication to bring about change at the individual and societal level. Possible career paths include public relations, marketing communications, polling, human resources, governmental affairs, and business, legal, and other graduate study.

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has considered students' need to understand contemporary research-based topics in communication as well as their need to be competent communicators in the workplace and in society at large.

Through the Department of Communication, CALS students may complete a minor program of study in communication or a minor program of study in information science or both.

The minor in communication consists of four required courses: COMM 1101, 1300, 2010, and either 2200, 2450, 2760, or 2850; Students also complete three elective courses totaling 9 credit hours, at least two of which must be at the 3000-4000 level, excluding the advanced writing and presentation courses and COMM 3030, 3530, 4090, 4960, and 4980.

The minor in information science is a cross-disciplinary program requiring one prerequisite statistics course, two courses from the information component area (primarily computer science), two courses from the human-centered systems component area (human-computer interaction and cognitive science), one course from the social systems component area (social, economic, political, and legal issues), and one additional course from any component area. A list of specific courses is available through the Department of Communication.

Students should contact the Department of Communication to enroll in either of these programs of study.

Crop and Soil Sciences
The Department of Crop and Soil Sciences provides instruction in the subject matter areas of crop science, soil science, environmental information science, and agronomy. Agronomy integrates the first three subjects and is a part of the Agricultural Sciences major (crop production and management concentration). A specialization in crop science is a part of the plant science major. A focus on soil science is possible in two majors, the Science of Natural and Environmental systems (SNES) or the Science of Earth Systems (SES). The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a general education in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas, including Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture. The SNES major is a biophysical science-based major that addresses the interface of environmental science and human systems involved in environmental management. Within the SNES major, students can concentrate in environmental agriculture, environmental biology, environmental economics, environmental information science, and sustainable development. The SES major places emphasis on the basic disciplines of chemistry, physics, and mathematics.

A minor in crop management is also available for students with any major at Cornell University. In summary, it requires at least two courses and an additional 3 credits in each of crop science (CSS 2110 or 4050, 3170, or 4140) and plant protection (CSS 3150, 4440, ENTO 2140, or PLPA 3010) plus at least three courses and at least 12 credits in soil science (CSS 2000, 3210, 3620, 4120, or 4680). Equivalent transferred courses can be substituted. This minor helps prepare students for the Certified Crop Advisor examination, which provides an important credential for jobs in agriculture and environmental management.

A minor in soil science requires 15 credits in soil science, but an additional 12 credits in biological, physical, and earth sciences are recommended to qualify the student for the Civil Service classification of Soil Scientist (GS-0470). In addition to 15 credits in soil science, Civil Service classification as Soil Conservationist (GS-0457) requires 12 credits in natural resources and agriculture and 3 credits in applied plant science. The soil science minor is also available to students with any major at Cornell University and transfer credit can be used to meet requirements. Students wishing to pursue either the crop management or soil science minor should contact the Department of Crop and Soil Sciences (255-5459).

Development Sociology
Technological, economic, demographic, and environmental changes are social processes. Each has major impacts on individuals, social groups, societies, and the international order. At Cornell, development sociology students study these and other facets of social change in both domestic and international settings. The development sociology major provides an opportunity for in-depth study of the interactions among development processes, environmental and technological contexts, demographic structures and processes, and the institutionalized and grassroots social movements through which people seek change in these dimensions. Courses offered by the department cover topics such as the impact of changes in agriculture on rural development and rural labor markets; community and regional development; environmental sociology; technology; the political economy of globalization; women in development; and ethnic stratification and integration. Most courses provide background in both domestic and international aspects of the subject matter. Students can develop a specialization with a domestic, international,
or global emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology and how to apply both to research and policy in their subject areas.

Majors in development sociology are required to successfully complete seven core courses: introductory sociology (DSOC 1100), international development (DSOC 2950), population dynamics (DSOC 3100), methods (DSOC 3130 or 3140), theory (DSOC 3010), social stratification (DSOC 3700), and a course in an additional development sociology course are also required of all majors, at least two of which must be at the 3000 level or higher. The elective courses allow students to focus their major on particular themes such as the sociology of development; the social processes linking the environment, population, and development; and more general areas such as ethnic and class stratification, social movements, social policy, and gender and development. In each of these focus areas, students can choose to concentrate on domestic or international situations. Students are encouraged to complement their courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Recognizing that students are concerned with future career opportunities, the development sociology major emphasizes acquisition of skills as well as general knowledge in preparation for jobs or post-graduate study. Accordingly, students are expected to become involved in the application of theory, methodology, and principles and concepts in the analysis of practical problems. Development sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., and Ph.D.). The department and graduate field are recognized as top programs in the area. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development. Sociology of agriculture, population studies, and the interactions among these dimensions. Development sociology faculty are committed to both quality instruction and cutting-edge research programs.

The department offers a general DSOC minor and a minor in Globalization, Ethnicity, and Development. For a complete list of requirements for either minor, please go to our web site: http://devsoc.cals.cornell.edu or visit 133 Warren Hall.

The department maintains strong ties with technical fields as well as with programs dealing with a range of issues of importance to international and domestic development. These include the International Agriculture Program, the Biology and Society Program, the Institute for Social and Economic Research, the Center for the Environment, the Polson Institute for Global Development, the Community and Rural Development Institute, the Gender and Global Change Program, the Bronfenbrenner Life Course Institute, and the Center for International Studies. Nearly half of the department faculty is associated with one or more area and ethnic studies programs including the American Indian Program, Latino Studies Program, Asian American Studies Program, Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, and the Institute for African Development. Department members also maintain working relations with faculty members in the Department of Sociology and Anthropology based units located in other colleges at Cornell. Students are encouraged to supplement their development sociology course work by electing courses in these other departments.

**Education**

The Department of Education builds on strong academic disciplines such as sociology psychology, anthropology, biological and political sciences, political thought, and philosophy and is ground in empirical and theoretical studies of educational practice in order to address education in diverse contexts and across the life span. The department has two foci to meet societal demands for teachers, research scholars, and leaders. The Learning, Teaching, and Social Policy (LTSP) concentration, which includes the Cornell Teacher Education Program (CTE), concentrates on teacher education in science, mathematics, pre-service education, diversity, critical pedagogy, the study of school-age children and their families, and policy related to formal education. The Adult and Extension Education (AEE) concentration prepares scholars and practitioners for adult and extension education leadership and professional development roles in domestic and international community-based, nonformal, and formal organizations and focuses on community development and organizing, adult education, public scholarship, university extension/outreach, learning in adulthood, educational planning and program development, and international adult and extension education. These two programs of study, largely at the graduate level, prepare leaders who will both engage in professional practice and improve educational processes through their scholarship and practice. Our undergraduate program leads to initial certification in agricultural science education. An undergraduate concentration is also available for students across all colleges at Cornell. For the latest information on program developments, go to education.cornell.edu.

**Adult and Extension Education (AEE)**

Creating a livable world requires more than just new knowledge and technology; it also requires sustained and expert practice in learning and education. The AEE program provides opportunities for graduate students to investigate educational and organizing practices that link learning to the challenge of facilitating global sustainability. As public universities focus their research, teaching, and extension on domestic and global environmental, political, and social problems, the AEE program focuses on creating opportunities for critical reflection on adult, extension, and international education by connecting action and research. We seek to move beyond the multiple questions of “how to do it” to critical institutional questions of who does and who should benefit from our adult, extension, and international educational work. The aim is to engage practitioners and graduate students in critical reflection on practice to create practical theory from and for action.

Participation in the AEE program helps scholars and practitioners prepare for adult and extension educational leadership and professional roles in domestic and international community-based, nongovernmental, and governmental organizational settings. Areas of expertise and inquiry include participatory practices in research, community development, and adult education; public scholarship, university extension/outreach, and community organizing in the United States; international adult and extension education; learning in adulthood; educational planning and program development; continuing professional education; staff development; and health issues related to the education of adults.

**Learning, Teaching, and Social Policy (LTSP)**

This program is designed to foster the development of educational leaders, researchers, and practitioners who approach issues and challenges in education from multiple perspectives, and seek to construct an integrated knowledge base upon which the practice of teaching, learning, and social policy is based. The impacts of implementation and practice are explored for creating new theories, approaches, and policies to improve teaching, learning, and community life.

Drawing on the dynamic nature of teaching and learning, this program challenges students to create and apply research-based, critically reflective educational practice to address pressing problems and issues in formal and nonformal educational contexts across a variety of national and cultural settings.

The program is philosophically grounded in the perspective that learning and teaching is a lifelong process vital to individual and community development, the development of democratic communities, and the implementation of democratic values in educational policy and practice. Context, gender, and social and economic diversity underlie the design and implementation of curriculum, teaching and learning theory, and social interactions and are lenses for examining educational practice, theory, and policy.

Faculty members and graduate students in research programs in Learning, Teaching, and Social Policy (LTSP) engage in research that investigates factors that contribute to scientific and quantitative literacy; curriculum design and evaluation in science, mathematics, and agricultural science; effectiveness of teacher professional development; educational policy in rural schools; and sociomoral development, action, and reflective thought in schools and communities. Our mission is to contribute to an educated, global society of citizens who are prepared to respond to emerging social, technological, and scientific issues, with ethical and critically reflective judgment.

**The Cornell Teacher Education (CTE) Program**

is a unique interdisciplinary cohort-based program that certifies teachers for secondary teaching in agricultural science,
Agricultural Science Education

Agricultural Science Education is taught at the middle and high school levels in New York State and nationally. Building on strong academic disciplines in the agricultural sciences, and with a solid grounding in the psychological, social, empirical, and theoretical bases of educational practice, the department offers two programs that lead to professional certification in Agricultural Science Education. The undergraduate degree in Agricultural Science Education and the agriculture option in the Master of Arts in Teaching are both offered under the Cornell Teacher Education umbrella. In addition, the undergraduate degree offers a non-certification option for persons with interests in instruction in nonschool settings such as extension, 4-H, arboretums, and state and national parks. All three of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

Minor in Education

The minor in education gives students a planned core of courses to provide them with an overview of education as a field. One option prepares students to move into the graduate segment of the Cornell Teacher Education (CTE) program. Other options provide preparation for admission into other graduate teacher certification programs or a background for positions such as extension, 4-H, arboretums, and state and national parks. Any of these programs prepare educators for leadership and professional roles in the broad fields of agriculture and natural resources.

Food Science

The food science program prepares students for careers in the food industry or research organizations and for graduate study in food science or related disciplines. Food scientists enjoy satisfying careers that help ensure the sustainable availability of a safe, nutritious, affordable, and high-quality food supply for people throughout New York State, the nation, and the world. Students in the food science program can choose from one of three specialization options in the major: (1) food science; (2) food operations and management; or (3) food biotechnology. The first option meets the curriculum standards set by the Institute of Food Technologists (IFT), the premier professional society for food scientists, allowing students to compete for IFT scholarships and awards. Students choose an option based on their individual interests and career goals.

The first two years of the undergraduate food science program are intended to establish a solid background in the physical and biological sciences, math and statistics, and communication skills. Required courses include chemistry (introductory and organic), biology, microbiology, calculus, physics, first-year seminar, introductory food science courses, and nutrition. The last two years emphasize the application of these basic sciences and technology to the manufacturing, sensory evaluation, storage, distribution, and safety of foods and food ingredients. Examples of food science core courses include Food Engineering Principles, Physical Principles of Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, and Food Microbiology; many elective courses are offered as well. Students choose electives to satisfy both college distribution requirements and their individual interests within the major and beyond.

Students are also strongly encouraged to participate in undergraduate research supervised by a faculty member and/or complete an internship in a food company during their program of study. Most teaching...
faculty in the department also have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Several food companies recruit on campus for their internship programs. These internships provide an excellent opportunity for students to gain hands-on experience in their chosen field of interest and to establish contacts for future employment. A modern food processing and development pilot plant, an operational dairy plant, and well-equipped laboratory facilities are available to support the teaching and research needs of undergraduates.

**Information Science**

Information Science (IS) is an interdisciplinary field that studies the design and use of information systems in a social context: the field studies the creation, representation, organization, application, and analysis of information in digital form. The focus of Information Science is on systems and their use, rather than on the computing and communication technologies that underlie and sustain them. Moreover, Information Science examines the social, cultural, economic, historical, legal, and political contexts in which information systems are employed, both to inform the design of such systems and to understand their impact on individuals, social groups, and institutions.

The Information Science major organizes its courses into three area-based tracks:

- **Human-Centered Systems.** This area examines the relationship between humans and information, drawing from human–computer interaction and cognitive science.
- **Information Systems.** This area examines the computer science problems of representing, organizing, storing, manipulating, and accessing digital information.
- **Social Systems.** This area studies the cultural, economic, historical, legal, political, and social contexts in which digital information is a major factor.

Students must complete a set of 11 core courses: one introductory course, four courses in math and statistics, and two courses from each of the three IS areas. Students must also obtain depth in two tracks—a primary and a secondary track—that together best represent their interests. In particular, completion of the major requires four advanced courses from the selected primary track and three advanced courses from the secondary track.

Note: All INFO courses will count as in-college credit.

**Requirements**

Core (11 courses)

1. Introductory (one course):
   - INFO 1300 Introductory Design and Programming for the Web

   Note: INFO 1301 and 1302 (no longer offered) may count together in place of 1300.

2. Math and Statistics (four courses):
   - MATH 1110 Calculus I
   - one course chosen from: MATH 1710 Statistical Theory and Application in the Real World; AEM 2201 Hospitality Quantitative Analysis; ECE 2310 Engineering Probability and Statistics; BTRY 3010 Statistical Methods I; SOC 3010 Evaluating Statistical Evidence; CEE 3040 Uncertainty Analysis in Engineering; ILRST 3120 Applied Regression Methods; ECON 3190 Introduction to Statistics and Probability; PSYCH 3500 Statistics and Research Design
   - either MATH 2130 Linear Algebra with Applications or MATH 2210 Linear Algebra
   - INFO 2950 Mathematical Methods for Information Science or CS 2800 Discrete Structures

3. Human-Centered Systems (two courses):
   - INFO 2140 Cognitive Psychology
   - INFO 2450 Communication and Technology

4. Information Systems (two courses):
   - CS 2110 Object-Oriented Programming and Data Structures*
   - INFO 2300 Intermediate Design and Programming for the Web

   *CS 2110 is an intermediate programming course that requires prior knowledge of Java. Students who have not learned Java can take CS 1130 after completing INFO 1300 and 2300, or they can take CS 1110.

5. Social Systems (two courses):
   - either ECON 3010 Microeconomics or ECON 3130 Microeconomic Theory
   - one course chosen from: INFO 2921 Inventing an Information Society; INFO 3551 Computers: From the 17th Century to the Dotcom Boom; or INFO 3561 Computing Cultures; or INFO 3200 New Media and Society

   Where options in the core courses exist, the choice will depend on the student's interests and planned advanced courses for the selected primary and secondary tracks.

**Tracks**

Students must complete four advanced courses in their selected primary track and three advanced courses in their selected secondary track.

Courses taken to satisfy the core-course requirements may not be used to fulfill the track requirements.

All courses used toward the major must be taken for a letter grade. Students must earn a C- or better in all courses used for the major.

Additional information on Information Science courses can be found below and in the CIS section of *Courses of Study*. Course information for all other courses in the major can be found in the relevant departments (e.g., AEM, CS, and STS).

1. **Human-Centered Systems**
   - INFO 3400 Psychology of Social Computing
   - PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display*
   - INFO 3450 Human–Computer Interaction Design
   - PSYCH 3470 Psychology of Visual Communications
   - INFO 3650 Technology and Collaboration
   - PSYCH 3800 Social Cognition*
   - PSYCH 4610 Modeling Perception and Cognition
   - INFO 4400 Advanced Human–Computer Interaction Design
   - INFO 4450 Seminar in Computer-Mediated Communication
   - INFO 4500 Language and Technology
   - DEA 4700 Applied Ergonomic Methods

   *Students who take PSYCH 3420 may also count its prerequisite, PSYCH 2050, toward the Human-Centered Systems primary/secondary track requirements. Similarly, students who take PSYCH 3800 may also count PSYCH 2800 toward the Human-Centered Systems primary/secondary track requirements. At most, one of PSYCH 2050 or 2800 can be counted toward the primary/secondary track requirements.

2. **Information Systems**
   - INFO 3500 Data-Driven Web Applications
   - CS 4450 Computer Networks
   - LING 4424 Computational Linguistics
   - INFO 4300 Information Retrieval
   - INFO 4302 Web Information Systems
   - CS 4320 Introduction to Database Systems
   - LING 4474 Introduction to Natural Language Processing
   - CS 4620 Introduction to Computer Graphics
   - CS 4700 Foundations of Artificial Intelligence
   - ORIE 4740 Statistical Data Mining I
   - CS 4780 Machine Learning
   - ORIE 4800 Information Technology
   - CS 5150 Software Engineering
   - INFO 5300 Architecture of Large-Scale Information Systems
   - CS 5430 System Security
   - CS 5780 Empirical Methods in Machine Learning and Data Mining

3. **Social Systems**
   - INFO 2040 Networks
   - SOC 3040 Social Networks and Social Processes
   - INFO 3200 New Media and Society*
   - AEM 3220 Internet Strategy
   - INFO 3490 Media Technologies
Requirements

In addition to the college distribution requirements, students in international agriculture and rural development must take a minimum of 50 credits toward the major. A minimum of 18 credits from a core curriculum (in addition to foreign language) are required, 8 of which should be in international agriculture and rural development (IARD). The foreign language requirement for the IARD major is identical to that of the College of Arts and Sciences (see p. 445). Other course work is drawn from a wide range of disciplines, consistent with the student's chosen concentration. Students are expected to complete an overseas field study experience of a minimum of six weeks. The objective is to familiarize students with the many facets of agricultural and rural development in low-income countries.

International Studies Minor

Preparing for leadership in an increasingly interconnected and dynamic world, CALS undergraduates need knowledge, skills, and attitudes that build "global competencies." The minor for CALS students not majoring in international agriculture and rural development will recognize an international concentration of course work and experiences.

Requirements

1. Five courses with significant international content, as recommended by students' major departments (three should be from CALS).

Highly recommended

1. Foreign language course work.
2. An approved overseas experience (exchange, study abroad program, internship, or faculty-led short course).

For more information, contact the academic programs coordinator in the CALS International Programs Office, 255-3811.

Landscape Architecture

Landscape architecture focuses on the art of landscape design as an expression of the cultural values and the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects may include garden design, parks design, housing design, historic preservation, environmental rehabilitation, and urban design.

Landscape architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences and a three-year master of landscape architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year master of landscape architecture advanced degree program administered through the Graduate School for those with accredited degrees in landscape architecture or architecture. The program entails core courses in the discipline and the development of a concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate minor in cultural landscape studies is available for nonmajors.

Dual-Degree Options

Graduate students can earn a master of landscape architecture and a master of science (Horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Study Abroad

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduate students in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Bachelor of Science Landscape Architecture Degree Sequence (Note: Each semester, the studio classes require payment of a supply and field trip fee, and all landscape architecture majors are required to pay an annual technology fee:)

International Agriculture and Rural Development

International agriculture and rural development provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural and rural development in low-income countries. The student chooses an area of concentration within the major and works with an advisor to plan an individualized program of study. Areas of concentration include (1) social development and livelihoods, (2) food systems, and (3) environment and ecosystems. The core curriculum and areas of concentration are designed to acquaint students with relevant socioeconomic factors, the physical and biological aspects of tropical crops and animal production, and issues of resource management and sustainability in low-income countries.

The Minor

A minor in Information Science is also available to students in AAP (Architecture and Planning students only), Arts and Sciences, CALS, Engineering, Hotel, Human Ecology, and ILR. The minor has been designed to ensure that students have a substantial grounding in all three of the human-centered systems, information systems, and social systems areas. Detailed information about the minor can be found in the CIS section of Courses of Study. Students should visit www.infosci.cornell.edu/ugrad for the most up-to-date description of the concentration and its requirements.

| Master of Landscape Architecture (M.L.A.) Advanced Degree Program

The two-year master of landscape architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants must hold a bachelor's degree in landscape architecture or architecture from an accredited program. The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects, the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape, two courses in site engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

**Undergraduate Minor for Nonmajors**

Students outside the professional program may choose the undergraduate minor (five courses, 15 credits) in cultural landscape studies to complement their major. A variety of courses consider the cultural landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society's relationship to natural systems. The study of cultural landscapes also includes perceptions of landscapes, cultural ideas and values, and visible elements. Direct inquiries to Professor A. Hammer, Department of Landscape Architecture, 440 Kennedy Hall.

Courses: choose five for a total of 15 credits

- LA 3600 Pre-Industrial Cities and Towns of North America (3 credits) offered alternate years
- LA 2610 Fieldwork in Urban Archaeology (4 credits)
- LA 2620 Laboratory in Landscape Archaeology (3 credits)
- LA 2820 Photography and the American Landscape (3 credits)
- LA 4180 Audio Documentary: Stories from the Land (3 credits)
- LA 4980 Seminar in Landscape Studies (3 credits)
- LA 4970 Independent Study (1–5 credits)
- LANAR 5240 History of European Landscape Architecture (3 credits)
- LANAR 5250 History of American Landscape Architecture (3 credits)
- LA 5450 The Parks and Fora of Imperial Rome (3 credits)
- LA 7920 Landscape Preservation: Theory and Practice (3 credits)

Natural Resources
Natural Resources is an interdisciplinary major focusing on the environmental knowledge and analytical tools required to conserve, restore, and manage the Earth's biodiversity and ecosystem services in sustainable ways. The curriculum draws on relevant knowledge from biology, ecology, chemistry, mathematics, sociology, economics, law, and ethics. A large number of field courses provide direct experience working in forests, wetlands, streams, lakes, and policy-making arenas. Courses address environmental issues such as global change, landscape transformation, endangered and invasive species, human alteration of biogeochemical cycles, and other environmental strategies, environmental justice, bio-cultural and biological diversity, and international conservation. Concentrations include applied ecology, resource policy and management, and environmental studies.

The major allows students flexibility to pursue a variety of professional careers including the biological, ecological, ethical, and societal basis for biodiversity conservation, sound resource management, and sustainable development.

Areas of Concentration within the Major

Field Biology, and Society and Natural Resources. Juniors complete three core courses: Applied Population Ecology, General Ecology, and Natural Resources Management and Planning. These foundation and core courses introduce the critical environmental and natural-resource issues confronting society, and develop the conceptual and methodological tools that students will use in upper-division courses.

Juniors and seniors may specialize in one of three areas of concentration: applied ecology, resource policy and management, or environmental studies. Through course work in these concentrations, students gain an in-depth understanding of key principles, concepts, and practices. All students also have the flexibility to gain exposure to a wide variety of environmental-related courses offered by Natural Resources and other departments throughout Cornell. Many students elect to conduct a research honors thesis.

The Future for Natural Resources Majors

Most students entering the major have a strong interest in the natural world and in contributing to greater harmony between society and the environment. An undergraduate degree in natural resources gives students the concepts and tools needed to participate intelligently and effectively in decisions that determine the future of our environment, whether as professionals within a diverse array of environmental careers, or as informed citizens working in other professions.

Graduates with a major in natural resources have the flexibility to pursue a number of different careers because of the interdisciplinary nature of the curriculum. The major prepares students for graduate school in numerous fields, and for entry-level positions in natural resources and environmental management agencies at local, state, federal, and international levels, or for jobs in the private for-profit (e.g., environmental consulting firms) or nonprofit (e.g., conservation organizations) sectors. Many students ultimately pursue graduate studies in environmentally related fields including the biological, physical, and chemical sciences; forest, wetland, stream, wildlife, or fisheries management; and environmental law and public policy.

Graduates often assume leadership positions in government, colleges and universities, national and international conservation organizations, environmental consulting firms, environmental divisions of private industry, and organizations involved in environmental education or communication.

Curriculum

Natural resources is a flexible major, and free electives can account for as many as 40 credits out of the total of 120 required for graduation. Students complete a set of courses in biology, ecology, chemistry, mathematics, economics, ethics, and written and oral expression; many of these courses also meet the college's distribution requirements for graduation. Freshmen and sophomores complete a series of four foundation courses in the major: Introduction to the Field of Natural Resources, Environmental Conservation, Introductory Science, and Junior Seminar in Natural Resources.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes

- Introduction to the Field of Natural Resources
- Environmental Conservation
- Introductory Science
- Junior Seminar in Natural Resources
- Applied Ecology
- Resource Policy and Management
- Environmental Studies

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and research opportunities at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see the website www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Research and Work Opportunities for Undergraduates

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and research opportunities at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see the website www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.

Nutritional Sciences

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutritional sciences provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships among human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work with specialists in areas such as agricultural economics, food production, and development sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutritional sciences majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes

- Introduction to the Field of Natural Resources
- Environmental Conservation
- Introductory Science
- Junior Seminar in Natural Resources
- Applied Ecology
- Resource Policy and Management
- Environmental Studies

The department offers many opportunities for field-oriented studies, independent research, internships, and jobs. These include several field-based courses and research opportunities at the Arnot Teaching and Research Forest near Ithaca, the Little Moose Field Station in the Adirondacks, the Cornell Biological Field Station on Oneida Lake near Syracuse, and the Hubbard Brook Experimental Forest in New Hampshire, as well as numerous natural areas near campus. Part-time jobs in the research and extension programs of many faculty members offer students opportunities for career-related work experience. A research honors program is available for qualified students.

For a comparison of the natural resources major with other environmental majors, see the website www.dnr.cornell.edu/teaching/ugrad/faq/cals_env.pdf.
introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 1150 Nutrition, Health, and Society; NS 2450 Social Science Perspectives on Food and Nutrition; NS 2451 Introduction to Physiochemical and Biological Aspects of Foods; NS 3310 Physiological and Biochemical Bases of Nutrition; and NS 3320 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisors in the Division of Nutritional Sciences with whom they meet regularly. Advisors help students plan course schedules and help find opportunities for special study or experiences outside the class. Many students engage in laboratory or field research with a faculty member for academic credit. The research honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutritional sciences can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the division faculty members work in Savage Hall, Kinzelberg Hall, and Martha Van Rensselaer (MVR) Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

For additional information about the nutritional sciences program, contact the Division of Nutritional Sciences Academic Affairs Office, B21 Savage Hall, 255-4410, aadns@cornell.edu.

The minor in nutrition and health in the College of Agriculture and Life Sciences allows students to choose from courses concerned with economic influences on human nutrition, epidemiology and social biology, health, food quality and food service management, human health and nutrition, nutritional biochemistry, and the psychological and social influences on human nutrition. The minor consists of NS 1150 Nutrition, Health, and Society plus 9 credits of 2000-level or above didactic NS courses. Several NS courses are excluded from use toward the minor. Please check www.nutrition.cornell.edu/undergrad/calsminr.html for details. Enrollment is limited in some courses.

Plant Sciences

Plant sciences prepares students for careers that meet the challenges of providing a safe, nutritious, and abundant food supply for a growing world population and using plants to enhance the beauty of our landscapes. It is a multidisciplinary program administered by faculty in the Departments of Crop and Soil Sciences, Horticulture, Plant Biology, Plant Breeding and Genetics, and Plant Pathology and Plant-Microbe Biology, representing one of the strongest groups of plant scientists in the world. Students in the program share a common interest in learning about topics associated with plant growth and development in the broadest sense, but beyond that common thread, individual career goals vary widely. Some have their sights set on careers in applied agriculture, others plan to contribute to advancements of our knowledge by way of teaching or research, and still others see study in plant science as a stepping-stone to specialized training in business, government, or law. In addition to the college distribution requirements, Plant Science majors must take at least one course in each of several areas, including botany, plant physiology, ecology, taxonomy/systematics, genetics, statistics, plant-pest interactions, crop production, and soil science, for a total of 40 credits.

Students who begin with well-defined interests or who identify certain areas of interest after several semesters of course work may choose a specialization within one of the five cooperating departments. Each specialization has additional requirements beyond the basic core courses. However, students who are uncertain about the breadth of their interests or who are seeking as much flexibility as possible may choose to design their course of study in plant sciences without declaring a specialization. Those students develop a strong background in plant science but have fewer required courses so that they can explore other areas of interest.

More than 140 courses that deal directly with some area of plant science are offered by the cooperating departments. Other courses relating to plant science are offered elsewhere in the university. There are also ample opportunities for internships, undergraduate teaching, and research experience. Qualified students, especially those expecting to go on for graduate degrees, are encouraged to avail themselves of such opportunities. Students who are planning to enter the workforce immediately upon completion of the B.S. degree are encouraged to obtain practical experience. This may involve summer employment in research or in a plant production or maintenance-related industry such as a lawn and tree care company, commercial greenhouse, nursery, orchard, vineyard or winery, botanical garden or arboretum, crop production farm, or with Cooperative Extension. Plant sciences faculty members also encourage students to avail themselves of opportunities to work and/or study abroad.

In addition to classrooms and laboratories in five buildings on the Cornell campus proper, research and teaching facilities adjacent to the campus are freely available to students for hands-on training, independent research projects, and internships. These facilities include research orchards and vineyards, golf courses and a turf research facility, the Cornell Plantations (including arboretum and natural areas), and vegetable and field crop farms. Demonstration/research facilities in Aurora (Cayuga County), Geneva (Ontario County), Highland (Ulster County), Lake Placid (Essex County), Odessa (Tioga County), and Riverhead (Suffolk County) are also sites administered by departments within the Plant Sciences consortium and are available for undergraduate and graduate field study. For more information about this major, see www.cals.cornell.edu/cals/hort/teaching/plant-sci-undergrad/index.cfm.

Crop science is a specialization that focuses on the major food and feed crops of the world, such as wheat, corn, rice, soybeans, and alfalfa. In addition to 15 credits in applied crop science, students in this program take at least 6 credits in plant protection (weed science, entomology, and plant pathology) and at least 6 credits in soil science. The crop science specialization can be focused on preparation for graduate school or be combined with a crop management minor for those planning to be certified crop advisors.

Horticulture. Derived from the Latin word "hortus," meaning garden, horticulture is a blend of science and culture involving knowledge of plants grown in farms and gardens, parks and landscapes, and athletic and recreational facilities; indoor plants; greenhouse and nursery plant production; and crops used for wines, herbs and spices, medicinal purposes, and coffee and teas. The knowledge and skills essential to grow, maintain, process, and market horticultural plants are in high demand in a world increasingly concerned with environmental quality, recreation, and health.

The 40 faculty members in horticulture specialize in almost every aspect of horticultural science, with active research and outreach programs regionally, nationally, and internationally.

Students choosing a concentration in horticulture must complete a minimum of 40 credits of core courses. In addition, students must complete the following courses:

**HORT 1101 Horticultural Science and Systems** (4 credits)
**HORT 4000 Plant Propagation** (3 credits)
Two HORT courses in plant production or management at the 4000 level (6 credits)
One additional course of integrated pest management (plant pathology, entomology, or weed science) beyond the 3-credit plant sciences core requirement (3 credits)

Students transferring into Cornell from other colleges can petition to waive or adjust these requirements, in consultation with their faculty advisors.

Plant biology stresses a basic, rather than applied, understanding of how plants function, grow, and develop, as well as a study of their genome, evolution, and relationships to humans. It provides undergraduates with a thorough preparation for graduate study in plant sciences. In cooperation with an advisor each student plans a curriculum with a concentration in basic sciences, supplemented by more advanced courses in plant biology. Students
specializing in plant biology within the plant sciences major should take a minimum of four courses beyond the core of plant sciences courses. Options include plant molecular biology, plant cell biology, biochemistry, ethnobotany, and further courses in the function, growth, genetics, systematics, ecology, and evolution of plants. Individual research under professorial guidance is encouraged. Different options within plant biology afford a flexible curriculum.

Plant breeding and genetics relates information about genetics/genomics of plants to the improvement of cultivated plant species. Agriculturally important genes are identified, characterized, and deployed through combinations of molecular studies and sexual crosses. This area of study integrates genetic information with plant physiology/biochemistry, plant pathology, entomology, conservation biology, international agriculture, and related areas to create crops that meet the needs of modern society. In addition to the core plant sciences courses, students should take PLBR 2080, 4030, 4040, and BIOL 3430. Other courses may be included after consultation with the advisor. Students are encouraged to participate in research projects and take advantage of opportunities for internships in industry.

Plant pathology and plant-microbe biology faculty study interactions of plants with pathogenic and beneficial microorganisms and with toxic elements in air and water. Some specialists in the field choose to focus their attention on the cause of plant diseases and others employ contemporary tools of molecular biology to answer fundamental questions about the nature of host-pathogen interactions. Working together, they advance the frontiers of science to ensure rapid deployment of new strategies for growing healthy crops with maximum yields and minimal impacts on the surrounding environment. For most students, a concentration in Plant Pathology and Plant-Microbe Biology is preparation for graduate study in the field. However, graduates may also be employed as sales or technical representatives with agribusiness firms, Cooperative Extension educators, state or federal regulatory officials, and laboratory technicians. Suggested courses beyond the Plant Science core include organic chemistry, biochemistry, calculus, introductory plant pathology, mycology, entomology, and plant breeding.

Plant protection is offered to students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that limit crop production. Although designed as a terminal program for students desiring practical preparation for careers in pest management, the specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

Science of Earth Systems (SES)
The EARTH SCIENCES have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunami, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell is a global leader in research toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes and Tibetan Plateau, the nature of the earth's ionosphere, and the impact of aerosols on global climate.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in the Colleges of Engineering, Arts and Sciences, and Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to compete for careers or graduate study at leading institutions in this country and abroad. Students may choose to focus on one of a number of disciplinary specialties, such as geophysics or tectonics, or develop the broad expertise needed to understand the interactions between the diverse elements of Earth and life in the past, present, and future. By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society's growing demand for energy, minerals, and clean water as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The SES program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples include archaeology, astronomy, biological and environmental engineering, civil and environmental engineering, and ecology and evolutionary biology. The SES program is unique in that it incorporates the fundamentals of earth science with the emergence of a new and more complete approach that encompasses all components of the earth system—air, life, rock, and water—to gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exist for geological, oceanographic, and meteorological research in the US, worldwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Aleutians, the Rockies, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geophysical sciences, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major
1. Basic Math and Sciences
This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.
   a. MATH 1910–1920 (or MATH 1110–1120)
   b. PHYS 2207–2208 (or PHYS 1112–2213)
   c. CHEM 2070–2080 or 2070–1570 or 2090–2080
   d. BIOLOGY—there are three options
      (CALS students must choose within option 1):
      1. one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1103-1102/1104, or 1105/1106, or BIOG 1109/1110
      2. one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700
      3. students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. Required Introductory Course: EAS 2200 The Earth System

These courses are founded on the most modern views of the planet as an interactive and ever-changing system, and each crosses the traditional boundaries of disciplinary science. Three courses selected from the following four core courses are required for the major:
   EAS 3010 Evolution of the Earth System
   EAS/NTRES 3050 Biogeochemistry
   EAS 3040 Interior of the Earth
   EAS 3050 Climate Dynamics

4. Concentration Courses
Four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the basic sciences and mathematics courses are required. Note that additional basic math and science courses may be required as prerequisites for courses chosen for the concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. The concentration should be chosen during the junior year or before in consultation with an SES advisor whose interests match those of the student. Four concentrations are defined for the major: atmospheric sciences, biogeochemistry, geological sciences, and ocean sciences (see EAS web site for details). Other concentrations can be tailored to a student's interests in concert with the student's
advisor and upon approval of the SES curriculum committee. Examples include sustainable Earth and environmental systems, earth system science and policy, hydrology, planetary science, and soil science.

5. Field/Observational/Laboratory Experience
Exposure to the basic observations of earth science, whether directly in the field, or indirectly by various techniques of remote sensing, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. A minimum of 3 credits of course work of an observational nature is required. Possibilities include Courses in the Hawaii Environmental Semester program; Courses given by the Shoals Marine Laboratory; EAS 2500 (Meteorological Observations and Instruments); EAS 3520 (Synoptic Meteorology I); EAS 4170 (Field Mapping in Argentina); EAS 4370 (Geophysical Field Methods); EAS 4910 and/or 4920 (Undergraduate Research, total 3 credits) with appropriate choice of project Field courses taught by another college or university (3-credit minimum), if approved by advisor.
### Required Introductory Core Course (4 cr)

Complete at least 13 credits.

- **A minimum of one additional class and 2 additional credits in any course(s) with a “VIEN” designation except 1104, 3400, 3410, 4300, 4420, 4060 must also be taken.**

- **Recommended courses include:**
  - VIEN 2400 Wine and Grape Composition and Analysis (2 cr)
  - VIEN 4200 Grape Pest Management (3 cr)
  - VIEN 4400 Wine and Grape Flavor Development (3 cr)
  - VIEN 4440 Viticulture and Vineyard Management II (3 cr)
  - VIEN 4444 Grapevine Biology (3 cr)

- **Any undergraduate student in the college may enroll, subject to availability, in courses required for the minor. Several courses in VIEN have suggested prerequisites, but these requirements may be waived at the discretion of the instructor. Only courses for which a grade of “C” or better is received will count toward the minor in Viticulture and Enology.**

### Special Programs in Agriculture and Life Sciences

#### Interdisciplinary Studies

The opportunity to develop an independent minor in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. A course of study for interdisciplinary studies must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisor prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

#### Distribution requirements
- **At least 3 credits must be taken in each of the following areas:**
  - **A. Botany and Plant Sciences**
  - **C. Mathematics**
  - **D. Environmental Science**
  - **E. Animal Products and Science**
  - **F. Nutrition and Food Science**
  - **G. Technology and Human Behavior**
  - **H. Veterinary and Animal Health**

- **Any one course of the 3000 level on a topic related to the natural sciences can be counted.**

### Core Viticulture and Enology Courses

Several VIEN or Viticulture and Enology major courses including:

- **VIEN 1104 Introduction to Wines and Vines (3 cr)**
- **VIEN 2400 Grape Composition and Analysis (3 cr)**
- **VIEN 3400 Winemaking Technology (3 cr)**
- **VIEN 4400 Wine and Grape Flavor Development (3 cr)**
- **VIEN 4430 and 4440: Viticulture and Vineyard Management I and II (6 cr)**
- **VIEN 4444 Grapevine Biology (3 cr)**

All students are encouraged to complete internships in the wine or grape industry during the summers and to participate in undergraduate research programs on campus. In New York State alone, more than 220 wineries and 600 vineyards are enthusiastic about working with students and hosting interns.

### The Minor

Through a minor in Viticulture and Enology, students will learn the essential natural history and biology of wine grapes, systems, and technologies of grape and wine production, as well as the basic chemistry of grape and wine analysis. Those interested in pursuing a minor in Viticulture and Enology need to complete at least 13 credits.

- **Required Introductory Core Course (4 cr)**
- **VIEN 1104 Wines and Vines (3 cr)**
- **VIEN 1105 Wines and Vines, Lab (1 cr)**

This course is also required for the **Minor in Viticulture and Enology**.

- **Required Upper Level Core Courses (7 cr)**
  - **VIEN 3400 Winemaking Practices and Principles (3 cr)**
  - **VIEN 3410 Winemaking Lab (1 cr)**
  - **VIEN 4430 Viticulture and Vineyard Management I (3 cr)**

A minimum of one additional class and 2 additional credits in any course(s) with a “VIEN” designation except 1104, 3400, 3410, 4300, 4420, 4060 must also be taken. Recommended courses include:

- **VIEN 2400 Wine and Grape Composition and Analysis (2 cr)**
- **VIEN 4200 Grape Pest Management (3 cr)**
- **VIEN 4400 Wine and Grape Flavor Development (3 cr)**
- **VIEN 4440 Viticulture and Vineyard Management II (3 cr)**
- **VIEN 4444 Grapevine Biology (3 cr)**

Any undergraduate student in the college may enroll, subject to availability, in courses required for the minor. Several courses in VIEN have suggested prerequisites, but these requirements may be waived at the discretion of the instructor. Only courses for which a grade of “C” or better is received will count toward the minor in Viticulture and Enology. (courses taken with an S–U option will not count).

### Special Programs in Agriculture and Life Sciences

#### Interdisciplinary Studies

The opportunity to develop an independent minor in interdisciplinary studies is available for students interested in pursuing a general education in agriculture and life sciences. In consultation with a faculty advisor, students plan a sequence of courses suited to their individual interests, abilities, and objectives. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. ### Nondepartmental Courses

#### ALS 1140 Explorations in Biology Research and Health Professions

**Summer. 1 credit.** Not for Biological Sciences majors. K. Gellman. Students will explore biology as it pertains to research, health-care professions, and the world at large. This seminar is designed for students with a strong interest in medicine and biological research. Discussions and laboratory exercises will allow students to interact with faculty and guest speakers. We will also learn to read and evaluate scientific publications on current biological topics. Course grade will be based upon a final paper.

#### ALS 1340/1341 N.Y.S. Emergency Medical Technician—Basic

**Fall and spring. 6 credits awarded at completion of course.** Full academic-year course requiring fall and spring enrollment. Recommended: basic or advanced first aid. S–U or letter grades. D. A. Grossman, R. Kniffen, and A. E. Gantert. Intensive 170-hour course taught throughout the fall and spring semesters. Includes training in C.P.R. and defibrillation for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, spinal immobilization, patient assessment, emergency pharmacology, and the use of medical antishock trousers. Students qualify for the New York State E.M.T.—Basic certification process. Examinations upon successful completion of the course.

#### ALS 1350 Advanced N.Y.S. Emergency Medical Technician—Intermediate

**Fall. 4 credits.** Prerequisite: current certification as N.Y.S. Basic E.M.T. or have applied for reciprocity. S–U or letter grades. D. Grossman and staff. Includes topics such as emergency pharmacology, patient assessment, advanced cardiac life support, emergency hypoperfusion management, and basic trauma life support. Uses classroom, lab, field, and simulation sessions to teach skills such as intubation, emergency IV access, electrocardiogram and defibrillation, and patient assessment and pharmaceutical intervention. Requires extensive out of classroom time.

#### ALS 3920 New York State Government Affairs (also HE 3920)

**Spring. 15 credits.** Prerequisite: junior or senior standing; minimum GPA of 2.3. R. Canfield. For description see HE 3920.

#### ALS 4060 Community Service Learning Project

**Fall and spring. 3 credits.** Prerequisite: none. Letter grades only. B. Chabot. Students will develop an independent community-based project that will achieve both service and learning objectives. Learning objectives include skills in research, critical thinking, and leadership. Students will gain knowledge in community needs assessment, project planning, design, implementation, and evaluation. Faculty members will mentor students in developing community partnerships, research, and project planning.
ALS 4770 Environmental Stewardship in the Cornell Community
Spring. 2–4 credits, variable; may be taken more than once. J. M. Regenstein. Each student or team of students undertakes an original project to improve the environment at Cornell or in Tompkins County. Often the projects will involve working with the Cornell infrastructure (generally campus life and/or facilities). Through class discussions, students learn how to be more effective at developing environmental programs in the future, both during and after college. Students present a final oral report at a public forum to which seniors of the Cornell in Washington program are invited. The final written report will be made public.

ALS 4940 Special Topics in Agriculture and Life Sciences
Fall or spring. 4 credits max. S–U or letter grades. The college teaches “trial” or temporary courses under this number. Offerings vary by semester and are advertised by the college before the beginning of the semester. The same course is not offered more than twice under this number.

ALS 4960 Internship
Fall, spring, or summer. 6 credits max. Not open to students who have earned internship credits elsewhere or in previous semesters. S–U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant’s Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Requires participation in any structured learning activities associated with the internship.

ALS 4991/4992 Honors Project I and II
(also BSOC/STS/HE 4991/4992)
Fall and spring (yearlong). 8 credits (register for 4 credits each semester; total credits 8) Prerequisite: biology & society seniors and permission of department; overall GPA of 3.5. Apply in 366 Rockefeller Hall. Students who are admitted to the honors program are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

ALS 4998 Politics and Policy: Theory, Research, and Practice (also AMST/PAM/GOVT 4998)
Students in CALS must register for ALS 4998. S. L. Ross and staff. This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell in Washington program. The central objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and procedures of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Students apply through the Cornell in Washington office, M101 McGraw Hall, or online at ciw.cornell.edu.

ALS 5100 Leadership Development for Life Scientists
Spring. 3 credits. Prerequisite: invitation or permission of instructor. S–U grades only. M. Pratts, C. Warzywinski, and L. Gasser. Formal training and practice of skills required for leading people in an academic or business environment. Skills includes coaching, feedback, managing conflict, fostering teamwork, creating vision, and developing diversity. A significant portion is devoted to understanding one’s own strengths and weaknesses and how to recognize and use strengths in others.

ALS 5800 International Teaching Assistant Development Program
Course 3
Fall or spring. 2 credits. Prerequisite: EDUC 5790. ITADP staff. Specifically designed for international graduate students who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants address English-language issues relating to phonemes, grammar, and suprasegmentals. Activities in these areas target communicative functions such as presenting concepts, initiating and sustaining conversation, and interpreting information in academic settings.

ALS 5810 International Teaching Assistant Development Program
Course 4
Fall or spring. 2 credits. Prerequisite: ALS 5800. ITADP staff. Specifically designed for international graduate students who have completed ALS 5800 and who plan to assume teaching assistant responsibilities that range from lab introductions to individual tutoring sessions. Participants develop skills in self-monitoring, critical listening, and language fluency with attention to time frame usage, academic terminology, extended discourse, and compensatory speech strategies.

ALS 6610–6611 Environmental Policy
(also BSOC 4611–4612, BIOEE 6610–6611)
Fall, 6610; spring, 6611. 3 credits each semester; students must register for 6 credits each semester since “R” grade is given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. D. Pimentel. For description, see BIOEE 6610.

AGRICULTURAL SCIENCES

The Agricultural Sciences major is an interdisciplinary program for students wishing to pursue a career in agriculture to prepare for careers that require a scientific and integrative understanding of agriculture and food systems. Students can concentrate in one or more areas including: Animal Science, Agriculture Economics and Management, Education and Communication, Crop Production and Management, and Sustainable Agriculture.

AGSCI 2940 Introduction to Agricultural Machinery
(also CSS/HORT 2940)
Fall. 2 credits. B. Flannigan and A. DiTommaso. For description, see CSS 2940.

AGSCI 3800 Organic Food and Agriculture
(also CSS/HORT 3800)
Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 1101 recommended, or permission of instructor. Staff. For description, see CSS 3800.

AGSCI 4010 Seminar in Agricultural Sciences
Fall or spring. 1 credit. S–U grades only. A. DiTommaso. Students in this weekly seminar series will learn about current debates and hot issues in the agricultural sciences today from both local and global perspectives. It will include both Agricultural Sciences majors presenting on internship and capstone experiences, and invited guest speakers. The target audience is Agricultural Sciences majors. Students are required to prepare a written reflection on each presentation. This course creates a weekly forum in which majors in our interdepartmental program can gather to learn and discuss important issues in agricultural sciences, while at the same time building community within our Agricultural Sciences major program.

AGSCI 4940 Special Topics in Agricultural Sciences
Fall or spring. 4 credits max. A. DiTommaso. The department teaches “trial” courses, and special topics not covered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

AGSCI 4960 Internship in Agricultural Sciences
Fall, spring, or summer. 1–3 credits variable, 6 credits maximum. Prerequisite: permission of student’s advisor in advance of participation in internship programs. S–U or letter grades. Staff. In this experiential learning opportunity, students will participate in structured, on-the-job learning under supervision of qualified professionals in a cooperating external organization. Internships and learning goals are arranged by the student in conjunction with an internship advisor and the internship host. Course may be taken multiple times for up to 6 credits. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

AMERICAN INDIAN STUDIES
The American Indian Program offers a minor in American Indian Studies to undergraduate students. The minor is earned upon the completion of five courses: AIS 1100 and AIS 1110, plus at least three other courses from the
AIS curriculum, for a minimum total of 15 credit hours. The three additional courses must include one course from Group A (arts and humanities) and one course from Group B (social and natural sciences) as listed below. Only one 3-credit independent study (AIS 4970) may be counted toward the minor. Only program-listed courses for which the student has earned a letter grade of C or better will be counted toward the minor. No courses taken for S–U credit will be counted toward the minor. A number of older courses no longer offered by AIP do count toward the minor, as do courses with the same title that were numbered using the old three-digit system. Students seeking to minor in American Indian studies or determining the eligibility of a course are encouraged to contact Professor Kurt Jordan, associate director for academic development, at kj21@cornell.edu. Application materials for the minor may also be obtained from the AIP office, 4th floor, Caldwell Hall. Students are also advised to consult www.aip.cornell.edu/academic.htm for the most up-to-date listings of course offerings.

Minor in American Indian Studies

Required Courses

AIS 1100 Introduction to American Indian Studies I: Indigenous North America to 1890
AIS 1110 Introduction to American Indian Studies II: Contemporary Issues in Indigenous North America

Electives

(Group A, Arts and Humanities)

AIS 2360 Native Peoples of the Northeast
AIS 2390 Seminar in Iroquois History
AIS 2600 Survey of Native American Literatures in the United States
AIS 2660 Introduction to Native American History
AIS 3860 Contemporary American Indian Fiction of the United States
AIS 4300 Native American Philosophies
AIS 4860 American Indian Women's Literature
AIS 4900 New World Encounters, 1500–1800

(Group B, Social and Natural Sciences)

AIS 2200 Field Course in Iroquois Archaeology
AIS 2360 Native Peoples of the Northeast, Pre-Contact to the Present (also HIST/AMST 2360) (CA) [HA] Spring. 4 credits. Next offered 2011–2012. J. Parmenter. For description, see HIST 2360.
AIS 2390 Seminar in Iroquois History (also HIS 2390) (CA) [HA] Fall. 4 credits. Next offered 2011–2012. J. Parmenter. For description, see HIST 2390.
AIS 2600 Survey of American Indian Literatures in the United States (also ENGL 2600) (LA) [CA] Spring. 4 credits. Next offered 2011–2012. E. Cheryitz. For description, see ENGL 2600.
AIS 2660 Introduction to Native American History (also HIST/AMST 2660) (CA) [D] Spring. 4 credits. Next offered 2010–2011. J. Parmenter. For description, see HIST 2660.

(Group C, Social and Natural Sciences)

AIS 3110 Social Movements (also DSOC/LSP 3110) Fall. 3 credits. Prerequisites: DSOC/SOC 1101 or permission of instructor. S–U or letter grades. Next offered 2010–2011.
AIS 3130 Ways of Knowing: Indigenous and Local Ecological Knowledge (also NTRES 3330) (CA, SBA) (D) Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. Letter grades only. K. Kassam. For description, see NTRES 3330.
AIS 3400 Contested Terrain: Hawai‘i (also SOC 3420) (CA) (SBA) Spring. 3 credits. Prerequisite: introductory or intermediate-level social sciences or history. M. M. Hamabata. This course, offered through Earth and Atmospheric Sciences’ program in Hawaii, draws from the fields of history, political science, and sociology to present an historical understanding of contemporary Hawaiian society. Topics include Western contact, establishment of Western institutions, overthrow of a sovereign government, annexation, integration into the United States. Direct experience with Hawaiian leaders and institutions are incorporated to address contemporary issues: sovereignty, economic development/dependency, social change, and land use as a sociopolitical and cultural struggle. Students should consult www.eas.cornell.edu/academics regarding the status of this course.
AIS 3422/6422 Culture, Politics, and Environment in the Circumpolar North (also ANTHR 3422/6422) (CA) Spring. 4 credits. Prerequisite: none. Letter grades only. P. Nadasdy. For description, see ANTHR 3422/6422.
AIS 3480/6480 Iroquois Archaeology (also ANTHR 3480/6480) (CA) (HA) Fall. 4 credits. S–U or letter grades. Next offered 2011–2012. K. Jordan. For description, see ANTHR 3248/6248.
AIS 3860 Contemporary American Indian Fiction (also ENGL 3670) (LA) (CA) Fall. 4 credits. Next offered 2011–2012. C. Geisler. Examines contemporary American Indian fiction as a response to the colonial structure of federal Indian law. Beginning with Mourning Dove’s Coyote, a novel of the Allotment Era, students read works by a range of Native fiction writers (from a list that includes McNickle, Welch, Silko, Vizenor, Hogan, Alexie, Walters, Glancy, and Red Corn) that respond critically to U.S. federal Indian policy.
AIS 4000 Critical Approaches to American Indian Studies (also AIS 6000) (CA) (HA) Fall. 4 credits. Prerequisite: advanced undergraduates or graduate students; permission of instructor. Course requirements differ at 4000 and 6000 levels. S–U or letter grades. Staff. An interdisciplinary survey of the literature in Native American Studies. Readings engage themes of indigeneity, coloniality, power, and “resistance.” The syllabus is formed from
some “classic” and canonical works in Native American Studies but also requires an engagement with marginal writings and theoretical and historical contributions from scholars in other disciplines.

AIS 4300 Native American Philosophies (also ENGL/AMST 4300) (KCM) (LA) Fall. 4 credits. Prerequisite: permission of instructor. E. Cheyfitz. This course will focus on American Indian, Native Alaskan, and Native Hawaiian social, spiritual, legal, political, aesthetic, scientific, environmental, and historical thought from the pre-mission period (before 1492) to the present as it is contained in both oral narratives and written texts (nonfiction, fiction, and poetry).

AIS 4720/7720 Historical Archaeology of Indigenous Peoples (also ANTH/ARKEO 4272/7272) (CA) (HA) Fall. 4 credits. K. Jordan. Seminar examining the responses of indigenous peoples across the world to European expansion and colonialism over the past 500 years. Archaeological case studies from North America, Africa, and the Pacific provide a comparative perspective on Postcolumbian culture contact and illustrate how archaeology can both supplement and challenge document-based histories.

AIS 4860 American Indian Women’s Literature (also ENGL 4860) (LA) (CA) Spring. 4 credits. Next offered 2010–2011. For description, see ENGL 4860.

AIS 4900 New World Encounters, 1500 to 1800 (also HIST/AMST 4990) (CA) (HA) Next offered 2011–2012.

AIS 4970 Independent Study Fall or spring. 1–4 credits. Staff. Topic and credit hours TBA between faculty member and student. The American Indian Program office must approve independent study forms.

AIS 6000 Critical Approaches to American Indian Studies (also AIS 4000) Fall. 4 credits. Staff. For description, see AIS 4000.

AIS 6010 American Indian Studies Proseminar Fall and spring. 1 credit. Staff. Graduate-level course that introduces students to ongoing research in the field of American Indian Studies in a proseminar/colloquium format. Advanced graduate students are expected to present their work in progress; all are expected to attend each seminar and provide presenters with critical and constructive commentary on papers.

AIS 6350 Indigenous Peoples and Globalization (also DSOC/LATA 6350) Fall. 3 credits. Next offered 2010–2011. A. Gonzales. Explores ways in which processes of globalization affect indigenous peoples worldwide and the strategies indigenous peoples are using to deal with those pressures. At issue are the lands, resources, traditional knowledge, and indigenous struggles for recognition and self-determination.

[AIS 6610 Colonial American Literatures (also ENGL/AMST 6610) Spring. 4 credits. Next offered 2010–2011. E. Cheyfitz. For description, see ENGL 6610.

[AIS 6710 Law and Literature in the Antebellum United States (also ENGL 6710) Spring. 4 credits. Next offered 2010–2011. E. Cheyfitz. For description, see ENGL 6710.

AIS 6790 Individual Study in American Indian Studies Fall, spring, or summer. 1–3 credits. S–U or letter grades. Staff. A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of interest in American Indian Studies.

A P P L I E D  E C O N O M I C S  A N D  M A N A G E M E N T

AEM 1101 Introduction to Applied Economics and Management Fall. 1 credit. Required of and limited to freshmen in AEM. S–U grades only. D. A. Grossman and A. M. Novakovic. The purpose of this course is to acquaint first-year students in AEM with their new department and better enable them to make academic and early-career decisions. A cross-section of faculty will lead discussions that introduce most of the major academic subjects taught in AEM. In addition, there are presentations on student organizations and course planning and an assignment on the use of library resources.

AEM 1102 Personal Evaluation and Development Spring. 1 credit. Required of and limited to first-year majors in AEM. S–U grades only. A. M. Novakovic. This course is designed to help students better understand their personal and professional skills and attributes and enhance their abilities in areas such as teamwork, leadership, trust, ethics, and diversity and what this means for interpersonal relationships. The weekly meeting will either be one plenary lecture or a smaller lab.

Students will learn by experience and have guest lecturers from the business community.

AEM 1200 Introduction to Business Management Fall, spring, summer. 3 credits. Two evening prelims. P. D. Perez. Provides an overview of management and business. Human resource, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as technological innovation and its impact on operations, globalization, ethics, teamwork, leadership, and entrepreneurship. Opportunity to deliver an integrative group project.

AEM 1210 Entrepreneurship Speaker Series Fall. 1 credit. P. D. Perez. Course consists of guest lectures by faculty members engaged in the study and practice of entrepreneurship by prominent entrepreneurs associated with the entrepreneurship@Cornell program, with a view to inform and inspire students. Evaluation includes attendance, book reports, and written feedback on lectures.

AEM 1220 Entrepreneurship in the Life Sciences Spring. 1 credit. W. Lesser. Seminars and guest lectures by faculty members and entrepreneurs engaged in the study and practice of entrepreneurship in the life sciences. Emphasis on the process of turning scientific discovery into business opportunity and success. Evaluation includes attendance and written feedback on lectures. Intended as a follow-up to AEM 1200 and AEM 1210 but may be taken independently.

AEM 1230 Foundations of Entrepreneurship and Business Fall and spring. 2 credits. P. D. Perez. Introductory course providing a sound base to both the understanding of entrepreneurial activity and possibilities and the study and practice of entrepreneurship in the business world. Emphasis on the identification and elaboration of business opportunities (i.e., business ideas). Extensive use of IT–based learning and presentation tools.

AEM 2000 Contemporary Controversies in the Global Economy

AEM 2100 Introductory Statistics Spring. 4 credits. Prerequisite: college algebra. Two evening prelims. C. van Es. Introduces statistical methods. Topics include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Includes an introduction to Minitab, a statistical software package.

AEM 2190 Introduction to Applied Portfolio Management Summer. 4 credits. Special program. D. Dase. Based in New York City’s Financial District. Topics include capital markets, the impact of the economy and the Federal Reserve System; recent stock market history; regulation; investment banking and management principles of both institutional and individual portfolios. Industry guest speakers provide unique perspectives. An individualized internship is required of all students.

AEM 2210 Financial Accounting Fall, summer. 3 credits. Not open to freshmen. Priority given to CALS majors. Two evening prelims. J. Little.
Comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and financial statement interpretation. Topics include methods of recording transactions, receivables, depreciation, bonds, and equity. Requires two evening prelims and a comprehensive final; weekly homework assignments.

AEM 2240 Principles of Finance
Summer. 3 credits. R. Curtis. This course focuses on the mathematics of finance, the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include time value, bonds, stock valuation, capital budgeting, financing alternatives, costs of capital, the capital structure decision, distribution policy, mergers and acquisitions, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 2250 AEM Certificate in Business Management Consulting Project
Summer 1 credit. R. Curtis and P. Perez. Student teams consult with local organizations in central New York and suggest solutions to problems these organizations are currently facing. Students will apply business principles they have learned during their AEM Certificate in Management summer immersion program. Each team will prepare a written report and will give a presentation to AEM Certificate faculty and representatives of the organization the team is working with.

AEM 2260 AEM Certificate Activities
Summer. 1 credit. Staff. Students participate in special activities as part of the AEM Certificate in Business Management summer immersion program. While activities may vary from year to year, in the past these activities have included a field trip to corporate sites in New York City, Cornell Outdoor Education team building and leadership exercises, a career services résumé/job search presentation, and a talk on the evolution of a local small business by its founder. Student participation in all activities is mandatory and is a paper focusing on “take aways” from each activity is required.

AEM 2270 Introduction to International Business
Summer. 4 credits. D. Ng. Based in the global finance center of Hong Kong, students will gain a fundamental understanding of some of the most powerful multinational firms in the world make and implement financial decisions, how they manage risk and gain competitive advantage, how they interact with governments, and what the risks and returns are in conducting such international business. Students will be assigned to internships in order to experience firsthand how such corporations function.

AEM 2300 International Trade and Finance (also ECON 2300) (SBA)
Spring. Prerequisites: ECON 1110 or equivalent. Recommended: ECON 1120 or equivalent. S–U or letter grades. One evening prelim. D. R. Lee. One-semester introduction to international economic principles and issues. Begins by surveying key topics such as the elements of comparative advantage, tariff and nontariff barriers, and multilateral institutions. The second part of the course treats selected topics in international finance, including exchange rates, balance of payments, and capital markets. Discusses current issues such as the effects of trade liberalization, trade and economic growth, and instability in international capital markets. Designed as a less technical introduction to concepts developed at a more advanced level in AEM 4300 and ECON 3610–3620.

AEM 2400 Marketing
Fall, summer. 3 credits. E. W. McLaughlin. Provides a broad introduction to the fundamentals of marketing. Explores the components of an organization’s strategic marketing program, including how to price, promote, and distribute goods and services. Industry guest lectures and current marketing applications from various companies are presented and analyzed.

AEM 2410 Marketing Plan Development
Fall, spring. 2 credits. Requirement for and limited to AEM majors. Prerequisite: AEM 2400. D. J. Perosio. Offers student teams the opportunity for an intense, hands-on application of basic marketing concepts through research and development of a marketing plan. Guided by a series of assignments, teams develop key components that are integrated into a comprehensive written plan for a local business.

AEM 2500 Environmental and Resource Economics (SBA)
Fall. 3 credits. S–U or letter grades. G. Poe. Introduces fundamental economic principles and the “economic approach” to policy issues, and demonstrates how these concepts underpin contemporary environmental and natural resource issues and policy solutions. Topics include valuation, benefit-cost analysis, policy design, property rights, and ecological economics. Uses these tools to explore major policy issues such as economic incentives in environmental policy, endangered species protection, air and water pollution, depletion of renewable and nonrenewable resources, and global warming.

AEM 3020 Farm Business Management
Fall. 4 credits. Not open to freshmen. Prerequisite for AEM 4050 and 4270. W. A. Knoblauch. Intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, and capital, buildings, and machinery.

AEM 3200 Business Law I (also NBA 5610)
Fall, spring. 3 credits. Prerequisite: junior, senior, or graduate standing. One evening prelim. D. A. Grossman. Examines legal problems of particular interest to persons who expect to engage in business. Emphasizes the law of contracts, sales, agency, and property.

AEM 3210 Business Law II (also NBA 5620)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; business law course or permission of instructor. D. A. Grossman. The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited-liability companies. The second portion reviews current issues in business law, like employment discrimination, debtor/creditor relations, product liability, unfair competition, e-commerce law, and international business law.

AEM 3220 Internet Strategy

AEM 3230 Managerial Accounting
Spring. 3 credits. Priority given to CALS majors. Prerequisite: AEM 2100 or equivalent. One evening prelim. J. Little. Introduction to cost accounting emphasizing the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost-volume-profit analysis, budgeting, variance analysis, and accounting systems in the manufacturing environment. Requires use of electronic spreadsheets. Includes an evening prelim, a second exam, weekly homework.

AEM 3240 Finance (also PAM 5620)
Fall and spring. 4 credits. Priority given to CALS majors. Prerequisites: AEM 2100, 1200, and 2210, or equivalents. Three evening prelims. R. Curtis. Focuses on the mathematics of finance, valuation, and the economics of managerial decisions, corporate financial policy, risk management, and investments. Topics include the time value of money, bond and stock valuation, capital-budgeting decisions, financing alternatives, the cost of capital and the capital-structure decision, distribution policy, mergers and acquisitions and restructuring, options, forward and futures contracts, market efficiency and market anomalies, strategies of successful investors, and personal finance.

AEM 3250 Personal Enterprise and Small Business Management
Spring. 4 credits. Prerequisites: junior or senior standing; AEM 1200 and 2210 or permission of instructor. Absolutely no adds or drops after second class meeting. Cost of term project: approx. $100 per team. D. Streeter. Focuses on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real-world entrepreneurs, who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams of no fewer than three students.

AEM 3280 Innovation and Dynamic Management (also HADM 4443)
Spring. 3 credits. Prerequisite: junior or senior standing. Staff. For description, see HADM 4443.
and environmental) regulation, industry structure, labeling uses and regulations, public perceptions, patents, trade, and international conventions. The course is of interest to students of biotechnology, public technology policy, and international technology marketing.

**AEM 3360 Intermediate Accounting I**
Fall. 3 credits. Prerequisites: AEM 2210 and 2320. Staff.
Includes an overview of Generally Accepted Accounting Principles, balance sheet valuation, and income measurement and recognition. Topics include accounting for pensions, earnings per share, and special financial reporting issues.

**AEM 3370 Intermediate Accounting II**
Spring. 3 credits. Prerequisite: AEM 3360 Intermediate Accounting I. Staff.
Continuation of the in-depth study of accounting theory, generally accepted accounting principles, and the techniques involved in measuring, recording, summarizing, and reporting financial data for business organizations. Learn the GAAP accounting for equity, revenue, investments, accounting changes, and statement of cash flows. Understand accounting alternatives within GAAP and accounting alternatives to GAAP for the topics covered so that students are prepared to understand and use future changes in GAAP.

**AEM 3380 Social Entrepreneurs, Innovators, and Problem Solvers**
Fall. 4 credits. A. Wessels.
This course introduces students to the social entrepreneurs, innovators, and visionaries who are creating new strategies for solving society's problems. The course highlights innovative case studies of success in restoring the environment, resolving conflicts, curing diseases, overcoming poverty, and addressing other problems of social injustice. At the end of the course, each student develops an original blueprint for social innovation: a creative proposal for solving a societal problem.

**[AEM 3420 Integrated Marketing Communication]**

**AEM 3440 Consumer Behavior**
Fall. 3 credits. Prerequisites: AEM 2400 or equivalent. Preference given to AEM majors. B. Wansink.
Develops a useful, conceptual understanding of the problems and strategies associated with psychology behind consumer behavior. In doing so, the course provides frameworks that enable students to address these issues responsibly, systematically, and creatively.

**AEM 3460 Dairy Markets and Policy**
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing. ECON 1110 or equivalent. S–U or letter grades. A. Novakovic.
Survey of topics related to the structure and performance of U.S. dairy markets and federal and state policies that regulate market activities.

**AEM 4020/4021 Food and Brand Lab Workshop**
Fall and spring. 6 credits total. Prerequisite: permission of instructor. B. Wansink.
The purpose of the Food and Brand Lab Workshop is to provide students with an advanced opportunity to develop an advanced understanding of consumers by involving them in collaborative, theory-based research related to food. This course is focused on asking and answering the “why” questions behind consumer behavior. Fall-semester students will receive an “R” grade and then receive their grade for course in the spring semester.

**AEM 4030 Farm Management Study Trip**
Spring. 1 credit. Prerequisite: AEM 3020. Open by application only. W. A. Knoblach and B. Gloy.
Special program to study production and management systems in diverse agricultural regions of the United States. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from the trip. Students must write a paper that further explores an aspect of the trip.

**AEM 4040 Financial Management for Agriculture and Agribusiness**
Spring. 3 credits. Prerequisites: AEM 4050 or equivalent. Permission of instructor. C. Turvey.
To expand students' knowledge base of finance as it relates to agriculture and agricultural business. The course will follow three main themes: Capital Budgeting and Project Valuation; Cost of Capital; Risk Management.

**AEM 4050 Agricultural Finance**
Spring. 3 credits. Prerequisites: AEM 3020 or equivalent. Recommended: calculus and statistics. C. Turvey.
Discusses the principles and practices used in financing agricultural businesses, from the perspectives of the business owner and the lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

**AEM 4100 Business Statistics**
Fall. 3 credits. Prerequisite: AEM 2100 or equivalent. C. van Es.
Focuses on techniques used to analyze data from marketing research, business, and economics. Topics include experimental design and ANOVA, contingency-table analysis, quality-control methods, time-series analysis and forecasting. Also includes brief introductions to nonparametric methods and multivariate analysis. Involves a research project designed to give experience in collecting and interpreting data.

**AEM 4110 Introduction to Econometrics**
Fall. 3 credits. Prerequisite: AEM 2100 and either ECON 3130 or PAM 2000 or equivalents. D. Just.
Introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed as are simultaneous equation models, simulation, and forecasting techniques.

**AEM 4120 Computational Methods for Management and Economics**
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: AEM 2100 or equivalent. C. Gomes.
AEM 4180 Introduction to System Dynamics Modeling
Fall. 4 credits. Prerequisites: MATH 1106 or higher and upper-level standing or permission of instructor. C. Nicholson. Introduction to system dynamics modeling, including the modeling process, fundamental modes of dynamic behavior and the stock-flow-feedback structures that generate them, system mapping tools, and modeling human behavior. Emphasis on examples from agriculture, natural resource management, and international development. Lab develops skills in the use of dynamic modeling software.

AEM 4190 Strategic Thinking
Spring. 3 credits. Prerequisites: PAM 2000 or ECON 3130 or S–U or letter grades. N. H. Chau. The art of thinking strategically puts outings one's adversary at the core of the decision-making process, while anticipating that the adversary is doing exactly the same thing. Businesses make investment decisions and innovate products in anticipation of the reaction of their rivals; managers make pay contingent on peer performance, taking into account the reaction of their superiors; national trade policies are formulated based on whether trading partners are committed to make credible concessions. This course introduces and explores the use of game theory to understand these interactions; students are expected to work with a balanced dose of both theory and relevant case studies. The objective of the course is to facilitate students' ability to think strategically to firm level issues (e.g., pricing, advertising wars, product differentiation, and entry deterrence) and strategic policy interaction in international economic relations (e.g., trade wars and the arms race).

AEM 4200 Investments
[AEM 4210 Derivatives and Risk Management]

AEM 4220 Estate Planning (also NBA 5620)
Fall. 1 credit. Prerequisite: junior, senior, or graduate standing. S–U grades only. D. A. Grossman. Fourteen sessions on the various aspects of estate planning techniques. Covers the law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures.

AEM 4230 Contemporary Topics in Applied Finance
Fall. 3 credits. Prerequisites: ECON 1110, MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. Bogan. Stimulates critical thinking about contemporary topics that attract attention in the press and among key finance decision-makers. This analytical course draws on the theory of modern finance to facilitate the understanding of real-world issues. Covers traditional topics in financial markets such as security trading, derivatives, fixed income, IPOs, portfolio formation, and market efficiency. Also explores new issues such as technology and financial markets.

AEM 4240 Management Strategy
Fall and spring. 3 credits. Prerequisite: AEM seniors. Fall, G. Blalock; spring, D. Simon. Capstone course designed to integrate what students have learned in other AEM courses with an emphasis on strategic decision making. Approaches issues from the standpoint of the board of directors, chief executive officer, and business unit managers. Focuses on what should be considered and how strategic decisions should be made.

AEM 4260 Fixed-Income Securities
Fall. 3 credits. Prerequisites: MATH 1110 or equivalent, AEM 2100 or equivalent, AEM 3240. Letter grades. V. Bogan. This course focuses on fixed-income securities including corporate bonds, default-free bonds, and floating rate notes. Other topics include related financial instruments such as forwards and futures on fixed-income securities, interest rate swaps, bond options, and mortgage-backed securities. In addition to the analysis of specific types of fixed-income securities, there will be an examination of the tools used in bond portfolio management.

AEM 4270 Agribusiness Strategy
Fall. 3 credits. Prerequisite: AEM 1200 or 3210. B. Gloy. Intended for students with an interest in agribusiness and designed to integrate previous course work and enhance problem identification and solving skills. Focuses on the evaluation, formulation, and implementation of strategy designed to create and sustain competitive advantage for agribusiness firms. Covers industry analysis, firm analysis, market analysis and selection, risk analysis, strategy development, organizational design and structure, and leadership for agribusiness firms. Designed as a capstone course for the agribusiness management specialization.

AEM 4280 Valuation of Capital Investment
Spring. 3 credits. Prerequisites: AEM 1200 and 3240 or equivalents. D. T.-C. Ng. Focuses on the analysis of financial information—particularly firms’ financial reports—for making decisions to invest in businesses. The primary focus is on the capital (share) valuation, with some attention given to credit analysis. Examines various valuation models in detail and applies them in cases and projects involving listed companies. Topics include models of shareholder value, discounted cash flow approaches to valuation, the analysis of profitability, growth, and valuation generation in a firm, forecasting earnings and cash flows, proforma analysis for strategy and planning, analysis of risk, and the determination of price/earnings and market-to-book ratios.

AEM 4290 International Finance
Spring. 3 credits. Prerequisites: AEM 2100 and 3240. S–U or letter grades. D. T.-C. Ng. Teaches students about issues in international financial management and international investment. The major issues discussed include exchange rate volatility, the benefit of international diversification, and the analysis of international capital and budgeting decisions. Specific topics include the determination of the cost of capital for foreign investments, the determination and management of foreign exchange risks and country risks, and the use
of innovative financing for the multinational corporation.

AEM 4300 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 1110–1120 or equivalents and intermediate microeconomics course. S–U or letter grades. N. H. Chau.
Examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Also emphasizes applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries.

AEM 4310 Agricultural and Food Policy
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; PAM 2000, ECON 3010, 3150, or equivalent. S–U or letter grades. A. Novakovic.
Acquaints students with current and historically important U.S. policies related to agriculture and food, including subsidies and regulations related to markets, production, and the environment. The approach combines historical, political, and economic interpretation and analysis.

AEM 4320 Public Private Sector Economics Linkages
Spring. 3 credits. Prerequisite: intermediate microeconomics course. C. K. Ranney.
This course examines the role of government tax and expenditure policies in the United States using tools from microeconomic theory. Given that the government sector is almost 40 percent of total U.S. economic activity, we analyze two related questions: First, when and why should some economic activities be undertaken in the public rather than private sector? Second, what are the implications of governmental economic activity on private sector decision makers? An array of tax and expenditure policies are investigated with particular foci changing from year to year based on current events and student interests.

AEM 4350 Political Economy of the WTO
Spring. 3 credits. Prerequisite: intro microeconomics. H. deGorter.
The politics of the WTO and trade policy are explored. We examine what the WTO is, how it operates, how much power it really has, why it was created, incentives for governments to cooperate. How WTO rules affect domestic politics and foreign policy goals and how WTO rules and agreements are enforced. We also debate the effect of trade on growth and poverty.

AEM 4360 Entrepreneurial Leadership
Fall, weeks 7–14. 1 credit. Prerequisite: permission of instructor. D. Streeter.
Participants learn about concepts and practice skills important to becoming an entrepreneurial leader in startup or small business, corporate environment, and/or the public sector. Set in a global context, issues-related entrepreneurial leadership are covered: vision, opportunity identification, engagement of teams in resource-constrained situations, and tolerance for ambiguity and risk.

AEM 4420 Emerging Markets
Fall. 3 credits. Prerequisites: senior or graduate standing; AEM 2400 and PAM 2000 or ECON 3130. R. D. Christy.
Provides a framework for examining the effectiveness of marketing strategies in economies in transition and identifying the challenges and opportunities for firms in low-income economies to access industrial markets. Appraises the risk of entering markets in low-income economies and assesses the political, legal, cultural, and economic forces. Analyzes and discusses case studies of companies.

AEM 4430 Food-Industry Strategy
Fall. 2 credits. Prerequisites: AEM juniors, seniors, or graduate students; AEM 2400 or 4480; or permission of instructor. Staff.
Examines the decisions that businesses must make, such as what to sell, where to invest, when to outsource, and how to market—all in a changing and competitive environment. While the principles and approaches applicable to any competitive environment, the focus is on one industry, the food industry, to allow an in-depth look at how the various players (manufacturers, retailers, and others) both cooperate and compete in the process of supplying food to consumers. Students learn how such issues as globalization, industry consolidation, new technologies, and health concerns add to their challenges and opportunities.

AEM 4440 Managing for Market-Driven Growth
Fall. 3 credits. Prerequisite: AEM 2400; junior or senior standing. Staff.
A sound marketing strategy is essential for long-term success of a firm. This requires an understanding of how customer needs evolve, how product-market boundaries shift, and how competitors are likely to react. The strategic roles of existing and new products need to be assessed, appropriate resource allocations made, and strategies developed to ensure sustained growth. The course is designed to provide opportunities to learn about the theoretical and applied perspectives of marketing strategy from readings, case analyses, and guest speakers.

AEM 4450 Food Policy for Developing Countries (also NS 4450) (SBA)
Fall. 3 credits. Prerequisites: 6 credits in economics, applied economics, or sociology and 6 credits in nutrition and/or agricultural sciences. P. Finnstrup-Andersen.
Comprehensive presentation and discussion of policy options for a sustainable global food system, with focus on developing countries. Topics include economic policy related to nutrition, health, consumption, production, natural resource management, trade, markets, gender roles, armed conflict, and ethics. A social entrepreneurship approach based on case studies and active participation by students will be used.

AEM 4460 Food Marketing Colloquium
AEM 4470 Retail Speaker Series
Spring. 1 credit. D. J. Perrosio.
Seminars and guest lectures by faculty and guest lecturers engaged in the study and practice of retailing. This class provides a unique opportunity for successful industry leaders to share their experiences with Cornell students. Speakers share their view about successful management styles, possible career paths, critical industry-related issues, and qualities conducive to successful business leadership. Students have an unprecedented opportunity to learn and question how retail leaders view the current and future status of retailing, the largest sector in the U.S. economy.

AEM 4480 Food Merchandising
Spring. 3 credits. Prerequisite: junior or senior standing; AEM 2400. D. J. Perrosio.
Covers merchandising principles and practices as they apply to food industry situations. Examines the various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy. Considers the consequences of food industry trends and initiatives for other industry members, public policy makers, and consumers.

AEM 4500 Resource Economics (also ECON 4500) (SBA)
Fall. 3 credits. Prerequisites: MATH 1110, ECON 3130, and familiarity with Excel. J. M. Conrad.
Constructs dynamic models of renewable, nonrenewable, and environmental resources to examine market allocation and optimal resource management.

AEM 4510 Environmental Economics (also ECON 4510) (SBA)
Spring. 3 credits. Prerequisites: undergraduate standing; intermediate microeconomics course and calculus. S–U or letter grades. Staff.
Explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasizes the welfare economic approach for allocating public goods, with specific emphasis on market failure, externalities, benefit-cost analysis, nonmarket valuation techniques, and cost-effective policy instruments. Also examines property rights/ institutional perspectives and ecological economic concepts.

AEM 4520 Accounting for Mergers and Acquisitions
Fall. 3 credits. Prerequisite: AEM 3630 Intermediate Accounting I. E. Lewis.
Detailed analytical study of special issues and situations in financial accounting. Continuous emphasis is placed on the relationship between theory and practice to reflect the latest professional pronouncements. Highly technical topics related to corporation, partnership, government, and not-for-profit organizations, with a focus on business combinations and the particular accounting challenges that they present.

AEM 4530 Risk Management, Internal Control and Assurance
Fall. 3 credits. Prerequisite: AEM 3630 Intermediate Accounting I. J. Lippitt.
Theory and practice of independent examination of financial statements. Discussion of relationships with clients; working papers, assurance procedures, including evaluations of internal controls; accounting principles; risk assessment, liability and professional ethics.
AEM 4540 China's and India's Growth Miracles (also ECON 4540)

Fall. 2 or 3 credits. Prerequisites: basic course in macroeconomics, international economics, and econometrics/statistics. E. Prasad.

This is an advanced undergraduate course that will cover topics in international finance and open economy macroeconomics. The course will be organized around a detailed examination of the growth experiences of China and India as a device for illustrating and delving into key analytical concepts.

AEM 4620 Technology and Financial Markets

Fall. 2 credits. Prerequisites: AEM 3240 and one 4000-level AEM finance course; permission of instructor. V. Bogan.

The course focuses on issues involving technology and financial markets. It is designed to equip future finance professionals with the knowledge of key finance systems [Bloomberg] skills and technologies. The lectures and labs will teach students to apply their theoretical finance knowledge in real-world situations for the purpose of optimizing their future job performance and increase their marketability. Lectures will explore topics on the effects of technology on financial markets. The lab component of the course will require students to complete the 30-hour, self-paced Bloomberg certification process.

AEM 4640 Economics of Agricultural Development (also ECON 4640)

Fall. 3 credits. Prerequisite: ECON 1110–1120 or permission of instructor. R. D. Christy.

Provides an understanding of the economics of the agricultural sector in low-income countries. Also covers more general issues of economic development beyond the agricultural sector to provide the necessary context for an understanding of rural problems. Topics include the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, commerce development, and international trade. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy, and the principal trade policies employed by countries in international trade.

AEM 4980 Supervised Teaching Experience

Fall or spring. 1–4 credits. Students must register using independent study form (available in undergraduate program office in Warren Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students cannot receive both pay and credit for the same hours of preparation and teaching.

AEM 4990 Undergraduate Research

Fall, spring, or summer. 1–4 credits. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in undergraduate program office in Warren Hall). S–U or letter grades. Staff.

Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

AEM 4991 Independent Honors Research in Social Science

Fall or spring. 1–6 credits. Prerequisite: requirements for honors program met (see "Honors Program" under CALS). Provides qualified students an opportunity to conduct original research under supervision. Information is available in the AEM undergraduate program office in Warren Hall.

AEM 6050 Agricultural Finance

Fall. 3 credits. Prerequisite: AEM 3240 or 4050 or equivalent B. A. Gloy.

Covers advanced topics in agricultural finance, including investment analysis, capital budgeting under uncertainty, decision analysis, risk management, capital structure, and financial intermediaries.

AEM 6080 Production Economics (also ECON 4080)

Fall. 3 credits. Prerequisite: ECON 3130 and MATH 1110 or equivalents. R. Boisvert.

Studies the theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production functions, cost, profit, revenue, demand, and supply functions. Discusses the concepts of efficiency and productivity. Introduces production function estimation methods and introduces production risk over time and under risk.

AEM 6120 Applied Econometrics

Fall. 1 credit. Corequisites: AEM 4110. D. Just.

Designed for M.S. and Ph.D. students who do not meet the prerequisites for other graduate-level econometrics courses. Complements AEM 4110, providing greater depth of understanding of econometric methods and exposure to applied econometric literature. Focuses on preparing students to conduct their own applied economic research.

AEM 6180 System Dynamics Applications

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. C. Nicholson.

This course provides more detailed discussion of SD concepts and further develops skills in system dynamics modeling through application to a project chosen by the student. Iterative writing assignments and peer review are used to refine problem statements, causal hypotheses, simulation models, model evaluation, and policy analysis. Final project includes development and application of a simulation model.

AEM 6300 Policy Analysis: Welfare Theory, Agriculture, and Trade (also ECON 4300)

Spring. 4 credits. Prerequisites: AEM 6080 or PAM 6030, ECON 3130, or equivalent intermediate micro theory course incorporating calculus. H. de Gorter.

The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optimal. The second half focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

AEM 6320 Open Economy Analysis: Theory and Applications

Spring. 2 credits. Prerequisites: ECON 3130 or 3140 or equivalent B. A. Gloy.

Explores both recent theoretical and methodological advances as well as practical applications in analyzing current topics and issues in open economics. Brings together research methods pertinent to open economy macroeconomics and international trade policies to give students a basic understanding of how different aspects of contemporary debates are analyzed in practice.

AEM 6400 Analysis of Agricultural Markets (also ECON 4400)

Fall. 3 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Offered every-numbered years. H. M. Kaiser.

Focuses on the unique features of agricultural commodity markets. Emphasizes government and private institutions that affect these markets, as well as on models of price behavior including marketing margins and imperfect competition. Also covers empirical tools to evaluate market characteristics.

AEM 6410 Commodity Futures Markets

Spring, weeks 8–14. 2 credits. Prerequisites: AEM 4110 and 4150 or equivalents. Recommended: AEM 6400. W. G. Tomcek.

Focuses on markets for agricultural futures contracts. Emphasizes models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public policy issues.
AEM 6420 Globalization, Food Safety, and Nutrition (also NS 6420)
Fall. 2 credits. Prerequisites: permission of instructor, graduate standing, and basic understanding of economics and nutrition. Letter grades only. P. Pintrup-Andersen. Directed readings course with a weekly 50-minute discussion section. The course is aimed at graduate students in nutrition, agricultural economics, and other relevant fields, who wish to explore how globalization may affect poverty, food security, and nutrition in developing countries and how national policies and international agreements and institutions may influence the outcome. The discussion sessions are based on assigned readings for each week.

AEM 6510 Environmental and Resource Economics
Spring. 4 credits. Core course for environmental management concentration/option. Prerequisite: graduate standing. Open to graduate students outside economics. G. L. Poe. Review of welfare economics, environmental externalities, and common property resources. Survey of current environmental and natural resource policy. Covers techniques for measuring benefits and costs—including property value and value hedonic approaches, travel cost models, and contingent valuation. Describes survey/data collection methods in detail. Explores innovative market mechanisms for resolving public goods, common property, and external problems. Students are expected to complete a project analyzing their own formal economic analysis of a natural resource or environmental problem.

AEM 6550 Electric Systems Engineering and Economics (also ECE 5510)
Fall. 2 credits. Prerequisites: basic calculus and microeconomics courses. T. D. Mount. For description, see ECE 5510.

AEM 6600 Agroecosystems, Economic Development, and the Environment Spring. 4 credits. Prerequisite: graduate standing. Open to graduate students outside economics; additional SEC TBA for economics majors. S–U or letter grades. R. R. Lee. Examines selected topics in agricultural and economic development, technology assessment, ecosystem management and the environment, with a focus on developing countries. Topics include production, poverty, and environmental tradeoffs; sustainable technology development; trade and environment linkages; economics of conservation and development; and alternative methodologies for analyzing these interactions. Readings emphasize the economic literature, but also draw from the biophysical sciences, ecosystem management, and the broader social sciences.

AEM 6670 Topics in Economic Development (also ECON 7770)
Spring. 3 credits. Targeted to second- and third-year graduate students. Prerequisite: basic first-year courses in ECON or AEM or permission of instructor. S–U or letter grades. R. Kanbur. Topics vary from year to year but may include poverty, inequality, intra-household allocation, structural adjustment, and debt. Examination is by term paper.

AEM 6700 Economics of Consumer Demand (also PAM 6800)
Fall. 3 credits. Prerequisites: ECON 3110 or 3130 and two semesters of calculus. S–U or letter grades. Next offered 2009–2010. C. K. Ranjan. Graduate-level introduction to theory and empirical research on household demand, consumption, and saving. Emphasizes the use of the theory in empirical research. Topics include neoclassical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption, and savings. As time allows, Becker and Lancaster models of demand may be included.

AEM 6800 Biofuels: The Economic and Environmental Interactions (also BEE 4900)
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor. S–U or letter grades. P. G. Hess. For description, see BEE 4900.

AEM 6900 Graduate Special Topics in Applied Economics and Management
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the beginning of the semester.

AEM 6990 Supervised Graduate Teaching Experience
Fall or spring. 1–4 credits. max. 4 credits during graduate program. Prerequisite: graduate standing; permission of instructor. Undergraduates should enroll in AEM 4980. Students must register using independent study form (available in undergraduate program office in Warren Hall). S–U or letter grades. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students may not receive both pay and credit for the same hours of preparation and teaching.

AEM 7000 Individual Study in Applied Economics and Management
Fall or spring. Prerequisite: graduate standing. S–U or letter grades. Credit, class hours, and other details TBA with faculty member. Staff. Used for special projects designed by faculty members. More than one topic may be given each semester in different sections. Student must register in section appropriate to topic being covered; section number is provided by instructor.

AEM 7010 Applied Microeconomics I
Fall. 5 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. W. D. Schulze and R. N. Boisvert. This course covers economic models and empirical applications in consumer demand and production economics.

AEM 7020 Applied Microeconomics II
Spring. 3 credits. Required for all second-year AEM Ph.D. students. Prerequisites: Ph.D. students only; ECON 6090 and 6100, and AEM 7100 or equivalent. H. DeGorter, D. R. Just, and J. Prince. This course covers economic models and empirical applications in welfare economics, risk analysis, and industrial organization.

AEM 7080 Advanced Production Economics
AEM 7100 Econometrics I
Spring. 3 credits. Prerequisites: matrix algebra and statistical methods courses at level of ILRST 3110 or ECON 6090. T. D. Mount. Provides (together with AEM 7110) a graduate sequence in applied econometrics that is suitable for M.S. and Ph.D. students. Covers linear-regression models and the associated estimation and testing procedures.

AEM 7110 Econometrics II
Fall. 3 credits. Prerequisite: AEM 7100 or equivalent. T. D. Mount. Coverage beyond AEM 7100 of dynamic models, including single-equation ARIMA, vector ARIMA, Kalman filtering, structural dynamic models, and regime switching. Topics include endogeneity, stability, causality, and cointegration.

AEM 7120 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. Highly recommended: course at level of BTRY 4170. R. N. Boisvert. Comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics include nonlinear programming, including separable, spatial equilibrium, and risk programming models. Discusses input-output models and their role in social accounting matrices and computable general equilibrium models. Makes applications to agricultural, resource, and regional economic problems.

AEM 7130 Dynamic Optimization
Spring. 3 credits. Prerequisite: ECON 6090 and ECON 6170. Letter grades only. J. M. Conrad. Concerned with the solution of dynamic allocation problems. Objectives are to (1) pose prototype optimization problems in discrete and continuous time, (2) introduce the common methods for solving prototype problems, (3) present a set of numerical problems, and thereby (4) equip students
AEM 7140 Experimental Economics
Fall. 4 credits. Prerequisite: ECON 6090.
Offered alternate years. W. D. Schulze.
Surveys both experimental economics methods and research as an approach to test economic theory. Students participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics include experimental methods decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation, and performance; public goods; externalities and voting; uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

AEM 7170 Research Methods in Agricultural Economics
Spring. 2 credits. Prerequisite: graduate standing. R. N. Boisvert.
Discusses the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester, each student develops a research proposal that may be associated with his or her thesis.

AEM 7300 Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Prerequisite: graduate standing. ECON 6300 or equivalent. D. R. Lee.
Examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change, trade policy, and agricultural trade and development.

AEM 7350 Public Finance: Resource Allocation and Fiscal Policy (also ECON 7350)
Spring. 4 credits. Prerequisite: ECON 6090. R. Kanbur.
For description, see ECON 7350.

AEM 7400 Empirical Analysis of Industrial Organization
Spring. 4 credits. Prerequisites: ECON 6090, ECON 6100, and AEM 7100. J. Prince.
This course will analyze in detail leading papers in the empirical industrial organization (IO) literature. In doing so, the objective will be to develop students’ skills in determining appropriate theoretical and corresponding econometric models for applied research, and to improve students’ proficiencies with a variety of econometric models (e.g., OLS, IVs, MLE, GMM, discrete choice).

AEM 7440 Advanced Consumer Research
Fall. 3 credits. Prerequisite: graduate standing; priority given to CAES Ph.D. students. J. Gavalchin.
Workshop providing students with a unique opportunity to develop an advanced theory-based understanding of consumers by using innovative methods and new research techniques. Class sessions alternate theory with implementation.

AEM 7500 Resource Economics
Fall. 3 credits. Prerequisites: ECON 6090 and 6180, or AEM 7130. J. M. Conrad.
Uses optimal control and other methods of dynamic optimization to study the allocation and management of natural resources.

AEM 7510 Environmental Economics
Spring. 4 credits. Prerequisites: ECON 6090 and graduate level microeconomics course. S–U or letter grades. G. L. Poe.
The objective of this course is to provide a graduate-level survey of the two prevailing contemporary themes in environmental economics: the measurement of the demand for environmental resources as input into benefit-cost analyses, and the design of incentive-based, cost-effective policy instruments to achieve environmental goals. Core topics include market failure; conceptual foundations for valuing changes in environmental quality, empirical applications of nonmarket valuation methods, and cost-effective market design for reducing pollution. Additional topics include information asymmetries and mechanism design for nonpoint source pollution, and international/global environmental issues.

AEM 7620 Microeconomics of International Development
Fall. 3 credits. Prerequisite: completion of first-year Ph.D. course sequence in AEM or ECON or permission of instructor. S–U or letter grades. Offered even years; next offered 2010–2011. C. B. Barrett.
Focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics include agricultural land, labor, and financial institutions; technology adoption; food security and nutrition; risk management; intra-household analysis; reciprocity networks; and product/factor markets analysis. Emphasizes empirical research.

AEM 7650 Development Microeconomics Graduate Research Seminar
Spring and fall. 1–3 credits. Prerequisite: graduate standing and permission of instructor. C. B. Barrett.
Graduate students and the instructor present draft research proposals, papers, and preliminary thesis results for group review and discussion. Students who actively participate by offering written and oral comments on others’ work receive 1 credit. Students who also present their own proposal or paper receive 2 credits. Presentations last 75 minutes and thus represent a substantial investment of time. Students who present a second proposal or paper receive 3 credits.

AEM 7670 Topics in International Finance
Fall. 3 credits. Prerequisite: ECON 7620 or equivalent. E. Prasad.
This course will provide a selective overview of topics at the cutting edge of academic research and policy debates about the international financial system. Main areas will include the effects of financial globalization on growth, volatility, and the transmission of business cycles. We will also examine the determinants of the direction and composition of capital flows, and analyze the implications of the rising prominence of hedge funds, sovereign wealth funds, and other institutional investors. This course is intended for advanced Ph.D. students, especially those in search of thesis topics, and will require extensive student involvement in preparing research proposals and critiques of existing literature.

AEM 7900 Graduate-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. For Ph.D. students only before “A” exam has been passed. S–U grades only. Graduate faculty.

AEM 9000 Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S–U grades only. Graduate faculty. For students admitted specifically to a master’s program.

AEM 9090 Doctoral-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. For Ph.D. students only before “A” exam has been passed.

ANIMAL SCIENCE

ANSC 1100 Domestic Animal Biology I
Fall. 4 credits. S–U or letter grades. Staff.
Introduction to the biology of economically important species (morphology, anatomy, and physiology) and its application to the management of animals in major livestock industries. Topics include domestication and origins of animal science, anatomy, quantitative cell biology, regulatory mechanisms, public domain genetic databases, major life support systems, and digestion. Students undertake the care and management of several species of farm animals. Laboratory exercises include animal handling, examining aspects of anatomy, and small group discussions of contemporary biotechnologies. Living farm animals are used noninvasively, and fresh organs from dead animals are examined.

ANSC 1105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Prerequisite: freshmen, sophomores, or first-year transfer standing. J. Gavalchin.
A forum to discuss the students’ career planning and the contemporary and future role of animals in relation to human needs.
ANSC 1120 Sustainable Animal Husbandry
Students completing this course will understand the many roles of domestic animals and the importance of their interdependence with humans; appreciate the scope, diversity, and problems related to domestic animal systems; be able to design and operate simple sustainable animal systems; and know how to continue learning about sustainable animal systems. This intensive summer course includes 25 hours of lecture and 39 hours of hands-on laboratory/demonstrations at various field sites and facilities all within a three-week period. Topics include domestication, sustainability, dogs, cats, rabbits, sheep, genetics, swine, nutrition, beef cattle, grazing, dairy cattle, dairy products, goats, poultry, aquaculture, camels, horses, draft animals, animal systems modeling, Third World limited-resource animal systems, toxicology, lab animals, toxicology, veterinary medicine, and ethics of human interactions with domestic animals.

ANSC 1160 Animal Agriculture and Society—From Food to Medicine
Fall. 4 credits. Letter grades only. D. L. Brown, J. R. Giles, X. Lei, and M. E. Van Amburgh.
The course is designed to integrate concepts of physiology, immunology, growth biology, lactation, and pregnancy with current production systems, cultural and societal aspects of animal food production and use and the current economic forces driving some of the production system evolution. The course is intended for majors and nonmajors with an emphasis on integrating animal biology with our current production and food systems from an Animal Science perspective. Topics include Domestication, Pre-technology Agriculture, Production Systems and Economics, Food Systems and Safety, Environmental Issues and Perspectives, Animal-Derived Food in Human Health, and Use of Animals in Biomedicine.

ANSC 2120 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 2080 or equivalent. Recommended: ANSC 1100 and 1160. D. J. R. Cherney.
Introduction to animal nutrition, including digestive physiology and metabolism of domestic animals and other species; nutrient properties and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and nutritional experiments performed on laboratory or farm animal species.

ANSC 2140 Captive Raptor Management and Propagation
Summer. 3 credits. Prerequisites: high school biology and ANSC 1140, or one year introductory biology. J. E. Parks.
This course is an introduction to the natural history and the care and management of raptors (birds of prey). Approaches to captive care and management: restraint, training, and captive breeding with potential for reducing pressures on wild populations of avian species will be included. A major objective is to present and discuss the scientific basis and merits of avian husbandry and breeding practices in species relevant to the course. Hands-on opportunities in basic raptor handling techniques are included.

ANSC 2150 Exotic Avian Husbandry and Propagation
Fall. 2 credits. Prerequisite: ANSC 1100, 1160, or one year introductory biology. J. Parks and D. Muscarella.
Natural history, care, management, health, and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Includes lectures, demonstrations, and local field trips.

ANSC 2210 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: one year of college biology. J. E. Parks.
Examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

ANSC 2250 Fertilization and New Life Technologies
Summer. 2 credits. Prerequisite: high school biology. J. E. Parks.
Course covers the biology of fertilization in mammals and birds including production of gametes (sperm and ova), the physiological events required for fertilization in vivo, early embryo development, and associated reproductive technologies (in vitro fertilization, intracytoplasmic sperm injection, cloning, cryopreservation, etc.).

ANSC 2400 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: one year introductory biology. J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals; fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory is offered to demonstrate fundamental aspects of reproduction and reproductive technology.

ANSC 2410 Animal Reproduction and Development Lab
Spring. 1 credit. Limited to 30 students per lab. Pre- or corequisite: ANSC 2400. J. E. Parks.
Demonstrates fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals are used in some demonstrations. Dissection and examination of tissues from vertebrate animals are included in selected laboratories.

ANSC 2500 Dairy Cattle Principles
Fall. 3 credits. Prerequisite for ANSC 2510, 3510, 3540, and 3550. S–U or letter grades. D. M. Galton.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of dairy cattle production.

ANSC 2510 Applied Dairy Cattle Genetics
Spring. 2 credits. Prerequisite: ANSC 2500. S–U or letter grades. D. M. Galton.
Application of principles of genetic programming in herds with different breeding programs. Emphasizes economical traits to be used to improve genetic progress and herd performance.

ANSC 2650 Equine Biology and Management
Fall. 3 credits. Prerequisites: ANSC 1100 and 1160 or permission of instructor. S–U or letter grades. S. A. Brooks.
This course is designed to provide the basics of equine form, function, care, management, and handling. Students will learn the basic biology of the horse and how to apply this knowledge to solve problems in horse care. Hands-on labs will include safe handling techniques, basic groundwork, and daily care of class horses. Short trips and tours will illustrate applied concepts in horse industry and health care.

ANSC 2900 Meat Science (also FDSC 2900)
Fall. 2 credits. D. Shaw.
Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Also study properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation.

ANSC 3100 Introduction to Animal Welfare
Fall. 2 credits. S–U or letter grades. Staff. Animal welfare issues will be discussed, mainly for farm animals, but companion animals will also be considered. Both animal specific and general areas of animal welfare will be discussed.

ANSC 3200 Comparative Animal Nutrition and Toxicology: Horses, Dogs, Cats, and More
At the end of this course, students will (1) be able to match feed resources to the physiological needs of horses, dogs, cats, rabbits, deer, reindeer, birds, reptiles, and a variety of other animals found at home, in zoos, rehabilitation centers, on ranches and farms, (2) understand the intellectual processes by which a successful, science-based feeding strategy should be developed for animals without a history of domestication, (3) understand the evolutionary and physiological basis for some of the diversity in nutritional strategies and toxicological vulnerabilities found among animals.

ANSC 3410 Biology of Lactation
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or animal physiology course. Y. R. Boisclair.
Comprehensive survey of the biology of the mammary gland. Lectures cover (1) basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; (2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Information used comes from a variety of species, including the mouse for developmental aspects, the dairy cow for production aspects, and the human for health issues.

ANSC 3510 Dairy Herd Management
Spring. 4 credits. Prerequisite: ANSC 2500 or permission of instructor. Recommended: AEM 3020. D. M. Galton.
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

**ANSC 3540 Dairy Cattle Herd Health**
Fall. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S–U or letter grades. T. R. Overton.

Application of scientific principles to practical herd health and animal well-being. Laboratory emphasizes practical applications of herd health management.

**ANSC 3550 Dairy Cattle Nutrition**
Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. Letter grades only. T. R. Overton and L. E. Chase.

Application of scientific principles to practical herd nutrition relating to herd production and feeding management. Laboratory emphasizes practical applications and field trips.

**ANSC 3600 Beef Cattle**
Spring. 3 credits. Offered even-numbered years. M. L. Thonney.

Emphasizes the management of reproduction, nutrition, and selection in beef cattle enterprises. Laboratories acquaint students with management skills through computerized simulations and working with cattle.

**ANSC 3700 Immunology in Animal Health and Disease**
Spring. 2 credits. Prerequisite: introductory biology. S–U or letter grades. J. Gavalchin.

Course covers basic immunological concepts, including inflammation, and mechanisms of innate and acquired immunity. Focus will be on diseases of companion animals and livestock. Topics include pathogenic mechanisms, immunodiagnostics, therapeutics, and vaccine development.

**ANSC 3800 Sheep**

Emphasizes breeding, feeding, management, and selection of sheep from a production-system approach. Lec/labs offer practical knowledge and scientific background for improved management practices.

**ANSC 3920 Mechanisms of Animal Growth and Development**
Spring. 2 credits. Prerequisites: ANSC 1100–1160 or equivalent introductory physiology courses. Letter grades only. Q. Long and Y. Boisclair.

A course on the basic biology of animal growth and development. The course employs model systems (cell culture, fish, and mice) to examine cellular and molecular mechanisms of animal growth and development, and farm animals to discuss whole-animal growth patterns and applications of new technologies. Lectures cover (1) patterns of whole-animal growth during fetal and postnatal life; (2) molecular and cellular basis of formation and development of skeletal muscle, adipose tissue, and bone; (3) regulation of growth and development by hormones and growth factors; (4) emerging molecular technologies and whole-genome approaches for improving growth and meat quality.

**ANSC 3980 Animals in Biomedical Research**
Fall. 2 credits. Prerequisites: one year introductory biology; ANSC 1100 or equivalent introductory physiology course. Offered alternate years; next offered 2010–2011. Letter grades only. X. Lei.

This course introduces features and applications of various animal models for biomedical research on human health, diseases, and nutritional deficiencies.

**ANSC 4010 Dairy Production Seminar**
Spring. 1 credit. Prerequisite: junior or senior standing. T. R. Overton.

Capstone course in which students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

**ANSC 4020 Seminar in Animal Sciences**
Spring. 3 credits. Prerequisite: students engaged in undergraduate honors research projects. S–U or letter grades. S. Quirk.

Reports of undergraduate honors research projects. Students present oral reports of their work for class discussion.

**ANSC 4050 Molecular and Cellular Approaches to Reproductive Physiology**
Fall. 5 credits. Prerequisites: one year introductory biology and introductory physiology (ANSC 1100 and ANSC 2400 or BIOAP 3110 or equivalent). S. Quirk.

Lectures on selected topics in reproductive biology of male and female mammals with a focus on how research questions are formulated, addressed and influenced by previous discoveries. Concepts introduced apply to investigation of all areas of animal physiology. Laboratory exercises provide experience in cellular and molecular methods used to study reproductive function.

**ANSC 4100 Nutritional Physiology and Metabolism**
Fall. 3 credits. Prerequisites: biochemistry and physiology courses. Next offered 2010–2011. J. E. Parks.

Fundamental approach to nutrition focusing on the metabolic fate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

**ANSC 4110 Integrated Cattle Nutrition**
Fall. 4 credits. Designed for juniors, seniors, and entering graduate students. Prerequisite: ANSC 1100 and 2120 (or equivalent). Highly recommended: ANSC 3550. M. E. Van Amburgh.

Integrates concepts of cattle nutrition and farm nutritional management to help students understand and appreciate factors influencing the performance of cattle under diverse conditions. Topics covered include the effect of environment on maintenance costs; the nutrient requirements for various stages of growth, lactation, pregnancy, rumen function, feed composition and chemistry, nutrient partitioning and the environmental impacts of cattle and how to minimize them. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to actualize the information presented in lectures. Herd case studies are used in lab and there are field trips to farms to evaluate the nutritional management.

**ANSC 4120 Whole-Farm Nutrient Management (also CSS 4120)**
Spring. 4 credits. Prerequisite: junior, senior, or graduate standing; ANSC 4110 preferred but not required. M. E. Van Amburgh and Q. M. Ketterings.

This course provides students with an understanding of the concepts and practices underlying whole-farm nutrient management planning of livestock and dairy farms. Improving profitability and efficiency are key factors considered while ensuring air and water quality associated with dairy production. Students learn about nutrient management on Confined Animal Feeding Operations (CAFO’s) and conduct their own Comprehensive Nutrient Management Plan on a case-study farm. This course integrates crop and manure management with nutrition and herd management to provide a broad but focused and action-oriented approach. The course utilizes two software programs developed at Cornell for nutrient management planning and herd nutritional management, the Cornell Nutrient Management Planning System and the Cornell Net Carbohydrate and Protein System. Current topics are also discussed, such as greenhouse gas emissions and impacts of dairy and livestock production and local versus global food production and environmental impacts.

**ANSC 4140 Ethics and Animal Science**
Spring. 2 credits. Prerequisite: junior or senior standing. D. J. R. Cherney.

Explores the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A book review, participation in discussion in class and online, and a project of the student’s choice are used to evaluate the performance of each student.

**ANSC 4250 Gamete Physiology and Fertilization (also BIOAP 4250)**
Fall. 2 credits. Limited to 50 students. Prerequisite: ANSC 2400 or equivalent. Offered alternate years. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation, and fertilization are covered.

**ANSC 4270 Fundamentals of Endocrinology (also BIOAP 4270)**
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. P. A. Johnson.

Physiology and regulation of endocrine secretions. Emphasizes neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology. Examples are selected from many animals, including humans.

**ANSC 4510 Dairy Herd Management**
Fall. 3 credits. Corequisite: ANSC 4560. J. Karszes and D. M. Galton.

Emphasizes dairy herd business management with application to herd management analysis. Laboratory includes farm tours and analysis.
ANSC 4560 Dairy Management Fellowship
Spring. 2 credits. Prerequisites: senior standing; ANSC 3510; permission of instructor. S–U grades only. D. M. Galton. Designed for undergraduates who have a sincere interest in dairy farm management. Objective is to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

ANSC 4570 Introductory Spanish for Dairy Producers
Spring. 3 credits. Prerequisite: ANSC 2500 or permission of instructor. S–U or letter grades. Staff. Students with a focus on dairy management learn to communicate with the increasingly Spanish-speaking workforce to assure that the knowledge of cutting-edge dairy management and observations from the field are exchanged accurately. This is the first of a sequence of two courses developed to meet these goals.

ANSC 4580 Advanced Spanish for Dairy Producers
Fall. 3 credits. Prerequisites: ANSC 4700 or permission of instructor. S–U or letter grades. Staff. Students with a focus on dairy management need to be able to communicate with the Spanish-speaking workforce, and upward mobility of that workforce depends on knowledge of cutting-edge dairy management. This is the second course of a two-semester program that will further develop the students’ skills to be able to communicate in Spanish higher-level dairy production tasks and principles to Spanish-speaking dairy workers.

ANSC 4700 Merchandising Beef Cattle
Fall. 2 credits. S–U or letter grades. M. J. Baker. Introduction to the merchandising of replacement beef heifers. Topics of study will include budgeting, advertising, animal preparation, cataloging, clerking, and reporting. Students will gain practical knowledge through lecture as well as hands-on experience by planning, organizing, and conducting a sale of beef heifers from the Empire Heifer Development Program.

ANSC 4940 Special Topics in Animal Science
Fall or spring. 4 credits max. Prerequisite: undergraduate standing. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ANSC 4960 Internship in Animal Science
Fall or spring. 1–3 credits; variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Staff. Structured, on-the-job learning experience by supervision of qualified professionals in a cooperating organization (e.g., farm agribusiness, pharmaceutical company, zoo, educational institution). Internships are arranged by the student and must be approved in advance by the student’s academic advisor. The internship should provide a professionally supervised experience with at least 60 hours on the job per credit required. Students are encouraged to arrange their own internship with an approved cooperating organization. Courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

ANSC 4970 Individual Study in Animal Science
Fall or spring. 1–3 credits, variable; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. May include individual tutorial study or a lecture topic selected by a professor. Because topics may change, the course may be repeated for credit.

ANSC 4980 Undergraduate Teaching
Fall or spring. 1–3 credits, variable; limited to two experiences during undergraduate career. Prerequisite: GPA of at least 2.7. Students must register using independent study form (available in 140 Roberts Hall). Designed to consolidate the student’s knowledge. A participating student assists in teaching a course, assisted by his or her education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ANSC 4990 Undergraduate Research
Fall or spring. 6 credits max. during undergraduate career. Prerequisite: junior or senior standing; GPA of at least 2.7. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Students must register using independent study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

ANSC 4991 Undergraduate Honors Research in Animal Science
Fall and spring. 1–6 credits; max. 6. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Intended for qualified students pursuing the research honors program in animal science.

ANSC 6030 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 6030)
Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition courses. Letter grades only. Offered alternate years; next offered 2010–2011. Y. R. Boisclair and D. E. Bauman. Provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry, and rumen function.

ANSC 6100 Animal Science Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing. S–U grades only. R. E. Austic. Weekly seminar on topics related to animal science. The requirement for an S grade is regular attendance at seminars during the semester.

ANSC 6190 Field of Nutrition Seminar (also NS 6190)
Fall and spring. 0 credits. No grades given. For description, see NS 6190.

ANSC 6210 Reproductive Physiology/Endocrinology Seminar
Fall and spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. W. R. Butler and staff. Current research in reproductive physiology is presented by faculty and staff members, graduate students, and invited speakers.

ANSC 6220 Seminar in Animal Metabolism
Fall and spring. 4 credits max. Prerequisite: graduate standing. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester begins. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

ANSC 7900 Graduate-Level Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty. For students in a Ph.D. program only before “A” exam has been passed.

ANSC 8900 Master’s-Level Thesis Research
Fall or spring. Credit TBA, max. 12 per semester. Prerequisite: permission of advisor. S–U grades only. Graduate faculty. For students admitted specifically to a master’s program.
BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

BEE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1050. Prerequisite: BEE majors or permission of instructor. Letter grades only.
M. F. Walter.
Forum covering the career opportunities for engineering students and the activities and curricula that lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career services offices, and students. Students develop their undergraduate course plans, complete a web search assignment to locate jobs and internships, and select future courses to meet their academic objectives and career goals.

BEE 1510 Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per lab and rec. No previous programming experience assumed. Prerequisite: BEE majors or MATH 1120, or equivalent. Letter grades only. C. L. Anderson.
Introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language MATLAB is used, implemented on interactive personal computers and applied to problems of interest in biological and environmental engineering.

BEE 2220 Bioengineering
Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 1920, BIOG 1110, PHYS 2213, and chemistry course completed or concurrent. Letter grades only.
J. B. Hunter.
Living systems rely on chemical and phase equilibria, precise coordination of biochemical pathways, and the release of chemical energy as heat, all of which are governed by the laws of thermodynamics and the rates of chemical reactions. The course covers concepts and laws of thermodynamics as applied to phase transformations, work, heat, and chemical reactions; and reaction kinetics applied to industrial processes and living systems, all with a focus on biological examples.

BEE 2510 Engineering for a Sustainable Society (also ENGRD 2510)
Fall. 3 credits. Pre- or corequisite: MATH 2930. Letter grades only. B. A. Ahner.
Case studies are presented on contemporary environmental issues including pollutant distribution in natural systems, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of math, physics, and engineering sciences to solve energy and mass balances in environmental sciences. Introduces students to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 2600 Principles of Biological Engineering (also ENGRD 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930, BIOG 1101–1104 or 1105/1106. Letter grades only. A. J. Baeumner.
Focuses on the integration of biological principles with engineering, math, and physical principles. Students learn how to formulate equations for biological systems in class and practice in homework sets. Topics include flow from principles of reaction kinetics and molecular binding events to macroscopic applications such as energy and mass balances of bioprocessing and engineering design of implantable sensors. Course grade based on homework, projects, and exams. BEE students may elect either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

BEE 3050 Principles of Navigation (also NAVS 3050)
Spring. 3 credits. Three classes each week (lec-rec-project work). Letter grades only. Lt. Raincault.
Introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Also briefly discusses electronic navigation systems.

BEE 3299 Sustainable Development: A Web-Based Co-Course
Spring, summer. 3 credits. Prerequisite: at least sophomore standing. S–U or letter grades. M. F. Walter and N. R. Scott. Sustainable development is the dominant economic, environmental, and social issue of the 21st century. This course develops the concepts of sustainable development as an evolutionary process, demanding the integration of the physical sciences and engineering with the biological and social sciences for design of systems. Topics include the nature of ecosystems, sustainable communities, and industrial ecology, renewable energy, and life cycle analysis.

BEE 3310 Bio-Fluid Mechanics
Fall. 4 credits. Prerequisites: ENGRD 2020 and engineering math sequence. Letter grades only. K. G. Gebremedhin.
Properties of Newtonian and non-Newtonian fluids; hydrostatic and dynamic forces; principles of continuity, conservations of mass, energy and momentum and their applications; laminar and turbulent flows and boundary layer, introduction to Navier Stokes; dimensional analysis and similarity; blood flow in the cardiovascular system; gas exchange in the pulmonary system; blood flow and sodium transport in the kidney. The major concepts are covered by case studies.

BEE 3500 Biological and Environmental Transport Processes
Fall. 3 credits. Pre- or corequisites: MATH 2930 and fluid mechanics course. Letter grades only. A. K. Datta.
Focuses on understanding the principles of heat and mass transfer in the context of biological (biomedical/bioprocessing/ bioenvironmental) systems. Emphasizes physical understanding of transport processes and simple reaction rates with application examples from plant, animal, and human biology in the bioenvironment (soil/water/air), and industrial processing of food and biomaterials.

BEE 3600 Molecular and Cellular Bioengineering (also BIOM 3600)
Spring. 3 credits. Prerequisite: BEE 2000, biochemical, linear algebra, ordinary differential equations, or permission of instructor. Letter grades only. J. C. March. Biotechnology viewed at the cellular and molecular level. Advances in biotechnology will be broken down to their functional parts using the tools of biological engineering (thermodynamics, transport, kinetics, etc.) to understand how and why they work with an emphasis on design. Particular attention paid to gene therapy, synthetic biology, protein engineering, and nucleic acid engineering. Case studies in biomedical, bioprocess, and bioenvironmental engineering.

BEE 3650 Properties of Biological Materials
Spring. 3 credits. Satisfies BE laboratory experience requirement. Pre- or corequisite: ENGRD 2020. Letter grades only. J. A. Bartsch.
Mechanics and structural properties of biological materials: mechanical testing of animal, plant, and food products. Laboratory exercises involve quasistatic and dynamic testing of materials and interpretation of test results. Uses experimental data to determine engineering properties of these materials.

BEE 3680 Biotechnology Applications: Animal Bioreactors
Fall. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. Offered alternate years. J. B. Hunter.
Introduces students to the biotechnological applications of animals; their organs, tissues, and cells as bioreactors for the production of substances such as pharmaceuticals; growth factors, anti-tumor proteins, antibodies, and vaccines. Exposes students to various design issues, technical constraints, societal concerns, and ethical considerations of this biotechnology.

**BEE 3710 Physical Hydrology for Ecosystems**  
Spring. 3 credits. Prerequisite: MATH 1920 or permission of instructor. Letter grades only. Offered alternate years; next offered 2010–2011. M. T. Walter. This is an introduction to physical hydrology with an emphasis on roles and interactions between hydrological processes and ecological, biogeochemical, and human systems. http://hive.bee.cornell.edu/faculty/walter/BEE371Index.html

**BEE 4010 Renewable Energy Systems**  
Spring. 4 credits. Prerequisite: college physics. Letter grades only. L. D. Albright. Introduces energy systems with emphasis on quantifying energy use and designing/optimizing renewable energy systems to convert environmental inputs into useful forms of energy. Covers solar energy, small-scale hydropower, wind, bio-conversion processes, home energy balances. Focuses on the technologies and small-scale system design, not policy issues. Use of spreadsheets is extensive.

**BEE 4270 Water Measurement and Analysis Methods**  
Fall. 3 credits. Satisfies BE and EnvE laboratory experience requirement. Prerequisites: fluids or hydrology course and MATH 1910. Letter grades only. L. D. Geohring and T. S. Steenhuis. Get wet and muddy learning how to monitor and characterize water and soil management problems in the natural environment. This is a field-based lab course that integrates science and engineering technologies, using various measurement equipment and analytical techniques to quantify water flow and quality parameters in surface and subsurface environments. Measurement accuracy, water sampling quality assurance protocols, and interpretation of watershed contaminants are addressed.

**BEE 4350 Principles of Aquaculture**  
Spring. 3 credits. Prerequisite: at least junior standing. Letter grades only. No-one is allowed to add course after 2nd lec. Two required field trips require class to return to campus at 7 p.m. M. B. Timmons. An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate’s previous course background and interests. Includes supervised “hands-on” laboratory experiences.

**BEE 4500 Bioinstrumentation**  
Spring. 4 credits. Satisfies both BE laboratory experience and BE capstone design requirements. Prerequisites: MATH 2940, introductory computing, two semesters of physics, statistics, or permission of instructor. Letter grades only. D. J. Aneashtsiany. Bioinstrumentation applications are emphasized in this laboratory-based course. Electronic instruments from sensor to computer are considered. Static and dynamic characteristics of components and systems are examined theoretically and empirically. General analog and digital signal condition circuits are designed, constructed, and tested. A variety of biological applications of instrumentation are discussed.

**BEE 4520 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)**  
Spring. 3 credits. Satisfies BE capstone design requirement. Satisfies College of Engineering technical writing requirement. Prerequisite: heat and mass transfer (BEE 3500 or equivalent). Letter grades only. A. K. Datta. Introduction to simulation-based design as an alternative to prototype-based design; analysis and optimization of complex real-life processes for design and research, using industry-standard physics-based computational software. Emphasis is on problem formulation, starting from a real process and developing its computer model. Covers biomedical processes in thermal therapy and drug delivery that involve heat transfer, mass transfer, and fluid flow. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own semester-long biomedical project, which is the major part of the course (no final exam).

**BEE 4540 Physiological Engineering**  

**BEE 4590 Biosensors and Bioanalytical Techniques**  
Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. J. C. March. Provides students with an understanding of the scientific and engineering principles of biosensors and bioanalytical techniques. Addresses selected topics from simple biosensors to micro/nanofabricated Micro Total Analysis Systems (MicroTAS). Biosensor and MicroTAS applications in environmental analysis, food safety, and medical diagnostics are explored. Students give oral presentations in lecture, and posters published in literature, and theoretically design a biosensor based on criteria discussed in class. Undergraduate students work together in teams of two to three. Meets concurrently with BEE 6590. BEE 6590 students work independently on individual biosensor projects.

**BEE 4600 Deterministic and Stochastic Modeling in Biological Engineering**  
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, BEE 3500 or equivalent, Mass and Energy Balances, permission of instructor. Letter grades only. L. D. Geohring and T. S. Steenhuis. This course covers modeling biological systems from an engineering standpoint. Starting with deterministic approaches, the class will functionally decompose and mathematically model systems important to biological engineers (including bioprocessing, biomedicine, and microbial ecology). Mechanistic aspects of biology will be handled using stochastic (probabilistic) approaches in the science and the second half of the semester.

**BEE 4640 Bioseparation Processes**  
Fall. 3 credits. Prerequisites: introductory biochemistry, physics, MATH 2930, BEE 2600 or equivalent, or permission of instructor. Offered alternate years. S–U or letter grades. J. B. Hunter. Bioseparation is the science and engineering of fractionating and purifying biological materials: DNA, proteins, living cells, antibiotics, biotools, and even foods. This course covers separation methods used in the biotechnology industry, principles governing these methods, approaches to improving bioseparation performance, and the special challenges of scale-up. Key topics (centrifugation, filtration, extraction, membrane methods, ion exchange, chromatography, electrophoresis) are supplemented with student presentations. Intended for seniors and graduate students in engineering, chemistry, biology, and food science.

**BEE 4710 Introduction to Groundwater (also EAS 4710)**  

**BEE 4730 Watershed Engineering**  
Fall. 4 credits. Satisfies BE and EnvE capstone design requirement. Satisfies College of Engineering technical writing requirement. Satisfies BE laboratory experience requirement. Prerequisite: CEE 3310 or hydrology course. Letter grades only. M. T. Walter. This course teaches basic design and analysis as practiced for water control and nonpoint source pollution prevention. We will discuss the origins of design approaches including their theoretical bases but this is not a theory course. Most of the course is dedicated to practicing applied design. Assignments are generally representative of real-life engineering problems and will involve as much hands-on experience as possible. Some example topics include risk analysis, water conveyance, point source pollution control, stream restoration, water management, and erosion control.

**BEE 4740 Water and Landscape Engineering Applications**  
Spring. 3 credits. Satisfies BE capstone design requirement. Prerequisites: fluids or hydrology course or permission of instructor. Letter grades only: L. D. Geohring and T. S. Steenhuis. This course will focus on how water moves in soil and the implications for design of drainage and irrigation systems in the landscape. The course addresses aspects of soil physics, flow in porous media, water quality and water supply or disposal in regard to drainage and irrigation applications. Emphasis is on problem solving of actual
situations, and a major site-design project is required.

BEE 4750 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Letter grades only. D. A. Haith. Applications of mathematical modeling, simulation, and optimization to environmental-quality management. Fate and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming) to evaluate alternatives to waste management and water and air pollution control. Introduction to hydrologic simulation (runoff and streamflow). Software packages for watershed analyses of point and nonpoint source water pollution.

BEE 4760 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry. Letter grades only. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion, sanitary landfills; composting; recycling and materials recovery facilities; and hazardous waste management. Emphasis on quantitative analyses.

BEE 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also EAS 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S–U or letter grades. P. G. Hess. This course investigates the science behind changes in our atmosphere’s composition and its relation to global change. We will examine the chemistry and physics that determines atmospheric composition on global scales including the effects of biogeochemistry and atmospheric photochemistry.

BEE 4810 LRFD-Based Engineering of Wood Structures (also CEE 4810)
Spring. 3 credits. Satisfies BE capstone design requirement when co-registered in BEE 4960. Prerequisite: ENGRD 2020. Letter grades only. K. G. Gebremedhin. Computer-aided and manual computation procedures of Load and Resistance Factor Design (LRFD)-based engineering of wood structures. National design codes and standards; estimation of factored design loads and load combinations; mechanical properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, diaphragms; connections and wood structural systems. Also discusses engineering design judgment as an integral component of the quantitative design procedure.

BEE 4840 Metabolic Engineering
Spring. 3 credits. Prerequisite: biochemistry course or permission of instructor. Letter grades only. R. M. Spanswick. The principles of metabolic engineering as they relate to the regulation of metabolic pathways, including membrane transport, are considered in terms of enzyme kinetics and metabolic control analysis. Case studies, reflecting the interests of the instructor, include examples involving higher plants. Each student is expected to investigate one topic in depth and make a short class presentation.

BEE 4860 Industrial Ecology of Agriculturally Based Bioindustries
Spring. 3 credits. Prerequisites: one year of calculus, some knowledge of MATLAB. Letter grades only. L. P. Walker. Agricultural-based biofuel and bioproduct systems are very complex and highly integrated. Each of these subsystems are composed of a number of biological, chemical, and physical processes that can be interconnected to ways to generate the essential material and energy flows for the production of biofuels and bioproducts. For this course an input/output modeling methodology is employed to develop and manipulate the structure of complex agriculturally based bio-industries and to generate the material, energy, and monetary flows. Students will use linear algebra and state space tools in the MATLAB toolbox to simulate static and dynamic behavior of these complex webs of connected processes and to conduct life-cycle analysis of these complex webs.

BEE 4870 Sustainable Energy Systems
Fall. 3 credits. Satisfies BE capstone design requirement. Intended for upper-level undergraduates and graduate students. Prerequisites: BEE 3500 and thermodynamics course. Letter grades only. L. T. Angenent and N. R. Scott. Offers a systems approach to understanding renewable energy systems (solar, wind, and biomass) and their conversion processes, from various aspects of biology, physics, engineering, environmental impacts, economics, and sustainable development.

BEE 4890 Entrepreneurial Management for Engineers
Fall. 4 credits. Satisfies College of Engineering technical writing requirement. Prerequisites: junior standing: ENGRD 2700 or CEE 3040 or equivalent highly recommended. Letter grades only. No one allowed to add course after second week. M. B. Timmons. The course focuses on how to start a new company centered on engineering or biological technologies. Course objectives include coverage of entrepreneurship principles, fundraising, negotiation, financial calculations (internal rate of return, time value of money, pro forma statements); legal structures of businesses; project management; and to develop an awareness of issues related to professional ethics; and technical writing and communication. Majority of work done in teams including a complete business plan that is presented to angel investors. Business plans must require less than $100k in startup funding and may result in actual investment by the angel investor group.

BEE 4900 Biofuels: The Economic and Environmental Interactions (also AEM 6900)
Spring. 2 credits. Prerequisites: senior or graduate standing, others by permission of instructor; course in microeconomics. S–U or letter grades. P. G. Hess. This course surveys the latest research on the science and economics of biofuels. Questions addressed include the environmental and economic impacts of biofuel use and whether the use of biofuels justifies public policy intervention. The class will consist of a colloquium, discussions with the colloquium speaker, and an in-class discussion section.

BEE 4930 Technical Writing for Engineers
Fall, spring. 1 credit. Meets College of Engineering technical writing requirement. Letter grades only. Staff. Covers communicational skills necessary for oral and written technical project reports. Also considers outlines, style, audience, and general presentation mechanics.

BEE 4940 Special Topics in Biological and Environmental Engineering
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered twice under this number. Each 4940 has a unique course ID for enrollment.

BEE 4960 Capstone Design in Biological and Environmental Engineering
Spring. 1 credit. Corequisite: BEE 4810. Letter grades only. Staff. Involves capstone design experience, including a team project incorporating analysis, design, evaluation, synthesis, and a written and oral report of the end product.

BEE 4970 Individual Study in Biological and Environmental Engineering
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to your project advisor. Staff. Special work in any area of biological and environmental engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

BEE 4980 Undergraduate Teaching
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for work proposed; normally reserved for seniors in upper two-fifths of their class. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). Letter grades only. See department office for course ID specific to your project advisor. Staff. The student assists in teaching a biological and environmental engineering course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

BEE 4990 Undergraduate Research
Fall and spring. 1–4 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class; adequate training for work proposed; written permission of instructor. Letter grades only. Students from all colleges must register using independent study form (available in 207 Riley-Robb Hall). See department office for course ID specific to your project advisor. Staff. Research in any area of biological or environmental engineering on problems under investigation by the department or of special interest to the student, provided that
adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**BEE 4991–4992 BEE Honors Research**

Fall and spring. 1–6 credits, variable. Prerequisite: enrollment in BEE research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. Letter grades only. Staff.

Intended for students pursuing the research honors program in BEE.

**BEE 5010 Bioengineering Seminar (also BME 5010)**

Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. S–U grades only. Staff.

To give you, the engineer-in-training, a broad overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give the students a working knowledge of how abstracts are written and revised.

**BEE 5330 Engineering Professionalism**

Spring. 1 or 2 credits. Prerequisite: graduate student with accredited engineering degree or senior who will graduate with accredited engineering degree. Must register to take Fundamentals of Engineering Exam**. S–U or letter grades. Lec only. 1st 10 weeks of semester. M. B. Timmons, J. R. Stedinger, other Engineering Faculty.

Presentations address engineering professionalism and ethics and provide preparation for the general NY FE Examination taught in a team-based format. The second-credit ethics portion emphasizes the engineer’s professional responsibilities for the health and welfare of the public and the guiding principles for a professional engineer. Case histories on engineering ethics will be examined and students will write their own personal statement addressing integrity. Homework assignments and a FE exam preparation, and students complete the formal comprehensive review of engineering subjects associated with the Fundamentals of Engineering Exam.

*1-credit option includes FE review only.

**Students must file their N.Y. FE Exam application by either November 1 of the previous year or by May 1 of the spring semester to be enrolled in BEE 5330. The FE exam registration and sitting fees total $205 and are paid to the N.Y. State Education Department and the testing service, not to Cornell. The FE Exam is offered in April and October; the April exam may be taken at Cornell and other N.Y. locations; the October exam is not offered at Cornell.

**BEE 5901–5902 M.P.S. Project**

Fall and spring. 1–6 credits. Requirement for each M.P.S. candidate in field. Letter grades only. BEE graduate faculty. Comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

**BEE 5951–5952 Master of Engineering Design Project**

Fall and spring. 3–6 credits. Prerequisite: admission to M.Eng. degree program. Letter grades only. BEE graduate faculty. Comprehensive engineering design projects relating to the candidate’s area of specialization. Projects are supervised by faculty members on an individual basis. A formal project report and oral presentation of the design project are required for completion of the course. A minimum of 12 credits of 5951–5952 is required for the M.Eng. degree.

**BEE 6430 Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOIMI 6430)**

Spring. 1 credit. Prerequisite: third- and fourth-year veterinary students; graduate students, advanced undergraduate students interested in agricultural engineering as related to animal manure management. D. D. Bowman.

In-depth look at the management of pathogens in animal manures. Reviews the pathogens involved, the role of governing agencies, the tools available to researchers in this field, and methods of pathogen destruction. Discusses commercial methods of manure processing for the control of these pathogens for the protection of other animals and the human population. Concludes with class discussions with major stakeholders representing the dairy, beef, pork, and poultry industries and their understanding of the problem as it relates to veterinary students.

**BEE 6470 Water Transport in Plants (also BIOPL 6510)**

Fall. 2 credits. Letter grades only. Offered alternate years. R. M. Spanswick.

Topics include water relations of plant cells and tissues using water potential terminology; permeability of plant cells to water and the role of aquaporins; transport of water through whole plants, including transpiration, stomatal physiology, and the modifications due to plant communities; water status and plant growth in relation to water stress.

**BEE 6490 Solute Transport in Plants (also BIOPL 6490)**

Fall. 3 credits. Letter grades only. Offered alternate years; next offered 2010–2011. R. M. Spanswick.

A fundamental treatment of the transport of ions and small organic molecules in plants.

**BEE 6510 Bioremediation: Engineering Organisms to Clean Up the Environment**

Spring. 3 credits. Prerequisites: BIOMI 2900 or BIOMI 3310 or permission of instructor. Letter grades only. Offered alternate years. S–U or letter grades. B. A. Ahner.

Through lectures and current literature, students evaluate the benefits as well as the current obstacles to effective bioremediation; includes examples of genetically engineered organisms.

**BEE 6550 Thermodynamics and Its Applications**

Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Letter grades only. Offered alternate years. J.-Y. Parlangue.

Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetics, phenomena, heat and mass transport, and structure of organizations).

**BEE 6590 Biosensors and Bioanalytical Techniques**

Fall. 3 credits. Prerequisites: biochemistry course and permission of instructor. Letter grades only. A. J. Baumann.

For description, see BEE 4590.

**BEE 6710 Analysis of the Flow of Water and Chemicals in Soils**

Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Letter grades only. Offered alternate years; next offered 2010–2011. J. V. Parlangue.

Describes the chemical and water flows on a soil surface, in the vadose zone, and through the aquifer. Discusses current analytical, semi-analytical, and computer-based techniques.

**BEE 6720 Drainage**

Spring. 4 credits. Prerequisites: BEE 4710 or BEE 4740. Letter grades only. Offered alternate years. T. S. Steenhus and L. D. Geohring.

Discusses the theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage. Critically reviews drainage design as it relates to agricultural land, landfills, and land application sites. Examines the importance of preferential flow and the effects of weather quality of drainage waters. Laboratories provide hands-on experience with measuring soil parameters and for actual drainage design.

**BEE 6740 Ecohydrology**

Spring. 3 credits. Prerequisite: ecology or hydrology course. Offered alternate years. Letter grades only. S–U or letter grades. L. P. Walker.

The objective of this course is to investigate novel topics that involve the interactions between physical hydrological processes and ecosystem processes, including the impacts of human activities on the ecohydrological system. The course is designed to encourage students from historically disparate disciplines to collaboratively combine their unique skills and insights to formulate multidisciplinary ecohydrological questions. This course will consider a broad range scales from a stomate and a soil pore to a forest, watershed, and region, with emphasis placed on those scales most appropriate to student interests. Through course work we will clarify the current understanding of various topics, identify knowledge gaps, develop hypotheses, and test them quantitatively by creating models and analyzing available data. The goal of this course is to identify the basic principles of ecohydrology and become familiar and comfortable with a range of quantitative tools and approaches for answering ecohydrological questions.

**BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries**

Fall. 1 credit. Prerequisite: graduate standing. S–U grades only. L. P. Walker.

Environmentally sustainable alternatives for our energy and chemical needs are critical. This seminar series explores challenges facing the development of industries that use biologically derived materials to produce useful chemicals and energy for society. Topics include natural products from biological systems, conversion of biomass to fuel and other commodities, and the use of
biological systems for environmental bioremediation.

**BEE 6940 Graduate Special Topics in Biological and Environmental Engineering**
Fall or spring. 4 credits max. S–U or letter grades. BEE graduate faculty.
The department teaches "trial" courses under this number. Offers vary by semester and are advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number. Each 6940 has a unique course ID number.

**BEE 6970 Graduate Individual Study in Biological and Environmental Engineering**
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S–U or letter grades. BEE graduate faculty. Topics are arranged by the staff at the beginning of the semester.

**BEE 7000 Orientation to Graduate Study**
Fall, first seven weeks. 1 credit. Prerequisite: new graduate students in BEE. S–U grades only. A. J. Baemumer. Introduction to BEE research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

**BEE 7540 Water and Culture in the Mediterranean: A Crisis**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructors. S–U or letter grades. T. S. Steenhuis, G. Holst-Warhaft, et al.
The course addresses the crisis of water in the Mediterranean region, through case studies situated in watershed basins, especially the Nile. It focuses on attitudes, conflicts, and relationships of local people and nations toward water, expressed in culture, environmental management, and watershed management practices.

**BEE 7600 Nucleic Acid Engineering**
(also BME 7600) Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S–U or letter grades. D. Luo.
Nucleic acid engineering focuses on manipulating nucleic acid molecules in a true engineering sense as well as in the "genetic engineering" sense by treating nucleic acids (including DNA, RNA, PNA, and TNA) as both genetic and generic materials. Both biomedical and nonbiomedical applications of nucleic acid engineering, including tool kits for nucleic acid engineering and current examples of DNA-based engineering, DNA nanotechnology, and DNA-based medicine are introduced. Efficient and effective literature reading and evaluation are emphasized.

**BTRY 2100 Biological and Environmental Engineering**
Fall and spring. 4 credits. Prerequisite: graducate standing or permission of instructor. S–U or letter grades. T. S. Steenhuis, J-Y. Parlane, M. F. Walter, and M. T. Walter.
Study and discussion of research or design procedures related to selected topics in watershed management, erosion control, hydrology, colloid transport, and water quality.

**BEE 8900 Master's-Level Thesis Research**
Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only. BEE graduate faculty. Variable credit for M.S. research.

**BEE 9900 Doctoral-Level Thesis Research**
Fall and spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only. BEE graduate faculty. Variable credit for Ph.D. research.

**BIOLOGICAL SCIENCES**
The program of study in biology is coordinated by the Office of Undergraduate Biology. For course descriptions, see the separate section "Biology & Society:"

**BIOLOGY & SOCIETY**
The undergraduate major field of study in biology & society is offered through the Department of Science and Technology Studies. For a full description of courses that fulfill field requirements, see "Biology & Society" under the College of Arts and Sciences.

**BIOMETRY AND STATISTICS**
The Department of Biological Statistics and Computational Biology offers the following courses in Biometry and Statistics. Students must register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

**BTRY 1150 Introduction to Quantitative Methods**
Spring. 4 credits. Review of basic algebra concepts, the equation of a line, and systems of linear equations; properties of functions and applications, including polynomial, exponential, and logarithmic functions; basic probability laws, counting principles, discrete probability distributions, expected value, frequency distributions, measures of central tendency and variation; the binomial and normal distributions.

**BTRY 3010 Biological Statistics I (also NTRES 3130, STSCI 2200)**
Fall. 4 credits. Develops and applies statistical methods to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 3020 Biological Statistics II (also NTRES 4130, STSCI 3200)**
Spring. 4 credits. Prerequisite: BTRY 3010 or 6010.
Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Includes linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Carries out applied analysis in a statistical computing environment.

**BTRY 4070 Principles of Probability and Statistics (also ILRST/STSCI 4100)**
Fall. 4 credits. Prerequisites: two semesters of statistics.
Applied methodology and theory of statistical sampling, with particular emphasis on sampling methods, sample design, cost, and error estimation. Assessment of nonsampling errors. Discussion of application to social and biological sciences and business. Includes an applied project.

**BTRY 4070 Principles of Probability and Statistics (also ILRST/STSCI 4100)**
Fall. 4 credits. Prerequisites: MATH 4710/4720 sequence. Prerequisite: one year of calculus. Course is prerequisite for upper-division statistical genetics courses. Recommended: some knowledge of multivariate calculus and statistics. S–U or letter grades.
A one-semester version of the BTRY 4080/4090 sequence. Topics include combinatorial probability, conditional probability and independence, random variables (and their moments), standard distributions (unimodal, Poisson, normal, gamma, beta, etc.) and their properties. The second half of the course focuses on parametric inference using maximum likelihood and Bayesian approaches. Computational methods are emphasized using the R programming language. The course is a prerequisite for upper-division statistical genetics courses.

**BTRY 4080 Theory of Probability (also STSCI 4080)**
Fall. 4 credits. Prerequisites: MATH 1110, 1120, at least concurrent enrollment in 2130 or 2220 or equivalents. Recommended: at least one introductory course in statistical methods.
Introduction to probability theory: axiomatic foundations; combinatorics and equally likely events; conditional probability and independence; discrete and continuous random variables, their distributions and moments; generating functions; transformations; extensions to problems involving two or more random variables.
random samples. Can serve as either one-semester introduction or a foundation for a course in statistical theory.

**BTRY 4090 Theory of Statistics (also STSCI 4090)**
Spring. 4 credits. Prerequisites: BTRY 4080 or equivalent and at least one introductory statistics course.

Introduction to classical theory of parametric statistical inference that builds on the material covered in BTRY 4080. Topics include sampling distributions, principles of data reduction, likelihood, parameter estimation, hypothesis testing, interval estimation, and basic asymptotic theory.

**BTRY 4100 Multivariate Analysis (also ILRST/STSCI 4100)**
Spring. 4 credits. Prerequisites: BTRY 3010, some knowledge of matrix algebra, S–U or letter grades.

Application of classical multivariate methods to data from a variety of fields using a statistical software package. Topics include the multivariate normal distribution, multivariate regression, and MANOVA; principal components and factor analysis; canonical correlation; discriminant analysis and clustering.

**BTRY 4790 Probabilistic Graphical Models (also CS 4782)**
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). Next offered 2010–2011.

A thorough introduction to graphical models, a flexible and powerful framework for machine learning and probabilistic modeling that combines graph theory and probability theory.

**BTRY 4820 Statistical Genomics**
Fall. 4 credits. Prerequisites: MATH 1110 and BTRY 4070. Highly recommended: at least one previous course in statistical methods and one in biology. S–U or letter grades.

A course on the statistical analysis of genetic, molecular, and genomic data. The first module of the course presents a thorough treatment of important probability distributions and the concepts of likelihood and Bayesian inference. We then focus on how statistical models are developed for linkage analysis, basic Quantitative Trait Locus mapping, analysis of pedigrees, molecular population genetics and genomics, and phylogenetic inference.

**BTRY 4830 Quantitative Genomics and Genetics**
Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics or equivalent. S–U or letter grades.

A rigorous treatment of analysis techniques used to understand complex genetic systems. This course will cover both the fundamentals and advanced topics in statistical methodology used to analyze disease, agriculturally relevant, and evolutionarily important phenotypes. Topics will include mapping quantitative trait loci (QTLs), application of microarray and related genomic data to gene expression and evolutionary quantitative genetics. Analysis techniques will include association mapping, interval mapping, and analysis of pedigrees for both single- and multiple QTL models. Application of classical inference and Bayesian analysis approaches will be covered and there will be an emphasis on computational methods. Meets concurrently with BTRY 6840.

**BTRY 4840 Computational Genomics**
Fall. 4 credits. Prerequisites: BTRY 4070 and at least one course in statistical methods and at least one in algorithms. S–U or letter grades.

A rigorous treatment of important computational principles and methods for the analysis of genomic data, emphasizing comparative and evolutionary genomics. Topics include sequence alignment, gene and motif finding, network reconstruction, and inference of gene regulatory networks. Covers both maximum likelihood and Bayesian principles, and both exact and approximate algorithms for inference. Draws heavily on general concepts from probabilistic graphical models. Meets concurrently with BTRY 6840.

**BTRY 4940 Undergraduate Special Topics in Biometry and Statistics**
Fall or spring. 1–3 credits. S–U or letter grades.

Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 4970 Undergraduate Individual Study in Biometry and Statistics**
Fall and spring. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 4980 Undergraduate Supervised Teaching**
Fall and spring. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

Students assist in teaching a course appropriate to their previous training. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 4990 Undergraduate Research**
Fall or spring. 1–3 credits. S–U or letter grades.

Prerequisite: statistics and biometry undergraduates; permission of faculty member directing research. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).

**BTRY 6010 Statistical Methods I (also ILRST 6100)**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

Continuation of BTRY 6010. Emphasizes the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasizes appropriate design of studies before data collection, and the appropriate application and interpretation of statistical techniques. Practical applications are implemented using a modern, widely available statistical package.

**BTRY 6030 Statistical Methods III: Categorical Data (also ILRST/STSCI 4110)**
Spring. 4 credits. Prerequisite: BTRY 6010 and 6020 or permission of instructor.

Offered alternate years. Categorical data analysis, including logistic regression, log-linear models, stratified tables, matched pairs analysis, polytomous response, and ordinal data. Applications in biomedical and social sciences.

**BTRY 6040 Statistical Methods IV: Applied Design (also STSCI 4120)**
Spring. 4 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor.

Applications of experimental design including such advanced design concepts as incomplete blocks, fractional factorials. Stresses use of the computer for both design and analysis, with emphasis on solutions of real data problems.

**BTRY 6070 Principles of Probability and Statistics**
Fall. 4 credits. Prerequisite: one year of calculus. Recommended: some knowledge of multivariate statistics. S–U or letter grades.

For description, see BTRY 4070.

**BTRY 6150 Applied Functional Data Analysis**
Fall. 3 credits. Prerequisites: BTRY 6010 and 6020 or permission of instructor. Next offered 2010–2011.

Functional data analysis studies data that may be thought of as continuously sampled smooth curves. The course focuses on extensions of standard statistical techniques to these data.

**BTRY 6520 Computationally Intensive Statistical Inference**
Spring. 4 credits. Prerequisites: ORIE 6700 and at least one course in probability, S–U or letter grades.

Modern applications in statistics often require intensive computation not handled by “off-the-shelf” software. This course covers topics in statistical computing, including numerical optimization and finding zeros (likelihood and related techniques including generalized estimating equations and robust estimation), kernel density estimation, resampling methods (randomization and bootstrap tests and confidence intervals), and statistical simulation (random number generation, heuristic search methods, Bayesian estimation, and Monte Carlo Markov Chain methods for tests and interval estimation). Programming is done in MATLAB. Focuses on the use of numerical analysis methods for...
solving problems in statistical inference and estimation.

[BTRY 6790 Probabilistic Graphical Models (also CS 6782)]
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent). Recommended: course in statistical methods (BTRY 4090 or equivalent). Next offered 2010–2011.
For description, see BTRY 4790.

BTRY 6820 Statistical Genetics
Fall. 4 credits. Prerequisites: MATH 1100 and BTRY 6070. Highly recommended: at least one previous course in statistical methods and one in biology: S–U or letter grades.
For description, see BTRY 4820.

BTRY 6830 Quantitative Genomics and Genetics
Spring. 4 credits. Prerequisites: BTRY 4070 and introductory statistics course or equivalent. S–U or letter grades.
For description, see BTRY 4830.

BTRY 6840 Computational Genomics
Fall. 4 credits. Prerequisites: BTRY 4070 and at least one previous course in statistical methods and at least one in algorithms. S–U or letter grades.
For description, see BTRY 4840.

BTRY 6890 Topics in Population Genetics and Genomics
Fall. 1 credit; may be repeated for credit.
Prerequisite: BTRY 6820 or permission of instructor.
This course is a graduate seminar on current topics in population genetic data analysis. Topics this semester may include detecting signatures of natural selection, estimating demographic parameters, and recombination rate variation from whole-genome data; statistical methods for association mapping; efficient methods for disease gene mapping; use of comparative genomic data for population genetic inference. Readings will be chosen primarily from current literature.

BTRY 6940 Graduate Special Topics in Biometry and Statistics
Fall or spring. 1–3 credits. S–U or letter grades.
Course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 6970 Individual Graduate Study in Biometry and Statistics
Fall, spring, or summer. 1–3 credits. S–U or letter grades.
Individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

[BTRY 7170 Theory of Linear Models]
Fall. 3 credits. Prerequisites: BTRY 4090, 6020, or equivalents. S–U or letter grades. Next offered 2010–2011.

BTRY 7180 Generalized Linear Models
Fall. 3 credits. Prerequisites: primarily for Ph.D. students in statistics; BTRY 6020, BTRY 4090, or equivalent. S–U or letter grades.
A theoretical development of generalized linear models and related topics including generalized estimating equations, and generalized linear mixed models.

BTRY 7200 Topics in Computational Genomics
Spring. 1 credit. Prerequisite: BTRY 4840/6840 or permission of instructor.
Weekly seminar series on current advances in computational genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

BTRY 7210 Topics in Quantitative Genomics
Fall. 1 credit. Prerequisites: BTRY 4830/6830 or permission of instructor.
Weekly seminar series on current advances in quantitative genomics. A selection of the latest papers in the field will be read and discussed. Methods will be stressed, but biological results and their significance will also be addressed.

[BTRY 7270 Advanced Survival Analysis]
Spring. 3 credits. Prerequisites: at least one graduate-level course in probability, mathematical statistics, and regression modeling. S–U or letter grades. Next offered 2010–2011.
This course focuses on the rigorous development of nonparametric, semiparametric, and parametric modeling and statistical inference procedures appropriate for analyzing right censored data.

BTRY 7900 Graduate-Level Dissertation Research
Fall or spring. 1–9 credits. Prerequisite: Ph.D. candidates; permission of graduate field member concerned. S–U grades only. Research at the Ph.D. level.

BTRY 7950 Statistical Consulting
Fall and spring. 2–3 credits. Corequisites: BTRY 6020 and 4090 and permission of instructor. S–U or letter grades.
Participation in the Cornell Statistical Consulting Unit (CSCU): faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions are held for joint consideration of literature and selected consultations encountered during previous weeks.

BTRY 7980 Graduate Supervised Teaching
Fall and spring. 2–4 credits. Prerequisites: permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. S–U grades only.
Students assist in teaching a course appropriate to their previous training. Students meet with a discussion section, prepare course materials, and assist in grading. Credit hours are determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 8900 Master’s-Level Thesis Research
Fall or spring. 1–9 credits. Prerequisite: M.S. candidates; permission of graduate field member concerned. S–U grades only. Research at the M.S. level.

COMM 1101 Cases in Communication (SBA)
Fall. 3 credits. T. Gillespie.
Through analysis of cases, this course introduces students to key principles and theories in the study of human communication. Cases cover personal situations, entertainment, national crises, business situations, new technologies, and other contexts. The goal is to understand the links between these daily activities, "mid-range" theories of human behavior, and broad social concepts of modernity and post-modernity.

COMM 1300 Visual Communication (SBA)
Spring. 3 credits. C. Scherer.
Introduction to visual communication theory. Examines how visuals influence our attention, perspectives, and understanding. Uses examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print, and interactive media to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 1310 Writing about Communication
Spring. 3 credits. Corequisite: COMM 1300.
L. Van Buskirk and staff.
Students develop skill in various writing styles and genres. This course explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, analyze information, integrate ideas about communication, and express those ideas clearly and cogently. Several assignments focus on visual communication theories explored in COMM 1300 as well as ideas from COMM 1101.

COMM 2010 Oral Communication
Fall, winter, spring, or summer. 3 credits. Limited to 24 students per sec (fall and spring) or 15 students per sec (summer).
Priority given to juniors and seniors, then sophomores. Fluency in spoken English assumed. Sections meet beginning first day of instruction; may precede lecture. Students absent twice during first week of class are dropped from course roster. Enrolled students must drop by end of second week to allow wait-listed students to add course. K. Berggren and staff.
Social influence and persuasion are the most basic and important functions of communication. The course covers characteristics of persuasive messages, message sources, and targets; interpersonal influence, influence in groups, organizations, and institutions. Emphasis is given to topics in health, science, risk, media, and technology. This course is taught with a case-study format with strong emphasis on class attendance and participation. Supplemented are interactive lectures and in-class activities and demonstrations. A semester-long field research project done in groups is a major component of the course. Exams and short individual homework assignments are also part of the student evaluation.

**COMM 2820 Research Methods in Communication Studies (SBA)**

Spring. 3 credits. Pre- or corequisite: Sophomore standing. J. Niederdeppe. The course covers social scientific methods to solve communication research problems empirically. Topics include basic principles of social scientific research, random sampling, questionnaire design, experimental research design, focus group techniques, content analysis, and basic descriptive and inferential statistics. Students will also learn basic data manipulation, presentation, and analysis techniques using SPSS and EXCEL.

**COMM 2840 Sex, Gender, and Communication (also FGSS 2840) (SBA)**

Fall. 3 credits. Not open to freshmen. L. Van Buskirk. Explores the personal, career, social, and economic implications of male and female gender categories. Topics include theories of male and female gender construction, self-identity, social structures, personal relationships, and gender concerns in the workplace. The course devotes equal time to men and to women and focuses on important contemporary communication issues.

**COMM 2850 Communication, Environment, and Health (also STS 2851) (SBA)**

Spring. 3 credits. B. Lewenstein and staff. Environmental problems, public health issues, scientific research—in each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the web, communication helps define scientifically based social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

**COMM 3010 Speech Communication in Context**

Fall and spring. 3 credits. Prerequisite: COMM 201H; second-semester sophomore, junior, or senior standing. Staff. This course introduces students to advanced theories of speech communication and then demonstrates the uses of these theories in several different contexts, including business and professional, small groups, interpersonality, and intercultural settings. Grades are based on a combination of in-class presentation, tests, and a final paper.

**COMM 3030 Speech and Debate Practicum**

Fall and spring. 2 credits. Prerequisite: Program in Speech and Debate members; permission of instructor; completion of one year in program. Travel fee: $200. S. Nelson and staff. Students learn how to prepare for CEDA (Cross Examination Debate Association) debate, Lincoln-Douglas debate, or individual speaking events. The class is divided into four groups according to level of experience; therefore, it may be repeated to a maximum of 8 credits.

**COMM 3100 Communication and Decision Making in Groups (SBA)**

Spring. 3 credits. Prerequisite: junior or senior standing; priority given to COMM majors. P. McLeod. This course will provide students with a greater understanding of information sharing, persuasion, and decision development in small work groups. Through practical exercises, class discussions, and lectures, students will learn firsthand how tools such as decision structuring process can affect group performance. The course will be taught in an interactive hands-on format that emphasizes applications of tested theory.

**COMM 3200 New Media and Society (also INFO 3200) (CA)**

Spring. 3 credits. T. Gillespie. This course builds on mass communication research and the study of culture and technology to investigate the social, political, and technological dynamics of contemporary media. We investigate how new media frame our experience of the world and shape our political involvement in it, and how new media intersect with our sense of identity and involvement in culture.

**COMM 3300 Media and Human Development (SBA)**

Spring. 3 credits. Prerequisite: COMM 2200. S. Byrne. Provides a developmental perspective on how children and adolescents interact with, interpret, and respond to media content. Major areas of consideration include the effects of media violence, health and-pro-social messages, educational programming, advertising, video games, sexual media, and content children find frightening. Students will evaluate the strategies that have been proposed to mitigate negative effects of the media on children.

**COMM 3400 Psychology of Social Computing (also INFO 3400) (SBA)**

Fall. 3 credits. Prerequisite: COMM/INFO 2450. J. Birnholtz. Course focuses on understanding online communication through principles of cognitive and social psychology as well as aspects of the Internet that defy traditional psychology understandings. Topics include impression formation and management, deception and trust, group dynamics, social support, "Internet addiction," violation of privacy, pornography, and organizational impacts of new communication technology.

**COMM 3450 Human-Computer Interaction Design (also INFO 3450) (SBA)**

Fall. 3 credits. Prereq: or corequisite: COMM/INFO 2450. D. Cosley, F. Guimbretière, and staff. Gives students insight into the design of computer interfaces and software from the
user’s point of view. Students come to understand how hardware and software design influence the interaction between people and computers. Using assigned readings, demonstrations, and projects, students examine issues and trade-offs in interaction design and invent and evaluate alternative solutions.

COMM 3490 Media Technologies (also STS/INFO 3491) (CA)
Spring. 3 credits. Offered odd-numbered years. T. Gillespie.
Our efforts to communicate, share culture, and drive social agendas depend on the tools we’ve developed. However, our commonplace notions of communication and media regularly overlook the role of the material technologies that are so crucial to them. This course considers the technologies of media (including printing, photography, film, telegraph, telephone, radio, television, and computer networks) as an opportunity to think about the intersection of technology, communication, and its social context.

[COMM 3520 Science Writing for the Mass Media (also STS 3521)]
Fall. 3 credits. Limited to 24 students. Not open to freshmen. Prerequisite: college-level writing course. Next offered 2010–11. B. Lewenstein.
How to write about science, technology, and medicine for the media. Writing assignments focus on writing news for web sites, blogs, magazines, and other media.

[COMM 3530 Science Writing Practicum]
Spring. 1 credit. Prerequisite: COMM/STS 3520, ENGR 3580, or permission of instructor. Next offered 2010–11. B. Lewenstein.
Students cover the annual meeting of the American Association for the Advancement of Science. Students are responsible for all costs of travel, lodging, and meals.

[COMM 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)]
Fall. 4 credits. Next offered 2010–11. J. Ratcliff.
For description, see STS 3551.

COMM 3561 Computing Cultures (also STS 3561)
Spring. 4 credits. R. Prentice.
For description, see STS 3561.

COMM 3600 Writing for New Media: Theory, Analysis, and Practice
Fall and spring. 3 credits. Prerequisites: sophomore standing and at least one college-level writing course. F. Joseph.
This advanced course emphasizes academic, analytical, and practical writing skills. Students will research and write analyses of texts that appear in new media outlets, including independent wikis and blogs and those linked to conventional journalistic sources. The first three or four class essays will analyze style, content, reliability, and readability of such texts. In the second half of the course, students will write their own blogs and wikis on approved communication and social science topics.

COMM 3650 Technology and Collaboration (also INFO 3650) (SBA)
Spring. 3 credits. Prerequisite: COMM 2450. J. Birnholtz.
Course focuses on understanding the use of communication technologies in groups, with a particular focus on the unique and sometimes difficult issues raised by groups that are geographically distributed. Topics include theories of group and organizational behavior, interactional awareness, privacy, trust, technology-mediated communication, and technology evaluation and adoption.

COMM 3760 Planning Communication Campaigns (SBA)
Fall. 3 credits. Prerequisites: COMM 2820 or equivalent social research course and one semester of introductory statistics. J. Niederdeppe.
Provides a theoretical and practical overview of the audiences, messages, and evaluation of communication campaigns. Includes principles of planning and evaluation relevant to several kinds of campaigns. Topics include discussion of campaign goals, objectives, strategies, and tactics; research design and implementation; segmentation; message construction; and techniques of evaluation. Considers common methods of data collection (e.g., focus groups, experiments, surveys) and analysis of campaign-related data sources.

[COMM 3980 Issues in Teaching Communication]
Fall and spring, 1 credit. Prerequisite: junior or senior standing; present or past undergraduate teaching assistant for COMM course. K. Berggren.
Seminar brings together novice educators to discuss ideas, experiences, and practice. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, students examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 4050 Speech and Debate in the Community
Fall and spring. 1 credit; may be repeated once for credit. Meets one hour weekly. S. Nelson and staff.
Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 4100 Organizational Communication: Theory and Practice (CA)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing; COMM 1101 or permission of instructor. C. Yuan.
Study of management communication processes in formal organizations. Applies relevant organizational behavior and communication principles in today’s business environment; examines formal and informal communication networks.

[COMM 4200 Public Opinion and Social Process (SBA)]
Spring. 3 credits. Prerequisite: COMM 2820. Offered even-numbered years. Next offered 2010–11. Staff.
The course provides a scientific and applied overview of the concept of ‘public opinion’ and its implications for macrosocial processes.

COMM 4210 Communication and the Environment (SBA)
Spring. 3 credits. Offered odd-numbered years. K. McComas.
Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is mass media’s impact on public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 4220 Psychology of Entertainment Media (SBA)
Fall. 3 credits. Prerequisites: introductory psychology or COMM 1101 or 2200. M. Shapiro.
Every media format uses entertainment including video games, advertising, television, movies, sports, and news. This course examines the psychology (conscious and unconscious) of entertainment, including why people like entertainment, what makes a story entertaining, how people mentally process entertainment, what makes things frightening or funny, and can entertainment persuade.

COMM 4280 Communication Law
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. D. Grossman.
This course deals with the law governing communication media. Topics include First Amendment concepts, restraints on newsgathering and dissemination, libel, invasion of privacy, copyright protection, regulation of broadcast and nonbroadcast electronic media, advertising law, and current legal issues unique to online communication.

COMM 4290 Copyright in the Digital Age (also INFO 4290) (CA)
Fall. 3 credits. Offered odd-numbered years. T. Gillespie.
This course looks at recent legal and cultural battles about digital copyright, to investigate how participation in a digital world is structured: who speaks, what they can say, who hears, and with what consequences. We use these cases to look at the collision of authorship and the market, technology and law, individual and institution, culture and power.

COMM 4400 Advanced Human-Computer Interaction Design (also INFO 4400) (SBA)
Spring. 3 credits. Prerequisite: COMM/INFO 3450 or permission of instructor. D. Cosley, G. Gay, and staff.
Focuses on the design of computer interfaces and software from the user’s point of view. The goal is to teach user interface design that “serves human needs” while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 4450 Seminar in Computer-Mediated Communication (also INFO 4450) (SBA)
Spring. 3 credits. Prerequisite: COMM/INFO 2450. S. Fussell.
Focuses on reading and evaluating the theories and research methodologies used to investigate communication via computer systems. Assignments include student
collaborations using electronic conferencing and other advanced communication technologies, as well as reflections on and evaluations of these collaborations in light of current theories and research findings. Topics include virtual teams, videoconferencing, and others as they emerge.

**COMM 4500 Language and Technology (also INFO 4500) (SBA)**
Spring. 3 credits. J. Hancock and staff. Examines how new communication technologies affect the way we produce and understand language and modify interaction with another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

**COMM 4560 Community Involvement in Environmental Decisions (SBA)**
Spring. 3 credits. Prerequisite: junior or senior standing or permission of instructor. Offered odd-numbered years. K. McComas.
Community involvement is an essential part of environmental decision making, but it is also one of the most challenging aspects of the decision-making process. Through selected readings and course activities, this class will examine both traditional and contemporary methods of community involvement. When evaluating the methods, the class will discuss how social structures work to define criteria for success.

**COMM 4650 Mobile Communication in Public Life (CA)**
Fall. 3 credits. Prerequisites: COMM/INFO 2450, L. Humphreys. Mobile technology is an increasingly prominent tool for modern communication. This course will critically explore the role of mobile communication and its impact on public life. The course is divided into three main areas: social and political uses of mobile communication, mobility and sense of place, and mobile social software.

**COMM 4660 Public Communication of Science and Technology (also STS 4661) (SBA)**
Spring. 3 credits. Prerequisite: COMM 2850, or 3520, ENGRGC 3500, or permission of instructor. Offered even-numbered years. B. Lewenstein.
Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Examines the contexts in which PCST occurs, looks at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyzes the functions of PCST. Ties existing ideas about PCST to general communication research, and leads to developing new knowledge about PCST. Format is primarily seminar/discussion.

**COMM 4860 Risk Communication (SBA)**
Spring. 3 credits. C. Scherer.
Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Concentrates on social theories related to risk perception and behavior. Examines case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors. Emphasizes understanding, applying, and developing theories.

**COMM 4940 Special Topics in Communication**
Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor. S–U or letter grades. Study of topics not otherwise provided by a department course and determined by the interest of the faculty and students.

**COMM 4960 Communication Internship**
Fall or spring. Work component and variable. 1 credit; may be repeated once for a total of 2 credits. Prerequisite: COMM major or minor (first-, second-, third-, or fourth-year) for 1 credit (minimum 60 hours). K. Berggren.
Students receive a structured, on-the-job learning experience under the supervision of communication professionals in cooperating organization. A minimum of 60 hours of on-the-job work is required; the number of work hours beyond 60 is left to the discretion of the intern and the supervising company. A paper linking communication theory to practical work experience is required. All internships must be approved before the work experience segment by the internship coordinator. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

**COMM 4970 Individual Study in Communication**
Fall or spring. 1–3 credits; may be repeated to 6 credits with different supervising faculty member. Prerequisite: 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

**COMM 4980 Individual Study in Communication Teaching Experience**
Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Intended for undergraduates desiring classroom teaching experience. Prerequisites: satisfactory standing; 3.0 GPA (2.7 if teaching assistant for skills development course); permission of faculty member who supervises work and assigns grade. Students must register using independent study form (available in 140 Roberts Hall).
Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to attending with the actual instruction, each student prepares a paper on some aspect of the course.

**COMM 4990 Independent Research**
Fall or spring. 1–3 credits; may be repeated to 6 credits. Prerequisites: senior standing; 3.0 GPA. Students must register using independent study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific, systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

**COMM 4991 Independent Honors Research in Social Science**
Fall or spring. 1–6 credits. Prerequisite: undergraduate standing, requirements met for honors program. Staff. Intended for students planning the research honors thesis in communication. Students must complete the CALS Honors program application by the third week of the fall semester of their senior year. Students should select a faculty advisor and begin proposal development during their junior year.

**COMM 5560 Workshop in Science Communication for Scientists**
Spring. 2 credits. Prerequisite: graduate standing. B. Lewenstein.
This workshop will train researchers in the sciences (including natural sciences, engineering, experimental social sciences, etc.) to communicate effectively with nonscientists such as policy makers, political stakeholders, the media, and the general public. Training activities may include role-play, reading/discussion, writing press releases and other outreach materials, and discussion with invited speakers. Outside of the regularly scheduled activities, participants may include field trips to newsrooms and a training session with a professional media trainer.

**COMM 6100 Seminar in Social Networks**
Fall. 4 credits. Prerequisite: graduate standing. Offered even-numbered years. C. Yuan.

**COMM 6180 Media Influence and Persuasion**
Spring. 3 credits. Prerequisite: graduate standing. Offered odd-numbered years. S. Byrne.
This graduate seminar covers classic, influential, and disruptive theories of media influence and mediated persuasion. Readings include cutting-edge research in these theories across communication contexts. Students develop skills in operationalizing theoretical concepts in preparation for empirical test.

**COMM 6210 Advanced Communication and the Environment**
Spring. 3 credits. Offered odd-numbered years. K. McComas.
Students investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus is media's impact on public perceptions of the environment, how the media portray the environment, and the implications of the public consumption of environmental content. Lectures concurrent with COMM 4210; graduate students should enroll in COMM 6210.

**COMM 6220 Advanced Psychology of Entertainment Media**
Fall. 3 credits. Prerequisites: graduate standing and permission of instructor. M. Shapiro.
Graduate seminar examining the psychology (conscious and unconscious) of entertainment media (including video games, advertising, television, movies, sports, and news). Specific topics examined will vary. Depending on preparation, students may be asked to attend COMM 4220 lectures and take exams.

**COMM 6440 Human-Computer Interaction Design (also INFO 6440)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
D. Cosley, G. Gay, and staff.
Graduate-level readings and research supplementing COMM/INFO 4440. Focuses on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve their needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

**COMM 6450 Seminar in Computer-Mediated Communication (also INFO 6450)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
S. Fussell.
Graduate-level readings and research supplementing COMM/INFO 4500. Through close reading and research in communication and technology, and participation in projects using these technologies, students enhance experiential, theoretical, and critical understanding of contemporary computer-mediated communication systems and uses. Topics include virtual teams, videoconferencing, and others.

**COMM 6500 Language and Technology (also INFO 6500)**
Spring. 3 credits.
J. Hancock and staff.
Graduate-level readings and research supplementing COMM/INFO 4500. Examines how new communication technologies affect the way we produce and understand language and modify interaction with one another. Focuses on the collaborative nature of language use and how Internet technologies affect the joint activities of speakers and listeners during the construction of meaning in conversation.

**COMM 6660 Public Engagement in Science (also STS 6661)**
Spring. 3 credits. Offered even-numbered years.
B. Lewenstein.
In recent years, the scientific community has increasingly referred to "public engagement in science." This seminar explores the scholarly literature addressing that move; the links between "public engagement" and earlier concerns about sciences literacy, public understanding of science, and outreach; and the intersections between literature in communication and in science studies on issues involving the relationships among science(s) and public(s).

**COMM 6760 Public Health Communication**
Spring. 3 credits. Prerequisite one graduate-level research methods course.
Offered even-numbered years.
J. Niederdeppe.
This graduate course provides an overview of theory and research on public communication related to health behavior and policy change. Topics include theories of behavior change and message effects; formative and evaluative research; campaigns related to cancer, AIDS, obesity, smoking, nutrition, and drug use; and heterogeneity in campaign effects between populations.

**COMM 6800 Studies in Communication**
Fall. 3 credits. Prerequisite: communication graduate students or permission of instructor.
S. Fussell.
Reviews classical and contemporary readings in communication, including key concepts and areas of investigation. Explores the scope of the field, the interrelationships of its various branches, and examines the role of theory in the research process.

**COMM 6810 Advanced Communication Theory**
Spring. 3 credits. Prerequisite: COMM 6800 or graduate standing and permission of instructor.
M. Shapiro.
Development of, and contemporary issues in, communication theory. Discusses the interaction between communication and society, social groupings, and mental processing.

**COMM 6820 Methods of Communication Research**
Fall. 3 credits. Recommended: familiarity with basic statistical concepts.
J. Birnholtz.
Analyzes methods of communication research based on a social science foundation. Goals will be to understand processes and rationales for qualitative, textual, survey, and experimental methods and to experience each method through modest individual or group research projects. Critiques of selected contemporary communication studies.

**COMM 6830 Qualitative Research Methods in Communication**
Spring. 3 credits. Prerequisite: COMM 6820 and graduate standing.
L. Humphreys.
Course will review qualitative methods used in communication research, including interviews, focus groups, fieldwork (ethnography), and case studies. Students will practice the various methods so they can learn to apply them to their own research. Course will also discuss how researchers analyze qualitative data and build theories from their observations.

**COMM 6840 Theory and Research in Group Communication and Decision Making**
Fall. 3 credits. Offered odd-numbered years.
P. McLeod.
This graduate seminar will focus on theory and research in communication and decision-making in small groups. Emphasis will be on task-oriented groups. Topics will include information exchange, decision-making processes, types of tasks, social influence, group development processes, group support systems, intergroup processes, and leadership. Special attention will be given to methodological challenges in group research.

**COMM 6860 Risk Communication**
K. McComas and C. Scherer.
Examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks.

**COMM 6910 Seminar: Topics in Communication**
Fall and spring. 0 credits. Staff.
Scholars from a wide variety of fields present varied topics in theory or research as it relates to communication.

**COMM 6940 Special Topics in Communication**
Fall, spring, or summer. 1–3 credits, variable. Prerequisite: permission of instructor.
Study of topics in communication not otherwise provided by a department course and determined by the interest of faculty members and students.

**COMM 6950 Structural Equation Modeling Techniques in Social Science Research**
Spring. 3 credits. Prerequisite: course in multiple regression; graduate standing.
C. Yuan.
This is an advanced research methods class for graduate students in the social sciences with an emphasis on data analysis using structural equation modeling (SEM). The class will cover both its basic principles and practical applications (e.g., multi-group models, growth curve models) using LISREL/PRELIS software.

**COMM 7810 Seminar in Psychology of Communication**
Spring. 3 credits. Prerequisite: COMM 6800 and 6810 or equivalent graduate-level theory in psychology or social psychology.
Offered odd-numbered years.
M. Shapiro.
Discusses and analyzes selected current issues in the psychology of communication. Students discuss and synthesize current research and theory in the mental processing of communication.

**COMM 7940 Seminar in Communication Issues**
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

**COMM 7970 Graduate Independent Study**
Fall, spring, or summer. 1–3 credits.
Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

**COMM 7990 Communication Teaching Laboratory**
Fall and spring. 1–3 credits each semester; may be repeated once.
Prerequisite: graduate standing and permission of faculty member who will supervise work and assign grade. Students must use faculty member's section number to register.) Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

**COMM 7990 Graduate Research**
Fall, spring, or summer. 1–3 credits.
Prerequisite: appropriate communication graduate course work or permission of instructor.
Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.
COMM 8900 Master's-Level Thesis Research
Fall or spring. 1–6 credits; may be repeated for max. of 6 credits. Prerequisite: permission of committee chair. Thesis research for M.S. (communication) students.

COMM 9900 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits; may be repeated for max. of 9 credits. Prerequisite: completion of "A" exam; permission of committee chair. Dissertation research for Ph.D. candidates.

CROP AND SOIL SCIENCES

Courses by Subject

Crop Science: 2110, 3150, 3170, 4030, 4050, 4140, 4200, 4440, 4551–4555, 5680, 6100, 6120, 6140, 6420, 6941, 7910, 8900, 9910

Environmental Information Science: 3970, 4100, 4110, 4200, 4650, 6200, 6210, 6600, 6740, 6970, 7920, 8910, 9920

Soil Science: 1220, 2600, 3210, 3620, 3630, 3650, 3720, 4220, 4600, 4720, 4850, 6650, 6660, 6690, 6710, 6720, 6840, 6942, 7900, 8920, 9900

General Courses

CSS 1900 Sustainable Agriculture: Food, Farming, and the Future
Fall. 3 credits. Limited to 60 students. G. W. Fick. Designed to introduce basic food production resources in the context of the human aspects of farming. The information is of general value for nonmajors and students new to the field. Several field trips enhance appreciation for the diversity of agriculture.

CSS 2940 Introduction to Agricultural Machinery (also AGSCI/HORT 2940)
Fall. 2 credits. B. Plannigan and A. DiTommaso. This course is an overview of agricultural machinery used in the production of field crops. Information will be presented in a lecture and field laboratory format, stressing “hands-on” equipment demonstrations and use, particularly of tractors. Successful completion will provide a broad understanding of agricultural machinery operation and design rationale.

CSS 2800 Organic Food and Agriculture (also AGSCI/HORT 2800)
Fall. 3 or 4 credits. Prerequisites: CSS 1900, CSS 2600, HORT 110 recommended, or permission of instructor. Discussion of techniques and methods of organic food production, including vegetables, orchard crops, grains and animal systems. Critically evaluates relevant issues that affect the environment, consumers, and the industry. Optional lab includes interaction with experts, field trips to farms, and living laboratory at Dilmun Hill.

CSS 4910 Food, Farming, and Personal Belief (also IARD 4910)
Spring. 1 credit. Recommended: Sustainable Agriculture (CSS 1900) or equivalent. G. Fick. Reading and discussion course focusing on the relationship between agricultural sustainability and religious faith, especially the linkage between the motivation to adopt practices of sustainability and personal value systems of farmers and consumers. Principles of scientific agriculture are examined with the holistic view of sustainable development.

CSS 4940 Biotechnology and Development (also GOVT 4300)
Spring. 2 credits. Sec 2: J. E. Thies and R. J. Herrig. Class discussions, presentations, and scholarly and popular articles are used to introduce students to the dominant contents around biotechnology in the context of international development.

CSS 4940 Special Topics in Crop and Soil Sciences (undergraduate level)
Fall or spring. 1–4 credits max. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department before the semester begins. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

CSS 4970 Individual Study in Crop and Soil Sciences
Fall or spring. 1–6 credits. Students must register using independent study form (available in 140 Roberts Hall). Topics in soil science, crop science, or environmental information science are arranged at the beginning of the semester for individual study or for group discussions.

CSS 4980 Teaching Experience in Crop and Soil Sciences
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). Teaching experience in soil science, crop science, or environmental information science is obtained by assisting in the instruction of a departmental course. This course should not be taken by teaching assistants.

CSS 4990 Undergraduate Research
Fall or spring. Credit TBA. Students must register using independent study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, soil science, or environmental information science.

CSS 6900 Scientific Method in Practice
Spring. 1 credit. Prerequisite: Junior, senior, or graduate standing. H. G. Gauch, Jr., and G. W. Fick. Students in this course study Hugh Gauch’s book Scientific Method in Practice, which is designed to help scientists become better scientists through deeper understanding of common themes that extend across the disciplines. Topics include the history and philosophy of science, reliance on evidence, deductive and inductive logic, probability, parsimony, and hypothesis testing.

CSS 6950 Planning and Reporting Research
Summer, six-week session. 3 credits. P. Hobbs.

This course is designed to help graduate students improve their technical writing skills for various scientific outputs. Students will be guided through written output that includes review articles, scientific papers, thesis, research and funding proposals, manuscripts, and Power Point and slide presentations. The goal will be to increase proficiency in writing that will improve the chances of acceptance of research outputs in good quality, refereed publications. The students will also review ways to present data in tables and figures with proper statistical analysis. Professional ethics in the conduct and communication of science will also be covered. Much of the course will have students using their own research data in preparation of various good quality publications and outputs. Special attention will be given to M.P.S. students who need to complete a problem-solving or applied project.

CSS 6960 Agroecological Perspectives for Sustainable Development
Fall and spring. 1 credit. S–U grades only. L. Buck, L. Fisher, and P. Hobbs. Agroecological perspectives for sustainable development.

CSS 6970 Seminar in Crop and Soil Sciences
Fall and spring. 1 credit. S–U grades only. H. van Es. Covers current research and selected topics in the crop and soil sciences and related fields.

CSS 6980 Graduate Teaching or Extension Experience
Fall. 1–12 credits. S–U or letter grades. H. G. Gauch, Jr. Planning and teaching courses or extension programs under the supervision of departmental faculty. This may include lectures, laboratories, discussion sessions, workshops, in-service training events, etc.

CSS 7970 Graduate Individual Study in CSS
Fall and spring. 1–6 credits.

Crop Sciences

CSS 2110 Field Crop Systems
Fall. 4 credits. Prerequisite: None. Two to four field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, village systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation.

CSS 3150 Weed Biology and Management
Fall. 4 credits. Prerequisite: Introductory course in biology or botany. A. DiTommaso. Examines principles of weed science. Emphasizes (1) weed biology and ecology; (2) weed-management strategies used in agricultural and natural ecosystems; and (3) chemistry of herbicides in relation to effects on plant growth and the environment. Hands-on laboratory sessions cover weed identification and ecology, crop-weed interactions, herbicide application, selectivity, and symptomology.
CSS 4170 Seed Science and Technology (also HORT 3170)  
Fall. 3 credits. Prerequisite: BIOL 2410 or equivalent. Two all-day field trips. Next offered 2011–2012. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

CSS 4030 Traditional Agriculture in Developing Nations (also IARD 4030)  
Fall. 1 credit. S–U grades only. P. Hobbs. Half the world’s arable land is farmed by traditional farmers who have produced food and fiber for millennia with few outside inputs. Many of these practices are forgotten but some are still used by farmers in developing countries. This course examines the pros and cons of some of these traditional systems.

CSS 4050 Field Crop Systems  
Fall. 4 credits. Prerequisite: none. Two to four field trips during lab periods (until 5 p.m.) or on weekends. R. L. Obendorf. Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, tillage systems, liming and mineral nutrition, cropping sequences, management systems, nutrition and health, and crop improvement are considered. Grain, protein, oil, fiber, biofuel, and forage crops are emphasized. Laboratory utilizes living plants, extensive crop garden, and computer simulation. Lab report and term paper on contemporary field crop systems required. Designed for professional students or advanced undergraduates. Credit for both CSS 4050 and CSS 2110 (or CSS 3110) not permitted.

CSS 4130 Physiology and Ecology of Yield  
Spring. 3 credits. Prerequisites: coursework in plant physiology or molecular biology or biochemical, or advanced plant science. T. L. Setter. Study of processes involved in the conversion of solar energy into harvested plant products and environmental constraints on crop productivity. Topics include photosynthesis and essential processes that utilize photosynthetic energy, including nitrogen assimilation, phloem translocation and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root, and floral/fruit/grain sinks in response to environment; seed and fruit set; water transport and stomatal regulation; root architecture and function, and behavior in water-limited situation. Examples will be from the full spectrum of crops and model-plant systems. Students will develop an ability to identify processes that could be improved through optimization of crop cultural practices or genetic change.

CSS 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also IARD 4140)  
Fall. 3 credits. Prerequisite: introductory crop science or soil science or biology course or permission of instructor. P. Hobbs. Characterizes and discusses traditional shifting cultivation; lowland rice-based systems; upland cereal-based systems; smallholder mixed farming including root crops and livestock; plantation fruit and oil crop systems; and agroforestry. In addition to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. Evaluates the impact of tropical cropping systems on the environment.

CSS 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/NTRES 4260)  
Fall. 2 credits. K. W. Mudge, L. E. Buck, and P. Hobbs. For description, see HORT 4260.

CSS 4440 Integrated Pest Management (also ENTOM 4440)  
Fall. 4 credits. Prerequisites: biology course or permission of instructor. J. E. Losey and A. DiTommaso. For description, see ENTOM 4440.

CSS 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also HORT 4551–4555)  

CSS 6080 Water Status in Plants and Soils  
Fall. 3 credits. Prerequisite: permission of instructor. S–U grades only. Next offered 2011–2012. T. L. Setter. This is a lecture and lab course that introduces students to techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, soil water content analyzers, sap flow instrumentation, and abscisic acid analysis with ELISA.

CSS 6100 Physiology of Environmental Stresses  
Fall. 3 credits. Prerequisite: course work in plant physiology and/or plant molecular biology or permission of instructor. Next offered 2010–2011. T. L. Setter and O. Vatamaniuk. Study of the responses of plants to environmental stresses, including drought, high temperature, salinity, chilling, freezing, hypoxia, and toxic elements. Emphasizes the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

CSS 6120 Seed Biology  
Fall. 3 credits. Prerequisite: plant physiology course or permission of instructor. R. L. Obendorf. Describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events, including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems for improved health.

CSS 6140 Weed Ecology and Management  

CSS 6420 Mineral Nutrition: From Plants to Humans (also BIOPL 6420)  

CSS 6941 Special Topics in Crop Science  
Fall or spring. 1–6 credits. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered depend on staff and student interests.

CSS 7910 Graduate-Level Thesis Research in Crop Science  
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for Ph.D. students before "A" exam has been passed.

CSS 8900 Master's-Level Thesis Research in Crop Science  
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for M.S. candidates.

CSS 9910 Doctoral-Level Dissertation Research in Crop Science  
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after "A" exam has been passed.

Environmental Information Science

CSS 3970 Environmental Microbiology (also BIOMI 3970)  
Spring. 3 credits. Prerequisite: BIOMI 2900. Recommended: BIODE 2610, NTRES 3030, or permission of instructor. Offered alternate even-numbered years. E. L. Madsen. Discusses the biology, behavior, and functions of microorganisms in natural environments in relation to past and present environmental conditions on Earth. Also considers the role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

CSS 4100 The GMO Debate: Science and Society  
Spring. 3 credits. Prerequisite: BIOL 1109 or equivalent. J. Thies and P. Hobbs. Biotechnology is causing global changes in agricultural production systems. Social movements have arisen to contest the adoption of transgenic or genetically modified organisms. Students will assess the science behind this debate and examine the interplay among science, society, and politics. We introduce the history of the GMO debate, how GMOs are developed, and their potential impacts on agriculture, the environment, and the food system. Social movements contest deployment of biotech products on grounds of food sovereignty, intellectual property,
CSS 4110 Environmental Information Science (also CEE 4110)
Spring. 3 credits. Prerequisite: permission of instructor. S. DeGloria and S. Hoskins. Survey of geo-spatial data and information applied to the science of natural and environmental systems. Experimental approaches emphasize use and integration of maps, spatial databases, aerospace imagery, field data, and the global positioning system (GPS) to discriminate, measure, inventory, and monitor agricultural and environmental resources and processes.

CSS 4200 Geographic Information Systems
Fall. 4 credits. Prerequisite: CSS 4110 or equivalent or permission of instructor. S. DeGloria. Principles and applications of geographic information systems for characterizing and assessing agronomic and environmental systems. Emphasizes accessing, updating, analyzing, and mapping geo-spatial data and information. Considers information needs assessment; spatial data accession; coordinate systems; spatial database design, construction, and maintenance; modeling and analysis; map accuracy assessment; and digital cartography.

CSS 4650 Global Positioning System
Spring. 3 hrs/wk. 1 credit. Prerequisite: CSS 4110 or 4200, or equivalent, or permission of instructor. S. DeGloria. Introduction to navigation-grade GPS instruments used in agricultural and environmental science. Topics include instrument familiarization; field-data collection and processing; real-time and post-differential correction; and GPS-GIS integration and mapping of geo-positional data.

CSS 6200 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: CSS 4110 or CSS 4200, or equivalent, or permission of instructor. Next offered 2011–2012. S. DeGloria. Theory and practice of applying geo-spatial data for resource inventory and analysis, biophysical process modeling, and land surveys. Emphasizes use and evaluation of spatial analytical methods applied to agronomic and environmental systems and processes. Laboratory section is used to process, analyze, and visualize geo-spatial data of interest to the student.

CSS 6210 Applications of Space-Time Statistics
Spring. 2 credits. Prerequisite: BTRY 6010 or equivalent. S–U grades only. Offered alternate years; next offered 2010–2011. H. Van Es. Introduction to space-time statistics with applications in agriculture and environmental management. Topics include geostatistics, temporal statistics, sampling, experimental design, state-space analysis, data mining, and fuzzy logic. Focuses on landscape-scale processes and a user's perspective.

CSS 6600 Remote Sensing Fundamentals (also CEE 6100)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

CSS 6740 Environmental Genomics
Spring. 2 credits. D. Buckley. Genomics opens new avenues for exploring interactions between organisms and their environment. Through lectures and discussion of current research we will learn how genomic tools can provide insight on processes occurring at individual, population, and ecosystem scales that govern the response of biological systems to environmental change. Emphasis will be placed on microbial systems, but this course will also be useful to those interested in the other applications of environmental genomics. The course will provide students with experience in writing and reviewing grant proposals by culminating in the creation of the short research proposals to be reviewed by the class in the style of an NSF panel.

CSS 6750 Modeling the Soil-Plant-Air System (also EAS 6750)
Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

CSS 6943 Special Topics in Environmental Information Science
Fall or spring. Staff. Study of topics in environmental science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

CSS 7920 Graduate-Level Dissertation Research in Environmental Information Science
Fall or spring. TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. students before ‘A’ exam has been passed.

CSS 8910 Master’s-Level Thesis Research in Environmental Information Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for master’s students.

CSS 9920 Doctoral-Level Dissertation Research in Environmental Information Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after ‘A’ exam has been passed.

Soil Science

CSS 1120 Microbes, the Earth, and Everything (also BIOMI 1120)
Fall. 3 credits. D. Buckley and E. Angert. We live on a microbial earth. If we happen to consider microbes in our daily lives most people conjure images of disease, but in reality we depend on microbes to sustain our world. This course will showcase the vast microbial world that hides in plain sight all around us and use microbial examples to explore both fundamental biological principles and the scientific method. Course modules will emphasize basic concepts from: evolution, molecular biology and genetics, diversity, and ecology. Learn about the tiny titans and miniature monsters that are the life support system of our planet, how they have shaped human civilizations, and how they reveal the unifying principles of life.

CSS 2600 Soil Science
Fall. 4 credits. J. Russell-Anelli. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective. Divided into three units: (1) soil information unit introduces students to soil characterization, testing, mapping, classification, GIS—tools and evaluation; (2) soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution, and soil health; (3) unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs are initially field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs focus on accessing, interpreting, and applying soil information.

CSS 3210 Soil Management for Sustainability
Spring. 2 credits. Prerequisite: CSS 2600 or equivalent. H. van Es, J. Lehmann, and J. Thies. Integrated perspectives on the physical, biological, and chemical aspects of soil management in the broader context of agroecosystems. Understanding of the interactions between soil, water, organisms, and chemical inputs forms the basis for discussions on conventional and organic cropping systems, soil health, water quality and quantity, bioenergy, greenhouse gases, and sustainability. Lab sessions elaborate through case studies and discussion of current topics.

CSS 3620 Soil Morphology
Fall, spring. 1 credit. Prerequisite: undergraduate standing. Recommended for sophomores and juniors. One all-day field trip required. Next offered 2010-2011. J. Russell-Anelli. Presents the principles for field identification of soil properties, profiles, and landscapes. A series of soil pits are examined, described, classified, and interpreted in the field.
CSS 3630 Soil Genesis, Classification, and Survey
Fall. 4 credits. Prerequisite: CSS 2600. One all-day field trip required. J. Russell-Anelli. Discusses factors and processes of soil formation on which soil survey is based. Practices principles of field identification, classification, survey, and interpretation in a field setting. Provides an overview of soil databases, their content, development, and use for site evaluation and land classification.

CSS 4660 Soil Ecology (also HORT 4660)
Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way organic farming and soil conservation affect the fate of nutrients in agroecosystems.

CSS 3720 Nutrient Management in Agroecosystems
Spring. 4 credits. Prerequisite: CSS 2600 or permission of instructor. Graduate students should enroll in CSS 4720. J. Lehmann. Familiarizes students with the basic concepts of soil fertility and biogeochemistry and how soil and environmental properties affect nutrient availability and cycling. Discussion focuses on the way organic farming and soil conservation affect the fate of nutrients in agroecosystems. Emphasizes the way organic farming and soil conservation affect the fate of nutrients in agroecosystems.

CSS 4660 Applied Plant-Microbe Interactions
Fall. 3 credits. Prerequisite: CSS 3610 or permission of instructor. Next offered 2010–2011. J. Russell-Anelli. Weathering, reactions, and processes of soil genesis; principles of soil classification and the rationale and use of soil taxonomy; development and significance of major groups of soils of the world.

CSS 6690 Organic Matter—Soils, Sediments, and Waters
Spring. 3 credits. Prerequisites: CSS 2600 and CHEM 3570–3580 or equivalent. J. M. Dixbury. Discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Includes a modeling project of soil carbon dynamics in natural or agricultural ecosystems.

CSS 6710 Soil Chemistry
Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. M. B. McBride. Detailed examination of the structure and surface chemistry of colloidal particles important to the function of soils. Emphasizes ion exchange; mineral-solution equilibria; and adsorption reactions of soluble cations, oxides, and organic matter. Describes the sorption behavior of environmental contaminants in soils, particularly metals and xenobiotics.

CSS 6720 Nutrient Cycling in Natural and Managed Ecosystems
Fall. 3 credits. Prerequisite: CSS 3720 or NTRES 5210 or BIOE 4780, or permission of instructor. Next offered 2010–2011. J. Lehmann. Examines the biogeochemistry and cycles of nutrients in terrestrial ecosystems, and the interface with the biosphere, atmosphere, and hydrosphere, using hands-on field experimentation and research proposals.

CSS 6840 Topics in Soil Microbial Ecology

CSS 8920 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. students before “A” exam has been passed.

CSS 9900 Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Dissertation research for Ph.D. candidates after “A” exam has been passed.

DEVELOPMENT SOCIOLOGY

DSOC 1101 Introduction to Sociology (SBA) (KCM)
Fall or spring. 3 credits. Students may not take both DSOC 1101 and SOC 1101 for credit. Fall, T. Hirschel; spring, A. Gonzales.

Introduction to theory and research in sociology. Demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. Provides “hands-on” experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is
presumed; necessary skills are covered in class and section meetings.

**DSOC 1200 Development Sociology**
First-Year Writing Seminar (SBA)
Fall, spring. 3 credits. Staff.
The department offers first-year writing seminars on a wide range of development sociology topics. Consult John S. Knight Writing Seminar Program brochures for instructors and descriptions.

**DSOC 2010 Population Dynamics (also SOC 2220) (SBA)**
Spring. 3 credits. ALS students must enroll in DSOC 2010. S–U or letter grades.
A. Basu and D. Brown.
This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and immigration) and social and economic issues. Discussion will cover special topics related to population growth and spatial distribution, including marriage and family formation, population aging, changing roles and statuses of women, labor force participation, immigrations, urban growth and urbanization, resource allocation, and the environment.

**DSOC 2050 International Development (also SOC 2226) (SBA) (HA)**
Spring. 3 credits. P. McMichael.
Examines new questions concerning development models in the post-Cold War era from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using various theoretical perspectives, the course examines Southern societies (economics, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technological innovations. Also examines the new global justice movements, such as environmentalism, feminism, and landless workers, peasant, and grassroots activism.

**DSOC 2070 Problems of Contemporary Society (also SOC 2070) (SBA)**
For description, see SOC 2070.

**DSOC 2090 Social Inequality (also SOC 2228) (SBA)**
For description, see SOC 2228.

**DSOC 2150 Introductory Organizations (also SOC 2150) (SBA)**
For description, see SOC 2150.

**DSOC 2200 Sociology of Health of Ethnic Minorities (also LSP 2200) (SBA) (D)**
Fall. 3 credits. S–U or letter grades.
P. A. Parra.
Discusses the health status of minorities in the United States. Explores intragroup diversity such as migration, economic status, and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

**DSOC 2201 Society and Natural Resources (also NTRES 2201) (SBA)**
For description, see NTRES 2201.

**DSOC 2220 Controversies About Inequality**
For description, see SOC 2220.

**DSOC 2650 Latinos in the United States (also SOC 2650, LSP 2660) (SBA)**
For description, see SOC 2650.

**DSOC 2750 Immigration and a Changing America (SBA) (HA)**
Spring. 3 credits. S–U or letter grades.
D. Gurak.
Immigration helped America become the nation that it is today. While many experts thought that immigration's contribution to American history ended in the early 1900s, immigration surged to historic highs in the second half of the 20th century and shows no signs of diminishing in the 21st century. This course examines the economic, social, and policy forces that underlie contemporary U.S. immigration and the impacts that immigrants are having on the American economy and society today. It looks in detail at who the new immigrants are, why they come to America, where they live, and what roles they fill in America.

**DSOC 3010 Theories of Society and Development (SBA) (KCM)**
Spring. 3 credits. Prerequisite: development sociology or sociology course. S–U or letter grades. F. Makki.
Introduction to the "classical" sociological theorists (Marx, Weber, Durkheim) of the late 19th and early 20th century. Also addresses the dramatic social upheavals of the industrialization, capitalism, and rise of bureaucracy to which these thinkers reacted and the inspiring (and frustrating) visions for the future which they offered. Emphasizes the intellectual history, the influence of the theorists on subsequent sociology, and the potential for relevance to contemporary society.

**DSOC 3050 Education, Inequality, and Development (SBA)**
Spring. 3 credits. Prerequisite: introductory social science course or permission of instructor. Letter grades. P. Eloundou-Enyegue.
The main goal of this course is to examine the functions of education institutions, as they affect individual welfare, inequality, and development. It begins with a review of basic definitions and measures of education, inequality, and development, it then examines the individual and societal functions of education, from theoretical perspectives drawn from sociology, economics, and demography. The insights from these various perspectives are examined critically. The course also reviews studies that have examined how investments in education appear to affect selected outcomes.

**DSOC 3060 Farmworkers: Contemporary Issues and Their Implications (SBA)**
Fall. 1 credit. S–U or letter grades.
M. J. Duarte.
Introduction to contemporary issues of farmworkers in the United States. Examines issues related to unauthorized immigrant workers, farmworker demographics, farmworker access to health services, labor concerns, farmworker needs, and integration into new home communities. Will include guest lectures by faculty members from throughout the university currently engaged in related research.

**DSOC 3130 Social Indicators and Introduction to Social Science Research (SBA)**
Spring. 3 credits. P. Eloundou-Enyegue.
This course is an introduction to social science research. It reviews the general process through which social scientists derive credible answers to important questions about social change and social influences on individual behavior. It covers all steps in the research process, from the formulation of a research question to the final presentation of findings. The course is designed as a preparation for future work in social science research, but it is also intended for students who simply want to sharpen their capacity to evaluate the claims made by researchers. The course combines theory and application. A real-life research project on campus is used to apply the concepts and ideas from the textbook and lectures.

**DSOC 3140 Spatial Thinking, GIS, and Related Methods (SBA) (KCM)**
Fall. 4 credits. Letter grades only.
J. Francis.
Everything occurs in space. Knowing where organizations are located, events occur in space provides clues to understanding social order and processes not revealed by traditional social analysis techniques. At the same time, spatial thinking and methods are becoming increasingly used in the social sciences. The purpose of this course is to introduce the undergraduate to both aspects of spatial patterns, trends, and themes but also to methodologies for bringing spatial considerations into their research. The course will provide a practical introduction to GIS via lab assignments.

**DSOC 3240 Environment and Society (also STS 3241, SOC 3240) (SBA)**
Spring. 3 credits. G. Gillespie.
The main objective is to develop a critical understanding of the dominant trends in modern U.S. environmental thought, such as preservationism, conservatism, deep ecology, social ecology, NIMBYism, risk assessment, ecological modernization, and environmental equity. The second objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, resource depletion, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

**DSOC 3290 Latin American Politics, Economy, and Society (also GOVT 3992, LATA 3290)**
Spring. 3 credits. Prerequisite: introductory sociology recommended. S–U or letter grades. G. Flores-Macias.
This course is designed as an introduction to political, economic, and social issues in 20th-century Latin America. In the first section of the course the region is analyzed through a political lens, focusing on issues including state formation, populism and corporatism, revolutions, the breakdown of democracy, military rule, and democratization. We then turn to issues under the heading of economic perspectives including dependency theory, import substitution industrialization, the debt crisis, market reform, and the period of the post-Washington Consensus. The third section of the course presents a selection of the region's...
central social issues including class structures, civil-military relations, church-state relations, social movements, and both internal and international migration. Throughout the semester, we will make reference to specific countries to illustrate each topic. Knowledge of Spanish or Portuguese is not required.

**DSOC 3311 Environmental Governance**

Analyses the changing structure and role of small towns and rural areas in developed nations. Focuses on adaptation of rural communities and populations to major trends, including increased societal differentiation and complexity; increased societal interdependence; and rapid social, economic, technological, and ecological change.

Consider alternative policies to ameliorate rural problems and enhance rural contributions to national development. Students participate in group research projects in rural communities.

**DSOC 3340 Agriculture, Food, and Society (SBA) (KCM)**

Analyzes the changing structure and role of an increasing global society. Theoretical perspectives applied to precedent-setting constitutional issues that impact Latina/os and African Americans. Examines the relationships between these transitions and the social, economic, or political changes being experienced by diverse societies prior to, during, and following the onset and conclusions of the demographic shifts. Case studies from diverse historical periods and geographic locations are used. Graduate students also meet with the instructor every other week to discuss graduate readings and topics relevant to their papers.

**DSOC 4630 Islam in Africa and Its Diaspora**

For description, see ASRC 4630.

**DSOC 4810 Global Conflict and Terrorism (SBA) (KCM)**

Reviews and discusses issues concerning global development and its relationship to conflict and terrorism. Each class session focuses on a specific topic presented by either a faculty member or a guest speaker leading the discussion and actively engaging the students. The weekly discussion section focuses on discussing in greater depth the reading assignments.

**DSOC 4940 Special Topics in Development Sociology (SBA)**

For description, see ASRC 4940.

**DSOC 4960 Internship in Development Sociology (SBA)**

For description, see ASRC 4960.

**DSOC 4970 Independent Study in Development Sociology (SBA)**

For description, see ASRC 4970.

**DSOC 4991 Independent Honors Research in Social Science (SBA) (KCM)**

For description, see ASRC 4991.

**DSOC 5500 Analytical Mapping and Spatial Modeling (also CRP 6290) (SBA) (KCM)**

For description, see ASRC 5500.
socioeconomic, political, and demographic analysis. Recent research in these fields has demonstrated that understanding spatial relationships, in addition to other factors that account for differences and similarities between people and organizations, significantly increase our explanatory power. The first part of the course focuses on various features of GIS that are most useful to social scientists in their endeavors. The second part of the course introduces spatial statistics that further this understanding as well as control for spatial autocorrelation when it exists.

**DSOC 6001 The Empirics of Development and Social Change (SBA)**
Spring. 3 credits. Prerequisite: graduate standing. P. Eloundou-Enyegue.
The purpose of this course is to review, critique, and apply several analytical approaches for measuring and explaining societal change. As such, it serves as a complement to theories of development. More broadly, the course critically examines the empirical record on global development, drawing from several methodological approaches, both quantitative and qualitative.

**DSOC 6030 Classical Sociological Theory**
Fall. 4 credits. Prerequisite: graduate students only. M. J. Pfeffer.
Reviews the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, Marx, and Simmel. Course materials include original texts and secondary literature used to examine the concepts, methods, and explanation in classical sociological thought. Important objectives are to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

**DSOC 6060 Sociological Theories of Development**
Spring. 3 credits. Prerequisite: DSOC 6030 or permission of instructor. F. Makki.
Critical examination of a historical range of theories and research in the sociology of development from the postwar period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and criticized both theoretically and in terms of practical challenges from environmental, indigenous, and other social movements.

**DSOC 6080 Demographic Techniques (also PAM 6060)**
Spring. 3 credits. Prerequisite: multivariate statistics or permission of instructor. S–U or letter grades. D. Lichter.
Introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

**DSOC 6150 Qualitative Research Methods**
Fall or spring. 4 credits max. Prerequisite: graduate standing. S–U or letter grades. The department teaches “trial” courses under special arrangements.
Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multilayered entity anchored in...
an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

**DSOC 7600 Environment and Social Transitions: Graduate Seminar in Environmental Sociology (also NTRES 7600)**

Spring or fall. 3 credits. Graduate Students Only. Graduate faculty.
Graduate seminar in advanced sociology-of-environment themes. We seek to focus analysis on contemporary sociocological transitions and their implications, theoretical and applied. Attention will be directed toward ecological, social, political, and technological dimensions of policy regimes, conventions, and governance. The seminar aims to understand and advance social science responses to prevailing paradigms in domains of conservation, energy, climate, agriculture, and natural resource conservation; the emphasis will rotate according to year and instructor.

**DSOC 7900 Graduate-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S–U or letter grades. Graduate faculty.
Thesis research for Ph.D. students only before "A" exam has been passed.

**DSOC 7910 Teaching Experience**

Fall or spring. 1–3 credits. Prerequisite: DSOC graduate standing. S–U grades only. Graduate faculty.
Participation in the ongoing teaching program of the department.

**DSOC 8720 Development Sociology**

Prerequisite: master's and doctoral degree candidates, permission of graduate field member concerned. S–U or letter grades. Graduate faculty.

**DSOC 8900 Master's-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S–U or letter grades. Graduate faculty.
Thesis research for master's students.

**DSOC 9900 Doctoral-Level Thesis Research**

Fall or spring. Credit TBA. Prerequisite: DSOC graduate standing and permission of instructor. S–U or letter grades. Graduate faculty.
Thesis research for Ph.D. candidates after "A" exam has been passed.

**Related Courses in Other Departments**

(Others may be added)
Population Dynamics (SOC 2050)
Gender Relations, Gender Ideologies, and Social Change (FGSS 5240)

**EARTH AND ATMOSPHERIC SCIENCES**

**General Courses**

**EAS 1150 Severe Weather Phenomena**

Summer. 3 credits. S–U or letter grades. M. W. Wysocki.
A description of the structure of the Earth's atmosphere and forces that govern its motion will be presented and then applied to understanding the aspects of severe weather including snowstorms/lake effect snow, windstorms, tornadoes, thunderstorms, tropical cyclones, El Niño, floods, drought, and heat waves.

**EAS 1400 Freshman Writing Seminar “Writing in the Sciences: Environmental Perspectives”**

Spring. 3 credits. S. Jessup.
This course is a Freshman Writing Seminar in which students examine interactions between humans and the natural environment from individual, societal, and scientific perspectives. Readings include a brief historical survey of humanity's role within the natural world and short readings about current environmental issues. Includes a research project where each student explores a current environmental issue.

**EAS 2500 Meteorological Observations and Instruments**

Fall. 3 credits. M. W. Wysocki.
Covers methods and principles of meteorological observations and measurements including surface, free-air, and remote systems. Also covers instrument sitting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis.

**EAS 4980 Teaching Experience in Earth and Atmospheric Sciences**

Fall, spring. 1–4 credits. S–U grades only. Students must register using independent study form. Staff.
The student assists in teaching an EAS course appropriate to his or her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses course objectives and teaching techniques with the faculty member in charge of the course.

**Atmospheric Science**

**EAS 1310 Basic Principles of Meteorology**

Fall. 3 credits. M. W. Wysocki.
Simplified treatment of the structure of the atmosphere: heat balance of the Earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. The optional 1-credit laboratory for the course is offered as EAS 1350.

**EAS 1320 Basic Meteorology Lab**

This course is required for atmospheric science majors but is optional for other students taking EAS 1310.

**EAS 1340 Weather Analysis and Forecasting**

Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1350. S–U grades only. M. W. Wysocki and staff.
This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific atmospheric storms (synoptic and mesoscale, including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

**EAS 2500 Meteorological Observations and Instruments**

Fall. 4 credits. Prerequisite: EAS 1310. M. W. Wysocki.
Covers methods and principles of meteorological measurements and observations including surface, free-air, and remote systems. Also covers instrument sitting, mounting, and protection; instrument response characteristics, calibration, and standardization; and recorders and data logging systems. Laboratory exercises are in observation and data analysis.

**EAS 2680 Climate and Global Warming**

Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.
Familiarizes students from a range of disciplines with such contemporary issues in climatology as global warming and El Niño. Introduces the natural greenhouse effect, past climates, and observed and project climate changes and impacts. Also covers natural climate variations (e.g., El Niño) and their consequences and predictability. Readings focus on recent scientific findings related to climate change.
EAS 2960 Forecast Competition
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded after second semester; may be repeated for credit. Prerequisite: understanding in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

Two-semester course providing daily exercise in probabilistic weather forecasting, in which students compete to forecast local weather most skillfully.

EAS 3050 Climate Dynamics
Fall. 3 credits. Prerequisites: two semesters of calculus and one semester of physics. N. Mahowald.

Discusses processes that determine climate and contribute to its change, including atmospheric radiation, ocean circulation, and atmospheric dynamics. Investigates contemporary climate change issues and discusses them in the context of natural variability of the system.

EAS 3340 Microclimatology
Spring. 3 credits. Prerequisite: physics course. M. W. Wysocki.

The relationship of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined with emphasis on the energy balance.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics include thermodynamic processes of dry air, water vapor, and moist air, and concepts of hydrostatics and stability.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)
Spring. 3 credits. Prerequisites: familiarity with multivariate calculus (e.g., MATH 2930, 2130 or 2220 or equivalent), one semester of university physics. Staff.

Introduction to the basic equations and techniques used to understand motion in the atmosphere, with an emphasis on the space and time scales typical of storm systems (the synoptic scale). Derives the governing equations of atmospheric flow from first principles and applies them to middle latitude and tropical meteorology. Topics include balanced flow, atmospheric waves, circulation, and vorticity.

EAS 3520 Synoptic Meteorology I

Study of weather map analysis and forecasting techniques by applying the principles of fluid and heat flow. Strengthens previously introduced meteorological concepts that are applied to forecasting midlatitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

EAS 4350 Statistical Methods in Meteorology and Climatology
Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.

Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Includes statistical characteristics of meteorological data including probability distributions and correlation structures. Covers operational forecasts derived from multiple regression models, including the MOS system and forecast evaluation techniques.

EAS 4470 Physical Meteorology
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.

Primarily a survey of fundamental phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include an introduction to atmospheric radiation processes; atmospheric optics and electricity; microphysical cloud processes; and principles of radar probing of the atmosphere.

EAS 4510 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

Structure and dynamics of large-scale midlatitude weather systems, such as cyclones, anticyclones, and waves, with consideration of processes that contribute to temperature changes and precipitation. Lab sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to study selected large-scale midlatitude weather events.

EAS 4560 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. S. J. Colucci.

Structure and dynamics of midlatitude mesoscale weather systems, such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, seas breeze circulations, and lake effect snowstorms. The course also considers tropical weather systems and mesoscale modeling.

EAS 4570 Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years; next offered 2010–2011. M. W. Wysocki.

EAS 4700 Weather Forecasting and Analysis
Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

Applied course focusing on weather forecasting and analysis techniques for various regions around the world. Lectures emphasize the application of student’s knowledge of atmospheric dynamics, thermodynamics, and computer data analysis, to forecast the development and movement of multiscale weather systems. Students participate in weekly forecast discussions; write daily forecasts that include a synoptic discussion, quantitative precipitation forecasts, and severe weather outlook for the forecast region; and lead class discussion on assigned readings.

EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112 or equivalent, or permission of instructor. S–U or letter grades. P. G. Hess.

For description, see BEE 4800.

EAS 4820 Atmospheric Modeling
Spring. 3 credits. Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. N. Mahowald.

Climate and numerical weather prediction models are important tools for policy and science. This course describes the basic principle of the numerics in these models, including dynamical cores and subgrid-parameterization. Included will be a discussion of evaluation of models and effective presentation of model results.

EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)

For description, see CSS 4830.

EAS 4840 Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisite: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radar/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hysell.

Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4940 Special Topics in Atmospheric Science (unusual, incomplete level)
Fall or spring. 8 credits max. S–U or letter grades. Staff.

The department teaches "trial" courses under this number. Offers vary by semester and are advertised by the department before the semester starts. The same course is not offered more than twice.
EAS 4970 Individual Study in Atmospheric Science  
Fall or spring. 1–6 credits. S–U grades only. Students must register using independent study form. Staff. Topics are announced at the beginning of the semester for individual study or for group discussions.

EAS 4990 Undergraduate Research in Atmospheric Science  
Fall or spring. Credit TBA. S–U grades only. Students must register using independent study form. Staff. Independent research on current problems in atmospheric science.

EAS 5050 Fluid Dynamics in the Earth Sciences  
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. L. Cathles and M. Wysocki.

The Earth System provides many fascinating examples of fluid dynamics phenomena that are also of societal importance. Turbulent convection in the outer core generates the Earth’s magnetic field. The viscous mantle (outer half of the Earth) is slowly but vigorously conveging, and consequently the Earth’s surface is dynamic. Viscosity is not important in the oceans and atmosphere, but the flow there is fast enough for the rotation of the Earth to become to dominate control. Electromagnetic effects again dominate in the solar wind and magnetosphere. This course will investigate the Earth using fluid dynamics. For students in the Earth sciences it will provide an opportunity to learn the insights that can be provided by fluid dynamics. For students who know fluid dynamics from other fields it will provide some spectacular applications and an opportunity to learn about the Earth system in a different and unusually fundamental way.

EAS 5750 Planetary Atmospheres (also ASTRO 6575)  
Fall. 4 credits. Next offered 2010–2011. P. Gierrasch. For description, see ASTRO 6575.

EAS 5840 Inverse Methods in the Natural Sciences  
Fall. 3 credits. Prerequisite: MATH 2940. D. L. Hysell.

An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data. Applications include medical and seismic tomography, earthquake location, image processing, and radio/radar imaging. Linear algebra (including condition numbers) and probability and statistics (including error analysis, Bayes theorem, Gibbs distribution, and Markov chains) will be reviewed. Methods to be covered include nonlinear least-squares, maximum likelihood methods, and local and global optimization methods, including simulated annealing and genetic algorithms. Students in EAS 5840 will be expected to complete and present a substantial class project to be negotiated with the instructor.

EAS 6480 Air Quality and Atmospheric Chemistry (also MAE 6480)  
Fall. 3 credits. Prerequisites: freshman chemistry, fluid mechanics or equivalent, thermodynamics. S–U or letter grades. K. M. Zhang.

Factors determining air quality and effects of air pollutants on public health, ecological systems and global climate change.

EAS 6520 Advanced Atmospheric Dynamics (also ASTRO 7652)  
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or equivalents. Next offered 2010–2011. S. J. Cohn. Covers quasigeostrophic theory, atmospheric waves, hydrodynamics instability, general circulation of the atmosphere, and other topics selected from among numerical weather prediction and tropical mesoscale, and middle atmosphere processes according to student interest.

EAS 6660 Applied Multivariate Statistics  
Spring. 3 credits. Prerequisites: multivariable calculus, matrix algebra, two statistics courses. Offered alternate years, next offered 2010–2011. D. S. Wilks.

EAS 6750 Modeling the Soil–Plant–Atmosphere System (also CSS 6750)  
Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics include modeling plant ecology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation, and scale. Discusses use of soil-plant-atmosphere models for teaching, research, extension, and policy formation.

EAS 6920 Special Topics in Atmospheric Science  
Fall or spring. 1–6 credits. S–U or letter grades. Staff. Study of topics in atmospheric science that are more specialized or different from other courses. Special topics covered depend on staff and student interests.

EAS 7110 Upper Atmospheric and Space Physics  
Fall or spring. 1–6 credits. Seminar course. D. L. Hysell.

EAS 8500 Master’s-Level Thesis Research in Atmospheric Science  
Fall or spring. Credit TBA. S–U grades only. Graduate faculty. Thesis research for atmospheric science master’s students.

EAS 9500 Graduate-Level Dissertation Research in Atmospheric Science  
Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. students only after ‘A’ exam has been passed.

EAS 9510 Doctoral-Level Dissertation Research in Atmospheric Science  
Fall or spring. Credit TBA. S–U or letter grades. Graduate faculty. Dissertation research for atmospheric science Ph.D. candidates after ‘A’ exam has been passed.

Science of Earth Systems

Field Study in Hawaii  
Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the SES major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program is offered during the spring semester and emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the SES major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically students participate in the EES program during their junior year, although exceptions are possible. For further information on the EES program see www.geo.cornell.edu/geology/classes/hawaii/course.html.
EAS 1540  Introductory Oceanography—
Lecture (also BIOEE 1540)
Fall. 3 credits. Prerequisites: EAS/BIOEE 1540. S–U or letter grades. Fall. C. H. Greene and B. Monger. Intended for both science and nonscience majors. Cover the basic workings of the ocean including its physics, chemistry, and biology. Following this basic description, the course examines threats to the health of the ocean and the important role the ocean plays in global climate change. Nonscience majors should pay particular attention to this course to fulfill a science requirement, because they learn broadly how the Earth works (physically, chemically, and biologically) in a single nonquantitative class.

EAS 1550  Introductory Oceanography—
Laboratory (also BIOEE 1550)
Fall. 1 credit. Corequisite: EAS/BIOEE 1540. B. Monger and C. H. Greene. Laboratory course covering topics presented in EAS/BIOEE 1540.

EAS 1551  Introduction to Oceanography—
Lab (also BIOSM 1151)
Summer. 1 credit. Prerequisite: college-level science course, or EAS 1540, or marine science course or permission of instructor. Staff. Fall. B. Monger and C. H. Greene. Laboratory course covering topics presented in EAS/BIOEE 1550.

EAS 1700  Evolution of the Earth and Life
Spring. 3 credits. J. L. Cisne.
Earth systems and their evolution; Earth history's astronomical context; plate tectonics, continental drift, and their implications for climate and life; coevolution of life and the atmosphere; precedents for ongoing global change; dinosaurs, mass extinctions, and human ancestry. Includes laboratories on reconstructing geological history and mapping ancient geography. Fossil-collecting on field trips.

EAS 2130  Marine and Coastal Geology
Summer. 4 credits. Prerequisite: introductory geology or ecology course or permission of instructor. Staff. Offered at Cornell’s Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details, including estimated cost and an application, contact SML office, G14 Stimson Hall, or visit www.sml.cornell.edu.

EAS 2200  The Earth System
Fall, spring. 4 credits. Prerequisites: MATH 1110/1111. Letter grades only. W. M. White and A. Moore.
An integrated introduction to the earth system stressing the biological, chemical, and physical interactions among the atmosphere, ocean, and solid earth. Topics will include biogeochemical cycles, climate dynamics, and the evolution of the atmosphere, biosphere, cryosphere (ice), hydrosphere (oceans and inland waters), and lithosphere (solid earth).

EAS 2220  Seminar: Hawaii’s Environment
Fall. 1 credit. S–U grades only. A. Moore.
A seminar for students interested in the unique environmental systems of the Hawaiian Islands. This course is designed to bring together undergraduates returning from field studies in Hawaii with students interested in going there to study. Through reading and discussion we will explore the geology, biology, ocean, atmosphere, and culture of the Hawaiian environment.

EAS 2300  Evolution of the Earth System
Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1111, and one course in chemistry (college or high school) Two Sat field trips. T. Jordan, S. Riha, and W. Allmon.
Examination of the physical and chemical environment and are altered by that environment. This interaction over very long times constitutes a co-evolution of earth and life. Course uses modern systems, tens of thousands to millions of years. Will follow hundreds of million year old systems to illustrate principles, methods of reconstructing deep history, and the context of natural change inherent to life and earth.

EAS 3030  Introduction to Biogeochemistry (also NTRES 3030)
Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, and biology and/or geology course. J. Yavit.
Control and function of the Earth's global biogeochemical cycles. Begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers, and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, controls on atmospheric carbon dioxide, and mathematical models. Interaction of global biogeochemical cycles and other components of the Earth system are discussed.

EAS 3400  Interior of the Earth
Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronicos.
This class will investigate the geology of the solid earth with emphasis on igneous and metamorphic petrology, structure of the continents and ocean basins, and large-scale tectonics. Interaction between deformation, melt generation, and metamorphism will be examined as a function of which the crust is differentiated from the underlying mantle. Geophysical and geochemical techniques for probing the deep interior of the Earth will be investigated. Plate tectonics will be used as a unifying theme to understand processes operating in the solid earth.

EAS 3500  Dynamics of Marine Ecosystems (also BIOEE 3500)
Fall. 5 credits. Prerequisites: one year of calculus and one semester of oceanography (i.e., BIOE/EAS 1540) or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth. Lecture course covering the interactions of physical and biological processes in marine ecosystems.

EAS 3510  Conservation Oceanography (also BIOEE 3510)
Covers the interactions of physical and biological processes in marine ecosystems. Begins by looking at these processes on ocean-basin to regional scales and works down to the smaller scales relevant to individual organisms. Introduces students to modern techniques of marine-ecosystems research, including remote sensing, oceanographic-survey methods, and experimental marine ecology. This course is field and laboratory intensive with students engaged in hands-on, active learning that takes advantage of local resources.

EAS 3530  Physical Oceanography
Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years. B. Monger.
The course covers thermohaline and wind-driven circulation and surface-ocean boundary-layer dynamics. Mathematical expressions for describing conservation of momentum, mass, and heat in a fluid are used to explain the ocean’s responses to wind and buoyancy forcing.

EAS 4010  Fundamentals of Energy and Mineral Resources
Fall. 3 credits. Recommended: previous course in geology. L. Cathles.
The Earth's energy and mineral resources reflect some of the most important changes and dramatic events that have punctuated earth history. Course provides an overview of resource types in the context of the Earth's atmospheric evolution, rifting, mantle convection, and hydrothermal systems. The processes of resource accumulation are described in terms of simple chemical and physical principles and in the societal
contexts of supply, demand, and sustainability.

**[EAS 4040 Geodynamics]**
Spring. 3 credits. Prerequisite: calculus and calculus-based physics courses or permission of instructor. Offered alternate years; next offered 2010–2011. J. Phipps-Morgan.
Quantitative study of the deformation, heat transport, and melting processes that have shaped the evolution of the solid Earth. Familiar physical and chemical principles and concepts are applied to the study of plate tectonics, fluid flow dynamics, mantle convection, melting, and mountain building.

**EAS 4050 Active Tectonics**
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. Offered alternate years. R. Lohnan.
Develops the ideas and methods necessary to understand how the Earth deforms—from individual earthquakes to the construction of mountain ranges. Discusses the driving forces of deformation, and how these forces interact with different geologic materials to cause deformation.

**[EAS 4060 Marine Geology and Geophysics]**
Spring. 4 credits. Prerequisite: EAS 2200 or comparable courses. Recommended: completion of some EAS classes. Offered alternate years. J. Phipps-Morgan.
This course will use geological, geochemical, and geophysical approaches to explore the geology of the ocean floor. We will begin by discussing in depth the mid-ocean ridge system where the basaltic seafloor is created by plate spreading. This complex system involves a rich interplay of volcanism, hydrothermal flow, mantle flow, and lithosphere deformation, and is responsible for both the architecture of the ocean crust and the chemical composition of seawater. After this, we will discuss the evolution of the seafloor during its residence at Earth’s surface. We end up by discussing the complex volcanic, melting, and fluid flow processes at subduction zones where seafloor is transmuted into mantle and crust. There will be a lab section focusing on the use of GMT to make maps of relevant geological and geophysical information.

**EAS 4170 Field Mapping in Argentina**
Summer. 4 credits. Prerequisite: introductory EAS course and EAS 4260 or EAS 3040. S. Muhlburg Kay.
Field mapping course in Argentina that fulfills field requirement for majors with interests in geological sciences and provides a field geological experience for others. Course consists of lectures in Buenos Aires followed by field exercises in the Sierras Pampeanas, Precordillera, and Main Cordillera Ranges of the Argentine Andes in the provinces of San Juan and Mendoza. A variety of exercises use modern techniques in the field mapping of a broad range of variable deformed sedimentary, metamorphic, and igneous rocks. The course further provides an introduction to the tectonics and magmatic processes of the central Andes with emphasis on comparable processes in the United States. Exercises are done in combination with students and faculty of the University of Buenos Aires.

**[EAS 4250 European Discovery of Impacts and Explosive Volcanism]**
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. Lectures only. Meets one day per week plus field trip during spring break. Fee probably charged for required weekly field trip. Offered alternate years; next offered 2010–2011. J. Phipps-Morgan.

**EAS 4260 Structural Geology**
Spring. 4 credits. Prerequisite: one semester of calculus plus introductory geology course, or permission of instructor. One weekend field trip. C. Andronicos.

**[EAS 4340 Exploration Geophysics]**
Fall. 5 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years; next offered 2010–2011. L. D. Brown.
Fundamentals of subsurface imaging by geophysical methods as used in oil exploration and environmental investigations.

**EAS 4370 Geophysical Field Methods (also ARKEO 4370)**
Fall. 5 credits. Prerequisites: PHYS 2208 or 2213, or permission of instructor. Offered alternate years. L. D. Brown.
Field exercises using geophysical techniques to probe the subsurface.

**[EAS 4400 Seminar on Climate Change Science, Impacts, and Mitigation]**
Fall. 2 credits. Prerequisite: junior or higher standing. Offered alternate years; next offered 2010–2011. N. Mahowald.
The course will focus on reading, understanding, and evaluating the IPCC report (2007 version).

**EAS 4510 Mineralogy**
Fall. 4 credits. Prerequisite: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.
Chemical and physical properties and identification of minerals with emphasis on the rock-forming minerals that are the principal constituents of the Earth and nearby planets. Topics include internal and external crystallography, crystal chemistry, introductions to x-ray crystallography and optical mineralogy, and a systematic examination of the structures, chemistry, and occurrence of the rock-forming minerals. Independent project includes use of electron microprobe (EPMA) and x-ray facilities.

**[EAS 4540 Petrology and Geochemistry]**
Spring. 3–4 credits. Prerequisite: EAS 4530. Offered alternate years; next offered 2010–2011. R. W. Kay.
Principles of phase equilibrium as applied to igneous and metamorphic systems. Distribution of trace elements and isotopes used to define processes and chronologies. Kinetics, reaction pathways, and textural and mineralogical characterization. Geochemistry, origin, and dating of igneous and metamorphic rocks as applied the formation and evolution of the earth, terrestrial planets, and meteorites.

**EAS 4550 Geochemistry**
Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 and MATH 1920 or equivalent. Recommended: EAS 3040. Offered alternate years. W. M. White.
The Earth from a chemical perspective.

**[EAS 4580 Volcanology]**
Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years; next offered 2010–2011. R. W. Kay.

**[EAS 4600 Late Quaternary Paleoclimatology]**
Fall. 4 credits. Offered alternate years; next offered 2010–2011. M. Goman.
Explores topics in Late Quaternary paleoecology. Broadly divides into sections: (1) lectures that cover a variety of topics, such as philosophy of paleoecology, radiometric dating methods, and paleoenvironmental proxies; (2) field- and laboratory-based research. The field research provides students with hands-on experience in sediment core collection; while in the laboratory students learn the basics of core description, pollen, and macrofossil analysis.

**EAS 4610 Paleoclimate: Since the Last Ice Age**
Fall. 3 credits. Prerequisites: EAS 2200 or permission of instructor. Offered alternate years. M. Goman.
This course examines changes and variability in climate for the last 21,000 years.

**[EAS 4620 Marine Ecology (also BIOEE 4620)]**
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years; next offered 2010–2011. C. D. Harvell and C. H. Greene.
For description, see BIOEE 4620.

**[EAS 4710 Introduction to Groundwater (also BEE 4710)]**
Spring. 3 credits. Prerequisite: MATH 2930, fluid mechanics or hydrology course. Offered alternate years; next offered 2010–2011. L. M. Cathles and C. Steenhuis.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**EAS 4750 Special Topics in Oceanography**
Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. Monger.
Undergraduate instruction and participation in advanced areas of oceanographic research. Topics change from semester to semester. Contact instructor for further information.

**EAS 4760 Sedimentary Basins**
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. F. Jordan.
The focus is on the physical characteristics of sedimentary basins, which host fossil fuels and groundwater, and can potentially store CO₂.
[EAS 4780] Advanced Stratigraphy
Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2010–2011.
T. E. Jordan.
Covers modern improvements on traditional methods of the study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Introduces techniques and applications of sequence stratigraphy.

EAS 4790 Paleobiology (also BIOEE 4790)
Spring. 4 credits. Prerequisites: one year of introductory biology and BIOEE 2740 or 3730 or EAS 3010, or permission of instructor. W. D. Allmon.
Surveys the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of Earth and atmospheric science students concerning the nature and significance of the fossil record for their respective studies.

[EAS 4840] Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisites: MATH 2940. D. L. Hysell.
An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent physical data.

EAS 4870 Introduction to Radar Remote Sensing (also ECE 4870)
Spring. 3 credits. Prerequisite: PHYS 2208 or 2213 or equivalent or permission of instructor. D. L. Hysell.
Fundamentals of radar, antennas, and remote sensing. Exposes students to the principles underlying the analysis and design of antennas used for communication and for radar-related applications. Students also encounter both a mathematical and a practical description of how radars function, how their performance can be optimized for different applications, and how signals acquired by them can be processed. The objective is to familiarize students with a wide variety of radars rather than to turn them into practicing radar engineers. Each topic is developed from basic principles so students with a wide variety of backgrounds are able to take the course. Emphasizes radar applications in geophysics, meteorology and atmospheric sciences, and astronomy and space sciences. Gives special attention to radar remote sensing of the Earth from spacecraft.

EAS 4880 Global Geophysics
Spring. 3 credits. Prerequisites: MATH 1920 (or 1120) and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman.
Covers global tectonics and the deep structure of the solid Earth as revealed by investigations of earthquakes, earthquake waves, the Earth's gravitational and magnetic fields, and heat flow.

EAS 4910–4920 Undergraduate Research
Fall, spring. 1 to 4 credits. Fill out form at 2124 Snee Hall. Staff (J. L. Cisne, coordinator).
Introduction to the techniques and philosophy of research in geological sciences and an opportunity for undergraduates to participate in current faculty research projects. Topics chosen in consultation with, and guided by, a faculty member. A short written report is required, and outstanding projects are prepared for publication.

EAS 4960 Internship Experience
Fall, spring. 2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S–U grades only. A. Moore.
During the last 3.5 weeks of the semester students carry out a service-learning project with a local NGO, environmental business, government agency, research lab, or educational facility. Projects are carefully designed with the student, sponsoring agency, and faculty member. A final report is required.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences
Fall, spring. 1–4 credits. S–U grades only. Students must register using independent study form. Staff.

EAS 5000 Design Project in Geohydrology
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5020 Case Histories in Groundwater Analysis
Spring. 3 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report. Results are presented in a half-day seminar at the end of term.

EAS 5050 Fluid Dynamics in the Earth Sciences
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years. L. Cathles and M. Wysocki.
The Earth system provides many fascinating examples of fluid dynamic phenomena that are also of societal importance. Turbulent convection in the outer core generates the Earth's magnetic field; convection (outer half of the Earth) is slowly but vigorously convecting, and consequently the Earth's surface is dynamic. Viscosity is not important in the oceans and atmosphere, but the flow there is fast enough for the rotation of the Earth to become a dominant control. Electromagnetic effects again dominate in the solar wind and magnetosphere. This course will investigate the Earth using fluid dynamics. For students in the Earth sciences it will provide an opportunity to learn the insights that can be provided by fluid dynamics. For students who know fluid dynamics from other fields it will provide some spectacular applications and an opportunity to learn about the Earth system in a different and unusually fundamental way.

EAS 5110 Earth System Interactions
Fall. 1 credit (S–U grades) or 2 credits (includes paper, letter grades). Prerequisite: permission of instructor. J. L. Cisne.
New ways of conceptualizing, characterizing, and measuring phenomena can be as important as new instruments or empirical discoveries in opening new areas to exploration or established ones to more rigorous investigation. This seminar aims to prepare seniors and beginning graduate students for independent research on Earth systems by analyzing examples ranging from epoch-making classics to work now appearing in the literature.

EAS 5220 Advanced Structural Geology I
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure; preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of subcrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

EAS 5240 Advanced Structural Geology II
Fall. 3 credits. Prerequisite: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces.

EAS 5530 Advanced Petrology
Fall. 3 or 4 credits. Offered alternate years. R. W. Kay.
Advanced crystallography and crystal chemistry of minerals and methods of their study. Intended to follow EAS 4530 or equivalent. Includes X-ray diffraction, optical and electron microprobe methods and can include other more advanced techniques. Concentration is on chemistry and structures of minerals and their use in understanding the thermal and pressure structure and evolution of the Earth and other planets. Includes an individual research project.

[EAS 5750] Planetary Atmospheres (also ASTRO 6575)
Fall. 4 credits. Prerequisites: undergraduate physics, vector calculus. Offered alternate years; next offered 2010–2011. P. Gierasch.
Introduction to radiative transfer in emitting and scattering atmospheres in the solar system. Introduction to motions in atmospheres. Planetary examples of balanced flows. Meso-scale waves, wave absorption and wave accelerations. Planetary waves. The influence of wave accelerations on thermal structure and composition. Introduction to atmospheric chemistry. Dynamical transports. Observation. At the level of Andrews Atmospheric Physics.]
[EAS 5780] Planet Formation and Evolution (also ASTRO 6578)
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years. J.-L. Margot and M. Pritchard. For description, see ASTRO 6578.

[EAS 5840] Inverse Methods in the Natural Sciences
Fall. 3 credits. Prerequisites: MATH 2940. An exploration of solution methods for inverse problems with examples taken from geophysics and related fields, with particular attention to making inferences from inaccurate, incomplete, or inconsistent data.

[EAS 5880] Advanced Methods in Radar
Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. D. Hysell. This course will address the theory and practice of advanced radar techniques used for remote sensing, with emphasis placed on studying the upper atmosphere and ionosphere. Roughly the first half of the course will be devoted to incoherent scatter theory, the theory that relates the statistics of the signals scattered from an incoherent plasma to the state variables that describe the plasma. The second half of the course will examine methods for measuring ionospheric parameters using incoherent scatter theory in concert with advanced radar modes and data analysis techniques. Students taking this course should be familiar with radar fundamentals and plasma kinetic theory.

[EAS 6280] Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. S. Mahlburg Kay. Seminar course in which students study specific geologic topics of an orogenic belt selected for study during the semester.

[EAS 6410] Analysis of Biogeochemical Systems
Spring. 2 credits. Prerequisite: MATH 2930 or permission of instructor. Offered alternate years; next offered 2010–2011. L. A. Derry. Covers dynamics of biogeochemical systems; kinetic treatment of biogeochemical cycles; box models, residence time, response time; analytical and numerical solutions of model systems.

[EAS 6560] Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years; next offered 2010–2011. W. M. White. Nucleosynthetic processes and the isotopic abundance of the elements; geochronology and cosmochronology using radioactive decay schemes.

[EAS 6610] Special Topics in Geological Sciences
Fall or spring. 1–3 var. credits. S–U or letter grades. Staff. Study of specialized advanced topics in the Earth sciences through readings from the scientific literature, seminars, and discussions.

[EAS 7220] Advanced Topics in Structural Geology
R. W. Allmendinger.

[EAS 7310] Advanced Topics in Remote Sensing and Geophysics
M. Pritchard.

[EAS 7330] Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

[EAS 7500] Satellite Remote Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

[EAS 7510] Petrology and Geochemistry
R. W. Kay.

[EAS 7550] Advanced Topics in Tectonics and Geochemistry
J. Phipps Morgan.

[EAS 7570] Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

[EAS 7620] Advanced Topics in Paleobiology
W. D. Allmon.

[EAS 7650] Topics in Paleoenology
Fall. 1 credit. S–U grades. G. Dietl.

[EAS 7710] Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

[EAS 7730] Paleobiology
J. L. Cisne.

[EAS 7750] Advanced Topics in Oceanography
C. H. Greene.

[EAS 7800] Earthquake Record Reading
Fall. M. Barazangi and R. Lowman.

[EAS 7810] Advanced Topics in Exploration Geophysics
L. D. Brown.

[EAS 7930] Andes-Himalaya Seminar

[EAS 7950] Low Temperature Geochemistry
L. A. Derry.

[EAS 7960] Geochemistry of the Solid Earth
W. M. White.

[EAS 7970] Fluid-Rock Interactions
L. M. Cathles.

[EAS 7990] Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EDUC 2200 Community Learning and Service Partnership (CLASP)
Fall only. 2 credits. Prerequisite: permission of instructor. Students must commit to taking EDUC 2210 the following spring. S–U or letter grades. A. Wilson.

EDUC 2210 Community Learning and Service Partnership (CLASP)
Spring only. 2–4 credits, variable. Prerequisites: EDUC 2200 and permission of instructor. S–U or letter grades. A. Wilson.

EDUC 2330 The Art of Teaching (CA)
Fall and spring. 3 credits. T. Richardson and D. Trumbull. This exploratory course is designed for students of all backgrounds and interests who have a desire to learn more about education and teaching. Teaching takes place in a variety of contexts from the family to the workplace, and this course endeavors to examine the elements of teaching that transcend the typical school-teaching environment. Designed to guide students in reflecting upon their experiences to help them better understand the decisions they make as teachers. Students have the opportunity to pursue their own interests through a teaching fieldwork assignment. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and occupational areas, and from school-based to nonformal situations. The course work and readings are designed to build on these experiences throughout the semester and provide concepts and skills to apply in the field.

EDUC 2710 Social and Political Context of American Education (also SOC/AMST 2710) (HA) (SBA)
Fall. 4 credits. Disc. J. Sipple. Examines the goals, roles, inputs, and outcomes of schooling in American society and the policy environment in which schools operate. Analyzes controversies and tensions (e.g., equity, market forces, state control) surrounding public education at local, state, and federal levels. Includes current and historical, urban and rural issues and problems.
EDUC 3110 Educational Psychology (also HD 3110) (KCM) (CA)
Fall. 4 credits. Prerequisite: PSYCH 1101 or permission of instructor. S–U or letter grades. Additional disc sec TBD.
D. Schwader.
Educational psychology is the application of psychological concepts to educational settings. This course examines the dynamic interaction between people as teachers and learners, schools as social and learning environments, and the sociocultural contexts that influence learning. The focus is on those interactions in cognitive, epistemic, social, moral, and personal domains in educational contexts.

[EDUC 3310 Careers in Agriculture, Extension, and Adult Education]
Designed to examine program development, methodologies, leadership, evaluation, and implementation in three areas of teaching—adult education, cooperative extension, and agricultural education.

EDUC 3350 Youth Organizations (CA)
Fall. 3 credits. T. Park.
Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Requires field experience with a recognized youth organization.

EDUC 4040 Learning and Teaching I
Fall. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. D. Trumbull.

EDUC 4050 Learning and Teaching II
Spring. 4 credits. Prerequisite: admission to Cornell Teacher Education program or permission of instructor. Letter grades. B. Crawford.

EDUC 4410 Language, Literacy, and Schooling (KCM)
Spring and summer. 3 or 4 credits. Lab TBD. T. Park.
Foundation for literacy activities in secondary education. Examines current research, policy, and practice related to the acquisition of first and second languages, the dynamics of literacy in school contexts, and the development of academic language proficiency. The fourth credit hour requires a research project based on fieldwork.

EDUC 4510 Multicultural Issues in Education (also AMST/LSP 4510)
Fall. 3 credits. Letter grades. S. Villenas.
This course explores race, gender, and language in American education. It examines historical and current patterns of minority school achievement and the cultural premises undergirding educational practices in diverse communities and schools. Policies, programmatic, and pedagogical responses to diversity, including multicultural and bilingual education, are addressed.

EDUC 4590 Educational Innovations in Africa and the Diaspora (also ASRC 4601)
Fall. 3 credits; 4 in College of Arts and Sciences. N. Assié-Lumumba.
For description, see ASRC 4601.

EDUC 4630 Policies, Practices, and Critical Issues of Distance Learning in Developing Countries
Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba.
Distance learning is increasingly being adopted to respond to the high demand for education in developing countries. This course critically analyzes distance education for the general population as well as specific social and professional categories. A typology of the ICTs (information and communication technologies) used and the different forms of virtual learning institutions are examined. Case studies include single-mode and dual-mode institutions in Africa, Asia, and Latin American countries and also e-learning programs designed in industrial countries for developing countries.

EDUC 4720 Philosophy of Education
Fall. 3 credits. Advanced undergraduates permitted. Letter grades only. T. Richardson.
Discussions for this course will be organized around a wide variety of philosophical positions which have influenced scholarly approaches to philosophy of education during the 20th century. We will be concerned primarily with the development of John Dewey’s humanist approach to educational philosophy and the post-humanist philosophical positions from Continental post-colonial and feminist philosophies that have emerged in response to it.

EDUC 4940 Special Topics in Education
Fall, spring, or summer. 4 credits max. Prerequisite: permission of instructor. S–U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and will be advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

EDUC 4970 Individual Study in Education
Fall, spring, or summer. 1–3 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.
A student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 4980 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits max. during undergraduate career.
Prerequisite: GPA of at least 2.7. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.
Participants studying in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 4990 Undergraduate Research
Fall, spring, or summer. 6 credits max. during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college.
Prerequisite: junior or senior standing; GPA of at least 2.7.
Students must register using independent study form (available in 140 Roberts Hall). Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 4991 Independent Honors Research in Science
Fall or spring. 1–6 credits; max. 6 credits may be earned in honors program.
Prerequisite: requirements for honors program met. S–U or letter grades. Staff.

EDUC 5020 Education and Development in Africa (also ASRC 5020)
Spring. 3 credits; 4 in College of Arts and Sciences. S–U or letter grades. N. Assié-Lumumba.
For description, see ASRC 5020.

EDUC 5030 Diversity in the Classroom
Spring or summer. 2–4 credits.
Prerequisite: enrollment in CTE program or permission of instructor. S–U or letter grades. S. Villenas.
Builds on knowledge of cultural diversity gained from prior course work and field activities. With a focus on classroom teaching, topics include learning and inequality, multiple literacies across home and school, culturally relevant teaching, and English-language learners. A service learning component is optional for 3 or 4 credits.

EDUC 5070 Language and Literacy in Developing World Contexts
Fall or spring. 2–4 credits.
Prerequisite: admission to graduate level. S–U or letter grades. S. Villenas.
EDUC 5320 Educational Programs in Agricultural Science
Organization and planning processes for public school education. Local needs assessments, advisory committees, community-partnering, course development, sequencing instruction, professional development. Fieldwork required.

EDUC 5350 Youth Organizations for Agricultural Science Education
Spring. 3 credits. Prerequisite: senior or graduate standing in Agricultural Science Education. Letter grades only. T. Park.
Provides future agriculture educators a comprehensive overview of the components of an agriculture education program including supervised agricultural experience (SAE) and FFA. Students examine factors affecting membership, purpose, design, operation, and administration of career and technical student organizations and FFA. Examine organization, structure, and functions on national, state, and local levels.

EDUC 6010 Secondary Agriculture, Science, and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: graduate students enrolled in Cornell Teacher Education Program. S–U grades only. D. Trumbull, B. Crawford, W. Camp, and T. Park.
Supervised student teaching in agriculture, mathematics or science at the secondary level. Program includes teaching in a local school for 14 weeks.

EDUC 6020 Practicum Seminar
Fall or spring. 9 credits. Prerequisite: EDUC 6010 or permission of instructor. W. Camp, B. Crawford, D. Trumbull, and T. Park.
Begins with full-day sessions of intensive consideration of classroom practice relevant to all aspects of student teaching. Assignments and an online seminar during the semester require students to use theories to develop and evaluate teaching materials and practices. Students also complete an extensive portfolio documenting their work.

EDUC 6140 Gender, Context, and Epistemological Development (also FGSS 6240)
Fall. 3 credits. Prerequisite: EDUC/HD 3110 or senior status. S–U or letter grades. Offered alternate years; next offered 2010–2011. D. Schrader.
We explore how our thinking and view of the nature of knowledge is influenced by gender and culture. Awareness of the differences and similarities is an essential part of research. The concepts and principles for studying gender and race are applied to the development of knowledge, and the history and motivations of experimental psychology.

EDUC 6160 Moral Psychology and Education (also FGSS 6060)
Fall. 3 credits. Prerequisites: EDUC 3110, graduate standing or permission of instructor. S–U or letter grades. Offered alternate years. D. Schrader.
This seminar examines questions of the psychological development of knowing what is right, just, good, and of value. We study moral development from cognitive, developmental, social-contextual, normative, and gendered perspectives. Topics vary by semester but include the relationship between judgment and action, moral education, social aggression, moral leadership, and integrity.

EDUC 6170 Psychology of Adolescence in Case Study (also FGSS 6190)
Spring. 3 credits. Prerequisite: any one of the following: EDUC 3110, HD 6170, or permission of instructor. S–U or letter grades. D. Schrader.
Adolescent psychological development is examined from the perspective of the individual subject and the researcher. Using a case study approach we explore classic and contemporary theories of adolescence, relying on primary source readings and first-person accounts to give us insight into adolescent issues, such as identity, values, and behaviors.

EDUC 6180 Learning in Adulthood: An Introduction
Fall. 3 credits. S–U or letter grades. R. Caffarella.
An introduction of learning in adulthood is provided with emphasis on understanding adult learning in contemporary society, reviewing key seminal and current theory and research, and exploring how this knowledge relates to teaching from other disciplines, in addition to education, who work with adults in formal and informal learning settings are welcomed.

EDUC 6200 Internship in Education
Fall or spring. 1–6 credits. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for supervising work. S–U or letter grades. Opportunity for practical experience in educational professions development.

EDUC 6330 Program Planning in Adult and Extension Education
Spring. 3 credits. S–U or letter grades. Offered alternate years. A. Wilson.
Examines current social and economic conditions affecting agricultural, extension, and adult education. Applies principles, objectives, strategies, and sources of information to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education and to pursue individual interests in program development and improvement.

EDUC 6470 Innovative Teaching in the Sciences
Spring. 3 credits. S–U or letter grades. B. Crawford.
This seminar on innovative ways to teach is designed for doctoral and master's-level students in education, sciences, math, and possibly other disciplines, including extension and outreach. Readings will potentially include issues of gender and underrepresented populations in science, math, and engineering. Students will design inquiry-based instruction in their field.

EDUC 6510 Anthropology and Education
A study of schooling and education from anthropological perspectives and ethnographic methodology. Participants examine teaching and learning in families, communities, and schools as cultural processes. Some topics include the differential school achievements of racial/ethnic minorities, school reform efforts, youth culture and identities, and literacy in adult learning spaces.

EDUC 6610 Administrative Leadership and Organizational Change
Fall. 3 credits. S–U. Perspectives on the administration of educational organizations. Considers social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

EDUC 6620 Evaluation Design
Spring. 3 credits. Prerequisite: survey of research methods (or other graduate-level courses in research methods), statistics. S–U grades only. M. Constanas.
This course is designed to introduce graduate students to the principles and practices of program evaluation. It addresses practical realities and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Students who are in the class will become familiar with the technical characteristics, practical realities, and political features of a range of evaluation designs that may be used to support decision making related to educational, social, and community-based programs. Course readings, class
discussions, and assignments will support the development of the proposal.

EDUC 6640  Methods for Interpretive Research
Spring. 3 credits. Prerequisites: course in research methods/research design. S–U or letter grades. D. Trumbull. Studies interpretive qualitative research, which attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in research.

EDUC 6670  Discourse Analysis in Education
Spring. 3 credits. S–U or letter grades. Next offered 2010–2011. A. Wilson. Course functions as an advanced study in the theory and practice of conducting discourse analysis in education. Discourse analysis is one of the preferred analytical approaches in cultural studies, but “discourse analysis” means different things to different people. Participants will examine a range of those differences.

EDUC 6680  Narrative Inquiry in Social Science and Action Research

EDUC 6710  American School Reform: Organizational and Sociological Perspectives
Spring. 3 credits. S–U or letter grades. J. Sipple. For individuals interested in the role of schools in society and in organizational behavior and public policy. This seminar investigates the sociological functions of schooling, including the stability of school organization given the long history of policy initiatives designed to reform schools. The focus is American K–12 public education, though issues of pre-K, private, and post-secondary education are covered.

EDUC 6720  Philosophy of Education
Fall. 3 credits. Letter grades only. T. Richardson. Discussions for this course will be organized around a wide variety of philosophical positions that have influenced scholarly approaches to philosophy of education during the 20th century. We will be concerned primarily with the development of John Dewey’s humanist approach to educational philosophy and the post-humanist philosophical positions from Continental Post-Colonial and Feminist philosophies which have emerged in response to it. Advanced undergraduates will be permitted.

EDUC 6800  Foundations of Adult and Extension Education
Fall. 3 credits. Limited to 20 students. S–U or letter grades. Offered alternate years. A. Wilson. Analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Examines definitions, conceptual controversies, philosophical issues, and current research directions through a seminar approach.

EDUC 6810  Democracy, Science, and Education
Spring. 3 credits. S–U or letter grades. Next offered 2010–2011. S. Peters. Explores the actual and potential connections between democracy, science, and education in both formal and non-formal education, both historically and in contemporary society.

EDUC 6820  Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grades only. Next offered 2010–2011. S. Peters. Reviews traditions of community education and development in their historical, cultural, social, and political contexts, examining implications for practice in a range of settings.

EDUC 6850  Training and Development: Theory and Practice (also IARD 6850)
Spring. 4 credits. Limited to 20 students. S–U or letter grades. R. Caffarella. Provides practice skills and researches conceptions from different perspectives of training and development, primarily in international settings. Engages students in critical and reflective analysis related to adults as learners, training and education at the instructional and program levels, major development issues at national and global levels, and ethical practice. Examines two major themes that drive training and development: the impact of context and the role of power.

EDUC 6940  Special Topics in Education
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Topic TBA.

EDUC 6970  Graduate Individual Study in Education
Fall, spring, or summer. 1–3 credits. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. A graduate student may, with approval of a faculty advisor, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 6980  Graduate Supervised Teaching in Education
Fall or spring. 1–2 credits. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. Participating graduate students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

EDUC 7000  Directed Readings
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that predominantly involves library research and independent study.

EDUC 7010  Empirical Research
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that primarily involves collection and analysis of research data.

EDUC 7020  Practicum
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For study that predominantly involves field experience in community settings.

EDUC 7030  Teaching Assistantship
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

EDUC 7040  Research Assistantship
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

EDUC 7050  Extension Assistantship
Fall, spring, or summer. 6 credits, variable. Prerequisite: graduate standing; permission of instructor. S–U or letter grades. Staff. For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

EDUC 7620  Comparative and International Education
Summer. 3 credits. S–U or letter grades. N. Assié-Lumumba. Seminar that critically analyzes education conceived both as a universal social institution and a reflection of cultural, economic, and political dynamics of the local and global contexts. The analysis focuses on policies, organization, and the functioning of education in industrial, new/emerging economies, and developing countries. Specific case studies are drawn from different countries.

EDUC 7830  Farmer-Centered Research and Extension (also IARD 7830)
Fall. 5 credits. S–U or letter grades. T. Tucker. For description, see IARD 7830.

EDUC 8900  Master’s-Level Thesis Research
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty member who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff.

EDUC 9900  Doctoral-Level Thesis Research
Fall or spring. Credit TBA. Each student, before course enrollment, must obtain approval of faculty and research committee who will assume responsibility for guiding work. S–U or letter grades. Times TBA. Staff. Doctoral or other research and development projects for Ph.D. students.
Courses by Subject

Apiculture: 2600, 2640
Behavior: 2150, 3150, 3250, 3940, 6620
Ecology: 3600, 4550, 4700, 6900
Introductory courses: 2010, 2011, 2100, 2120, 2150, 2410

Medical and veterinary entomology: 2100, 3520, 4100, 4700
Toxicology: 3600, 3650, 7090
Pathology: 4630, 4700
Pest management: 2140, 4200, 4440, 6700

Pest management: 2410, 4200, 4440, 6700
Physiology, development, and toxicology: 3670, 3940, 4830, 4900, 6850
Systematics: 3510, 3511, 3530, 4400, 6340, 6550

ENTOM 2100/2011 Alien Empire: Bizarre Biology of Bugs
Spring. 2 (2010) or 3 (2011) credits. S–U or letter grades. Optional field trips. Staff. Insects are the most abundant and diverse animals on earth. This course explores the bizarre biology of insects and their interaction with humans. We will examine both the detrimental roles insects play (e.g., pests and vectors of disease) as well as their beneficial roles (e.g., pollination, edible insects, insect products such as waxes, dyes, and silk). We will also explore the symbolic representation of insects in art, literature, and religion. Students taking the course for 3 credits will meet once per week (on Friday) for discussion and documentary films on the biology of insects.

ENTOM 2150 Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S–U or letter grades. Lec. Lab. Offered alternate years; next offered 2010–2011. J. G. Scott. Introduction to the fascinating world of spiders. Explores evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders’ unique use of silk, risky courtship, predatory behavior, diverse uses of silk, social spiders, and potential use in BPM.

ENTOM 2410 Insect Pest Management for Practitioners
Spring. 3 credits. Limited to 18 students. Prerequisites: BIOG 1101–1102 or equivalent. Lec, lab/disc. W. M. Tingey. Introduction to pest management in plant or animal protection for those preparing for careers in extension, service, and production. Emphasizes pest monitoring, sight identification, diagnosis, decision-making, and management tactics for the major groups of insect and arthropod pests affecting field, forage, and vegetable crops; floriculture, woody ornamentals, and turf; urban environments and public health; veterinary, dairy, livestock, and poultry. Five off-campus laboratory field trips with demonstrations of pest management decision-making, pest-monitoring tools, and pesticide-application equipment.

[ENTOM 2600 Biology of the Honey Bee]
Fall. 2 credits. Lec. Offered alternate years; next offered 2010–2011. N. W. Calderone. Introduces students to the life history, physiology, ecology, and behavior of honey bees. Reviews classical and contemporary research on the dance language, chemical communication, behavioral genetics, division of labor, and evolution of social behavior.

[ENTOM 2640 Practical Beekeeping]
Fall. 1 credit. Limited to 20 students. Prereq.corequisite: ENTOM 2600. Lab. Offered alternate years; next offered 2010–2011. N. W. Calderone. Consists of 14 laboratory sessions that acquaint students with practical methods of colony management. Laboratories involve hands-on work with honey bee colonies and equipment.

[ENTOM 3070 Pesticides, the Environment, and Human Health (also TOX 3070)]
Fall. 2 credits. Prerequisites: BIOG 1101–1102 or equivalent. Lec. Offered alternate years; next offered 2010–2011. J. G. Scott. Survey of the different types of pesticides, their uses, proposed and off label effects on the environment. Discusses the risks, benefits, regulation, politics, and current controversies associated with pesticide use and genetically modified crops.

ENTOM 3150 Spider Biology
Fall. 3 credits. Prerequisite: introductory biology or permission of instructor. Letter grades only. Lec. S. Rayor. In-depth introduction to the fascinating world of spiders and their relatives. Meets concurrently with ENTOM 2150 (2 credits). Students in ENTOM 3150 meet for another hour with additional coverage of current topics in arachnology and developing spider identification skills. Entomology majors and biology majors in the Biology program of study should take ENTOM 3150 rather than 2150. Students may not take both ENTOM 2150 and 3150 for credit.

ENTOM 3250 Insect Behavior (also BIONB 3250)
Spring. 3 credits. Prerequisite: introductory biology and either ENTOM 2120 or BIONB 2210. Lec. Offered alternate years. L. S. Rayor. Insects are the most diverse organisms on earth, with equally diverse behavior. This course explores the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

ENTOM 3310 Insect Phylogeny and Evolution
Fall. 3 credits. Prerequisite: ENTOM 2120. Corequisite: ENTOM 3311. Offered alternate years. B. N. Danforth. This course will provide a broad overview of insect diversity, morphology, phylogeny, evolution, and fossil history. Evolution of the insects will be discussed in light of real data sets based on morphology and/or DNA sequence data. Basic principles of phylogeny reconstruction using both morphological and DNA sequence data will be presented using published data sets. Analytical methods such as parsimony, maximum likelihood, and Bayesian methods will be discussed and compared. We will also survey how phylogenies are used to analyze evolutionary patterns, such as historical biogeography, co-evolution, and host–parasite relationships.

ENTOM 3311 Insect Phylogeny and Evolution Laboratory
Fall. 1 credit. Prerequisite: ENTOM 2120 Lab. Lab fee: $40. Corequisite: ENTOM 3310. B. N. Danforth. Introduction of the diversity, phylogeny, evolution, and fossil history of insects. Includes lab practice in insect morphology, insect diversity, and phylogenetic analysis. Entomology undergraduates wishing to count this course toward their Group A requirement are required to take the laboratory, as well as the lecture for a total of 4 credits.

ENTOM 3330 Maggots, Grubs, and Outworms: Larval Insect Biology
Spring. 3 credits. Prerequisites: ENTOM 2120 or permission of instructor. S–U or letter grades. Offered alternate years. J. K. Liebherr. The evolutionary history of the Holometabola has been greatly influenced by adaptations of their larval. This course introduces students to the biology, anatomy, and natural history of
of holometabolous insect larvae. The lab includes field sampling, curation of field-collected specimens, and identification of unknowns. Development of a small larval collection required.

**ENTOM 3350 Naturalist Outreach Practicum**

Fall. 3 credits. Prerequisite: introductory biology. S–U or letter grades. L. S. Rayor. Learn the skills to do effective scientific outreach. This interdisciplinary course combines lectures on topics relevant to teaching about natural history, with more pedagogic lectures on developing and presenting scientific inquiry–based presentations. The course emphasizes developing different approaches to effectively communicate science at different scales from classroom settings, through museum programs, to large outreach events. Students participate in the Naturalist Speakers Bureau to provide lively multimedia presentations in classrooms throughout the region. With feedback from peers and instructors, students develop their own biological presentations, display materials, and teacher resource guides.

**ENTOM 3360 Naturalist Outreach in Biology**

Fall. 1–2 credits, variable. Prerequisite: ENTOM 3550. S–U or letter grades. L. S. Rayor. For students who have already taken Naturalist Outreach Practicum (ENTOM 3550) who wish to continue doing scientific outreach through the Naturalist Outreach Speakers Bureau. This course can be taken twice.

**ENTOM 3520 Medical and Veterinary Entomology**

Fall. 3 credits. Prerequisites: BIOG 1101–1102 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. L. C. Harrington. This course explores the impact of vector-borne disease and provides a comprehensive overview of the fields of medical and veterinary entomology. Undergraduate and graduate students in medicine and veterinary medicine as well as other disciplines including pre-medical and veterinary students are encouraged to enroll.

**ENTOM 3521 Lab in Medical and Veterinary Entomology**

Fall. 1 credit. Prerequisites: ENTOM 3520 concurrently or have taken another medical/veterinary entomology course. S–U or letter grades. Offered alternate years; next offered 2010–2011. L. C. Harrington. The laboratory complements the lecture course ENTO 3520. Includes field trips, collection and identification and arthropods of medical/veterinary importance, and hands-on experience with modern laboratory research methods.

**ENTOM 3690 Chemical Ecology (also BIOEE/BIONB 3690)**

Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S–U or letter grades. Lec. A. Agrawal, G. Jander, A. Kessler, and J. Thaler. For description, see BIOEE 3690.

**ENTOM 4100–4101 Malaria Interventions in Ghana**

4100, fall; 4101, spring. 2 credits each semester. S–U grades only. R grade given at end of fall semester and final grade at end of spring semester. L. C. Harrington. This service learning class will educate students about malaria, Ghanaian culture, and general public health intervention strategies. During the fall semester, students will hear from a variety of speakers and will read and discuss key papers. Students in the class will travel to Ghana over winter break and create a malaria needs indicator to evaluate intervention strategies in partnership with the Ghana Health Initiative. After returning from the service trip, students will evaluate their survey and intervention plan.

**ENTOM 4200 Grape Pest Management (also PLPA/VIEN 4200)**

**ENTOM 4400 Phylogenetic Systematics (also BIOPL 4400)**

**ENTOM 4440 Integrated Pest Management (also CSS 4440)**

Fall. 4 credits. Prerequisite: introductory biology or permission of instructor. S–U or letter grades. Lec. J. E. Losey and A. DiTommaso. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Labs consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**ENTOM 4450 Insect Ecology (also BIOEE 4450)**

Fall. 4 credits. Recommended: ENTO 2120 or BIOEE 2610 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. S. Thaler. Focuses on individual and population aspects of insect ecology as well as some topics in community and ecosystem ecology. Laboratory includes indoor and outdoor field trips illustrating the major concepts in insect ecology as well as experimental techniques.

**ENTOM 4630 Invertebrate Pathology**

Fall. 4 credits. Prerequisites: one year of introductory biology. S–U or letter grades. Lec. Lab. Offered alternate years; next offered 2010–2011. A. E. Hajek Lecture and lab cover pathology and ecology of infectious diseases of invertebrates.

**ENTOM 4670 Ecological Genetics (also BIOEE 4670)**

Spring. 4 credits. Prerequisite: BIOEE 2780. Recommended: introductory course in genetics and/or statistics. S–U or letter grades. Offered alternate years; next offered 2010–2011. B. P. Lazzaro. Focuses on the application of population genetic concepts in ecological or applied contexts. Emphasizes measuring adaptation in natural populations, detecting the effects of population demography, and determining the genetic basis of adaptive traits.

**ENTOM 4830 Insect Physiology**

Spring. 4 credits. Prerequisite: ENTOM 2120 or permission of instructor. Lec. Lab. Offered alternate years; next offered 2010–2011. C. Gilbert and A. Douglas. Introduction to the only unique ways in which insects have met their basic needs. Examines each organ system with emphasis on basic principles and specific examples. Also introduces students to some common methods used in physiological research and to the critical reading of scientific literature.

**ENTOM 4900 Toxicology of Insecticides (also TOX 4900)**

**ENTOM 4940 Special Topics in Entomology**

Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

**ENTOM 4970 Individual Study in Entomology**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff.

**ENTOM 4980 Undergraduate Teaching Assistant**

Fall or spring. Credit TBA. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistant in an entomology course by agreement with the instructor. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**ENTOM 4990 Undergraduate Research**

Fall and spring. Credits TBA. S–U or letter grades. Staff. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall).

**ENTOM 4991 Undergraduate Honors Research**

Fall and spring. Credit TBA. For students who enroll under this number, but do not complete an Honors Thesis, course credit reverts to ENTOM 4990 Undergraduate Research. Students must register using an Independent Study Form (available in 140 Roberts Hall). Staff. This course is intended for students doing independent research that will lead to Honors with Distinction in Research.

**ENTOM 6340 Special Topics in Systematic Entomology**

Fall or spring; on demand. 2–4 credits. Prerequisite: permission of instructor. Staff. Lectures on the classification, evolution, and biomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.
[ENTOM 6620 Insect Behavior Seminar] Spring. 2 credits. Prerequisite: permission of instructor or ENTRMT 2100 and BIONB 2210 or equivalents. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. Gilbert.

[ENTOM 6700 Seminar on Biological Control] Fall. 1 credit. Prerequisite: ENTRMT 2770, 4400, or 4630 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. A. E. Hajek. Seminar series covering topics in biological control chosen by participating students and faculty.

[ENTOM 6850 Seminar in Insect Physiology] Spring. 1 credit. Prerequisite: permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. Gilbert.

[ENTOM 6900 Seminar in Ecology and Evolution of Infectious Diseases] Fall and spring. 1 credit. B. Lazzaro and A. Hajek. Graduate-level discussion of the ecology, epidemiology, genetics, and evolution of infectious disease in animal and plant systems. Weekly discussion of research papers published in the primary scientific literature. Participation in discussion and presentation of at least one paper required for course credit.

[ENTOM 7070 Individual Study for Graduate Students] Fall or spring. Credit TBA. Prerequisite: permission of instructor. Not for thesis research. Staff.

[ENTOM 7090 Teaching Entomology] Credit TBA. Staff. Teaching entomology or for extension training.

[ENTOM 7570 Current Topics in Entomology] Fall and spring. 1 or 2 credits. Requirement for first- and second-year entomology graduate students. S–U grades only. Staff. This course provides first- and second-year graduate students with an overview of the field of entomology. The course format changes from year to year but generally involves attendance at the weekly entomology seminar as well as a one-hour meeting TBA with faculty from the department or with visiting speakers. Additional readings may be required. Graduate students in entomology are required to attend the class for a total of two semesters (ideally in the first year of their graduate program). The 2-credit option is for students attending the Juguatae seminar and a one-hour meeting following the seminar. The 1-credit option is for attendance at the seminar only.

[ENTOM 8900 Master’s-Level Thesis Research] Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTRMT 8900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Research at the master’s level.

[ENTOM 9900 Doctoral-Level Thesis Research] Fall and spring. 15 credits per semester if taking no classes; if taking other courses, use ENTRMT 9900 to bring yourself up to a total of 15 credits. Prerequisite: permission of instructor. S–U or letter grades. Staff. Research at the doctoral level.

Juguatae Seminar
Fall and spring.
Seminar conducted by Juguatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

ENVIRONMENTAL TOXICOLOGY

There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. The graduate student may choose from three degree options: M.S., M.S./Ph.D., or Ph.D. Concentrations include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry, and risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated. General information is available through the Environmental Toxicology office in 116 Storcking Hall, or at toxicology.cornell.edu.

[TOX 3070 Pesticides and the Environment (also ENTRMT 3070)] Fall. 2 credits. Prerequisites: BIOG 1101–1102 or equivalent. Offered alternate years; next offered 2010–2011. J. G. Scott. For description, see ENTRMT 3070.

[TOX 4370 Eukaryotic Cell Proliferation (also BIOBM 4370)] Spring. Variable credit; students may take 2 credits, or less and discard for 3 credits. Limited to 20 students perdisc; priority given to graduate students. Prerequisite: BIOG 1101–1102 or 1105–1106 and BIOBM 3300 or 3310/3320. Recommended: BIOGD 2810 and BIOBM 4320. S. Lee.

For description see BIOBM 4370.

[TOX 4900 Insect Toxicology and Insecticidal Chemistry (also ENTRMT 4900)] Spring. 3 credits. Prerequisite: general chemistry course. Offered alternate years. J. G. Scott.

For description, see ENTRMT 4900.

[TOX 5970 Risk Analysis and Management (also CEE 5970)] Spring. 3 credits. Prerequisite: introduction to probability and statistics course (e.g., CEE 3040, ENGRD 2700, ILRST 2100, BTRY 2610 or AEM 2100); two semesters of calculus. Prerequisite: senior or graduate standing or permission of instructor. J. R. Stedinger.

For description, see CEE 5970.

[TOX 6100 Introduction to Chemical and Environmental Toxicology (also BIOBM 6100)] Fall. 3 credits. Prerequisite: graduate standing in field or permission of instructor. Offered alternate years; next offered 2010–2011. A. G. Hay.

For description, see BIOBM 6100.

[TOX 6110 Molecular Toxicology (also NS 6110)] Spring. 3 credits. Prerequisites: TOX 6100 or permission of instructors. Offered alternate years; next offered 2010–2011. S. Bloom, R. Dietert, D. Muscarella, and B. Strupp.

For description, see NS 6110.

[TOX 6990 Environmental Toxicology Journal Club (also BIOBM 6990)] Spring only. 1 credit. Requirement for env. tox. students until post-A exam.

A. G. Hay.

For description, see BIOBM 6990.

[TOX 7010 Mouse Pathology and Transgenesis (also VTBMS 7010)] Fall, meets during second half of fall semester and relies on background information from NS/BIOGD 4900 Manipulating the Mouse Genome, which meets during first half. Students interested in both courses must register for them separately. 1 credit. Prerequisites: permission of instructor. Highly recommended: NS/BIOGD 4900 and basic course in histology (BioAP 4130 or equivalent). A. Nikitin.

For description, see VTBMS 7010.

[TOX 7020 Seminar in Toxicology (also NS 7020)] Fall or spring. 1 credit.

For description, see NS 7020.

[TOX 7130 Cell Cycle Analysis (also VTBMS 7130)] Spring. 1 credit. S–U grades only. Offered alternate years. A. Yen.

For description, see VTBMS 7130.
that determine wine quality.

to illustrate the components and processes development and perception. Wines are used and culture of wines, viticultural regions, sensory evaluation. Topics include history and to participate in a project using the and activities, case studies, and networking through presentations, interactive exercises and ethics issues, as well as career skills in leadership and team building skills, diversity and Greek must and wine analysis. Hands-on laboratory work, wine sensory and chemical analysis, and practical experience in viticulture and wine-making.

The goal of this course is to help students develop improved strategies for making healthier food choices. Concepts and principles that form the bases for current dietary guidelines and food safety regulations are discussed. Topics include the U.S. food system, relationships between diet and health, food processing, food safety, and selected contemporary issues relating to nutrition, food quality, and safety. Students conduct nutritional analyses of their diets using a computer software program.

Food analysis and other biological analysis. Emphasizes fundamental principles of food analysis and other biological analysis. Topics include chemistry and functionality of commodities and ingredients, chemical and physical phenomena that affect food quality, techniques of processing and preservation, microbiology and fermentation, food safety, and regulation.

This course will investigate the composition of grapes and wine and the most common analytical tools used in their evaluation. Both the theoretical and practical aspects of grape and wine analyses will be considered.

The goal of this course is to help students develop improved strategies for making healthier food choices. This course will investigate the composition of grapes and wine and the most common analytical tools used in their evaluation. Both the theoretical and practical aspects of grape and wine analyses will be considered.
FDSC 3510 Milk Quality  
Fall. 1 credit. Prerequisite: ANSC 2500 or equivalent or permission of instructor. 
Letter grades only. M. Wiedmann.  
Focuses on the effects of on-farm and animal husbandry practices on milk and dairy food quality and safety. Significant parts of class focus on discussion and critical analysis of the assigned reading materials, questions, and hot topics.

FDSC 3940 Applied and Food Microbiology (also BIOMI 3940)  
Fall. 3 credits. Prerequisites: BIOMI 2900–2910. C. A. Batt.  
Microorganisms play a central role in a variety of food, agricultural, and environmental processes. This course presents a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. A focus on the impact of genomics and the emerging understanding of the microbiome provides an underlying foundation for the course. A 2-credit core section on food microbiology is complemented by a 1-credit section on industrial/biotechnological applications.

FDSC 3950 Food Microbiology Laboratory  
Fall. 3 credits. Prerequisite: BIOMI 2910 or equivalent. Letter grades only. A. Orta-Ramirez.  
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and rapid methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods, or addressing a food safety issue.

FDSC 3960 Food Safety Assurance  

FDSC 4000 Current Topics in Food Science and Technology  
Spring. 1 credit. S–U or letter grades only. S. J. Mulvaney and staff.  
Discussion of current topics in food science. Topics vary and are chosen from scientific literature and popular press.

FDSC 4010 Concepts of Product Development  

FDSC 4020 Agriculture in Developing Nations I (also IARD 4020)  
Fall. 2 credits. R. V. Raman and W. R. Coffman.  
For description, see IARD 4020.

FDSC 4050 Managing Food Waste Without Trashing the Environment  
Fall. 2 credits. Prerequisite: BIOMI 2900.  
Letter grades only. M. Wiedmann.  
Lecture course covering the basic principles of fermentation, the microbiology of food fermentations (including the physiology and genetics of fermentative microorganisms), starter cultures and their preparations and applications, as well as specific examples of food fermentations. Selected textbook readings are supplemented with papers from peer-reviewed journals. Significant parts of class focus on discussion and critical analysis of the assigned reading materials.

FDSC 4100 Sensory Evaluation of Food  
Fall. 2–3 credits. 1 lab credit. Lect and lab required for undergraduate food science majors. Prerequisite: statistics course.  
Letter grades only. H. T. Lawless.  
Topics include the sensory evaluation methods used to test the flavor, appearance, and texture of foods by quantitative description and simple difference testing; consumer testing for product acceptability; sensory tests in quality control; strategic product research; and product development. Presents the psychological principles in sensory testing and statistical methods for sensory data analysis. The lab provides first-hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis.

FDSC 4150 Principles of Food Packaging  
Spring. 3 credits. Letter grades only. Offered alternate years. J. H. Hotchkiss.  
Discusses the chemical and physical properties and manufacture of the basic materials used to construct packaging. Presents the influence of packaging on shelf life. Emphasizes newer packaging technologies and materials. Briefly presents economics, design, and regulation of food packaging.

FDSC 4170 Food Chemistry I  
Spring. 3 credits. Prerequisites: CHEM 1570 or BIOBM 3300 or 3310. S–U or letter grades. J. W. Brady.  
Covers the composition of foods and food ingredients. Discusses the chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components and additives in the context of their interactions and functional roles in foods.

FDSC 4180 Food Chemistry II  
Fall. 3 credits. Prerequisite: FDSC 4170. S–U or letter grades. C. Y. Lee, C. I. Moraru, and J. M. Regenstein.  
Discusses the chemical composition of several food groups (meats, fruits, vegetables, and dairy) and describes the chemical reactions and changes that take place during processing and storage, as well their effects on the quality and nutritional characteristics of these foods.

FDSC 4190 Food Chemistry Laboratory  
Fall. 2 credits. Prerequisites: BIOBM 3300 or 3310 or CHEM 1570 or equivalent. Corequisite: FDSC 4170. D. D. Miller and A. Orta-Ramirez.  
Deals with the chemical properties of food components and changes they undergo in processing and storage. Stresses relationships between the chemical composition of foods and functional, nutritional, and sensory properties. Introduces lab techniques commonly used in food research. Requires a lab research project that involves writing a research proposal for the project, conducting laboratory research to test hypotheses described in the proposal, analyzing the data, and writing a paper following the format used by the Journal of Food Science.

FDSC 4220 Functional Foods and Nutraceuticals  
Spring. 2 credits. Prerequisites: Basic biochemistry course or permission of instructor. Letter grades only. Offered alternate years; next offered 2010-2011. R. H. Liu.  
Covers functional foods and nutraceuticals, bioactive compounds, antioxidants and dietary supplements, micronutrient fortification, botanicals, and herbs in disease prevention and health promotion. Emphasizes the mechanisms of action and scientific evidence of efficacy. Emphasizes safety and efficacy testing, and regulations for functional foods and nutraceuticals will be discussed.

FDSC 4230 Physical Principles of Food Preservation and Manufacturing  
Fall. 3 credits. Prerequisite: FDSC 3210.  
Letter grades only. Lect. S. J. Mulvaney.  
Emphasizes the fundamental principles that underlie much of food preservation and manufacturing. Uses a systems analysis approach to make connections between the chemical and physical changes that occur in food processing and their impact on food quality. Topics include materials properties of foods, heat processing, freezing, concentration, and drying. Selected products serve as case studies for more complex manufactured foods.

FDSC 4250 Unit Operations and Dairy Foods Processing  
Spring. 3 credits. Prerequisites: FDSC 3210, 3940, 4170, 4180, and 4230 or permission of instructor. Letter grades only. Lect. C. I. Moraru.  
Combined lecture-laboratory course focusing on principles and practices fundamental to modern dairy foods processing. Structured in two parts. The first part deals with the main unit operations used in dairy processing (i.e., pasteurization, sterilization, centrifugal separation, homogenization, membrane separation, concentration, and drying) and the second part focuses on the science and technology that underpins the manufacture of main classes of dairy products (i.e., fluid milk, milk powder, ice cream, butter, and cheese). Laboratories are conducted in a food processing pilot plant facility, which allows students to gain hands-on experience in operating pilot plant equipment and the manufacture of safe, high-quality dairy products. One field trip to operating dairy plants in the area is scheduled during the semester.

FDSC 4300 Understanding Wine and Beer (also VIEN 4300)  
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor; age 21 by first day of class (Jan. 25, 2010). S–U or letter grades. T. E. Acree, K. J. Siebert, G. L. Sacks, and R. Mira de Orduña.  
Introduction to wine and beer appreciation through the study of fermentation biology, product composition, and sensory perception. Uses samples of wines and beers to illustrate the sensory properties, microbiological processes, and chemical components that determine quality. Students learn to recognize the major features of wine and beer that determine sensory quality and know the processes that produced them. Topics include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; the sensory properties of wines from different grape varieties, viticultural practices, and wine-making techniques; and the effects of brewing raw materials and processing procedures on beer quality.
FDSC 4400 Wine and Grape Flavor Development (also VIEN 4400)
Spring. 3 credits. Limited to 30 students; preference given to students in the enology or viticulture program.
Prerequisites: at least one semester of general chemistry and one semester of organic chemistry required. Prior coursework in or knowledge of viticulture and enology recommended. FDSC 1104 and CHEM 2750. Letter grades only.
G. Sacks.
This course will use a (bio)-chemical perspective to investigate viticulture and enological factors that impact flavor and other quality attributes (mouthfeel, color, stability) of wine and wine grapes.

FDSC 4500 Fundamentals of Food Law
Spring. 2 credits. Letter grades only.
Offered alternate years. J. M. Regenstein.
Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasizes the Food and Drug Administration and U.S. Department of Agriculture regulations but also other regulatory agencies.
Emphasizes how a food or agricultural professional interacts with the U.S. legal system during legislative action, regulatory rule making, and with respect to compliance.

FDSC 4560 Advanced Concepts in Sensory Evaluation

FDSC 4666 U.S. Food Industry and Food Science Research
Summer. 1 credit. Prerequisite: enrollment in Food Science summer scholars program or M.P.S. in Food Science and Technology. S–U grades only. M. Wiedmann.
This course will introduce students to the U.S. food industry and food science research. Students will participate in weekly meetings to cover topics such as food science research methods, ethics in food science and research; field trips to food processing plants and R&D facilities, and panel discussions on food science careers in the United States. Students will be required to keep journals with weekly entries that reflect critical thinking on the challenges and opportunities in the discipline of food science.

FDSC 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also NTRES/IARD 4800)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller.
For description, see NTRES 4800.

FDSC 4910 Viticulture and Enology Research Practices (also VIEN 4910)
Fall. 3 credits. Prerequisite: VIEN/FDSC/HORT 1105 or permission of instructor. Letter grades only. K. Armuk.
Collaborative wine research project for students in the Viticulture and Enology major. Original research experience, including critical evaluation of literature; experimental protocols and analytical procedures, data collection and evaluation, and scientific research writing. Emphasis on practical winemaking and laboratory methods, with sufficient lecture and discussion time to support student learning of relevant scientific concepts.

FDSC 4940 Special Topics in Food Science
Fall or spring. 4 credits max. S–U or letter grades. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

FDSC 4960 Undergraduate Internship in Food Science
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. Students must submit a CALS independent study research, teaching, or internship form signed by faculty member who will supervise study and assign credits and grade. S–U grades only. Staff.
On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and students, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship experiences must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

FDSC 4970 Individual Study in Food Science
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Staff.
May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Since topics vary, the course may be repeated for credit.

FDSC 4980 Undergraduate Teaching Experience
Fall or spring. 3 credits max. Prerequisite: permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U grades only. Staff.
Students assist in teaching a course appropriate to their previous training and experience. Students meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

FDSC 4990 Undergraduate Research in Food Science
Fall or spring. 4 credits max. may be repeated for credit. S–U or letter grades. Staff.
Students must register using independent study form (available in 140 Roberts Hall). S–U grades only. Staff.
Students conduct original research directed by a food science faculty member.

FDSC 4991 Food Science Honors Research
Fall. 1 to 4 credits, variable. Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S–U or letter grades. Staff.
Intended for students pursuing the research honors program in Food Science.

FDSC 4992 Food Science Honors Research
Spring. 1 to 4 credits, variable. Prerequisite: enrollment in Food Science research honors program. Students must be eligible for Latin honors and complete honors program application by third week of fall semester, senior year. S–U or letter grades. Staff.
Intended for students pursuing the research honors program in Food Science.

FDSC 5000 Master of Professional Studies (Agriculture) Project
Fall, spring, summer. 1–6 credits. Requirement for M.P.S. students in graduate field of Food Science and Technology. S–U or letter grades. Staff.
Problem solving project involving analysis and/or active research to the field of Food Science and Technology.

FDSC 5200 Advanced Food Processing and Engineering
Summer. 2 credits. Prerequisites: M.P.S. standing or permission of instructor. Letter grades only. S. Rizvi and S. Mulvaney.
This course is intended primarily for M.P.S. students in the field of Food Science and Technology enrolled in the dual Cornell-TNAU M.P.S. degree program. An intensive overview of the principles of food polymer science and rheology and analysis of current and emerging processes for food manufacturing.

FDSC 5990 Research for Lausanne Exchange Students
Fall/spring. 10 credits max. Prerequisite: permission of instructor. S–U or letter grades. Staff.
Undergraduate senior thesis research for Lausanne exchange students only. Students conduct original research directed by a food science faculty member, then write and present a final report to the faculties of both Cornell University and the University of Lausanne.

FDSC 6000 Seminar in Food Science
Fall and spring. 1 credit. Requirement for all graduate students in field of food science and technology; highly recommended for graduate students minoring in food science and technology. S–U grades only. Staff.
Weekly seminar series on contemporary topics and issues in the field of food science and technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the field of food science and technology may use the forum to present their required thesis research seminar.

FDSC 6020 Agriculture in Developing Nations II (also IARD 6020)
Spring, field trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and (or) permission of instructors. cost of field-study trip is $4,000 (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman.
For description, see IARD 6020.
on proteins, starches, gelatin, and other hydrocolloids relevant to food systems.

[FDS 6650 Food and Bioprocessing Systems]
FALL 2009 – 2010

[FDS 6690 Graduate Internship in Food Science]
FALL or SPRING 2009 – 2010

[FDS 9900 Doctoral-Level Thesis Research]
Fall or spring. Credit TBA. Maximum of 12 credits. Prerequisite: doctoral students who have passed ‘A’ exam; permission of Special Committee chair. S–U grades only. Graduate faculty.

HORTICULTURE

HORT 101 Functional Horticulture and Systems
Fall. 4 credits. I. A. Merwin.
Science and technology of horticultural plants grown for foods and beverages and ornamental, landscape, or recreational purposes. Lectures, labs, and field trips involve natural history and evolution of horticultural plants, botany and physiology, sustainable management of soil, water and plant nutrition, breeding and propagation, ecological and landscape functions, and integrated design and management of horticultural plantings and production systems.

HORT 102 Hands-On Horticulture
Spring. 2 credits. Not for seniors or plant science majors. Nominal materials fee. M. P. Pritts.
The objective is to instill in students a lifelong appreciation for how gardening can enhance individual well-being through aesthetics, culinary experiences, and mastery of techniques. Emphasizes hands-on learning and practice of key gardening skills and techniques in the greenhouse and the field, such as landscape management, garden design, propagation, pruning, grafting, pest management, and flower arrangement. There is one Saturday field trip at the end of the semester to visit gardens in the local area.

HORT 104 Introduction to Wines and Vines (also FDS/C/VIEN 1104)
Spring. 3 credits. Letter grades only. K. J. Arnink and I. A. Merwin. For description, see FDSC 1104.

HORT 1105 Lab/Field Practice in Wines and Vines (also FDS/C/VIEN 1105)
Spring. 1 credit. K. J. Arnink and I. A. Merwin. For description, see FDSC 1105.

HORT 1110 Collaboration, Leadership, and Career Skills in the Plant Sciences
Fall. 2 credits. Prerequisite: permission of instructors. M. P. Pritts and M. Eames-Shealey.
For all new plant sciences students; seminar will provide opportunities to meet other students and faculty, develop collaboration, leadership, and career skills in the discipline, and to make connections with the world beyond the campus.
HORT 1160 Nature Writing
Spring. 3 credits. Letter grades only.
D. W. Wolfe.
Today more than ever we need individuals who not only enjoy or study nature, but also can write effectively about it so that others will know what they know, and feel what they feel. We will begin by reading and writing about the technique of others, from Thoreau and Whitman, to Edward Abbey and Wendell Berry, to emerging new voices in this genre. We will critique essay structure, literary creativity, and evidence of careful research and observation. Nature writing is more than a desk job, and in that spirit we will have at least two shared field trips. Students will develop their unique "voice" for expressing their views, expertise, and passion for nature by research and revision of essay topics of personal interest.

HORT 2010 The Art of Horticulture
Fall. 2–3 credits. Fee for materials: $35.
M. Eames-Sheavly.
Experiential survey course; two distinct units: plants used in/ as art; plants as a subject of art. Unit 1: sculpture methods, such as turf-works, tree sculpture, Unit 2: drawing, botanical illustration, watercolor/pastel painting. Required: attendance: critical reflection in journals; original, creative final project. Optional third credit: pursue proficiency in drawing.

HORT 2200 Practicing Sustainable Land Care
Fall. 2–3 credits; 1 additional credit for student projects by permission of instructor. Offered odd-numbered years.
L. E. Drinkwater.
Experiential course emphasizing interdisciplinary, ecosystem-based approaches to land management and food production. Covers concepts from biological and environmental sciences and includes hands-on activities in organic agriculture, agroforestry, and ecosystem restoration. Classes are held at Dilmun Hill Organic Farm and the MacDaniels Nut Grove.

HORT 2350 Plants and Human Well-Being (CA) (HA)
Spring. 3 credits. Offered even-numbered years.
Examines the biophysical, social, economic, cultural, and environmental effects of plants on human cultures, communities, and individuals. Areas of focus include impacts of community gardens, green space, and farmer’s markets; use of plants for pollution control, economic development, conflict resolution, and tourism; how plants benefit individuals in terms of adult cognition, K–12 education, mental health, and personal empowerment. Laboratories include field trips and exercises to allow students to analyze and evaluate plant-based initiatives in many phases of contemporary life.

HORT 2400 Exploring the Small Farm Dream
Spring. 1 credit. Prerequisite: permission of instructors. S–U grades only.
J. Green and A. Rangarajan.
Explore opportunities and challenges involved in starting up and managing a small farm. Weekly presentations and discussion with innovative farmers and others. Topics include diversified farming, high-value horticulture, grass-based farming, agroforestry, dairy and livestock opportunities, community-supported agriculture, farm business planning, access to land, marketing strategies, juggling jobs, family-farming, and more.

HORT 2430 Taxonomy of Cultivated Plants (also BIOPL 2430)
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 2480. Offered even-numbered years; next offered 2010–2011.
M. A. Luckow.
For description, see BIOPL 2430.

HORT 2940 Introduction to Agricultural Machinery (also CSS/AGSCI 2940)
Fall. 2 credits. B. Flannigan and A. DiTommaso.
For description, see CSS 2940.

HORT 3000 Herbaceous Plant Materials
Fall. 5 credits. Cost of field trips: $75.
W. B. Miller.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries.

HORT 3100 Production and Marketing of Greenhouse Crops
Spring. 4 credits. Prerequisites: HORT 1101 and any other horticulture course; junior standing preferred. Letter grades only. Cost of required three-day field trip: approx. $150. Offered odd-numbered years; next offered 2010–2011.
W. B. Miller.
Covers basics of establishing a greenhouse operation, growing crops in optimized environments and serving niche or mass market. Discusses technology basics and production management.

HORT 3170 Seed Science and Technology (also CSS 3170)
Fall. 3 credits. Prerequisite: BIOPL 2410 or equivalent course approved by instructor. Letter grades only. Offered odd-numbered years.
A. G. Taylor, Geneva Experiment Station.
For description, see CSS 3170.

HORT 3300 Golf and Sports Turf Management
Spring. 3 credits. Prerequisite: CSS 2600 or permission of instructor. Letter grades only. Offered odd-numbered years; next offered 2010–2011.
F. S. Rossi and A. M. Petrovic.
Proposal, siting, specification, installation, establishment, and management of turfgrass areas. Emphasizes commercial locations including lawns, sports fields, and golf courses.

HORT 3400 Golf and Sports Turf Management Techniques
Fall. 2 credits. Prerequisite: HORT 3300. Letter grades only. Offered odd-numbered years.
F. S. Rossi.
A course designed to provide hands-on learning of essential turfgrass management skills including mower set-up, sprayer calibration, calibration mathematics, budget development, etc.

HORT 3800 Organic Food and Agriculture (also CSS/AGSCI 3800)
Fall. 5–4 credits. Prerequisite: CSS 1900, CSS 2600, HORT 1101, or permission of instructor. Staff.
For description, see CSS 3800.

HORT 3910 Woody Plant Identification and Use I
Fall. 2 credits. Limited enrollment. Prerequisite: permission of instructor. Letter grades only.
N. L. Bassuk.
Module of HORT/LA 4920 covering the identification of approximately 160 evergreen trees and shrubs and deciduous plants using winter identification. HORT 3910 (fall module) need not be taken before taking HORT 3920 (spring module). Students also assist in the establishment of a new landscape on campus.

HORT 4000 Principles of Plant Propagation
Spring. 3 credits. Offered even-numbered years.
K. W. Mudge.
Asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering, and specialized vegetative reproductive structures and sexual (seed) propagation. Stresses physiological, environmental, and anatomical principles and industry applications in lecture, and hands-on skills in laboratories. Includes both temperate and tropical horticultural, agronomic, and forestry crops.

HORT 4030 Plant Cell and Tissue Culture (also PLBR 4010)
Fall. 3 credits. Letter grades only.
E. D. Earle.
For description, see PLBR 4010.

HORT 4040 Plant Tissue Culture Laboratory (also PLBR 4011)
Fall. 1 credit.
E. D. Earle.
For description, see PLBR 4011.

HORT 4200 Nursery-Crop Production
Fall. 3 credits. Prerequisite: HORT 4000 or permission of instructor. Cost of field trips: $75. Offered odd-numbered years.
K. W. Mudge.
Principles and practices of commercial nursery crop production. Term project required. Includes field trips to commercial nurseries.

HORT 4250 Postharvest Biology of Horticultural Crops
Fall. 2 credits. Offered odd-numbered years.
S. Gan.
Study of the biological processes controlling physical and chemical changes in harvested yet living horticultural crops or their parts. Discusses the theoretical principles and fundamental processes that bring about these changes. Also covers strategies and practical handling requirements/conditions for storage, transportation, and quality monitoring of harvested horticultural crops.
HORT 4251 Postharvest Biology of Horticultural Crops Lab
Fall. 1 credit. Pre- or corequisite: HORT 4250. Offered odd-numbered years.
S. Gan.
Laboratory exercises are intended to supplement/complement HORT 4250 lectures. Labs, taught by scientists who are experts in their respective subject areas, will involve some experimental manipulations and physiological and biochemical analysis of harvested fruits, vegetables and flowers, data analysis, and oral and written discussion of the results. Lab periods will also provide time for formal discussion of research papers and topics. May include one field trip during regularly scheduled lab.

HORT 4260 Practicum in Forest Farming as an Agroforestry System (also NTRES/CSS 4260)
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Madge, P. Hobbs, and L. E. Buck.
Students actively take part in the restoration of a 70-year-old nut grove. The MacDaniel's Nut Grove is being developed as a multipurpose forest-farming teaching, research, and extension site. Hands-on activities include site evaluation and planning, temperate-nut harvest and variety evaluation, mushroom culture, small-fruit and fruit-tree culture, and medicinal-herb culture. Outdoor activities are integrated with selected readings via an online discussion board.

HORT 4400 Restoration Ecology
Fall. 5 credits. Prerequisite: upper-division or graduate standing and permission of instructor. Letter grades only. Lec, lab, plus several weekends. T. H. Whitlow.
Draws concepts from ecology, hydrology, soil science, and conservation biology and applies these in both principle and practice to the rapidly evolving field of restoration ecology. Through lectures, reading, and discussion, site visits to active restoration sites, and a real-world class project, students learn and practice skills needed to develop restoration plans for a variety of situations.

HORT 4420 Berry Crops: Culture and Management—I (also VIEN 4430)
Fall. 3 credits. Offered even-numbered years; next offered 2010–2011. M. P. Pritts.
Study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other small fruit crops. Frequent field trips.

HORT 4430 Viticulture and Vineyard Management—I (also VIEN 4430)
Fall. 3 credits. Prerequisite: any two-semester college biology course. Letter grades only. J. E. Vanden Huevel and P. Cousins.
First-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine environmental factors favoring production and quality, soils, and the anatomical and physiological basis for vineyard management decision-making. Laboratory exercises and field trips offer hands-on experience.

HORT 4440 Viticulture and Vineyard Management—II (also VIEN 4440)
Spring. 3 credits. Pre- or corequisites: HORT 4430 and permission of instructor. Letter grades only. J. E. Vanden Huevel.
Second-semester course in commercial grape production with an emphasis on the problems of production in cold climates. Students examine the genetics of the vine and learn principles of vineyard establishment, propagation, pruning and training, and conservation. Laboratory exercises and field trips offer hands-on experience.

HORT 4444 Grapevine Biology (also VIEN 4444)
Spring. 3 credits. Prerequisite: introductory botany; BIOL 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. N. Lakso, C. C. Clingeleffer, P. S. Cousins, and C. L. Owens.
Focuses on the whole-plant biology of the grapevine that underpins grape-growing. Major topics include vine structure and its organization, vegetative and reproductive development, biomass and carbon balance, water and mineral nutrition, grapevine species and taxonomy, grape scion varieties, rootstocks, breeding and genetic improvement, and genomes.

HORT 4450 Ecological Orchard Management
Spring. 3 credits. Prerequisite: introductory biology. Recommended: previous horticulture/plant science courses. S–U or letter grades. Offered even-numbered years. I. A. Merwin.
The ecology and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology; orchard renovation and design systems; nutrition, irrigation, and freeze protection practices; tree pruning and training; post-harvest fruit storage; marketing and economic spreadsheet models; monitoring and decision-making systems for integrated pest management; and efficient use of orchard equipment. Emphasizes the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management.

HORT 4490 Green Signals and Triggers—The Plant Hormones (also BIOL 4490)
Spring. 2 credits. Prerequisites: introductory biology and BIOL 2420 or 3420 or permission of instructor. S–U or letter grades. Offered even-numbered years. P. J. Davies.
For description, see BIOL 4490.

HORT 4500 Principles of Vegetable Production
Fall. 3 credits. Prerequisite: HORT 1101, CSS 2600, or equivalent. Letter grades only. Two Sat. field trips; students responsible for cost of their meals. Offered even-numbered years; next offered 2010–2011. R. R. Bellinder and S. Reiners.
Commercial vegetable production from variety selection to postharvest. Topics include: crop physiology and culture, soil and pest management, stand establishment, marketing, and history of production.

HORT 4551–4555 Mineral Nutrition of Crops and Landscape Plants (also CSS 4551–4555)
Spring. 5 modules; 1 credit each. Prerequisite: CSS 2600 and BIOL 2420. Offered even-numbered years. Coordinator: H. C. Wien.
Students learn the principles of mineral nutrient function in crop plants, are able to diagnose deficiencies by symptoms and tissue tests, and can devise organic and conventional nutrient management schemes that maximize productivity and mineral nutrient quality.

HORT 4555 Crop Nutrition Principles (also CSS 4555)
Spring, weeks 1–3. 1 credit. Prerequisite: CSS 2600 and BIOL 2420, or equivalent. Offered even-numbered years. H. C. Wien. Required module to be taken in addition to at least two, or up to four other modules.

HORT 4556 Agronomic Crop Nutrition (also CSS 4556)
Spring, weeks 4–6. 1 credit. Prerequisite: CSS 2600 and BIOL 2420, or equivalent. Offered even-numbered years. M. Duxbury. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4557 Vegetable Crop Nutrition (also CSS 4557)
Spring, weeks 7–9. 1 credit. Prerequisite: CSS 2600 and BIOL 2420, or equivalent. Offered even-numbered years. S. Reiners. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4558 Landscape Plant Nutrition (also CSS 4558)
Spring, weeks 10–12. 1 credit. Prerequisite: CSS 2600 and BIOL 2420, or equivalent. Offered even-numbered years. A. M. Petrovic. Must be taken with the required Crop Nutrition Principles module—HORT 4551—and at least one other module.

HORT 4600 Cropping Systems Ecology
Spring. 3 credits. Prerequisite: any crop production or plant ecology course or permission of instructor. Offered even-numbered years. D. W. Wolfe.
Course utilizes the basic principles of plant population biology, environmental physiology, and ecology to evaluate the management, productivity, and environmental impact of various cropping systems. Emphasis is on agricultural systems, but the role of plant–plant interactions and biodiversity in succession and productivity of natural ecosystems will also be discussed.

HORT 4620 Physiology of Vegetables and Flowers
Spring. 4 credits. Prerequisite: BIOL 2420 or equivalent. Offered odd-numbered years; next offered 2010–2011. H. C. Wien. Study of the physiological principles that govern growth, development, and production of reproductive structures of vegetable crops and herbaceous ornamental plants. Hands-on greenhouse experiments.

HORT 4660 Soil Ecology (also CSS 4660)
Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies.
For description, see CSS 4660.

HORT 4660 Soil Ecology (also CSS 4660)
Spring. 4 credits, with lab. Prerequisite: one year of biology or ecology and CSS 2600 or permission of instructor. J. E. Thies.
For description, see CSS 4660.
HORT 4970 Individual Study in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff.

HORT 4980 Undergraduate Teaching Experience
Fall or spring. Variable credit. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff.

HORT 4990 Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using individual study form (available in 140 Roberts Hall). Staff. Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 5900 Master of Professional Studies (Agriculture) Project
Fall or spring. 1–6 credits; 6 credits max. toward M.P.S. (agriculture) degree. Requirement for M.P.S. (agriculture) candidates in respective graduate fields of horticulture. S–U or letter grades. Staff. Comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations.

HORT 6000 Seminar in Horticulture
Fall and spring. 1 credit. Requirement for undergraduate students majoring or minoring in horticulture. Undergraduate students enroll in HORT 4950. S–U grades only. L. Cheng.

HORT 6010 Extension Volunteer Development in Garden-based Learning
Fall. 2 credits. Prerequisite: course work in horticulture and related fields. Undergraduate plant sciences students by permission of instructor. Offered even-numbered years; next offered 2010–2011. L. J. Bushway. Extension/outreach training course for graduate entomology, pathology, and horticulture students. Learn skills to effectively develop knowledge of adult volunteers in garden-based learning programs.

HORT 6100 Extension Volunteer Development in Garden-based Learning
Fall. 2 credits. Prerequisite: HORT 6100. Offered odd-numbered years; next offered 2010–2011. L. J. Bushway. Lead introductory horticultural science training sessions for Master Gardener Volunteers and/or other volunteer groups associated with garden-based learning programs.

HORT 6150 Quantitative Methods in Horticultural Research
Spring. weeks 1–7. 2 credits. Prerequisite: BTRY 6010, 6020, or permission of instructor. S–U grades only. Offered even-numbered years. D. W. Wolfe.
Provides experience in applying statistics principles to real-world agricultural research problems. Uses examples of lab, greenhouse, and field studies from the published literature. Explores other quantitative methods. Topics include approaches to controlling and analysis of variation; common block and incomplete block designs; selecting an appropriate significance level; designing on-farm experiments and demonstration plots; regression methods in relation to mechanistic models and path and principal components analysis; and plant growth analysis techniques.

HORT 6170 Advanced Analytical Methods for Plant Systems
Spring. 2 credits. Prerequisite: one year of general chemistry, one semester of organic chemistry, plant physiology. Letter grades only. Offered odd-numbered years; next offered 2010–2011. L. Cheng. Principles and practical applications of selected laboratory methods in the plant and environmental sciences. Emphasizes enhancement of laboratory technique and problem-solving skills.

HORT 6180 Breeding for Pest Resistance (also PLBR 6180)
Fall. 2 credits. Prerequisites: BIOGD 2810 and PLBR 4030 or equivalents. Highly recommended: introductory plant pathology and/or entomology course. Letter grades only. Offered even-numbered years. P. D. Griffiths. For description, see PLBR 6180.

HORT 6251 Advanced Postharvest Biology: Postharvest Physiology
Fall. 1 credit (12 lec). Offered even-numbered years. S. Gan. Emphasizes the physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticulture plant parts.

HORT 6252 Advanced Postharvest Biology: Plant Senescence (also BIOPOL 4836)
1 credit. (12 lec). S. Gan. Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research.

HORT 6253 Advanced Postharvest Biology: Postharvest Technology
1 credit. (12 lec). C. B. Watkins. Emphasizes advanced existing and emerging technology and practice for handling, monitoring, and storage of horticultural crops after harvest.

HORT 6350 Tools for Thought
Fall. 1 credit. Prerequisite: graduate standing. S–U grades only. T. H. Whitlow. Discusses readings from Kuhn, Waddington, Wilson, Lewontin, and others emphasizing application of the philosophy of science to the real-world practices of scientists.

HORT 6450 Advanced Viticultural Topics (also VIEN 6450)
Spring. 2 credits. Prerequisite: HORT 4430 or equivalent. Letter grades only. Offered even-numbered years. A. N. Latso. In-depth lecture/discussion of complex topics of viticulture that have important impacts on fruit composition and wine quality. These include crop load effects, canopy management, water relations, vineyard efficiency, and vineyard variability/precision viticulture.

HORT 6940 Special Topics in Horticulture
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committees, and the same course is not offered more than twice under this number.

HORT 6970 Graduate Individual Study in Horticulture
Fall or spring. Variable credit. Prerequisite: permission of instructor(s). S–U or letter grades. Staff. Graduate individual study in horticultural sciences under the direction of one or more faculty members.

HORT 7000 Graduate Teaching Experience
Fall or spring. Variable credit. Prerequisite: permission of instructor; graduate standing. Undergraduates should enroll in HORT 4980. S–U or letter grades. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. May include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 8900 Thesis Research, Master of Science
Fall or spring. Variable credit. S–U grades only.

Hort 9900 Thesis Research, Doctor of Philosophy
Fall or spring. Variable credit. S–U grades only.

INFORMATION SCIENCE

INFO 1300 Introductory Design and Programming for the Web (also CS 1300)
Fall. 3 credits. For description, see INFO 1300 in CIS section.

INFO 2040 Networks (also CS 2850, ECON 2040, SOC 2800) (SBA)
Spring. 4 credits. For description, see ECON 2040.

INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140) (KCM)
Spring. 4 credits. Limited to 175 students. Prerequisite: sophomore standing. Graduate students: info 6440. For description, see PSYCH 2140.

INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)
Spring. 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3400.

For description, see INFO 2300 in CIS section.

INFO 2450 Communication and Technology (also COMM 2450) (SBA)
Fall, summer. 3 credits. For description, see COMM 2450.

INFO 2921 Inventing an Information Society (also AMST/CE/ENGRG 2980, HIST 2920, STS 2921)
Spring. 3 credits. For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science
Fall. 4 credits. Corequisite: MATH 2101 or equivalent. For description, see INFO 2950 in CIS section.

INFO 3200 New Media and Society (also COMM 3200) (CA)
Spring. 3 credits. For description, see COMM 3200.

INFO 3300 Data-Driven Web Applications (also CS 3300)
Spring. 3 credits. Prerequisite: CS 2110 and INFO 2300 or permission of instructor). For description, see INFO 3300 in CIS section.

INFO 3400 Psychology of Social Computing (also COMM 3400)
Fall. 3 credits. Prerequisite: COMM/INFO 2450. Next offered 2010–2011. For description, see COMM 3400.

INFO 3450 Human–Computer Interaction Design (also COMM 3450) (SBA)
Fall. 3 credits. Prerequisite: INFO 2450 or permission of instructor. May be taken simultaneously with INFO 2450. For description, see COMM 3450.

INFO 3490 Media Technologies (also COMM 3490, STS 3491) (CA)
Spring. 3 credits. Offered odd-numbered years; next offered 2010–2011. For description, see COMM 3490.

INFO 3541 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)
Fall. 4 credits. For description, see STS 3551.

INFO 3561 Computing Cultures (also STS 3561) (CA)
Spring. 4 credits. No technical knowledge of computer use presumed or required. INFO 3551 and 3561 may be taken separately or in any order. For description, see STS 3561.

INFO 3650 Technology and Collaboration (also COMM 3650) (SBA)
Spring. 3 credits. Prerequisite: INFO 2450. For description, see COMM 3650.

INFO 3660 History and Theory of Digital Art (also ARTH 3660) (CA)
Fall. 4 credits. Next offered 2010–2011. For description, see ARTH 3660.

INFO 3820 Information Systems (also COMM 3820) (CA)
Fall. 3 credits. Prerequisite: INFO 2450. For description, see COMM 3820.

INFO 3960 Business Communication (also COMM 3960) (CA)
Spring. 3 credits. Introduces use of information systems in business settings. Prerequisite: INFO 2450. For description, see COMM 3960.
INFO 4290 Copyright in the Digital Age (also COMM 4290) (CA)
Fall. 3 credits. Offered odd-numbered years.
For description, see COMM 4290.
INFO 4300 Information Retrieval (also CS 4300)
Fall. 5 credits. Prerequisites: CS 2110 or equivalent.
For description, see INFO 4300 in CIS section.
INFO 4302 Web Information Systems (also CS 4302)
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.
For description, see INFO 4302 in CIS section.

[INFO 4350 Seminar on Applications of Information Science (also INFO 6350)]
INFO 4400 Advanced Human–Computer Interaction Design (also COMM 4400) (SBA)
Spring. 3 credits. Prerequisite: INFO 3450.
For description, see COMM 4400.
INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450) (SBA)
Spring. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4450.
INFO 4470 Social and Economic Data (also LIRLE 4470)
Fall. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, at least one upper-level social science course, or permission of instructor.
For description, see INFO 4470 in CIS section.
INFO 4500 Language and Technology (also COMM 4500) (SBA)
Spring. 3 credits. Prerequisites: INFO 2450 or permission of instructor.
For description, see COMM 4500.
INFO 4900 Independent Reading and Research
Fall, spring. 1–4 credits.
Independent reading and research for undergraduates.
INFO 4910 Teaching in Information Science, Systems, and Technology
Fall, spring. Variable credit.
Involves working as a TA in a course in the information science, systems, and technology major.

[INFO 5150 Culture, Law, and Politics of the Internet (SBA)]
INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)
Spring. 4 credits. Prerequisite: INFO 3300 or CS 4320.
For description, see INFO 5300 in CIS section.
INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)
Spring. 4 credits.
For description, see PSYCH 6140.
INFO 6300 Advanced Language Technologies (also CS 6740)
Fall, spring. 3 credits. Prerequisite: permission of instructor. Neither INFO 4300 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.
INFO 6341 Information Technology in Sociocultural Context (also STS 6341)
Spring. 4 credits.
For description, see INFO 6341 in CIS section.

[INFO 6350 Seminar on Applications of Information Science (also INFO 4350)]
INFO 6400 Human–Computer Interaction Design (also COMM 6400)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6400.
INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6450.
INFO 6648 Speech Synthesis by Rule (also LING 6648)
Spring. 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2010–2011.
For description, see LING 6648.
INFO 6500 Language and Technology (also COMM 6500)
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor.
For description, see COMM 6500.
INFO 6850 The Structure of Information Networks (also CS 6850)
INFO 7090 IS Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.
INFO 7900 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Independent research for M.Eng. and Ph.D. students.
INFO 9900 Thesis Research
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Thesis research for post-A exam Ph.D. students.

INTERNATIONAL AGRICULTURE AND RURAL DEVELOPMENT
IARD 4020 Agriculture in Developing Nations I (also FDSC 4020)
Fall. 2 credits. K. V. Ramana and W. R. Coffman.
Acquaints students with the major issues and problems in international agriculture and rural development and to demonstrate how problems in development are being addressed in India and Thailand. The lectures/discussions establish the global and regional contexts for sustainable agricultural development and focus on development challenges in Asia through cases in India and Thailand. This course may be taken as a stand-alone survey course in international agriculture and rural development. However, it is primarily a preparatory course for participants selected to participate in the spring-semester course Experience Latin America II: Chiapas Edition (IARD or LATA 6010), which includes a field-study trip to southern Mexico (Chiapas during the January intersession).
IARD 4030 Traditional Agriculture in Developing Countries (also CSS 4030)
Fall. 1 credit. S–U grades only. P. Hobbs.
For description, see CSS 4030.
IARD 4040 Crop Evolution, Domestication, and Diversity (also PLBR 4040)
Fall. 2 credits. Prerequisite: BIOGD 2810 or PLBR 2290 or permission of instructor. S–U or letter grades. S. Kresovich.
For description, see PLBR 4040.
IARD 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also PLBR 4050)
Spring. 3 credits. Prerequisite: senior or graduate standing. S–U or letter grades. A. F. Krattiger and S. Kowalski.
For description, see PLBR 4050.
IARD 4140 Tropical Cropping Systems: Biodiversity, Social, and Environmental Impacts (also CSS 4140)
Fall. 3 credits. Prerequisite: introductory crop science, soil science, or biology course or permission of instructor. P. Hobbs.
For description, see CSS 4140.
IARD 4800 Global Seminar: Building Sustainable Environments and Secure Food Systems for a Modern World (also FDSC/NTRES 4800)
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassiee and D. Miller.
For description, see NTRES 4800.
IARD 4910 Food, Farming, and Personal Belief (also CSS 4910)
Spring. 1 credit. Prerequisites: Sustainable Agriculture (CSS 4900) or equivalent recommended. S–U grades only. G. Fick. For description, see CSS 4910.

IARD 4940 Special Topics in International Agriculture and Rural Development (also LATA 4940)
Fall, spring, summer. 1–5 credits. S–U or letter grades. Staff. The department teaches “trial” courses, and special topics not offered in other courses, at the undergraduate level, under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 4960 International Internship
Fall, spring. 1–6 credits. Prerequisite: submission of approved internship form (see CALS internship policy guidelines). S–U or letter grades. Staff. International internship, supervised by a faculty member who is directly involved in determining both the course content and in evaluating a student’s work. The student researches and plans an appropriate international internship and negotiates a learning contract with the faculty supervisor, stating the conditions of the work assignment, supervision, and reporting. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

IARD 4970 Independent Study in IARD
Fall and spring. 1–3 credits. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Allows students the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the direction of a faculty member.

IARD 5980 International Development M.P.S. Project Paper
Fall and spring. 1–6 credits; max. 6 credits may be applied toward M.P.S. degree. Prerequisite: M.P.S. candidates in field of international development (ID). S–U grades only. N. Uphoff. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international development.

IARD 5990 International Agriculture and Rural Development M.P.S. Project Paper
Fall and spring. 1–6 credits; maximum of 6 credits may be applied toward M.P.S. degree requirements. Prerequisite: M.P.S. candidates in field of international agriculture and rural development (IARD). S–U grades only. S. Kyle. Problem-solving project entailing either fieldwork and/or library work. The aim of the project is to give students supervised experience in dealing intellectually and analytically with a professional problem related to a substantive area of international agriculture and rural development.

IARD 6010 Experience Latin America II (Chiapas Edition) (also LATA 6010)
Spring. 3 credits. Prerequisite: IARD or LATA 4010. T. Tucker and D. Castillo. Designed to provide students with an opportunity to observe the rich living cultures, environments, ecologies, rural and urban communities, and development issues in tropical southern Mexico. Also designed to promote interdisciplinary exchange among faculty, staff, and students and their Mexican hosts and counterparts. A two-week field-study trip in January is followed by discussions, written projects, and oral presentations dealing with a range of topics pertinent to the living cultures of Chiapas. Optional 1-credit discussion in Spanish can be taken concurrently (SPAN 3020).

IARD 6020 Agriculture in Developing Nations II (also FDSC 6200)
Spring, field trip to Asia during Jan. intersession. 3 credits. Prerequisites: IARD 4020 and permission of instructors. Cost of field-study trip is $4,000 (including airfare, local transportation, and lodging). Some merit and need-based financial aid may be available. K. V. Raman and W. R. Coffman.

IARD 6030 Planning and Management of Agriculture and Rural Development (also GOVT 6927)
Spring. 4 credits. N. T. Uphoff and T. W. Tucker. Reviews experience and approaches in agricultural and rural development in a range of developing countries, with particular attention to contemporary issues of participation, decentralization, local institutions, capacity-building, civil society, social capital, and empowerment. Case studies from Asia, Africa, and Latin America.

IARD 6850 Training and Development: Theory and Practice (also EDUC 6850)
Spring. 4 credits. S–U or letter grades. R. Caffarella. For description, see EDUC 6850.

IARD 6940 Graduate Special Topics in IARD
Fall or spring. 1–4 credits. S–U or letter grades. Staff. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

IARD 6960 Agroecological Perspectives for Sustainable Development (also NTRES/ CSS 6960)
Fall, spring. 1 credit. S–U grades only. L. Fisher, T. Hobbs. A variety of speakers present seminars on agroecological topics relating to sustainable development throughout the world. Students are required to prepare a synopsis of each seminar.

IARD 6990 International Agriculture and Rural Development M.P.S. Project Seminar
Fall, spring. 1 credit. S–U grades only. N. Uphoff. For M.P.S. students to discuss important issues in international development and to prepare them to write their project papers. Specific content varies.

IARD 7830 Farmer-Centered Research and Extension (also EDUC 7830)
Fall. 3 credits. S–U or letter grades. T. Tucker. Introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal, and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension provide a focus for analysis. Appropriate roles of researchers and extensionists as partners with farmers are examined. A major contribution of farmer-centered research and extensions is its potential to legitimize people’s knowledge by enhancing their capacity to critically analyze their own problems, conduct their own research and empower them to take direct action to solve those problems.

LANDSCAPE ARCHITECTURE

LA 1410 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grades only. Fee for required packaging of drafting equipment plus materials for projects: approx. $300. Introduction to the representation and design of landscapes and to working in a studio setting. Uses freehand drawing, measured drafting, and model making to understand design principles of the landscape within a cultural and ecological paradigm.

LA 1420 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approx. 20 students. Prerequisite: Freshman landscape architecture majors or permission of instructor. Required drafting equipment plus project supplies: approx. $250. Applies fundamentals of landscape design to small-scale site-planning projects. Work in the studio introduces students to the design process, design principles, construction materials, planting design, and graphics.
LA 2010 Medium of the Landscape
Fall. 5 credits. Prerequisite: landscape architecture majors. Required drafting equipment, supplies, and fees: approx. $200; field trip: approx. $250.
Study of course emphasizing the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthforms, water, and vegetation.

LA 2020 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 2010 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250.
Focuses on the role of materials in design, design theory, and design vocabulary associated with landscape architecture projects.

[LA 2150 Writing Seminar: Engaging Places]
Explores how places come to be what they are, how they shape—and are shaped by—the people who live in them, how they become coordinates for plotting both a culture’s biography and the meaning of a life. While the course serves as an introduction to cultural landscape studies, or the interaction of people and place, its focus is on writing how we represent the complexity of a place and our relation to it?

[LA 2610 Fieldwork in Urban Archaeology (also CRP/ARKEO 2610) (CA) (LA)]

[LA 2620 Laboratory in Landscape Archaeology (also ARKEO 2620)]

LA 2820 Photography and the American Landscape (CA) (LA)
Fall. 5 credits. A. Hammer.
Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, photographic surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 3010 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 2020 with grade of C or better. Supplies and fees: approx. $250; field trip: approx. $250.
This studio engages participants in the art and science of design as well as focusing on site-scaled projects that consider significant cultural and natural landscapes. This course explores theories of landscape design, restoration, sustainable design, and landscape representation through projects that derive form from a specific site and place.

LA 3020 Integrating Theory and Practice II
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250; international studios: $500.
Studio building upon prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Focuses on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historical factors and their relationship to site design and planning are critically explored through theory and practice.

LA 3160 Site Engineering
Fall. 5 credits.
Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 3180 Site Construction
Spring. 5 credits. Prerequisite: permission of instructor. P. Trowbridge.
This course emphasizes detail design and use of landscape materials in project implementation. It explores construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, studio problems, and development of drawings leading to construction documentation for one or more comprehensive projects.

[LA 3600 Pre-Industrial Cities and Towns of North America (also ARKEO 3600, CRP 3600/6660, LA 6660) (CA) (LA)]

LA 4010 Urban Design Studio
Fall. 5 credits.
This studio focuses on the integration of theory and practice in landscape architecture at the urban scale. Urban design methods and strategies are introduced and applied to city-scaled projects including community engagement.

LA 4020 Integrating Theory and Practice II
Spring. 5 credits. Supplies and fees: approx. $250; field trip: approx. $250.
Studio focusing on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationships to site design and planning are critically explored through theory and practice in this studio.

LA 4030 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: landscape architecture undergraduates in final year of study.
Working with their advisor, students create a written and visual paper that documents the concentration intent.

LA 4100 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Limited to 15 students. Prerequisite: landscape architecture students. S. Curtis.
Designed to develop a working knowledge of various computer software applications with emphasis on AutoCad. Explores other applications related to land-use planning and the profession of landscape architecture.

LA 4120 Professional Practice
Fall. 1 credit.
This course presents the student with an understanding of the emerging role of the professional landscape architect. The course helps students choose a type of practice and introduces the problems and opportunities one may encounter in an office or in other professional situations. Topics include job-seeking preparation, diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 4180/7900 Audio Documentary: Stories from the Land (CA) (LA)
Spring. 3 credits. Limited to 15 students. Letter grades only. A. Hammer.
Offers hands-on experience in basic audio documentary. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects appropriate for podcasting, webcasting, and radio. Explores relationship between sound and the still or moving image.

LA 4850 Seminar in Landscape Studies (CA) (LA)
Spring. 3 credits. Prerequisite: senior or graduate standing in any major or field. Topical seminar with a different subject and method each time it is offered.

LA 4860/7910 Placemaking by Design
Fall. 3 credits. Limited to 20 students. Priority given to juniors, seniors, and graduate students. S. Curtis.
Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions. What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

LA 4910 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4910)
Fall. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors. Preregistration required.
Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk.
Focuses on the identification, uses, and establishment of woody plants in urban and garden settings. By understanding the environmental limitations to plant growth, students are able to critically assess potential planting sites, select appropriate trees, shrubs, vines, and ground covers for a given site, and learn about the principles and practices of site remediation and plant establishment. Design followed by written specifications and graphic details is produced to implement these practices.

LA 4920 Creating the Urban Eden: Woody Plant Selection, Design, and Landscape Establishment (also HORT 4920)
Spring. 4 credits. Limited to 48 students. Prerequisite: horticulture or landscape architecture majors or permission of instructors; passing grade in HORT/LA 4910. Preregistration required. Supplies: approx. $50; field trips: approx. $25. P. Trowbridge and N. Bassuk.
Second half of course focusing on winter identification, uses, and establishment of woody plants in urban and garden settings. Issues of site assessment and soil remediation are emphasized in addition to soil volume calculations, drainage, surface detailing, and planting techniques. Students critically assess
potential planting sites and select appropriate trees, shrubs, vines, and groundcovers for a given site. Designs for specific sites are followed by written specifications and graphic details that are produced to implement these proposals. Students are engaged in a hands-on manner in site remediation and planting techniques they have learned by creating new landscapes that serve to integrate theory, principles, and practices. Together, HORT/LA 4910 and 4920 constitute an integrated course.

LA 4940 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S–U or letter grades. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 4950 Green Cities: The Future of Urban Ecology (also CRP 3840/5840)
Fall. 4 credits. R. Young. Explores the history and future of the ecology of cities and their role in solving the present global ecological crisis. Examines the politics, design, and economics of “green cities” in terms of transportation, renewable energy, solid waste and recycling, land use, and the built environment.

LA 4970 Individual Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Work on special topics by individuals or small groups.

LA 4980 Undergraduate Teaching
Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty members.

LA 4990 Undergraduate Research
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Permits outstanding undergraduates to carry out independent research in landscape architecture under academically appropriate faculty supervision. Research goals should include description, prediction, and explanation, and should generate new knowledge in the field of landscape architecture.

LA 4991 Undergraduate Honors Research in Landscape Architecture
Fall or spring. 1–5 credits. Students must register using independent study form (available in 140 Roberts Hall). S–U or letter grades. Permits outstanding students to carry out independent research in landscape architecture under appropriate faculty supervision. Research goals should include description, prediction, and explanation and should generate new knowledge in the field of landscape architecture.

LA 5010 Composition and Theory
Fall. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Basic principles of natural and cultural processes that form landscapes. Projects focus on design applied to the practice of landscape architecture: particularly the relationship between measurement, process, experience, and form at multiple scales of intervention.

LA 5020 Composition and Theory
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. Studio focusing on the spatial design of project-scale site development. Students develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 5010.

LA 5050 Landscape Representation I
Fall. 3 credits. Corequisite: LA 5010 or permission of instructor. Introduces students to both conventional and unconventional modes of landscape architectural design representation. Teaches drafting, orthographic drawing, axonometric project, lettering, analysis, and concept drawing alongside more expressive modes of direct site study and representation.

LA 5060 Graphic Communication II
Spring. 3 credits. Prerequisite: LA 5050. Corequisite: LA 5020 or permission of instructor. Intermediate-level course focusing on modes of landscape representation from ideation to presentation. Representation modes may include freehand, process drawing, analysis and orthographic drawing, concept modeling; composite drawings; and visual books.

LA 5240 History of European Landscape Architecture*
Fall. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5250 History of American Landscape Architecture*
Spring. 3 credits. L. Mirin. *Offered through College of Architecture, Art, and Planning.

LA 5450 The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics, or history of art, other disciplines, or permission of instructor. K. Gleason. Advanced seminar seeking an interdisciplinary group of students in classics, art history, archaeology, landscape architecture, horticulture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design, or computer modeling to a collaborative study of the ancient forums and public parks of the ancient Roman world. Seminar involves students in current research and publication in this emerging area of landscape history and park history.

LA 5820 Photography and the American Landscape
Fall. 3 credits. A. Hammer. Interdisciplinary study of the relationship between photography, the American landscape, and cultural meaning. Topics include representation and perception, photography and painting in the 19th century, expeditionary surveys and national identity, pictorialism, the American sublime, photography and tourism, modernism and postmodernism, the industrial landscape and American ruins, and contemporary practice.

LA 5900 Theoretical Foundations
Spring. 2 credits. Prerequisite: senior or graduate standing. A. Hammer. This seminar is intended to provide students in the Department of Landscape Architecture with an overview of the theories and discourses related to the field. Topics may include, but not be limited to, environmental perception, issues of language and representation, pertinent debate in cultural geography, developments in ecological design, landscape urbanism, infrastructure, etc. Weekly readings, discussion, short papers.

LA 5970 Graduate Individual Study in Landscape Architecture
Fall or spring. 1–5 credits; may be repeated for credit. Work on special topics by individuals or small groups.

LA 5980 Graduate Teaching
Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing assistants in desk critiques, and presenting lectures. There are assigned readings and discussion sessions on education theory and practice throughout the semester. Credit hours are determined by the formula: 2 hours per week = 1 credit hour.

LA 6010 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: graduate standing or permission of instructor. Supplies and fees: approx. $250. This studio focuses upon site-scaled projects that consider significant cultural and natural landscapes. Explores theories of landscape restoration, sustainable design, and landscape representation. These are explored through projects that derive form from specific site and place. The integration of site history, ecology, and site construction supports an understanding and relationship between theory and practice.

LA 6020 Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: graduate standing. Drafting supplies and fees: approx. $250; field trip: approx. $250. This studio builds on prior course work with an expectation that participants can creatively manipulate the program and conditions of a site, with increased emphasis on contemporary construction technology. Projects focus upon the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical, and historic factors and their relationship to site design and planning are critically explored through theory and practice.

LA 6030 Directed Study: The Concentration
Fall, spring. 1 credit. Prerequisite: landscape architecture graduate students in final year of study.
Working with their advisor, students create a written and visual paper that documents the concentration intent.

**LA 6160 Site Engineering**
Fall. 5 credits.
Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

**LA 6180 Site Construction**
Spring. 5 credits. Prerequisite: permission of instructor, P. Trowbridge.
This course emphasizes detail design and use of landscape materials in project implementation. It explores materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. It includes lectures, short studio problems, and the development of drawings leading to construction documentation for one or more comprehensive projects.

**LA 6660 Pre-Industrial Cities and Towns of North America (also CRP 6660)**
Spring. 5 credits.

**LA 6900 Methods of Landscape Architectural Inquiry**
Spring. 3 credits. Prerequisite: graduate standing. S–U or letter grades.
This class builds on the theoretical foundations provided in LA 5900 with an investigation of the variety of methods used in landscape architectural and urban design research and practice. These methods may include, but are not limited to, physical analysis, mapping, site inventory, behavioral observations, cultural landscape investigations, surveys, and interviews. The format of the class combines weekly lecture and applied research.

**LA 6940 Special Topics in Landscape Architecture**
Fall or spring. 1–3 credits; may be repeated for credit. S–U or letter grades.
Topical subjects in landscape architectural design, theory, history, or technology. Includes group study of topics not considered in other courses.

**LA 7010 Urban Design and Planning**
Fall. 5 credits. Prerequisite: graduate standing. Supplies and fees: approx. $250; required field trip: approx. $50.
This studio explores the application of urban design and landscape urbanism techniques to the problems and opportunities of contemporary city making. The studio investigates the social, cultural, natural, and infrastructural conditions of urban environments, and develops integrated spatial design strategies involving streets, built form, and open space networks. The course introduces three-dimensional computer modeling and digital design media as tools for urban design.

**LA 7020 Advanced Design Studio**
Spring. 5 credits.
This advanced design studio provides students in the final year of the graduate program in Landscape Architecture with the opportunity to work on complex, real-time projects. The overarching goal of this class is to test the student's theoretical, methodological, technical, and representational competency and ability to engage with a range of scales and issues.

Through intensive studio work, seminar sessions, independent research, and site visits students will gain the knowledge and skills necessary to develop sound and creative solutions to environmental design problems.

**LA 7900 Audio Documentary: Stories from the Land**
Spring. 3 credits. Letter grades only. A. Hammer.
Offers hands-on experience in basic audio documentary. Students create aural portraits of New York landscapes and communities undergoing critical change. Encourages projects for podcasting, webcasting, and radio. Explores relationships between sound and the still or moving image.

**LA 7910 Placemaking by Design**
Fall. 3 credits. Limited to 20 students. S–U or letter grades. P. Horrigan.
Seminar providing an understanding of contemporary planning and landscape architecture design strategies that reaffirm and reclaim a sense of place. Readings and discussions focus on the theory and practice of placemaking as represented in the literature and in built works. Addresses the following questions: What constitutes a place-based design approach and what distinguishes it from other more conventional design approaches? Who are the key players shaping the theory and practice of placemaking?

**LA 7920 Landscape Preservation: Theory and Practice**
Fall. 3 credits. Prerequisite: junior, senior, or graduate standing. D. Krall.
Examines the evolving practice of landscape preservation in the United States. Topics include the recent history of the discipline, methodology in documentation of historic landscapes, and important practitioners and notable projects. Format is assigned readings and discussion, invited speakers, lectures, and a project documenting a local site.

**LA 8900 Master's Thesis in Landscape Architecture**
Fall or spring. 9 credits.
Independent research, under faculty guidance leading to the development of a comprehensible and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

This course provides an overview of the science and management of natural and environmental resources. Material highlights facts and principles from the physical, biological, social, and economic sciences. The focus is on identifying knowledge required to enhance intelligent and sustainable management of the Earth’s ecological and environmental systems. Case studies, guided readings, multi-media presentations, videos, discussions, and field and laboratory exercises are used to introduce students to the interdisciplinary basis for understanding the complexities of such systems within the text of modern society. Active student participation in all phases of the course is expected.

**NTRES 1102 Introduction to Environmental Studies**
Summer. 3 credits. S–U or letter grades. R. J. McNeil.
Discussion-centered course examining the interrelationships between the sciences, arts, and humanities as they affect our environment. Students explore how we manage nature and negotiate with each other to meet our needs. Emphasis is on principles of ecology, economics, aesthetics, ethics, and law.

**NTRES 1103 Science Fiction and Environment**
Summer. 3 credits. S–U or letter grades. R. J. McNeil.
This course is intended to be primarily for Summer College students (high school rising seniors), new freshmen, Cornell staff, and other people with an interest in, but little formal background in, environmental studies. Science fiction short stories and two books will be used as vehicles for illustrating environmental predicaments and to enable easy discussion of environmental principles that may be helpful to us in choosing ways to live. Some extra attention to studying and learning may be helpful to new college students.

**NTRES 2010 Environmental Conservation**
Spring. 3 credits. T. Fahey.
Our lives increasingly are touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course stimulates students to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media to gain a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 2100 Introductory Field Biology**
Fall. 4 credits. Limited to 60 students. Prerequisite: sophomore or junior standing with advisor in natural resources or permission of instructor; BIOG 1101–1102 or equivalent. Cost of two required overnight weekend field trips: approx. $20. C. Smith.
Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn taxonomy, natural history, and basic field techniques used in the identification of approximately 170 species of vertebrates and 80 species of woody plants. Stresses selected aspects of current ecological thinking. Emphasizes the interaction of students with biological events in the field and accurate recording of those events.
The actions of people are crucial to environmental well-being. This course addresses the interrelationships between social phenomena and the natural (i.e., biophysical) environment. It is intended to: (1) increase student awareness of these interconnections in their everyday lives; (2) introduce students to a variety of social science perspectives, including sociology, economics, psychology, and political science, that help us make sense of these connections; (3) identify contributions of each of these perspectives to our understanding of environmental problems; and (4) discuss how natural resource management and environmental policy reflect these perspectives.

**NTRES 2320 Nature and Culture (HA) (CA)**
Spring. 3 credits. S–U or letter grades. J. Tantillo.
We will examine the history of human-environment relationships, the diversity of environmental values and ethics, cultural manifestations of nature, and the role of society in forming natural resource and environmental policy. The history of natural resource conservation and management in North America, including the history and philosophy of ecology, will be introduced.

**NTRES 2830 DNA, Genes, and Conserving Genetic Diversity**
4 credits. Prerequisites: introductory biology or equivalent or permission of instructor. Letter grades only. Lec/lab. M. Hare.
This course is designed to provide a broad understanding of molecular, Mendelian, and population genetic principles relating to genetic diversity and its conservation. This class is recommended as a preliminary to upper-level ecology, evolution, and conservation biology courses. We will focus on eukaryotes and cover a broad range of molecular and cellular genetic concepts including DNA replication, recombination, and gene expression. Mendelian inheritance and linkage mapping will also be covered in depth before expanding the scope to population genetic and quantitative genetics. A laboratory section will be devoted to problem solving, computer exercises, and discussions.

**NTRES 3030 Introduction to Biogeochemistry (also EAS 3030)**
Fall. 4 credits. Prerequisites: college-level chemistry and a biology and/or geology course. J. B. Yavitt and L. A. Derry. For description, see EAS 3030.

**NTRES 3100 Applied Population Ecology**
Fall. 3 credits. Prerequisite: completion of calculus (MATH 1106, 1110, or equivalent). Highly recommended: background in biology or ecology. Letter grades only. E. Cooch.
In-depth analysis of the ecological factors influencing the natural fluctuation and regulation of animal population numbers. Examines models of single- and multi-species population dynamics, with emphasis on understanding the relationship between ecological processes operating at the individual level and subsequent dynamics at the population level. Significant emphasis is placed on principles as applied to conservation and management. Computer exercises are used to reinforce concepts presented in lecture.

**NTRES 3110 Fish Ecology, Conservation, and Management**

**NTRES 3111 Fish Ecology Laboratory**
Fall. 4 credits. Prerequisite: one semester of calculus. P. Sullivan.
Develops statistical methods and applies them to problems encountered in the biological and environmental sciences. Methods include data visualization, population parameter estimation, sampling, bootstrap resampling, hypothesis testing, the Normal and other probability distributions, and an introduction to modeling. Applied analysis is carried out in the Splus statistical computing environment.

**NTRES 3140 Conservation of Birds**
Spring, summer. 2 credits. Prerequisite: NTRES 2100 or permission of instructor. Offered alternate years. Next offered 2010–2011. C. R. Smith.
A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community, and landscape levels.

**NTRES 3141 Conservation of Birds Laboratory**
A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs, and calls, and habitat cues.

**NTRES 3220 Global Ecology and Management**
Spring. 3 credits. Prerequisites: college-level biology and general ecology course. J. B. Yavitt.
The subjects of biogeochemistry, ecology, and biodiversity have patterns and processes that emerge only at the global scale. Recognizing the global importance of these patterns and processes is even more imperative in light of the tremendous increase in the human population size and the effects of humans on the Earth. This course is an introduction to the field of global ecology. Topics include comparative ecology and biogeography, community ecology, island biogeography, and ramifications of global climatic change.

**NTRES 3240 Ecological Management of Water Resources**
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. R. Schneider.
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion integrate scientific literature with current management issues. Topics include linkages between hydrologic variability and communities; groundwater-surface connections; flow paths for dispersal, patchily distributed water resources; and water quality controls on organisms.

**NTRES 3250 Forest Management and Maple Syrup Production**

**NTRES 3260 Applied Conservation Ecology**
Spring. 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S. Morreale.
Field and lab course designed to provide direct experience with some of the most important field methods and analytical techniques used to examine ecosystem and community function, structure, and value, especially within the context of contemporary conservation ecology and evolutionary theory. Tools include field sampling techniques, resource and conservation mapping, spatial referencing, GIS, measures of biodiversity, and manual and automated techniques for studying soil, stream, and forest biota and related physical factors.

**NTRES 3300 Natural Resources Planning and Management**
Fall. 3 credits. Prerequisite: junior standing. T. B. Lauber.
Focuses on terrestrial and aquatic resources. Emphasizes the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

**NTRES 3311 Environmental Governance (also STS/BSOC/DSOC 3311) (SBAI)**

**NTRES 3320 Introduction to Ethics and Environment (KCM)**
Fall. 4 credits. J. Tantillo.
Introduction to ethics, aesthetics, and epistemology as related to the environment. Examines the question “How should I live?” and explores the implications of different answers to that question for our treatment of nature. Also examines the various approaches to ethics theory; the relations between art, literature, religion, and mortality; the objective nature of value judgments; and the subjective nature of nature.

**NTRES 3330 Ways of Knowing: Indigenous and Local Ecological Knowledge (also AIS 3330) (CA, SBAI)**
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing. K-A. Kassam.
Based on indigenous and local “ways of knowing,” this course: (1) presents a theoretical and heuristic framework from which to understand generation of ecological knowledge; (2) examines processes by which to engage indigenous and local knowledge of natural resources, the nonhuman environment, and human-environment interactions; and (3) reflects upon the relevance of this knowledge to climatic change, resource extraction, food sovereignty, and issues of sustainability and conservation.

**NTRES 4100 Advanced Conservation Biology: Concepts and Techniques**
Fall. 3 credits. Limited to 30 students. Prerequisite: CALS math requirement; NTRES 3100 or equivalent or permission of instructor. E. G. Cooch.
A thorough analysis of the ecological and quantitative dimensions for decision making in modern conservation biology and management. Emphasis is on formal analysis of variation and maintenance of biological diversity, and will focus on principles and quantitative techniques, including...
considered.

**[NTRES 4110 Quantitative Ecology and Management of Fisheries Resources](#)**
Spring. 4 credits. Prerequisites: NTRES 3130 recommended or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. P. J. Sullivan. Examines the dynamics of marine and freshwater fisheries resources with a view toward observation, analysis, and decision making within a quantitative framework.

**[NTRES 4120 Wildlife Population Analysis: Techniques and Models](#)**
Spring. 3 credits. Prerequisites: NTRES 3100 or 4100 (or equivalent or permission of instructor). NTRES statistics requirement. Lec/lab. Offered alternate years; next offered 2010–2011. E. Cooch. This course will explore the theory and application of a variety of statistical estimation and modeling techniques used in the study of wildlife population dynamics.

**[NTRES 4130 Biological Statistics II (also STS 3200, STS 3200)](#)**
Spring. 4 credits. Prerequisite: NTRES 3130 or BTRY 3100. P. Sullivan. Applies linear statistical methods to quantitative problems addressed in biological and environmental research. Methods include linear regression, inference, model assumption evaluation, the likelihood approach, matrix formulation, generalized linear models, single-factor and multifactor analysis of variance (ANOVA), and a brief foray into nonlinear modeling. Applied analysis is carried out in the Splus statistical computing environment.

**[NTRES 4200 Forest Ecology](#)**
Fall. 3 credits. Prerequisite: introductory biology. T. J. Fahey. Comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests; ecophysiology of forest trees; disturbance, succession, and community analysis; primary productivity; and nutrient cycling.

**[NTRES 4201 Forest Ecology Laboratory](#)**
Fall. 1 credit. Corequisite: NTRES 4200. Weekend trip (approx. $30). T. J. Fahey. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and to the White Mountains, New Hampshire. Includes group research projects in local forests.

**[NTRES 4220 Wetland Ecology Lecture](#)**
Fall. 3 credits. Prerequisite: BIOEE 2610. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on ecological principles required to understand how human activities affect wetlands. Topics include geomorphology, hydrology, biogeochemistry, plant and animal adaptations to wetland environments, and vegetation dynamics of freshwater and saline wetlands. Biodiversity conservation, state and federal wetland regulations, and other approaches to wetland protection are considered.

**[NTRES 4221 Wetland Ecology Laboratory](#)**
Fall. 1 credit. Optional. Corequisite: NTRES 4220. One all-day field trip required. B. L. Bedford. Integrated set of field and laboratory exercises designed to expose students to the diversity of wetland ecosystems; the vegetation, soils, water chemistry, and hydrology of wetlands in the region; methods of sampling wetlands vegetation, soils, and water; and methods of wetland identification and delineation.

**[NTRES 4240 Landscape Impact Analysis](#)**
Spring. 3 credits. Prerequisites: junior, senior, or graduate standing; one introductory and one advanced course in ecology, natural resources, or soil ecology. Offered alternate years. B. L. Bedford. Advanced course in applied ecology focusing on environmental impact analysis within the context of watershed, and regions rather than individual estimation development projects. The course seeks to critically examine the different temporal and spatial scales at which human impacts operate to alter natural resources and ecosystem services. This expanded perspective focuses consideration of the ways in which different components of the environment, the patterning of those components in space and time, and past and present human actions interact to produce environmental effects. Lecture topics include an introduction to the environmental impact assessment process, ecosystem function, and ecosystem services, the problem of determining “significant” impacts, fundamental concepts of scale, defining assessment boundaries in space and time, current conceptual frameworks for impact analysis of large geographic areas, tools available on-line for impact analysis, and detailed analysis of specific case studies. Students will work in teams to develop an integrated ecological assessment of a specific, large geographic area of the Earth.

**[NTRES 4260 Practicum in Forest Farming as an Agroforestry System (also HORT/CSS 4260)](#)**
Fall. 2 credits. Prerequisite: junior, senior, or graduate standing or permission of instructor. K. W. Madge, L. E. Buck, and P. Hobbs. For description, see HORT 4260.

**[NTRES 4280 Principles and Practices of Applied Wildlife Science](#)**
Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. The course covers the theory and practice of solving wildlife-related resource issues. Differences between basic and applied wildlife science will be discussed.

**[NTRES 4300 Environmental and Natural Resource Policy Processes](#)**
Spring. 3 credits. Prerequisites: junior standing, special application process. Lec, Wash., D.C., during winter session, approx. Jan. 6–16; three two-hour orientation sessions in fall semester and four two-hour sessions in Feb. and March. Fee: approx. $500. Completed applications due by Oct. 15. Applications available by contacting ntres@cornell.edu or at www.dnr.cornell.edu/teaching/ugrad/ courses. B. A. Knuth. Intensive field-based exploration of the environmental policy process and its conceptual framework. Defining environmental problems; aggregating interests; agenda-setting; formulating and selecting alternative solutions; implementation and evaluation stages; roles of lobbyists, legislature, executive branch, and other actors. Case studies; discussion with about 20 prominent Washington policy makers who appear as guest panelists. Self-selected research topic requires conducting independent interviews with Washington experts, policy analysis paper, and oral presentation.

**[NTRES 4310 Environmental Strategies (also DSOC 4320) (SBA)](#)**

**[NTRES 4320 Human Dimensions of Natural Resource Management](#)**

**[NTRES 4330 Applied Environmental Philosophy (KCM)](#)**
Spring. 3 credits. Recommended: NTRES 3320. J. Tanitlio. Special topic for 2010: Environmental justice. Focuses on environmental philosophy and environmental ethics considered as an academic field. Major themes include anthropocentrism versus non-anthropocentrism, intrinsic value, monism versus pluralism, animal rights versus environmental ethics, and various approaches to environmental ethics, including deep ecology, ecofeminism, and pragmatism.

**[NTRES 4340 International Conservation: Communities and the Management of the World’s Natural Resources](#)**
Fall. 4 credits. Prerequisite: junior, senior, or graduate standing. Letter grades only. J. Lassoie. This course builds an interdisciplinary understanding of the conservation and management of protected areas and fragile landscapes around the world. It uses lectures, readings, library assignments, and multimedia information, including a new Internet-based platform linking students to conservation practitioners, to examine the role of local communities in protecting biodiversity and ecosystem services. Stakeholder analyses of case studies from Africa, Latin America, Asia, and the United States explore conservation science and management issues from different geopolitical perspectives.

**[NTRES 4440 Resource Management and Environmental Law (also CRP 4440)](#)**
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. S–U or letter grades. R. Booth. For description, see CRP 4440.

**[NTRES 4560 Stream Ecology (also BIOEE 4560)](#)**
Fall. 4 credits. Prerequisites: BIOEE 2610 or permission of instructor. S–U or letter grades. One field trip. Offered alternate years. C. Kraft and A. Flecker. Lecture examines patterns and processes in stream ecosystems, including geomorphology and hydrology, watershed–stream interactions, trophic dynamics, biogeochemistry, disturbance, and conservation and management. Field and laboratory exercises focus on experimental and analytical...
techniques used to study stream ecosystems, including techniques to measure stream discharge, physical habitat, water chemistry, and stream biota. Field project with lab papers.

NTRES 4800 Global Seminar: Building Sustainable Environments and Systems for a Modern World (also FDSC/IARD 4800) Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Lassoie and D. Miller. Modernization has led to development pressures that have increasingly disrupted natural systems leading to widespread concerns about the long-term viability of important environmental and ecosystem services, including those critical to food security worldwide. This interdisciplinary course uses case studies to explore interrelationships among social, economic, and environmental factors basic to sustainable development. Cases examine contemporary issues identified by participants (i.e., population growth, genetically modified foods, biodiversity, sustainable resource management, global warming, and global responsibility). Cornell faculty members lead discussions in each of the major topic areas. In addition, students participate in discussions and debates with students from Sweden, Costa Rica, Honduras, and Australia through live interactive videoconferences and electronic discussion boards.

NTRES 4940 Special Topics in Natural Resources Fall or spring. 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 4960 Internship in Natural Resources Fall or spring. Credit TBA. Prerequisite: permission of instructor (academic staff in major), S–U or letter grades. Students must register using the CALS Course Enrollment Form for Undergraduates (available in 140 Roberts Hall). On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and the student, stating the learning objectives, conditions of the work assignment, nature of on-the-job supervision, and reporting requirements, including the formal basis on which the faculty supervisor will assign a grade. All 4960 internship courses must adhere to the CALS guidelines at http://www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

NTRES 4970 Individual Study in Environmental Social Science and Resource Policy Fall, spring, or winter. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). S. R. Broussard, T. Brown, L. E. Buck, D. J. Decker, J. Enck, K. Kassam, B. Knath, J. Lassoie, T. B. Lauber, R. Stedman, J. Tantillo, and S. Wolf. Individual study under faculty supervision. Topics in environmental social science resource policy are arranged depending on the interests of students and availability of staff.

NTRES 4971 Individual Study in Applied Ecology and Conservation Biology Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). M. Bain, E. Cooch, P. Curtis, T. Gavin, M. Hare, J. R. Jackson, C. Kraft, J. Lassoie, S. Morreale, M. Richmond, L. Rudstam, P. L. Sullivan, and P. Sullivan. Individual study under faculty supervision. Topics in applied ecology or conservation biology are arranged depending on the interests of students and availability of staff.

NTRES 4972 Individual Study in Ecosystem Science and Biochemistry Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). B. Bedford, B. Blossey, T. Fahey, M. Krasny, R. Schneider, R. Sherman, P. Smallidge, and J. Yavitt. Individual study under faculty supervision. Topics in ecosystem science and biochemistry are arranged depending on the interests of students and availability of staff.

NTRES 4980 Undergraduate Teaching in Natural Resources Fall and spring. 1–4 credits. Prerequisite: NTRES 3130 or permission of instructor. S–U or letter grades. Students taking the course for graduate credit are asked, in addition to the 4000-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

NTRES 5900 Professional Projects—M.P.S. Fall and spring. Credit TBA. Prerequisite: M.P.S. graduate students working on professional master's projects. S–U grades only.

NTRES 6000 Introduction to Graduate Study in Natural Resources Fall. 2 credits. Prerequisite: beginning graduate students whose faculty advisors are in Natural Resources. S–U grades. C. E. Kraft. Includes discussions of the role of science in natural resource management and conservation, with a particular focus on how scientists pursue career paths toward effective participation in this realm. Discussions focus on the practices of scientists and institutions that provide a framework for scientific endeavors.

NTRES 6010 Seminar on Selected Topics in Environmental Science and Resource Policy Fall or spring. 1–4 credits. S–U grades only. Check with department for availability. Staff. Selected readings and discussions of research and/or current issues in environmental social science and resource policy. Offering varies by semester and is subject to availability of staff.

NTRES 6040 Seminar on Selected Topics in Resource Policy and Management Fall or spring. 1–4 credits. S–U grades only. Check with department for availability. Staff. Special topics seminar on subjects related to resource policy and management. Offering varies by semester and is subject to availability of staff.

NTRES 6110 Quantitative Ecology and Management of Fisheries Resources Spring. 3 credits. Prerequisites: NTRES 3130 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. P. J. Sullivan. Taught in conjunction with NTRES 4110 (see description above). Students taking the course for graduate credit are asked, in addition to the 4000-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.

NTRES 6120 Wildlife Population Analysis: Techniques and Models Spring. 3 credits. Prerequisites: NTRES 5300 (or equivalent or permission of instructor), college-level math and statistics course. Offered alternate years; next offered 2010–2011. E. Cooch. For description, see NTRES 4120.

NTRES 6140 Seminar on Selected Topics in Applied Ecology and Conservation Biology Fall and spring. 1–4 credits. Prerequisite: permission of instructor. S–U grades only. Check with department for availability. Staff. Discussion of individual research, current problems, and current literature in applied ecology and conservation biology. Offering varies by semester and subject to availability.
NTRES 6160 Seminar on Selected Topics in Ecosystem Science and Biogeochemistry
Fall or spring. 1–4 credits. Prerequisite: upper-level undergraduate or graduate standing. S–U or letter grades only. Offered alternate years; next offered 2010–2011.

NTRES 6280 Principles and Practices of Applied Wildlife Science (also NTRES 4280)
Spring. 3 credits. Prerequisites: NTRES 3100 or equivalent; permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. For description, see NTRES 4280. Students taking the course for graduate credit are required to participate, read supplemental materials, and complete an additional out-of-class assignment.

NTRES 6340 International Conservation: Communities and the Management of the World's Natural Resources
Fall. 4 credits. Variable. Prerequisite: graduate students; seniors by permission of instructor. Letter grades only; S–U grades only. J. P. Lassoie.

NTRES 6360 Systems in the Environment
Spring. 2 credits. Prerequisite: graduate student standing. S–U grades only. M. Bain.

NTRES 6490 Special Topics in Natural Resources
Fall or spring. 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

NTRES 6960 Agronomical Perspectives for Sustainable Development (also IARD/CSS 6960)
Fall and spring. 1 credit. S–U grades only. L. Buck, L. Fisher, and S. DeGloria. For description, see IARD 6960.

NTRES 6970 Graduate Individual Study in Natural Resources
Fall or spring. Credit TBA. Prerequisite: permission of instructor. S–U or letter grades. NTRES graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 7330 Social-Cultural and Ecological Role of Diversity (D)
Spring. 3 credits. Prerequisites: seniors and graduate students. K-A. Kassam and B. Blosser.

NTRES 7340 Management of the World's Natural Resources
Summer. 4 credits, variable. Prerequisites: seniors and graduate students; seniors by permission of instructor. Letter grades only; S–U grades only. J. P. Lassoie.

NTRES 7600 Environment and Social Transitions: Graduate Seminar in Environmental Sociology (also DSOC 7600)
Fall or spring. 3 credits. Graduate students only. C. Geisler, S. Wolf, and R. Stedman. For description, see DSOC 7600.

NTRES 7800 Graduate Seminar in Ornithology (also BIOEE 7800)
Fall or spring. Credit TBA. S–U grades only. Undergraduate must have permission of instructor. J. Dickinson, W. Koenig, I. Lovette, A. Dhondt, and D. Winkler. Group intensive study of current research in ornithology. Topics vary from semester to semester. Course may be repeated for credit.

NTRES 7900 Graduate-Level Thesis Research
Fall and spring. Credit TBA. Prerequisite: Ph.D. students before “A” exam has been passed. S–U grades only.

NTRES 8900 Master’s Thesis Research
Fall and spring. Credit TBA. Prerequisite: graduate students working on master’s thesis. S–U grades only.

NTRES 9900 Doctoral-Level Thesis Research
Fall and spring. Credit TBA. Prerequisite: Ph.D. candidates after “A” exam has been passed. S–U grades only.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in natural resources. The following list includes some of the most closely related courses but is not exhaustive.

Ecology and Biology (ENTOM 4550, 4700; BIOEE 2610, 2630, 2740, 2780, 3630, 4500, 4570, 4620, 4660, 4690, 4700, 4730, 4750, 4760, 4780; BIONM 2900–2920, 2930, 3970, 4180; BIONM 2210, 2220; BIOPL 2410, 2470, 2480, 3420, 4480; CSS 4660, 4720; EAS 1540, 2200, 3010, 3030, 3500, 3510, 4400)

Environment and Society (DSOC 2010, 3240, 3400, 4100)
Environmental Law, Ethics, and Philosophy (STS 2061, CRP 3840, 4440, 4510, PHIL 2410, 2460, 3810)

Human Systems and Communication (COMM 2850, 3520, 4210, 4560, 4660; ENTRM 3350; CRP 3840)

Physical Sciences (BEE 1510, 2510, 3710, 4010, 4270, 4350, 4710, 4730, 4750; CSS 2600, 3650, 3720, 3970, 4110, 4200, 4830; EAS 1101, 1540, 3050; CEE 4320, 4510)

Public Policy and Politics (GOVT 2947, 3071, 3131, 4281; BSOC 4616)

Resource Economics (AEM 2500, 4310, 4500, 4510)

Spatial Data Interpretation (CSS 4110, 4200, 4650, 6200, 6600; DSOC 3140)

PLANT BREEDING AND GENETICS

PLBR 2100 Plants, Genes, and Global Food Production
Fall. 5 credits. May be used for partial fulfillment of CAES distribution requirement Physical and Life Sciences. Prerequisite: one year introductory biology or permission of instructor. S. McCouch.

Introduction to plant breeding: offers a sense of the importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. Offers examples of how breeding objectives are realized and raises questions about the environmental, social, and economic consequences of intensive food production systems. Emphasizes the connection between the genetics of plants, modern scientific research, and the potential to respond to the growing human demand for food, fiber, fuel, and environmental sustainability.

PLBR 2250 Plant Genetics
Spring. 3 or 4 credits; 2 credits if taken after BIOGD 2810. Prerequisites: one year of introductory biology or equivalent; permission of instructor for students who have taken BIOGD 2810. Staff. Surveys the fundamentals of plant genetics and shows how this information is used in plant biology and allied agricultural sciences.
Evolution, domestication, and breeding of crop plants have affected the current diversity we conserve and use. Based on advances in genetics, systematics, and crop improvement, this course presents an integrated approach to understanding and describing diversity of agricultural and horticultural species. Also addressed are underlying ethical, legal, and social issues affecting crop conservation and use.

PLBR 4050 Patents, Plants, and Profits: Intellectual Property Management for Scientists and Entrepreneurs (also IARD 4050)
Spring, eight weeks. 3 credits. Prerequisite: senior or graduate standing. S–U or letter grades. A. F. Krattiger and S. Kowalski. Covers statutory protection (copyright, trademarks, patents, plant variety protection), contracts (from material transfer to licensing), management of IP (e.g., freedom-to-operate, valuation, genetic resources, trade, and marketing), and nonpatent. Emphasizes technology transfer and international aspects. The course is particularly relevant to students interested in science management, technology transfer, international agriculture, and business.

PLBR 4060 Methods of Plant Breeding
Fall. 2 credits. Pre- or corequisite: PLBR 4030 or equivalent. S–U or letter grades. M. E. Sorrells. Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germplasm release. Additional labs include selection techniques for various traits, intellectual property issues, genetically modified crops, and international agriculture. For a term project, each student designs a comprehensive breeding program on a chosen crop.

PLBR 4070 Nutritional Quality Improvement of Food Crops
Spring. 1 credit. Prerequisite: one introductory biology or permission of instructors. S–U or letter grades. L. Li, L. Kochian, and R. Welch. Introduction to biofortification of crop plants for enhancing their nutritional quality and health-promoting properties. The course discusses strategies to increase the contents of micronutrients, vitamins, phytochemicals, as well as the qualities of proteins and lipids with regard to improving food crops for human nutrition and health.

PLBR 4075 Evolution of Plant Breeding and Genetics
Spring. 2 credits. Prerequisite: permission of instructors. Letter grades only. O. Hoekenga and T. Brutnell. We will discuss seminal research papers that advanced the fields of basic and applied plant genetics. We will juxtapose the original discovery with a recent report that speaks to our present understanding of the same phenomenon. Participation in discussion, a presentation, and a term paper will determine the grade.

PLBR 4080 QTL Analysis: Mapping Genotype to Phenotype in Practice
Spring. 1 credit. Prerequisite: BTRY 6010 or 4070 or permission of instructor. J. L. Jannink and E. Buckler. Discussion of mating designs and populations as well as statistical models to identify genetic loci that affect the phenotype and to predict breeding and genotypic value using DNA polymorphisms. Practical application to real datasets.

PLBR 4460 Plant Cytogenetics Laboratory
Spring, two-week module. 1 credit. Prerequisite: genetics course or permission of instructor. Check with department for further information. S–U grades only. W. Pawlowski. Aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasizes applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Covers basic techniques for examination of plant chromosomes.

PLBR 4826 Plant Biotechnology (also BIOPL 4826)
Spring. 1 credit. Prerequisite: BIOPL 4831 or permission of instructor. S–U or letter grades. 12 lec. E. D. Earle. Current and proposed use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, or have improved nutritional or processing characteristics. Other topics are use of transgenic plants for production of valuable products and for environmental remediation. Biosafety, social, legal, and international issues relating to plant biotechnology are discussed.

PLBR 4831 Concepts and Techniques in Plant Molecular Biology (also BIOGD/BIOPL/PLPA 4831)
Fall, eight weeks. 2 credits. Prerequisites: see BIOPL 4850. S–U or letter grades. Two lec and one day of disc per week. M. Hanson, T. Owens, and M. Scanlon. For description, see BIOPL 4851.

PLBR 4832 Proteomics and Protein Mass Spectrometry in Biology (also BIOPL/PLPA 4832)
Fall. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3310 or 3520, or equivalent. Recommended: BIOBM 3310 or letter grades. Offered alternate years. K. van Wijk. For description, see BIOPL 4832.

PLBR 4833 Plant Genome Organization (also BIOPL 4833)
PLBR 4835 Molecular Breeding (also BIOPL 4835)
Fall. 1 credit. S–U or letter grades. Offered alternate years. S. Tanksley. For description, see BIOPL 4835.

PLBR 4940 Special Topics in Plant Breeding
Fall or spring. 4 credits max. S–U or letter grades. The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.
PLBR 4960 Internship in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6 credits. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4970 Individual Study in Plant Breeding
Fall or spring. Variable credit; may be repeated to max. of 6 credits. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff.

PLBR 4980 Undergraduate Teaching
Fall or spring. Variable credit; may be repeated to max. of 6 credits. Prerequisite: permission of instructor and previous enrollment in course to be taught or equivalent. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PLBR 4990 Undergraduate Research
Fall or spring. Variable credit. Prerequisite: permission of instructor. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PLBR 6060 Advanced Plant Genetics
Spring. 3 credits. Prerequisites: BIOGD 2810 or equivalent and permission of instructor. S–U or letter grades. W. Pawlowski.

Advanced survey of genetics in higher plants including selected topics in transmission genetics, epigenetics, and chromosome biology. Emphasizes development of critical analytical skills through reading of current literature and a class project.

PLBR 6180 Breeding for Pest Resistance (also MORT 6180)

PLBR 6220 Seminar
Fall or spring. 1 credit. S–U grades only. Staff, graduate students, and visitors.

PLBR 6500 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising research or teaching. Staff.

PLBR 6940 Special Topics in Plant Breeding
Fall or spring. 4 credits. S–U or letter grades. The department teaches “trial” courses under this number; offerings vary by semester, and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLBR 7160 Perspectives in Plant Breeding Strategies

PLBR 7170 Quantitative Genetics in Plant Breeding
Spring. 3 credits. Prerequisites: PLBR 4030 and BTRY 6010 or equivalent. Letter grades only. Offered even-numbered years. D. R. Vianas.

Discussion of quantitative genetics for more effective plant breeding. Specific topics include population genetics, linkage, components of variance (estimated from various mating designs); heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During one period, plants in the greenhouse are evaluated to provide data for computing quantitative genetic parameters.

PLBR 7900 Graduate-Level Dissertation
Fall or spring. Variable credit. Prerequisite: doctoral students who have not passed “A” exam; permission of instructor. S–U grades. Graduate faculty.

PLBR 8900 Master’s-Level Thesis Research
Fall or spring. Variable credit. Prerequisite: master’s candidates; permission of instructor. S–U grades. Graduate faculty.

For students working on a master’s thesis.

PLBR 9900 Doctoral-Level Dissertation Research
Fall or spring. Variable credit. Prerequisite: doctoral students who have passed “A” exam; permission of instructor. S–U grades. Graduate faculty.

For students admitted to candidacy after “A” exam has been passed.

PLANT PATHOLOGY AND PLANT-MICROBE BIOLOGY

PLPA 2010-2015 Magical Mushrooms, Mischievous Molds
Spring or 2 credits. S–U or letter grades. G. W. Hudler and B. G. Turgeon.

The Department of Plant Pathology and Plant-Microbe Biology offers several course options for students who want to learn about the kingdom FUNGI. All three courses (PLPA 2010, 2013, and 2015) have the same two-lecture-per-week core, and students wanting only the core should enroll in PLPA 2010 for 2 credits. Students interested in additional exposure to the FUNGI can enroll in PLPA 2013 or 2015 (each for 3 credits). See individual course descriptions below for more detail.

PLPA 3010 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S–U or letter grades. G. W. Hudler.

Presentation of the fungi and their roles in nature and in shaping past and present civilizations. Emphasis on the historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals.

PLPA 2013 Mushrooms, Molds, and More
Spring. 3 credits. Fulfills 3 credits of introductory biology for non–life science majors. Limited to 24 students per sec. Letter grades only. G. W. Hudler.

Lectures and exams for this course are the same as those in PLPA 2010. However, students in PLPA 2013 will also participate in a weekly 55-minute discussion section where they will grow mushrooms and other fungi in culture, learn about contemporary classification of fungi, see examples of major taxa growing on natural substrates, and determine whether suspect pathogens really can kill agricultural crops. Students also teach their peers about the fungus world with presentations of their own creation. (CALS non–life science majors can receive college physical/life science distribution credits upon completion of this course but they must register for a letter grade.)
PLPA 2015 Mushrooms, Molds, and Molecules
Spring. 3 credits. Fulfills 3 credits of introductory biology for non-life science majors. Limited to 30 students per sec. Letter grades only. K. T. Hodge. Lectures and exams for this course are the same as those in PLPA 2010. However, students in PLPA 2015 will also participate in a weekly 55-minute discussion section to provide more in-depth exposure to some of the issues raised in 2010 lecture. Experts will emphasize that fungi produce myriads of molecules that are beneficial to other organisms (e.g., antibiotics, immunosuppressants, biocontrol agents) or to themselves (e.g., development, reproduction, nutrient gathering, stress reduction), or detrimental to other organisms (e.g., toxins, poisons, allergens, hallucinogens). UCALS non-life science majors can receive college physical/life science distribution credits upon completion of this course but they must register for a letter grade.

PLPA 3010 Biology and Management of Plant Diseases
Fall. 4 credits. Prerequisite: one year of biology. Letter grades only. W. E. Fry. Introduction to the biology of the pathogens that cause plant diseases, and the diagnosis and management of plant diseases. Topics include the biology of bacteria, fungi, oomycetes, viruses, and nematodes; disease cycles, plant disease epidemiology; and the principles and practices of plant disease management. Intended for students who want a practical knowledge of plant diseases and their control, as well as for students preparing for advanced courses in plant pathology and plant-microbe biology.

[PLPA 3090 Fungi]
Fall. 3 credits. Prerequisite: one year of biology. Recommended: concurrent enrollment in PLPA 3090. S–U or letter grades. K. T. Hodge. A thorough introduction to the astounding kingdom of fungi, including mushrooms, molds, yeasts, athlete's foot, histoplasmosis, and the blue stuff in blue cheese. We cover fungal biodiversity, how fungi work, and their roles in the environment and in human affairs. Students work with living and preserved fungi and learn basic lab and identification skills.

PLPA 3100 Mushrooms of Field and Forest
Fall, weeks 1–8. 2 credits. Letter grades only. K. T. Hodge. Students learn to identify mushrooms and other macrofungi on a series of eight field trips to local forests. Mushrooms are collected during afternoon lab field trips. During the evening labs, students use keys and microscopes to identify mushrooms they've collected, and brief lectures introduce fungal ecology and diversity. Students must attend both lab times.

PLPA 3290 Medical and Veterinary Mycology (also VETMI 3290)
Spring. 2 credits. Prerequisite: introductory biology. Letter grades only. K. T. Hodge. Introduction to fungi that cause human and animal disease. Lectures introduce topics including important fungi and the diseases they cause, which range from athlete's foot to equine guttural pouch aspergillosis. We cover the ecology and epidemiology of animal pathogenic fungi, mycotoxins, mushroom poisoning, disease management, and clinical diagnosis.

[PLPA 3940 Circadian Rhythms (also ENTOM/BIOGD/BION 3940)]
Fall. 2 credits; optional 3rd-credit lab. Prerequisite: 2000-level biology. S–U or letter grades. K. Lee. Explores the fundamental feature of living organisms among all kingdoms: how the cellular 24-hour biological clock operates and influences biological activities. Covers fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators in many organisms including cyanobacteria, fungi, insects, plants, reptiles, birds, and mammals (including humans).

[PLPA 4090 Principles of Virology (also VETMI/BION 4090)]
Fall. 3 credits. Prerequisites: BIOMI 2900, 2910 or permission of instructor. Recommended: BIOM 3300–3320, 4320. Letter grades only. S. G. Lazarowitz, J. S. L. Parker, and N. Osterrieder. For description, see VETMI 4090.

PLPA 4161 Microbes and Food: Contemporary Issues Affecting Humanity
Spring. 4 credits. Prerequisite: senior standing. S–U or letter grades. S. Beer. Addresses the all-encompassing role that microbes play in contemporary life. How do microbes affect food production, processing, preservation, safety, and waste disposal? Assesses the role of microbes in industrial and environmental processes. Deals with origins of agriculture, GMOs, and high-input versus sustainable food production. Intense seminar/discussion format.

PLPA 4190 Agricultural Application of Plant Disease Concepts
Fall. 2 credits. Eight sessions. Prerequisite: PLPA 3010 and permission of instructor. S–U or letter grades. H. S. Aldwinckle and B. Nault. Addresses real-world problems in plant pathology and entomology through the application of research. Students tour fields of diverse fruit and vegetable field crops, a nursery, forests, and a golf course that have been impacted by diseases and arthropod pests. Strategies for managing diseases and pests based on research and the interface between Research and Extension are emphasized. This course is taught at Geneva. Free transportation available.

PLPA 4200 Grape Pest Management (also ENTOM/VIEN 4200)
Fall. 3 credits. Prerequisite: PLPA 3010, ENTOM 2410, or permission of instructors. S–U or letter grades. W. Wilcox, G. Loeb, and A. Landers. The course emphasizes general integrated pest management concepts, the biology and specific management practices pertaining to the major diseases and arthropod pests of grapes, and modern spray application technologies. Laboratories emphasize field illustrations of classroom concepts. Team taught by a plant pathologist, entomologist, and agricultural engineer.

PLPA 4330 Ecology of Infectious Diseases
Fall. 3 credits. Prerequisites: at least two semesters of introductory biology or equivalent. Letter grades only. E. Nelson. Introduction to the ecology of plant, animal, and human diseases. The course will emphasize a science-based approach for understanding the nature of disease development, the behavior of infectious agents and hosts, the ecological principles influencing disease emergence, transmission, and resurgence, and the general approaches to disease prediction, detection, and management.

[PLPA 4430 Pathology of Trees and Shrubs]
Fall. 4 credits. Limited to 30 students. Prerequisites: PLPA 3010 or equivalent. S–U or letter grades. Offered even-numbered years; next offered 2010–2011. G. W. Hudler. For students preparing for careers in horticulture, urban forestry, natural resources, and pest management. Deals with identification, impact, assessment, biology, and management of insects and diseases that damage trees and shrubs. Emphasizes pests of northeastern flora but examples from other parts of the country and the world are also used. Considers forest, shade, and ornamental plants.

PLPA 4480 Evolution and Ecology of Symbiotic Associations (also BIOMI 4480)
Spring. 2 credits. Prerequisites: BIOG 1101–1102 or equivalent. Letter grades only. T. Pawlowska. Symbiosis, a living together of two organisms in close association, encompasses a spectrum of interactions ranging from mutually detrimental to mutually beneficial. We will focus on a selection of ecologically important symbiotic interactions, consider their evolutionary origins, and explore conditions that would favor their establishment and maintenance.

PLPA 4821–4822 Molecular Plant-Pathogen Interactions I and II (also BIOL 4821–4822)
Spring, 4 weeks. 1 credit. Prerequisites: BIOTGD 2810, BIOM 3300 or 3310, and BIOL 4831. A. R. Collmer and B. G. Turgeon (odd years); S. G. Lazarowitz and G. B. Martin (even years). Examines the molecular and cellular factors that control pathogen-plant interactions from the perspectives of pathogen biology and plant responses to pathogen infection. Beginning spring 2004, alternate years will focus on (1) plant perception of microbial pathogens and the interplay of plant defenses and pathogen counterstrategies that result in resistance or susceptibility to disease production, with topics including the genetic nature of dominant and recessive resistance, induction of pathogen defense genes, apopotic responses that limit infection, and RNA interference; and (2) the genetic and molecular mechanisms of microbial pathogenesis, with an emphasis on fungal and bacterial virulence proteins, toxins, and their deployment systems.
PLPA 4823 Molecular Plant-Microbe Interactions (also BIOL/BIOMI 4823)
Spring, weeks 1–4. 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310, and BIOL/PLBR 4831 or equivalents. S–U or letter grades. Offered every year. S. C. Winans.
For description, see BIOL 4832.

PLPA 4831 Plant Molecular Biology I—Concepts and Techniques in Plant Molecular Biology (also BIOGD/BIOL/PLBR 4831)
Fall, weeks 1–4. 2 credits. Prerequisites: BIOGD 2810, BIOBM 3300, or 3310. S–U or letter grades. M. Hansen, T. Owens, and M. Scanlon.
For description, see BIOL 4831.

PLPA 4832 Proteomics and Protein Mass Spectrometry in Biology (also BIOL/BIOMI 4832)
Fall, 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3320, or equivalent. Recommended: BIOBM 3310. S–U or letter grades. Offered alternate years. K. van Wijk.
For description, see BIOL 4832.

PLPA 4940 Undergraduate Special Topics in Plant Pathology and Plant-Microbe Biology
Fall or spring. 4 credits max. S–U or letter grades. Staff.
The department teaches “trial” courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under the number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 4970 Independent Study in Plant Pathology and Plant-Microbe Biology
Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall). An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PLPA 4980 Undergraduate Teaching Experience
Fall or spring. 1–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).
Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PLPA 4990 Undergraduate Research
Fall or spring. 3–5 credits. S–U or letter grades. Students must register using independent study form (available in 140 Roberts Hall).
Opportunity for research experience under the direction of a faculty member.

PLPA 6010 Concepts of Plant Pathology and Plant-Microbe Biology
Spring, 3 credits. Prerequisite: PLPA 3010 or equivalent. S–U or letter grades. A. R. Collmer.
Concepts in plant-pathogen relationships unifying molecular and population biology approaches, with emphasis on molecular/cellular investigations of model pathosystems and population biology studies integrating host-pathogen evolution, genetics, and ecology. The discussion section is used for examining current research literature and other exercises complementary to lecture topics; emphasis is on critical thinking in science. Students prepare and review mock grant proposals.

PLPA 6020 Biology of Plant Pathogens
Spring, 3 credits. Prerequisite: PLPA 3010. S–U or letter grades. K. L. Perry and M. M. Milgroom.
Biological and ecological diversity of four major groups of plant pathogens: fungi, bacteria, viruses, and oomycetes. Molecular approaches are used to illustrate concepts of pathogen diversity, evolution, reproduction, life cycles, movement, diagnosis, and control. Lecture and laboratory topics are coordinated with PLPA 6100 to provide students with a comprehensive treatment of plant pathogens at all levels from molecular to ecologic. Laboratory periods are used for hands-on demonstration of diagnostic procedures and to discuss current literature relevant to lecture topics.

PLPA 6080 Genomics of Bacterium–Host Interactions (also BIOMI 6080)
Fall, weeks 2–5. 1 credit. Prerequisite: BIOMI 2900 or equivalent or permission of instructor. S–U or letter grades. Offered spring 2010–2011. A. Collmer, S. C. Winans, and D. Schneider.
Introduction to genomic approaches, tools, and discoveries involving the study of bacterial interactions with plant and animal hosts. Topics include the TIGR Comprehensive Microbial Resource and Artemis tools, the pathogens Yersinia pestis, V. enterococctica, Pseudomonas syringae, Ralstonia solanacearum, and Agrobacterium tumefaciens, and the symbiont Sinorhizobium meliloti.

PLPA 6380 Filamentous Fungal Genomics and Development (also BIOGD 6380)
Spring, weeks 9–12. 1 credit. Prerequisite: BIOGD 2810 or equivalent. S–U or letter grades. Offered odd-numbered years; next offered 2010–2011. B. G. Turgeon. S. M. Gray.
Molecular genetic and genomic approaches to the study of fungal biology. Applications of contemporary methodology to genetic dissection of developmental processes, such as pathogenesis and reproduction, are described and experimental data are evaluated. Examples are chosen from investigations of model plant pathogenic fungi such as Cochliobolus heterostrophus, Fusarium graminearum, Magnaporthe grisea, and Ustilago maydis and from well-known genetic models such as Aspergillus nidulans and Neurospora crassa.

PLPA 6420 Pathogen Population Biology
Fall, Prerequisite: permission of instructor. S–U grades only. M. G. Milgroom.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6440 Current Topics in Oomycete Biology
Fall, Prerequisite: permission of instructor. S–U grades only. E. B. Nelson.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6450 Plant Virology
Fall. Prerequisite: permission of instructor. S–U grades only. S. M. Gray.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6490 Fungal Biology
Spring, 1 credit. Recommended: some background in mycology or plant pathology. S–U grades only. K. T. Hodge and B. G. Turgeon.
Weekly meeting to discuss current scientific articles on the biology of fungi. Primarily directed at graduate students, but undergraduates, postdocs, staff, and guests who have an interest in fungi are welcome.

PLPA 6500 Diseases of Vegetable Crops
Fall. 1 credit. Prerequisite: permission of instructor. S–U grades only. J. W. Lorber and T. A. Zitter.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6520 Field Crop Pathology
Spring. 1 credit. Prerequisite: permission of instructor. S–U grades only. W. G. C. Bergstrom.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PLPA 6600 Special Topics in Plant Disease Management
Fall and spring. 1 credit. S–U grades only. C. D. Smart.
Weekly discussions of current topics in plant disease management. These include not only management practices, but also factors that influence management strategies. Students are required to read current literature and present oral reports on a topic. Offered only at the Geneva campus. Students provide their own transportation.

PLPA 6610 Diagnostic Lab Experience
Fall and spring. 1 or 2 credits. Priority given to graduate students in plant pathology and plant protection. Recommended: course work or experience in diagnostic techniques. S–U grades only. Requires 3 hours per week per credit hour. T. A. Zitter.
For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (plant pathology department) under supervision of the diagnostician.

PLPA 6810 Plant Pathology and Plant-Microbe Biology Seminar
Fall and spring. 1 credit. Requirement for all plant pathology and plant-microbe biology majors. S–U grades only. B. G. Turgeon.
PLPA 6820 Graduate Student Research Updates
Spring and fall. 1 credit. Requirement for all plant pathology and plant-microbe biology graduate students. S–U grades only. S. Carthinou and H. Aldwinckle. Weekly graduate student seminar series. Guests with an interest in plant pathology research are welcome to attend. Classes meet simultaneously in Geneva and Ithaca and are linked by teleconference.

PLPA 6940 Graduate Special Topics in Plant Pathology and Plant-Microbe Biology
Fall or spring. 4 credits max. S–U or letter grades. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PLPA 7880 Research in Molecular Plant Pathology
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor before beginning research. S–U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in molecular plant pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PLPA 7970 Special Topics Independent Study
Fall or spring. 1–5 credits. S–U or letter grades. Staff. Opportunity for independent study of a special topic.

PLPA 7980 Graduate Teaching Experience
Fall or spring. 1–5 credits. S–U grades. Staff. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PLPA 7990 Graduate-Level Thesis Research
Fall or spring. Credit TBA. S–U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For Ph.D. candidates who have passed "A" exam.

PLPA 9900 Doctoral-Level Thesis Research
Fall or spring. Credit TBA. S–U or letter grades. Prerequisite: permission of advisor. Graduate faculty. For Ph.D. candidates who have passed "A" exam.

SCIENCE OF NATURAL AND ENVIRONMENTAL SYSTEMS

SNES 1101 Intro to the Science and Management of Environmental and Natural Resources (also NTRES 1101)
Fall. 5 credits. Prerequisite: first-year students in Natural Resources, Science of Natural and Environment Systems, or other Environmental Undecided majors in CALS. J. Yavitt and E. Madsen.

SNES 2000 Environmental Sciences Colloquium
Fall. 1 credit. S–U grades only. S. Riha and J. Lehmann.

SNES 4960 Internships in Environmental Science
Fall, spring, summer. 1 credit. Prerequisite: permission of advisor. Letter grades only. S. Riha.

SNES 4970 Individual Studies in Environmental Sciences
Fall, spring, summer. 1–6 credits, variable. Prerequisite: permission of advisor. Letter grades only. S. Riha.

STATISTICAL SCIENCE
The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the CIS section of this catalog.

VITICULTURE AND ENOLOGY

VIEN 1104 Introduction to Wines and Vines (also FDSC/HORT 1105)
Spring. 3 credits. Lect. (VIEN 1104) and lab (VIEN 1105) required for Viticulture and Enology majors. Letter grades only. K. Arnink and I. Merwin.

VIEN 1105 Lab/Field Practice in Wines and Vines (also FDSC/HORT 1105)
Spring. 1 credit. Limited to 30 students. Priority given to Viticulture and Enology majors. Prerequisite: concurrent or previous enrollment in VIEN 1104. Letter grades only. G. Sacks.

VIEN 2400 Wines and Grapes: Composition and Analysis (also FDSC 2400)
Fall. 2 credits. Prerequisite: one semester of chemistry. Preference given to Enology and Viticulture and Food Science majors. Letter grades only. G. Sacks.

VIEN 2400 Microbiology and Technology of Winemaking (also FDSC 3400)
Fall. 3 credits. Prerequisite: introductory microbiology or permission of instructor. Priority given to Viticulture and Enology majors for whom lab is required. Letter grades only. K. Arnink.

VIEN 3410 Microbiology and Technology of Winemaking: Lab (also FDSC 3410)
Fall. 1 credit. Limited to 20 students. Preference given to Viticulture and Enology majors. Prerequisite: permission of instructor. Letter grades only. K. Arnink.

VIEN 4200 Grape Pest Management (also PLPA/ENTOM 4200)
Fall. 3 credits. Prerequisites: PLPA 3010, ENTOM 2410, or permission of instructor. S–U or letter grades. W. Wilcox, G. Loeb, and A. Landers.

VIEN 4300 Understanding Wine and Beer (also FDSC 4300)
Spring. 3 credits. Prerequisites: Introductory biology and chemistry or permission of instructor; age 21 by first day of class. S–U or letter grades. T. Acree and K. Siebert, G. Sacks, and R. Mira de Orduña.

For description, see FDSC 4300.
VIEN 4400 Wine and Grape Flavor Development (also FDSC 4400)
Spring. 3 credits. Limited to 30 students. Required: at least one semester of general chemistry and one semester of organic chemistry. Prior coursework in food chemistry and one of the following courses recommended: FDSC 1104 and CHEM 2570. Letter grades only: G. Sacks. For description, see FDSC 4400.

VIEN 4430 Viticulture and Vineyard Management I (also HORT 4430)
Fall. 3 credits. Prerequisites: any two-semester college biology course. Letter grades only. J. Vanden Heuvel and P. Cousins. For description, see HORT 4430.

VIEN 4440 Viticulture and Vineyard Management II (also HORT 4440)
Spr. 3 credits. Prerequisite or corequisite: HORT 4430 or permission of instructor. Letter grades only. J. Vanden Heuvel. For description, see HORT 4440.

VIEN 4444 Grapevine Biology (also HORT 4444)
Spr. 3 credits. Prerequisite: introductory botany; BIOL 2420 or equivalent. Letter grades only. Offered odd-numbered years. A. N. Lakso, M. C. Goffinet, B. I. Reisch, P. S. Cousins, and C. L. Owens. For description, see HORT 4444.

VIEN 4910 Viticulture and Enology Research Practices (also FDSC 4910)
Fall. 3 credits. Prerequisite: FDSC/HORT/VIEN 1105. Letter grades only. K. Arnink. For description, see FDSC 4910.

VIEN 4960 Viticulture and Enology Internship
Fall, spring, summer. Variable credit. Prerequisite: VIEN/FDSC 1105. S-U grades only. K. Arnink and staff. Internships provide experiential learning opportunities in real-life winery and vineyard circumstances where classroom knowledge is applied and evaluated. Students are able to master new skills, compare pilot-scale with commercial-scale winemaking practices, solve problems, interact in workplace situations, and build networks for future career opportunities. While working with industry mentors, students apply classroom knowledge, critical thinking, and self-directed learning skills to work effectively. Limit of 3 credits per internship and no more than 6 credits total for all internships. All 4960 internship courses must adhere to the CALS guidelines at www.cals.cornell.edu/cals/current/student-research/internship/index.cfm.

VIEN 6450 Advanced Viticulture Topics (also HORT 6450)
Spr. 2 credits. Prerequisite: HORT 4430 or equivalent. Letter grades only. Offered even-numbered years. A. Lakso. For description, see HORT 6450.

FACULTY ROSTER
Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology and Plant-Microbe Biology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Agnello, Arthur M., Ph.D., North Carolina State U. Prof., Entomology (Geneva)
Ahner, Beth A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biological and Environmental Engineering
Aldrich, Louis D., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Anneshansley, Daniel J., Ph.D., Cornell U. Prof., Biological and Environmental Engineering
Ange, Larus T., Ph.D., Iowa State U. Assoc. Prof., Biological and Environmental Engineering
Austic, Richard E., Ph.D., U. of California, Davis. Prof., Animal Science
Baumert, Annie J., Ph.D., U. of Arizona (Geneva). Prof., Horticulture
Bartlett, Christopher B., Ph.D., U. of Wisconsin. Prof., Applied Economics and Management

ADMINISTRATION
Kent Kleinman, dean
Barry Perlu, associate dean
Peter Turner, assistant dean of administration and finance
to be announced, chair, Department of Architecture
Patricia C. Phillips, chair, Department of Art
Kieran Donaghy, chair, Department of City and Regional Planning
Deborah Durnam, director, admissions
Michael Moyer, director, alumni affairs and development
M. Susan Lewis, director, career services
Melanie Holland Bell, registrar

FACULTY ADVISORS
Architecture students are assigned faculty advisors and are also invited to share concerns with and seek advice from the most appropriate faculty member or college officer, including the registrar, the department chair, and the dean.

Students in the fine arts department are assigned a faculty advisor for the first year. After the first year, students may select their advisors. Students are required to have an advisor throughout their program in their area of concentration.

Undergraduate students in the program of Urban and Regional Studies are assigned faculty advisors.

All students in the college are invited to share concerns and seek advice from the volunteer student advisors (EARS) at any time.

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the bachelor of architecture; four-year programs in art and architecture lead to the bachelor of fine arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the bachelor of science.

Graduate-level programs are offered in art, architectural design and urban design, architectural science, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in most of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with students and faculty from other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 670 students and a full-time teaching staff of over 60, supplemented by visiting professors and critics, part-time and assistant professors. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curricula, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry, as well as space at 531 Eddy Street in downtown Ithaca. Facilities for architecture and city and regional planning, as well as college administrative offices, and the Fine Arts Library, are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry, and architecture design studios and shop facilities are in Rand, Sibley, and at Eddy Street. The Green Dragon Café, a student eatery and lounge, is located in the lower level of Sibley Dome. Darkrooms in the Department of Art are available for general use by students in the college and are used primarily as laboratories for the photography courses. Each user must pay a darkroom fee. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library in Sibley Hall serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 207,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,400 serials are currently received and maintained.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell.

Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held.

Cornell in Rome

Cornell in Rome is a semester-long study-abroad program of Cornell University’s College of Architecture, Art, and Planning. Educating students in Italy for 20 years, the program has provided a transformative experience for young, developing artists, architects, urbanists, and scholars. The program is open to students in and outside Cornell in the disciplines of architecture, visual art, and urban studies, as well as related fields like art history, classics, European studies, medieval studies, and sociology.

Drawing upon the historical and cultural resources of Rome, its museums, art, and architecture, and the city’s beauty and complexity as an ancient and yet modern world capital, a semester in Rome has proven to be a pivotal semester for both intellectual and personal growth. The program provides extensive studio work, onsite classes, and a rich field trip itinerary.

Courses are offered in both fall and spring terms in architecture, architecture history, art, art history, drawing, photography, architecture theory, contemporary Italian culture, European politics, and Italian language. Courses in urban studies are offered in the spring semester only. Weekly classes use the city and its wealth of museums and galleries, archaeological sites, villas, churches, and remarkable public spaces for onsite study, as well as Rome’s many neighborhoods, for field-based learning activities.
Cornell in Rome’s resident faculty members, chosen from the best local and internationally known scholars, critics, architects, and artists, are all expert at using the city as an unparalleled resource for instruction and inspiration. Additionally, distinguished Cornell professors from the Departments of Architecture, Art, and City and Regional Planning live and teach in Rome for the entire term.

The program is based at Palazzo Lazzaroni, a handsomely restored 17th-century palazzo in the historic center of Rome. All participants are housed in large, completely furnished apartments with wireless Internet access, all within walking distance of studio and classroom space. Students enjoy daily contact with the urban life of a major, European city and its nearly 3,000 years of history and extraordinary backdrop of art and architecture.

Application is made in the academic year before participation. The deadline for both fall and spring semesters is November 1 for AAP students and January 15 for all out-of-college applicants. Accepted students must confirm their enrollment by February 15. Detailed course and program information may be found at www.rome.cornell.edu. Students are also welcome to stop by the Cornell in Rome office at 149 East Sibley Hall.

### AAP NYC

The College of Architecture, Art, and Planning’s rapidly expanding studio and classroom facility in New York City offers undergraduate and graduate students a unique opportunity to live and study in one of the most culturally vital urban centers in the world, while gaining valuable professional experience at design firms, studios, and innovative public, private, and nonprofit organizations throughout the city. Located on 17th Street near Union Square, in the vibrant Chelsea neighborhood of Manhattan, AAP NYC’s loft provides the Department of Studio and seminar space for short-term and semester-long use by the entire college. The location is an ideal base for the study of urban and social policy, for museum and gallery visits, or for exposure to the wealth of art and architectural history and practice.

AAP NYC offers a full roster of courses enriched by New York City’s unique artistic, historical, and cultural resources and by AAP’s extensive alumni network of noted metropolitan professionals, who frequently teach and serve as guest critics and mentors. The programming expands opportunities for AAP’s undergraduates, allowing them to now take advantage of study in two world capitals—New York and Rome—while easily meeting graduation requirements.

Application is made in the academic year prior to participation. The deadline is November 1 for AAP students and January 15 for all out-of-college applicants. Detailed program information can be found at www.aap.cornell.edu/aap/nyc.

### COLLEGE ACADEMIC POLICIES

#### Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

#### Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty members, students, and visitors.

#### Minors

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department as shown in the subsequent semester by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in this catalog or contact the appropriate department for information on minors offered and how to pursue a minor.

#### Scholastic Standards

Semester by semester, a candidate for an undergraduate degree in this college is required to successfully complete a minimum of 12 academic credit hours with a minimum grade point average of 2.0. The record of each student who falls below the standard will be reviewed by the college’s Academic Records Committee for appropriate action, among those described below:

1. The student is issued a Warning. This means the student’s performance does not meet expectations. Unless improvement is shown in the subsequent semester, the student may be placed on Final Warning or given a Required Leave of Absence from the college.

2. The student is issued a Final Warning. This indicates the student’s record is unsatisfactory. Unless considerable improvement is shown in the subsequent semester, the student may be given a Required Leave of Absence from the college.

3. The student is placed on a Required Leave of Absence. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may request to resume studies after a leave of absence of at least two semesters. This request is made by letter addressed to the college registrar, B1 W. Sibley Hall, Ithaca, NY 14853-6702. The student must submit evidence that time has been well used, and if employed, the student must furnish a letter from the employer(s). Students on required leave are not allowed to register extramurally at Cornell, as the intention of the required leave is to insist upon a break from study at Cornell. If a student chooses to enroll in courses at another institution while on a required leave, credit is not granted automatically. Upon receiving permission to return, a student must petition the department and include an official transcript to request credit for courses taken. A return to study in the college after a required leave of absence is at the discretion of the college’s Academic Records Committee. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The second required leave of absence is a de facto dismissal and the student will be permanently withdrawn from the college.

4. The student is placed on a Required Withdrawal. The student may not register in the College of Architecture, Art, and Planning and is dismissed from the college and is permanently prohibited from continuing studies in it.

The required withdrawal action does not prevent the student from applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence at the end of the next semester if the performance during that semester is deemed to be grossly deficient. It is necessary to have a cumulative grade point average of at least 2.0 (C) for graduation.

#### Leaves of Absence

The College of Architecture, Art, and Planning adopted the following leave of absence policy effective in the fall of 2006:

Leaves of absence will be of four types:

1. **Voluntary leaves of absence for personal reasons** may be granted for a variety of reasons. The student may request a voluntary leave of absence no later than the third week of class in the affected term. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The term limit for this type of leave is five years. Following the end of the fifth year, the student will be automatically withdrawn from the college.

2. **Voluntary leaves of absence with conditions** may be granted for students desiring to take a voluntary leave for personal reasons but who are not in good academic standing or they wish to take a leave during the current term. Conditional leaves are at least two semesters in length. The department will set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. Students may be granted conditional leaves of absence after the 12th week of the term only in highly extinguating circumstances and with the approval of the student’s department and the Academic Records Committee (ARC). The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student’s academic status is subject to review at the time of the leave and upon the student’s return.
3. Voluntary leaves of absence for health reasons may be granted by the college upon the recommendation of Counseling and Psychological Services (CAPS) or Gannett Health Services. They are usually no less than six months in duration. The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student’s academic status is subject to review at the time of the leave and upon the student’s return. Students must receive approval to return from this type of leave; both from CAPS or Gannett as well as the student’s department and the ARC.

4. Required leaves of absence for academic reasons. The ARC may vote for a required leave if the student is not making satisfactory progress in the degree program (defined by completion of a minimum of 12 academic credits with a minimum GPA of 2.3 each term unless there are special circumstances). The department may set conditions for completion of work, new and incomplete course work, community service, or internships while the student is on leave. The college may impose additional conditions appropriate to the individual situation. The student may not attend classes at Cornell through the School of Continuing Education and Summer Sessions. The student’s academic status is subject to review at the time of the leave and upon the student’s return.

Return from Leave of Absence

Students who desire to return from any of these leaves shall submit a written request to the AAP Registrar’s Office. Requests for spring-semester return must be made by October 1 and requests for fall-semester return must be made by March 1. The request will be reviewed and approved first by the department. The recommendation of the department will be forwarded to the college ARC for its review and action. If the student request to the department results in a “no pass” outcome, the student may appeal in writing to the ARC within two weeks of receipt of the department decision. The final decision then rests with the ARC. No appeals will be considered following the decision of the ARC.

It is expected that the department and college committees will review and act on requests to return to study in the fall term and by November 15 for requests to study in the spring term.

ARCHITECTURE

Department of Architecture Program Mission

If one could identify a singular philosophy for the architecture program at Cornell, it would be that architecture is a conceptual problem-solving discipline. The goal of the program is to produce conceptual thinkers, versed in the skills, history, theory, and science of their field. In part, the success of the program can be attributed to the quality of students and faculty members combined with their dedication and enthusiasm. Companion undergraduate and graduate programs in the fine arts and in city and regional planning have also greatly contributed to the department’s strength. The influence of these programs has created a philosophy that is unique to Cornell: that the individual work of architecture is thought of as part of a greater whole and exists in a determinate physical context. Furthermore, the students and their work are also placed in a historical context, creating a sense of the continuity of architectural thought. The intention has always been to instruct architecture students in issues of basic and more sophisticated formal principles, developing an aptitude for functional and programmatic accommodation, structural and technological integration, energy-conscious design, and materials and methods of construction. Virtually every architecture school does this. Cornell, however, differs from most schools in the way it teaches students about architecture: we do not teach architecture; instead we try to teach students how to learn about architecture (witness, for example, the inordinate number of Cornell alumni teaching in architecture programs). Rather than train architects who think of buildings as objects frozen in an assigned ideology, our goal is to produce architects who are capable of making independent judgments rooted in an ever-changing context of architectural thought.

To affect these goals, design at Cornell is taught as an intellectual discipline steeped in societal and cultural values. Architecture is taught as the integration of thought, form, and structure. Design problems frequently are located within real physical contexts and are evaluated in relation to those motivations that shaped the environment over time. Architecture, it is assumed, resides in the integration of idea and fact.

The development of form and space is critical to architectural design. Equally significant is the responsible resolution of functional requirements integrated with actual and perceived structure. The excellence of architectural art, however, derives from the exploration and refinement of ideas, upon which form, purpose, and structure are dependent. Deemed essential at Cornell is that the student grapple not only with fact, but with the substance of fact. Consequently, the investigation of architectural content is pursued in protracted and continuous study. Architecture studies extend into the classroom and the library; they embrace the humanities and sciences, tradition and innovative effort.

Professional Degree Programs

Note on Professional Accreditation

In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a six-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

Cornell University, College of Architecture, Art, and Planning, Department of Architecture offers a NAAB-accredited bachelor of architecture degree program.

B. Arch. (176 undergraduate credits)

Next accreditation visit for the B.Arch. program: 2010

The NAAB grants candidacy status to new programs that have developed viable plans for achieving initial accreditation. Candidacy status indicates that a program should be accredited within six years of achieving candidacy, if its plan is properly implemented. In order to meet the education requirement set forth by the National Council of Architectural Registration Boards, an applicant for an NCARB Certificate must hold a professional degree in architecture from a program accredited by the NAAB. The degree must have been awarded not more than two years prior to initial accreditation.

Cornell University, College of Architecture, Art, and Planning, Department of Architecture was granted candidacy status for the Professional Master of Architecture in 2004.

M.Arch I (pre-professional degree + 115 graduate credits)

Continuation of candidacy granted: 2007

Projected year of initial accreditation: 2010

Bachelor of Architecture

The undergraduate professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.
The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental control, structures, construction, and computer applications provide a base for the work in design.

In the first three years, the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years, this base may expand through further detailed studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the bachelor of architecture degree to the post-professional M. Arch. II program. Some students are then able to complete the requirements for the master's degree in one additional year.

**Professional Master of Architecture (M. Arch. I)**

Cornell's graduate professional degree program (in NAAB candidacy status) is a 3½-year course of study dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program builds on the excellence and distinction of Cornell's renowned B.Arch. degree, but is specifically crafted to engage the unique strengths and needs of the graduate student. Committed to the view that the question of appropriate practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context, the program places this concern at the center of the learning process, seeking to empower the student's sense of inquiry, responsibility, and creativity.

Teaching in the program complements basic skills and knowledge essential to the profession with engagement in emergent social, cultural, technical, and environmental concerns that characterize architecture's expanded field in the 21st century. The curriculum comprises a rich offering of courses in visual representation, history and theory of architecture, building technology, and professional practice, complemented by six semesters of design studios. The design studio is the core of the curriculum, with the design project serving as a negotiating platform between diverse practices, technologies, and fields of knowledge. The intensive course of study encourages the development of individual research trajectories at the upper levels, and culminates in a one-semester design thesis. Making full use of Cornell University's excellent resources across all disciplines, the professional Master of Architecture situates itself globally, drawing upon distinguished national and international visitors as well as the AAP in New York City studio. The professional Master of Architecture is open to applicants possessing a four-year bachelor's degree in any area.

**Cornell in Rome**

Cornell in Rome has been an integral part of architectural study at Cornell University for 20 years. Architecture students traditionally look forward to this semester abroad for first-hand experience of buildings and urban spaces previously studied only in classes and lectures. Rome, with its unparalleled complexity of historical layers, presents the student of architecture with the challenge of visualizing architecture in a city where the intensity of history pervades.

The city teaches students to understand that history can become a critical foundation for understanding architectural design as an integral component of the urban context. Complete immersion in this distinctive and complex milieu presents students with new and different problems and decisions; through analysis and understanding of historic examples, experience and insight are gained for future design challenges.

Design studios, complemented by visits to important buildings, museums, and monuments both in Rome and throughout Italy, emphasize onsite observation, measuring, drawing, and projection, while history courses and theory seminars encourage students to engage in analytical thinking, direct study, and cultural interpretation.

Italian and European architects and educators complement faculty members from Cornell in teaching the 6-credit studio and assist in formulating and contributing to a rich variety of seminars, lectures, and field trip programs.

**Architecture Requirements**

Fourth-year architecture students in good academic standing who have completed the requirements of the first three years of the five-year B.Arch curriculum are eligible for participation in Cornell in Rome.

The program also is open to third-year students by petition, if space permits.

**AAP in NYC**

AAP NYC provides the opportunity for architecture students to study, work, and live in one of the world's most dynamic urban contexts. With its pivotal location, the architecture program at AAP NYC attracts guest faculty members not only from the city but from international locales as well. The program allows students to build on the core curriculum foundations of their Ithaca-campus experience in a more directly applied format, using the city as a classroom and world-class professionals as their critics and faculty.

Additionally, undergraduate students are encouraged to take advantage of the wealth of architectural practices in New York by working two days per week in selected offices while pursuing their studies. As a result, AAP NYC serves as a bridge from school to the profession—one that allows students to consider their own future trajectories and the possible paths toward achieving them.

**B.Arch. Curriculum**

Please refer to the AAP Student Handbook at [www.aap.cornell.edu/aap/student-services](http://www.aap.cornell.edu/aap/student-services) for the most up-to-date B. Arch. curriculum information.

### Architecture Concentrations for Majors

The Department of Architecture recognizes any concentration earned within the university but outside of the department (using standards set by those departments) on the transcripts of its students.

It is often advantageous for undergraduates to concentrate in specific subdisciplines of architecture, especially if they anticipate application to specialized graduate programs; therefore, the following concentrations in architecture are offered within the department for B. Arch. and B.F.A. in architecture candidates only:

- Architecture, Culture, and Society 3402 (or equivalent), plus 9 credits in this area.
- Architectural Science and Technology 2601, 2602, 2603, 2604, 3601, 3602, 3603, distribution requirement (3 credits), plus 6 credits in this area.
- History of Architecture 1801, 1802, distribution requirements (9 credits), plus 7 credits (including a 4-credit seminar course) in this area.
- Theory of Architecture 2301, 2302, distribution requirements (6 credits), plus 6 credits in this area.
- Visual Representation in Architecture 1501, 1502, distribution requirement (3 credits), plus 9 credits in this area.

*Students wishing to receive recognition for a concentration must submit a concentration request form to the Architecture Department Office. For a course to count toward a concentration, the student must receive a grade of C or better.*

### Transfer Students

*Although the program leading to the bachelor of architecture is directed specifically to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree may apply to the professional M. Arch. I program.*

Transfer students are responsible for completing that portion of the curriculum which has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the 10-semester design sequence. Since this sequence may be accelerated by attending summer sessions, seven or eight regular semesters and two or three summer terms are typically required.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four semesters in residence, taking 35 of the 70 credits (including four semesters of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work. For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint participants with opportunities, issues, and methods in the field of architecture.

### Alternative Programs

**Bachelor of Fine Arts**

After completing the first four years of B. Arch. requirements, the student may choose to receive the degree of bachelor of fine arts (B.F.A.) in architecture, which is not a professional degree.

A student wishing to receive this degree must submit a petition to the Petition Committee, verified by the college registrar, that the first eight semesters of required B.Arch. courses can be satisfactorily completed and that the following minimum distribution requirements will be met:

- 1 Art studio course (3 credits)
- 1 Mathematics course: MATH 1110, 1106, or approved equivalent (3–4 credits)
- 1 First-Year Writing Seminar (3 credits)
- 1 Mathematics or physical or biological sciences course (3 credits)
- 1 Humanities course (3 credits)

Students are admitted to this degree program only via the B.Arch. degree track. Students who are awarded a B.F.A. in Architecture degree may not reregister in the B.Arch. program.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a bachelor of science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from...
The history of architecture program at Cornell offers students a special opportunity for an enlarged and enriched academic experience. This program is designed to provide students with a comprehensive understanding of the field of architecture in the 21st century. The curriculum is structured to engage the unique strengths and needs of the student in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture.

### Option

Students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements, and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, B-1 West Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 172 Goldwin Smith Hall.

### Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 1101 and 5902, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to enroll in any summer program.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability, and departmental approval.

### Minor in Architecture for Nonmajors

A minor in Architecture for Nonmajors is available to students from a variety of disciplines. Students meeting the requirements for this minor should complete the Minor in Architecture for Nonmajors minor form, which is available in the Admissions Office.

The curriculum for students in the Minor in Architecture for Nonmajors is flexible and may vary depending on the student's academic program with an introduction to architectural studies. Some students may wish to develop architectural specialties within other disciplines. Students meeting the requirements for this minor should complete a minor form, which is available in the architecture department office. This form, when validated by the architecture department, serves as evidence of completion of the minor requirements.

The curriculum for students in the Minor in Architecture Program totals 14 credit hours minimum, including 8 credits of required courses and 6 credits of elective courses. Grades earned must be C or better in all courses.

### Required courses

- A minimum of 8 credits, including one design studio, one visual studies course (e.g., drawing), and one history of architecture course. For example, ARCH 1110 Introduction to Architecture Design Studio (offered summer only) 3 credits

### Professional Master of Architecture (in NAAB candidacy status)

Mission Statement

Consistent with the broader mission of the Department of Architecture, the Master of Architecture program (in NAAB candidacy status) is dedicated to preparing graduate students from diverse disciplines and backgrounds for careers in architecture. The program is committed to the view that the nature of contemporary practice must be continually investigated and reassessed in today's globally expansive and technologically dynamic context. The program places the question of practice at the center of the learning process. It posits alternative models and methods of research and seeks to empower the student's sense of inquiry, responsibility, and creativity as she or he formulates her or his unique professional trajectory. The program aims in particular to engage the unique strengths and needs of the graduate student: her or his maturity, commitment to architecture, and the wealth and variety of academic and life experiences she or he brings to the discipline. The pedagogy sets skills and knowledge essential to the profession in a context of emergent cultural, technical, and environmental concerns that characterize the expanded field of architecture in the 21st century.
Term Three
ARCH 5115 Core Design Studio III 6
ARCH 6601 Environmental Systems II: Thermal Environmental Systems 3
ARCH 5602 Building Technology, Materials, and Methods 3
History Elective or Theory Elective* 3
Visual Representation Elective 3 18

Term Four
ARCH 5114 Core Design Studio IV 6
ARCH 6602 Environmental Systems III: Building Systems Integration 3
ARCH 6603 Structural Systems 3
ARCH 5402 Architecture, Culture, Society 3
Open Elective 3 18

Term Five
ARCH 5115 Core Design Studio V: Integrative Design Practices 6
ARCH 5201 Professional Practice 3
ARCH 8911 Proseminar in Design Research 3
History or Theory or Visual Representation Elective* 3 15

Term Six
ARCH 5116 Vertical Design Studio 6
Visual Representation Elective 3
Open Elective 3
History or Theory or Visual Representation Elective* 3 15

Term Seven
ARCH 8912 Independent Design Thesis 9
Open Elective 3 12
Total Units/Credit Hours 115

* Total required for graduation:
1 Theory elective
1 History elective
1 Theory or History elective
2 Visual Representation electives

Course Information
Courses in brackets are not offered this year. A $350 fee is charged to all registered architecture students (undergraduates, graduate students, and New York City Program participants) and is used to generate funds for the upkeep of computer and fabrication facilities.

Architectural Design

Sequence Courses
ARCH 1101 Design I
Fall, spring. 6 credits. Prerequisite: department students. Staff. Introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 1102 Design II
Spring. 6 credits. Prerequisite: department students; ARCH 1101 and 1501. Staff. Continuation of ARCH 1101. Covers human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 2101-2102 Design III and IV
Fall and spring. 6 credits each semester. Prerequisites: department students; ARCH 1501-1502, for ARCH 2101, ARCH 1102 and 1502; for 2102, ARCH 2101. Corequisite: ARCH 2301-2302. Staff.

ARCH 3101 Design V
Fall and spring. 6 credits. Prerequisites: department students; ARCH 2102. Staff.

ARCH 3102 Design VI
Fall and spring. 6 credits. Prerequisites: department students; ARCH 3101. Staff. One of the key design experiences during this semester will be the dialogic interaction of architectural conceptions and building subsystems as simulated in the design studio. The requirements of building subsystems are seen to both support and inform architectural concepts and form. Questions of passive architectural responses versus active technical responses, as well as issues of thermal comfort, energy efficiency, sustainability, structure, and life safety will be addressed.

ARCH 4101-4102 Design VII and VIII
Fall and spring. 6 credits each semester. Prerequisite: department students; for ARCH 4101, ARCH 3102 and 3602; for 4102, ARCH 4101. Staff. Programs in architectural design, urban design, or architectural technology and environmental science and topical studies.

ARCH 5101 Design IX
Fall or spring. 6 credits. Prerequisite: department students; ARCH 4102. Staff. Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 5902 Design X—Thesis
Fall or spring. 6 credits. Requirement for B. Arch. candidates who must satisfactorily complete a thesis. Prerequisite: ARCH 5101. Staff.

Graduate Courses
ARCH 5301 Core Design Studio I
Fall. 6 credits. Introduction to fundamental concepts of architectural design and representation, including preliminary notions of site, program, and context. Emphasis on interpretive, analytical, and generative uses of drawing, physical modeling, and digital media in the design process.

ARCH 5112 Core Design Studio II
Spring. 6 credits. Prerequisite: ARCH 5111. Continuation of subjects developed in the first term. Focus on issues of program and architectonics in the design of a building type in context; introduction to site planning.

ARCH 5113 Core Design Studio III
Fall. 6 credits. Prerequisite: ARCH 5112. Focus on issues of program and architectonics in the design of a complex building type. Emphasis on interpretive, analytical, and generative uses of digital media.

ARCH 5114 Core Design Studio IV
Spring. 6 credits. Prerequisite: ARCH 5113. Focus on architecture's expanded sites: social, cultural, material, and/or environmental considerations of building in a complex urban landscape.

ARCH 5115 Core Design Studio V: Integrative Design Practices
Fall. 6 credits. (New York City). Prerequisites: ARCH 5114, 5602, 5604, 6601, 6602, 6603. Focus on the development of architectural ideas in constructed, material form. The studio explores emerging topics and constructive methods in contemporary architectural practice. Design study includes the creation of a comprehensive set of representations that describes an architectural project in detail. Students work in collaborative groups and in consultation with advisors drawn from professional practice to develop a project that engages a complex range of topical areas, including: structural and environmental systems, building envelope systems, materiality and construction, life-safety planning, and sustainability.

ARCH 5116 Vertical Design Studio
Spring. 6 credits. Prerequisite: ARCH 5115. Open to professional and post-professional M. Arch. students. The vertical studios are topical in nature and engage contemporary issues in architectural practice and research.

ARCH 7111 Design A
Fall. 6 credits. Staff. Exploration of themes, methods, and technologies in contemporary design.

ARCH 7912 Design B: Topics Studio
Spring. 6 credits. Staff. Graduate vertical research studio.

ARCH 8901 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Staff. Second-year design course for M. Arch. II students whose major concentration is architectural design.

ARCH 8902 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 7111–7912. Staff. Second-year design course for M. Arch. II students whose major concentration is urban design.

ARCH 8911 Proseminar in Design Research
Spring. 3 credits. Prerequisites: ARCH 5301 and 5302. ARCH 8911 offers a synthesis of design and research methods for the development of an independent thesis proposal. Course work includes exposure to different theories and practices of design inquiry, explorations of critical positions for individual development, and preparation of a document encapsulating research leading to a thesis proposition. Successful completion of the course, which includes approval of the thesis document, is a prerequisite for advancement into ARCH 8912 Independent Design Thesis.
ARCH 8912 Independent Design Thesis
Fall. 9 credits. Prerequisites: ARCH 8911, 5116.
An independent design project on a topic selected and developed by the student and researched in ARCH 8911. Marking the transition between academic and professional practices, the thesis project is an opportunity for each student to define an individual position with regard to the discipline of architecture.

ARCH 8913 Design C: ADR Project
Summer. 9 credits. Staff.
Development of a design project in the student’s territory of investigation.

Elective Design Courses
ARCH 1103-1104 Elective Design Studio
Fall, 1104; spring, 6 credits. Prerequisite: nonarchitecture students for ARCH 1103, permission of instructor; for ARCH 1104, ARCH 1103 and permission of instructor. Staff.

ARCH 2100, 3100, 4100, 5100 Elective Design Studio
Fall, spring, or summer. 6 credits. For transfer students and students who are not architecture majors at Cornell. Prerequisite: permission of instructor. Each student is assigned to a class of appropriate level. Staff. Nonsequence design used as temporary placement of transfer students, non-Cornell architecture students, off-campus foreign programs for third-year students (summer and Rome), and for incompletes in design sequence. In some cases, student must petition to convert elective design into sequence design.

ARCH 5103 Design IXa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisites: ARCH 4102 and passing, but nonadvancing, grade in ARCH 5101. Structured studio for those needing to retake ARCH 5101. The course operates within the fourth-year design studios.

ARCH 5104 Design Xa
Fall, spring, or summer. 6 credits. Limited to department students. Prerequisite: ARCH 5103 and passing, but nonadvancing, grade in ARCH 5902. A structured studio for those needing to take an alternative to design thesis. This course operates within the fourth-year design studio.

Related Courses and Seminars
ARCH 1110 Introduction to Architecture: Design Studio
Summer. 3 credits. Open to nonarchitecture majors in college, high school students in 11th and 12th grades, and any individual with a minimum of a high school diploma interested in exploring the field of architecture. S–U or letter grades. Not offered every year. Staff.

ARCH 1111 Concentration in Architecture: Design Studio
Summer only. 3 credits. Subject to enrollment. Prerequisite: non-architecture students. Not offered 2009–2010. Staff. Designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the interrelationship of the architectural concepts of space, form, function, and technology. Instruction includes critiques of individual student work by department faculty, as well as by periodic reviews by guest critics.)

ARCH 3103 Special Problems in Architectural Design
Fall or spring. Variable credit; max. 3. Does not count for design sequence credit. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3106 Praxis: Community Design Workshop (also ARCH 6106)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Workshop-based, hands-on course directed to underserved local and global communities that seek to improve the quality of life for all citizens. It is an interdisciplinary, service-learning course that challenges the usual definition and separation of practice and theoretical research. Services are provided collaboratively to not-for-profit agencies, civic and governmental groups, as well as community-action groups to support sustainable design solutions. The course teaches professional work proficiency, and emphasizes teamwork as well as written, oral, and graphic communication skills to negotiate the public realm.

ARCH 3113 Furniture Design
Fall or spring. 3 credits. Limited enrollment. Students who wish to earn arch visual representation credit must enroll in sec 01; arch technology credit, sec 02; and in-college electives credit, sec 03. Prerequisite: permission of instructor. Not offered every year. G. Hascup. Explores the history, design, and materiality of furniture. Analyses of materials and joinery-connector systems are developed in parallel with ergonomic restraints. Design transformation occurs through cycles of conceptual alternatives (models and drawings), increasing in scale as the idea evolves. Full-scale prototypes and detailed tectonic drawings are required on three pieces.

ARCH 3117 Contemporary Italian Culture
Fall or spring. Variable credit; max. 3. Prerequisite: Rome Program participants. Staff. Provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 5110 Thesis Proseminar
Fall and spring. 2 credits. Prerequisite: ARCH 4101. ARCH 5110 is a prerequisite for ARCH 5902 Design X Thesis. Failure to earn grade of C in ARCH 5110 requires automatic registration in ARCH 5104 Design Xa—an option studio. Staff. Lectures, seminars, and independent research leading to the production of the student’s thesis program. General instruction in the concept of programming, and development of a thesis.

ARCH 5201 Professional Practice
Fall or spring. 3 credits. Staff. Examination of organizational and management theories and practices for delivering professional design services. Includes a historic overview of the profession and a review of the architect’s responsibilities from the pre-contract phase through cost estimating and specifications to construction. Application of computer technology in preparing specifications.

ARCH 5202 Professional Seminar
Fall or spring. 3 credits. Prerequisite: ARCH 5201. Staff. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm’s practice and the identification of agency roles.

ARCH 5203 Curricular Practical Training
Fall or spring. 1 credit. Open to B. Arch. and M. Arch. students only. Approved independent study form required. S–U grades only.

Independent study promotes an understanding of cultural differences within architectural practice. Course project involves writing a 10-page paper relating the experience of the internship to one or more texts approved by the instructor. Course may be taken more than once, but a maximum of 1 credit may be used to fulfill the in-college “free elective” distribution requirement. Students with summer internships enroll in the course during the spring semester prior to the internship and after obtaining an internship offer. Students with part-time fall or spring internships enroll in the course immediately after obtaining an internship offer.

ARCH 6105 Special Problems in Design
Fall and spring. Variable credit; max. 3. Does not count toward design sequence credit. Prerequisite: permission of instructor. Staff. Independent study.

ARCH 6106 Praxis: Community Design Workshop (also ARCH 3106)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. For description, see ARCH 3106.

ARCH 6110 Graduate Design Seminar
Fall. 3 credits. Intended for, but not limited to, graduate students in Architectural Design and Urban Design Program. Not offered every year. Staff. A companion seminar developing themes explored in ARCH 7111.
ARCH 6111–6112 Urban Housing Developments
6111, fall; 6112, spring. 3 credits each semester. Prerequisite: fourth- and fifth-year students in architecture and graduate students with permission of instructor. Not offered every year. Staff.

ARCH 6113 Transportation
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
The effect of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 6114 Low-Cost Housing
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

Architectural Theory

ARCH 1300 An Introduction to Architecture: Lectures
Summer. 3 credits. Open to non-architecture majors in college, high school students in 11th and 12th grades, and anyone with minimum of a high school diploma interested in exploring the field of architecture. S–U or letter grades. Not offered every year. Staff.
Course format comprises lectures, demonstrations, films, and field trips. Evaluation is based on quizzes and a final exam.

ARCH 1301 An Introduction to Architecture
Fall. 5 credits. Open to out-of-department students only. ARCH 1501 is not a prerequisite for ARCH 1302. Staff.
Intended to familiarize non-architecture students with the art and science of architecture. The fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from contemporary Cornell campus.

ARCH 2301 Architectural Analysis I
Fall. 2 credits. Corequisite: for architecture students, ARCH 2101. Staff.
Introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 2302 Architectural Analysis II
Spring. 2 credits. Corequisite: for architecture students, ARCH 2102. Staff.
Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 3304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 6304)
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.
Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades. The first part of the semester is a lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 3307 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit, max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 3308 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: ARCH 2301–2302 or permission of instructor. Not offered every year. Staff.
Topic TBA.

ARCH 3309 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. L. Mirin.
Examination of Japanese architecture (buildings and gardens) and their contexts: landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 4302 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: upper-level students. Not offered every year. Staff.
Development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 4305 Architecture and Representation
Fall or spring. 3 credits. Prerequisite: degree candidates in architecture; successful completion of ARCH 2301–2302. Not offered every year. Staff.
Study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 5301–5302 Theories and Analyses of Architecture I
Fall or spring. 3 credits. Prerequisite: ARCH 5301. Not offered every year. Staff.
Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 5302 Theories and Analyses of Architecture II
Spring. 3 credits. Prerequisite: ARCH 5301. Continuation of ARCH 5301 focusing on themes in architectural discourse, design, and inquiry from the 1960s to the present, and their creative/critical implications.

ARCH 6301 Design Research
Fall. 3 credits. Staff.
Introduction to themes of inquiry in contemporary architecture, including critical motives in research, topical “problems,” and materials and tactics of investigation.

ARCH 6304 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 3304)
Fall or spring. 3 credits. Prerequisite: third-year students and above. J. Wells.
For description, see ARCH 3304.

ARCH 6305 Theory and Criticism in Architecture
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Staff.
Inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the 20th century.

ARCH 6307 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 6308 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: ARCH 5301–5302, permission of instructor. Not offered every year. Staff.
Topic TBA.

Architecture, Culture, and Society

ARCH 3402 Architecture as a Cultural System (also ARCH 5402)
Fall or spring. 3 credits. Can substitute ARCH 4405 or 4407 by permission of instructor. B. MacDougall.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its reflection in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 3409 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. B. MacDougall.
Independent study.
ARCH 4405 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. B. MacDougall.

ARCH 4407 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 3402 or permission of instructor. Not offered every year. Staff.

ARCH 4408-4418 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each semester. Prerequisite: permission of instructor. B. MacDougall.
Topic TBA.

ARCH 5402 Architecture, Culture, and Society
Spring. 3 credits. What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of order within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies; the structure of the ideal social order and its reflection in the material world; cosmological models and architectural form; geometries of non-Western traditions; and the relationship between indigenization and culture change.

ARCH 6401-6402 Architecture in Its Cultural Context I and II
6401, fall; 6402, spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered every year. B. MacDougall.

ARCH 6409 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit; max. 4. Prerequisite: permission of instructor and approved independent study form. B. MacDougall.
Independent study.

Visual Representation

ARCH 1501 Drawing I: Freehand Drawing
Fall. 2 credits. Prerequisite: department student or permission of instructor. Staff. Freehand drawing with emphasis on line as a means of visualizing form and space in architecture.

ARCH 1502 Drawing II: Drawing Systems
Spring. 2 credits. Prerequisite: ARCH 1501 or permission of instructor. Staff. Concepts and methods of visualization and representational drawing systems used in architecture. Orthogonal projection, line weight, paraline projection, shade and shadow, and perspective.

ARCH 2503 Drawing III: Digital Media in Architecture
Fall or spring. 2 credits. Prerequisite: ARCH 1502 or permission of instructor. Letter grades only. Introduction to two- and three-dimensional digital media in architecture and its potential for visualization, representation, and analysis.

ARCH 4500 Architectural Publications
Fall or spring. Variable credit; max. 3. May be repeated for credit. Not offered every year. Staff.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production issues related to the exchange of architectural ideas. Exercises cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 4508 Special Investigations in Visual Representation
Fall or spring. Variable credit; max. 3. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 4509 Special Topics in Visual Representation I
Fall or spring. 1-4 credits. Prerequisite: ARCH 1501, 1502, and 2503, or permission of instructor. Staff.
Topics TBA.

ARCH 5511 Techniques in Visual Representation I: Freehand and Analytical Drawing
Fall. 3 credits. Focuses on hand drawing and sketching as vehicles for design thinking and perception. Observational, analytical, and transformational exercises develop creative proficiency in freehand line drawing and orthographic projection.

ARCH 5512 Techniques in Visual Representation II: Analog/Digital Constructed Drawing
Spring. 3 credits. Prerequisite: ARCH 5511 or approved equivalent. Develops understanding of, and proficiency in, projective drawing, including paraline and perspective representation in both analog and digital forms. Students are also introduced to a variety of digital representation applications, including modeling, rendering, and animation.

ARCH 6508 Special Investigations in Visual Representation II
Fall or spring. Variable credit; max. 4. Prerequisites: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 6509 Special Topics in Visual Representation II
Fall or spring. 3 credits. Prerequisite: ARCH 5511–5512 or permission of instructor. Staff. Topics TBA.

Architectural Science and Technology

Structures

ARCH 2603 Structural Concepts
Fall. 4 credits. Prerequisite: MATH 1110 or approved equivalent. M. Cruvellier. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 2604 Structural Elements
Spring. 3 credits. Prerequisite: ARCH 2603. J. Ochshorn or staff. Concepts and procedures for the design of individual structural components (e.g., columns, beams) in steel, concrete, and timber construction.

ARCH 3603 Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 2604. M. Cruvellier. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 3604 Vertigo Structures (also ARCH 6604)
Fall or spring. 3 credits. Prerequisite: ARCH 3603 or equivalent. Not offered every year. M. Cruvellier.

ARCH 3605 Bridge Design (also ARCH 6605)
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. M. Cruvellier. The major visual impact of bridges on the built environment cannot be denied. And yet, during the past century, architects have virtually abandoned their historical role in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of structural art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 4603 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2603, 2604, and 3603 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 4609 Special Investigations in Structures
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 5603 Structural Concepts
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier. For description, see ARCH 2603.

ARCH 5604 Structural Elements
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. J. Ochshorn. For description, see ARCH 2604.

ARCH 6603 Structural Systems
Fall or spring. 3 credits. Prerequisite: M. Arch. 1 students or permission of instructor. M. Cruvellier. For description, see ARCH 3603.
ARCH 6604 Vertigo Structures (also ARCH 3604)  
Fall or spring. 3 credits. Prerequisite: ARCH 2603 or equivalent. Limited enrollment. Not offered every year. M. Arch. I students or permission of instructor. Letter grades only. Staff.  
For description, see ARCH 3604.

ARCH 6605 Bridge Design (also ARCH 3605)  
Fall or spring. 3 credits. Limited enrollment. Prerequisite: ARCH 3603 or equivalent. Not offered every year. Staff.  
For description, see ARCH 3605.

Construction  
ARCH 2602 Building Technology, Materials, and Methods (also ARCH 5602)  
Fall. 3 credits. J. Ochshorn.  
Building construction is examined from the following standpoints: life safety (construction types, occupancy, assemblies, egress); accessibility (ramps, doors, etc.); sustainability; conveying systems (stairs, elevators, escalators); structural materials (properties, manufacturing strategies, typical applications, and connections); envelope theory (insulation, condensation, vapor and air barriers, pressure-equalization, movement, tolerances); cladding systems (masonry, precast, metal, glass); interior systems (walls, floors, and ceilings); and technical documentation (detail drawings).

ARCH 3607 Working Drawings (also ARCH 6607)  
Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

ARCH 4604 Special Investigations in Construction  
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 4605 Special Topics in Construction  
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 2602 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 5602 Building Technology, Materials, and Methods (also ARCH 2602)  
Fall. 3 credits. Prerequisite: M. Arch. I students or permission of instructor. J. Ochshorn.  
For description, see ARCH 2602.

ARCH 6607 Working Drawings (also ARCH 3607)  
Fall or spring. 3 credits. Prerequisite: ARCH 2602 or equivalent. Limited enrollment. Not offered every year. J. Ochshorn.

Environmental Systems and Conservation  
ARCH 2601 Environmental Systems I—Site Planning  
Spring. 3 credits. Staff.  
Basic principles involved in design in the outdoor environment. A brief historical perspective. A development of a design to the outdoor environment. A brief historical perspective. A development of a design involving grading and drainage. Foundations, surfacing, and construction.

ARCH 3601 Environmental Systems II—Thermal Environmental Systems  
Fall. 3 credits. Prerequisites: ARCH 2601. Corequisite: ARCH 5101. Letter grades only. Staff.  
The first semester of this yearlong course addresses the design of the indoor thermal environment, including the appropriate application of building envelope materials and assemblies, and an introduction to the principles of sustainability. Beginning with the basics of human thermal comfort, followed by the concept and practice of solar heating, passive cooling, indoor air quality, and human health, students will learn how to shape the form of a building to respond to climate and the needs of an occupant. In the second half of the semester, students address the design of mechanical, electrical, and plumbing systems, including heating, ventilation and air-conditioning (HVAC) equipment, vertical transportation, communication, security, and fire protection systems.

ARCH 3602 Environmental Systems III—Building Systems Integration  
Spring. 3 credits. Prerequisites: ARCH 2602, 2603, 3101 and 3601. Corequisite: ARCH 3102. Letter grades only. Staff.  
The second semester of this yearlong course addresses the design of the visual and acoustical environments of buildings. Beginning with the basics of vision, followed by the concept and practice of daylighting, electric lighting sources, and human health, this course will provide students with a working understanding of light and sound as architectural media.

The objective of this yearlong course is to engage students to produce a comprehensive architectural project based on a building program and site. To do this, students will be required to select a design from a prior design studio project to develop in this course. In the comprehensive design project, students will be required to demonstrate an understanding of structural systems, environmental systems, building envelope systems, life-safety provisions, wall sections, building assemblies and the basic principles of sustainability.

ARCH 4601 Ecological Literacy and Design (also DAE 4220)  
Spring. 3 credits. Letter grades only. Cost of field trips: approx. $25. J. Elliott. Lecture/seminar course for advanced (junior or senior) students interested in learning about the effects of designing the built environment of the biophysical world. Course objectives are to develop sensitivities to environmental issues, construct conceptual frameworks for analysis, and demonstrate how ecological knowledge can be applied to the practice of design through participatory approaches to learning. Visit http://courses.cit.cornell.edu/dea/4220/ARCH.

ARCH 4618 Special Investigations in Environmental Systems and Conservation  
Fall or spring. Variable credit; max. 3. Prerequisite: permission of instructor and approved independent study form. Staff. Independent study.

ARCH 4619 Special Topics in Environmental Systems and Conservation  
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 2601, 3601, and 5602 (for undergraduate students). Not offered every year. Staff. Topics TBA.

ARCH 6601 Environmental Systems II—Thermal Environmental Systems  
Fall. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only. Staff.  
For description, see ARCH 3601.

ARCH 6602 Environmental Systems III—Building Systems Integration  
Spring. 3 credits. Prerequisite: second-year M. Arch. I students or permission of instructor. Letter grades only. Staff.  
For description, see ARCH 3602.

Computer Applications  
ARCH 3702 Imaging and the Electronic Age  
Fall or spring. 3 credits. For undergraduate non–computer scientists. Not offered every year. D. Greenberg.  
Historical technological advances that created major paradigm shifts for communications as well as advances in computer technology are presented. Technical fundamentals of computer graphics capabilities are emphasized. The latter half of the course covers the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education. The course is heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 3704 Computer Graphics I (also CS 4620)  
Fall. 4 credits. Prerequisite: CS/ENGRD 2110. Staff.  
For description, see CS 4620.

ARCH 4706 Special Topics in Computer Applications  
Fall or spring. 3 credits. Limited to 30 students. Prerequisite: ARCH 3704 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 4707-4708 Special Projects in Computer Graphics  
Not offered every year.

ARCH 4709 Advanced Computer Graphics: Virtual Reality (also ARCH 6709)  
Fall. 5 credits. Prerequisites: introductory computer graphics or computer science course, or permission of instructor; upper-level undergraduate or graduate standing. Not offered every year. H. Richardson.  
Explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course examines the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimodal representation, including motion and sound. The second half explores the uses of information technologies to model and simulate the creative design
process. These explorations include developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts and "architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses
ARCH 6709 Advanced Computer Graphics: Virtual Reality (also ARCH 4701)
Fall, 3 credits. Prerequisite: introductory computer graphics or computer science course or permission of instructor; upper-level undergraduate or graduate standing. H. Richardson. For description see ARCH 4709.

ARCH 7701–7702 Architectural Science Laboratory
7701, fall: 7702, spring, 6 credits each semester. Prerequisite: architectural science graduate students. D. Greenberg. Projects, exercises, and research in the architectural sciences.

ARCH 7903–7904 Thesis or Research in Architectural Science
7903, fall; 7904, spring, Variable credit; max. 12. Prerequisite: architectural science graduate students. Staff. Independent study.

Architectural History
The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take ARCH 1801–1802 in the first year, and three additional courses from the 3800–3819 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may be taken only once to satisfy history of architecture or in-college requirements.

Sequence Courses
ARCH 1801 History of Architecture I
Fall, 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain. Staff. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 1802 History of Architecture II
Spring, 3 credits. Requirement for first-year architecture students; open to all students in other colleges interested in the history of the built domain; may be taken independently of ARCH 1801. Staff. The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

Directed Electives
ARCH 3800 History of Theory
Fall or spring, 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 3801: From Utopia to the Ghetto: Renaissance Urban Form
Fall or spring, 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Significant development of European urban design from 1300 to 1600. Particular attention is given to Italy and Spain. Focuses on a series of case studies: entire towns, specific urban spaces, and individual building types. Weekly discussions continue within a larger cultural framework. This course considers how civic, economic, social, political, legislative, technical, and material concerns have had a significant impact on the form, function, and practice of these places, spaces, and structures. The relevance of Renaissance theory to contemporary practice is also emphasized through the discussion of several 20th-century urban plans and built projects.

ARCH 3802 The Cinematic City
Fall, 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Examines the relationship between cinematic forms of mass media and architecture. Explores the representation, perception, and understanding of architecture as it has been mediated by various cinematic genres including film, television, and documentaries. Considers how cinema has been deployed as a tool in architectural production, how it has influenced the experience and design of space, the extent to which it has been used as a vehicle for critical commentary on the urban condition, and the way it is imbedded in the historical development of architecture and urbanism.

ARCH 3803 The Construction of Modern Life: The Politics of Memory and the Commodification of Architecture
Fall or spring, 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Examines the complex relationship between the built environment, the construction and definition of cultural heritage, collective memory and civic identity, and the commodification or commercial celebration of specific buildings, sites, and urban events. Focuses on late 18th-, 19th-, and 20th-century Europe. Particular attention is awarded to the discourse surrounding the restoration of buildings (and figures such as Ruskin, Viollet-le-Duc, and Giovanni); political agendas guiding restoration and urban renewal projects; newly defined venues of modern urban spectacle (e.g., the World's Fair, department stores, morgues, and panoramas); and the role played by tourism in the commodification of local and foreign sites.

ARCH 3804 The Urban Landscape of Renaissance Rome: 1450 to 1600
Fall or spring, 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Lasansky. Exploration into the urban morphology, architecture, and civic life of Renaissance Rome. The city was a thriving center for architectural practice. It drew practitioners from throughout the peninsula and served as an important theoretical model for architects elsewhere. The course surveys the important issues, individuals, and building projects of the city between 1450 and 1600 with particular emphasis on the intellectual and physical rediscovery and re-appropriation of antiquity; the role of the Vatican with its large population of pilgrims, tourists, resident church officials, foreign bankers, and dignitaries that made specific demands of the built environment, and the unique topography and natural resources of the city's location. The last portion of the course addresses the legacy of the Renaissance during the period of Italian unification and the Fascist regime.

ARCH 3805 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring, 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the 17th century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 3806 The Architecture of India and Its Interpretation
Spring, 3 credits. Not offered every year. B. MacDougall. Surveys the architectural record of ancient and medieval India with an emphasis on stupa and temple traditions. Devotes attention to European efforts to write a Western-style architectural history for India and to the British fascination with explaining Indian ethnology and history over two centuries. Attempts to evaluate the claim made by the historian James Fergusson that architecture provided the basis for reconstructing an imperfectly known Indian history. Also examines the notion that scholarly enterprises were closely entwined with strategies for domination. To this end, students read 19th-century firsthand reports on architecture in antiquarian English-language journals alongside more modern accounts. They are compared with indigenous architecture writings that were often unacknowledged by Europeans.

ARCH 3807 19th Century: Tales of the City
Fall or spring, 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Focuses on 19th-century cities as settings for modernisms and modernities, new visions and experiences of modern life. The relationship between urbanism and creativity that emerges during the 19th century engages students in Berlin, Havana, Miami, London, Bombay, Paris, Harlem, and other cities.
Issues of center and periphery, nation and locality, capital and colony also emerge. Urban pleasures and dangers for men, women, and the other as revealed through histories of the built environment but also through literature, painting, photography, and film are examined.

ARCH 3808 Modernism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Precursors and proponents of the modern movement from the late 19th century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design serving the state in the 1930s.

ARCH 3809 Architecture, Revolution, and Tradition
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. From early 18th to early 19th century, European society underwent profound change. Political absolutism—the doctrine of unlimited governmental control—was challenged; enlightenment attitudes—commitments to human reason, science, and education—gained ascendance. This course considers architectural and urban design in those times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 3810 American Architecture and Building I (also AMST 3810)
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts are emphasized and thus the contributions of artisans, clients, and users, as well as professional architects and builders are examined. The architectural expressions of Native Americans, African Americans, women, and others are treated in addition to those of European colonists and settlers.

ARCH 3811 American Architecture and Building II (also AMST 3811)
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Continuation of ARCH 3810 but may be taken independently. An account of American architecture, building, and responses to the environment from the post–Civil War period to the present day. Particular attention is paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 3812 Modern Architecture on Film
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. M. Woods. Exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus varies each semester with particular emphases to include the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theater, literature, and advertising also are examined. The course includes selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 3813 The Cumulative City
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. C. Otto. Well-established cities were transformed by radical and unimagined change in the 19th and 20th centuries. Politics and economies were recast, population exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 3815 History of the Present—Contemporary Architecture and Urbanism
Fall or spring. 3 credits. Prerequisite: ARCH 1801–1802 or permission of instructor. C. F. Otto. Theory and practice in architecture and urbanism are investigated from late Modernism to contemporary positions. Built work, theoretical texts and graphics, and the nature of design practice in locations worldwide (such as the United States and the Pacific Rim) raise issues of globalization and the specificity of place and cultural identity. By engaging the immediate past using methods of cultural and design history, the course problematizes the relationship (and relevance) of history to architectural practice and experience.

ARCH 3816 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3817 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3818 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3819 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 1801–1802 or permission of instructor. Not offered every year. Staff. Topics TBA.

ARCH 3820 The Topography and Urban History of Rome in Antiquity and the Middle Ages
Fall or spring. 3 credits. Rome Program only. J. Gadeyne. Rome is a prisoner of its past. The entire city confronts the student with almost 30 centuries of urban and architectural history. This course intends to reconstruct the urban history of Rome from its origins through the Middle Ages (10th century ac–12th century ad). The purpose of this course will be to discover the layers of Rome, combining archaeology with literature, architecture, and urban history with art history. The goal is a thorough and direct knowledge of the Roman and Medieval urban landscape and the way this landscape has sometimes survived until today.

Special attention will be given to Roman and Medieval building typology, both private and public, and the development of the urban infrastructure (street system, water supply, fortifications, etc.). Strong emphasis will be placed upon continuity, use/reuse, and transformation of buildings and spaces, etc. Every week one or two different “regions” will be explored that are typical for a particular moment of the urban history. Visits to sites outside Rome also will be used to address the issue of urban history in Italy in antiquity and the Middle Ages.

ARCH 5801 History of Architecture I
Fall. 3 credits. Staff. The history of the built environment as social and cultural expression from the earliest times to the beginning of the modern period is studied through selected examples from across the world. Themes, theories, and ideas in architecture and urban design are explored through texts, artifacts, buildings, cities, and landscapes.

ARCH 5802 History of Architecture II
Spring. 3 credits. Prerequisite: ARCH 5801 or approved equivalent. Staff. The history of the built environment as social and cultural expression from the modern period to the present day is studied through selected examples from across the world. Architecture and urban design, theories, and ideas are explored through texts, artifacts, buildings, cities, and landscapes.
Graduate Seminars in the History of Architecture and Urbanism
All topics for ARCH 6802 to 6819 TBA before the start of the semester.

ARCH 6800 State of the Discipline
Fall or spring. 4 credits. Staff.
This seminar will provide a survey of architectural historiography paying particular attention to the paradigm shifts of recent decades. Through the critical readings of important texts we will discuss the current state of the field while simultaneously reconsidering our position in it. The course will address how we apply theory to practice, develop research strategies that maximize methodological alliances, imbue the study of the past with contemporary relevance, and contribute as much to other disciplines as we borrow from them.

ARCH 6801 Foundations of the Discipline
Fall or spring. 4 credits. Staff.
Explorations of seminal positions that established the disciplinary praxis of the history of architecture and urbanism, based on case studies.

ARCH 6802 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6803 Seminar in History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6804 Seminar in Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. M. Lasansky.

ARCH 6805 Practicum
Fall or spring. 4 credits. Staff.
This course exercises history of architecture and urbanism's capacities for affecting contemporary events through critical associations with the past. The workshop culminates in an exhibition, publication, symposium, curricular initiative, or other public occasion. Enrollment of qualified graduate students from associated fields is encouraged.

ARCH 6806 Seminar in 17th- and 18th-Century Architecture and Urbanism

ARCH 6808 Seminar in 20th-Century Architecture and Urbanism

ARCH 6809 Seminar in History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6810 Seminar in American Architecture, Building, and Urbanism

ARCH 6812 Seminar in 19th-Century Architecture, Building, and Urbanism

ARCH 6816 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6817 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6818 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 6819 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Staff.

ARCH 2809 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 3. May not be taken by students in design to satisfy undergraduate history requirements. Prerequisite: permission of instructor. Staff. Independent study for undergraduate students.

ARCH 4901 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: B.S. honors candidates in history. Staff.

ARCH 7809 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Prerequisite: permission of instructor. Staff. Independent study for graduate students only.

ARCH 8920 M.A. Essay Research
Fall. 4 credits. Prerequisite: permission of instructor and approved independent study form. Staff. Independent research for the M.A. essay.

ARCH 8921 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 6 credits. Staff. Independent preparation of the M.A. essay.

ARCH 9901 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit; max. 12. Staff. Independent study for the doctoral degree.

ART

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art and Planning, as well as other colleges at Cornell. The undergraduate curriculum in art is an excellent background for a career in the visual arts. Past graduates have found it also to be preparation for careers in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The undergraduate curriculum in art, leading to the degree of bachelor of fine arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters, all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in electronic imaging, painting, photography, printmaking, sculpture, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remaining time is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are practicing, exhibiting artists, whose work represents a broad range of expression. A candidate for the B.F.A. degree may also earn a bachelor of arts degree from the College of Arts and Sciences or the College of Human Ecology, or a bachelor of science degree from the College of Engineering, in a five-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student is assigned an advisor in both colleges of their dual-degree program to provide needed guidance. Candidates for two degrees must satisfy all requirements for both degrees. At least 62 of the total credits must come from courses offered in the Department of Art. In addition, all Department of Art requirements for first-year writing seminars, art history, and distribution must be met.

It is expected that a dual-degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fourth and fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution
The B.F.A. degree requires 130 academic credits. A minimum of 9 are taken in the Department of Art.

Curriculum
Students are expected to take an average course load of 16 credits per semester during their four years. Students wishing to take more than three studio courses in any one semester must file a petition. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any deviation from the standard curriculum must be petitioned to the department before the act. No student in the first year of the B.F.A. program will be permitted to deviate from the required curriculum.
Specific Course Requirements

By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, photography, electronic imaging, and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration

Students must plan their programs to complete 26–27 credits in one of the studio areas of electronic imaging, painting, photography, printmaking, or sculpture. Declaration of the area of concentration must be made by the second semester of the sophomore year. Students concentrating in combined media must also submit an approved projected course plan. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the Thesis II is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Electronic Imaging: ART 1701; 2304/2702 (1 of 2); 2703; 3703/3704 (1 of 2), 4001, 4002 (senior thesis)

Painting: ART 1201, 2201, 3201, 3202, 4001, 4002 (senior thesis)

Photography: ART 1601, 2601, 2603; 2604, 2605, 3601 (1 of 3), 4001, 4002 (senior thesis)

Printmaking: ART 1301/1302/1303 (2 of 3), 2301/2302/2303/2304 (1 of 4), 3501, 4001, 4002 (senior thesis)

Sculpture: ART 1401, 2401, 3401, 3402, 4001, 4002 (senior thesis)

Dual Concentration

Students interested in studying in more than one area may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a nonthesis second area. This I and Thesis II must be taken in the first area of concentration. Students take 23 credits in the first area of concentration (22 for printmaking) and 15 credits in the second area of concentration (14 for printmaking). Drawing is available only as a second area of concentration.

The required courses for the dual concentration are:

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media concentration enables students to fulfill concentration requirements by combining several studio disciplines, including outside-department studio courses such as those offered in the departments of music and theater, film, and dance.

Students must file an approved “area of concentration” form. In addition to the courses required by all B.F.A. majors during their first and second year (see B.F.A. curriculum), students must take two studios at the 2000 or 3000 level, a minimum of two “out of college” studio electives (OCE studio) of 3–4 credits each, ART 4001 Thesis I and ART 4002 Thesis II.

Note: The total number of in- and out-of-college elective credits required will be adjusted to allow for additional credits required of the combined media concentration.

Cornell in Rome

The studio art component of the Cornell in Rome program draws upon the historical and cultural resources of Rome, its museums, art, and architecture, and its beauty and complexity. It provides an experience unparalleled for artistic, intellectual, and personal growth.

The program provides close individual instruction and studios that are structured but flexible enough to accommodate personal interests. Students are given the freedom to generate their own ideas and may work in any medium that compels them to investigate their personal relationship to Rome. Student projects include paintings, photo essays, collages, performance installation, sculptures, drawings, and books.

Artists resident in Rome visit and lecture. Day trips to the studios of Rome-based artists and artisans provide further inspiration. Workshops on papermaking, fresco, mosaics, egg tempera, and watercolor are frequently available. Visitors from the various academies in Rome give student artists contact with their contemporaries and with those representing international art movements. An extensive and varied field-trip program balances great historic collections with modern and contemporary art, and the best of Italy’s notable cities, towns, and landscapes.

The Rome Studio (ART 4000) may be taken for course credit in all Department of Art electives required will be adjusted to 19 credits in Rome. **Students may add by approved petition to take credits in Rome.**

17–18 Total

Other electives available to B.F.A. students include courses in architectural history, visual studies, and urban studies.

Students may petition to take more than 16 credits per semester in the Rome Program. Students may study in Rome for one or two academic semesters.

*Fulfills 3000-level theory and criticism requirement.

Art Requirements

Students in good academic standing who have completed the requirements of the first two years of a fine arts program are eligible for participation in Cornell in Rome. Students are admitted to the program by application and review of their record. Students must register for a full semester of credits.

Students may enroll in the first or second semester of their junior year or for the full academic year. Under special circumstances, first-semester seniors also may attend Cornell in Rome. Serious studio art students from outside Cornell also are encouraged to apply. A portfolio is required.

Sample Rome Curriculum

**ART 4000** Rome Studio Requirement for Rome B.F.A. students, fulfills 4 credits in a studio concentration

**ART 2000** Site-Specific Processes 3

**ART 3102** Modern Art in Italy 3

**ART 3107** History of Art in Rome: Early Christianity to the Baroque Age 4

or

**ART 3108** History of Art in Rome: Renaissance in Rome and Florence 4

or

**ART 3702** Special Topics in Art History (spring only) 4

or

**ART 3702** Special Topics: Intermediate and Advanced Drawing 3

**ITALA 1110/1120** Italian Language 4

[ARCH 3107 Contemporary Italian Film 1*]

**Students may add by approved petition to take credits in Rome.**

AAP NYC

AAP NYC is a dynamic site from which to explore contemporary art and visual culture and to create art that is responsive to urban issues and life. The Department of Art offers distinctive programs for B.F.A. students from Cornell and other colleges and universities during a January Winter Session and spring semester.

New York is a vast and diverse laboratory with extraordinary museums and galleries, countless studios of artists and designers, dynamic public art, and cultural sites and organizations that offer exceptional opportunities for students to learn first-hand about the production and presentation of art. Scheduled annually, the spring semester is a
collaboratively developed and conceptually linked plan of study with studio and theory courses, independent studies, and internships that all use the remarkable resources and opportunities of the city. Faculty members include practicing artists, theorists, critics, and curators. The spring semester is planned for art majors in their sophomore year, but students at other levels may participate. The Winter Session is open to all students who seek an intensive, thematically organized immersion in contemporary art theory and practice. In addition to the department’s Rome junior-year seminar, all undergraduate art majors are encouraged to participate in at least one of these unique New York–based opportunities.

Sample AAP NYC Curriculum

The focus of these courses may vary from year to year.

- ART 2000 New York City Studio
- ART 2001 New York City Seminar
- ART 2003 Art/Architecture History in NYC
- ART 2004 Drawing Projects (Studio)
- ART 2009 Independent Study/Studio in NYC
- ART 2109 Art Practicum in NYC (Field Studies)

Out-of-College Requirements

A minimum of 61 elective credits must be taken outside of the college. In the first year, students must take two first-year writing seminars. Students are required to take courses from among three groups, which include physical and biological sciences (minimum of two courses, of at least 3 credits each); social sciences (minimum of three courses, of at least 3 credits each); and humanities and expressive arts (minimum of three courses, of at least 3 credits each). All B.F.A. students are required to take 20 credits in the history of art. One course must be taken in each of the following areas:

Modern

BFA students can satisfy the modern art history requirement with any of these courses without petition.

- ARTH 2600 Intro to Art History: The Modern Era
- ARTH 2700 Mapping America
- ARTH 3170 Visual Culture
- ARTH 3550 Modern and Contemporary Latin American Art
- ARTH 3600 Intro to Art History: Contemporary Art: 1960 to Present
- ARTH 3605 U.S. Art from FDR to Reagan
- ARTH 3650 History and Theory of Digital Art
- ARTH 3660 Conceptual Art
- ARTH 3740 Painting 19th-Century America
- ARTH 3760 Impressionism in Society
- ARTH 4047 Aesthetic Theory: The End of Art
- ARTH 4505 Contemporary African Diaspora Art
- ARTH 4508 Exhibiting Cultures: Museums, Monuments, Rep, and Display
- ARTH 4525 Rastafari Race and Resistance
- ARTH 4578 African Cinema
- ARTH 4600 Studies in Modern Art
- ARTH 4861 Modern Chinese Art
- ARTH 4917 Modern Art and Popular Culture Non-Western

BFA students can satisfy the non-Western art history requirement with any of these courses without petition.

- ARTH 2350 Introduction to Art History: Islamic Art and Culture
- ARTH 2880 Introduction to Art History: Approach to Asian Art
- ARTH 3510 Introduction to African Art
- ARTH 3550 Modern and Contemporary Latin American Art
- ARTH 3611 Art of South Asia, 1500–Present
- ARTH 3800 Introduction to Arts of China
- ARTH 3805 Representation and Meaning of Chinese Painting
- ARTH 3820 Introduction to Arts of Japan
- ARTH 3850 The Arts of Southeast Asia
- ARTH 3855 The House and the World: Architecture of Asia
- ARTH 4311 The Multicultural Alhambra
- ARTH 4505 Contemporary African Diaspora Art
- ARTH 4578 African Cinema
- ARTH 4850 Art and Collecting: East and West
- ARTH 5571 African Aesthetics
- ARTH 5850 Dancing the Stone

Three electives: any art history elective at the 2000 level or above or any architectural history elective. Also, the following 2000-level art history courses have been approved to count toward the art history elective requirement.

- ARTH 2019 Thinking Surrealisms
- ARTH 2109 Immigrant Imagination
- ARTH 2200 Introduction to Art History: the Classical World
- ARTH 2247 Art and Archaeology/Ancient Mediterranean World
- ARTH 2300 Monuments of Medieval Art
- ARTH 2400 Introduction to Art History: Renaissance and Baroque Art

Note: Offerings may vary each semester. Students are encouraged to consult the History of Art Department. In addition, students may petition to substitute courses of similar content.

The university requirement of two semesters in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two semesters of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1992. No student may study in absentia for more than two semesters. Students who transfer into the undergraduate degree program in art must complete a minimum of four semesters in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four semesters of studio work.

For those students matriculating in fall of 2009: Students are required to take ART 1103 Introductory Art Seminar; ART 1201 Introductory Painting; ART 1401 Introductory Sculpture; ART 1501 Drawing I; Art History elective; and a first-year writing seminar during the fall semester of the freshman year. ART 1301/1302/1303 Introductory Printmaking, ART 1502 Drawing II; Art History elective; and an additional first-year writing seminar must be taken during the spring semester of the freshman year. Two 3000-level courses in theory and criticism must be taken sometime between the sophomore and senior years.

Courses that will fulfill the theory and criticism requirement (Note: Offerings may vary from year to year. Check the current course catalog.):

- ART 1700 Visual Imaging in the Electronic Age
- ART 3101 Issues in Contemporary Art
- ART 3102 Modern Art in Italy: Contemporary Issues (Rome Program only)
- ARTH 3170 Visual Culture and Social Theory
- ARTH 3500 African American Art
- ARTH 3660 Conceptual Art
- ARTH 4322 The Late Medieval Devotional Image in Iberia
- ARTH 4600 Studies in Modern Art
- ARTH 4610 Women Artists
- ARTH 4663 Studies in Modern Art (IV)
- ARTH 5571 African Aesthetics
- ARTH 5993–5994: Supervised Reading
- ANTH 3202 Arts of the Roman Empire
- ANTH 3420 Myth, Ritual, and Symbol
- ARCH 4407 Architectural Design and the Utopian Tradition
- ASRC 3500 African American Art
- ASRC 6506 African Aesthetics
- ENGL 2000 Introduction to Criticism and Theory
- ENGL 3905 Video: Art, Theory, and Politics
- FGSS 4040 Women Artists
- FILM 3760 History and Theory
- GERST 6600 Visual Ideology
- GOVT 3755 Visual Culture and Social Theory

### Spring Semester (Required Curriculum) Credits

- Art History Elective 4
- 1502 Drawing II 3
- One of the following: 3
  - 1301 Introductory Intaglio
  - 1302 Introductory Graphics
  - 1303 Introductory Lithography
- First-year writing seminar 3
- In/out-of-college elective 3

**Second Year**

**Fall Semester (Required Curriculum)**

- 1601 Introductory Photography 3
- 1701 Electronic Imaging in Art 3
- 2501 Drawing III 3
- Out-of-college elective (OCE)/Art History 3–4
- OCE 3
- Art history elective or 3000-level course in theory and criticism 3
- Art studio concentration 4
- 2000-level studio 4
- In/OCE 3

**Spring Semester**

- 2000-level studio 4
- In/OCE 3
- 3000-level course in theory and criticism 3
- OCE 3

**Third Year**

**Fall Semester**

- 2000-level studio 4
- Art studio concentration 4
- Art history elective or 3000-level course in theory and criticism 3–4
- OCE 3
- In/OCE 3

**Spring Semester**

- Art studio concentration 4
- Art history elective or 3000-level course in theory and criticism 3–4
- In/OCE (two courses) 3

**Fourth Year**

**Fall Semester**

- Thesis I 6
- 2502 Advanced Drawing Workshop 3
- In/OCE (two to three courses) 7

**Spring Semester**

- Thesis II 6
- In/OCE (three courses) 9

---

### The M.F.A. Program

The master of fine arts program requires four semesters of full-time study, equal to a minimum of 60 credits. Graduate work done elsewhere or in the summer session is not applicable to the M.F.A. degree. The curriculum leading to the master’s degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students allows an exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university. Fifteen credits are required in each semester; of these, 9 credits are in studio work, and 3 credits are in graduate seminar. Students are required to take at least 12 credits of academic work outside the Department of Art during their four semesters in residence.

Candidates for the master of fine arts degree must have completed 18 credits in the history of art in the course of their graduate and/or undergraduate study. Prior undergraduate art history coursework may apply toward this requirement and will be evaluated by the director of graduate studies. Any remaining credit toward this requirement must be taken at Cornell. Every M.F.A. candidate must prepare a written statement, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written statement and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

### Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Priority is given to B.F.A. majors and AAP students.

Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, several courses are offered during summer session.

### Guidelines for Independent Study

A student who wishes to undertake an independent study must be a junior and in good academic standing. Fine arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. Students must have prior approval to have an independent study count as a drawing requirement. All students must have taken a minimum of one Cornell art department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies must be petitioned to count toward required studio courses. Credit hours are variable up to a maximum of 4.

---

### Courses in Theory and Criticism

**ART 1103 Introductory Art Seminar**

Fall or spring. 3 credits. Prerequisite: B.F.A. students. Letter grades only. Staff.

This course links theory and practice through a study of issues of contemporary art with a first-semester drawing course. The course is an opportunity for new B.F.A. students to explore issues and questions of contemporary art and culture that have particular relevance for students and artists in the early 21st century. The objectives of the course are to help B.F.A. students develop a keener understanding of issues in contemporary art; create an open forum and exploratory studio environment; and introduce first semester/first year Art majors to the intellectual community and aesthetic environment of a university art department and Cornell at large.

Through a series of coordinated activities, readings, projects, and discussions, first-year/first-semester B.F.A. students jointly and dynamically explore ideas of vision, visualization, perception, representation, and contemporary visual culture through both studio-based drawing projects, readings in art history and contemporary art criticism and theory, and close examination of selected artists’ practices. Taught by a faculty member in cooperation with Drawing I faculty members, the course seeks to make meaningful connections between practice and theory in students’ thinking and creative work and serves as a cohesive first-year experience shared by all new Art majors.

**ART 1701 Visual Imaging in the Electronic Age**

Fall or spring. 3 credits. D. Greenberg. Interdisciplinary survey course designed to introduce students in the creative arts, science, and engineering to the concepts of digital pictorial representation and display. It is a concept and theory course that focuses on “why” rather than “how.” Topics include perspective representations, display technology, how television works, bandwidth concepts, digital photography, computer graphics modeling and rendering, matting and compositing, color perception, data acquisition, volumetric imaging, and historical precedents, primarily from the art world. Also included are other modes of imaging.

**ART 2001 New York City Seminar**

Spring. 4 credits. Staff.

This seminar involves readings, discussion, writing, trips to museums and galleries, artists, studios, other field trips, and presentations by leading critics and scholars who present and examine issues of contemporary art in one of the leading art centers of the world. The seminar is developed to conceptually connect to the studio and art/architecture history course in which students are enrolled. This course fulfills a Theory and Criticism course for B.F.A. majors.

**ART 2104 Art and the Multicultural Experience**

Fall. 3 credits. R. Dalton. Investigates selected topics related to art and the multicultural experience. Students study the basic vocabulary and tools used in the expression of art. Students question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

---
ART 3101 Issues in Contemporary Art
Fall or spring. Lab fee: $35. Staff. Students will be exposed to the ideas, issues, and methods of contemporary visual art by combining studio practice with discussions of critical and theoretical concerns in visual culture. The course combines lectures, readings, discussions, project work, and critiques. Students will make art by using a variety of mediums, with projects structured in relation to issues and artists covered in the lecture component. Discussions of historical movements and artists since the 1980s will be stressed. Studio assignments are designed to familiarize students with a number of ways of making art and to enlarging the understanding of the connections between the conceptual and the technical in art making.

ART 3102 Modern Art in Italy
Fall or spring. 3 credits. Fullfills 3000-level theory and criticism requirement for fine arts majors. Prerequisite: Rome Program participants. Staff. Introduces students to contemporary art in Rome through studio visits, gallery exhibitions, and museum collections. Lectures by artists, collectors, and curators. Traces art from idea to realization and explores the gallery and its relationship to artists and to promotion of art, the role of the art critic and museum, and art collecting.

Related Courses
ART 2003 Art/Arch History in NYC
Spring. 3 credits. Staff. This course uses New York as a site to study developments in modern and contemporary art, architecture, and design. With students in architecture and other fields, art students study in a seminar format the historical connections of art and architectural innovations in the context of one of the world's most complex and vibrant urban environments. The course includes reading, lectures, and presentations, as well as field trips and walking tours. This course fulfills a 3000-level art history elective requirement for BFA majors.

ART 3107 History of Art in Rome: Early Christian to the Baroque Age
4 credits. Rome Program. Not offered every year. Staff. General survey of the early Christian period to the fantastic vision of Piranesi in the 18th century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 3108 History of Art in Rome: Renaissance in Rome and Florence
Not offered every year. Staff. Surveys art from the beginning of the 15th century to Michelangelo's death (1564) with field trips to important churches, collections, and villas. Emphasis is given to sculpture and painting, and in the case of fresco, mosaics, and stucco decoration, the relationship with architecture and environment is a key element.

ART 4109 Independent Study/Enlargements in Art
Fall, spring, or summer. 4 credits. Variable. Prerequisite: juniors in good academic standing and written permission of instructor. Staff. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

Graduate Studio and Theory Courses
ART 6101 Professional Skills for the Visual Artist
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. This seminar helps fine arts graduates students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students complete a resource notebook that will be useful to them in the years after they graduate. Topics include funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 6102 Recent Practice in the Visual Arts
Fall. 3 credits. Prerequisite: M.F.A. students. Staff. This seminar is designed to provide graduate students with an overview of recent visual art. Students study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as "Documenta, " "La Biennale di Venezia," and the "Whitney Biennial" are discussed. Students are encouraged to travel to nearby cities to look at contemporary work.

ART 6103 Online Publication for the Visual Artist
Fall. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student interviews a contemporary visual artist. These interviews are illustrated with digital images of each artist's work and combined in an online magazine. Additionally, each student learns to create a home page on the web.

ART 6104 Contemporary Theory in the Visual Arts
Spring. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar exploring selected writings on the current issues represented within the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frameworks.

ART 6203 Contemporary Theory and Visual Culture
Fall. 3 credits. Prerequisite: M.F.A. students. Staff. Seminar exploring selected writings on current issues in the visual arts. Designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary practice in the visual arts. Topics vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frameworks.

Undergraduate Studio Courses in Drawing

 Fees for all drawing courses: $25

ART 1500 Summer Drawing I
Summer, three-week session. 3 credits. Course does not fulfill studio credit for ART 1501 Drawing I requirement. Staff. General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1501 Drawing I
Fall, spring. 3 credits. Preference given to B.F.A. students. Staff. General course introducing students to principles and techniques of representation. Emphasis is on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. Students have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, and wash.

ART 1502 Drawing II
Spring. 3 credits. Prerequisite: ART 1501. Preference given to B.F.A. students. Staff. General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1501 and concentrates on the analytical study of the figure. Students explore a variety of materials, traditional and contemporary.

ART 1503 Summer Drawing II
Summer, three-week session. Course does not fulfill studio credit for ART 1502 Drawing II requirement. Staff. General course in drawing that emphasizes figure study and life drawing. Builds on the foundation of ART 1500 and concentrates on the analytical study of the figure. Students
explore a variety of materials, traditional and contemporary.

**ART 1507 Observation and Conception: Drawing**

Summer, six-week session. 3 credits. Staff. Experimental investigations related to various properties of drawing relevant to contemporary artistic practices. Working from the imagination as well as studies from life serve as the basic structure for this course. These practices range from pictorial representation to conceptual strategies. The team-taught aspect of this course allows for a critical thinking forum for an intensive approach to learning skills and developing sensibilities, building a foundation for all further advanced visual media studies.

**ART 1508 Conceptual Drawing**

Summer, six-week session. 3 credits. Staff. Emphasizes drawing from the imagination. Stresses the generation of ideas and their development in sketches. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artmaking directly from nature.

**ART 1509 Life and Still-Life Drawing**

Summer, six-week session. 3 credits. Staff. Studies the human figure and still life both as isolated phenomena and in relation to their environment. Focuses are on helping the student observe and discover.

**ART 2004 Drawing Projects (Studio)**

Spring. 3 credits. Prerequisite: ART 1502. Drawing II. This course fulfills ART 2501, 2502, 4509 for B.F.A. majors. Staff.

In this course, drawing is explored in its multiple forms and capacities to explore, experience, and represent ideas of the city—its physical forms and diverse neighborhoods and inhabitants. Drawing is developed as a connectional tool, navigational device, and research strategy that considers the dynamic conditions of the urban context through the individual vision of artists. Students pursue both experimental and more developed individual, serial, and collaborative drawing projects using a generous range of materials and formats. The boundaries and conventions of drawing are challenged and questioned.

**ART 2501 Drawing III**

Fall. 3 credits. Prerequisite: ART 1502. Preference given to B.F.A. students. Staff. Intermediate drawing course in which students study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials are stressed.

**ART 2502 Advanced Drawing Workshop**

Fall or spring. 3 credits. Prerequisite: ART 2501. Corequisite: B.F.A. Thesis I studio. Staff.

This advanced studio workshop focuses on the use of drawing for the development and refinement of complex visual expression. Using both traditional and nontraditional drawing approaches, students work to clarify their conceptual concerns and develop a pertinent visual vocabulary. This course begins with assignments structured to identify the conceptual and formal considerations central to each student’s individual artistic intentions. Once identified, these artistic intentions become the basis for a rigorous investigation. The resulting body of work informs and supports advanced thesis work across the visual art and design disciplines. This course includes faculty and student presentations on historical and contemporary art, as well as regular critiques focusing on peer evaluation.

**ART 4509 Independent Studio in Drawing**

Fall, spring, or summer. 4 credits. Variable. Prerequisites: junors in good academic standing and written permission of instructor. Staff. Independent studio in drawing that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans studio projects and courses under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Undergraduate Studio Courses in Electronic Imaging**

Course fees: 1701, 3702, 4709 $250
2304, 2701, 2702 $105
3703/3704 $250
4001, 4002 $ 70

**ART 1701 Electronic Imaging in Art**

Fall or spring. 3 credits. Preference given to B.F.A. students. Staff. This is an introductory studio course using the computer for contemporary art making. Students approach software programs by researching historical and contemporary art issues, with emphasis on the constructed image, motion, virtuality, and interactivity.

**ART 2304 Large-Format Digital Printing**

Fall and spring. 4 credits. Prerequisite: ART 1701. Preference given to B.F.A. students. Staff. Focuses on the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, lithography, screen printing, intaglio, transfers, collage, and photomechanical processes. Students use appropriate software, including Adobe Photoshop, QuarkXPress, Final Cut Pro, and Adobe Illustrator to draw from both still and video-based sources. Students work with large-format inkjet printers.

**ART 2702 Digital Video and Sound**

Fall or spring. 4 credits. Prerequisite: ART 1701. Preference given to B.F.A. students. Not offered every year. Staff. Studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production. This course concentrates on the web.

**ART 2703 Computer Animation (also CIS 5640)**

Fall. 4 credits. Preference given to B.F.A. students. D. Greenberg. Focuses on techniques of computer animations. Combines critical readings with studio projects that employ a variety of animation software. Topics include modeling, storyboarding, 2-D and 3-D key frame animation, motion and kinematics, lighting effect and shading, texturing and material properties, physical simulation, and cinematography.

**ART 3703 Advanced Projects in Time-Based Art**

Fall. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Preference given to B.F.A. students. Letter grades only. Staff. This course teaches advanced techniques for creating nonlinear moving images with digital sound. Projects include integrating key frame-based animation, layered animated text, still, and video images made with 3D software applications, field recording, and sound mixing. Emphasis will be placed on ways of integrating and manipulating time-based images and sound to make multimedia art projects and installations for public spaces.

**ART 3704 Interactive Digital Media**

Spring. 4 credits. Prerequisites: ART 1701 and one of the following: ART 2304, 2702, 2703, or permission of instructor. Letter grades only. Staff. This is a project-centered studio course designed to encourage students to integrate computer-aided and time-based media (video, sound, motion graphics, and text) using physical materials and space. The course will challenge students to develop a theoretical understanding of the relationship between body and technology in a social and cultural context. Students will use digital technologies to create projects using interactive CD-ROM/web art, sensor and micro-controller aided interactive video and sound installations, real-time performance, and public space. The course encourages integrative approaches to studio production.

**ART 4001 Thesis I**

Fall and spring. 6 credits. Prerequisites: ART 1701, 2304 or 2702; 2703; 3703 or 3704. Staff. This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002 Thesis II**

Fall and spring. 6 credits. Prerequisite: ART 4001. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors...

**Undergraduate Studio Courses in Painting**

Fees for painting courses (1201, 2201, 3201, 3202, 4001, 4002, 4209): $40

**ART 1201 Introductory Painting**

Fall, spring, or summer. 3 credits. Preference given to B.F.A. students. Staff. Studies the language of painting through color, form, materials, and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.
ART 2201  Painting II
Fall or spring. 4 credits. Prerequisite: ART 1201 or permission of instructor. Preference given to B.F.A. students. Staff. Continuation of the study of aspects of pictorial composition initiated in ART 1201, focusing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 3201  Painting III
Fall or spring. 4 credits. Prerequisite: ART 2201 or permission of instructor. Staff. Intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic, and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 3202  Painting IV
Fall or spring. 4 credits. Prerequisite: ART 2201 or permission of instructor. Staff. Advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 4001  Thesis I
Fall or spring. 6 credits. Prerequisite: ART 3002. Staff. This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

ART 4002  Thesis II
Fall or spring. 6 credits. Prerequisite: ART 4001. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

ART 4209  Independent Studio in Painting
Fall, spring, or summer. 4 credits. Variable. Prerequisites: Juniors in good academic standing and permission of instructor. Staff. Independent studio in painting that allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate results.

explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.

**ART 1303** Introductory Lithography
Fall and spring. 3 credits. Preference given to B.F.A. students. Staff. Study of the theory and practice of lithographic printing, using limestone block and aluminum plates. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 1304** Expanded Print Forms
Spring. 3 credits. Prerequisite: one of the following: ART 1301, 1302, 1303, 1601, 1701, 2501, or permission of instructor. Preference given to B.F.A. students. Staff. Intensive experimental studio designed to introduce students to various ideas and processes of making artists' books. Encourages the integration of studio practice (photography, printmaking, drawing, and painting) with new digital strategies (digital photography/ink jet print, video/sound, CD-ROM/digital book making). Presents both concept and process as related to the visual book form. An introduction to digital publication as an expanded print form helps students investigate how the book is re-invented or reshaped within an electronic context.

**ART 2301** Intaglio II
Spring. 4 credits. Prerequisite: ART 1301. Preference given to B.F.A. students. Staff. Studio course in advanced intaglio techniques. Refinement of processes and ideas through the use of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple-plate color printmaking.

**ART 2302** Advanced Screen Printing

**ART 2303** Lithography II
Spring. 4 credits. Prerequisite: ART 1303. Preference given to B.F.A. students. Staff. Theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

**ART 2304** Large-Format Digital Printing
Fall and spring. 4 credits. Prerequisites: ART 3401, 3402, or 3403. Staff. Studies the use of digital printing and its use in combination with traditional forms of printmaking. Students explore various approaches to image making while also using traditional materials and media, including relief, monotype, photo-lithography, screen printing, intaglio, transfers, collage, and photographic processes. Students use appropriate software, including Adobe Photoshop, QuarkXPress, Final Cut Pro, and Adobe Illustrator to draw from both still and video base sources. Students work with large-format inkjet printers.

**ART 3301** Printmaking III
Fall or spring. 4 credits. Prerequisite: ART 2301, 2302, or 2303 or permission of instructor. Staff. Study of the theory of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 3302** Printmaking IV
Fall. 4 credits. Prerequisite: ART 3301 or permission of instructor. Staff. Continuation and expansion of ART 3301.

**ART 4001** Thesis I
Fall or spring. 6 credits. Prerequisite: ART 3502. Staff. This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002** Thesis II
Fall or spring. 6 credits. Prerequisite: ART 4001. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

**ART 4301** Independent Studio in Printmaking
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in printmaking that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Undergraduate Studio Courses in Sculpture**

Fees for sculpture courses:
- 1401: $50
- 2401, 3401, 3402, 3403, 4001, 4002, 4009: $75

**ART 1401** Introductory Sculpture
Fall, spring, or summer. 3 credits. Preference given to B.F.A. students. Staff. Series of studio problems introducing the student to the basic principles of artistic expression in three-dimensions, i.e., clay modeling, direct plaster, plaster casting, and construction in wood, metal, and other materials.

**ART 2401** Sculpture II
Fall or spring. 4 credits. Prerequisite: ART 1401, or architecture design studio, or permission of instructor. Preference given to B.F.A. students. Staff. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore bronze/metal casting processes. The sculpture program, which is housed in its own building, contains a fully equipped bronze-casting foundry.

**ART 3401** Sculpture III
Fall or spring. 4 credits. Prerequisite: ART 2401 or permission of instructor. Staff. Continued study of the principles of sculpture and conceptual development. Each student explores the selection and expressive use of materials, media, scale, and content. Group discussions and individual criticism. Experimentation is encouraged.

**ART 3402** Sculpture IV
Fall or spring. 4 credits. Prerequisite: ART 3401 or permission of instructor. Staff. Continued and expansion of ART 3401. Special projects may include site-specific and/or large-scale installations.

**ART 3403** Sculpture V
Fall or spring. 4 credits. Prerequisite: ART 3402 or permission of instructor. Staff. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 4001** Thesis I
Fall or spring. 6 credits. Prerequisite: ART 3402. Staff. This course prepares students for the final semester of thesis when they fully develop and complete a final exhibition/project of a new distinctive body of work. During Thesis I, students begin to research, develop, clarify, and sharpen and deepen their thesis proposal through dialogues, critiques, reading, and other activities with members of a Core Thesis Faculty. Thesis I encourages independent, critical thinking and requires students to reflect on their work to date—and their work in the future—with an understanding of historical, theoretical, and conceptual contexts.

**ART 4002** Thesis II
Fall or spring. 6 credits. Prerequisite: ART 4001. Staff. This course is the final semester when B.F.A. students continue to develop, refine, and produce their final capstone work, which may take the form of an exhibition or some other project. Thesis II involves the creation of new work in consultation with Core Thesis Faculty members and other faculty advisors.

**ART 4409** Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in sculpture that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

**Special Studio Courses**

**ART 1109** Internship Practicum
Fall, spring, and summer. Variable credit. S-U grades only. Students serving as interns with art-related businesses or institutions may receive 1 academic credit upon receipt of a letter from the internship sponsor confirming successful performance of intern responsibilities. Students may earn up to 3 hours of nongraded credit for internships and these credits may not be used to fulfill or waive department of art academic and studio requirements.
ART 1505 Drawing Rome
Summer. 3 credits. Letter grades only. Staff.
The course introduces students to methods of representing space and form through a study and application of perspective and the effects of light and shade. Uses of line, tone, and color will be investigated. The subject is the city of Rome: its public spaces, churches, museums, archaeological zones, and the residents and visitors who occupy it. A variety of materials are used including pencil, ink, charcoal, pastel and collage. With the exception of one or two in-studio sessions, all work will be done onsite in Rome. Course meets four weeks, five times per week.

ART 2000 New York City Studio
Spring. 4 credits. This course fulfills a 2000-level studio for BFA majors. Staff. This interdisciplinary course is thematically and topically organized. Through a series of research-based assignments and independent and collaborative projects, students actively engage the city as a site of open investigation and critical engagement. The thematically based studio encourages and allows students to work with a range of media. Students are encouraged to participate not as painters, printmakers, or sculptors, but as artists who pursue and use a range of materials and methodologies as part of a creative process. Students work in the AAP NYC space, as well as other sites in New York City.

ART 2019 Independent Study/Studio in NYC
Spring. 2–4 credits, variable. Staff. In consultation with a faculty member, students may pursue a thoughtfully developed and rigorous independent study that utilizes the context and content of New York to create an innovative research project, performance, intervention, installation, or other body of work. Student must complete an ART Independent Study/Studio form.

ART 2109 Art Practicum in NYC
Spring. 1–6 credits, variable. This course fulfills an IN/OUT college elective for B.F.A. majors. The credit amount will be determined by and in consultation with the department chair. Students choose an internship with an arts, cultural, or civic organization that has an established relationship with AAP NYC or another organization or venue. Students have direct, hands-on experience and receive academic credit for their work.

ART 3702 Special Topics in Art Studio
Fall, spring, or summer. 4 credits, variable. Staff.
Exploration of a particular theme or project. For example, Special Topics in Art History, offered spring 2009 for Rome Program participants.

ART 3709 Independent Studio in Rome
Fall and spring. 4 credits, variable. Prerequisites: Rome Program participants; juniors in good academic standing and written permission of instructor. Staff. Independent studio in Rome that allows non-art majors the opportunity to pursue special interests in fine arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide his or her progress and evaluate the results.

ART 3809 Independent Study/Studio in NYC
Fall, winter, spring, or summer. 4 credits variable. Prerequisite: student in good academic standing and written permission of instructor on an approved independent study form. Staff. Independent study or studio allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 4000 Rome Studio
Fall or spring, 4 credits. Fulfills 4 credits of concentration requirement. Prerequisites: Rome Program participants; permission of instructor. Content for Rome studio determined by instructor. Lab fee: $60; additional fees for photography and printmaking. Staff.

ART 4709 Independent Studio in Electronic Imaging
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff. Independent studio in electronic imaging that allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide his or her progress and evaluate the results.

ART 4809 Independent Study in Combined Media
Fall, spring, or summer. 4 credits, variable. Prerequisites: juniors in good academic standing and written permission of instructor. Staff.

The Undergraduate Program in Urban and Regional Studies
The program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Graduates from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies addressing urban and regional issues. Courses in the program provide students with a broad understanding of urban issues, the ability to assess those issues, and skills technical analysis. The URS program is truly interdisciplinary: students learn to evaluate urban and regional problems by using wide ranges of analytic tools and disciplinary perspectives.

URS Statement of Purpose
The URS program encompasses an interdisciplinary, liberal arts course of study focused on the forces that shape the social, economic, and political character and physical form of cities, suburbs, and their surrounding regions. Students pursue knowledge in a range of disciplines, acquire significant writing skills, quantitative and non-quantitative analytical skills, and develop the capacity to think broadly and deeply regarding the past, present, and future of urbanized communities and their inhabitants.

Like many quality liberal arts programs, the URS program requires students to develop a broad academic base in the physical and biological sciences, quantitative methods and mathematics, social sciences and history, humanities and the arts, and writing. The major requires students to complete a series of four introductory courses and encourages them to develop expertise in looking at cities, suburbs, and metropolitan regions through a series of lenses. Students use theory to examine social dynamics, politics, economics, history; design and land use patterns, and environmental problems.

Graduates pursue a wide variety of advanced studies and careers in city and regional planning, historic preservation, real estate, architecture, landscape architecture, public administration and law; and positions in the public sector: teaching, not-for-profit institutions, and consulting firms.

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 previously established by the College of Arts and Sciences or in the groups Physical and Biological Sciences (PBS) and Mathematics and Quantitative Reasoning (MQR) currently used by the College of Arts and Sciences, provided that they must complete at least one science course during their undergraduate career. They may apply up to advanced placement credit toward the distribution requirements in categories currently established by the College of Arts and Sciences in Cultural Analysis (CA); Historical Analysis (HA); Knowledge, Cognition, and Moral Reasoning (KCM); Literature and the Arts (LA); and Social and Behavioral Analysis (SBA).

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels.
Basic Degree Requirements for Students in the Graduating Classes of 2011 and Subsequent Years

URS requirements for graduation include (a) eight semesters of residence; (b) 120 credits; (c) General Education Requirements consisting of writing seminars, qualification in one foreign language, and a series of distribution requirements; (d) required courses for the major; (e) area requirements for the major; (f) free electives; (g) a 34 course minimum; and (h) completion of the university physical education requirement. Note: Physical education credit does not count toward graduation or toward the 12-credit minimum required for good academic standing each semester. No course may satisfy more than one requirement.

More specifically these requirements include

1. General Education
   a. First-year writing seminars: two courses. Students earning a score of 5 on both English literature and English language exams will receive 3 credits (in out-of-college electives) and place out of one first-year writing seminar.
   b. Foreign language: qualification in one foreign language can be demonstrated by completing three courses in one foreign language in high school, or by taking the Cornell Advanced Standing Examination (CASE), or by successfully completing two to three college-level foreign language courses.
   c. Distribution Requirements: nine courses. Students must successfully complete nine courses for the distribution requirement. A total of four courses must be completed in the categories of Physical and Biological Sciences (PBS-AS) and Mathematics and Quantitative Reasoning (MQR-AS). Of those four courses, at least two must be classified as PBS and at least one course must be classified as MQR course. The fourth course can be classified as either PBS or MQR. The remaining five courses must be courses identified by the College of Arts and Sciences in the categories of Cultural Analysis (CA-AS), Historical Analysis (HA-AS), Knowledge, Cognition, and Moral Reasoning (KCM-AS), Literature and the Arts (LA), and Social and Behavior Analysis (SBA). These five courses must be selected from at least four of these five categories (i.e., CA-AS, HA-AS, KCM-AS, LA-AS, and SBA-AS). No more than three of these five courses can be taken in any one department. URS students may petition to substitute equivalent courses from the Colleges of Agriculture and Life Sciences, Engineering, Human Ecology, Industrial and Labor Relations, and Architecture, Art, and Planning. Grades of S–U cannot be applied toward the distribution requirement.
   URS students may not apply college credit earned before entering Cornell as a freshman to satisfy any distribution course requirement. However, they may petition to have that credit counted toward the 120 total credits required for graduation.

2. Required Courses for the Major: seven courses
   a. CRP 1100 The American City (fall, 3 credits)
   b. CRP 1101 The Global City: People, Production, and Planning in the Third World (spring, 3 credits)
   c. CRP 1106 URS First-Year Seminar (fall, 1 credit)
   d. CRP 2000 The Promise and Pitfalls of Contemporary Planning (fall, 3 credits)
   e. Microeconomics: one course from a list of microeconomics courses (fall or spring, 3 or 4 credits)
   f. Methods for Planning and Urban Studies (one course in quantitative methods from designated lists of courses)
   g. Students understand, develop, and apply tools used in analyzing economic, sociological, and other quantitative data relevant to the development, implementation, and assessment of public and private actions that influence the growth and development of cities/suburbs and regions, and the well-being of their inhabitants.

Basic Degree Requirements for Students in the Graduating Class of 2010

URS Students in Minors Offered by Other Departments

The department recognizes minors earned within the university (accepting standards set by various colleges). URS students may apply for minors in any college (e.g., Africana Studies, Architecture, Latino Studies, Southeast Asian Studies, and Feminist,
Off-Campus Opportunities
Cornell in Rome. The urban studies component of Cornell in Rome is offered during the spring semester for students interested in the economic, political, cultural, and social life of contemporary European cities and regions. It is open to urban studies majors and related disciplines.

By living and studying in the center of one of the world’s most historic, beautiful, and dynamic cities, students gain a deeper understanding of the powerful local, regional, and global forces that are reshaping urban communities abroad and at home.

In addition to taking classes with architecture and art students, participants engage in field research and assist civic leaders and municipal officials in developing workable solutions to challenging problems confronting contemporary Roman neighborhoods. Students meet with professional planners, government officials, community activists, leading architects, researchers, and others responsible for urban policy-making in the areas of economic development, neighborhood stabilization, urban design, regional planning, city management, agricultural development, tourism, historic preservation, and immigration.

Students complement their classes and fieldwork with travel to Italy’s most important artistic, economic, and political centers. Participants have the opportunity to see Italy and its European neighbors work together to form a more powerful regional economy and political alliance through the increasingly influential European Union.

The program’s cultural immersion and community-based research experience significantly strengthen application for graduate or professional school, and also enhance the careers of young professionals employed in increasingly global workplaces.

Graduate planning and international studies students gain invaluable work experience as full-time interns with one of the United Nations agencies headquartered in Rome (such as the Food and Agricultural Organization or the International Commission on Objects and Monuments), in an Italian city planning agency (Fluent Italian required), or in a nongovernmental agency. Rome faculty members help students individually to arrange intern positions. An updated résumé and internship questionnaire must be submitted with the program application.

AAP NYC. AAP NYC provides an exciting off-campus semester with courses and professors that challenge students with New York City’s economics and politics, housing and transportation, and art and design. Participants study the use of streets and public spaces, and faculty and guest lecturers guide students through the astonishing variety of the world’s premier city.

Studying and living in New York City complements classroom-based coursework in Ithaca with the chance to learn onsite. The New York program is envisioned to fit well with both Ithaca and Rome allowing students to apply ideas first encountered in Ithaca courses to the big-city laboratories off campus. The CRP faculty has identified a diverse set of educational partners, connected to both the public and private sectors, to provide high-quality site visits, guidance in professional internships, and special events.

During a semester in New York City, Urban and Regional Studies (URS) juniors and seniors can learn how such a complex system functions and interacts, how new businesses set up and prosper while others fail, and how City Hall, the Port Authority, and various other state and local agencies try to manage things.

The internship course combines work experience two days each week with formal Friday lunchtime discussions. Every other Friday experienced professionals from across the metropolitan region join students to discuss their current work in planning, design, and development. On alternate Fridays students report on their work meeting with faculty and fellow interns.

Students enjoy opportunities to gain work experience on issues ranging from arts and culture to planning, public policy, housing, and economic development through CRP’s internship program. Students may select work with private firms, public agencies, neighborhood-based groups, or NGOs. The list of possible internships is extensive and individually tailored. Interns take full advantage of the special resources of New York, working with people in AAP’s broad network of alumni and friends in a range of professional fields. Placements are matched to students’ study areas and career interests.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking courses to meet graduation requirements for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, NY 14850-2488. Official transcripts of all high school and college work must be submitted with the program application.
submit along with SAT or ACT scores and letters of recommendation.

Prospective transfer students should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transferring. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus if that is possible. Applicants who want further information regarding the Urban and Regional Studies Program may contact Professor Richard Booth, program director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, NY 14853-0701, 607-255-4025.

The Graduate Program in City and Regional Planning

There are five graduate degree programs in the city and regional planning department. The master of regional planning program (M.R.P.) stresses skills basic to professional practice and responds to individual needs and interests. The faculty strongly recommends that students concentrate in one of three areas of planning. The Land Use and Environmental Planning concentration focuses on policies and actions that directly affect the physical character, transformation, rehabilitation, and preservation of cities and regions. Economic Development Planning: Communities and Regions focuses on the economies of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. International Studies in Planning (ISP) focuses on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts.

The master of professional studies in international development (M.P.S./I.D.) degree is administered jointly with the Cornell International Institute for Food, Agriculture, and Development (CIIFAD). It is intended to meet the specific training needs of experienced planners or midcareer professionals in related fields.

The 60-credit master of arts (M.A.) in historic preservation planning prepares students for professional work in the creative preservation and use of our physical heritage.

The master of science (M.S.) or master of arts (M.A.) degree in regional science is the study of regional economies and their interactions with each other. Central issues include capital flows, trade, location of economic activity, growth, and regional conflicts. Graduates are positioned for careers as researchers and policy analysts at the highest levels in national governments, corporations, and international organizations.

The doctor of philosophy (Ph.D.) program is for those who seek advanced, specialized education for a career in teaching, research, or policy making.

### Off-Campus Opportunities

**Cornell in Rome**
Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Lazzaroni. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include volunteer work assignments in one of the international development organizations headquartered in Rome.

### Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

### Undergraduate Program in Urban and Regional Studies

**CRP 1100 The American City**
Fall. 3 credits. S–U or letter grades for out-of-department students only. Staff.
Introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we enter the first decade of the 21st century. Readings, discussions, and brief papers explore topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

**CRP 1101 The Global City**
Spring. 3 credits. S–U or letter grades for out-of-department students only. A. Forsyth.
Critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

**CRP 1106 URS First-Year Seminar**
Fall. 1 credit. S–U grades only. R. Booth.
Introduces students to substantive issues of the diverse disciplines that make up the planning profession. Students are engaged in weekly discussions with CRP and other faculty members in the department. Students have the opportunity to engage in open discussions.

**CRP 2000 The Promise and Pitfalls of Contemporary Planning**
Fall. 3 credits. Prerequisite: CRP 1100. A. Sanchez.
Introduction to the historical origins and evolution of the city planning profession in the United States. The theoretical foundation, core values, primary methods, and key challenges facing contemporary planners are examined through a combination of readings, lectures, films, guest speakers, and field trips. Students acquire a deeper understanding of professional practice by working with local officials to develop community development profiles for several Ithaca neighborhoods.

**CRP 2300 Community Service Fieldwork**
Fall. 4 credits. Variable. Prerequisite: permission of instructor. Staff.
Undergraduate students work under the direction of a faculty member in the CRP department on a project for a local or nonprofit organization. Projects involve urban and regional issues as defined by a client and agreed upon by the faculty member.

**CRP 3010 Public Administration (also CRP 6010)**
Fall. 3 credits. Not offered every year. R. Schwarting.
This course prepares students to work within government departments and agencies, state and local authorities, and nonprofit public benefit corporations. While the emphasis is on local and mid-size organizations, some material will address international and domestic national level organizations. As a first-year graduate program course it prepares students to conduct research on public organizations leadership and management and to be effective in public careers. It also prepares upper-level undergraduate students for internships and entry into public-sector careers.

**CRP 3011 Ethics, Development, and Globalization (also CRP 6011)**
Fall or spring. 4 credits. K. Donaghhy. This seminar surveys some of the most important recent contributions to the literatures of development ethics and global ethics and examines their power to illuminate such issues as the nature of development, poverty and human rights, globalization and local autonomy, environmentalism and consumerism, and humanitarian intervention and just wars.

**CRP 3072 Land Use, Environmental Planning, and Urban Design Workshop (also CRP 5072)**
Fall or spring. 4 credits. A. Forsyth.
Land Use and Environmental Planning workshop courses focus on the forces and actions that directly affect the physical character, transformation, rehabilitation, and preservation of natural landscapes, cities, and regions. Topics of study include, among others, development of land use and natural conservation plans, design and implementation of "smart growth" policies, evaluation of infrastructure requirements, strategies for making cities more environmentally sustainable, design and analysis of public spaces, and strategies for increasing housing opportunities.
This course deals with current topics in urban political economic restructuring. It will be situated within the broader context of social history, political geography, and ethnic privatization. Our reading will come from centuries and conclude with contemporary colonial conquest and the expropriation of present-day seizure of land, resources, and political economy and examines past and present political challenges. Particular attention will be paid to different means of accommodation and political challenges. This course examines public policy and political issues that affect Asian Pacific Americans, including electoral politics, social justice/grassroots movements, affirmative action, and multiracial/interracial coalitions. We investigate both the interaction between state institutions and political movements and how this dialectic frames political issues and accommodates political challenges. Particular attention will be paid to different means of political organization and different strategies toward political empowerment. The course will be situated within the broader context of post-civil rights racial politics and postwar political economic restructuring.

This course deals with current topics in urban political economy and examines past and present-day seizure of land, resources, and ways of life as well as resistance against such seizure. We begin with an examination of colonial conquest and the expropriation of the English commons in the 17th and 18th centuries and conclude with contemporary anti-globalization struggles against privatization. Our reading will come from social history, political geography, and ethnic studies.

The rise in urban entrepreneurship among certain immigrant groups, and the variable forms of neo-liberal economic and spatial restructuring in U.S. cities, require that we view immigrant businesses from a critical and transdisciplinary perspective. This course will foreground how distinct ethnic entrepreneurial patterns and socially constructed immigrant labor markets are framed by both difference and policy regimes.
and development as practiced in cities and regions in specific areas outside the United States, with a particular focus placed on how these institutional arrangements and conditions compare with the United States.

CRP 3506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 6995) Fall or spring. 2–3 credits, variable. E. Thornikide.

This course deals with current topics in environmental planning. Wilderness and wildlife resources have been under assault by the Congress, the “Wise Use” movement, property-rights activists, pollutants, and the actual users. This seminar considers historical and philosophical foundations and political factors that affect decisions about environmental policies, planning, acquisition, protection, and management. The roles of government, professional planners and managers, organized special interests, the legal system, citizens, and user groups are examined.

CRP 3508 Urban Transformations in NYC Fall. 3 credits. Letter grades only. Offered in New York City. Staff.

Students will investigate the structural changes taking place in the New York regional economy and the impact these changes are having on the spatial structure of the city. This background information will be used to identify the major environmental, economic, and social policy issues confronting local civic leaders. Special attention will be given to policy questions that affect economic growth, income and wealth distribution among social groups, environmental sustainability, and citizen participation in policy-making.

CRP 3540 Introduction to Environmental Planning (also CRP 5540) Fall. 3 credits. S. Schmidt.

Introduction to problems facing planners and decision-makers as they attempt to manage and preserve environmental quality in urban and rural settings. Case studies are used to discuss issues related to sustainability, quality of life, environmental hazards, and environmental justice. Students are also introduced to the basic regulatory and institutional aspects of environmental planning and tools and techniques for environmental impact assessment, inventorying, and risk analysis.

Evaluates different types of museums (art, science, history, arboretum, etc.), and their constantly evolving missions in contemporary societies. The material is addressed through site visits, lectures by faculty and guests, readings, case studies and a team semester-long project. Issues covered include the nature of collections; the nature of the audience; the purpose and role of museums; political and cultural questions about collecting; history and interpretation; governance and management; and the core ethical and intellectual values and positions implied or expressed by the institutions. Students will also undertake a comprehensive planning project for a local museum, to be presented to the client at the end of the semester.

CRP 3602 American Planning History (also CRP 6602) Fall. 3 credits. P. Clavel.

This lecture and discussion course covers the 20th-century growth of city and regional planning. Related institutions and individual planners are put in the context of social, political, and economic development, and the history of the movement and legislative innovation. Students will also have the opportunity to work with practicing planners, other scholars, and Cornell University Library’s Division of Rare and Manuscript Collections.

CRP 3608 The Built Environment of New York City Fall. 3 credits. Letter grades only. Offered in New York City. Staff.

Students will learn about the history, culture, politics, and social life of New York City’s newest immigrant communities through an immersion in the contemporary art, poetry, stories, and dance being produced by its most prolific young artists. Weekly visits to the studios, galleries, and performance spaces of these communities will be a central aspect of this experientially based course.

CRP 3610 Seminar in American Urban History (also CRP 6610) Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan.

Seminar in the historical evolution of the American city. Emphasizes factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 3650 Gender and Globalization (also FGSS 3360) Fall. 3 credits. L. Benería.

For description, see FGSS 3360.

CRP 3720 The Regional Question: The Case of Italy Spring. 4 credits. variable. Prerequisite: Rome Program participants; majors in urban and regional studies. Staff.

The “regional problem” in Italy has long interested regional economists, sociologists, and political scientists. This course makes use of field trips to the Italian Mezzogiorno and the North to explore theoretical and practical aspects of regional inequality. The question of how Italy’s integration into the European Union affects and is affected by its regional issues will be considered.

CRP 3801 Asian American Urban Experience (also AAS/AMST 3801/6801, CRP 6801) Fall or spring. 3 credits. C. Lai.

This seminar uses the case of Asian Americans in the United States to examine the intersection of race, space, and power from a social geographical and ethnic studies framework. The course provides an introduction to spatial theory and racial theory and history of Asian immigrant communities in the 19th and 20th centuries.

CRP 3810 Principles of Spatial Design and Aesthetics (also CRP 5810) Fall. 3 credits. Limited to 15 students. J. Foster.

A lecture projects course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 3840 Green Cities (also CRP 5840, LA 4950) Fall. 4 credits. S–U or letter grades. Not offered every year. S. Schmidt.

For the first time in history, a majority of human beings live in cities. As a result, any realistic solution to the global ecological crisis will need to include strategies for urban life that are ecologically sound. This course examines the history and future of urban ecology and the technology and politics that shape it. Alternative transportation, renewable energy, urban design, recycling and resource management, and sustainable economics are explored as means toward transforming cities to become the basis of a new, ecological society. Open to both graduate and undergraduate students. All students have additional research requirements.

CRP 3860 Planning for Sustainable Transportation (also CRP 6860) Spring. 3 credits. S–U or letter grades. Not offered every year. Staff.

Exposes issues related to sustainable transportation policy and practice. The course (1) provides an overview of current transportation trends and their impacts; (2) reviews themes such as planning history and politics, the problems with auto-dominated systems, and key challenges to development sustainable transport systems; and (3) looks...
at regulatory, design, and market-based approaches to reducing automobile-dependency, introducing creative sustainable solutions from around the world.

CRP 3900 Professional Planning Colloquium I (also CRP 7850)
Fall. 1 credit. Staff. Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a three- to five-page paper about the lecture series.

CRP 4080 Introduction to Geographic Information Systems (GIS) (also CRP 5080)
Spring. 4 credits. S. Schmidt. Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course focuses on GIS in the social sciences. Many of the exercises and examples are based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues covered include fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 4120 Devolution, Privatization, and the New Public Management (also CRP 6120, AEM 4330/6330, FGSS 4110/6110)
Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S–U or letter grades offered every other year. M. Warner. Addresses devolution and decentralization of government services in a national and international context and then focuses on the local public-sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring are reviewed, including changing roles for the private sector, nonprofit sector, and unions. Implications for policy, program design, public advocacy, and citizen involvement are addressed. A special topic may include welfare reform. Graduate students are expected to write a major research paper in addition to short papers throughout the semester.

CRP 4160 European City: The Public Sphere and Public Space
Spring. 6 credits. Variable. Enrollment may be limited by instructor. Prerequisite: junior or senior standing; Rome Program participants. S–U or letter grades for nonmajors only. Staff. Examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socioeconomic underpinnings of the city. How are cities organized, and how do citizens relate to the state; the city to the nation; the nation to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 4170 Economic Development: Firms, Industries, and Regions (also CRP 5170)
Fall. 4 credits. Not offered every year. S. Christopherson. Economic development policy in the United States has focused historically on the provision of subsidies to individual firms. As the limitations of this strategy have become more apparent, alternative approaches including multifirm and workforce development are being implemented. This comparative course draws on cases from a variety of industries and national contexts. Particular attention is paid to economic development issues and policies in New York State.

CRP 4440 Resource Management and Environmental Law (also CRP 5440, NTRES 4440)
Spring. 4 credits. Prerequisite: junior, senior, or graduate standing and permission of instructor. R. Booth. Introduces the application of legal concepts and processes to the management of natural resources and natural-resource areas. Explores the role of the common law, statutory law, adjudicatory regulations, and judicial decisions in managing these resources. Particular focus is given to the management of wildlife, wetlands, and critical resources on public lands, and to the conflicts inherent in government attempts to regulate important natural resources on private lands.

CRP 4590 Legal Aspects of Land Use Planning (also CRP 5590)
Spring. 4 credits. R. Booth. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 4770 Issues in African Development (also CRP 6770)
Fall and spring. 1 credit. S–U grades only. M. Nduli. Examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 4900 Student-Faculty Research
Fall or spring. 4 credits, variable. Prerequisite: undergraduates in Urban and Regional Studies Program. S–U grades only. Staff. Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 4920 Honors Thesis Research
Fall or spring. 4 credits. Prerequisite: Urban and Regional Studies Program majors who have been selected as honor students by department faculty. Staff. Each selected student works with his or her thesis advisor.

CRP 4930 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: CRP 4920. Staff. Each selected student works with his or her thesis advisor.

CRP 4970 Independent Study
Fall or spring. 4 credits. Prerequisite: junior or senior standing; permission of instructor. Staff. Typical topics are:

CRP 3850 Special Topics in Planning
CRP 3851 Special Topics in Design and Land Use
CRP 3852 Special Topics in Urban History, Society and Politics
CRP 3853 Special Topics in Environment
CRP 3854 Special Topics in Regional Development and Globalization
CRP 3855 Special Topics in Qualitative and Field Methods
CRP 3856 Special Topics in Quantitative Methods

Graduate Courses and Seminars
Courses numbered from 5000 to 5990 and 6000 to 6990 are generally considered introductory or first-year courses; those numbered from 7000 to 7990 and 8000 to 8990 are generally considered more advanced. Upper-level undergraduate courses are numbered from 3000 to 4990. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 5000 and above.)

CRP 5071 City and Regional Planning Workshop
Fall or spring. 4 credits. Staff. City and Regional Planning workshop courses focus on planning issues and problems that combine several of the topics undertaken in the various workshop categories. Topics may include public policy issues regarding land-use, transportation, public space, municipal services, environmental impact, housing and economic development, and public participation.

CRP 5072 Land Use, Environmental Planning, and Urban Design Workshop
Fall or spring. 4 credits. Staff. For description, see CRP 3072.

CRP 5073 Historic Preservation Planning Workshop
Fall or spring. 4 credits. Staff. Historic Preservation Planning workshop courses take students into the field to engage in a range of problems, from conducting a historic resources survey working in a city, town, or village in the region, to developing a scheme for revitalization of an entire neighborhood, to a site-specific economic analysis for the renovation of a surplus school.

CRP 5074 Economic and Community Development Workshop
Fall or spring. 4 credits. Staff. Economic and Community Development workshop courses focus on the economics of neighborhoods, cities, and regions with the intent of producing more informed and effective economic development policy. Topics of study include, among others, the application of analytical tools needed to produce first-rate economic development
plans, the special needs of excluded, poor and segregated communities, use of quantitative and qualitative methods to address social inequalities, the politics of planning, relationships between economic development and community development.

CRP 5075 Real Estate Workshop
Fall or spring. 4 credits. Staff. Student are trained to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships are required. A range of types of problems that may be encountered in the real estate field are addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, and others. Projects focus on real-world case studies and require professional-level reports suitable for oral and written presentations.

CRP 5076 International Planning and Development Workshop
Fall or spring. 4 credits. Staff. International Planning and Development courses focus on urban, regional, and international development processes and their implications for people's lives and livelihoods in diverse international contexts. Particular attention is paid to critical assessment of programs that reflect a commitment to environmental sustainability, economic vitality, and social justice.

CRP 5080 Introduction to Geographic Information Systems (GIS) (also CRP 4080)
Spring. 4 credits. S. Schmidt. For description, see CRP 4080.

CRP 5090 Community Development Seminar (also CRP 3090)
Spring. 3 credits. K. Beaudon. For description, see CRP 3090.

CRP 5120 Public and Spatial Economics for Planners
Spring. 3 credits. N. Brooks. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public–nonprofit sectors are peripheral to (or absent from) the usual graduate foundation courses in economics. The course also covers the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 5130 Introduction to Planning Practice and History
Fall. 4 credits. J. Forester. Introductory graduate seminar on the theory and history of planning, administration, and related public intervention in urban affairs. Topics are analyzed from the perspective of the political economy of the growth and development of cities. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing, and explore one research topic in depth.

CRP 5170 Economic Development: Firms, Industries, and Regions (also CRP 4170)
Fall. 4 credits. S. Christopherson. For description, see CRP 4170.

CRP 5180 Politics of Community Development (also CRP 3180)
Spring. 3 credits. A. Sanchez. For description, see CRP 3810.

CRP 5190 Urban Theory and Spatial Development
Spring. 3 credits. W. Goldsmith. Surveys theories on the existence, size, location, and functioning of cities and their metropolitan areas in rich and poor regions of the world. Considers orthodox/conservative treatments as well as critical/left-wing perspectives of planners, geographers, economists, sociologists, and political economists. These theories are indispensable for understanding the origins of cities, the persistence of urban and regional spatial patterns, and the distinctive nature of urban problems.

CRP 5250 Introductory Methods of Planning Analysis
Fall. 4 credits. R. Pendall. Quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from various regions of the United States, but tools are applicable throughout the world. They include descriptive and inferential statistics, mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 5320 Real Estate Development Process
Fall. 3 credits. Letter grades. Fee for case studies packet. B. Olson. Examination of various forms of development as well as the role of major participants in the processes. Reviews issues in residential, retail, industrial, office, and low-income housing projects. Guest speakers and case studies included.

CRP 5330 Real Estate Marketing and Management
Fall. 3 credits. Staff. Focuses on the tenant or user as the basic source of the benefit of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Multifamily residential and office buildings are the principal focus of the course. Topics include marketing research, examination of tenant types, locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies included.

CRP 5370 Real Estate Seminar Series
Fall and spring. 0.5 credit each semester. Prerequisite: M.P.S./R.E. students. S–U grades only. D. Funk. Designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 5440 Resource Management and Environmental Law (also CRP/NTRES 4440)
Spring. 4 credits. R. Booth. For description, see CRP 4440.

CRP 5450 Inferential Statistics for Planning and Public Policy
Fall or spring. 3 credits. N. Brooks. This course is an introduction to the inferential statistical methods and econometrics/regression analysis needed to understand empirical public policy and planning research and to do basic applied public policy analysis. The statistical concepts are illustrated using data and examples primarily from the fields of public policy and planning.

CRP 5460 Introduction to Community and Environmental Dispute Resolution
Fall or spring. 3 credits. J. Forester. Explores the theories and techniques of dispute resolution as they apply to community, environmental, and related public-policy disputes. Analysis complements skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 5530 Land-Use Regulations
Spring. 3 credits. R. Pendall. This seminar covers the essentials of "smart growth," zoning, and subdivision and the main tools for implementing a land-use plan. Also covers agriculture and open-space preservation, infrastructure-timing controls, redevelopment, and planned-unit development.

CRP 5540 Introduction to Environmental Planning (also CRP 3540)
Fall. 3 credits. S. Schmidt. For description, see CRP 3540.

CRP 5560 Design in Real Estate Development
Spring. 3 credits. S–U or letter grades. H. Richardson. Provides a basic understanding of the importance of design in real estate development. The role of the architect and other design professionals is considered from the initial needs assessment through project implementation. Fundamentals involved in defining, stimulating, and recognizing quality in design are addressed. The analysis of case-study presentations by guest speakers examine the methods and procedures employed to achieve quality design and how this can create added value to development.

CRP 5590 Legal Aspects of Land Use Planning (also CRP 4590)
Spring. 4 credits. R. Booth. For description, see CRP 4590.

CRP 5600 Documentation for Preservation
Fall. 3 credits. M. Tomlan. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 5610 Historic Preservation Planning Workshop: Surveys and Analyses
Fall. 4 credits. J. Chusid. Covers techniques for the preparation of surveys of historic structures and districts, identification of American architectural styles, focusing on upstate New York, and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasizes fieldwork with individuals and community organizations.
CRP 5620 Perspectives on Preservation
Fall. 3 credits. J. Chusid.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 5630 Problems in Contemporary Preservation Practice
Spring. Variable credit. J. Chusid.
Review and critique of ongoing preservation projects and determination of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 5640 Building Materials Conservation
Spring. 3 credits. Prerequisite: junior, senior, or graduate standing. J. Chusid.
Survey of the development of building materials in the United States, chiefly during the 19th and early 20th centuries, and a review of the measures that might be taken to conserve them.

CRP 5650 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. Staff.
Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 5660 Planning and Preservation Practice
Fall. 1 credit. Prerequisite: graduate standing in CRP programs or M.P.S./R.E. or permission of instructors. S–U grades only. R. Pendall and M. Tomlan.
Students participate in field study of city planning, historic preservation, economic and community development, and real estate issues in large eastern U.S. cities.

CRP 5670 Measured Drawing
Spring. 3 credits. Prerequisite: undergraduate architecture students and graduate students in history and preservation. J. Chusid.
Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 5680 Principles of Spatial Design and Aesthetics (also CRP 3810)
Spring. 3 credits. J. Foster.
For description, see CRP 3810.

CRP 5840 Green Cities (also CRP 3840, LA 4950)
Fall. 4 credits. S–U or letter grades. Not offered every year. S. Schmidt.
For description, see CRP 3840.

CRP 6010 Public Administration (also CRP 3010)
Fall. 3 credits. Not offered every year. R. Schwarting.
For description, see CRP 3010.

CRP 6011 Ethics, Development, and Globalization (also CRP 3011)
Fall or spring. 4 credits. K. Donaghy.
For description, see CRP 3011.

CRP 6012 Legal Aspects of Public Agency Decision-Making
Fall. 4 credits. R. Booth.
This course introduces the application of legal concepts to decision-making processes conducted by governmental agencies, particularly at the federal level. It explores how constitutional law, statutory law, and judge-made law shape agency decisions. Attention is given, for example, to roles agencies play in American government, differences between rule-making proceedings and adjudications, rights of parties to obtain judicial review of agency decisions, how judges review factual and legal determinations by agency officials, and the rights of parties appearing before agencies.

CRP 6050 Urban Public Finance
Fall. 4 credits. Prerequisite: exposure to microeconomics. Not offered every year. Staff.
Overview of neoclassical public-economics theory, particularly those aspects of the theory that are central to urban public finance. The unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Also presented is the public-finance theory of taxation. Major taxes and other revenue sources used by large municipalities are described and analyzed. The heart of the matter is the measurement and analysis of the fiscal condition of cities.

CRP 6101 Race, Space, and Place (also CRP 3101)
Fall or spring. 3 credits. C. Lai.
For description, see CRP 3101.

CRP 6102 Asian American Politics and Public Policy (also AAS 3900, CRP 3102)
Fall or spring. 3 credits. C. Lai.
For description, see CRP 3102.

CRP 6105 Urban Political Economy Seminar (also CRP 3105)
Fall or spring. 3 credits. C. Lai.
For description, see CRP 3105.

CRP 6111 Immigrant Entrepreneurship Markets and the U.S. City: The Latino(a) Case (also CRP 3111)
Spring. 3 credits. A. Sanchez.
For description, see CRP 3111.

CRP 6120 Devolution, Privatization, and the New Public Management (also CRP 4120, AEM 4330/6330, FGSS 4110/6110)
Fall. 4 credits. Prerequisite: ECON 1110 or equivalent. S–U or letter grades. Offered every other year. M. Warner.
For description, see CRP 4120.

CRP 6201 Qualitative Research and Design Methods (also CRP 3201)
Fall or spring. 3 credits. J. Forester.
For description, see CRP 3201.

CRP 6202 Visual Methods in Planning (also CRP 3202)
Spring. 3 credits. Staff.
For description, see CRP 3202.

CRP 6203 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits. D. Lewis.
Examines selected analytical techniques used in the planning and evaluation of public policy and public investments. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 6220 Planning Policy and Analysis
Spring. 3 credits. I. Azis.
The course is designed to familiarize students with the essence of planning models and equip them with analytical tools to undertake a practical quantitative policy and planning analysis. Two categories of models to be discussed are: (1) economy-wide models that capture complete interactions between economic and social indicators such as income distribution and poverty; and (2) non-Bayesian decision-making models that combine intangibles and subjective judgments with statistical data and other tangible actors, and that can also capture feedback influences.

CRP 6302 Economics of Financial Crises (also NBA 5950)
Spring. 3 credits. I. Azis.
Understanding the causes, nature, and consequences of financial crises is of interest to both the public and private sector. The purpose of this course is to help students with such understanding, and to familiarize them with the relevant tools for analyzing the phenomena of financial crises. While crisis is often multidimensional, the focus of this course is on economics.

CRP 6303 Consulting for Nonprofit and Government Organizations
Fall and spring. 4 credits. L. Haas-Manley.
This class teaches practical skills that will enable students to work with clients in the local community, learn about organizational structure and culture, and gain real-world experience as they complete a public-service project. Students receive instruction on topics such as organizational development, program evaluation, project management, professional communication, and strategic planning. A significant portion of the course will focus on project management.

CRP 6320 Methods of Regional Science and Planning I
Spring. 4 credits. Variable. D. Lewis.
Introduction to some of the major methods and models used in regional science and planning. Topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning are discussed. When appropriate, computer implementation emphasizing statistical, econometric models is considered.

CRP 6390 Economics of Financial Crises (also NBA 5950)
Spring. 3 credits. I. Azis.
Understanding the causes, nature, and consequences of financial crises is of interest to both the public and private sector. The purpose of this course is to help students with such understanding, and to familiarize them with the relevant tools for analyzing the phenomena of financial crises. While crisis is often multidimensional, the focus of this course is on economics.

CRP 6430 Affordable Housing Policy and Programs (also CRP 3430)
Fall. 3 credits. S–U or letter grades. R. Pendall.
For description, see CRP 3430.

CRP 6502 Suburbia (also CRP 3502)
Fall or spring. 3 credits. Staff.
For description, see CRP 3502.

CRP 6503 Comparative Land Use Policy
Fall or spring. 3 credits. Staff.
Graduate seminar in which students conduct guided, often collaborative, research on contemporary land-use planning and policy issues in comparative international perspective. Topics may include sustainable development, conservation, revitalization of urban cores, and land use-transportation connections, among others.

CRP 6504 Comparative Urban Development (also CRP 3504)
Fall or spring. 3 credits. S. Schmidt. For description, see CRP 3504.

CRP 6506 Environmental Planning Seminar: Wilderness and Wildlands (also CRP 3506)
Fall or spring. 2–3 credits. variable. E. Thorndike. For description, see CRP 3506.

CRP 6560 Real Estate Transactions and Deal Structuring (also LAW 6792)
Spring. 3 credits. S–U or letter grades. D. Funk. Real estate transactions and deal structuring examines real estate deals through a practitioner perspective within a case study and transactional approach. The course looks at the transactional components and structuring of real estate deals and related parties at each step in creating value from real estate, including acquisition and assemblage; due diligence; sourcing and financing; structuring the venture/parties; operation; disposition; and tax consequences. Additional issues within deal structuring that may be included are negotiation, managing risk including litigation and environmental issues; analysis of financing techniques, and consequences when deals go bad, including work out and bankruptcy. The case study format will address deals from the perspectives of investment fund manager, banker/lender, developer, REIT, joint venture partner/investor, and owner.

CRP 6570 Real Estate Law
Spring. 3 credits. A. Klausner. Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus is on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Current legal issues affecting the real estate industry are discussed.

CRP 6580 Residential Development
Spring. 4 credits. Letter grades. Fee for mandatory field trip. B. Olson. Explores the residential-development process from site acquisition through delivery of the finished product. Topics include market feasibility, land and planning acquisition, product selection and design considerations, project financing and feasibility, schedule and budgetary controls, contracting and construction issues, marketing, and sales activities. Current issues in providing competitive housing products in today's markets are also explored. Composition of the residential-development project team is discussed. Classes are supplemented by presentations from visiting professionals. The course includes a semester-long project based on an actual property and market opportunity.

[CRP 6601 Museum and the Public (also CRP 3601)]

CRP 6602 American Planning History (also CRP 3602)
Fall. 3 credits. M. Ndulo. For description, see CRP 3602.

CRP 6610 Seminar in American Urban History (also CRP 3610)
Fall or spring. 3 credits. Prerequisite: permission of instructor. M. Tomlan. For description, see CRP 3610.

CRP 6630 Historic Preservation Law
Spring. 3 credits. Offered every other year. Staff. Covers law of historic district and landmark designation; tools for preservation (e.g., police power, taxation, eminent domain); and recent developments in state and federal historic preservation.

CRP 6650 Preservation Planning and Urban Change
Fall. 3 credits. M. Tomlan. Examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 6700 Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. M. Gonzales. Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 6710 Seminar in International Planning
Spring. 1 credit. S–U grades only. W. Goldsmith. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 6711 Italy and the European Union (also CRP 3721)
Spring. 4 credits. M. Cremaschi. For description, see CRP 3721.

CRP 6720 International Institutions
Fall. 3 credits. L. Benería and D. Funk. Focuses on the growth and transformation of international institutions since World War II. The first part includes a discussion of the Bretton Woods institutions and of the U.N. system up to the early 1970s, and how these function and have evolved over time. The second part examines some of the crises and tensions within the international system since the 1980s and how these have affected institutional change and current debates on reform and global governance.

CRP 6760 Latin American Cities (also CRP 3760)
Fall. 3 credits. A. Sanchez. For description, see CRP 3760.

CRP 6770 Issues in African Development (also CRP 4770)
Fall or spring. 1 credit. S–U grades only. M. Ndulo. For description, see CRP 4770.

CRP 6801 Asian American Urban Experience (also CRP 3801)
Fall or spring. 3 credits. C. Lai. For description, see CRP 3801.

CRP 6860 Planning for Sustainable Transportation (also CRP 3860)
Spring. 3 credits. S–U or letter grades. Not offered every year. Staff.

CRP 6901 Real Estate Review
Fall and spring. Variable 1–2 credits. D. Funk. Real Estate Review is for students undertaking a research project culminating in an article worthy of publication in the Cornell Real Estate Review.

CRP 7770 Theories of Development and Underdevelopment
Fall or spring. 4 credits. P. Olpadwala. Various theories attempting to analyze and explain the phenomena of underdevelopment are examined. Although a range of thought and approaches are considered, the accent is on aspects of political economy revolving around concepts of class and exploitation. Topics include the transition of capitalism; dependent and uneven development; various issues of growth and fluctuation under contemporary capitalism, including crisis; rural and industrial development in less developed countries, and planning for development.

CRP 7850 Professional Planning Colloquium I (also CRP 3900)
Fall. 1 credit. Staff. For description, see CRP 3900.

CRP 7940 Planning Internships
Fall, spring, or summer. 12 credits, variable. Staff. Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 7970 Graduate Independent Study
Fall or spring. 4 credits. variable. Prerequisite: graduate student standing, permission of instructor. Staff. For description, see department coordinator, 106 West Sibley Hall.

CRP 8000 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. S. Christopherson. Introduction to key conceptual and empirical literature in urban theory. Focuses on the relationship between political and economic processes and their joint influence on urban spatial form.
CRP 8010 Advanced Seminar in Urban and Regional Theory II  
Fall or spring. 3 credits. K. Donaghy.  
This course will survey traditional and more recent explanations of the location, aggregation, and fragmentation of economic activities in space under different assumptions about the mobility of factors, transportation (or more generally, transaction) costs, economies of scale, and the competitiveness of markets. The relationship between theories of trade and location will be considered, as will the effects on spatial economies of policy interventions.

CRP 8100 Advanced Planning Theory  
Fall. 3 credits. Staff.  
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 8300 Seminar in Regional Science, Planning, and Policy Analysis  
Fall or spring. 4 credits, variable. S–U grades only. K. Donaghy.  
CRP 8300 is a weekly seminar at which faculty, students, and visitors present their research on topics of current interest. Presentations usually involve formal or quantitative analyses of developments in regional economies and policy or planning implications.

CRP 8900 Planning Research Seminar I  
Fall or spring. 2 credits. Staff.  
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 8910 Master’s Thesis in Regional Science  
Fall or spring. 12 credits, variable. S–U or letter grades. L. Mirin.  
CRP 8910 is a seminar in which the student prepares a thesis in a field of study. This course is designed to accommodate students who intend to do a thesis in any field of planning research. It is intended to provide the student with a systematic, broad, and critical understanding of the subject, which will guide the development of the thesis. It is expected that the student will have a general subject in mind before beginning the course and will have selected a specific topic by the end of the course. The thesis will be defended orally.

CRP 8920 Master’s Thesis, Project, or Research Paper  
Fall or spring. 10 credits, variable. S–U or letter grades. Staff.  
CRP 8920 is a seminar in which the student prepares a thesis, project, or research paper in a field of study. It is intended to accommodate students who intend to do a thesis, project, or research paper in any field of planning research. It is expected that the student will have a general subject in mind before beginning the course and will have selected a specific topic by the end of the course. The thesis, project, or research paper will be defended orally.

CRP 8950 Master’s Thesis in Preservation Planning  
Fall or spring. 6 credits, variable. Staff.  
CRP 8950 is a seminar in which the student prepares a thesis in the field of preservation planning. It is expected that the student will have a general subject in mind before beginning the course and will have selected a specific topic by the end of the course. The thesis will be defended orally.

CRP 9920 Doctoral Dissertation  
Fall or spring. 12 credits, variable. Staff.  
CRP 9920 is the fourth quarter of the dissertation process. It is assumed that the student has already completed the coursework and has written the research proposal and preliminary research. The dissertation is expected to be completed in the academic year following the second quarter of the dissertation process.

Special Topic Courses  
Fall or spring. Variable credit. Staff.  
Typical topics are:

CRP 6090 Urban and Regional Theory  
CRP 6190 Planning Theory and Politics  
CRP 6290 Quantitative Methods and Analysis  
CRP 6390 Regional Development Planning  
CRP 6490 Social-Policy Planning  
CRP 6590 Urban Development Planning  
CRP 6690 History and Preservation  
CRP 6790 Planning and Developing Regions  
CRP 6890 Environmental Planning  
CRP 6990 Regional Science  
CRP 7190 Planning Theory and Politics  

LANDSCAPE ARCHITECTURE  
Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program  
Landscape Architecture offers a three-year master of landscape architecture license qualifying degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in landscape architecture; a concentration in a subject related to the core courses; and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, six resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.  
The department also offers a two-year master of landscape architecture advanced degree program, administered through the Graduate School, for those with accredited degrees in landscape architecture or architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject-matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.  
Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual-Degree Options  
Graduate students can earn a master of landscape architecture and a master of science (horticulture) or a master of city and regional planning simultaneously. Students need to be accepted into both fields of study to engage in a dual-degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information  
Note: Landscape Architecture courses are offered through the College of Agriculture and Life Sciences except LANAR 4970, 5240, and 5250. For complete course offerings, see Landscape Architecture course listings on pages 110–113 of this catalog.

LANAR 4970 Individual Study in Landscape Architecture  
Spring, 1–5 credits; may be repeated for credit. S–U or letter grades. L. J. Mirin.  
Work on special topics by individuals or small groups.

LANAR 5240 History of European Landscape Architecture  
Fall. 3 credits. L. Mirin.  
Survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 5250 History of American Landscape Architecture  
Spring. 3 credits. L. Mirin.  
Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

FACULTY ROSTER  
Ashkin, Michael, M.F.A., The School of the Art Inst. of Chicago. Asst. Prof., Art  
Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning

**DEPARTMENT OF ATHLETICS AND PHYSICAL EDUCATION**

**ADMINISTRATION**
Alan E. Gantert, director

**COURSES**
The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses, call 255-4286; for outdoor education courses, call 255-6183 or visit www.coe.cornell.edu.

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at the physical education course registration or may be found on “Bear Access,” a package of software for accessing a variety of network services at Cornell. Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed. Drop deadlines for outdoor education courses are earlier than university deadlines, and often earlier than physical education deadlines. Cornell Outdoor Education (COE) courses may be added any time by calling 255-6183, or registering at www.coe.cornell.edu.

### Aquatic Courses

**PE 1100 Swimming, Beginning**
Fall, spring, and summer (six weeks).
Instruction and practice in skills leading to passing the basic swimming proficiency test.

**PE 1101 Swimming, Advanced Beginning**
Spring
Ideal for all who have taken one semester of Beginning Swimming. Regardless of whether the test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective is to strengthen the student’s confidence and competence.

**PE 1102 Swimming, Intermediate**
Fall and spring.
Practice of basic skills and five basic strokes: front crawl, back crawl, elementary backstroke; breaststroke, sidestroke.

**PE 1103 Swimming, Advanced**
Fall and spring.
Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, trudgen, and butterfly.

**PE 1104 Swimming Conditioning**
Fall and spring. Prerequisite: reasonable swimming ability. Introduction to and practice of different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

**PE 1105 Springboard Diving**
Fall and spring.
Introduction on the safe and effective use of a diving board and practice of the five basic dives: forward dive, back dive, inward dive, reverse dive, and 1/2 twist dive.

**PE 1110 Lifeguard Training**
Fall and spring. Fee charged. Prerequisite: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from 7 feet of water. Three classes per week.
American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, O₂, AED, and CPR upon satisfactory completion of the course.

**PE 1111 Lifeguard Training Instructor**
Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. 2 classes a week.
American Red Cross lifeguarding instructor and CPR-FPR certifications are awarded upon successful completion.

**PE 1120 Water Safety Instructor**
Spring. Fee charged. Prerequisite: passing of written and skill water tests given on first day.
American Red Cross water safety instructor certification is awarded upon satisfactory completion of the course. This is not a course for a casual participant. Approximately 45 hours of work is required.

**PE 1130 Scuba, Open-Water**
Fall, spring, and summer (six weeks). Fee charged.
Program includes classroom work, skill training in a pool, and open-water training in Cayuga Lake. P.A.D.I. open-water certification awarded upon successful completion.

**PE 1131 Scuba, Advanced Open-Water**
Fall and spring. For those who have completed open-water course. Fee charged.
Advanced-level open-water training in Cayuga Lake.

**PE 1132 Rescue Diver**
Fall and spring. For those who have completed Advanced Open-Water Scuba certification. Fee charged.
Advanced course for scuba divers interested in learning rescue and safety techniques.

**PE 1133 Dive Master**
Fall and spring. Open only to those who have completed Rescue Diver course. Fee charged.
Advanced-level scuba course. Note: This is a long, time-consuming course, which requires the student to be good physical and swimming shape.

**PE 1134 Scuba Diving Trips**
Spring, offered during spring intersession period. Fee charged.

Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

**PE 1135 Specialty Scuba Diving**
Fall and spring. Fee charged.
Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

**Bowling Courses**

**PE 1300 Bowling**
Fall and spring. Fee includes shoe rental. For the beginning and intermediate bowler.

**PE 1301 Intermediate Bowling**
Fall and spring. Fee charged.
For players with previous bowling experience (e.g., bowling classes, YABA, tournament). Skills emphasized are timing, balance, and release.

**Dance Courses**

Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to all advanced courses, since they require the mental and physical ability to perform more complex phrases in various styles.

**PE 1150 Ballroom Dancing**
Fall, spring, and summer. Fee charged. Students and their partners must sign up at course registration.
Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

**PE 1151 Intensive Ballroom Dance**
Fall and spring. Fee charged.
Ballroom Intensive class examines three social dance styles in depth each semester. The course is geared to students who enjoy a challenge, and who are seeking more depth and breadth than offered in a survey course. No dance experience is necessary to enroll; the basics are covered each semester.

**PE 1155 Belly Dancing I**
Fall and spring. Fee charged.
Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class begins with warm-ups and continues with basic movements and rhythms, then puts them together in a dance to music of the Middle East.
PE 1156 Belly Dancing II
Spring. Fee charged.
Advanced belly dance movements and combinations that include putting basic and advanced movements to the Belodi, Masmoudi, and Karsalma dance rhythms of the Middle East. A drum solo, taqsim (fluid, graceful movements of the arms and hands), floor work (level changes with the dance), and techniques in playing finger cymbals are also a part of this class.

PE 1160 Latin Dance
Fall and spring. Fee charged. Partner sign-in required. This is an introductory course that teaches salsa, mambo, Latin, and merengue. Emphasis on listening, feeling, and expressing Latin rhythms with precise detail and technique.

PE 1161 Latin-Israeli Dance
Fall and spring.
Covers some of the hundreds of dances that make up Latin-Israeli dancing and the thousands of dances that make up Israeli dancing, with a clear emphasis on the dances of the past 10 years.

PE 1162 Intermediate Salsa and Rueda de Casino Dance
Fall and spring. Prerequisite: Latin Dance or permission of instructor.
The first half of the course will concentrate on more complex open step patterns and partnered and non-partnered combinations. The second will transition into a "Dancing Wheel."

PE 1165 International Ethnic Dance
Fall and spring.
This class covers the popular traditional dances from around the world, including line, circle, partner and individual forms. Now is your chance to move to the exotic beats from the Balkans and Near East, whirl to Scandinavian tunes, sway with sultry Latin American sounds, swing to historic and contemporary American folk rhythms, and much more. No experience or partner necessary.

PE 1166 Spanish Folk Dance
Fall and spring.
The Sevillanas is danced in pairs—man and woman or two women. It is a popular dance mainly at fairs and festivals and it is the dance usually taught first when learning the Flamenco.

PE 1167 Introduction to Tango
Fall and spring.
Introduction to the fundamentals of Tango dancing and its origins. Focus is on movement on the dance floor and how to be connected to your partner. Other aspects include learning to differentiate between the genres of Tango music (Tango, Milonga, Candombe, and Vals).

PE 1170 Introduction to Swing Dance
Fall and spring. Fee charged.
No partners are needed. Beginners can expect to develop significant capacity for enjoyment of two forms of swing dance: jitterbug and street boogie. Partners are rotated throughout the course. Effort are made at registration to equalize male and female ratios.

PE 1171 Swing Dance I
Fall and spring. Fee charged.
For those who have taken the introductory course.

PE 1172 Swing Dance II
Spring. Fee charged.
A solid Lindy Hop I & II sequence in the tradition of Frankie Manning and Steven Mitchell (includes Intermediate Charleston, Jazz, and Fast Lindy). Dancing more deeply into the music, styling for leaders and followers, improvisation skills. Partner recommended, but not necessary.

PE 1173 Swing Dance II (Modern)
(also DANCE 2220)
Fall and spring.

PE 1174 Swing Dance II (Classical)
(also DANCE 2230)
Fall and spring.

PE 1175 Swing Dance III
Fall and spring.

PE 1176 Swing Dance IV
Fall and spring.

PE 1177 Swing Dance V
Fall and spring.

PE 1178 Advanced Swing Dance
Fall and spring.

First Aid/CPR Courses
PE 1202 Certified First Responder
Fall. Fee charged.
CPR is an intensive 52-hour course that requires studying and examinations. Course includes training in basic patient assessment, CPR for the Professional Rescuer, and automatic external defibrillation, oxygen administration, basic airway management, bleeding control, and spinal immobilization. Students will qualify for the New York State CPR Certification Exam upon successful completion of the course.

PE 1203 NYS EMT Refresher
Spring. Fee charged.
EMT-B refresher is an intensive course that will renew your certification upon successful completion of all NYS DOT requirements. Students will have the opportunity to challenge the NYS Practical Skills Examination and the course written examination at the beginning of the class. All students must pass a CPR for the Professional Rescuer course within the class. To complete the class and renew certification, students must also pass the NYS Practical Skills Examination and the NYS written examination.

PE 1210 NYS Emergency Medical Technician—Basic
Two-semester course. Fee charged.
Intensive 130-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students qualify for the NYS EMT Certification Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

PE 1211 NYS Emergency Medical Technician—Critical Care
Two-semester course. Prerequisite: current certification as NYS EMT. Fee charged.
Intensive 160-hour course taught throughout both fall and spring semesters. Includes training in CPR for the Professional Rescuer, oxygen administration, airway management, fracture management, bleeding control, expanded patient assessment, spinal immobilization, medical anti-shock trousers, and defibrillation. Students qualify for the New York State AEMT-CRITICAL CARE certification exam upon successful completion of the course. Attendance and participation requirements are strictly enforced.

Fishing Courses
PE 1310 Introduction to Freshwater Angling
Fall. Fee charged.
Acquaints the student with freshwater spinning, casting, and fly fishing equipment; tackle; and techniques through on-the-water experiences. It also seeks to promote an awareness of the angling opportunities that exist close to Cornell and in the Finger Lakes region of New York. The course consists of an orientation and outings to various locations around the area such as Cayuga Lake and the Susquehanna River.

PE 1311 Fly Fishing and Basic Fly-Tying Techniques
Fall and spring. Fee charged.
Learn the art of tying several of your own artificial flies while you learn the art of fly casting. Students must have a valid NYS fishing license and their own wader boots. All other materials provided.

Fitness Courses
PE 1230 Cardio Combo
Fall, spring, and summer (six weeks). Fee charged.
Dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

PE 1231 Aerobic Instructor
Fall. Fee charged.
Helps prepare the student to teach aerobics and prepares them for the AFAA Primary Aerobic Instructor or Egg Certification. Topics include the theory behind all basic components of a good class, applications, and practical uses in the class settings.
**PE 1232 Aerobic Instructor Apprentice**  
Spring. Fee charged. Prerequisite: Aerobic Instructor course.  
This class is a necessary component to finishing the Aerobic Instructor certification.

**PE 1233 Bootcamp**  
Fall and spring. Fee charged.  
Designed as a modern military-style workout program with an emphasis on both aerobic and anaerobic fitness.

**PE 1235 8 O’Clock Rock**  
Fall and spring. Fee charged.  
Combines the best of the principles of weight training and cardio training.

**PE 1240 Pilates Mat Work**  
Fall and spring. Fee charged.  
Conditioning program designed to increase body awareness, improve alignment and breathing, and build endurance, flexibility, coordination, and strength through a highly focused flow of movement.

**PE 1245 Spinning**  
Fall and spring. Fee charged.  
Indoor stationary cycling class that combines basic cycling movements with motivational coaching, breathing awareness, and heart rate training.

**PE 1250 Cardio Kickboxing**  
Fall and spring. Fee charged.  
Cardio kickboxing is a series of movements that consists of kicks, punches, and blocks done to music. It is similar to a typical aerobics class except the moves consist of martial arts techniques.

**PE 1261 Fitness and Conditioning**  
Fall and spring.  
Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

**PE 1262 Fitness for Women**  
Fall and spring.  
Includes both lecture and physical activity. Students are presented with a variety of topics and information that involves physical fitness and health. Each student will learn to design a fitness program that is geared toward her own interests and abilities. Topics include: nutrition, time management, relaxation techniques, and stress management. Activities will include aerobic dance, walking, jogging, weight training, flexibility exercises, relaxation and stress management routines, and yoga techniques.

**PE 1265 Wellness and Fitness**  
Fall and spring. Fee charged.  
“Here’s to a Healthier You”—a wellness experience for the busy student. This course assesses the student’s physical fitness status, blood-cholesterol levels, and overall lifestyle health habits. Each student receives an individual exercise prescription and has access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented. This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell’s first director of women’s sports and physical education (1920 to 1962).

**PE 1270 Jogging**  
Fall and spring.  
Covers running and stretching techniques. It comprises a conditioning program with the objective to develop the capacity to run 3 miles after 12 weeks of training.

**PE 1271 Jogging Tours—Distance Running**  
Fall.  
Designed for the intermediate runner who can run an average of 3 miles in 30 minutes. Most tours are 3-4 miles long and go through campus and nearby countryside.

**PE 1272 Walking Tours**  
Fall and spring.  
A series of walking tours around the Cornell campus and beyond.

**PE 1273 Walking Meditation**  
Fall and spring.  
This course combines walking and meditation, two life enhancing activities that can help students create balance in their hectic lives. Walking is the optimum exercise for optimum health and meditation one the chance to calm an active and busy mind.

**PE 1275 Triathlon**  
Fall and spring.  
Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

**Equitation Courses**

**PE 1305 Basic, Intermediate, Advanced**  
Fall, spring, and summer (six weeks). Fee charged.  
All riding classes are held at the Cornell Equestrian Center located on Pine Tree Road near East Hill Plaza. Detailed information will be offered by the equitation staff at the registration sign-up table. Basic—never ridden; Intermediate I—completed basic with knowledge of walk/trot/canter; Intermediate II—walk/trot/canter with control over two-foot-high jumping course; Advanced—strong jumping/dressage skills with experience hunting/showing/eventing. Students must fill out a release form to participate in any riding class.

**Golf Courses**

**PE 1320 Golf, Instructional**  
Fall and spring. Fee charged. Equipment furnished.  
PGA program of instruction geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals.

**PE 1321 Golf, Recreational**  
Fall and spring. Prerequisite: experienced golfers. Fee covers a semester’s membership. Students must provide clubs. Students must play a minimum of 10 rounds of nine holes to receive credit.

**Gymnastics Courses**

**PE 1290 Introduction to Gymnastics**  
Fall and spring. Open to both male and female participants. Deals with a majority of the Olympic events. Focuses on beginner-level skills.

**Ice Skating Courses**

**PE 1540 Introduction to Skating**  
Fall and spring. Fee charged.  
For beginners to intermediate skaters. Fee charged; students provide skates or rent them at Lynah Rink. Covers forward and backward skating, turns, and stops.

**PE 1545–1547 Figure Skating, Beginning, Intermediate, and Advanced Levels**  
Fall and spring. Fee charged; students provide skates or rent them at Lynah Rink. Instruction and practice in basic figure-skating techniques: forward, backward, crossovers, turns, and spirals.

**Martial Arts—Self-Defense Courses**

**PE 1345–1346 Boxing, Introduction to, Intermediate**  
Fall and spring. Fee charged.  
Covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work are taught as methods for individual aerobic conditioning.

**PE 1350 Chi Gong**  
Fall and spring.  
Chi Gong, or “the art of breathing,” is an ancient Taoist exercise system from China. Like Tai Chi, Chi Gong is an internal martial art that links movement, breathing, and visualization to enhance physical strength and mental clarity. In ancient times, this gentle system was used by warriors preparing for battle. They believed it would make their bodies impervious to weapons of the day. The movements used in Chi Gong are generally less complex than those of Tai Chi and can be learned more quickly. Meditation is an important element of the practice.

**PE 1355 Judo, Introduction to**  
Fall and spring. Fee charged.  
Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**PE 1356 Judo, Intermediate**  
Fall and spring. Fee charged.  
Conditions and increases suppleness. Continues to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**PE 1360 Jeet Kune Do/MMA**  
Fall and spring. Fee charged.  
Blended system of martial arts. Developed by the late Bruce Lee and taught to his personal apprentice at the time, Dan Inosanto, Jun Fan Gung Fu is the foundation from which Jeet Kune Do eventually evolved. The system emphasizes footwork and agility, economy of motion, counter ability, and strong practical self-defense. This realistic, modern training approach cultivates strong physical, mental, and emotional development in the student.

**PE 1365 Karate, Introduction to**  
Fall and spring. Fee charged.  
Beginning course taught by professional black-belt instructors. Involves mastery of basic blocks, kicks, and punches.

**PE 1366 Karate, Advanced**  
Fall and spring. Fee charged.  
Open to those who have taken basic karate or the equivalent.
C O U R S E S  1 6 3

PE 1370  Kung Fu
Fall and spring. Fee charged. Explores conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

PE 1375  Tae Kwon Do, Introduction to
Fall and spring. Fee charged. Korean martial art distinguished by emphasis on high and powerful kicks. Basic kicking, punching, and blocking emphasized.

PE 1376  Tae Kwon Do, Intermediate
Fall and spring. Fee charged. Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

PE 1380-1381  Tai Chi Chuan, Introduction to, and Intermediate
Fall and spring. Fee charged. Introduction to Tai Chi, a system of graceful exercises that aims at nurturing relaxation, deep breathing, and improved circulation.

PE 1385  Thai Boxing
Fall and spring. Fee charged. Martial art system developed from the unique culture of Thailand that is a blend of art, science, and sport.

PE 1390  Self-Defense and Empowerment for Women
Fall and spring. Fee charged. Basic methods of physical protection for women.

PE 1395  Self-Defense and Personal Safety in the Modern World
Fall and spring. Fee charged. Provides students an opportunity to learn a system of practical, proven self-defense techniques and educates the individual in the strategies of personal safety and awareness.

PE 1396  Filippino Kali
Fall and spring. Fee charged. A method of increasing your coordination and fitness, keeping both your mind and your body sharp! Kali/Escrima addresses empty hand and kicking, grappling, and tools of the jungle warrior.

PE 1525  Fencing, Classical
Fall and spring. Fee charged. Maurial art that uses the practice of the sword to cultivate self-mastery.

PE 1526  Renaissance Fencing
Fall and spring. Prerequisite: Introduction to Fencing or permission of instructor. Fee charged. Focuses on the fundamental techniques of 16th- to 17th-century fencing with an emphasis on safety, balance, line, focus, and distance.

PE 1527  Olympic Fencing
Fall and spring. Fee charged. Equipment furnished. Includes warm-up exercises and offensive and defensive moves.

PE 1528  Olympic Fencing II
Spring. Prerequisite: Olympic Fencing or equivalent. Fee charged. Equipment furnished. Interclass competition is stressed.

PE 1529  Epee de Guerre
Fall and spring. Fee charged. This course focuses on "the most noble weapon" of the Ideal Knight: the "epee de guerre" ("sword of war") also sometimes called the longsword, the bastard sword, or most accurately, "the hand-and-a-half sword" because the weapon was designed to be wielded with equal effectiveness either with one hand or two. Since the practice of the longsword is inextricably linked with the ideals and tenets of chivalry, this beginning level course may include philosophical discussion and reflection as well as techniques, tactics, and strategy.

PE 1640  Basic Rock Climbing
Fall, spring, and summer. Fee charged. Six or 10 indoor climbing sessions at the Lindseth Climbing Wall.

PE 1641  Introduction to Outdoor Rock Climbing
Fall. Fee charged. Includes fall break trip. Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

PE 1642  Women's Basic Rock Climbing
Fall, spring. Fee charged. Six indoor climbing sessions at the Lindseth Climbing Wall taught by and for women.

PE 1643  High Adventure
Fall, spring. Fee charged. Six sessions combining rappelling, rope traverses, tree climbing, and a 400-foot zipline.

PE 1644  Basic Outdoor Rock Climbing
Fall. Fee charged. Includes fall break trip. Two indoor classes and a four-day climbing trip to the Shawangunks introduce basic safety, techniques, equipment, and methods for outdoor rock climbing.

PE 1645  Basic Rock Climbing for 24 and Over
Fall. Fee charged. Noncredit course. Four indoor climbing sessions at the Lindseth Climbing Wall for people age 24 and older.

PE 1646  Wellness Rock Climbing
Fall. Fee charged. Noncredit course. Nine one-hour climbing sessions at the Lindseth Climbing Wall for Wellness Program members only.

PE 1650  Performance Rock Climbing
Fall, spring. Fee charged. Six indoor sessions at the Lindseth Climbing Wall that introduce and practice more advanced climbing techniques.

PE 1651  Introduction to Outdoor Rock Climbing
Fall, spring. Fee charged. One class and a weekend trip to the Shawangunks will introduce you to outdoor climbing and top rope anchor building.

PE 1652  Shawangunks Rock Climbing
Fall. Fee charged. Includes fall-break or senior-week trip. Two indoor classes and a four-day advanced climbing camp at the Shawangunks introduce advanced climbing techniques and systems for outdoor multi-pitch rock climbing.

PE 1653  Intro to Traditional Lead Climbing
Spring. Fee charged. Enjoy world-class rock climbing at one of the premier areas in the United States, the Shawangunks. We will travel to the ‘Gunks for a three-day rock camp that will teach you the skills to do multi-pitch climbs.

PE 1654  Ice Climbing
Spring. Fee charged. Basic top-rove ice climbing instruction.

PE 1657  Tree Climbing
Fall, spring. Fee charged. All equipment is included in course fee. No experience necessary. Whether you are a rain forest canopy researcher, an arborist, or just a kid at heart, everyone loves to climb trees. Recall the excitement and your sense of adventure when you first crawled into the branches to look inside a bird's nest. Then you swung from limb to limb without a thought of ropes and harnesses. But what about that big tree down the street you always wanted to climb, but couldn't reach the first branch? Cornell Outdoor Education's Tree Climbing course will teach you how to get up into the canopy of any tree, to move around, even to climb from one tree to another without touching the ground.

PE 1658  Costa Rica Tree Climbing
Fall with winter break trip. Fee charged. Spend ten days in Costa Rica, traveling to the Rio Guabo valley to explore the canopy of a lowland tropical rainforest. Learn how to use ropes and technical gear to get into the canopy of any tree, to move around, and to climb from one tree to another, 100 feet in the air, without coming back to the ground. Learn some local ecology and experience the culture of a Spanish-speaking rural community. A desire for experiencing a new culture is a must. All equipment is included in the course fee. No climbing experience necessary: Students must provide their own transportation to and from San Jose, Costa Rica.

Backpacking Courses

PE 1610  Backpacking in the Finger Lakes
Fall. Fall, spring. Fee with 100 percent attendance, otherwise fee charged. Escape from campus on day outings and weekend trips to explore the glens, forests, waterfalls, vistas, and trails in the local area. This fantastic introduction to backpacking skills covers basic outdoor living skills, including hiking, navigation, camping, equipment selection and use, back-country cooking, and safety. No experience necessary. Fee charged for personal rental equipment.

PE 1611  Backpacking in the Finger Lakes—Fall Break
Fall. Fee charged. Includes fall break trip. Travel to the heart of the Finger Lakes to learn and practice the skills of outdoor leadership and education. This is an introductory leadership course, focusing on wilderness skills, minimum impact travel, communication, judgement, and decision-making.

PE 1612  Southwest Backpacking
Spring. Fee charged. Includes spring break trip. Spend spring break exploring the wide open spaces of the Southwest. Destination changes year to year. Trip heads to either Utah's stunning and remote Escalante Canyon country or Arizona's Sonoran Desert wilderness of the Superstition Mountains. Visit www.coe.cornell.edu for trip destination and full details.
PE 1613 Wilderness Survival Skills  
Fall. Fee charged.  
Hands-on course covers principles of survival, shelter building, navigation, fire starting, and water procurement as well as nature observation skills and local natural history. Evening and weekend outings.

PE 1615 Trekking in Peru  
Fall. Fee charged.  
Come to Peru to hike through worlds highest mountains outside of Asia. Pristine high alpine lakes, spring wildflowers, and white glaciers dominate this rugged Andean landscape. The Santa Cruz Trek takes us 50 km beside turquoise glacial lakes and over high mountain passes.

PE 1616 Introduction to Winter Camping  
Spring. Fee charged. Prerequisite: some backpacking experience; permission of instructor.  
Learn the fundamentals of winter travel and camping. Course covers trip planning, equipment selection, snowshoe travel, snow shelter construction, and winter safety.

PE 1617 Surfing in San Diego  
Spring. Fee charged.  
Whether students are catching a wave or spotting dolphins this class is sure to excite! Students will spend their nights overlooking the ocean from their cliffside campsite and their days catching a wave. Participants will learn the basics of how to surf, ocean safety, and basic outdoor living skills.

PE 1664 Mountain Biking  
Fall, spring. Fee charged. Participants provide own mountain bike.  
Explore local bike trails and develop off-road riding skills. Course covers essential cycling skills for riding single track, managing steep terrain, and negotiating obstacles, as well as bike repair, riding etiquette, navigation, and outdoor safety.

PE 1670 Adirondack Canoe Camping  
Fall. Fee charged. Includes fall-break trip.  
Learn basic canoeing and wilderness camping skills. Experience the blazing Adirondack autumn foliage as this fall-break trip explores lakes and rivers of upstate New York.

PE 1671 Recreational Canoeing  
Fall. Fee charged.  
Spend afternoons on Beebe Lake learning the art of canoeing. Class culminates in a trip exploring Dryden Lake applying your newly found skills. Course covers equipment, basic paddling techniques, deep water rescues, and considerations for day trips.

PE 1672 River Canoeing  
Spring. No prerequisites. Fee charged.  
Explore local rivers by canoe. Learn skills to safely navigate quick-moving currents and class I to easy class II water. Course covers strokes, braces, eddy turns, peels outs, ferrying, river dynamics, self-rescue, and river safety. Culminates with a weekend river trip.

PE 1682 Intermediate Whitewater Kayaking  
Spring. Prerequisites: graduate of a COE whitewater kayak class or equivalent experience, comfortable swimming and self-rescuing in class II water and permission of instructor.  
Designed for paddlers with some whitewater experience who are motivated to work on more advanced techniques. Pool sessions to review the fundamentals. Learn more advanced paddling techniques and concepts, and develop skills by paddling increasingly challenging whitewater during two day trips.

PE 1683 1,000 Islands Sea Kayaking  
Fall. Fee charged. Includes fall break trip. International travel documentation to Canada required.  
Learn fundamental sea kayak touring skills in the Thousand Islands region of the St. Lawrence River. Course covers equipment, safety, paddling techniques, rescues, trip planning, navigation, considerations for overnight trips, and camping, cooking, and travel skills.

PE 1684 Cayuga Lake Dragon Boating  
Fall. Fee charged.  
Get in shape, stay in shape! Get out on the lake without buying your own boat. Paddle with twenty other people in a 40 foot wooden boat with a dragon head and tail! Romance, adventure, and fresh air!

PE 1685 Kayak Rolling Seminar  
Fall, spring. Noncredit course. Fee charged.  
Learn kayak rolling techniques in two evening sessions. Classes take place at the Helen Newman pool.
the instructor will answer questions for at least review at the beginning of the class; however, is recent CPR training. There is no formal at the Professional Rescuer level. Prerequisite [PE 1628 CPR Recertification includes American Red Cross certification.]

level of CPR to keep WFR certification current. It is the required use an AED on an adult or child victim of This American Red Cross class teaches students to respond to breathing and cardiac emergencies in adults, children, and infants; use an AED on an adult or child victim of cardiac arrest; and use personal protective equipment to stop blood-borne pathogens and other diseases from spreading. It is the required level of CPR to keep a WFR certification current. Includes ARC certification.

Spring. Fee charged. Take advantage of fall break in the Finger Lakes region to learn and practice the skills of outdoor leadership and education. Focus is on refining wilderness skills, outdoor judgment, group facilitation, decision making, and teaching skills. Course culminates in spring-break trip where participants plan and lead portions of the trip.

Spring. Prerequisite: backpacking and camping experience; approval of program coordinator. Fee charged. Includes spring break trip.

Fall, spring. Fee charged. Full weekend of wilderness first aid. Includes CPR certification.

Fall, spring. Offered over winter break and late May/early June. Fee charged. Eight days of instruction and practical application of backcountry first aid. Participants earn nationally recognized CPR and Wilderness First Responder certifications. Taught by Wilderness Medical Associates.

Spring. Fee charged. This three-day (24 hour) course is a recertification course open to graduates of all wilderness medical training courses of 64 hours or longer with a current certification. Upon successful completion of this course you will receive Wilderness Medical Associates WFR, Anaphylaxis and BLS-level CPR certifications.

Fall, spring. Not for credit. This American Red Cross class teaches students to respond to breathing and cardiac emergencies in adults, children, and infants; use an AED on an adult or child victim of cardiac arrest; and use personal protective equipment to stop blood-borne pathogens and other diseases from spreading. It is the required level of CPR to keep a WFR certification current. Includes ARC certification.

Spring. Not for credit. The CPR Challenge Class is set up to re-certify at the Professional Rescuer level. Prerequisite is recent CPR training. There is no formal review at the beginning of the class; however, the instructor will answer questions for at least the first half hour before beginning testing. The assumption is that students come prepared to take the challenge, so it is crucial to have taken a recent CPR class, to check out the textbook from COE, and to review it carefully before class. This class fulfills requirements to keep WFR certification current. Includes American Red Cross certification.

Spring. Fee charged. Four sessions learning basic cross-country skiing skills and exploring local forests in winter.

Spring. Fee charged. Four courses at Greek Peak ski area.

Spring. Fee charged. A cross between downhill and cross country skiing, telemark involves a graceful free heel turn that opens up alpine and steep terrain to lightweight backcountry touring gear. We will ski together locally before shifting to our primary classroom in the mountains.

Fall and spring. Activities are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

Fall and spring. Fee charged. Teaches students to use the wisdom of the body, movement, and voice. Each class provides an opportunity to increase mindfulness of the present moment. By cultivating openness and respect, students provide the necessary foundation for working with others. Students practice processing and exploring spontaneous experiences of their own and others with precision, gentleness, and curiosity.

Fall and spring. Meets twice a week. We will focus on the practice of meditation in touch with the power of our own life force. Each class will begin with movement and stretching and end with a meditation exercise designed to reinforce the power of one’s own presence.

Fall and spring. Provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

Fall and spring. Introduction to basic relaxation techniques for the reduction of everyday stress. Teaches techniques that can be used in normal everyday living situations.

Fall and spring. Fee charged. Designed to assist students in learning to meditate, or to deepen an existing practice. As students learn to practice meditation and relaxation exercises, they find that as little as 15 minutes a day can benefit physical, mental, emotional, and spiritual health.
PE 1425  The Winning Mindset  
Fall and spring. Fee charged. 
Contains a wealth of knowledge and experience to guide athletes of all levels and abilities to achieve outstanding levels of performance. Students learn the principles to help them achieve success, whether it be tapping inner strength or overcoming the obstacles that limit performance.

PE 1430  Yoga, Introduction to  
Fall, spring, and summer (six weeks). Fee charged. 
Fundamentals of hatha yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

PE 1431  Intermediate Yoga  
Fall and spring. Prerequisite: previous yoga experience. Fee charged. 
The course covers more of the fundamentals of Hatha Yoga, including basic postures, breathing techniques, and deep relaxation and chanting techniques.

PE 1432  Extreme Yoga  
Fall and spring. Prerequisite: membership on a team, participation in daily routine, or minimum of 40 hrs. of yoga practice in past 3 months. Fee charged. 
This class is designed for serious participation only. Advanced warm-up sets, handstands, shoulderstands, spinal twists, and more. You will experience briskly paced transitions from one posture to the next emphasizing form and alignment with attention to the hamstrings to prevent injury.

Racquet Sports Courses  
PE 1440  Badminton, Introduction to  
Fall and spring. Helen Newman Hall. 
Fundamental shots, scoring, and general play.

PE 1441  Badminton, Intermediate  
Fall and spring. Helen Newman Hall. 
Review of fundamental shots, scoring, and general play.

PE 1445  Tennis, Introduction to  
Fall, spring, and summer. Fee charged. 
Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

PE 1446  Tennis, Intermediate  
Fall, spring, and summer. Fee charged. 
Review basic strokes plus topspin and underspin. Doubles strategy emphasized.

PE 1447  Tennis, Advanced  
Fall, spring. Fee charged. 
Advanced strokes and doubles play emphasized. Recommended for tournament players or those with previous team experience.

PE 1453  Tennis, Indoor-Recreational  
Fall and spring. Fee charged. Prerequisite: high school or college tournament experience or a rating of 3.5 or higher from USTA. NO BLACK-SOLED SHOES ALLOWED ON COURTS! 
Play is conducted at the new Reis Tennis Center. Matches are played in both doubles and singles. Equipment furnished.

PE 1460  Racquetball, Introduction to  
Fall, spring, and summer. Fee charged; equipment furnished. Protective eyewear required. 
Instruction for beginners.

PE 1465-1466  Squash, Introduction to, Intermediate  
Fall, spring, and summer. Fee charged. Equipment furnished. Protective eyewear required. 
Classes for appropriate level of play.

Sailing Courses  
PE 1335  Water Skiing  
Fall and summer. Fee charged. 
Introductory course for beginning water skiers. Classes are conducted from East Shore Marina.

PE 1480  Small-Boat Sailing, Introduction to  
Fall, spring, and summer (six weeks). Fee charged. 
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

PE 1481  Small-Boat Sailing, Competitive  
Fall and spring. Fee charged. 
Includes one-year membership in university sailing team program. Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course.

PE 1482  Introduction to Large-Boat Sailing  
Fall. Fee charged. 
A course for those who already know how to sail. Students may go to the sailing facility during the listed times and days and take boats out to sail when they are not being used for instructional sailing. Students must pass knowledge test before they are allowed to take boats out.

PE 1483  Recreational Sailing  
Fall. Fee charged. 
A course for those who already know how to sail. Students may go to the sailing facility during the listed times and days and take boats out to sail when they are not being used for instructional sailing. Students must pass knowledge test before they are allowed to take boats out.

PE 1484  Large-Boat Competitive Sailing  
Fall and spring. Fee charged. Prerequisite: sailing experience. 
This course teaches the basic skills necessary to sail and crew large boats safely and competitively. Twenty-three- to twenty-six-foot sailboats will be used to teach this course. The USYRA rules book will be the text for the course.

Skiiing and Snow Boarding  
PE 1330, 1331  Downhill Skiing and Snowboarding  
Fall, spring, and summer. Fee charged. 
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal. Greek Peak and Song Mountain personnel are present at registration to explain the program and accept fees. Bus transportation to Greek Peak is provided six afternoons a week for six weeks.

Cross-Country Skiing—See Outdoor Program.

Target Shooting Courses  
PE 1505  Trap and Skeet  
Fall, spring, and summer (six weeks). Fee charged. 
Incl. lectures and shooting at the Tompkins County Rod and Gun Club range.
Weight Training Courses

PE 1580 Principles of Weight Training
Fall and spring. Fee charged.
Introduces the proper use of Olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

PE 1581 Weight Training for Women
Fall and spring. Fee charged.
This class will focus on the basics of weight lifting. Topics will include toning vs. building, theory of program design, training with dumbbells, selectorized equipment, free weight exercises for all muscle groups, flexibility, and proper nutrition for weight training.

Independent Study

PE 1999 Independent Study
Fall and spring.
Designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities are based on personal fitness programs. A term paper is required. Permission to enter this program must be granted by the program director.
The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by 30 specialized fields within the Graduate School, as described in the Fields of Study catalog at www.gradschool.cornell.edu/?p=38.

ORGANIZATION
Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology (OUB), wwwbiology.cornell.edu. Located in Stimson Hall, the professional and student advisors provide academic and career advising, as well as help undergraduates find research opportunities on campus. Advisors in the OUB also follow the progress of biology majors and work closely with faculty advisors. Additional services and resources of the Biology Center include tutoring, examination files, and extensive information on summer research opportunities and graduate programs. The center has comfortable areas for studying and relaxing. The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its main administrative office in Stimson Hall provides academic advising for students interested in the marine sciences.

DISTRIBUTION REQUIREMENT
In the College of Agriculture and Life Sciences, the Physical and Life Sciences distribution requirement is a minimum of 18 credits, including at least 6 credits of introductory biology satisfied by BIOG 1109–1110, 1105–1106, or 1101 and 1103 plus 1102 and 1104, or 1107–1108.

For Students in the College of Arts and Sciences, most biology ("BIO") courses can be used toward fulfillment of the biological sciences distribution requirement. Please see the Arts and Sciences 'Distribution Requirements' section of this catalog for further details.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from BIOG 1109–1110, 1101 and 1103 plus 1102 and 1104, 1105–1106, or 1107–1108 or from specified courses in chemistry or physics.

Switching between BIOG 1109–1110 and either BIOG 1101–1104 or 1105–1106 at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse order is strongly discouraged in BIOG 1101–1104 but allowed in BIOG 1105–1106.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1988 and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals (DHHEW publication 86–23, revised 1996, see p. 7, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Michele Bailey, at 253–3523. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollment in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS . . . ) at the first meeting of the course.

ADVANCED PLACEMENT
For information on credit for advanced placement in biological sciences, see wwwbiology.cornell.edu/advising/ap.html.

THE MAJOR
The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges by the Office of Undergraduate Biology. By completion of the sophomore year, all students who intend to major in biological sciences must declare the major and a program of study through the Office of Undergraduate Biology, in 216 Stimson Hall. Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Biology majors should regularly monitor their progress in the major, and should assess as realistically as possible the likelihood of achieving at a level that is consistent with their academic and personal goals. Weak performance in core courses, particularly after the freshman year, may indicate a need to reevaluate aptitude and genuine interest in the major. Students with questions, particularly with concerns about their ability to complete the major, are encouraged to consult with their biology advisor and to take advantage of the professional advising services available in the Office of Undergraduate Biology as well as those of the university and their college.

The requirements for the biological sciences major are listed below. Requirements 1–9 must be taken for a letter grade. Students are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell or during an approved Study Abroad semester. Courses taken for the program of study should be taken for a letter grade unless the course is offered for S–U grades only or if the student's advisor grants permission.

1. Introductory biology for majors (one year): BIOG 1101 and 1103 plus 1102 and 1104, or 1105–1106. BIOG 1107–1108 or BIOSM 1110, offered during the eight-week Cornell summer session for 8 credits, also satisfies the introductory biology requirement for majors.

2. General chemistry: CHEM 2070–2080 or 2150. Students who, via advanced placement, take only CHEM 2080 or only 2150 should be aware that some professional and graduate schools require 8 credits of general chemistry. These students may wish to take both CHEM 2150 and 2080 or 2150 and 2160. Students may wish to consult with their faculty advisor or advisors in the Office of Undergraduate Biology for further clarification.
3. **College mathematics** (one year): one semester of calculus (MATH 1106, 1110, 1910, or their equivalent) plus one semester selected from the following:
   a. a second semester of calculus (MATH 1120, 1920, or their equivalents).
   b. a course in finite mathematics (MATH 1105).
   c. a course in statistics (BTRY 3010, MATH 1710, AEM 2100, ILR 2100, PSYCH 4590, PAM 2100, ECON 3190, ECON 3210, SOC 3010).

4. **Organic chemistry**: CHEM 1570 and 2510, or 3570-3580 and 2510, or 3570-3580 and 3010, or 3590-3600 and 2510, or 3590-3600 and 3010.

5. **Physics**: PHYS 1101-1102, 2207-2208, or 1112-2213. Those who take PHYS 1112-2213 are advised to complete PHYS 2214 as well.

6. **Genetics**: BIOGD 2810.

7. **Biochemistry**: BIOBM 3500, or 5310 and 5320, or 5350.

8. **Evolutionary biology**: BIOOE 2780 or BIOPL 4480. Note: BIOPL 2410 Botany is a prerequisite course to BIOPL 4480.

9. **A program of study** selected from the outline below.

   Although not required for the biological sciences major, a course in statistics is recommended for all biology students. Students should consult their faculty advisors when choosing appropriate courses in statistics.

   **Note**: Core courses cannot count toward the program of study requirements.

**Programs of Study and Requirements**

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study (POS). Whereas the core requirements of the biological sciences major provide the common foundation deemed essential for all biology majors, the role of the program of study is to provide either a concentration in a particular area of biology or, in the case of the general biology program of study, a survey of biology that is broad but not superficial. The program of study can be met by taking 13 to 15 credit hours of courses chosen by the student in consultation with his or her biology advisor. Programs of study for particular subject areas are designed by faculty members specializing in the subject. Typically, the program of study consists of one or more courses that provide foundation in the subject and a list of optional courses from that area or related areas, many of which are at an advanced level (3000 or higher). Because biology is an experimental science, most programs of study require one or more laboratory courses. The laboratory requirement in some programs of study can be met by participation in the independent research course (BIOG 4990). The possible programs of study and their requirements are as follows:

1. **Animal Physiology**: BIOAP 3110 

   Introductory Animal Physiology, BIOAP 3160 Cellular Physiology, plus a minimum of 7 credit hours selected from the following lecture and laboratory courses, of which at least 4 credit hours must be a laboratory course.

   a. **Lecture courses**: BEE 4540 Physiology Engineering; ANSC 3000 Animal Reproduction and Development; ANSC 4100 Nutritional Physiology and Metabolism; ANSC 4270 Fundamentals of Endocrinology; BIOG 3050 Basic Immunology; BIOAP 2150 Biological Basis of Sex Differences; BIOAP 4580 Mammalian Physiology; BIOAP 4750 Mechanisms Underlying Sterility; BIOG 4890 Mammalian Embryology; BIOBM 4070 Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOG 4750 Eukaryotic Cell Proliferation; BIOBM 4834 Molecular Aspects of Development; BIOGD 3850 Developmental Biology; BIOGD 4000 A Genomics Approach to Studying Life; BIOG 4010 Genomic Analysis; BIOGD 6100 Genomes as Chromosomes; BIOGD 6120 Overview of Model Genetic Organisms; BIONB 3220 Hormones and Behavior; BIONB 3300 The Visual System; BIONB 4920 Sensory Function; NS 3310 Physiological and Biochemical Bases of Human Nutrition.

   b. Laboratory courses: BIO 4540 Physiological Engineering; ANSC 3010 Animal Reproduction and Development; BIOG 4010 Introduction to Scanning Microscopy; BIOG 4030 Transmission Electron Microscopy for Biologists; BIOAP 4130 Histology: The Biology of the Tissues; BIONB 3590 Animal Physiology Laboratory; BIOAP 4140 Cellular Physiology and Genomics Laboratory; Bio G4000 Laboratory in Biochemistry and Molecular Biology; BIOG 4010 Principles of Neurophysiology.

2. **Biochemistry**: Students electing this program of study should be sure to complete CHEM 2070-2080 or CHEM 2150-2160 during their freshman year. 

   a. BIOG 4400 Laboratory in Biochemistry and Cell Biology: Physical Chemistry* (CHEM 2870-2880 or 3890-3900 or 3890-2880): 6 credits of organic chemistry (CHEM 3570-3580 or CHEM 3590-3600); BIOG 4320 Survey of Cell Biology; and at least one other course with a biochemical or biophysical orientation selected from the following list: BIOBM 4380 RNA World; BIOBM 6310 Protein NMR Spectroscopy; CHEM 3000 Quantitative Chemistry; CHEM 4510 Structural Chemical Biology; CHEM 7380 Macromolecular Crystallography.

   **Notes:**
   - Students interested in graduate work in biochemistry should take PHYS 2207-2208 and should probably also take CHEM 3890-3900 and its prerequisites.
   - Biology majors in the College of Agriculture and Life Sciences who select the biochemistry program of study are allowed to take up to 61 credit hours in the endowed colleges because of the high number of endowed courses required for this program.

3. **Computational Biology**: Computational biology has become essential to biological research. Genomic databases, protein databanks, MRI images of the human brain, and remote sensing data on landscapes contain unprecedented amounts of detailed information that is transforming almost all of biology.

   Problems investigated by computational biologists include topics as diverse as the genetics of disease susceptibility; comparing entire genomes to reveal the evolutionary history of life; predicting the structure, motions, and interactions of proteins; designing new therapeutic drugs; modeling the complex signaling mechanisms within cells; predicting how ecosystems will respond to climate change; and designing recovery plans for endangered species. The computational biologist must have skills in mathematics, statistics, and the physical sciences as well as in biology. A key goal in training is to develop the ability to relate biological processes to computational models. Cornell faculty work primarily in four subareas of computational biology: biomolecular structure; bioinformatics and data mining; ecology and evolutionary biology; and statistical and computational methods for modeling biological systems.

   Specific topics of study include DNA databases, protein structure and function, computational neuroscience, biomechanics, population genetics, and management of natural and agricultural systems.

   Beyond core skills in mathematics, physical sciences, and biology, the computational biology program of study requires additional course work in mathematics and computer programming, a "bridging" course aimed at connecting biology to computation, and an advanced course where the theoretical/computational component of one aspect of biology is studied. Students should enroll in the more rigorous courses in the physical and mathematical sciences and may wish to take additional courses in these areas.

   Computational biology has applications as broad as biology itself. The problems of interest and the tools available to study them are constantly evolving, so students are encouraged to gain fundamental skills that will serve them throughout their careers. There is great, and increasing, demand for research scientists and technical personnel who can bring mathematical and computational skills to the study of biological problems.

   The program is also an excellent preparation for graduate study in any area of biology or computational biology.

**Required Courses for Program of Study in Computational Biology**

a. One course in computer programming (CS 1110, CS 1115, CS 1117, or CS 1120 Introduction to Computer Programming, or BEE 1510 Introduction to Computer Programming).

b. One additional course in mathematics (MATH 2210 Linear Algebra; or MATH 2910 Linear Algebra with Applications; or MATH 2940 Linear Algebra for Engineers; or MATH 4200 Differential Equations and...
1. It is strongly recommended that students in this POS use PHYS 2207/2208 to satisfy the core physics requirement.

2. It is strongly recommended that students complete the core organic chemistry requirement using the CHEM 1570/2510 option, and that the time saved be used to take either CS 2110 or a second mathematics course from the list above.

3. MATH 2210 Linear Algebra, MATH 2310 Linear Algebra with Applications, or MATH 4200 Differential Equations and Dynamical Systems is recommended for bridging course BIOEE 4600.

4. One course may not be used to satisfy two different requirements simultaneously. For example, BTRY 4080 can be used to satisfy either requirement (2) or requirement (4), but not both.

5. Students who use BTRY 4080 to fulfill the additional mathematics requirement should not use ORIE 3500 Engineering Probability and Statistics II to fulfill the requirement for an advanced course.

6. For biology majors in the College of Agriculture and Life Sciences who select this program of study are allowed to take up to 61 credit hours in the endowed colleges due to the high number of required endowed courses for this program of study.

4. Ecology and Evolutionary Biology: BIOE 2610 Ecology and the Environment. Students must also complete 10 credits from the following lists: (a) Principles, (b) Organisms, and (c) Ecological and Evolutionary Processes. One course must be chosen from list (a) and a second either from list (b) or (c). The remaining credits can be satisfied with courses from all three lists. Students are encouraged to take at least one course from each list:

   b. Organisms: BIOEE 2740 The Vertebrates: Structure, Function, and Evolution; BIOEE 3730 Biodiversity of Vertebrates; BIOEE 4570 and 4571 Limnology: Ecology of Freshwater Ecosystems; BIOEE/EAS 3500 Dynamics of Marine Ecosystems; BIOEE/EAS 3770 Diversity of Marine Vertebrates; BIOE 4660 and 4661 Marine Biodiversity; BTRY 4210 Matrix Computation.

   c. A minimum of two upper-level (3000 and above) courses of 2 or more credit hours in addition to courses counted toward requirements 1–9 on pages 155–6. These 13 credits must include:

   a. One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of advisor.

   b. A course with a laboratory.

   c. A minimum of two upper-level (3000 and above) courses of 2 or more credits each.

5. General Biology: The program of study in general biology requires a minimum of 13 credit hours in addition to courses counted toward requirements 1–9 on pages 155–6. These 13 credits must include:

   a. One course from each of three different programs of study in biology. Only those courses specifically listed as fulfilling a program of study requirement are acceptable without permission of advisor.

   b. A course with a laboratory.

   c. A minimum of two upper-level (3000 and above) courses of 2 or more credits each.

1000-level courses are not acceptable for meeting any of these requirements. BIOG 4980 may not be used to fulfill the requirements of this program of study. BIOG 4990 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study. Students must use three or more biological sciences courses to fulfill the requirements of this program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOAP 4130 Histology could count in all three areas: as a course in the Animal Physiology program of study, as a course in the Marine Biology program of study, and as a course in the General Biology program of study.
an upper-level course, and as a course with a lab.

6. Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOG 3850 Developmental Biology; any BIOGD course of 3000 level or higher; BIOMI 4200 Microbial Genomics; BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects; BIONB 4930 Developmental Neurobiology; BIONB 4950 Molecular and Genetic Approaches to Neuroscience; BIOMI 6590 Biosynthesis of Macromolecules; BIOMB 6390 The Nucleus; BIOEE 4530 Speciation; PLBR 4030 Genetic Improvement of Crop Plants; PLBR 6060 Veterinary Pathology; PSYCH 3430 Molecular Biology and Genetic Engineering of Plants; BIOPL 4821 Molecular Plant-Pathogen Interactions I; BIOPL 4822 Molecular Plant-Pathogen Interactions II; BIOPL 4853 Molecular Plant-Microbe Interactions; BIOPL 4824 Plant Gene Evolution and Phylogeny; BIOPL 4825 Molecular Biology of Plant Organelles; BIOPL 4826 Plant Biotechnology; BIOPL 4827 Plant Cell Walls: Structure to Proteome; BIOPL 4829 Light Signal Transduction in Plants; BIOPL 4851 Concepts and Techniques in Plant Molecular Biology; BIOPL 4852 Proteomics in Plant Biology; BIOPL 4853 Plant Genome Organization and Function; BIOPL 4854 Molecular Aspects of Plant Development; BIOPL 4855 Molecular Breeding; BIOPL 4856 Plant Senescence; BIOPL 6410 Laboratory in Plant Molecular Biology. Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIOGD 3990 Research Practicum in Molecular and Cellular Biology, or BIOP 4990 Independent Undergraduate Research in Biology, with approval from the faculty advisor.

7. Insect Biology: ENTOM 2120 Insect Biology plus a minimum of three additional laboratory courses toward a total of at least 9 credits selected from the following two groups. At least one of the three additional courses must be selected from group a.

Group a: ENTOM 3310 Insect Phylogeny and Evolution; ENTOM 3330 Larval Insect Biology; ENTOM 3520 Medical and Veterinary Entomology; ENTOM 4440 Integrated Pest Management; ENTOM 4550 Insect Ecology; ENTOM 4630 Invertebrate Pathology; ENTOM 4830 Insect Physiology

Group b: ENTOM 3510 Spider Biology; ENTOM 3520 Insect Behavior; ENTOM 3440 Insect Conservation Biology; ENTOM 3690 Chemical Ecology; ENTOM 3070 Pesticides, Environment, and Human Health; ENTOM 4550 Principles and Practice of Historical Biogeography; NTRES 4560 Stream Ecology; ENTOM 4700 Ecological Genetics; ENTOM 4770 Biological Control; ENTOM 4900 Insect Toxicology

8. Microbiology: The program of study in microbiology requires a minimum of 13 credits, usually chosen from the following courses: BIOMI 2900 General Microbiology Lectures and BIOMI 2911 General Microbiology, Lab, ARE

REQUIRED. The remaining 8 credits must be completed by taking at least ONE of the courses from the list below, although more than one may be taken to reach the required credit level: BIOMI 3910 Advanced Microbiology Laboratory; BIOMI 4160 Bacterial Physiology; BIOMI 4180 Microbial Ecology; BIOMI 4200 Microbial Genomics; BIOMI 4850 Bacterial Genetics. Other courses that can be used to fulfill the remaining credits are BIOMI 3940 Applied and Food Microbiology; BIOMI 4090 Pathogenic Bacteriology and Mycology; BIOMI 4510 Medical Parasitology.

9. Molecular and Cell Biology: Students electing this program of study should be sure to complete CHEM 2070–2080 or CHEM 2150–2160 during their freshman year. CHEM 3570–3580 or 3590–3600; BIOMI 3430 Advanced Plant Biology; BIOMI 4400 Laboratory in Biochemistry and Molecular Biology, or BIONB 4300 Experimental Molecular Neurobiology; and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two 2-credit or above courses from the following list: any BIOMI course at the 4000 level or above; any BIOGD course at the 3000 level or above (Note: graduate-level BIOM and BIOGD courses are acceptable with permission of your advisor). Students electing this program of study should be sure to take BIOPL 3430 and 3431 Molecular Biology and Genetic approaches to Neuroscience; BIOMI 3420 Plant Physiology; BIOPL 3430 Molecular Biology and Genetic Engineering of Plants; BIOPL 4220 Plant Development; BIOPL 4440 Plant Cell Biology; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOPL 4620 Plant Biochemistry.

10. Neurobiology and Behavior: The two-semester introductory course sequence Neurobiology and Behavior I and II (BIONB 2210/2211) plus discussion section (4 credits per semester) and 7 additional credits. The 7 additional credits must include at least one advanced course from the BIONB offerings, "Topics" courses (BIONB 4200s and 7200s), independent study (BIOG 4990), and PSYCH 4240 may be used as supplemental credits but do not qualify as advanced courses.

Note: Students who declare the program of study in Neurobiology and Behavior I after taking BIONB 2210 or 2220 for only 3 credits must still take the 1-credit discussion section in BIONB 2210 and 2220. To arrange this, the student should consult the professors in charge of the two courses.

11. Nutrition: NS 3310 Physiological and Biochemical Bases of Human Nutrition (4 credits) and at least 9 credits of additional course work in the biological aspects of nutrition, such as NS 1220 Nutrition and the Life Cycle; NS 1540 Obesity and the Regulation of Body Weight; NS 3220 Maternal and Child Nutrition; NS 3320 Methods in Nutritional Sciences; NS 3410 Human Anatomy and Physiology; NS 3470 Human Growth and Development; NS 4210 Nutrition and Exercise; NS 4510 Mineral Nutrition and Chronic Disease; NS 4410 Nutrition and Public Health; NS 4610 Manipulating the Mouse Genome; NS 6080 Epigenetics; NS 6100 Proteins and Amino Acids: Nutritional Regulation; NS 6110 Molecular Toxicology; NS 6140 Topics in Maternal and Child Nutrition; NS 6310 Micronutrients: Function, Homeostasis, and Assessment; and NS 6520 Regulation of Macronutrient Metabolism.

Note: For students in the College of Agriculture and Life Sciences, credits in NS courses count toward the required 55 CALS credits. For students in the College of Arts and Sciences, NS credits count toward the 100 hours required in ARS if those credits fulfill major requirements.

12. Plant Biology: Students choosing one area of study from the following two options: Option (a) Botany: Students are required to take BIOP 2410 Introductory Botany. Students should then choose, with the aid of their faculty advisor, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOP 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOP 2430 Taxonomy of Cultivated Plants; BIOP 2450 Plant Biology; BIOP 2470 Ethnobiology; BIOP 2480 Taxonomy of Vascular Plants; BIOP 3420 and 3421 Plant Physiology, Lec and Lab; BIOP 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab; BIOP 3450 Plant Anatomy; BIOP 3480 The Healing Forest; BIOP 3590 Biology of Grasses; BIOP 3800 Strategies and Methods in Drug Discovery; BIOP 4040 Crop Evolution, Domestication, and Diversity; BIOP 4220 Plant Development; BIOP 4400 Phylogenetic Systematics; BIOP 4420 Current Topics in Plant Biology; BIOPL 4440 Plant Cell Biology; BIOP 4470 Molecular Systematics; BIOP 4480 Plant Evolution and the Fossil Record; BIOPL 4490 Green Signals and Triggers—The Plant Hormones; BIOP 4620 Plant Biochemistry; or BIOEE 4660 and 4661 Physiological Plant Ecology, Lec and Lab.

Option (b) Plant Biotechnology: Students are required to take BIOP 3430 and 3431 Molecular Biology and Genetic Engineering of Plants, Lec and Lab. Students choose, with the aid of their faculty advisor, a minimum of 10 additional credits from the following courses: BIOEE 4660 Plant Behavior—Induced Plant Responses to Biotic Stresses; BIOP 2410 Introductory Botany; BIOP 2420 and 2421 Plant Function and Growth, Lec and Lab; BIOP 3420 and 3421 Plant Physiology, Lec and Lab; BIOP 3800 Strategies and Methods in Drug Discovery; BIOP 4220 Plant Development; BIOPL 4440 Plant Cell Biology; BIOP 4470 Molecular Systematics; BIOP 4490 Green Signals and Triggers—The Plant Hormones; BIOP 4620 Plant
**13. Systematics and Biotic Diversity:** A minimum of 15 credits from the following two groups, including at least 7 credits from group a and 3 from group b and at least two laboratory courses (marked with *), BIOG 4990 Independent Undergraduate Research in Biology, with approval of the advisor, can be used in fulfillment of up to 4 credits in group (a) and can count as one laboratory course if it has a laboratory component of 2 or more credits.

a. *BIOE 2640 Tropical Field Ornithology; *BIOE 2740 The Vertebrates: Structure, Function, and Evolution; BIOE 3710 Human Paleontology; *BIOE 3750 Biology of the Marine Invertebrates; BIOE 4050 Biology of the Neotropics; BIOE 4500 Mammalogy, Lec; *BIOE 4501 Mammalogy, Laboratory; BIOE 4700 Herpetology, Lec; *BIOE 4701 Herpetology, Lab; *BIOE 4750 Ornithology; *BIOE 4760 Biology of Fishes; BIOE 4770 Marine Invertebrates Seminar; BIOI 2900 General Microbiology, Lab; *BIOI 2910 General Microbiology, Lec; *BIOI 2911 General Microbiology Lab; BIOI 3510 General Parasitology; BIOI 4410 Prokaryotic Diversity, Lec; *BIOI 2410 Introductory Botany; *BIOI 2430 Taxonomy of Cultivated Plants; BIOI 2450 Plant Biology; BIOI 2470 Ethnobiology; *BIOI 2480 Systematics of Vascular Plants; BIOI 3480 The Healing Forest; BIOI 3590 Biology of Grasses; BIOI 4520 Systematics of Tropical Plants; *BIOI 4521 Systematics of Tropical Plants; *ENTOM 2120 Insect Ecology; ENTOM 2150 Spider Biology; Life on a Silken Thread; ENTOM 3150 Spider Biology; ENTOM 3310 Insect Phylogeny and Evolution; *ENTOM 3311 Insect Phylogeny and Evolution Laboratory; ENTOM 3330 Mammals, Grubs, and Cutworms: Larval Insect Biology; PLPA 3090 Fungi; *PLPA 3190 Mushrooms of Field and Forest.

b. *BIOE 4530 Speciation; BIOEE 4640 Macroevolution; BIOE 4790 Paleobiology; *BIOI 4400 Phylogenetic Systematics; BIOI 4470 Molecular Systematics; *BIOI 4480 Plant Evolution and the Fossil Record; *BIOI 4530 Principles of Practices of Historical Biogeography.

**The Minor in Biological Sciences**

The minor in biological sciences has been designed to provide students with a broad background in biology while allowing them some flexibility to choose courses of interest. Students must have completed one full year of introductory biology (or its equivalent) to declare the minor. Students will complete 12 to 15 credits by taking either all three biology core course requirements or two biology core course requirements and 5 or more biology credits from the lists of approved program of study courses found on pages 159–162 of this catalog.

**Biology core courses**

1. Biochemistry: BIOBM 3300, 3330, or 3310–3320; one year of general chemistry and organic chemistry lecture (CHEM 1570 or 3570–3580) are prerequisites

2. Evolutionary biology: BIOE 2780 or BIOI 4480

3. Genetics: BIOGD 2810

*BIOG 4990 Independent Research may not be used to fulfill any requirement for the minor. No course substitutions are allowed. With the exception of transfer and study abroad students, no biology courses taken at other institutions will count toward the minor.

**Notes:**

- External transfer students must complete the core biology courses at Cornell. Students who are fulfilling the minor requirements under Option 2 must complete a minimum of one program of study course of at least 3 credits at Cornell.
- **All courses for the minor must be taken for letter grades unless a course is offered S-U only.**
- Applications for the minor are located in 216 Stimson Hall and on the OUB website. See Bonnie Cornella, Jeff McCaffrey, or Wendy Aquadro for academic advising.

**Independent Research and Honors Program**

Biology majors are encouraged to consider participating in individual research under the direction of a Cornell faculty member. Students interested in beginning research should contact faculty members who have compatible research interests. Information about faculty research interests and undergraduate research opportunities is available in the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.

Faculty members may consider the student's previous academic accomplishments, interests and career goals, and the availability of space and equipment when agreeing to supervise a student in their laboratory. Students conducting research for the first time must enroll in BIOG 2990, an S-U course designed to introduce students to research. After the first semester, students enroll in BIOG 4990. Registration for both of these classes is done in the Office of Undergraduate Biology in 216 Stimson Hall. Students may work with faculty in any department on campus as long as the research topic is biological. Students may not earn credit for research during their junior year, unless supervised by a Cornell faculty member. Up to 3 credits of research may be used to complete the programs of study in general biology, genetics and development, systematic and biotic diversity, as well as 4 credits in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in life science research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Biology majors planning on graduating with honors must apply to the Biology Honors Program in the spring of their junior year. Applications and information are available in the Office of Undergraduate Biology, 216 Stimson Hall, or at www.biology.cornell.edu/research/honors.html. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 90 credits at Cornell, and have a cumulative Cornell grade point average (GPA) of at least 3.0. In addition, students must have at least a 3.0 cumulative Cornell GPA in all biology, chemistry, mathematics, and physics courses. (Grades earned in courses in other departments that are used to fulfill biology major requirements are included in this computation.) In addition, candidates must find a Cornell faculty member to supervise their research. An honors candidate usually enrolls for credit in BIOG 4990 Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although the honors program does not require enrollment for credit. Students accepted into the honors program are required to participate in honors research seminars during their senior year; submit an acceptable honors thesis; complete all major requirements; and maintain a 3.0 Cornell cumulative and science GPA through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final GPA and quality of his or her thesis are factors in determining the level of honors recommended.

Students interested in the honors program are strongly encouraged to begin their research projects in their junior year and to consider spending the following summer at Cornell engaged in full-time research on their honors project.

Biology majors who are considering study abroad and graduating with honors are encouraged to meet with their academic and career advisor during their sophomore year to carefully plan their academic schedule to meet the requirements of the honors program. Application forms, requirements, deadline dates for the honors program and the Hughes Scholars Program, and information pertaining to faculty research may be obtained at the Office of Undergraduate Biology, 216 Stimson Hall, and at www.biology.cornell.edu.
CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum and to the programs of study are made by the Biology Curriculum Committee, which meets monthly during the academic year. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested parties.

ADVISING

Students in need of academic advice are encouraged to consult their advisors or see an academic advisor in the Office of Undergraduate Biology, 216 Stimson Hall.

Students interested in marine biology should visit the Shoals Marine Laboratory Office, G14 Stimson Hall.

Students interested in the Biology and Society major should see pages 498–505 in the College of Arts and Sciences section of this catalog.

TRANSFERRING CREDIT

Biology majors are required to complete all three biology core courses (biochemistry, evolution, and genetics) at Cornell.

External transfer students are limited to transferring one core biology course and one course of up to 3 credits toward their program of study. See the Office of Undergraduate Biology for approval procedures.

Students who matriculated to Cornell as freshmen and Study Abroad students may transfer program of study courses at the discretion of their advisor. Study Abroad students must obtain approval from the Office of Undergraduate Biology, Director of Advising, to transfer biology core courses.

Online course credit is not acceptable to transfer for any biology course.

GENERAL COURSES (BIOG)

Three introductory biology course sequences are taught during the academic year: BIOG 1101–1104, 1105–1106, and 1109–1110; and two during the eight-week summer session: BIOG 1107–1108 and BIOSM 1110. BIOG 1101–1104 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (e.g., students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listed “one year of introductory biology for majors” as a prerequisite. BIOG 1109–1110 is a course sequence intended for nonmajors and meets the prerequisite for many, but not all, upper-level courses listing “one year of introductory biology” as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

Other Introductory Biology Courses for Non–Biological Sciences Majors

The courses listed below are intended primarily for non–biological sciences majors.

Please see the full course description for more details.

BIOL 1120 Issues in Social Biology: From Diet to Disease; DNA to Deforestation

BIOL 2400 Green World/Blue Planet

BIOL 2490 Hollywood Biology

BIOG 1109–1110 Biological Principles

CSS/BIOM 1120 Microbes, the Earth, and Everything

Please see the CALS Registrar’s Office web site for the most recent course additions.

BIOG 1101–1102 Biological Sciences, Lectures

1101, fall; 1102, spring. 2 credits each semester. Corequisite: BIOG 1103 (fall) or 1104 (spring). Prerequisite: for 1102, D or better in 1101 or permission of instructor. May not be taken for credit after BIOG 1105–1106 or 1109–1110. U or letter grades by permission of instructor. First lec of fall semester, F Aug. 28. No admittance after second week of classes. Evening prelims: fall, Sept. 24 and Nov. 3; spring, Feb. 25 and April 6. Full, staff; spring, staff. Designed for students who intend to specialize in biological sciences. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in terms of modern evolutionary theory; and discussions of plant and animal systems are integrated.

BIOG 1103–1104 Biological Sciences, Laboratory

1103, fall; 1104, spring. 2 credits each semester. Corequisite: BIOG 1101 (fall) or 1102 (spring). Prerequisite: for 1104, D or better in 1103 or permission of instructor. Students registered for lab courses who are more than 10 minutes late for first meeting of lab forfeit registration in that course; no admittance after second week of classes. First lab of fall: week of Aug. 31; first lab of spring: week of Jan. 18. S–U or letter grades by permission of instructors. K.-C. Chen and L. L. Hester.

Designed to provide lab experience with major biological phenomena to support an introduction to the important concepts, principles, and theories of modern biology. A second objective is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and scientific method and poster development. In the second semester, laboratory experience is provided in genetics, biotechnology, invertebrate diversity, plant and animal development, and ecology. During the first semester, students dissect a domesticated frog (pithing is done by the staff). Students dissect several invertebrates during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIOG 1105–1106 Introductory Biology

1105, fall; 1106, spring. 4 credits each semester; 2 credits by permission of instructor. Limited to 200 students. Taking 1105–1106 in sequence preferred but not required. May not be taken for credit after BIOG 1101–1104 or 1109–1110. No admittance after first week of classes. First lec of fall semester R Aug. 27, 9:05; additional study and lab. D. Campbell. Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to the fundamental concepts of biology. Cell biology, physiology, anatomy, and biochemistry are strongly emphasized in BIOG 1105. BIOG 1106 covers genetics, development, ecology, evolution, behavior, and the diversity of organisms. Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of predissected specimens, students who object to dissections should take BIOG 1101–1104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be already enrolled in anatomy and physiology courses.

Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam. Web site: www.biol1105-1106.org.

BIOG 1107–1108 General Biology

Summer, 8-week session; 1107, weeks 1–4; 1108, weeks 5–8. 4 credits each. 1107–1108 fulfills introductory biology requirement for majors and forms suitable introductory biology course sequence for students intending to go to medical school. Prerequisite: one year of college or permission of instructor; for BIOG 1108, grade of D or better in prerequisite courses (BIOG 1101, 1103, 1105, or 1107). Fee for weeks 1–4: $25; for weeks 5–8, $25. Staff.

Designed for students who plan further study in biology. 1107 covers metabolic and bioenergetics. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. 1108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in 1107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. For those students who object to animal dissection, alternative materials are available for study. However, testing involves identification of important structures in real organisms.

BIOG 1109–1110 Biological Principles

1109, fall; 1110, spring. 3 credits each semester includes lecture and lab. Limited to 500 students. Nonmajors survey course, not appropriate for prebiological science or premed requirement. Both BIOG 1109 and 1110, taken in either order, are required to fulfill distribution requirement in CALS and Human Ecology. Either course fulfills Arts and Sciences
distribution requirement. Students with transfer credit must consult with course instructors for appropriate course placement. Due to overlap in content.

Note: This course may not satisfy prerequisite for upper-level courses in biology. Offered fall only. Prerequisites: fall (2 in class); spring (2 in class). H. Greene, R. Wayne, E. Balko, and staff.

Both semesters of Biological Principles are intended to appeal to anyone who seeks an overview of general biology topics and current biological issues. BIOG 1109 is offered during fall semester and introduces students to the diversity of biological organisms, Mendelian genetics, behavior, and ecology and culminates by tying together the information covered during the semester with current issues involving global climate change and biometric research. BIOG 1110 integrates instruction about cells, organ systems, metabolic processes, reproduction, sexually transmitted infections, contraception, and bioengineering with the students' understanding of human biology. The culminating activities for spring semester includes hands-on activities involving some of the techniques used by health care professionals and forensic scientists, plus student-led debates about bioengineering. Laboratory sessions meeting alternate weeks (total of 6 lab periods per semester) are used for problem-solving experiments, demonstrations, discussions, and dissections (preserved vertebrate, invertebrate, and plant materials). For those students who object to dissection, alternative materials are available for study without grade penalty. Testing on dissection labs involves identification of important structures in real organisms. Registration for the lab section is required at the time of course registration. All students must enroll in lecture and lab using electronic course enrollment.

BIOG 1115 Biology Summer Bridge
Summer. 4 credits. Letter grades only. R. Booker.

This is an inquiry-based course intended for freshmen who intend to major in life sciences or a career in the health professions. Topics include the molecular and cellular basis of life, genetics, physiology, and natural selection. The course includes an intensive six-hour-per-week laboratory, writing and math and a study skills session. All students will be required to be part of the Biology Summer Bridge Living-Learning community.

BIOG 1200 Biology Scholars Program Freshman Seminar
Spring. 1 credit. Prerequisite: membership in Biology Scholars Program. S–U grades only. J. McCaffrey and J. J. Doyle. This course is designed to help freshman biology majors make the transition to Cornell's science courses, give exposure to career options in research and medicine, provide opportunities to meet and network with faculty, and to facilitate students' pursuit of research on campus.

BIOG 1250 Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIOG 2000 Special Studies in Biology
Fall, spring, or summer. 1–3 credits. Prerequisite: written permission from Office of Undergraduate Biology. Students must register in 216 Stimson Hall. S–U or letter grades by permission of instructor. Staff.

Registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory if it's a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 1000-level courses and may not be used to fulfill college distribution requirements except by permission from the Office of Undergraduate Biology.

BIOG 2200 Biology Scholars Program Sophomore Seminar
Fall. 1 credit. Prerequisite: membership in Biology Scholars Program. S–U grades only. J. McCaffrey and J. J. Doyle. The first half of the semester will focus on interpreting and evaluating scientific literature. Students will do group presentations on a primary research or review paper. The second half will cover careers in science, personal and professional development, on-campus research, and summer opportunities.

BIOG 2990 Introduction to Research Methods in Biology
Fall, spring, or summer. Variable credit; max. 3 suggested. S–U grades only. Recommended for freshmen and sophomores. Students must register for credit in Office of Undergraduate Biology, 210 Stimson Hall. Applications available in OUB and at www.bio.cornell.edu. Add deadline is three days before university deadline. Any Cornell faculty member whose research field is biological in nature may serve as a supervisor for this course. Non-Cornell supervisors not acceptable. Intended for students who are new to undergraduate research. Students enrolled in BIOG 2990 may be reading scientific literature, learning research management and assisting with ongoing research. The faculty supervisor determines the work goals and the form of the final report.

BIOG 4080 Presentation Skills for Biologists
Spring. 1 credit. Prerequisite: research experience. Priority given to students accepted into Biology Honors Program. S–U grades only. L. Southard and G. Hess. Covers oral and written communication skills used in presenting research to other scientists. Topics include organization and writing of scientific papers, presentation tips for research seminars, and preparation of visual aids using Microsoft PowerPoint. All students present a 10-minute seminar on their research and evaluate other presentations.

BIOG 4100 Teaching High School Biology
Fall. 3 credits. Prerequisite: one year introductory biology; permission of instructor. S–U or letter grades. Offered alternate years. L. Southard.

Gives students the opportunity to experience teaching high school science. Students select an important biological concept, then develop inquiry-based teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content. Students then work in teams with high school teachers to develop their curriculum. The final part of the course includes practice presentations and teaching at regional high schools.

BIOG 4940 Special Topics in Biological Sciences
Fall or spring. 1–4 credits, variable. S–U or letter grades. Biological Sciences offers "trial" courses or seminars under this number. Offerings vary by semester and are advertised by the department before the semester starts. Courses offered under this number will be approved by the Biological Sciences Curriculum Committee, and the same course is not to be offered more than twice under this number.

BIOG 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisite: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in the college. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOG 4990 Independent Undergraduate Research in Biology
Fall, spring, or summer. Variable credit. S–U or letter grades. Note: Arts students may not register for more than 6 credits per semester with one supervisor or 15 credits per semester with more than one supervisor. Students in CALS may use up to 15 credits of independent study (BIOG 4990, 4998) toward graduation. Up to 3 credits of research may be used to complete programs of study in General Biology, Genetics and Development, and Systematics and Biotic Diversity; and 4 credits of research in Neurobiology and Behavior. Prerequisite: one semester of
BIOG 2990 or equivalent or permission of instructor and Office of Undergraduate Biology.
For students with previous undergraduate experience conducting biological research at Cornell. Students enrolled for this credit should be doing independent work on their own project. Registration forms are available in OUB and on the web at www.bio.cornell.edu. Add deadline is three days before university begins. Each student must submit proposed research project description during course registration. Any Cornell faculty member whose research field is biological in nature may serve as supervisor for this course. Non-Cornell supervisors not acceptable.

BIOG 6000 Graduate Seminar in Biology
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings); may be repeated for credit. S–U or letter grades. Staff.
Specialized seminars on topics of interest to graduate students presented by biology faculty including visiting faculty.

ANIMAL PHYSIOLOGY (BIOAP)

BIOAP 1250 Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U or letter grades. Only.
A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

[BIOAP 2140 The Biological Basis of Sex Differences (also BSOC 2141, BIOMS/FGSS 2140)]
Fall. 3 credits. Prerequisite: one year introductory biology, S–U or letter grades. Offered alternate years; next offered 2010–2011. J. E. Fortune.
Examines the structural and functional differences between the sexes. Emphasizes mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. This course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 3110 Introductory Animal Physiology (also BIOMS 3110, VTBSM 3460)
Fall. 3 credits. Prerequisites: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelims. E. R. Loew.
General course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 3160 Cellular Physiology (also BIOMS 3160)
Spring. 3 credits. Pre- or corequisite: BIOMB 3500 or 3510 and 3520 or 3530. Letter grades only. Evening prelims. A. Quaroni.
A comprehensive course covering the general characteristics of eukaryotic cells; the structure, composition, and function of subcellular organelles; and the major signal transduction pathways regulating a variety of physiological cell activities. Among the main subjects covered are absorption and transport processes, mechanism of action of signaling molecules (hormones), the cell cycle and regulation of cell proliferation, communication, extracellular matrix, and carcinogenesis.

BIOAP 3190 Animal Physiology Experimentation (also BIOMS 3190)
Fall. 4 credits. Prerequisite: BIOAP 3110 or permission of instructor. For pre-med, pre-vet juniors and seniors and graduate students interested in medical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff.
Student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes, physiological research techniques, instrumentational, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, dissection, and real-time computer recording and analysis. Experiments with isolated living tissues or live anesthetized animals examine properties of membranes and epithelia, blood, nerves, skeletal and smooth muscle, cardiovascular, respiratory, renal, and reproductive function and their regulation by the nervous and endocrine systems.

BIOAP 4130 Histology: The Biology of the Tissues (also BIOMS 4130)
Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOMB 3500 or 3510, or equivalent. S–U or letter grades. S. Suarez and L. Mizer.
Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates (primarily mammals), as well as methods of histologic and analytic morphology at the cell and tissue levels. Emphasizes dynamic interrelations of structure, composition, and function in cells and tissues.

BIOAP 4160 Cell Physiology and Genomics Laboratory (also BIOMS 4160)
Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 3160 or BIOMB 4320 or permission of instructor. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical sciences. Letter grades only. H.-H. Chuang, N. A. Lorr, and staff.
The course emphasizes the application of molecular biology and analytical methods, including microscopy, to investigation of physiological mechanisms of cellular excitability. Students learn manipulation of nucleic acids including molecular cloning RT-PCR, qRT-PCR and microarray analysis, heterologous expression systems including Xenopus oocytes and cultured mammalian cells, characterization of proteins using antibodies, and analysis of ion channels, receptors, and signal transduction pathways by measuring ionic currents and membrane potentials in live cells using patch-clamp expression system. Students also learn critical reading of original research articles. Students will conduct an independent project in the latter part of the semester using methods and systems introduced during the course.

BIOAP 4570 Fundamentals of Endocrinology (also ANSC 4270)
Fall. 3 credits. Prerequisite: animal or human physiology course or permission of instructor. Letter grades only. Lec. P. A. Johnson.
For description, see ANSC 4270.

BIOAP 4580 Mammalian Physiology (also BIOMS 4580)
Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or equivalent. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal behavior. Letter grades only. Evening prelims. K. W. Beyerbach.
The course offers a treatment of selected topics in vertebrate and human physiology that emphasizes concepts and a working knowledge of physiology. The first course half surveys biological design and the functional strategies of multicellular animals. Topics include mammalian fluid compartments, homeostasis, and membrane and epithelial transport. The second half examines the mechanism and the regulation of cardiovascular, gastrointestinal, and renal systems. Course-concluding lectures aim to illustrate the integration of systems in the regulation of acid/base balance. Clinical examples of dysfunction will underscore the role of normal function, and some diseases will be traced to the deepest roots of their molecular etiology. Weekly problem sets count 50 percent of the final grade.

BIOAP 4750 Mechanisms Underlying Mammalian Developmental Defects (also BIOMS/NS 4750)
Spring. 3 credits. Prerequisites: BIOMB 3500, 3510–3520, or 3530 (may be taken concurrently). S–U or letter grades. Offered alternate years. D. Noden and P. Stover.
Focuses on the causes of developmental defects and how genetic changes or teratogenic insults disrupt developmental regulatory and metabolic pathways.

BIOAP 4890 Mammalian Embryology (also BIOGD/BIOMS 4890)
Examines the early formation of the mammalian body and placenta, emphasizing comparative aspects, and morphogenesis and histo genesis of each organ system.

BIOAP 4980 Teaching Experience
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.
BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOM)

**BIOBM 1250 Biology Seminar**
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U or letter grades only. Staff. This seminar is designed for students with background in biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOBM 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOGD 1320)**
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S–U or letter grades only. J. Blankenship. Six professors discuss their research and promising new areas for research in the future.

**BIOBM 3300–3330 Principles of Biochemistry**
Introductory biochemistry is offered in three formats: individualized instruction (3300) and lectures (3310 and 3320) during the academic year, and lectures (3330) during the summer. Lectures are given fall semester (3310), spring semester (3320), and summer (3330).

**BIOBM 3370 Principles of Biochemistry, Individual Instruction**
Fall or spring. 4 credits. Prerequisites: one year introductory biology and one year general chemistry and CHEM 1570 or 3570–3580 (CHEM 3580 may be taken concurrently or permission of instructor). Recommended: concurrent registration in BIOBM 3340. May not be taken for credit after BIOBM 3310, 3320, or 3330. S–U or letter grades. Evening prelms: fall, Oct. 1 and Nov. 3; spring, Feb. 25 and April 6. J. E. Blankenship, P. C. Hinkle, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, proteins, and an introduction to gene cloning. No formal lectures, autotutorial format.

**BIOBM 3310 Principles of Biochemistry: Proteins and Metabolism**
Fall. 3 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570 or 3570–3580 (CHEM 3570 should not be taken concurrently) or equivalent, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S–U or letter grades by permission of instructor. Lec., evening prelm Oct. 22. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated lecture format. Topics include protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

**BIOBM 3320 Principles of Biochemistry: Molecular Biology**
Spring. 2 credits. Prerequisites: one year introductory biology and previous or concurrent registration in CHEM 3570 or equivalent, or permission of instructor. May not be taken for credit after BIOBM 3300 or 3330. S–U or letter grades by permission of instructor. Lec. B. K. Tye. Comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and repair, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and applications of recombinant DNA technologies, genomics, and proteomics.

**BIOBM 3330 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology**
Summer, eight-week session. 4 credits. Prerequisites: one year introductory biology, one year general chemistry, and CHEM 1570, or 3570–3580, or equivalents, or permission of instructor. May not be taken for credit after BIOBM 3300, 3310, or 3320. H. Nivison. Topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

**BIOBM 3340 Computer Graphics and Molecular Biology**
Fall or spring. 1 credit. Prerequisite: BIOBM 3300 or 3310–3320 (BIOBM 3320 may be taken concurrently) or Corequisite: BIOBM 3300. J. E. Blankenship, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

**BIOBM 3990 Research Practicum in Molecular and Cellular Biology**
Fall or spring. 4 credits. Limited to 12 students. Prerequisites: genetics (BIOGD 2810) or biochemistry (BIOBM 3300 or BIOBM 3310 or BIOBM 3320 or BIOBM 3330) and permission of instructor. Lec. Letter grades. Taught occasionally; check with Dept. of MBG for scheduling. Staff. Organizational meeting to schedule open lab times on first day of class. A laboratory course that integrates ongoing faculty research to introduce students to a project-based research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology, biochemistry, genetics, genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.

**BIOBM 4310 Frontiers in Biophysics**
Fall, full day of lec, S, Sept. 12, 9 a.m.–4 p.m., Racker Room, Biotechnology Bldg. 0.5 credit. S–U grades only. G. Feigenson and staff. Overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates considering a career in biophysics and for graduate students interested in biophysics research opportunities at Cornell.

**BIOBM 4320 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: BIOBM 3300, 3330, or 3310, and previous or concurrent registration in 3320, or equivalent. Recommended: BIOGD 2810. Lec. Undergraduate students must enroll in this course for letter grade; graduate students may enroll either for letter grade or S–U. Evening prelms Mar. 9 and Apr. 22. V. M. Vogt. Survey of a wide array of topics focusing on the general properties of the cell. Topics include methods used for studying cells, the structure and function of the major...
cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 4370, BIOGD 4830, BIOBM 6360, and 6390.

BIOBM 4340 Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320. Recommended: BIOBM 6390. Lecture. S. E. Elly. Lecture topics emphasize biotechnology and plant systems that constitute marketed or near-market applications such as production of pharmaceuticals in milk, edible and nucleic acid vaccines, gene therapy, and high-tech agricultural products. Additional topics may include cancer treatments and relevant aspects of the human genome projects. An overview of human immunology and its relationship to drug development will be provided. Students will also explore relevant scientific literature.

BIOBM 4350 Undergraduate Biochemistry Seminar
1 credit; may be repeated. Prerequisites: upper-class standing; BIOBM 3300, 3330, or 3310–3320, or written permission of instructor. 3-4 credits. S-U or letter grades. Selections from the literature on a given topic are evaluated critically during 12 one-hour meetings.

BIOBM 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOGD/TOX 4370)
Spring. 4 credits. Limited to 12 credits. Lecture. S. Lee. Lecture topics are usually new topics in cell cycle regulation and cell death. This course explores both pro-apoptotic and anti-apoptotic cellular pathways. Additional topics include the regulation of cell cycle division and cell death, with special emphasis on the role of mitotic kinases in cell cycle regulation.

BIOBM 4380 The RNA World
Spring. 3 credits. Prerequisites: BIOBM 3300 or 3310–3320 or 3330, or permission of instructor. A. Ke.

Part of the excitement about “the RNA world” stems from the recognition that RNA is ancient and that the evolution of life as we know it depended upon RNA evolving both informational and catalytic capabilities. This course explores these ideas but more generally provides a comprehensive introduction to RNA biology. Many of the most interesting topics in the RNA biology, such as the mechanism of the RNA interference and its widespread applications, will be covered in detail. Other topics require consideration of essential RNA-protein complexes such as ribosomes, spliceosomes, telomerase, and Signal recognition particles. Classical experiments as well as up-to-date research are covered in this course. A portion of each class is devoted to discussion and questions.

BIOBM 4390 Molecular Basis of Human Disease (also BIOGD 4390)
Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOGD 3500, 3510–3520, or 3530) and genetics (e.g., BIOGD 2300) and permission of instructor. Recommended: cell biology (e.g., BIOGD 3420 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). Lecture: S-U or letter grades. W. L. Kraus. This course examines how changes in the normal expression, structure, and activity of gene products caused by genetic mutations, epigenetic phenomena, and environmental agents lead to human diseases. The material focuses on how these changes lead to alterations in normal cellular processes, as well as the resulting physiological consequences. Topics selected from recent literature include cancer, diabetes, heart disease, neurodegeneration, and infectious diseases. The methods used to identify the underlying biochemical and genetic basis of the diseases, as well as possible pharmacological and genetic therapies for treating the diseases, are presented. A portion of the lecture periods will be devoted to discussion and practice questions.

BIOBM 4400 Laboratory in Biochemistry and Molecular Biology
Fall, spring, or summer (six-week session). 4 credits. Limited enrollment. Prerequisites: BIOBM 3300 or 3310–3320 or 3330, or 3340. Lecture. S. Ely and N. H. Nivison. This course introduces students to fundamental techniques in biochemistry and molecular biology. Topics include protein purification and analysis, restriction mapping and DNA sequencing analysis, protein purification and analysis, gel electrophoresis, and introduction to DNA analysis.

BIOBM 4430 Experimental Molecular Neurobiology (also BIONB 4300)
Spring. 4 credits. Limited to 12 students. Letter grades only. J. B. Nasrallah. Prerequisites: CHEM 3570 or 3580 or 3590 or 3600 or 3600 equivalent. Lecture. S. Deitcher. For description, see BIONB 4500.

BIOBM 4500 Principles of Chemical Biology (also CHEM 4500)
Fall. 5 credits. Prerequisites: CHEM 3570–3580 or 3590–3600 or 3590 equivalent. Staff. For description, see CHEM 4500.

BIOBM 4510 Structural Chemical Biology (also CHEM 4510)
Spring. 3 credits. Prerequisites: CHEM 2880 and 3580 or equivalent. Exp. S. Fisher. Lecture. J. T. Lis and J. Pleiss. For description, see CHEM 4510.

BIOBM 4534 Molecular Aspects of Plant Development I (also BIOPL 4834)
Fall. 1 credit. 12 lec. Offered alternate years; next offered 2010–2011. J. B. Nasrallah. For description, see BIOPL 4834.

BIOBM 4580 Bacterial Genetics (also BIOMI/BIOGD 4830)
Fall. 2 or 3 credits; optional credit for registered students with permission of instructor to review literature. Prerequisites: BIOGD 2810. Recommended: BIOM 2900 and BIOBM 3300 or 3310 and 3320 or 3330. Lecture: S. J. E. Peters. For description, see BIOI 4850.

BIOBM 4980 Teaching Experience
Fall or spring. 1-4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S-U or letter grades by permission of instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOBM 6310 Protein Structure, Dynamics, and Function
Fall. 5 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320 and organic chemistry. Recommended: physical chemistry course. S-U or letter grades. Lecture. L. Richardson. This course presents the basic principles of protein structure, dynamics, and function. Specific topics include protein stability, dynamics, evolution, molecular recognition, basic enzyme kinetics, and spectroscopic tools for studying proteins.

BIOBM 6330 Biosynthesis of Macromolecules

BIOBM 6360 Functional Organization of Eukaryotic Cells
Spring. 3 credits. Prerequisites: BIOBM 3350 or 3330 or 3310–3320, and 4320, or equivalents. Lecture. W. J. Brown and A. Brezinski. Aims to provide an integrated view of eukaryotic cell organization as elucidated using biochemical, molecular, genetic, and cell biological approaches. Major topics include the cytoskeleton, membrane traffic, and cell polarity. Together with BIOBM 4370 and 6390, this course provides broad coverage of the cell biology subject area.

BIOBM 6390 The Nucleus
Spring. 2 credits. Prerequisites: BIOBM 3300 or 3330 or 3310–3320, or equivalent. Recommended: BIOGD 2810. Lecture: J. T. Lis and J. Pleiss. Lectures on topics of eukaryotic genome organization, chromatin structure, regulation of gene expression, RNA processing, the
structure and movement of chromosomes, and nuclear export and import. Covers the structure and function of the nucleus at the molecular and cell biological levels.

**BIOBM 6410 Laboratory in Plant Molecular Biology** (also BIOPL 6410)
Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S–U grades by permission of instructor. Lab. M. R. Hanson, J. Nasrallah, K. Van Wijk, and staff. For description, see BIOPL 6410.

**BIOBM 7300 Protein NMR Spectroscopy** (also VETM 7070)
Spring. 2 credits. Prerequisites: CHEM 3890 and 3900, or 2870 and 2880, or permission of instructor. S–U or letter grades. Offered alternate years. Lec. L. K. Nicholson and R. E. Oswald.

Students acquire the tools necessary for understanding multidimensional NMR of proteins. NMR fundamentals and schemes for magnetization transfer, water suppression, decoupling, and others are presented.

**BIOBM 7380 Macromolecular Crystallography** (also CHEM 7880)
Lectures and seminars on specialized topics. Multiple topics and sections will be offered each semester. 3 credits. Prerequisite: permission of instructor. Lec. S. E. Elalick. For description, see CHEM 7880.

**BIOBM 7510 Ethical Issues and Professional Responsibilities**
Spring. 1 credit. Prerequisite: graduate students beyond first year. S–U grades only. Organizational meeting first W of semester. Sem. P. Hinkle.

Ethical issues in research and the professional responsibilities of scientists are discussed based on readings and occasional lectures. The topics are intended to cover the requirements for ethical training of graduate students on training grants and follow the recommendations of the Office of Research Integrity.

**BIOBM 7940 Current Topics in Biochemistry**
Fall or spring. 0.5 or 1 credit for each topic; must be repeated for credit. Prerequisite: BIOBM 3300 or 3330 or 3310–3320 or equivalent. S–U grades only. Lab. Staff. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the course and time roster published at the beginning of each semester or the department mini-courses web site, www.mbg.cornell.edu/cals/mbg/about/courses/mini-courses.cfm.

**BIOBM 8300 Biochemistry Seminar**
Fall or spring. 0 credits. Prerequisite: graduate students majoring in field of biochemistry, molecular, and cell Biology. Lec open to everyone. V. Vogt.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

**BIOBM 8310 Advanced Biochemical Methods**
Fall. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S–U grades only. Lab and disc. Organizational meeting first F of semester 10:10. T. C. Huffaker and J. Pleiss.

The first half of this course comprises an intensive laboratory covering fundamental aspects of modern molecular biology and cell biology. The second half comprises research in the laboratory of a professor chosen by the student (see BIOBM 8320). Students must enroll separately for each half.

**BIOBM 8320 Advanced Biochemical Methods II**
Spring. 6 credits. Requirement for, and limited to, first-year graduate students in field of biochemistry, molecular and cell biology. S–U grades only. Lab. V. Vogt.

Research in the laboratories of two different professors chosen by the student. Arrangements are made jointly between the director of graduate studies and the research advisor.

**BIOBM 8330 Research Seminar in Biochemistry**
Fall or spring. 1 credit each semester; may be repeated for credit. Requirement for, and limited to, second-, third-, and fourth-year graduate students majoring in field of biochemistry, molecular and cell biology. S–U grades only. W. L. Kraus and V. M. Vogt.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**BIOBM 8360 Methods and Logic in Biochemistry, Molecular and Cell Biology, Part I**
Spring. 1 credit. Prerequisite: first-year graduate students majoring in field of biochemistry, molecular and cell biology. S–U grades only. Sem. and disc. G. P. Hess.

Seminar with critical discussion by students of original research papers selected by faculty members of the field of biochemistry, molecular and cell biology.

**BIOBM 8380 Scientific Communication and Quantitation in Biochemistry, Molecular and Cell Biology (BMCB)**
Spring. 2 credits. Prerequisite: second-year graduate students majoring in field of biochemistry, molecular and cell biology or field of genomics and development. S–U grades only. D. Shalloway.

Interactive seminar to develop the general skills needed to support a career in scientific research: experimental design, writing scientific papers and grants, oral presentation, basic statistical and computational methods, and managing a research laboratory. Exercises focus on the preparation of a mock research grant proposal.

**Related Courses in Other Departments**
**Lipids (NS 6020)**
Undergraduate Research in Biology (BIOG 4990)

**ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOEE)**

**BIOEE 1250 Biology Seminar**
Fall or spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A problem-solving seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOEE 1540 Introductory Oceanography, Lectures (also EAS 1540)**
Fall. 3 credits. Optional 1-credit laboratory offered as BIOEE/EAS 1550. S–U or letter grades. B. C. Monger.

For description, see EAS 1540.

**BIOEE 1550 Introductory Oceanography, Laboratory (also EAS 1550)**
Fall. 1 credit. Corequisite: BIOEE/EAS 1540. S–U or letter grades. B. C. Monger.

For description, see EAS 1550.

**BIOEE 2070 Evolution (also HIST 2870, STS 2871)**
Fall or summer (six-week session). 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOEE 2780. Does not meet evolutionary biology requirement for biological sciences major. S–U or letter grades. W. B. Provine.

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolution. Students will explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

**BIOEE 2610 Ecology and the Environment**
Fall or summer (three-week session). 4 credits. Prerequisite: one year introductory biology. S–U or letter grades. Fall: J. Sparks; summer: A. T. Vawter.

Fall: Explores interactions between the environment and organisms in the context of individuals, populations, communities, and ecosystems. Emphasizes basic ecological principles and processes intrinsic to understanding the world around us and in more advanced studies in the environmental sciences, including management-oriented disciplines.

Major topics include adaptive strategies of organisms, population dynamics, species interactions, community structure and ecosystem function, biodiversity, biogeochemistry, productivity, and human influences on ecosystems, and sustainable practices.

Summer: Introduction to principles of ecology, concerning the interactions between organisms and their environment. Deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are examined through classroom lectures and discussion and through a series of lab and field experiences in natural habitats around Ithaca. Ecological principles are applied extensively to current environmental problems and issues.

**BIOEE 2630 Field Ecology**
Fall. 3 credits. Prereq. or corequisite: BIOEE 2610. Letter grades only. One weekend field trip. A. Kessler.

Field exercises designed to give students direct experience with fieldwork, with an emphasis on developing observation and skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.
BIOEE 2640 Tropical Field Ornithology
Winter, two-week, full-time course. 3 credits. Limited to 14 students; minimum of 8. Prerequisite: permission of instructor. Intended for students with limited or no bird knowledge. S–U or letter grades. Fee: $250. Daily fieldwork, disc, reading, and individual project. A. A. Dhondt. Provides students with the opportunity to study birds intensively in a neotropical environment. Students learn observational and field techniques, participate in group research projects and in daily seminars. The group is housed in the Biodiversity Center at Punta Cana. One or two field trips are taken to national parks in the Dominican Republic.

BIOEE 2650 Tropical Field Ecology and Behavior
Winter, field course based in Kenya, Africa. 4 credits. Limited to 15 students. Prerequisites: one introductory biology course and permission of instructors. Letter grades only. J. J. Lovette and D. Rubenstein. Gives students a broad hands-on understanding of tropical biology, ecology, and behavioral ecology. Students gain experience with experimental design and data collection, field methods, basic statistics, interpretation and evaluation of primary scientific literature, and scientific paper writing. Students pay separately for their international airfare and there may also be a small supplementary laboratory fee.

BIOEE 2670 Introduction to Conservation Biology
Fall. 2 or 3 credits. 3 credits with disc, sec, two Sat a.m. field trips, and two essays. Intended for both science and nonscience majors. May not be taken for credit after NTRES 4100. Completion of BIOEE 2670 not required for NTRES 4100. S–U or letter grades. Offered alternate years. J. W. Fitzpatrick. Broad exploration of biological concepts and practices related to conserving the earth’s biodiversity; integrates ecological, evolutionary, behavioral, and genetic principles important for understanding conservation issues of the 21st century. Topics include species and ecosystem diversity, values of biodiversity, causes of extinction, risks facing small populations, simulation modeling, design of nature preserves, the Endangered Species Act, conservation priority-setting, species recovery, ecosystem restoration and management, implications of climate change, and our ecological footprint.

BIOEE 2740 The Vertebrates: Structure, Function, and Evolution
Spring. 4 credits. Prerequisite: one year introductory biology. Fee: $25. S–U or letter grades. B. A. McGuire. Introductory course in vertebral organismal biology that explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and nonmammal live animal demonstrations.

BIOEE 2780 Evolutionary Biology
Fall or spring. 3 or 4 credits. 4-credit option involves writing component and two disc per week; 4-credit option limited to 20 students per sec each semester. (Students must register for 4-credit option; interested students complete application form on first day of class.) Limited to 300 students. Prerequisite: one year introductory biology or permission of instructor; freshmen by permission of instructor. S–U or letter grades. One all-day Sat. field trip. Evening prelms: spring, Mar. 4 and April 6. Fall, J. Lovette; spring, staff. Considers explanations for patterns of diversity and for the apparent good fit of organisms to the environment. Topics include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelms.

BIOEE 3500 Dynamics of Marine Ecosystems (also EAS 3500)
Fall. 3 credits. Limited to 25 students. Prerequisites: one year of calculus and semester of oceanography (i.e., BIOEE/EAS 1540), or permission of instructor. S–U or letter grades. Offered alternate years. C. H. Greene and R. W. Howarth. For description, see EAS 3500.

BIOEE 3510 Conservation Oceanography (also EAS 3510)
Spring, full-time, three-week course. 4 credits. Limited to 25 students. Prerequisites: enrollment in Cornell Abroad Earth and Environmental Sciences Semester in Hawaii; one semester of calculus and two semesters of biology or permission of instructor. Letter grades only. C. H. Greene, C. D. Harvell, and B. C. Monger. For description, see EAS 3510.

BIOEE 3620 Dynamic Models in Biology (also MATH 3620)
Spring, 4 credits. Prerequisites: two semesters introductory biology (BIOG 1101–1102, 1105–1106, 1107–1108, 1109–1110 or equivalent) and completion of mathematics requirements for Biological Sciences major or equivalent. S–U or letter grades. Offered alternate years; next offered 2010–2011. S. P. Ellner and J. M. Guckenheimer. Introductory survey of the development, computer implementation, and applications of dynamic models in biology and ecology. Case-study format covering a broad range of current application areas such as regulatory networks, neurobiology, cardiology, infectious disease management, and conservation of endangered species. Students also learn how to construct and study biological systems models on the computer using a scripting and graphics environment.

BIOEE 3630 Field Methods in Ornithological Research
Summer (eight-week session). 5 credits. Limited to 15 students. Prerequisites: introductory biology or equivalent, interest and ability to spend all day in the field under variable weather conditions, including intense sun and periods of rain, and permission of instructor. S–U or letter grades. Next offered 2011–2012. D. W. Winkler and staff.

BIOEE 3560 Chemical Ecology (also BIONB/ENTOM 3660)
Spring, 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalent or permission of instructor. S–U or letter grades. J. S. Thaler, A. Kessler, A. Agrawal, and R. Raguso. Why are chilies so spicy? This course examines the chemical basis of interactions between species and is intended for students with a basic knowledge of chemistry and biology. Focuses on the ecology and chemistry of plants, animals, and microbes. Stresses chemical signals used in diverse ecosystems, using Darwinian natural selection as a framework. Topics include plant defenses, microbial warfare, communication in marine organisms, and human phenomones.

BIOEE 3710 Human Paleontology (also ANTHR 3710)
Fall. 4 credits. Limited to 18 students. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Occasional field trips. Next offered 2011–2012. K. A. R. Kennedy.

BIOEE 3730 Biodiversity and Biology of the Marine Invertebrates
Fall (but course must be taken previous summer at Shovals Marine Laboratory [SML], three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily and evening lec, lab, and fieldwork. Total cost for room, board, and overhead $4246. Offered alternate years. C. D. Harvell. Introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. SML exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Daily field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOEE 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses, Lectures (also BIONB 4460)
Spring, 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. A. Kessler and R. Raguso. How do plants respond to herbivore attack? What are the molecular, plant hormonal, metabolic mechanisms for these responses? What ecological consequences do these responses have for the fitness of the plants and their attackers? The course provides an overview of the plant’s myriad responses to herbivores and compares them with plant responses to pathogens. It gives an introduction to the study of induced plant responses in the lectures as well as practical independent and group-intensive work.

ECOLOGY AND EVOLUTIONARY BIOLOGY 179
BIOLICAL SCIENCE - 2009–2010

**BIOEE 4461 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIONB 4461)**
Spring. 1 credit. Limited to 12 students. Prereq or corequisite: BIOEE 4640 or BIONB 4640. Letter grades; S–U or letter grades. A. Kessler and R. Raguso.
Laboratory course covering topics presented in BIOE 4460/BIONB 4460.

**BIOEE 4450 Mammalogy, Lectures**
Spring. 3 credits. Recommended: BIOEE 2740. Letter grades; S–U or letter grades by permission of instructor. Offered alternate years; next offered 2010–2011. B. A. McGuire.

**BIOEE 4451 Mammalogy, Laboratory**
Spring. 1 credit. Limited to 16 students. Prereq or corequisite: BIOEE 4500. Letter grades; S–U or letter grades by permission of instructor. Fee: $20. Travel to Cornell University Museum of Vertebrates (CUMV) at the Laboratory of Ornithology is necessary. One all-day field trip may be scheduled. Offered alternate years; next offered 2010–2011. R. G. Harrison.

**BIOEE 4450 Insect Ecology (also ENTOM 4550)**
Fall. 4 credits. Recommended: ENTOM 2120 or BIOEE 2610 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. S. Thaler.
For description, see ENTOM 4550.

**BIOEE 4450 Stream Ecology (also NTRES 4550)**
Fall. 4 credits. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. A. S. Flecker and E. Kraft.
For description, see NTRES 4550.

**BIOEE 4450 Limnology: Ecology of Lakes, Lectures**
Spring. 3 credits. Prerequisite: BIOEE 2610 or written permission of instructor. Recommended: introductory chemistry. Letter grades; S–U grades by permission of instructor only. Offered alternate years. N. G. Hairston, Jr.
Limnology is the study of fresh waters and other inland, nonmarine environments. This course focuses on lakes and ponds, which are discussed as distinct aquatic environments with clear terrestrial boundaries, and within which ecological interactions are especially evident. In lakes, interactions between organisms are often strong and adaptations easily recognized. Physical and chemical properties of the environment impact organisms in important ways and organisms, likewise, influence physics and chemistry. As a result, lakes provide excellent systems for understanding the links between physical (thermal and mixing), chemical (dissolved elements and compounds), and organismal dynamics. Lakes are exciting environments for study in their own right and for gaining perspective on ecological and evolutionary processes in general.

**BIOEE 4461 Physiological Plant Ecology, Laboratory**
Spring. 2 credits. Limited to 15 students. Prereq or corequisite: BIOEE 4660. Letter grades only. Offered alternate years; next offered 2010–2011. J. P. Sparks.

**BIOEE 4670 Seminar in the History of Biology (also HIST 4150, BSC/STS 4471)**
Fall or summer (six-week session). 4 credits. Limited to 18 students. S–U or letter grades. W. B. Provine.
Specific topics change each year.

**BIOEE 4450 Food, Agriculture, and Society (also BIOEE 4681)**
Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S–U or letter grades. Offered 2010–2011. A. G. Power.

**BIOEE 4670 Herpetology, Lectures**
Spring. 2 credits. Limited to 20 students. Recommended: BIOEE 2740 and concurrent enrollment in BIOEE 4701. Letter grades; S–U grades by permission of instructor only. Offered alternate years; next offered 2010–2011. H. W. Greene.

**BIOEE 4670 Herpetology, Laboratory**

**BIOEE 4670 Ecology of Agricultural Systems (also HORT 4730)**
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. During first six weeks of class, Thurs. meetings may run later because of field trips. Next offered 2010–2011. L. E. Drinkwater.

**BIOEE 4670 Ornithology**
Spring. 4 credits. Limited to 35 students. Prerequisite: permission of instructor by preregistering in E141 Corson Hall. Recommended: BIOEE 2740. Letter grades; S–U grades by permission of instructor only. Carpooling to Lab of Ornithology necessary. Fee: $15. Occasional field trips and special projects. Offered alternate years. D. W. Winkler.
Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York.

**BIOEE 4670 Biology of Fishes**
Fall. 4 credits. Limited to 24 students. Recommended: BIOEE 2740 or equivalent experience in vertebrate zoology. Letter grades; S–U grades by permission of instructor only. Small lab fee may be required. Two field trips. Offered alternate years; next offered 2010–2011. A. R. McCune.

**BIOEE 4770 Marine Invertebrates Seminar**
Fall. 1 credit. Prerequisite: BIOEE 3750 or permission of instructor. S–U grades only. Offered alternate years. C. D. Harvell.
Discussions and directed readings center on current research themes in invertebrate biology. Designed as an on-campus companion course to the field-based BIOEE 3750 Biodiversity and Biology of the Marine Invertebrates. Students write individual research essays based on projects done in the field.

**BIOEE 4780 Ecosystem Biology**
Spring; 4 credits. Prerequisite: BIOEE 2610 or equivalent. S–U or letter grades. Offered alternate years; next offered 2010–2011. C. L. Goodale and R. W. Howarth.

**BIOEE 4790 Paleobiology (also EAS 4790)**
Spring; 4 credits. Prerequisites: one year introductory biology for majors and either BIOEE 2740, 3730, EAS 3010, or permission of instructor. S–U or letter grades. W. D. Allmon.

For description, see EAS 4790.

**BIOEE 4800 Ecological Genetics (also ENTOM 4700)**
Spring; 4 credits. Prerequisite: BIOEE 2780. Recommended: introductory course in genetics and/or statistics. S–U or letter grades. Offered alternate years; next offered 2010–2011. B. P. Lazzaro.

For description, see ENTOM 4700.

**BIOEE 4900 Topics in Marine Biology**
Spring; 2 credits; may be repeated for credit. Limited to 15 students. Prerequisite: permission of instructor. Primarily for undergraduates, S–U or letter grades. Offered alternate years. J. G. Morin.

Seminar courses on selected topics in marine biology; may include laboratory or field trips. Topics and time of organizational meeting are shown in departmental course offerings listed on the web site.

**BIOEE 4980 Teaching Experience**
Fall or spring; 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

**BIOEE 6600 Field Studies in Ecology and Evolutionary Biology**
Fall or spring. Variable credit. Prerequisites: BIOEE 2610, taxon-oriented course, and permission of instructor. Letter grades; S–U grades by permission of instructor only. Lec and field trips TBA. Estimated costs: Lec. Staff.

Provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester.

Meetings on campus are devoted to orientation and reports on completed projects.

**BIOEE 6601 Tropical Field Ecology**
Spring; 2 credits. Prerequisite: for undergraduates, experience or course work with terrestrial, marine, or freshwater organisms. Extended field trip over winter break. Letter grades only. Fee to cover transportation and housing. TBA. Offered alternate years; next offered 2010–2011. C. D. Harvell, J. P. Sparks, and N. G. Hairston, Jr.

**BIOEE 6602 Graduate Field Course in Ecology**
Spring; 3 credits. Prerequisite: graduate standing. Letter grades only. Fee charged to help cover food and lodging for trip to Florida. Offered alternate years. J. P. Sparks and H. W. Greene.

Designed to give graduate students experience in defining questions and designing field investigations. The course is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, and the Everglades.

**BIOEE 6610-6611 Environmental Policy**
(also ALS 6610-6611, BSO 4611-4612)
6610, fall; 6611, spring; 3 credits each semester; students must register for 6 credits each semester since R grade given at end of fall semester. Limited to 12 students. Prerequisite: permission of instructor. Letter grades only. D. Pimentel.

Focuses on complex environmental issues. Ten to 12 students representing several disciplines investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience. Thus far, every study has been published.

**BIOEE 6680 Principles of Biogeochemistry**
Spring; 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental science; for undergraduates, permission of instructor. S–U or letter grades. Offered alternate years. R. W. Howarth and C. L. Goodale.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

**BIOEE 6710 Palaeoanthropology of South Asia**
(also ANTHR 6371, ASIAN 6671)

**BIOEE 6730 Human Evolution: Concepts, History, and Theory**
(also ANTHR 6373)
Spring; 3 credits. Prerequisite: one year introductory biology or ANTHR 1300 or permission of instructor. Letter grades only. Next offered 2011–2012. K. A. R. Kennedy.

**BIOEE 6750 Current Topics in Plant Molecular Ecology**
Fall; 1 credit; may be repeated for credit. Limited to 20 students. Prerequisite: graduate standing or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. A. Kessler.

**BIOEE 7600 Special Topics in Evolution and Ecology**
Fall or spring; 1–3 credits; may be repeated for credit. Limited enrollment. Letter grades; S–U grades by permission of instructor only. Staff.

Independent or group-intensive study of special topics of current interest. Content varies each semester.

**BIOEE 7610 Microsatellite DNA: Techniques**
Fall; 1 credit; may be repeated for credit. Limited to 12 students. Prerequisite: permission of instructor. Primarily for graduate students; undergraduates admitted only under exceptional circumstances. E-mail S. M. Bogdanowicz (sm385) by end of Aug. if interested. S–U grades only. Fee: TBA. Next offered 2010–2011. R. G. Harrison and S. M. Bogdanowicz.

**BIOEE 7640 Plant- Insect Interactions Seminar**
Fall or spring; 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. A. Agrawal, J. S. Thaler, and A. Kessler.

Group intensive study of current research in plant-insect interactions. Topics vary from semester to semester but include chemical defense, coevolution, insect community structure, population regulation, biocatalysis, tritrophic interactions, and mutualism.

**BIOEE 7670 Current Topics in Ecology and Evolutionary Biology**
Fall; 4 credits. Prerequisite: for undergraduates, permission of instructor. S–U grades only. Staff.

Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**BIOEE 7700 Workshop in Biogeochemistry**
Fall or spring; 1–3 credits; may be repeated for credit. Limited to 15 students. Prerequisite: BIOEE 6680. S–U grades only. Staff.

Workshop-forum in which graduate students interact with invited world leaders in biogeochemistry. Workshop topics change each semester. A one-week workshop is preceded by seven one-hour preparatory discussions of readings.

**BIOEE 7800 Graduate Seminar in Ornithology (also NTRES 7800)**
Fall or spring; 1 credit; may be repeated for credit. Prerequisite: for undergraduates, permission of instructor. S–U grades only. I. J. Lovette, A. A. Bonfondt, D. W. Winkler, and J. L. Dickinson.

Group intensive study of current research in ornithology. Topics vary from semester to semester.

**BIOEE 8990 M.S. Thesis Research**
Fall or spring; 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology. S–U or letter grades. E&EB field faculty.
Thesis research conducted by an M.S. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

**BIOEE 9990 Ph.D. Dissertation Research**
Fall or spring. 1–15 credits. Prerequisite: admission to field of ecology and evolutionary biology as Ph.D. student. S–U or letter grades. &EB field faculty. Dissertation research conducted by a Ph.D. student in the field of ecology and evolutionary biology with advice and consultation of a major professor who is a member of the field.

**GENETICS AND DEVELOPMENT (BIOGD)**

**BIOGD 1250 Biology Seminar**
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff. A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOGD 1320 Orientation Lectures in Molecular Biology and Genetics (also BIOBM 1320)**
Spring, weeks 1–3. 0 credits. Primarily for freshmen, sophomores, and transfer students. S–U grades only. J. Blankenship. For description, see BIOBM 1520.

**BIOGD 2810 Genetics**
Fall, spring, or summer (eight-week session). 5 credits. Not open to freshmen fall semester. Prerequisite: one year introductory biology or equivalent. Lec. Lab. Fall and spring classes planned T. W. R. F. 2:30–4:30. Lab sign-ups done in first lec. Highly recommended: problem-solving sessions. T. D. Fox, M. L. Goldberg, and D. Nero. General introduction to the fundamental principles of genetics in eukaryotes and prokaryotes. Topics include gene transmission, linkage, recombination, structure, mutations, and manipulation, as well as analysis of genomes in individuals and populations.

**BIOGD 2820 Human Genetics**
Spring. 2 or 3 credits; 2 credits if taken after BIOGD 2810. Prerequisite: one year introductory biology or equivalent. S–U or letter grades. Lec. M. L. Goldberg and D. Nero. Designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

**BIOGD 3850 Developmental Biology**
Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. K. Liu. Introduction to the morphogenetic, molecular and cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 3940 Circadian Rhythms (also ENTOM/BIONB/PLPA 3940)**
Fall. 2–3 credits. Prerequisite: ENTOM 2120 or BIOGD 2810 or BIONB 2210 or 2220 or permission of instructor. S–U or letter grades. Lec. K. Lee. This course will explore a fundamental feature of living organisms found in all kingdoms: how the cellular 24-hour biological clock operates and influences the biological activities. The course will cover fundamental properties of biological rhythms and cellular and molecular structure of circadian oscillators of model organisms including cyanobacteria, fungi, insects, plants, and mammals. One-credit (optional) lab module offered in conjunction with lec.

**BIOGD 3990 Research Practicum in Molecular and Cellular Biology**
Fall or spring. 4 credits. Limited to 12 students. Prerequisites: genetics (BIOGD 2810) or biochemistry (BIOBM 5300 or BIOBM 3310 or BIOBM 3320 or BIOBM 3330) and permission of instructor. Lec. Letter grades. Taught occasionally. Check with Dept. of MGB for scheduling. Organizational meeting to schedule open lab times on first day of class. Staff. A laboratory course that integrates ongoing faculty research to introduce students to a project-based research environment. Students will engage in the practice of doing science by direct participation in current projects using a variety of experimental methodologies from molecular and cellular biology, biochemistry, genetics, genomics, and computational biology. Students will work in collaborative research groups to approach and solve scientific problems through rigorous inquiry and exchange. Credit may be awarded to a maximum of two consecutive semesters.
in-depth analysis of the material taught during possible clinical applications. The focus will emphasize on the biological role of embryonic morphogenesis and homeostasis with BIOGD 4390 Molecular Basis of Human biological systems.

BIOGD 4010 Genetic Analysis Spring. 3 credits. Prerequisite: BIOGD 4000 or permission of instructor. Lec.

T. P. O’Brien.

Overview of approaches and tools used in genomic research. Covers experimental and computational technologies as well as theoretical concepts important for the study of genomes and their function. Topics include genome sequencing and assembly, high-throughput sequencing, comparative genomics, genetic variation and complex traits, expression profiling and proteomics, genome modification and transgenesis, modeling network structure and dynamics. Discussions will explore how genomic tools and approaches can be integrated to study biological systems.

BIOGD 4370 Regulation of Cell Proliferation, Senescence, and Death (also BIOBM/TOX 4370) Spring. Variable credit; students may takeLEC for 2 credits or LEC and DISC for 3 credits. Limited to about 20 students per disc; priority given to graduate students. Prerequisites: BIOG 1101–1102 and BIOBM 3300 or 3310/3320. Recommended: BIOGD 2810 and BIOBM 4290. S–U or letter grades. S. Lee.

For description, see BIOBM 4370.

BIOGD 4390 Molecular Basis of Human Disease (also BIOBM 4390) Fall. 3 credits. Prerequisites: biochemistry and molecular biology (e.g., BIOBM 3900, 3310/3320, or 3350) and genetics (e.g., BIOGD 2810) or permission of instructor. Recommended: cell biology (e.g., BIOBM 4520 or BIOAP 3160) and physiology (e.g., BIOAP 3110 or 4580). S–U or letter grades. Lec. W. L. Kraus.

For description, see BIOBM 4390.

BIOGD 4400 Stem Cell Biology: Basic Science and Clinical Applications Spring. 3 credits. Limited to 40 students. Prerequisites: BIOGD 4520 or BIOGD 3850 or permission of instructor. S–U or letter grades by permission of instructor. Lec, disc. T. Tumbar.

This course will cover basic aspects of tissue morphogenesis and homeostasis with emphasis on the biological role of embryonic and adult stem cells in development, and their possible clinical applications. The focus will be placed on mouse and human stem cells. The discussion will be structured around relevant research papers that allow more in-depth analysis of the material taught during lectures.

BIOGD 4500 Vertebrate Development Fall. 3 credits. Prerequisites: BIOGD 2810, and either BIOBM 4320 or BIOGD 3850. S–U or letter grades. M. J. Garcia-Garcia.

This course explores the developmental mechanisms employed by vertebrate organisms. Topics include the detailed analysis of the genetic, molecular, and cellular events underlying development in frogs, fish, mice, and humans. Course readings include original research articles. Students are encouraged to participate in class discussions.

BIOGD 4610 Development and Evolution Spring. 3 credits. Prerequisites: BIOGE 2780, BIOGD 2810, BIOBM 3320 or 3300 or 3350. Recommended: BIOGD 3850. Lec. Offered alternate years; next offered 2010–2011. M. F. Wolfer.

BIOGD 4810 Population Genetics Fall. 4 credits. Prerequisite: BIOGD 2810, BIOGE 2780, or equivalents. Lec, disc. C. F. Aquadro.

Population genetics is the study of the transmission of genetic variation through time and space. This course explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation.

Emphasis is placed on DNA sequence variation and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, personalized medicine, the genetic structure and evolution of natural and domesticated populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 4820 Human Genetics and Society Fall. 4 credits. Limited to 24 students. Prerequisite: biological sciences majors; BIOGD 2810 and BIOBM 3300 or 3350 or 3310 and 3320. Taught occasionally. Check with Dept. of MBG for scheduling. M. Inada.

Presentation of science and technology of human genetics, plus discussion of the ethical, social, and legal implications of recent advances in the field. Topics include assisted reproductive strategies, genetic counseling, genetic screening (pre-implantation, prenatal, pre-symptomatic, carrier, and workplace), therapy for genetic diseases, human cloning, genetics and behavior, forensic uses of genetics and eugenics. Students lead discussions. There is a major writing component.

BIOGD 4825 Molecular Biology of Plant Organelles (also BIOPL 4825) Spring. 3 credits. Prerequisites: BIOPL 4831 or BIOGD 4520 and permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. M. R. Hanson and D. B. Stern.

For description, see BIOPL 4825.

BIOGD 4831 Concepts and Techniques in Plant Molecular Biology (also BIOL/PLPA/PLBR 4831) Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3350, or equivalents. Recommended: BIOGD 3810. Lec. S–U or letter grades. M. Scanlon, M. Hanson, and T. Owens.

For description, see BIOL 4831.

BIOGD 4840 Molecular Evolution Spring. 3 credits. Prerequisites: BIOGD 2810. Lec. D. Barbash.

Explores the various processes by which DNA and protein sequences evolve over time, and how this evolution at the molecular level relates to changes in the morphology, behavior, and physiology of organisms that have occurred over time scales ranging from thousands to billions of years. After developing basic principles the course discusses the evolution and organization of genomes from microbes to higher eukaryotes, including humans, and the relationship between molecular evolution at the sequence level and the evolution of developmental pathways and systems.

BIOGD 4850 Bacterial Genetics (also BIOM/BIOBM 4850) Fall. 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOM 2900 and BIOBM 3500 or 3310 and 3320 or 3330. J. E. Peters.

For description, see BIOM 4850.

BIOGD 4860 Eukaryotic Genetics Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 2810, BIOBM 3300 or 3330 or 3310 and 3320. S–U or letter grades. E. Alani.

Develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed in this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOGD 4870 Human Genomics Fall. 3 credits. Prerequisite: BIOGD 2810. Lec. A. G. Clark.

Applies fundamental concepts of transmission, population, and molecular genetics to the problem of determining the degree to which familial clustering of diseases in humans has a genetic basis. Emphasizes the role of full genome knowledge in expediting this process of gene discovery. Stresses the role of statistical inference in interpreting genomic information. Population genetics, and the central role of understanding variation in the human genome in mediating variation in disease risk, are explored in depth. Methods such as homoygosity mapping, linkage disequilibrium mapping, and admixture mapping are examined. The format is a series of lectures with classroom discussion. Assignments include a series of project sets and a term paper.

BIOGD 4890 Mammalian Embryology (also BIOL/BIOBM 4890) Spring. 3 credits. Prerequisite: introductory biology. Offered alternate years. D. M. Noden.
The course examines how chromosome discrete structural units, the chromosomes. The eukaryotic genome is partitioned into regulatory modules, relate to the functional organization of the genome in the nucleus. Experimental and computational approaches used to address chromosome structure and function are studied.

**BIOGD 6110 Genome Maintenance Mechanisms**

Fall. 1 credit. May be repeated only during first half of semester. Limited to 25 students. Prerequisites: BIOGD 2810, as well as BIOBM 3300, or 3330, or 3310/3320 (or equivalents). S–U or letter grades. R. Weiss. The course focuses on the molecular mechanisms utilized by eukaryotic cells to preserve genomic integrity. Topics to be discussed include endogenous and exogenous sources of mutation, DNA repair pathways, and cell cycle checkpoint mechanisms. Also addressed will be how genome maintenance impacts genome plasticity and evolution, as well as the relationship between genomic instability and disease, especially cancer.

**BIOGD 6120 Overview of Model Genetic Organisms**

Spring, 2nd 6 weeks of semester. 1 credit. Prerequisite: BIOGD 2810 or BIOGD 4000 or permission of instructor. S–U or letter grades. J. Schimenti and staff. Presents the features of various model organisms and their relative merits for conducting various types of genetics/genomics research. Model systems discussed include yeast, Arabidopsis, Drosophila, C. elegans, zebrafish, and mice.

**BIOGD 6130 Genomics and Society**

Spring, weeks 10–13. 1 credit. Prerequisite: BIOGD 2810 or BIOGD 4000 or permission of instructor. S–U or letter grades. Disc. S. Kresovich and S. Tanksley. A multidisciplinary examination of four to six selected topics that relate to the applications of biological insights derived from genomic analysis. Technical, scientific, ethical, political, legal, and/or social aspects of each topic will be considered from various perspectives.

**BIOGD 6200 Evolutionary Genomics of Bacteria**

Spring. 1 credit. M. Stanhope. Comparative genomics of bacteria is a valuable approach to deriving information on pathogenesis, antibiotic resistance, host adaptation, and genome evolution. This course provides an evolutionary perspective on comparative bacterial genomics, focusing in particular on pathogens of human and agricultural importance. The course will include lectures, discussion of relevant scientific literature, and a bioinformatics session.

**BIOGD 6380 Filamentous Fungal Genomics and Development (also PLPA 6380)**

Spring, last four weeks of semester. 1 credit. Prerequisite: BIOGD 2810 or equivalent, or permission of instructor. S–U or letter grades. Lec. Offered alternate years. B. G. Turgeon. For description, see PLPA 6380.

**BIOGD 6820 Fertilization and the Early Embryo**

Spring. 2 credits. Prerequisites: BIOGD 2810; BIOBM 3320 or 3330; and BIOGD 3850 or permission of instructor. Lec. Offered alternate years; next offered 2010–2011. M. F. Weller. We explore the latest molecular/cell/genetic findings about the biology of gametes, fertilization, and early development—and their application to fertility modulation, “cloning,” and stem cells.

**BIOGD 6870 Developmental Genetics**

Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 2810 and 3850 or equivalents. S–U or letter grades. Lec TBA. Offered alternate years; next offered 2010–2011. K. J. Kemphues. Course focuses on methods of genetic analysis of fruitflies, nematodes, mice, and fish to understand mechanisms of development. No text. Lectures and problems from literature.

**BIOGD 6890 Cellular Basis of Development**

Fall and spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S–U grades only. Staff.

**BIOGD 7800 Current Topics in Genetics and Development**

Fall and spring. 1 credit; may be repeated for credit. Limited to 20 students. Primarily for graduate students; priority given to majors in field of genetics. Prerequisite: for undergraduates, written permission of instructor. No auditors. S–U grades only. Staff.

**BIOGD 7810 Problems in Genetics and Development**

Fall. 2 credits. Prerequisite: First-year graduate students in field of genetics and development. Disc TBA. Staff. Introduction to the research literature in selected areas through weekly problem sets and discussions.

**BIOGD 7820 Current Genetics/Development Topics**

Spring. 0–5 or 1 credit for each topic; may be repeated for credit. S–U grades only. Lec and sem on specialized topics. Staff.

**BIOGD 7840 Introduction to Quantitative Analysis**

Fall. 1 credit. Letter grades only. M. L. Goldberg. The goal of this course is to introduce bioinformatic and probability/statistical tools at an intuitive level that will be meaningful to first-year graduate students in Genetics and Development.

**BIOGD 7860 Research Seminar in Genetics and Development**

Fall and spring. 1 credit. Requirement for, and limited to second-year and beyond graduate students in genetics and development. S–U grades only. Staff. Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis.
BIOMS 3310 General Parasitology (also BIOMS 3310)
Spring; 2 credits. Prerequisites: zoology or biology course; any of the following: BIODE 2510, 2640, 2700, 2740, 2780; NS 2750, EAS 1700, BIOG 1101, 1102, 1103, 1104, 1106, 1107, 1108, 1109, 1110; BIOM 2900, or equivalent courses. Letter grades only. D. D. Bowman.
For description, see BIOMS 3310.

BIOMS 3910 Advanced Microbiology Laboratory
Fall; 3 credits. Prerequisites: BIOMS 2900, 2910, and BIOMS 3300 or 3410 or 3530. Priority given to biological sciences students in microbiology program of study. E. R. Angert, J. P. Shapleigh, and S. H. Zinder.
An introduction to advanced experimental methods in microbiology. Students will gain experience with a variety of cutting-edge technologies used to characterize genetic, physiological, and structural aspects of microbes. These skills will be utilized during the isolation and characterization of bacteria isolated from diverse habitats as well as during isolation of mutants of an environmental isolate.

BIOMS 3940 Applied and Food Microbiology (also FDSC 3940)
Fall; 2–3 credits. Prerequisites: BIOMS 2900–2910. C. A. Batt.
For description, see FDSC 3940.

BIOMS 3970 Environmental Microbiology (also CSS 3970)
Spring; 3 credits. Prerequisites: BIOMS 2900. Recommended: BIODE 2610, NRES 3030, or permission of instructor. Offered alternate even-numbered years. E. L. Madsen.
Discusses the biological properties, evolution, and behavior of microorganisms in natural systems in relation to past and present environmental conditions on Earth. Also considers the functional role of microorganisms in ecologically and environmentally significant processes through discussion of specific topics such as nutrient and toxic elemental cycles, transformation of pollutants and waste treatment, environmental biotechnology, and astrobiology.

BIOMS 4040 Pathogenic Bacteriology (also BIOMS 4040)
Spring; 2 or 3 credits; 3 credits with lab. Seniors only. Seminar required for graduate students. Maximum enrollment for seminar portion 15. Prerequisites: BIOMS 2900 and 2910; for undergraduates, permission of instructor. Highly recommended: BIOM 3050. Offered alternate even years. Letter grades only. D. Debbie.
For description, see BIOMS 4040.

BIOMS 4090 Principles of Virology (also BIOMS/PLPA 4090)
Fall; 3 credits. Prerequisites: BIOMS 2900 and 2910. Recommended: BIOMS 3300 or 3410 or 3530. Offered alternate odd-numbered years; next offered 2010–2011. S. H. Zinder.

BIOMS 4140 Prokaryotic Diversity
Spring; 3 credits. Prerequisites: BIOMS 2900 and 2910. Recommended: BIOMS 3300 or 3530 or 3530. Offered alternate odd-numbered years; next offered 2010–2011. S. H. Zinder.
BIOMI 4180 Microbial Ecology  
Spring, 3 credits. Prerequisites: BIOMI 2900 and 2910, or 3970 and permission of instructor, and BIOM 3300 or 3310, or equivalents. Offered alternate even years. J. P. Shapleigh. Understanding the role of microorganisms in natural environments is one of the greatest challenges facing microbiologists. This course introduces current methods to assess community diversity in a variety of ecosystems.

BIOMI 4200 Microbial Genomics  
Spring, 2 credits. Prerequisites: BIOM 2900, BIOGD 2810, BIOBM 3300, or equivalent. Offered alternate odd-numbered years; next offered 2010–2011. J. P. Shapleigh and J. D. Helmann. Genomic information is revolutionizing biology. This course discusses the impact of genomic information on the study of microbial physiology, evolution, and biotechnology. Topics include both techniques (automated DNA sequencing, assembly, annotation, DNA chips) and applications (genome-wide analysis of transcription, functional genomics).

BIOMI 4310 Medical Parasitology (also BIOMS 4310)  
Fall, 2 credits. Prerequisites: zoology or biology course; any of the following: BIOE 2070, 2610, 2630, 2640, 2740, 2780; NS 2750; BIOG 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110, 1110. BIOMI 2900, 3970; EAS 1700 or equivalent course. Letter grades only. D. D. Bowman. For description, see BIOMS 4310.

BIOMI 4480 Symbiotic Associations: Evolution and Ecolgy (also PLPA 4480)  
Spring, 3 credits. Prerequisites: two semesters of introductory biology (BIOG 1101–1102, BIOG 1105–1106, BIOG 1107–1108, or BIOG 1109–1110), and BIOMI 2900 or permission of instructor. Letter grades only. T. E. Pawlowska. For description, see PLPA 4480.

BIOMI 4823 Molecular Plant-Microbe Interactions (also BIOL/PLPA 4823)  
Spring, 1 credit. Prerequisites: BIOGD 2810, BIOBM 3300 or 3310 or 3330, and BIOL 4830 or equivalents. S–U or letter grades. Offered alternate even years. S. C. Wiens. For description, see BIOL 4823.

BIOMI 4850 Bacterial Genetics (also BIOGD/BIOBM 4850)  
Fall, 2 or 3 credits; optional 1 credit for registered students with permission of instructor to review literature. Prerequisite: BIOGD 2810. Recommended: BIOMI 2900 and BIOBM 3300 or 3310 and 3320 or 3330. J. E. Peters. Students gain a detailed understanding of how bacteria maintain and pass on genetic information with a strong focus on the bacterium Escherichia coli. They discover the processes by which bacteria evolve through different mutations and the exchange of genetic information. The course explores how genes are regulated efficiently through negative and positive regulation and by global regulatory mechanisms. Upon completion of the course students should understand the tools used to manipulate bacterial genomes for the understanding of bacteria and other living organisms.

BIOMI 4980 Teaching Experience  
Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

BIOMI 6901 Prokaryotic Biology: Prokaryotic Structure and Function  
Fall, 2 or 3 credits; optional 1 credit for students until post A exam. A. G. Hay. Introduction to the fundamental concepts of bacterial biology including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include bacterial pathogens of both animals and plants.

BIOMI 6903 Prokaryotic Biology: Microbial Physiology/Diversity  
Spring. 2 credits. Prerequisite: BIOMI 2900 or equivalent. D. K. Sogin. Reviews the major energy-conserving modes of metabolism and their distribution among both bacteria and archaea. Topics include phylogenetic analysis, fermentation, respiration, photosynthesis, pathways of carbon and nitrogen fixation, and evolution of the three domains of life.

BIOMI 6904 Prokaryotic Biology: Microbial Genetics  
Spring, 4 weeks/8 lec. 1 credit. J. D. Helmann. Reviews the fundamental concepts of microbial genetics including mutations and their analysis, plasmids, conjugation, transformation, transduction, transposition, recombination, repair, and mutagenesis.

BIOMI 6905 Prokaryotic Biology: Microbial Pathogenesis  
Spring, 4 weeks/8 lec. 1 credit. S. C. Wiens. Introduction to the fundamental concepts of bacterial pathogenesis including the normal flora, pathogen entry and colonization, the production and regulation of toxins, horizontal transfer of pathogenesis determinants, and the roles of both specific and nonspecific host defenses. Examples include microbial pathogens of both animals and plants.

BIOMI 6909 Advanced Topics in Microbiology  
Fall or spring. 1 credit; may be repeated for credit. Prerequisite: graduate standing in microbiology. S–U grades only. E. R. Angert. Reading and presentation by graduate students of current literature in selected areas of modern microbiology.
BIOMI 7960  Current Topics in Microbiology
Fall and spring. 0.5 or 1 credit for each topic; may be repeated for credit. Primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S–U grades only. Lec. Staff. Lectures and seminars on special topics in microbiology.

BIOMI 7970  Scientific Communication Skills
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology for first two semesters; third semester optional. S–U grades only. Staff. The ability to communicate effectively is essential for success as a scientist. The primary goal of this course is to provide students with an opportunity to develop self-confidence and refine their formal oral presentation skills. Students are asked to present topical seminars that are critically evaluated by the instructor. Feedback for improving the presentation and peer evaluations are emphasized.

BIOMI 7980  Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Requirement for graduate students in graduate field of microbiology. S–U grades only. Staff. All graduate students in the field of microbiology are required to attend and present a seminar concerning their research at least once each year.

BIOMI 7990  Microbiology Seminar
Fall and spring. Requirement for all graduate students in graduate field of microbiology. Open to all who are interested. Staff.

Principles of Biogeochemistry (BIOEE 6680)

MEDICAL SCIENCE (BIOMS)
[BIOMS 2140  The Biological Basis of Sex Differences (also BSOC 2141, BIOAP/FGSS 2140)
Fall. 5 credits. Prerequisite: one year introductory biology. S–U or letter grades. Offered alternate years; next offered 2010–2011. J. E. Fortune. For description, see BIOAP 2140.]

BIOMS 3110  Introductory Animal Physiology (also BIOAP 3110, VTBMS 3460)
Fall. 5 credits. Prerequisite: one year college biology, chemistry, and mathematics. Recommended: previous or concurrent physics course. S–U or letter grades by permission of instructor. Evening prelms. E. R. Loew. For description, see BIOAP 3110.

BIOMS 3150  Basic Immunology
Fall. 5 credits. Highly recommended: basic courses in microbiology, genetics, and biochemistry. S–U or letter grades. J. A. Appleton. Survey of immunology, with emphasis on the cellular and molecular bases of the immune response.

BIOMS 3160  Cellular Physiology (also BIOAP 3160)
Spring. 3 credits. Pre- or corequisite: BIOBM 3900 or 3510 and 3520 or 3530. Letter grades only. Evening prelms. A. Quaroni. For description, see BIOAP 3160.

BIOMS 3190  Animal Physiology Experimentation (also BIOAP 3190)
Fall. 4 credits. Prerequisite: BIOAP 3110 or permission of instructor. For pre-med, pre-vet juniors and seniors, and graduate students interested in biomedical science. Letter grades only. E. R. Loew, N. A. Lorr, and staff. For description, see BIOAP 3190.

BIOMS 3310  General Parasitology (also BIOMS 3310)
Spring. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2610, 2640, 2670, 270x, 2780; NS 2750; BIOG 1101, 1102, 1103, 1104, 1106, 1107, 1108, 1109, 1110; BIOI 2900, or equivalent courses. Letter grades only. D. D. Bowman. This course is an introduction to the basic animal parasites, stressing systematics, taxonomy, general biology, ecological interactions, and behavior of non-medically important groups. Introduces the major animal parasite groups: protozoan, nematode, platyhelminth, acanthocephalan, annelid, and arthropod.

BIOMS 4040  Pathogenic Bacteriology (also BIOI 4040)
Spring. 2 or 3 credits; 3 credits with lec and sem. Seminar required for seminar portion 15. Prerequisites: BIOI 2900 and 2910. Letter grades only. D. P. Debrie. Course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. Emphasizes infection and disease pathogenesis. Topics include disease causality; interactions of host, pathogen, and environment, including immunity to bacteria; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular levels.

BIOMS 4090  Principles of Virology (also BIOMI/PLPA 4090)
Fall. 3 credits. Prerequisites: BIOM 2900 and 2910 or permission of instructor. Recommended: BIOBM 3900–3920, 4320. S. Lazarowitz, N. Osterrieder, and J. Parker. Covers the principles of virology, focusing mainly on animal viruses but also including plant viruses and bacteriophage. Topics include the classification of viruses, virus entry, genome replication and assembly, and virus pathogenesis. Particular emphasis is placed on virus–host cell interactions and common features between different viral families.

BIOMS 4130  Histology: The Biology of the Tissues (also BIOAP 4130)
Spring. 4 credits. Prerequisite: one year introductory biology. Recommended: BIOBM 3310 or 3510, or equivalent. S–U or letter grades. S. Suarez and L. Mizer. For description, see BIOAP 4130.

BIOMS 4160  Cell Physiology and Genomics Laboratory (also BIOAP 4160)
Spring. 4 credits. Limited to 24 students. Pre- or corequisite: BIOAP 4160 or BIOBM 4520 or permission of instructor. For pre-med, pre-vet, juniors, seniors, and graduate students interested in biomedical science. Letter grades only. H.–H. Chuang, N. A. Lorr, and staff. For description, see BIOAP 4160.

BIOMS 4310  Medical Parasitology (also BIOMS 4310)
Fall. 2 credits. Prerequisites: zoology or biology course; any of the following: BIOEE 2070, 2610, 2630, 2640, 2670, 2740, 2780; NS 2750; BIOG 1101, 1102, 1103, 1104, 1106, 1107, 1108, 1109, 1110; BIOI 2900, 3970; EAS 1700 or equivalent course. Letter grades only. D. D. Bowman. Systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitisms.

BIOMS 4580  Mammalian Physiology (also BIOAP 4580)
Spring. 3 credits. Auditors allowed. Prerequisite: BIOAP 3110 or equivalent. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science. Letter grades only. Evening prelms. K. W. Beyeinbach. For description, see BIOAP 4580.

BIOMS 4750  Mechanisms Underlying Mammalian Developmental Defects (also BIOAP/NS 4750)
Spring. 3 credits. Prerequisites: BIOBM 3500, 3510–3520, or 3530 (may be taken concurrently). S–U or letter grades. Offered alternate years. D. Noden and P. Stover. For description, see BIOAP 4750.
BIOMS 4890 Mammalian Embryology (also BIOAP/BIOGD 4890)
Spring. 3 credits. Prerequisite: introductory biology. S–U or letter grades. Evening prelms. Offered alternate years. D. M. Noden. For description, see BIOAP 4890.

BIOMS 7050 Advanced Immunology (also VETMI 7050)
Spring. 3 credits. Prerequisite: basic immunology course or permission of instructor. Letter grades only. Offered even-numbered years. J. Bi Hack. For description, see VETMI 7050.

BIOMS 7190 Immunology of Infectious Diseases (also VETMI 7190)
Spring. 2 credits. Prerequisite: basic immunology course or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2009–2011. M. Byneoe and staff. For description, see VETMI 7190.

NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 1110 Brain Mind and Behavior (also PSYCH/COGST 1110)
Spring. 5 credits. Prerequisite: none. Intended for freshmen and sophomores in humanities and social sciences; not open to juniors and seniors. Not recommended for psychology majors; biology majors may not use for credit toward major. Letter grades only. Planned M W F 9:05. E. Adkins-Regan and R. R. Hoy. For description, see COGST 1110.

BIONB 1220 FWS: Special Topics in Neurobiology and Behavior
Fall and spring. 3 credits. Prerequisite: permission of Knight Writing Program; freshman standing. Letter grades only. Staff. For description, see John S. Knight Institute for Writing in the Disciplines. First-Year Writing Seminars.

BIONB 1250 Biology Seminar
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U or letter grades. C. L. Leifer and staff.
A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

BIONB 2210 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits; 4 credits with one disc per week; 5 credits with two disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors. May be taken independently of BIONB 2220. S–U or letter grades. Planned M W F 11:15. Next offered 2010–2011. E. Adkins-Regan. For description, see PSYCH 3220.

BIONB 2220 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3, 4, or 5 credits; 4 credits with one disc per week and participation in Writing in the Majors program; 4- or 5-credit option required of students in neurobiology and behavior program of study. Limited to 15 students per 4-credit disc. Priority given to students studying neurobiology and behavior. Limited to 12 students in 5-credit option (students may not preregister for 5-credit option; interested students complete application form on first day of class). Not open to freshmen. Prerequisite: one year introductory biology for majors and one year of chemistry. May be taken independently of BIONB 2210. S–U or letter grades. Planned M W F 12:20. disc TBA. Staff.
General introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 3220 Hormones and Behavior (also PSYCH 3220/7220)
Fall. 3 credits. Limited to 60 students. Prerequisites: junior or senior standing; any one of the following: PSYCH 2230 or BIONB 2210 or 2220 or one year introductory biology plus psychology course. Two lec plus sec in which students read and discuss original papers in the field, give oral presentation, and write term paper. Letter grades only. Graduate students, see PSYCH 7220. Planned M W F 11:15. Next offered 2010–2011. E. Adkins-Regan. For description, see PSYCH 3220.

BIONB 3230 Methods in Animal Behavior
Hands-on lab/field course in methods for studying animal behavior. Topics include sound recording, radar, radio-tracking, mapping, capture/marking methods, and behavioral statistics.

BIONB 3240 Biopsychology Laboratory (also PSYCH 3240)
Fall. 4 credits. Limited to 20 students. Prerequisites: junior or senior standing; PSYCH 2230 or BIONB 2210 or 2220, and permission of instructor. Planned T R 1:25–4:25. Letter grades only. T. J. DeVogol.
For description, see PSYCH 3240.

BIONB 3250 Insect Behavior (also ENTOM 3250)
For description, see ENTOM 3250.

BIONB 3280 Biopsychology of Learning and Memory (also PSYCH 3320/6320)
Spring. 3 credits. Limited to 65 students. Prerequisites: one year of biology and either a biopsychology course or BIONB 2220. S–U or letter grades. Graduate students, see PSYCH 6320. Planned M W F 11:15. T. J. DeVogol.
For description, see PSYCH 3320.

BIONB 3290 Ecology of Animal Behavior (also BIOSM 3290)
Summer. 4 credits. Limited to 18 students. Prerequisite: one year introductory college biology. Recommended: ecology, psychology, or behavior course. S–U or letter grades. Special two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details and an application, contact SML office. G14 Smissen Hall. Dailylec, lab, and fieldwork for two weeks. SML faculty.
For description, see BIOSM 3290.

BIONB 3300 Introduction to Computational Neuroscience (also PSYCH/COGST/BME 3300)
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Prerequisites: BIONB 2220 or permission of instructor. S–U or letter grades. Offered alternate years; next offered 2010–2011. Planned M W 2:55–4:10, lab TBA. C. Linster.
Covers the basic ideas and techniques involved in computational neuroscience. Surveys neural dynamics of networks of cells, neural coding, learning, memory models, sensory coding.

BIONB 3310 Human Social Behavior and Evolution
Fall. 3 credits. Limited to 100 students. Prerequisite: BIONB 2210 or permission of instructor. S–U or letter grades. Planned M W 2:55–4:10. P. Barclay.
Lecture-based course drawing on research in evolutionary biology and animal behavior to investigate various aspects of human social behavior. Findings are presented from areas such as evolutionary psychology, anthropology, human behavioral ecology, and evolutionary game theory. Topics may vary slightly from year to year, but include mating, cooperation (with kin and nonkins), conflict and aggression, parental behavior, costly signaling, and culture.
Governing such behaviors as parental care, neurotransmitters, hormones and receptors, patterns, and their relationship to social, underlying innate and learned behavior, values, and beliefs.

**BIONB 3400 Animal Orientation and Navigation**
Spring. 2 credits. Prerequisites: BIONB 2210 or NERBIOE 2690. Offered alternate years, next offered 2011–2012. K. Adler. In-depth coverage of the topic, including sensory cues and receptors, physiological basis, ecological context, and evolutionary aspects, with emphasis on current research.

**BIONB 3690 Chemical Ecology (also BIOEES 3690)**
Spring. 3 credits. Prerequisites: one semester of introductory biology for majors or nonmajors and one semester of introductory chemistry for majors or nonmajors or equivalents, or permission of instructor. S–U or letter grades. Planned M W F 11:15. J. Thaler, A. Kessler, A. Agrawal, and R. Raguso. For description, see BIOEE 3690.

**BIONB 3920 Drugs and the Brain**
Fall. 4 credits. Limited to 90 students. Prerequisites: BIONB 2220 or equivalent course in neurobiology by permission of instructor. Recommended: knowledge of biochemistry. S–U or letter grades. Planned T R 10:10–11:25, disc TBA. Offered alternate years. R. M. Harris-Warrick. Introduction to neuropharmacology, with an emphasis on the neural mechanisms of psychoactive drugs. Topics include a brief introduction to neuropharmacology and a discussion of the major neurotransmitter families. The rest of the course covers the major psychoactive drugs, including cocaine, heroin, psychedelics, marijuana, and alcohol, as well as pharmaceuticals for the treatment of anxiety, schizophrenia, and depression. Includes a term paper in the form of a grant proposal to study a current problem in neuropharmacology.

**BIONB 3940 Circadian Rhythms (also BIOGID/ENTOM/PLPA 3940)**
Fall. 2 or 3 credits (for optional lab sec see PLPA 3941). Prerequisites: 2000-level biology course. S–U or letter grades. Planned T R 10:10–11; additional lab R 1:25–4:25 for 3-cr. option. K. Lee. For description, see PLPA 3940.

**BIONB 3960 Introduction to Sensory Systems (also PSYCH 3960/6960)**
Spring. 4 credits. Limited to 25 students. Prerequisites: introductory biology or biopsychology, plus second course in behavior, biopsychology, cognitive science, neuroscience, or perception; knowledge of elementary physics, chemistry, and behavior. S–U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2010–2011. B. P. Halpern. For description, see PSYCH 3960.

**BIONB 4130 Molecules of Social Behavior and Emotion**
Spring. 3 credits. Limited to 25 students. Prerequisite: permission of instructor. Letter grades only. Planned T R 10:10–11:25. Offered alternate years. D. P. McCobb. Active-learning course with specific topics to be determined by students. Focuses on molecular, neural, and endocrine mechanisms underlying innate and learned behavior patterns, and their relationship to social, ecological, and evolutionary context. Neurotransmitters and receptors governing such behaviors as parental care, territoriality, cooperation, courtship, and stress responses are examples of topics of interest. Format includes library research, oral and written presentations, teamwork, and peer review.

**BIONB 4200 Topics in Neurobiology and Behavior**
Fall and spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S–U or letter grades. Staff. Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. See department office (W363 Mudd Hall) for offerings.

**BIONB 4210 Topics in Neurobiology and Behavior: Darwinian Medicine Seminar**
Summer, 6-week session. 3 credits. Prerequisites: BIONB 2210, S–U or letter grades. Planned M–F 3–4:15. Next offered summer 2011. J. Shellman Sherman. We explore how and why a Darwinian approach to medicine can provide us with important insights and a more complete understanding of health and disease than that offered solely by a traditional approach to medicine.

**BIONB 4215 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 4310/6310)**
Fall. 3 or 4 credits. 4-credit option involves term paper or creation of relevant web site. Limited to 35 students. Prerequisites: introductory course in biology or psychology, plus second course in perception, neuroscience, cognitive science, or biopsychology. S–U or letter grades. Planned T R 10:10–11:25. B. P. Halpern. For description, see PSYCH 4310.

**BIONB 4220 Modeling Behavioral Evolution**
Fall. 4 credits. Limited to 25 students. Prerequisites: BIONB 2210, one year of calculus, course in probability or statistics, and permission of instructor; advanced undergraduates and graduate students. S–U or letter grades. Planned T R 2:55–4:10: computer lab TBA. Offered alternate years. H. K. Reeve. Intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to critically assess recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

**BIONB 4230 Cognitive Neuroscience (also PSYCH 4250/6250)**
Fall. 4 credits. Limited to 20 students. Prerequisites: introductory biology; biopsychology or neuroscience (e.g., PSYCH 2220 or BIONB 2210); and introductory course in perception, cognition, or language (PSYCH 1200, 2090, 2140, or 2150 essential). S–U or letter grades. Graduate students, see PSYCH 6250. Planned M W F 9:05. One lab in sheep brain dissection. Offered alternate years; next offered 2010–2011. B. L. Finlay. For description, see PSYCH 4250.

**BIONB 4240 Neuroethology (also PSYCH 4240)**
Fall. 4 credits. Limited to 50 students. Prerequisites: BIONB 2220 or equivalent permission of instructor. S–U or letter grades. Planned M W F 10:10: disc TBA. Offered alternate years. C. D. Hopkins. Neuroethologists take a comparative and evolutionary approach to study the nervous system. They ask, how do brains of animals compare and how did they come about through the process of evolution? How are neural circuits adapted to species-typical behavior? What is the hope and interest in the study of a large diversity of animals, compared to a specialized look at a few mammalian species? Can we hope to understand how animals with specialized behaviors have specialized nervous systems? What is the sensory world of a real animal and how does it vary from species to species? These and other questions derive this introductory survey of neuroethology, including exotic senses, amazing motor programs, surprising integration.

**BIONB 4250 Molecular Neurophysiology**
Fall. 3 credits. Limited to 20 students. Prerequisites: BIONB 2220 or permission of instructor. S–U or letter grades. Planned T R 2:55–4:10. Offered alternate years. D. P. McCobb. Focuses on ion channels, the primary proteins generating cellular electrical signals in nerve cells and other excitable cells (e.g., muscle, heart, glands). Reviews the latest electrophysiological and molecular genetic experiments. Diversity of electrophysiology deriving from channel structure and expression patterns is considered in the contexts of behavior and behavioral plasticity (learning), neural development, and channel evolution. Format includes written and oral presentations, review of literature in selected areas, and proposing new experiments.

**BIONB 4260 Animal Communication**
Spring. 4 credits. Limited to 50 students. Prerequisites: BIONB 2210. Letter grades only. Planned T R 2:55–4:10; disc TBA. Offered alternate years. S. L. Vehrencamp. Communication is the “glue” that holds societies together. This course examines how and why animals communicate. Topics include the role of the environment in shaping animal signals, whether animal signals matter to each other, why some bird songs are simple and others complex, and what kinds of signals might be exchanged between species.

**BIONB 4270 Darwinian Medicine**
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 2210 and BIOEES 2610 or 2780, and permission of instructor. Letter grades only. Planned T R 2:50–4:25. Offered alternate years; next offered 2010–2011. P. W. Sherman. Writing-intensive advanced course for upper-division students. Lectures, discussions, student presentations examine the role of health and disease from an evolutionary perspective.
BIONB 4280 Clinical Neurobiology
Fall; 3 credits. Limited to 20 students. 
Prerequisites: two courses from BIONB 2220, BIOGD 2810, BIOBM 3300 or 3310; co-registration in one of the two is acceptable by permission of instructor. Open to advanced undergraduates. S–U or letter grades. Planned M W 2:30–4:25. Offered alternate years; next offered 2010–2011. R. Booker.

This course focuses on the etiology, epidemiology, cellular and molecular basis, and strategies for treating a number of neurodegenerative diseases (e.g., Alzheimer’s disease, depression, and ADHD).

BIONB 4290 Olfaction and Taste: Structure and Function (also PSYCH 4290)
Spring; 3 or 4 credits; 4-credit option requires term paper. Priority given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 6290. Prerequisite: one 3000-level course in biopsychology or equivalent. S–U or letter grades. Planned T R 10:10–11:25. Offered alternate years; next offered 2010–2011. B. P. Halpern. For description, see PSYCH 4290.

BIONB 4300 Experimental Molecular Neurobiology

BIONB 4310 Genes and Behavior
Spring; 3 credits. Limited to 50 students. Prerequisite: BIONB 2220. S–U or letter grades. Planned T R 2:55–4:10. Offered alternate years; next offered 2010–2011. J. R. Fitch. Our genes influence how we behave. This lecture course explores the current understanding of how genes influence the behavior of a variety of animals, including humans. This will include the genetic basis of hearing, movement, learning, memory, intelligence, sexual behavior, aggression, sleep, and diseases of behavior. The focus is on the unprecedented insight that modern molecular and genetic tools are providing into the genetic basis of behavior.

BIONB 4320 Genetics and Evolution of Behavior
Spring; 3 credits. Limited to 20 students. Prerequisite: BIONB 2210. Letter grades only. Planned T R 2:55–4:10. Offered alternate years; next offered 2011–2012. K. Shaw. The astounding diversity of animal behaviors provides an endless source of fascination. This multidisciplinary course examines our current understanding of the evolution of such behavior, focusing on how and why behaviors evolve.

BIONB 4330 Consciousness and Free Will (also COGST 4310, PSYCH 5310)
Spring; 4 credits. Limited to 15 students. Prerequisite: PSYCH 2140. Planned M 2–4; T 2:25. S. Edelman. For description, see COGST 4310.

BIONB 4340 Advanced Behavioral Ecology
Spring; 8 weeks; 3 credits. Limited to 25 students. Prerequisites: BIONB 2210, BIOEE 2610 or 2780; permission of instructor. S–U or letter grades. Planned M W 12:20–2:15; disc F 12:20–2:15. Offered alternate years; next offered 2010–2011. W. D. Koening. An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, altruism, kin recognition, and conflict and cooperation in animal societies.

BIONB 4350 Mechanisms of Animal Behavior
Spring; 4 credits. Limited to 30 students. Prerequisites: BIONB 2210. Letter grades only. Planned M W F 2:30–3:20; lab R 2:30–4:15. Offered alternate years; next offered 2010–2011. T. D. Seeley. Examination of the mechanisms underlying the adaptive behaviors of animals as revealed by whole-organism studies. After reviewing the sensory abilities of animals, we will see at how they find their way, communicate, learn and think, find food, choose mates, build nests, and live in societies.

BIONB 4440 Neuro Computation (also PSYCH 4440)
Spring; 3 credits. Limited to 10 students. Prerequisite: BIONB 2220 or BIONB 2220 required or permission of instructor. Recommended: BIONB 3300 or equivalent experience. S–U or letter grades. Planned T R 2:30–3:20; lab T R 3:35–4:25. Offered alternate years; next offered 2010–2011. T. A. Cleland. For description, see PSYCH 4440.

BIONB 4460 Plant Behavior—Induced Plant Responses to Biotic Stresses, Lectures (also BIOEE 4460)
Spring; 3 credits. Prerequisite: BIOEE 2610 or permission of instructor. S–U or letter grades. Planned M W F 2:30–3:20. A. Kessler and R. Raguso. For description, see BIOEE 4460.

BIONB 4461 Plant Behavior—Induced Plant Responses to Biotic Stresses, Laboratory (also BIOEE 4461)
Spring; 1 credit. Limited to 12 students. Pre- or corequisite: BIOEE 4460 or BIONB 4460. S–U or letter grades. Planned R 2:30–4:25. A. Kessler and R. Raguso. For description, see BIOEE 4461.

BIONB 4470 Biophysical Methods (also AEP/PHYS 4700)
Fall; 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: knowledge of cellular biology. Letter grades only. Planned M W 2:45–4:15. M. Lindau. For description, see AEP 4700.

BIONB 4910 Principles of Neurophysiology (also BME 4910)
Spring; 4 credits. Limited to 20 students. Prerequisite: BIONB 2220 or written permission of instructor. S–U or letter grades for students outside the Neurobiology and Behavior concentration and graduate students, by permission of instructor. Planned M W 10:10; lab planned M or T 12:20–4:25. B. R. Johnson.

Laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology including computer acquisition and analysis of laboratory results. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and to discuss primary research papers. Extracellular and intracellular recording and voltage clamp techniques explore motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. Invertebrate preparations are used as model systems. See http://courses.cit.cornell.edu/bionb491/index.html.

BIONB 4920 Sensory Function (also PSYCH 4920/6920)
Spring; 4 credits. Limited to 25 students. Prerequisite: 3000-level course in biopsychology, or BIONB 2220, or BIOAP 3110, or equivalent; knowledge of elementary physics, chemistry, and behavior. S–U or letter grades. Graduate students, see PSYCH 6920. Planned M W F 10:10. Offered alternate years; next offered 2011–2012. B. P. Halpern. For description, see PSYCH 4920.

BIONB 4930 Developmental Neurobiology
Fall; 3 credits. Limited to 20 students. Prerequisite: BIONB 2220 or permission of instructor. S–U or letter grades by permission of instructor. Planned M W 2:55–4:10. Offered alternate years. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BIONB 4940 Brain Evolution and Behavior
Fall; 3 credits. Limited to 50 students. Intended for junior, senior, and graduate students. Prerequisite: BIONB 2220 or equivalent. S–U or letter grades. Offered alternate years; next offered 2010–2011. A. H. Bass.

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors.

BIONB 4950 Molecular and Genetic Approaches to Neuroscience
Fall; 3 credits. Limited to 25 students. Prerequisites: junior, senior, or graduate standing; BIONB 2220 and BIOBM 3300 or 3320. Letter grades only. Planned T R 2:55–4:10. Offered alternate years; next offered 2010–2011. D. L. Deitcher. Focuses on how molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine research articles.

BIONB 4960 Bioacoustic Signals in Animals and Man
Fall; 3 credits. Limited to 12 students. Prerequisites: junior, senior, or graduate standing; one year introductory biology [PHYS 1101–1102 or 2207–2208], and permission of instructor. S–U or letter grades. Planned M W 9:05; lab R 3–5. Offered alternate years; next offered 2010–2011. C. W. Clark and R. R. Hoy.
Teaches students about animal acoustic signaling by introducing them to various animal acoustic systems.

**BIONB 4980 Teaching Experience**  
Fall and spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

**BIONB 7200 Advanced Topics in Neurobiology and Behavior**  
Fall and spring. Variable credit; may be repeated for credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades. Staff.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. See department office (W363 Mudd Hall) for offerings.

**BIONB 7201 Research Design in the Study of Animal Social Behavior**  
Fall and spring. 1 credit; may be repeated for credit. Graduate students only: S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

**BIONB 7202 Current Topics in Neuroethology**  
Fall and spring. 1 credit; may be repeated for credit. Graduate students only: S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

**BIONB 7203 Research Design in Cellular and Molecular Neurobiology**  
Fall and spring. 1 credit; may be repeated for credit. Graduate students only: S–U grades only. Staff.

A weekly journal club–style discussion. Graduate students may be expected to present a summary of their research or a summary of research in the literature related to their thesis once per year.

**BIONB 7210 Introductory Graduate Survey in Neurobiology and Behavior**  
Fall and spring. 2 credits. Requirement for graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 2210 and 2220 required. S–U grades only. Planned W 4:30–6:00. J. R. Fetcho and staff.

A year-long, graduate-level seminar with presentations from lecturers in BIONB 2210 and 2220. Discussions of current research in the area of neurobiology or behavior that have been presented in the lecture class. A lab project and/or a writing component each week could be assigned to ensure engagement with the material.

**Related Courses in Other Departments**

- OTS Undergraduate Semester Abroad Programs
- Shoals Marine Laboratory Program
- Spider Biology: Life on a Silken Thread (ENTOM 2150)

**PLANT BIOLOGY (BIOPL)**

**BIOPL 1120 Issues in Social Biology: from Diet to Diseases, DNA to Deforestation**  
Spring or summer, 3-week session. 3 credits. S–U or letter grades. D. J. Davies.

An analysis of current issues of biological relevance and the biological science behind these issues. Topics will include issues such as food and nutrition, antioxidants, organic produce, disease prevention, athletic enhancers, genetic testing, cancer, stem cells and animal cloning, genetically modified crops, bacteria and antibiotics, viruses, risk, statistics and epidemiology, photosynthesis and global warming, extinction and overpopulation, invasive species, resource over-utilization. The topics will vary according to current issues.

**BIOPL 1250 Biology Seminar**  
Fall and spring. 1 credit. Prerequisite: first-year standing or permission of instructor. S–U grades only. Staff.

A first-year seminar designed for students with Biology AP credit or a strong interest in research. Students will interact with faculty while learning to read and evaluate scientific publications on current biological topics. Multiple topics and sections will be offered each semester.

**BIOPL 2120 Natural Remedies in Ethnohealth**  
Fall. 2 credits. Prerequisites: course work in biology and sociology and health or related area, or permission of instructor. E. Rodriguez.

This course is an introduction to two aspects of ethnomedicine/ethnohealth: (1) the study of biology of health disparities like diabetes, cancer, and infectious diseases in Latinos/as, African Americans and American Indians in the United States, (2) and the botany, culture, and medical anthropology of plants and other natural remedies used by ancient cultures in the Americas and also currently used throughout the United States and the Americas.

**BIOPL 2400 Green World/Blue Planet**  
Fall or summer, 6-week session. 3 credits.

S–U or letter grades. M. G. Brand. Focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

**BIOPL 2410 Introductory Botany**  
Fall. 3 credits. Lec., lab, K. J. Nield. Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

**BIOPL 2420 Plant Function and Growth Lectures**  
Spring. 3 credits. Primarily for undergraduates in agricultural sciences but also for any biological sciences students wanting to know about plant function, suitable as second-level course for nonmajors to satisfy biology distribution requirement. Prerequisites: one year introductory biology and/or BIOPL 2410. Corequisite for plant science undergraduates (and highly recommended for other science majors): BIOPL 2421. Recommended: one year introductory chemistry. May not be taken for credit after BIOPL 3420 except by written permission of instructor. S–U or letter grades. Evening prelms. P. J. Davies.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake; transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress, tissue culture; and genetic engineering of plants.
[BIOPL 2421] Plant Function and Growth, Laboratory
Spring. 2 credits. Limited to 14 students per sec. Corequisite: BIOPL 2420. May not be taken for credit after BIOPL 3440. Disc and lab students must take lab and disc on same day. T. Silva.
Experiments exemplify concepts covered in BIOPL 2420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level.

[BIOPL 2430] Taxonomy of Cultivated Plants (also HORT 2430)
Fall. 4 credits. Prerequisite: one year introductory biology or written permission of instructor. May not be taken for credit after BIOPL 2460. Lec, lab. Offered alternate years; next offered 2010–2011. M. A. Luckow.
Study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

[BIOPL 2440] Plant Biology
Summer, six-week session. 3 credits. Limited to 24 students. Lec, lab. T. Silva.
Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas available for study. Those who lack college-level biology are expected to work closely with the instructor on supplemental instructional materials.

[BIOPL 2470] Ethnobiology

[BIOPL 2480] Vascular Plant Systematics
Spring. 4 credits. Prerequisite: introductory course in biology or botany or permission of instructor. May not be taken for credit after BIOPL 2430. S–U or letter grades. Lec, lab. Offered alternate years. J. I. Davis.
Introduction to the classification of vascular plants, with the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory presents an overview of vascular plant diversity, with particular attention to the flowering plants.

Biological subjects presented in Hollywood films. Lecture topics include the scientific method, Darwinism, development, paleobiology, animal cloning, genome sequencing, forensic DNA, artificial intelligence, eugenics, and epidemiology as backdrops to discussions of their presentation in selected films. Themes: Genetics/Genomics; Evolution; Development; Epidemiology; Physical Anthropology; and Genetic Engineering. Does not fulfill any requirement of the biology major.

[BIOPL 3420] Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: one year introductory biology. Corequisite: BIOPL 3440 or written permission of instructor. May not be taken for credit after BIOPL 2420 unless obtained from instructor. Lec. T. G. Owens.
Integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant-water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

[BIOPL 3421] Plant Physiology, Laboratory
Spring. 2 credits. Corequisite: BIOPL 3420. May not be taken for credit after BIOPL 2440. Similar to BIOPL 2440 but at more advanced level. Lab, disc. T. Silva.
Experiments exemplify concepts covered in BIOPL 3420 and offer experience in a variety of biological and biochemical techniques, from the cellular to whole plant level, with emphasis on experimental design.

[BIOPL 3430] Molecular Biology and Genetic Engineering of Plants
Spring. 2 credits. Prerequisite: one year general biology or permission of instructor. S–U or letter grades. Lec. M. E. Nasrallah.
Introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. Emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is directed toward undergraduates who wish to become familiar with the theory and practice of plant biotechnology.

[BIOPL 3431] Laboratory in Molecular Biology and Genetic Engineering of Plants
Spring. 2 credits. Limited to 24 students. Prerequisite: BIOPL 3430 or permission of instructor. Recommended: concurrent enrollment in BIOPL 3430. S–U or letter grades. Lec. M. E. Nasrallah.
Companion to BIOPL 3430 with laboratory activities that focus on the practice of plant biotechnology. Students transfer genes to plants by a variety of methods and analyze their expression in the host genome by use of reporter gene assays and by the preparation and analysis of nucleic acids.

[BIOPL 3450] Plant Anatomy
Fall. 4 credits. Limited to 15 students. Prerequisite: introductory course in biology or botany or permission of instructor. May not be taken for credit after BIOPL 3470. Lec, lab. A. Gandolfo.
Descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

[BIOPL 3480] The Healing Forest
Spring. 2 credits. Prerequisites: introductory biology or plant biology or permission of instructor. Lec/disc. Offered alternate years. Staff.

[BIOPL 3590] Biology of Grasses
Spring 2 credits. Prerequisite: one year introductory biology or course in plant systematics or permission of instructor. S–U or letter grades. Lec. Lab. Offered alternate years; next offered 2010–2011. J. J. Davis.
Systematics and related aspects of the biology of the graminoid plant families (grasses, sedges, and rushes), with the principal emphasis on grasses. Major topics include phylogenetics, taxonomy, physiology, reproductive biology, speciation, and biogeography. The roles of graminoid plants in natural and human-disturbed environments are discussed, as are the origins of cultivated species.

[BIOPL 4010] Introduction to Scanning Electron Microscopy

[BIOPL 4030] Transmission Electron Microscopy for Biologists

[BIOPL 4040] Crop Evolution, Domestication and Diversity (also PLBR 4040)
Fall. 2 credits. Prerequisites: BIOGD 2810 or PLBR 2250 or permission of instructor. S–U or letter grades. Lec. S. Kresovich.
For description, see PLBR 4040.

[BIOPL 4220] Plant Development
Fall. 2 credits. Lec. Prerequisites: course work in molecular biology (e.g., BIOBM 3300, 3310/5320) or 3330, and genetics (e.g., BIOC 2810). Prerequisite: permission of instructor. S–U or letter grades. L. Hua.
Introduction to plant development, studying the mechanisms of morphogenesis and cell fate determination at the organismal, cellular, and molecular levels.

[BIOPL 4400] Phylogenetic Systematics (also ENT 4400)
Spring. 4 credits. Limited to 24 students. Prerequisite: introductory biology or permission of instructor. Lec. Lab. Offered alternate years; next offered 2010–2011. K. N. Nixon.
Basic and advanced theory and methods of phylogenetic analysis. Introduces students to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics include applications of phylogenetic methods to biogeography and evolutionary studies.

[BIOPL 4420] Current Topics in Ethnobiology
Fall. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S–U or letter grades. Lec/disc. Offered alternate years. Staff.
BIOL 4430 Topics and Research Methods in Systematics
Fall or spring. 1–2 credits; 1 credit per sec. Prerequisite: written permission of instructor. S–U or letter grades.
K. J. Niklas and W. L. Crepet. Series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taken every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

BIOL 4440 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: one year introductory biology and permission of instructor. Lec, lab. R. O. Wayne. Uses evidence from microscopy, physiology, biochemistry, and molecular biology to try to unravel the mystery of the living cell. Studies the dynamics of protoplasm, membranes, and the various organelles. The mechanisms of cell growth and division, and the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 4450 History of Systematic Botany
Fall. 3 credits. S–U or letter grades. Lec. Offered alternate years. J. Reveal. An historical overview from early man to the present day of systematic botany concentrating on nomenclature and classification with an emphasis of botanical explorations and their impact on plant taxonomy.

BIOL 4470 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOE 2780 or BIOGD 2810 or BIOBM 3300, or BIOBM 3520, or written permission of instructor. Lec. Offered alternate years. J. J. Doyle. Theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

BIOL 4480 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 2410 or equivalent, or permission of instructor. Lec, lab. Offered alternate years. K. J. Niklas and W. L. Crepet. Introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasizes plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOL 4490 Green Signals and Triggers—The Plant Hormones (also HORT 4490)
Spring. 2 credits. Prerequisite: one year introductory biology and plant physiology (BIOL 2420 or 3420) or permission of instructor. S–U or letter grades. Offered alternate years. P. J. Davies. Study of plant hormones and how they regulate plant growth and development. Topics include the discovery, role in growth and development, mode of action, and practical uses of the plant hormones auxin, gibberellins, cytokinins, abscisic acid, ethylene, and brassinosteroids.

BIOL 4500 Light and Video Microscopy for Biologists
Fall. 3 credits. Limited to 12 students. Prerequisites: one year introductory biology and permission of instructor. Lec, lab. R. O. Wayne. Students learn the relationship between reality and the image using philosophy, mathematics, and physical theory. Next they apply these tools theoretically and in practice to understand and become experts at image formation and analysis using brightfield, darkfield, phase-contract, fluorescence, polarization, interference, differential interference, and modulation contrast microscopes. They build upon our knowledge and experience to understand how analog image processors and digital image processors can influence, enhance, and analyze the images gathered by the microscope. Last they learn about many other kinds of microscopes, including confocal, near field, x-ray, acoustic, nuclear magnetic resonance, infrared, centrifuge, atomic force, and scanning tunneling microscopes.

BIOL 4520 Systematics of Tropical Plants
Fall. 3 credits. Prerequisite: BIOL 2430 or 2480. Letter grades only. Lec, lab. Offered every three years. K. C. Nixon. The families of plants encountered solely or chiefly in tropical regions are considered in a phylogenetic context. Lectures, discussions, and laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

BIOL 4521 Systematics of Tropical Plants: Field Laboratory
Spring. 1 credit. Limited to 15 students. Prerequisite: BIOL 4520 or permission of instructor. Letter grades only. For more details and application, contact L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. K. C. Nixon. Intensive orientation to families of tropical flowering plants represented in forests of the American Tropics. Emphasis is on field identification and lab work. Laboratory, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families.

BIOL 4530 Principles and Practice of Historical Biogeography (also ENTOM 4530)
Fall. 3 credits. Prerequisite: systematics course or permission of instructor. S–U or letter grades. Lec, lab. Offered alternate years. J. K. Liebherr and M. A. Luckow. For description, see ENTOM 4530.

BIOL 4620 Plant Biochemistry
Spring. 3 credits. Prerequisites: BIOL 2420 or 3420 or equivalent, or BIOGD 3300 or 3310 or equivalent, or permission of instructor. Letter grades only. Lec. J. Rose and K. Van Wijk. Focuses on biochemistry of plant specific processes, with the aim to obtain an integrative overview of plant biochemistry. Topics include processes such as cell wall biochemistry, pigment biosynthesis and degradation, secondary metabolism, senescence, defense mechanisms, amino acid biosynthesis, and small molecule transport. Genomics-based experimental tools such as proteomics and metabolomics are discussed.

BIOL 4821–4822 Molecular Plant-Pathogen Interactions I and II (also PLPA 4821)
Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. A. Collmer and B. G. Turgeon, odd years; S. G. Lazarowitz and D. Martin, even years. For description, see PLPA 4821 and 4822.

BIOL 4823 Molecular Plant-Microbe Interactions (also BIOM 4640, PLPA 4822)
Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. 12 lec. Offered alternate years. S. C. Wirans. Focuses on the interactions of Agrobacteria and Rhizobia with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization, and function of the sym plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

BIOL 4824 Plant Gene Evolution and Phylogenies
Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2610 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Offered alternate years; next offered 2010–2011. J. J. Doyle. Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns.

BIOL 4825 Molecular Biology of Plant Organelles (also BIOGD 4825)
Spring. 1 credit. 12 lec. Prerequisites: BIOPL 4823 or BIOGD 4821 and permission of instructor. Recommended: BIOBM 3310 or equivalent. Letter grades or S–U grades with permission of instructor. Offered alternate years; next offered 2010–2011. M. R. Hanson and D. B. Stern. Plants contain three different genomes—in the nucleus, chloroplasts, and mitochondria. This course examines the organization, expression, and evolution of plant organelle genomes. Special topics include RNA editing and stability, effects of organelle mutations on plant reproduction and photosynthesis, and chloroplast transformation for expression of useful foreign proteins.

BIOL 4826 Plant Biotechnology (also PLBR 4826)
Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. E. D. Earle. Deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene
Introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to biotechnology are discussed.

**BIOPL 4827 Plant Cell Walls: Structure to Proteome**

Spring. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3130. S–U or letter grades. 12 lec. Offered alternate years. J. Brutnell.

Examines the structure and function of plant cell walls, exploring their dynamic nature and fundamental contribution to numerous aspects of plant growth and development. Topics include wall biosynthesis; wall structure and composition; regulation of cell expansion and differentiation; defense against pathogens and signaling; the apoplast as a metabolically active subcellular compartment; and analytical techniques: from biochemistry to proteomics.

**BIOPL 4829 Light Signal Transduction in Plants**

Spring. 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3130. S–U or letter grades. 12 lec. Offered alternate years. T. Brutnell.

In addition to providing plants with energy for photosynthesis, light plays an essential role in the development of higher plants. Light quality and intensity can be flawlessly monitored by the plant to avoid neighboring vegetation, set the circadian clock, and adjust photosynthesis rates. This course focuses on recent studies that have illuminated the molecular basis of light signal transduction networks in higher plant species.

**BIOPL 4831 Concepts and Techniques in Plant Molecular Biology**

Fall. 2 credits. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3130. Lec. S–U or letter grades. M. Scanlon, M. Hanson, and T. Owens.

Introductory module that provides a broad overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 4830 (fall) and BIOPL 4820 (spring) classes. Course covers genetic concepts relevant to the plant sciences. Serves as an overview of molecular biology concepts relevant to the plant sciences. Serves as a prerequisite to other modules in the BIOPL 4830 (fall) and BIOPL 4820 (spring) classes.

**BIOPL 4832 Proteomics and Protein Mass Spectrometry in Biology**

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3130. S–U or letter grades. Offered alternate years. K. van Wijk.

Introduction to proteomics and mass spectrometry and its application in plant biology. Includes discussion of protein separation, protein tagging and visualization techniques; principles of biological mass spectrometry and interpretation of spectra; bioinformatics tools; comparative proteomics; phosphorylation mapping. Discusses limitations and possibilities of proteomics on plants for which little sequence information is available and experimental papers involving plant proteomics.

**BIOPL 4833 Plant Genome Organization and Function (also PLBR 4833)**

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3130. S–U or letter grades. Offered alternate years; next offered 2010–2011.

S. D. Tanksley.

Covers the structure and variation of plant nuclear genomes, including changes in genome size, centromere structure, DNA packaging, transposable elements, genetic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

**BIOPL 4834 Molecular Aspects of Plant Development I (also BIOBM 4834)**

Fall 1 credit. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. Offered alternate years; next offered 2010–2011. J. B. Nasrallah.

Focuses on the molecular genetics of plant development with an emphasis on plant reproductive biology. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include cell-cell signalling in the establishment of pattern and functional differentiation of specialized cell types, and the control of developmental pathways by endogenous and external cues. It is a companion to BIOPL 4823 (Molecular Plant-Microbe Interactions.)

**BIOPL 4835 Molecular Breeding (also PLBR 4835)**

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. Offered alternate years. S. D. Tanksley.

Application of DNA markers to the identification, manipulation, and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs.

**BIOPL 4836 Plant Senescence (also HORT 6252)**

Fall. 1 credit. 12 lec. Prerequisites: BIOGD 2810 and BIOBM 3300 or 3320, or equivalents. Recommended: BIOBM 3310. S–U or letter grades. Offered alternate years; next offered 2010–2011.

S. Gan.

Introduces molecular, genetics, and genomics approaches in plant senescence and postharvest research. Topics include gene expression, regulation, and function associated with physiological and biochemical changes in senescing, maturing, and/or ripening plants or parts. Genetic manipulation of senescence/ripening processes are also discussed.

**BIOPL 48980 Teaching Experience**

Fall or spring. 1–4 credits. Limited enrollment. Prerequisites: previous enrollment in course to be taught or equivalent. Note: Arts students may not count this course toward graduation but may, upon petition (one time only) to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean’s List eligibility but not eligibility for graduating with distinction. S–U or letter grades by permission of the instructor. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring.

**BIOPL 6410 Laboratory in Plant Molecular Biology (also BIOBM 6410)**

Fall. 4 credits. Prerequisites: BIOGD 2810 or equivalent, BIOBM 3300 or 3310 or equivalent, and permission of instructor. S–U grades by permission of instructor. Lab. M. R. Hanson, T. Brutnell, G. Jander, J. Hua, M. Scanlon, and K. van Wijk.

Includes selected experiments on gene expression, bioinformatic transformation, confocal microscopy, laser capture microdissection, microarray analysis, genetic mapping and mutant analysis, transposon tagging, proteomics, and metabolite analysis.

**BIOPL 6420 Plant Mineral Nutrition (also CSS 6420)**

Spring. 3 credits. Prerequisite: BIOPL 3420 or equivalent. Lec. Offered alternate years; next offered 2010–2011. O. K. Vatamaniuk, L. V. Kochian, and R. M. Welch.

For description, see CSS 6420.

**BIOPL 6470 Systematic Biology Journal Club**

Fall or spring. 1 credit. may be repeated for credit. Intended for graduate students and advanced undergraduate students in systematic biology. S–U grades only. Disc. TBA. Bailey Hortorum staff.

Discussions led by staff, visitors, and students on topics of current importance to systematic biology.

**BIOPL 6490 Solute Transport in Plants**

(also BEE 6490)

Fall. 3 credits. Letter grades only. Lec. Offered alternate years; next offered 2010–2011. R. M. Spanwick.

For description, see BEE 6490.

**BIOPL 6510 Water Transport in Plants**

(also BEE 6470)

Fall. 3 credits. Lct. S–U grades only. Lec. Offered alternate years. R. M. Spanwick.

For description, see BEE 6470.

**BIOPL 6540 Botanical Nomenclature**

Fall. 3 credits. Prerequisite: written permission of instructor. S–U or letter grades. Lec. and disc. Offered alternate years; next offered 2010–2011. J. Reveal.

Analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

**BIOPL 6560 Topics in Plant Evolution**

Spring. 1 credit. Prerequisite: BIOPL 4480 or equivalent background in evolution, or written permission of instructor. Lab and disc. Offered alternate years; next offered 2010–2011. K. J. Niklas.
Series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

**BIOPL 7490 Plant Biology Seminar**
Fall and spring. 0 credits. Requirement for graduate students doing work in plant biology. W. L. Crepet. Lectures on current research in plant biology, presented by visitors and staff.

**BIOPL 7410 Problems in Plant Cell and Molecular Biology**
Spring. 2 credits. Prerequisite: first- and second-year graduate students in Plant Cell and Molecular Biology Program. Disc. Introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

**BIOPL 7420 Current Papers in Plant Biology**
Fall or spring. 1 credit. Limited enrollment. Primarily for graduate students, with priority given to majors or minors in plant molecular biology. Prerequisite: for undergraduates, written permission of instructor. S–U grades only. Sem. Staff.

**BIOPL 7430 Faculty Research in Plant Cell and Molecular Biology**
Fall. 1 credit. Prerequisite: graduate standing or written permission from member of Plant Cell and Molecular Biology Program or from coordinator for undergraduates. Disc. TBA. Staff. Introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

**BIOPL 7440 Graduate Research in Plant Cell and Molecular Biology**
Fall or spring. 1 credit. Requirement for, and limited to, all graduate students in the Field of Plant Biology. Sem. Staff. After the first year, each student presents one seminar per year on his or her thesis research and then meets with the thesis committee members for evaluation. First-year students only attend the seminar series, they do not present. Second-year students give a 25-min. seminar, while students in their third and higher years present a 50-min. seminar.

**BIOPL 7450 Seminar in Systematic Botany**
Fall. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U grades only. Sem. Bailey Hortorum staff. Seminar with student presentations of current topics in systematics.

**BIOPL 7460 Seminar in Systematic Botany: Student Research**
Spring. 1 credit. Prerequisite: graduate standing or permission of instructor. Letter grades only. Sem. Bailey Hortorum staff. Student-led seminar presentation based on his or her thesis research or a related topic.

**BIOPL 7490 Graduate Research in Botany**
Fall or spring. Variable credit. may be repeated for credit. S–U or letter grades. Staff. Similar to BIOG 4990 but intended for graduate students who are working with faculty members on an individual basis.

**COURSES IN MARINE SCIENCE**

Cornell offers an extensive listing of undergraduate courses in marine science. Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in marine biology, the undergraduate specialization in ocean sciences, and the summer program of courses offered by the Shoals Marine Laboratory. For further information on all of these programs, contact the Shoals Marine Laboratory Office, G14 Stimson Hall, or at www.sml.cornell.edu.

**Undergraduate Specialization in Marine Biology**

Biological Sciences majors who are concentrating in Ecology and Evolutionary Biology have the option of specializing their studies in the area of Marine Biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. Students specializing in Marine Biology are expected to spend significant time at the Shoals Marine Laboratory, Cornell’s marine field station on Appledore Island, Maine, where they may take introductory and advanced courses for Cornell credit, do an independent research project, and complete a paid internship. See www.sml.cornell.edu for details.

**Undergraduate Specialization in Ocean Sciences**

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four courses from the following list to fulfill their major.

- BIOSM 3060 Evolution of Ancient and Modern Oceans
- BIOSM 3080 Field Microbial Ecology
- BIOSM 3090 Coastal Ecology and Bioclimates
- BIOSM 3100 Marine Symbioses
- BIOSM 3120 Biology of the Lobster
- BIOSM 3200 Functional Morphology of Marine Organisms
- BIOSM 3210 Anatomy and Function of Marine Vertebrates
- BIOSM 3220 Ecology of Biological Invasions
- BIOSM 3290 Ecology of Animal Behavior
- BIOSM 3640 Field Marine Science
- BIOSM 3650 Underwater Research
- BIOSM 3740 Field Ornithology
- BIOSM 3750 Field Marine Biology and Ecology
- BIOSM 3760 Marine Invertebrate Zoology (Note: Not same as BIOEE 3730)
- BIOSM 3770 Diversity of Fishes
- BIOSM 3820 Comparative Embryology and Life History Strategies
- BIOSM 4100 Animal Social Behavior
- BIOSM 4130 Research in Marine Biology
- BIOSM 4450 Forensics Science for Wildlife Biologists
- BIOSM 4490 Marine Botany
- BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Allies
- BIOSM 4720 Genetics of Marine Diversity
- BIOSM 4770 Marine Vertebrates
- BIOEE 3730 Biology and Biodiversity of the Marine Invertebrates
- BIOEE 4570 Limnology
- BIOEE 4571 Limnology: Ecology of Lakes, Laboratory
- BIOEE 4620 Marine Ecology
- BIOEE 4780 Ecosystem Biology
- BIOEE 4900 Topics in Marine Biology
- BIOEE 6680 Principles of Biogeochemistry
- EAS 3060 Evolution of Ancient and Modern Oceans
- EAS 3220 Biogeochemistry of the Hawaiian Islands
- EAS 3400 Field Study of Earth Systems
- EAS 3420 Atmospheric Dynamics
- EAS 3500 Dynamics of Marine Ecosystems
- EAS 3530 Physical Oceanography
- EAS 4060 Marine Geology and Geophysics
- EAS 3750 Sedimentology and Stratigraphy
- EAS 4550 Geochemistry
- EAS 4620 Marine Ecology
- EAS 4750 Special Topics in Oceanography
- EAS 4790 Paleobiology
- EAS 5050 Fluid Dynamics in the Earth Sciences
- EAS 7500 Satellite Remote Sensing in Biological Oceanography
- SEA 3660 Introduction to Oceanography
- SEA 3670 Introduction to Maritime Studies
- SEA 3680 Introduction to Nautical Science
- SEA 3690 Practical Oceanography
The following marine sciences courses are currently administered by the Shoals Marine Lab. (Not all of these courses are offered each semester; consult the SML web site for current offerings: www.sml.cornell.edu.)

BIOSM 1110 A Marine Approach to Introductory Biology
Summer. 8 credits. Prerequisite: permission of instructor. Letter grades only. A four-week course for pre-freshmen at Shoals Marine Lab (SML) on Appledore Island in the Gulf of Maine. W. E. Bemis, J. B. Heiser, and D. Taylor. Course includes daily fieldwork, boat trips, outdoor adventure, and practices for sustainable living. Intensive lectures, laboratory, and fieldwork occur in a learning environment emphasizing individual skill building, project design and execution, and collaboration with faculty and peers. We explore four major themes—ecology, behavior, development, and genomics—and connect them using examples from evolution. Social issues discussed range from global environmental change to sustainable fisheries, emerging infectious diseases, and stem cell research.

BIOSM 1230 Ocean Sciences
Summer. 4 credits. Prerequisite: permission of instructor. Letter grades only. Offered 2011–2012 by D. Taylor.

BIOSM 1551 Introduction to Oceanography (also EAS 1551)
Summer. 1 credit. Prerequisite: college-level science course, EAS 1540, marine science course, or permission of instructor (any of these). S–U or letter grades. B. Monger and C. Greene. For description, see EAS 1551.

BIOSM 1600 The Oceanography of the Gulf of Maine
Summer. 2 credits. Limited to 24 students. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. For more details or an application, contact SML or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, B. Ober, C. Garrison, and J. Gibson. General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The student or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.

BIOSM 2040 Biological Illustration
Summer. 2 credits. Prerequisite: none. S–U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, Marine and freshwater biologists rely on boats—small and large—for transportation, environmental sampling, data collection, and other tasks. This course offers biologists at all stages of their careers a chance to learn basic boat handling, piloting, navigation, and common sampling techniques to enhance their opportunities for research and education. This course meets all certification requirements for basic small boat handling by state-specific agencies and National Association of Boating Law Administrators.

BIOSM 2250 Sustainability in the 21st Century
Summer. 4 credits. Prerequisite: open to all undergraduate and graduate students. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Next offered 2010–2011. Cornell, UNH, SML faculty and staff.)
BIOSM 2760 Seabird Ecology and Conservation
Summer. 2 credits. Prerequisite: one year college-level biology. S–U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. J. Ellis. Combines lectures from specialists (e.g., ecologists and wildlife veterinarians) with a variety of field-based activities related to seabird ecology and conservation. Topics will include: seabird identification, behavioral studies, census techniques, population threats (e.g., fisheries bycatch, pollution), and restoration. A field trip to a nearby seabird restoration island will be included.

BIOSM 2770 Introduction to Marine Conservation Biology
Summer. 4 credits. Prerequisite: two semesters of college-level introductory biology or equivalent. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. H. Weeks and K. Flessa. Students will study introduction to the examination and analysis of marine biological resource conservation, with an emphasis on management issues. Class will address principles and problems through readings, laboratory modeling exercises and lectures, including guest from the New England region, and explore potential pathways to success through readings and field trip.

BIOSM 3060 Evolution of Ancient and Modern Oceans (also EAS 3060)
Summer. 6 credits (students will have the opportunity to continue their studies during the fall semester on campus at Cornell for another 2 credits of independent study). Prerequisite: one semester of oceanography and/or marine biology or permission of instructor. Letter grades only. W. Allmon. For description, see EAS 3060.

BIOSM 3080 Field Microbial Ecology (also BIOMI 3080)
Summer. 4 credits. Prerequisite: introductory biology or permission of instructor. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. E. Zettler and L. A. Zettler. The microbial world dominates the biosphere in terms of biomass, diversity, and metabolic flexibility. This course will introduce students to collecting, observing, and identifying live representatives of these fascinating microbial organisms including bacteria, protists, fungi, and microscopic animals. Taxonomy and ecology of the basic groups of microorganisms will be covered while students learn to collect in the field for observation, experimentation and isolation.

BIOSM 3100 Marine Symbiosis

BIOSM 3110 Science Writing
Summer. 2 credits. Prerequisite: introductory-level science course. One-week course offering students an introduction to science writing at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. S–U or letter grades. C. Zimmer. Students will learn about the business of science writing (including career opportunities in newspapers, television, and the Internet). They will also have the opportunity to become familiar with the craft of making complex scientific research understandable and exciting for the general public. Students should be prepared to complete several short-deadline writing exercises.

BIOSM 3120 Biology of the Lobster
Summer. 2 credits. Prerequisite: one year of college level biology. S–U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. J. Factor. An introduction to the biology of the American lobster, Homarus americanus. The course will include an overview of this ecologically and economically important species, as well as cover several major topics in depth, each taught by a lobster biologist expert in that field. Topics may include life history, larval development and metamorphosis, anatomy, physiological adaptation, fisheries and fishing methods, feeding mechanisms, ecology, and behavior. Course will include lecture, laboratory, discussion, and the natural field environment of Appledore Island.

BIOSM 3200 Functional Morphology of Marine Organisms
Summer. 4 credits. Prerequisite: one year introductory biology or one semester introductory biology, general zoology, and general botany. Letter grades only. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. E. Bemis, EE&B faculty, and F. Fish. Course includes introductions to vertebrate systematics, paleontology and evolution, vertebrate development and functional morphology. Students will do comparative study of the anatomy of marine vertebrates, including: hagfishes; lampreys; sharks, skates, rays and chimaeras; ray finned fishes; lobe-finned fishes; marine reptiles, birds, and mammals. All in organism systems of vertebrates will be detailed in lecture and laboratory exercises. Dissection is required. Grades will be based on quizzes, essay exams, practical exams, class participation, and research projects.

BIOSM 3220 Ecology of Biological Invasions
Summer. 4 credits. Prerequisite: full year (two semesters) of introductory biology. One-week field course examining marine and terrestrial invasions of the field using facilities at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine and at Creek Farm in Portsmouth, N.H. S–U or letter grades. R. Hadlock Seeley and J. Dijkstra. The course includes both a thorough review of theory of invasions (and their ecological and evolutionary sequelae) and field time with invited experts in invasive insect, plant, marine invertebrate and bird species.

BIOSM 3230 Ecology of Animal Behavior (also BIOLB 3230)
Summer. 4 credits. Prerequisite: one year introductory college biology. Recommended: course work in ecology, psychology, or behavior. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lecs, lab, and fieldwork for two weeks. H. Weeks, J. Waldvogel, and J. Kimler. The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 3460 Field Marine Science (FMS)
Summer. 8 credits. Prerequisite: one year college-level biology. S–U or letter grades. A four-week course offered twice each summer at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Students may not take FMS after taking FMBE (BIOSM 3750). Daily lec, lab, and fieldwork for four weeks. Three core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. J. Factor, R. Zachman, S. Morris, W. E. Bemis, and E. Zettler. Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living marine habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical), and marine geology. FMBE (BIOSM 3750) places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

SHOALS MARINE LABORATORY 197
BIOSM 3650 Underwater Research
Summer. 4 credits. Prerequisites: one year college-level biology, recognized SCUBA certification, and medical exam. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. J. Coyer, J. Grabowski, and E. Calvert. Covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasizes subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOSM 3730 Biology and Biodiversity of the Marine Invertebrates
Fall (but course must be taken previous summer at Shoals Marine Laboratory (SML), three-week, full-time course. 5 credits (students enroll for credit during fall semester). Limited to 24 students. Prerequisites: one year introductory biology for majors; permission of faculty because off campus. Letter grades only. Daily lec, lab, and fieldwork. Offered alternate years. C. D. Harvell.

BIOSM 3740 Field Ornithology
Summer. 4 credits. Prerequisite: one year college-level biology. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. D. Bonter. Introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. Focuses on fieldwork designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 3750 Field Marine Biology and Ecology (FMBE)
Summer. 8 credits. Prerequisites: one full year college-level biology; S–U or letter grades. A four-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for four weeks. K. A. Miller and C. Siddon. Designed for students seeking an introduction to the marine sciences and marine ecology. FMBE emphasizes fieldwork in natural habitats. Examines aspects of the biology and ecology of marine organisms, including intertidal plants and invertebrates, fishes, marine mammals and birds, biological oceanography, and human impacts on the marine environment. FMBE places a special emphasis on the ecology of the intertidal zone and ecological, evolutionary, and physiological adaptations of marine organisms. Students may not take FMBE after taking FMS (BIOSM 3640).

BIOSM 3760 Marine Invertebrate Zoology
Summer. 6 credits. Prerequisite: one year introductory biology and permission of instructors. Students may not take BIOSM 3760 after taking BIOE 3730. S–U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Offered alternate years; next offered 2011–2012. J. Morin.

BIOSM 3770 Diversity of Fishes
Summer. 6 credits. Prerequisite: one full year college-level biology. Recommended: background in vertebrate biology. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec and fieldwork for two weeks. B. Collette. Intensive lecture, laboratory, and field course. Lectures cover the basic anatomy and physiology of fishes with examples drawn from a wide variety of fishes from throughout the world. The course emphasizes the diversity of fishes in two aspects, diversity of evolutionary processes, and problems faced by fishes and the great diversity of different types of fishes that inhabit the world. Laboratory exercises cover the anatomy and osteology of teleost fishes and identification of local species. Each student is assigned a different local species of teleost fish to study and dissect and prepares a comprehensive paper on its morphology, soft anatomy, and osteology.

BIOSM 3820 Comparative Embryology and Life History Strategies

BIOSM 4100 Animal Social Behavior

BIOSM 4130 Research in Marine Biology
Summer. 4 credits. Prerequisite: one year college-level biology. Recommended: experience in ecology or physiology. S–U or letter grades. A three-week course offered at Shoals Marine Laboratory (SML) on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for two weeks. D. Taylor, D. Fudge, A. Todgham, and J. Lam. A hands-on course in which students explore the marine environment around Appledore Island via field and laboratory experiments of their own design. This course is unique in that it involves students learning practical skills that are required of all biologists, such as generating hypotheses, experimental design, data collection, statistical analysis, group decision-making, writing scientific papers, and communicating results to others. The class will work together on several experiments inspired by student observations, primary literature, lectures, and data collected by previous classes. Phenomena investigated in previous years include: predator-prey interactions, vertical migration in zooplankton, biomechanical design, foraging behavior, photosynthesis, and adaptation to intertidal stressors such as desiccation, temperature, and wave action. Students will gain practical experience with laboratory, field, and remote sensing equipment, and may work with a diverse range of marine organisms, including vertebrates, invertebrates and algae. Each student will take responsibility for writing up the results from one experiment and will present the results in a scientific symposium at the end of the course. This course is highly recommended for undergraduates interested in independent research or considering graduate education in biology, as well as science educators seeking experience in inquiry-based learning.

BIOSM 4450 Forensic Science for Wildlife Biologists (also VTMED 6435)
Summer. 2 credits. Prerequisite: satisfactory completion of college-level course in biology, ecology, or marine science. S–U or letter grades. A one-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. W. Lord, R. Haechler, R. Kenney, W. Rodriguez, and I. Sidor. Forensic science represents the unique merging of scientific insight and the law. Forensic Science for Marine Biologists provides a field-oriented introduction to the forensic science domain and the utilization of marine biology within the justice system. Students receive comprehensive instruction concerning the recognition, documentation, collection, and preservation of physical evidence. Additionally, students develop practical incident response, scene management, and forensic teamwork skills.

BIOSM 4490 Marine Botany

BIOSM 4650 Sharks: The Biology, Evolution, and Conservation of Sharks and Their Environments
Summer. 3 credits. Prerequisite: vertebrates or comparative anatomy and ichthyology or permission of SML director. S–U or letter grades. A one-and-a-half-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. D. Dagit and W. E. Bemis. The last 50 years have produced an explosion of new information on the biology of the approximately 1,000 living species of sharks, skates, rays, and chimaeras, which collectively make up the group Chondrichthyes. This course will cover advanced topics in the evolution, diversity, anatomy, functional morphology, neurobiology, sensory systems, behavior, reproduction, development, and conservation of cartilaginous fishes.

BIOSM 4720 Genomics of Marine Diversity
Summer. 4 credits. Prerequisite: one year introductory biology. Recommended: genetics and/or cell biology with laboratory component. S–U or letter grades. A two-week course offered at Shoals Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. A. Shulock.
An introduction to basic concepts in systematic biology, evolutionary genetics, molecular ecology, and conservation biology emphasizing the natural history of marine organisms. Students integrate field sampling techniques, taxonomy, and curation of specimens from Appledore Island and surrounding waters with molecular diagnostics completed in the laboratory. Standard methods for DNA purification, amplification, sequencing, and genotyping are used to address questions about population structure, kinship, and species phylogeny.

[BIOSM 4770] Marine Vertebrate Structure
Summer. 6 credits. Prerequisites: vertebrate biology course or equivalent course at level from which applicant can demonstrate knowledge of basic vertebrate anatomy, physiology, and systems, or permission of instructor. S-U or letter grades. A three-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Daily lec, lab, and fieldwork for three weeks. Next offered 2010–2011. J. Heiser.

[BIOSM 4950] Research Methods in Marine Biology
Summer. 1 credit. Corequisite: BIOSM 4990 or permission of instructor. Primarily for undergraduates. An eight-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. Weekly sem for eight weeks. Next offered 2011–2012. SML faculty.

Section A: Independent Biological Research: Independent study with a member of the Sholes Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be sent with application materials.

[BIOSM 6500] Field Marine Ecology and Environmental Science for Teachers

[BIOSM 6990] Research in Biology for Teachers
Summer. Variable credit; 2 credits per seven days on site. A three-week course offered at Sholes Marine Laboratory (SML), on Appledore Island in the Gulf of Maine. SML faculty.

[BIOSM 3660] Introduction to Oceanography
3 credits. Corequisites: BIOSM 3670 and 3680. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent course. Guest lecturers from the Woods Hole Research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

[BIOSM 3670] Introduction to Maritime Studies
3 credits. Corequisites: BIOSM 3660 and 3680. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

[BOSM 3780] Oceans and Climate: Oceans in the Global Carbon Cycle
Fall, spring. 4 credits. Prerequisite: BIOSM 3780. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

[BOSM 3790] Ocean Science and Public Policy (HA)
Fall, spring. 3 credits. SEA faculty. This course seeks to provide students with a fundamental understanding of the intersection between climate change and governmental policy and the interrelationship between science and governmental policy. After an introduction to the development of maritime law and sovereignty on the high seas, students will examine why societies funded oceanic research.

[BOSM 3800] Oceanographic Field Methods
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty. This course introduces students to all aspects of oceanographic fieldwork. Students learn practical skills in the operating principles and safe deployment of oceanographic instrumentation. Skills acquired enable students to carry out an independent research project.

[BOSM 3810] Independent Research in Oceans and Climate
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty. This course provides upper-level study focused on oceanography and climate, including the design and completion of an independent research project that is comparable in scope to an undergraduate senior research thesis.

SEA Semester
Sea Education Association (SEA) offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the SSV Corwith Cramer. Enrollment is open to both men and women judged capable of benefiting from SEA semester; a student must have successfully completed at least one college-level laboratory science course (or its equivalent) in order to be admitted to SEA Semester. No prior sailing experience is necessary. Cornell students enrolled in the SEA Semester must take the entire sequence.

For more information, contact Sea Education Association, P.O. Box 6, Woods Hole, MA 02543 or call 508-540-3535 ext. 770. Program costs are to be paid in place of regular Cornell tuition and fees.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

SEA Basic Semester

SEA 3660 Introduction to Oceanography
3 credits. Corequisites: BIOSM 3670 and 3680. Survey of the characteristics and processes of the global ocean. Introduces oceanographic concepts and develops them from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent course. Guest lecturers from the Woods Hole Research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

SEA 3670 Introduction to Maritime Studies
3 credits. Corequisites: BIOSM 3660 and 3680. Interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

SEA 3780 Oceans and Climate: Oceans in the Global Carbon Cycle
Fall, spring. 4 credits. Prerequisite: BIOSM 3780. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

SEA 3790 Ocean Science and Public Policy (HA)
Fall, spring. 3 credits. SEA faculty. This course seeks to provide students with a fundamental understanding of the intersection between climate change and governmental policy and the interrelationship between science and governmental policy. After an introduction to the development of maritime law and sovereignty on the high seas, students will examine why societies funded oceanic research.

SEA 3800 Oceanographic Field Methods
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty. This course introduces students to all aspects of oceanographic fieldwork. Students learn practical skills in the operating principles and safe deployment of oceanographic instrumentation. Skills acquired enable students to carry out an independent research project.

SEA 3810 Independent Research in Oceans and Climate
Fall, spring. 4 credits. Prerequisite: successful completion of BIOSM 3780. SEA faculty. This course provides upper-level study focused on oceanography and climate, including the design and completion of an independent research project that is comparable in scope to an undergraduate senior research thesis.

Computing and Information Science

INTRODUCTION

Computing and Information Science (CIS) offers courses and programs campuswide in various academic disciplines in which computing is integral. It is home to the Department of Computer Science, the Department of Statistical Science, the program in Information Science, and interdisciplinary programs in computational biology, computational science and engineering, game design, and computing in the arts. The faculty members associated with CIS programs hold joint appointments with CIS and another Cornell academic unit.

Computing and Information Science is a rapidly changing area. Please consult the CIS web site, www.cis.cornell.edu, for the most current news of programs and courses, or visit the CIS undergraduate office in 303 Upson Hall.

ACADEMIC PROGRAMS

Computing and Information Science offers the following academic programs through its corresponding colleges. See the departmental listings for details of the programs.

Computational Biology

Undergraduate students interested in computational biology can pursue study in the field through a variety of academic programs within their major. Programs in computational biology are available to students majoring in biology, biological statistics and computational biology (BSCB), and mathematics. Students majoring in computer science should review the vector in computational science.

A concentration in computational biology is available to biological sciences majors in the College of Agriculture and Life Sciences and the College of Arts and Sciences and is coordinated by the Office of Undergraduate Biology. It provides core training in biology and the supporting physical and computer sciences.

The concentration in statistical genomics is offered by the Department of Biological Statistics and Computational Biology to students enrolled in the College of Agriculture and Life Sciences. It provides training in statistics, biology, and computer science. It is designed for students who want to emphasize statistics and bioinformatics.

The concentration in mathematical biology is offered by the Department of Mathematics and is open to students enrolled in the College of Arts and Sciences. It provides training in mathematics, biology, and computer science. It is designed for students who want to emphasize mathematics.

Computational Science and Engineering

The CIS program in Computational Science and Engineering (CSE) spans several dozen departments and research areas. The field is application-driven and involves a mix of applied mathematics, numerical analysis, and computer science. Numerous courses are taught throughout the university. Go to www.cis.cornell.edu/cse for a list of courses and associated faculty members.

Computer Science

All CIS programs have connections to computer science, the study of computation in all of its forms. The curriculum covers the theory of algorithms and computing and its many applications in science, engineering, and business. Students learn the algorithmic method of thinking and how to bring it to bear on a wide range of problems. They also study the elements of computing and information technology such as system design, problem specification, programming, system analysis and evaluation, and complex modeling. Research areas include artificial intelligence, bioinformatics, computational logic, computer architecture, computer graphics, computer vision, computing systems, databases and digital libraries, natural language processing, networks, programming languages and compilation, scientific computing, security, and theory of algorithms.

The Department of Computer Science offers the computer science major to students in the College of Arts and Sciences and the College of Engineering, the computer science minor to students across colleges, and the Master of Engineering (M.Eng.) degree in computer science.

Computing in the Arts

An undergraduate minor in Computing in the Arts offers students opportunities to use computers to realize works of art, to study the perception of artistic phenomena, and to think about new, computer-influenced paradigms and metaphors for the experiences of making and appreciating art. Faculty from several departments across the university offer courses toward the minor, drawing on disciplines in the arts, computing, the social sciences, the humanities, and the physical sciences. Tracks are available for students pursuing this minor in: computer science, music, psychology, dance, and film. This minor is offered through the College of Arts and Sciences and coordinated by the Department of Computer Science. Students across colleges are eligible to pursue this program of study.

Game Design

The undeniable popularity of games draws the attention of academia, industry, and even the government on areas of design, development, and social impact. The game industry, like the film industry, is an unmistakable force in entertainment. Like filmmaking, game design can thrive and evolve only with the support of a strong academic foundation. The Game Design minor is offered by the Department of Computer Science for students who anticipate that game design will have a prominent role to play in their academic and professional career. Visit www.cs.cornell.edu/degreeprogs/grad/CSIMinor/GameDesignMinor.html for more information. Students interested in the minor should contact the Game Design Initiative at Cornell (GDIAC) visit gdiac.cis.cornell.edu. Students across colleges are eligible to pursue the Game Design minor.

Information Science

The interdisciplinary program Information Science studies the design and use of information systems in a social context. It integrates the study of three aspects of digital information systems. First, information science studies computing systems that provide people with information content; this study overlaps with parts of computer science, stressing the design, construction, and use of large information systems such as the World Wide Web and other global information resources. The second aspect of information science examines how people engage these information resources and how they can be integrated into everyday life. This area is also called “human-centered systems” because it is concerned with systems that hundreds of millions of people will use in daily life. The third aspect deals with understanding how information systems are situated in social, economic, and historical contexts. It explores the economic value of information, the legal constraints on systems, their social impact, and the cultural aspects of their construction. These are synergistic topics, and the next generation of scientists, scholars, business leaders, and government workers will need to understand them and how they relate.

Specific topics emphasized in the information science program include information networks, information discovery, knowledge organization; interaction design; interface design and evaluation; collaboration within and across groups, communities, organizations, and society; computational linguistics; computational techniques in the collection, archiving, and analysis of social science data; information privacy; methods of collecting, preserving, and distributing information; information system design; cognition and learning; social informatics; and cultural studies of computation.

The Information Science (IS) major is offered by the College of Agriculture and Life Sciences and the College of Arts and Sciences. Students in the College of Engineering may major in Information Science.
THE INFORMATION SCIENCE MINOR

A minor in information science is available to students in the Colleges of Agriculture and Life Sciences; Architecture, Art, and Planning (available to Architecture and Planning students only); Arts and Sciences; Engineering; Human Ecology; and the Schools of Hotel Administration and Industrial and Labor Relations. Because of small differences in regulations between the colleges, the requirements may vary slightly, depending on a student’s college and, in a few cases, a student’s major. Students interested in pursuing the information science minor must initiate the process by sending an e-mail message with their name, college, year of study (e.g., second-semester sophomore), expected graduation year, and (intended) major to minor@infosci.cornell.edu. See www.infosci.cornell.edu/ugrad.html for the most up-to-date description of the minor and its requirements.

Information science is an interdisciplinary field covering all aspects of digital information. The program has three main areas: human-centered systems, social systems, and information systems. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information.

The minor has been designed to ensure that students have substantial grounding in all three of these areas, as well as in statistics. To this end, the requirements for the undergraduate minor are, as follows: All courses must be chosen from the course lists below. In addition, a letter grade of at least C is required; S–U courses are not allowed. Note: Course credits from institutions other than Cornell may not be counted toward the IS minor. Engineering students must use ENGRD 2700 or CEE 3040. Hotel students must use HADM 2201.

- **Statistics**: one course.
- **Human-centered systems** (human-computer interaction and cognitive science): two courses (for all colleges except Engineering and Hotel); one course (Engineering and Hotel).
- **Social systems** (social, economic, political, cultural, and legal issues): one course.
- **Information systems** (primarily computer science): two courses for all colleges except Hotel. Hotel students need to take one course in this area. Engineering students may not use INFO 1500. CS 2110 may not be used by students who are required to take it for their major.
- **Elective**: one additional course from any component area. Hotel students must take three courses in this category, from the following: HADM 3574, HADM 4474, or AEM 3220. (Engineering students and all computer science majors must select a course from human-centered systems or social systems. Communication majors must select a course outside Communication. Students in other majors should check with their advisors to make sure there are no special departmental restrictions or requirements.)

**Statistics**

An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing data occurring in the real world.

Engineering students must take one of the following:
- ENGRD 2700 Basic Engineering Probability and Statistics
- CEE 3040 Uncertainty Analysis in Engineering

Hotel students must take:
- HADM 2201 Hospitality Quantitative Analysis

All other students can meet this requirement with any one of the following:
- MATH 1710 Statistical Theory and Application in the Real World
- STSCI 2010 Introductory Statistics
- AEM 2100 Introductory Statistics
- PAM 2100 Introduction to Statistics
- HADM 2201 Hospitality Quantitative Analysis
- ENGRD 2700 Basic Engineering Probability and Statistics
- BTRY 3010 Statistical Methods I
- SOC 3010 Evaluating Statistical Evidence
- CEE 3040 Uncertainty Analysis in Engineering
- ILRST 3120 Applied Regression Methods
- ECON 390 Introduction to Statistics and Probability
- PSYCH 3500 Statistics and Research Design

**Human-Centered Systems**

- COGST 1101 Introduction to Cognitive Science
- PSYCH 2050 Perception
- INFO 2140 Cognitive Psychology
- INFO 2450 Communication and Technology
- PSYCH 2800 Introduction to Social Psychology
- PSYCH 3420 Human Perception: Applications to Computer Graphics, Art, and Visual Display
- INFO 3400 Psychology of Social Computing
- INFO 3450 Human-Computer Interaction Design
- PSYCH 3470 Psychology of Visual Communications
- INFO 3650 Technology and Collaboration
- PSYCH 3800 Social Cognition
- PSYCH 4160 Modeling Perception and Cognition
- INFO 4400 Advanced Human-Computer Interaction Design
- INFO 4450 Seminar in Computer-Mediated Communication
Computing and Information Science Courses

Social Systems
- INFO 2040 Networks
- STS 2501 Technology in Society
- INFO 2921 Inventing an Information Society
- ECON 3010 Microeconomics
- SOC 3040 Social Networks and Social Processes
- ECON 3130 Intermediate Microeconomic Theory
- INFO 3200 New Media and Society
- AEM 3220 Internet Strategy
- INFO 3490 Media Technologies
- INFO 3551 Computers: From the 17th Century to the Dotcom Boom
- INFO 3561 Computing Cultures
- INFO 3660 History and Theory of Digital Art
- ECON 3680 Game Theory
- INFO 3871 The Automatic Lifestyle: Consumer Culture and Technology
- STS 4111 Knowledge, Technology, and Property
- INFO 4144 Responsive Environments
- SOC 4150 Internet and Society
- ECON 4190 Economic Decisions Under Uncertainty
- COMM 4280 Communication Law
- INFO 4290 Copyright in the Digital Age
- ORIE 4550 Introduction to Game Theory
- INFO 4470 Social and Economic Data
- HADM 4489 The Law of the Internet and E-Commerce
- ECON 4760 Decision Theory I
- ECON 4770 Decision Theory II
- INFO 4850 Computational Methods for Complex Networks
- INFO 5150 Culture, Law, and Politics of the Internet

*Only one of ECON 3010 and 3130 can be taken for IS credit. Only one of ORIE 4550 and ECON 3680 can be taken for IS credit. Only one of INFO 3220 and SOC 4150 may be taken for IS credit.

Information Systems
- INFO 1300 Introductory Design and Programming for the Web
- INFO 1301 and 1302 (no longer offered) may count together in place of INFO 1300.
- CS 2110 Object-Oriented Programming and Data Structures
- INFO 2300 Intermediate Design and Programming for the Web*
- CIS 3000 Introduction to Computer Game Design
- INFO 3300 Data-Driven Web Applications
- INFO 4500 Information Retrieval
- INFO 4502 Web Information Systems
- CS 4320 Introduction to Database Systems
- LING 4424 Computational Linguistics
- LING 4474 Introduction to Natural Language Processing
- CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- ORIE 4740 Statistical Data Mining I
- CS 4780 Machine Learning
- ORIE 4800 Information Technology
- ORIE 4810 Delivering OR Solutions with Information Technology
- ORIE 4850 Application of Operations Research and Game Theory to Information Technology
- CS 5150 Software Engineering
- INFO 5300 Architecture of Large-Scale Information Systems
- CS 5430 System Security
- ECE 5620 Fundamental Information Theory
- CS 5780 Empirical Methods in Machine Learning and Data Mining

*The following exceptions apply:
- INFO 1300: Engineering students and Computer Science majors may not use this course for the minor.
- INFO 2300: Computer Science majors may not use this course for the minor.
- CS 2110: Students for whom this is a required major course may not use it for the minor, e.g., Computer Science or Operations Research and Information Engineering majors.

Introduction to Computer Game Design
- CIS 3000 Introduction to Computer Game Design
  Spring. 4 credits. Prerequisites: students must satisfy at least one of the following, according to their area of interest (art, music, or programming): Art: ART 2501 or equivalent; Music: CS 111x or INFO 1301–1302, MUSIC 1421 or equivalent; Programming: CS/ENGRD 2101 or equivalent.
  Investigates the theory and practice of developing computer games from a blend of technical, aesthetic, and cultural perspectives. Technical aspects of game architecture include software engineering, artificial intelligence, game physics, computer graphics, and networking. Aesthetic and cultural aspects of design include art and modeling, sound and music, history of games, genre analysis, role of violence, gender issues in games, game balance, and careers in the industry. Programmers, artists, and musicians collaborate to produce an original computer game.

Advanced Projects in Game Design
- CIS 4002 Advanced Projects in Game Design
  Fall. 3 credits. Prerequisites: CIS 3000 or permission of instructor.
  Project-based follow-up course to CIS 3000. Students work in a multidisciplinary team to develop an original computer game or an application that explores innovative game technology. Students have the goal of submitting their work to a contest or conference. Grading is based on completion of project plans and documentation, teamwork, presentations and demonstrations, class participation, and quality of final projects. Instructional meetings are arranged based on student and instructor schedules.

Effective Use of High-Performance Computing
- CIS 4205 Effective Use of High-Performance Computing
  Spring, usually weeks 1–7. 2 credits. Prerequisites: proficiency in C, C++, Fortran, or Fortran 90.
  A hands-on introduction to high-performance computing (HPC) for graduate students or advanced undergraduate students who will use HPC as a tool in their work. Various HPC architectural platforms are described with a focus on computational clusters. Students learn how to identify and exploit parallelism in algorithms and legacy applications; how to measure parallel speedup and efficiency; and how to diagnose bottlenecks affecting performance. Parallel programming with MPI, OpenMP, and task-farming techniques (for web services and grid computing) is covered in depth. Examples and assignments are taken from typical application areas such as matrix and Monte Carlo computations. The goal of the class is for students to gain practical HPC experience for use in their specific fields of research.

Introduction to Scripting in Python and Perl
- CIS 4206 Introduction to Scripting in Python and Perl
  Spring, usually weeks 1–8. 2 credits. Prerequisites: basic computer programming skills or permission of instructor.
  Scientific computing today requires heterogeneous systems, software, and data to be used together in many different ways, based on desired results. Researchers commonly develop work-flows that control the processing of data and/or experiment from beginning to the desired results. The “glue” that often links the various stages of these work-flows is scripting languages. In
this course we explore scripting with two of the most popular scripting languages, Perl and Python, from the basics to specific types of functions/capabilities that are useful in the development and maintenance of scientific workflows. Examples are provided for Microsoft Windows, Mac OS X and Red Hat Linux. Best-of-breed modules and tools are covered for each platform based on student interest.

CIS 4999 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

CIS 5040 Applied Systems Engineering (also CEE 5040, SYSEN 5100, ECE/ORIE 5120, MAF 5910)
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.

For description, see SYSEN 5100.

CIS 5050 Systems Analysis and Design, and Optimization (also CEE 5050, ECE/ORIE 5130, MAF 5920, SYSEN 5200)
Spring. 3 credits. Prerequisite: Applied Systems Engineering (CEE 5240, ECE 5120, MAF 5920, ORIE 5120, or SYSEN 5100).

For description, see SYSEN 5200.

CIS 6229 Computational Methods for Nonlinear Systems (also PHYS 7682)
Fall. 4 credits. Enrollment may be limited. For description, see PHYS 7682.

CIS 7999 Independent Research
Fall, spring. Variable credit. Prerequisite: permission of CIS faculty member. Independent research or master of engineering project.

COMPUTER SCIENCE

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The department is also part of CIS. Its courses are an integral part of CIS’s several educational programs.

Consult the following web site for updates made after the publication of Courses of Study: www.cs.cornell.edu/courses/ listofcourses/index.htm.

CS 1109 Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

Designed for students who intend to take CS 111x but are not adequately prepared for it. Basic programming concepts and problem analysis are studied. An appropriate high-level programming language is used. Students with previous programming experience and students who do not intend to take CS 111x should not take this course.

CS 1110 Introduction to Computing Using Java
Fall, spring, summer. 4 credits. Assumes basic high school mathematics (no calculus) but no programming experience. Programming and problem solving using Java. Emphasizes principles of software development, style, and testing. Topics include object-oriented concepts, procedures and functions, iteration, arrays, strings, algorithms, exceptions, GUIs (graphical user interfaces). Weekly labs provide guided practice on the computer, with staff present to help. Assignments use graphics and GUIs to help develop fluency and understanding.

CS 1112 Introduction to Computing Using MATLAB
Fall, spring, 4 credits. Corequisite: MATH 1110, 1190, or equivalent. Assumes student is comfortable with mathematics (at level of one semester of calculus) but has no prior programming experience. Programming and problem solving using MATLAB. Emphasizes the systematic development of algorithms and programs. Topics include iteration, functions, arrays, and MATLAB graphics. Assignments are designed to help build an appreciation for complexity, dimension, fuzzy data, inexact arithmetic, randomness, simulation, and the role of approximation.

CS 1114 Introduction to Computing Using MATLAB and Robotics
Spring, 4 credits. Prerequisite: some programming experience. Honors-level introduction to computer science using camera-controlled robots using MATLAB. Emphasis is on modular design of programs and on fundamental algorithms. Extensive laboratory experiments with cameras and robots, including Sony Aibo. Example projects include controlling a robot by pointing a light stick and making a robot recognize simple colored objects.

CS 1130 Transition to Object-Oriented Programming
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only. Introduction to object-oriented concepts using Java. Assumes programming knowledge in a language like MATLAB, C++, or Fortran. Students who have learned Java but were not exposed heavily to OO are welcome.

CS 1132 Transition to MATLAB
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only. Introduction to MATLAB and scientific computing. Covers the MATLAB environment, assignment, conditionals, iteration, scripts, functions, arrays, scientific graphics, and vectorized computation. Assumes programming knowledge in a language like Java, C, C++, or Fortran.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)
Fall. 4 credits. For description, see INFO 1300.

CS 1610 Computing in the Arts (also CIS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

Over the centuries, artists in a wide variety of media have employed many approaches to the creative process, ranging from the philosophical to the mechanical to the virtual. This course unravels some of the mysteries going on inside software used for art and music. It looks at ways of breaking things apart and sampling and ways of putting things together and resynthesizing, and explores ideas for creation. This course does not teach software packages for creating art and music. The course complements ART 1701+ and MUSIC 121+.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS/ENGRI 1620)
Fall. 3 credits.

For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHILO 1910, PSYCH 1102)
Fall, summer. 3 credits.

For description, see COGST 1101.

CS 2022 Introduction to C
Fall, spring, usually weeks 1–4. 1 credit. Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 taken first. S–U grades only.

Brief introduction to the C programming language and standard libraries. Unix accounts are made available for students wishing to use that system for projects, but familiarity with Unix is not required. Projects may be done using any modern implementation of C. CS 2024 (C++ Programming) includes much of the material covered in 2022. Students planning to take CS 2024 normally do not need to take 2022.

CS 2024 C++ Programming
Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

An intermediate introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user-defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take CS 2024 normally do not need to take CS 2022; 2024 includes most of the material taught in 2022.

CS 2026 Introduction to C#
Spring, usually weeks 5–8. 1 credit. Prerequisite: CS/ENGRD 2110 or equivalent experience. S–U grades only.

Introduces students to building applications in the .NET environment using the C# language.

CS 2029 Unix Tools
Fall, usually weeks 5–8. 1 credit. Prerequisite: one programming course or equivalent programming experience. S–U grades only.

Introduction to Unix, emphasizing tools for file management, compilation, process control, managing the Unix environment, and rudimentary shell scripts. Projects assume no previous knowledge of Unix or expertise in any particular language.
CS 2044 Advanced UNIX Programming and Tools
Spring, usually weeks 5–8. 1 credit. Prerequisite: CS 2042 or equivalent. S–U grades only. Focuses on Unix as a programming environment for people with a basic knowledge of Unix and experience programming in at least one language. Projects cover advanced shell scripts (sh, ksh, csh), Makefiles, programming and debugging tools for C and other languages, and more modern scripting languages such as Perl and Python. Students with little or no experience with Unix should take CS 2042 first.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)
Fall, spring, summer. 3 credits. Prerequisite: CS 1110, or CS 1130, or CS 1112 if completed before Fall 2007 or equivalent course in Java or C++.
Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, object-oriented programming (classes, objects, types, subtyping), graphical user interface, algorithm analysis (asymptotic complexity, big "O" notation), recursion, data structures (lists, trees, stacks, queues, heaps, search trees, hash tables, graphs), simple graph algorithms. Java is the principal programming language.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)
Spring, 3 credits. Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300 for description, see INFO 2300.

CS 2800 Discrete Structures
Fall, spring. 3 credits. Pre- or corequisite: one programming course or permission of instructor.
Covers the mathematics that underlies most of computer science. Topics include mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; basic probability theory; basic number theory; sets, functions, and relations; partially ordered sets; and graphs. These topics are discussed in the context of applications to many areas of computer science, including game playing, the RSA cryptosystem, data mining, load balancing in distributed systems, properties of the Internet and World Wide Web, and web searching.

CS 2850 Networks (also ECON/INFO 2040, SOC 2090)
Spring, 4 credits. Prerequisites: none. For description, see ECON 2040.

CS 3110 Data Structures and Functional Programming
Fall, spring. 4 credits. Prerequisite: CS 2110 and equivalent programming experience. Pre- or corequisite: CS 2800 should not be taken concurrently with CS 3110 or CS 3210.
Advanced programming course that emphasizes functional programming techniques and data structures. Programming topics include recursive and higher-order procedures, models of programming language evaluation and compilation, type systems, and polymorphism. Data structures and algorithms covered include graph algorithms, balanced trees, memory heaps, and garbage collection. Also covers techniques for analyzing program performance and correctness.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)
Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.
Introduction to numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Includes special lectures on computational statistics.

CS 3300 Data-Driven Web Applications (also INFO 3300)
Spring, 3 credits. Prerequisite: CS/ENGRD 2110 and (CS 3300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.
For description, see INFO 3300.

CS 3410 Systems Programming
Spring, 4 credits. Prerequisite: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.
Introduction to systems programming, computer organization, and the hardware/software interface. Topics include representation of information, machine and assembly languages, processor organization, memory management, input/output mechanisms, and basic network programming. Also covered are techniques for analyzing program performance and optimization.

CS 3420 Computer Organization (also ECE 3140)
Spring, 4 credits. Prerequisite: CS 2110 or ENGRD 2940. Should not be taken concurrently with CS 3110.
For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)
Fall, 4 credits. Recommended: CS 2042. For description, see LING 4424.

CS 3810 Introduction to Theory of Computing
Fall, summer. 3 credits. Prerequisite: CS 2800 or permission of instructor. Introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

CS 4120 Introduction to Compilers
Fall, 3 credits. Prerequisites: CS 3110 or permission of instructor and CS 3410 or 3420. Corequisite: CS 4121.
Introduction to the specification and implementation of modern compilers. Topics include lexical scanning, parsing, type checking, code generation and translation, an introduction to optimization, and the implementation of modern programming languages.

CS 4121 Practicum in Compilers
Fall, 2 credits. Corequisite: CS 4120. Compiler implementation project related to CS 4120.

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)
Fall. 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Problems (also MATH 4260)
Spring, 4 credits. Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming. Introduction to the fundamentals of numerical linear algebra: direct and iterative methods for linear systems, eigenvalue problems, singular value decomposition. In the second half of the course, the above are used to build iterative methods for nonlinear systems and for multivariate optimization. Strong emphasis is placed on understanding the advantages, disadvantages, and limits of applicability for all the covered techniques. Computer programming is required to test the theoretical concepts throughout the course.

CS 4300 Information Retrieval (also INFO 4300)
Fall. 5 credits. Prerequisite: CS 2110 or equivalent. For description, see INFO 4300.

CS 4302 Web Information Systems (also INFO 4302)
Spring, 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology. For description, see INFO 4302.

CS 4320 Introduction to Database Systems
Fall. 3 credits. Prerequisites: CS 3110 (or CS 2110, 2111, and permission of instructor).
Introduction to modern database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction management, recovery, database design, XML, and XQuery. The course focuses on the design and internals of modern database systems.

CS 4321 Practicum in Database Systems
Fall. 2 credits. Pre- or corequisite: CS 4320. CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321. Students build part of a real database system in C++.

CS 4410 Operating Systems
Fall. 3 credits. Prerequisite: CS 3410 or 3420.
Introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.
have become key components of many software systems. For example, machine learning techniques are used to create spam filters, to analyze customer purchase data, and to explore new domains of science. This course introduces the fundamental set of techniques and algorithms that constitute machine learning as of today, including classification methods like decision trees and support vector machines, parametric Bayesian learning and hidden Markov models, as well as unsupervised learning and reinforcement learning. The course discusses algorithms and methods and provides an introduction to the theory of machine learning.

[CS 4782 Probabilistic Graphical Models (also BTRY 4790)]
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent); programming and data structures (CS 2110 or equivalent); course in statistical methods recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011.
For description, see BTRY 4790.

[CS 4812 Quantum Computation (also PHYS 4481/7681)]
Spring. 2 credits. Prerequisite: familiarity with theory of vector spaces over complex numbers. For description, see PHYS 4812.

[CS 4820 Introduction to Analysis of Algorithms]
Spring, summer. 4 credits. Prerequisites: CS 2800 and 3110. Develops techniques used in the design and analysis of algorithms, with an emphasis on problems arising in computing applications. Some examples are drawn from systems and networks, artificial intelligence, computer vision, data mining, and computational biology. This course covers four major algorithm design techniques (greedy algorithms, divide-and-conquer, dynamic programming, and network flow), heuristic search, structured special cases, approximation algorithms, and local search heuristics.

[CS 4830 Introduction to Cryptography]
Fall. 4 credits. Prerequisites: CS 2800 (or equivalent), mathematical maturity, or permission of instructor. Next offered 2010–2011.
Introductory course in cryptography. Topics include one-way functions, encryption, digital signatures, pseudo-random number generation, zero-knowledge and basic protocols. Emphasizes fundamental notions and constructions with proofs or security based on precise definitions and computational assumptions.

[CS 4850 Mathematical Foundations for the Information Age]
Spring. 4 credits. Prerequisite: mathematical maturity.
Covers the mathematical foundation underlying modeling and searching of the web and other complex networks, discovering trends, data mining, and making recommendations based on user behavior. Topics include random graphs; tail bounds; branching processes; spectral analysis; clustering; learning mixtures of distributions; extracting information from large, high dimensional, and noisy data; VC dimension; latent semantic indexing; and collaborative filtering.

[CS 4860 Applied Logic (also MATH 4860)]
Fall. 4 credits. Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3520, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic. Smith-Bendix method, and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

[CS 4999 Independent Reading and Research]
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

[CS 5150 Software Engineering]
Fall. 4 credits. Prerequisite: CS 2110 or equivalent experience programming in Java or C++. Introduction to the practical problems of specifying, designing, and building large, reliable software systems. Students work in teams on projects for real clients. This work includes a feasibility study, requirements analysis, object-oriented design, implementation, testing, and delivery to the client. Additional topics covered in lectures include professionalism, project management, and the legal framework for software development.

[CS 5220 Applications of Parallel Computers]
Spring. 4 credits. Prerequisites: course in numerical methods at level of CS 3220 or higher. Models for parallel programming and survey of parallel machines. Existing parallel programming languages, vectorizing compilers, and parallel libraries and toolboxes. Techniques for data partitioning, synchronization, and load balancing. Performance tuning for serial and parallel codes. Applications to scientific problems. Work includes detailed study and programming of medium-sized representative applications.

[CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)]
Spring. 4 credits. Prerequisite: CS/INFO 3500 or CS 4320.
For description, see INFO 5300.

[CS 5410 Intermediate Computer Systems]
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009.
Focuses on practical issues in designing and implementing distributed software. Topics vary depending on instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in CS 4999 or 7999.
CS 5420 Parallel Computer Architecture (also ECE 5720)
Fall. 4 credits. Prerequisite: ECE 4750.
For description, see ECE 5720.

CS 5430 System Security
Fall or spring. 4 credits. Prerequisites: CS 4410 or 4450 and familiarity with JAVA, C, or C# programming languages. Next offered spring 2010.
Discusses security and survivability for computers and communications networks. Includes discussions of policy issues (e.g., the national debates on cryptography policy) as well as discussions of the technical alternatives for implementing the properties that comprise “trustworthiness” in a computing system. Covers mechanisms for authorization and authentication as well as cryptographic protocols.

CS 5620 Interactive Computer Graphics
Fall. 4 credits. Prerequisite: CS 4620.0.
Methods for interactive computer graphics, targeting applications including games, visualization, design, and immersive environments. Topics include programming graphics processing units (GPUs), shading models, advanced texturing, shadow algorithms, advanced lighting, hierarchical acceleration structures, and animation.

CS 5643 Physically Based Animation for Computer Graphics
Spring. 4 credits. Prerequisites: CS/ENGRA 3220 and/or CS 4620 or permission of instructor.
Modern computer animation and interactive digital entertainment are making increasingly sophisticated use of tools from scientific and engineering computing. This course introduces students to common physically based modeling techniques for animation of virtual characters, fluids and gases, rigid and deformable solids, and other systems. Aspects of interactive simulation and multi-sensory feedback are also discussed. A hands-on programming approach is taken, with an emphasis on small interactive computer programs.

CS 5722 Heuristic Methods for Optimization (also CEE 5340)
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 or CEE/ENGRA 3200, or graduate standing, or permission of instructor.
For description, see CEE 5290.

CS 6110 Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Study of programming paradigms: functional, imperative, concurrent, and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

CS 6210 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor.
Offered alternate years.
Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

CS 6240 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210) and differential equations, and knowledge of MATLAB.

CS 6320 Database Management Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.
Covers a variety of advanced issues ranging from transaction management to query processing to data mining. Involves extensive paper reading and discussion. Development of a term project with research content is required.

CS 6322 Advanced Database Systems
Fall. 4 credits.
Covers advanced topics in database systems and data mining. The exact set of topics changes with each offering of the course.

CS 6410 Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2009.
Advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

CS 6450 Peer-to-Peer Systems
Spring. 4 credits. Recommended: CS 6410.
Peer-to-peer (P2P) systems, in which clients not only consume resources but also provide their own resources for the use of other clients, have emerged as a new architectural paradigm in distributed computing. This course examines peer-to-peer systems and discusses existing and new applications. Students are expected to perform extensive reading on P2P and build a peer-to-peer system as part of this course.

CS 6464 Advanced Distributed Storage Systems
Spring. 4 credits. Prerequisite: CS 4410 or permission of instructor.
BROADLY examines distributed storage systems in their many manifestations. Explores how to harness and maintain the collective storage capabilities in storage systems from global-scale enterprises and cloud computing to peer-to-peer, ad hoc, and home networks. Teaches abstractions, design, and implementation techniques that allow the building of the kind of scalable high-performance distributed systems that can deal with real-world workload. Students read recent research papers on server design, network programming, naming, various storage systems, security, and fault tolerance.

CS 6642 Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisites: CS 4620 and 4621 or 5620 or permission of instructor. Next offered 2010–2011.
State-of-the-art techniques for high-quality rendering techniques used in simulation, games, and movies. Focus is on practical rendering algorithms for graphics applications.

CS 6650 Computational Motion
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered alternate years; next offered 2010–2011.
Covers computational aspects of motion, broadly construed. Topics include the computer representation, modeling, analysis, and simulation of motion. Students implement several of the algorithms covered in the course and complete a final project.

CS 6670 Computer Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Offered fall 2009.
Introduction to computer vision, with an emphasis on discrete optimization algorithms and on applications in medical imaging. Topics include edge detection, image segmentation, stereopsis, motion and optical flow, active contours, and the Hausdorff distance. Students are required to implement several of the algorithms covered in the course and complete a final project.

CS 6700 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: CS 4700 or permission of instructor.
Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics, AI planning, knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

CS 6740 Advanced Language Technologies (also INFO 6300)
Fall, spring. 3 credits. Prerequisite: CS 4700 or permission of instructor.
Graduate-level introduction to technologies for the computational treatment of information in human-language form, covering modern natural-language processing (NLP) and/or information retrieval (IR). Possible topics include latent semantic analysis (LSI), clickthrough data for web search, language modeling, text categorization and clustering, information extraction, computational syntactic and semantic formalisms, grammar induction, and machine translation.
[CS 6764] Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010–2011.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. The course considers formal models of knowledge and applications in these areas.

[CS 6780] Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor. Offered Fall 2009.
Extends and complements CS 4780 and 5780, giving in-depth coverage of new and advanced methods in machine learning. In particular, we connect to open research questions in machine learning, giving starting points for future work. The content of the course reflects an equal balance between learning theory and practical machine learning, making an emphasis on approaches with practical relevance. Topics include support vector machines, clustering, Bayes nets, boosting, model selection, learning orderings, and inductive transfer.

[CS 6782] Probabilistic Graphical Models (also BTRY 6790)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011.
For description, see BTRY 6790.

[CS 6810] Theory of Computing
Fall or spring. 4 credits. Prerequisites: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2010–2011.
Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

[CS 6820] Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.
Methodology for developing and analyzing efficient algorithms. Understanding the inherent complexity of natural problems via polynomial-time algorithms, advanced data structures, randomized algorithms, approximation algorithms, and NP-completeness. Additional topics may include algebraic and number theoretic algorithms, circuit lower bounds, online algorithms, or algorithmic game theory.

[CS 6822] Advanced Topics in Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 6180, 6820, or 6880 recommended, depending on the topic. Next offered 2010–2011.
An advanced study of current topics in the theory of computing. Topics may include algorithms, complexity, logic, cryptography, or theories of networks, information, and learning. Course may be repeated for credit.

[CS 6830] Cryptography
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory, maturity with mathematical proofs (ability to read and write mathematics proofs). Graduate introduction to cryptography. Topics include encryption, digital signatures, pseudo-random number generation, zero-knowledge, and basic protocols. Emphasizes fundamental concepts and proof techniques.

[CS 6840] Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed.
Offered Fall 2009.
Algorithmic game theory combines algorithmic thinking with game-theoretic or, more generally, economic concepts. This course focuses on problems arising from, and motivated by, the Internet and other decentralized computer networks. The most defining characteristic of the Internet is that it was not designed by a single central entity, but emerged from the complex interaction of many economic agents, such as network operators, service providers, designers, and users, in varying degrees of collaboration and competition. The course focuses on some of the many questions at the interface between algorithms and game theory that arise from this point of view. Topics include Nash equilibrium and general equilibrium, the price of anarchy, market equilibrium, social choice theory, mechanism design, and multicut pricing.

[CS 6850] The Structure of Information Networks (also INFO 6850)

[CS 6860] Logics of Programs
Spring. 4 credits. Prerequisites: CS 4810, 6810, and (MATH 4810 or CS/MATH 4860).
Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, propositional dynamic logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

[CS 7090] Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.
Weekly meeting for the discussion and study of important topics in the field.

[CS 7190] Seminar in Programming Languages
Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only.

[CS 7192] Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

[CS 7200] Topics in Database Systems
Fall, spring. 4 credits. S–U grades only.

[CS 7290] Database Seminar
Spring. 1 credit. Prerequisite: CS 6322 or permission of instructor. S–U grades only.

[CS 7490] Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

[CS 7690] Computer Graphics Seminar
Fall, spring. 3 credits.

[CS 7726] Evolutionary Computation and Design Automation (also MAE 6500)
Spring. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2010–2011.
Seminar course in evolutionary algorithms and their application to optimization and open-ended computational design. Genetic algorithms, genetic programming, co-evolution, arms races and cooperation, developmental representations, learning, and symbiosis are covered. Topics include artificial life, evolutionary robotics, and applications in a variety of domains in science and engineering. Suitable for students interested in computational techniques for addressing open-ended design problems and in computational models of evolutionary discovery.

[CS 7790] Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7794] Seminar in Natural Language Understanding
Fall, spring. 2 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

[CS 7860] Introduction to Kleene Algebra
Spring. 4 credits. Prerequisites: CS 4810 and (CS 4860 or MATH 4810).
Kleene algebra is an algebraic system for describing and reasoning about sequential processes. Topics will include some subset of the following: Model theory, including language, relational and trace models; matrix algebras and automata as matrices; formal power series in noncommuting variables; Salomaa’s completeness theorem and Redko’s theorem; deductive completeness; related structures including Conway’s S-algebras and closed semirings; ideal completion; PSPACE completeness of the equational theory; Kleene algebra with tests; guarded strings and automata on traces; reduction of the Høir theory to the equational theory; program schematicity; commutative Kleene algebra; Brzozowski derivatives and Taylor’s theorem; algebraic closure and Parikh’s theorem; applications in program verification; coalgebraic theory.

Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

[CS 7893] Cryptography Seminar
Fall, spring. 1 credit. Seminar for discussing recent or classical papers in cryptography.

[CS 7999] Independent Research
Fall, spring. Prerequisite: permission of a computer science advisor.
Independent research or master of engineering project.
INFO 2450 Communication and Technology (also COMM 2450)  
Fall, summer. Prerequisite: permission of a computer science advisor. S–U grades only.  
Doctoral research.

INFO 2921 Inventing an Information Society (also AMST/ECE/ENGRR 2980, HIST 2920, STS 2921)  
Spring. 3 credits.  
For description, see ENGRG 2980.

INFO 2950 Mathematical Methods for Information Science  
Fall. 4 credits. Corequisite: MATH 2310 or equivalent.  
Teaches basic mathematical methods for information science. Topics include graph theory, discrete probability, Bayesian methods, finite automata, Markov models, and hidden Markov models. Uses examples and applications from various areas of information science such as the structure of the web, genomics, natural language processing, and signal processing.

INFO 3200 New Media and Society (also COMM 3200)  
Spring. 3 credits.  
For description, see COMM 3200.

INFO 3300 Data-Driven Web Applications (also CS 3300)  
Fall. 3 credits. Prerequisite: CS 2110 and (INFO 2300 or permission of instructor).  
Introduces students to modern database systems and three-tier application development with a focus on building web-based applications using database systems. Concepts covered include the relational model, relational query languages, data modeling, normalization, database tuning, three-tier architectures, Internet data formats and query languages, server- and client-side technologies, and an introduction to web services. Students build a database-backed web site.

INFO 3400 Psychology of Social Computing (also COMM 3400)  
Fall. 3 credits. Prerequisite: INFO 2450. Next offered 2010–2011.  
For description, see COMM 3400.

INFO 3450 Human-Computer Interaction Design (also COMM 3450)  
Fall. 3 credits. Prerequisite: INFO 2450. May be taken concurrently with INFO 2450.  
For description, see COMM 3450.

INFO 3490 Media Technologies (also COMM 3490, STS 3491)  
Spring. 3 credits. Offered odd-numbered years. Next offered 2010–2011.  
For description, see COMM 3490.

INFO 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551)  
INFO 3561 Computing Cultures (also STS 3561)  
Spring. 4 credits. No technical knowledge of computer use presumed or required. INFO 3551 and 3561 may be taken separately or in any order.  
For description, see STS 3561.

INFO 3650 Technology and Collaboration (also COMM 3650)  
Spring. 3 credits. Prerequisite: INFO 2450.  
For description, see COMM 3650.

INFO 3660 History and Theory of Digital Art (also ARTH 3650)  
Fall. 4 credits. Next offered 2010–2011.  
For description, see ARTH 3650.

INFO 4290 Copyright in the Digital Age (also COMM 4290)  
Fall. 3 credits. Offered odd-numbered years.  
For description, see COMM 4290.

INFO 4300 Information Retrieval (also CS 4300)  
Fall. 5 credits. Prerequisites: CS/ENGRD 2110 or equivalent.  
Studies the methods used to search for and discover information in large-scale systems. The emphasis is on information retrieval applied to textual materials, but there is some discussion of other formats. The course includes techniques for searching, browsing, and filtering information and the use of classification systems and thesauruses. The techniques are illustrated with examples from web searching and digital libraries.

INFO 4302 Web Information Systems (also CS 4302)  
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.  
Examines the architecture of web information systems such as distributed digital libraries and electronic publishing systems. Many of the topics presented are the subject of current research and development at Cornell, other universities, and in standards organizations such as the World Wide Web Consortium. Course content mixes exploration of current tools for building web information systems such as XML, XSLT, and RDF with broader concepts such as techniques for knowledge representation and description, object models for content representation, and legal and economic impacts of web information. A theme that runs throughout the course is the relationship between traditional information environments, exemplified by libraries, and the distributed information environment of the web.

INFO 4350 Seminar on Applications of Information Science (also INFO 6350)  
INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400)  
Spring. 3 credits. Prerequisites: INFO 2450. For description, see COMM 4400.

INFO 4440 Seminar in Computer-Mediated Communication (also COMM 4450)  
Spring. 3 credits. Prerequisite: INFO 2450.  
For description, see COMM 4450.

INFO 4470 Social and Economic Data (also IRBLE 4470)  
Fall. 4 credits. Prerequisites: calculus, IS statistics requirement, and one upper-level social science course, or permission of instructor.  
Social and economic data drive decisions in public and private organizations, and quality decisions require quality data. This course focuses on data quality—conceptual fit, sampling and nonsampling error, timeliness, geographic detail, and dissemination—as well as legal and ethical issues in the data manufacturing process. Major emphasis is placed on public use microdata files of the U.S. Census Bureau and their role in the allocation of federal funds. These files include the Census of Population and Housing, Current Population Survey, American Housing Survey, Consumer Expenditure Survey, and American...
Community Survey: The course is appropriate for upper-level undergraduate, professional master's, and doctoral students who will be users of data products, from the public and private sectors; and/or producers of data products for their organizations, working with existing data products from public and proprietary sources, as well as administrative or survey data collected by their organization.

**INFO 4500 Language and Technology (also COMM 4500)**
Spring, 3 credits. Prerequisite: INFO 2450 or permission of instructor. For description, see COMM 4500.

**INFO 4900 Independent Reading and Research**
Fall, spring, 1–4 credits. Independent reading and research for undergraduates.

**INFO 4910 Teaching in Information Science, Systems, and Technology**
Fall, spring. Variable credit. Involves working as a T.A. in a course in the information science, systems, and technology major.

**INFO 5150 Culture, Law, and Politics of the Internet**

**INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)**
Spring, 4 credits. Prerequisite: INFO/CS 5300 or CS 4320.
Deals with the architecture of large-scale information systems, with special emphasis on Internet-based systems. Topics include three-tier architectures, edge caches, distributed transaction management, web services, workflows, performance scalability, and high-availability architectures. The course includes a substantial project in the context of three-tier architectures, involving web servers, application servers, and database systems. Students study and use technologies such as Web Services, .Net, J2EE, ASPs, Servlets, XML, and SOAP.

**INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)**
Spring, 4 credits. For description, see PSYCH 6140.

**INFO 6300 Advanced Language Technologies (also CS 6740)**
Fall or spring, 3 credits. Prerequisites: permission of instructor. Neither INFO/CS 4300 nor CS 4740 are prerequisites. For description, see CS 6740 in CIS section.

**INFO 6341 Information Technology in Sociocultural Context (also STS 6341)**
Spring, 4 credits.
Analyzes information technology using historical, qualitative, and critical approaches. Discusses questions such as: In what ways is information technology—often portrayed as radically new—actually deeply historical? How do information technologies represent and intervene in debates and struggles among people, communities, and institutions? How is the design of information technology tools entangled in the realms of law, politics, and commerce? In what ways are the social consequences of information technologies produced as much by the claims we make about the technologies as about the raw functionality of the tools themselves? This course investigates these issues through the lenses of long-standing debates and current controversies.

**INFO 6350 Seminar on Applications of Information Science (also INFO 4390I)**

**INFO 6400 Human-Computer Interaction Design (also COMM 6400)**
Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see COMM 6400.

**INFO 6450 Seminar in Computer-Mediated Communication (also COMM 6450)**
Spring, 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see COMM 6450.

**INFO 6648 Speech Synthesis by Rule (also LING 6648)**
Spring, 4 credits. Prerequisite: LING 4401, 4419, or permission of instructor. Next offered 2010–2011. For description, see LING 6648.

**INFO 6500 Language and Technology (also COMM 6500)**
Spring, 3 credits. For description, see COMM 6500.

**INFO 6850 The Structure of Information Networks (also CS 6850)**

**INFO 7050 Graduate Seminar**
Fall, spring. 2 credits. Graduate seminar on new research in the field of Information Science.

**INFO 7090 IS Colloquium**
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in information science.

**INFO 7900 Independent Research**
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Independent research for M.Eng. students and pre-A exam Ph.D. students.

**INFO 9900 Thesis Research**
Fall, spring. Variable credit. Prerequisite: permission of an information science faculty member. Thesis research for post-A exam Ph.D. students.

**STSCI 2010 Introductory Statistics**
Fall or spring. 4 credits. Introduction to the basic concepts of probability, statistics and data analysis. Descriptive methods, normal theory models, and inferential procedures are considered. Topics include basic statistical designs, an introduction to probability, estimation, confidence intervals, tests of significance for a single population mean and proportion, the difference in two population means and proportions, ANOVA, multiple linear regression, and contingency tables.

**STSCI 5010–5020 Applied Statistical Analysis**
Two-semester core course for students in master of professional studies (M.P.S.) degree program in applied statistics in Department of Statistical Science. Prerequisite: enrollment in M.P.S. program. Consists of a series of modules on various topics in applied statistics. Some modules include guest lectures from practitioners. Parallel with the course, students complete a yearlong, in-depth data analysis project. Fall (STSCI 5010). 4 credits. Letter grades only. Topics include but are not limited to: statistical computing systems, statistical software packages, data management, statistical graphics, and simulation methods and algorithms. Spring (STSCI 5020). 4 credits. Letter grades only. Topics include but are not limited to: sample surveys and questionnaire design, data sources, experimental design, and data mining.

**STSCI 6000 Statistics Seminar**
Fall and spring. 1 credit. Pre- or corequisite: BTRY 4090 or permission of instructor. S–U grades only.

**FACULTY ROSTER**

SCHOOL OF CONTINUING EDUCATION AND SUMMER SESSIONS

The School of Continuing Education and Summer Sessions (SCE) provides outstanding educational opportunities throughout the year for people of all ages and interests.

We present programs in a wide variety of formats on campus, online, and around the world.

Join us to prepare for your future, enhance your studies, improve your job skills, have fun learning something new, or introduce someone else to the wonders of Cornell.

For information about the following programs, visit www.sce.cornell.edu, e-mail cusc@cornell.edu, call 607 255-4987, or write to B20 Day Hall, Ithaca, NY 14853-2801.

SCHOOL ADMINISTRATION
Glenn C. Altshuler, dean
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Diane E. Sheridan, director, finance and administration
Ruby D. Brown, assistant director, finance and administration

School Program Directors and Managers
Mary E. Adie, director, Special Programs and Executive Education
Robert Hutchens, director, Cornell in Washington Program
Abby H. Eller, director, Summer College
Catherine Penner, director, Cornell's Adult University and Cornell CyberTower

School Support Services
Graham Dobson, manager, information technologies
Ann L. Morse, manager, media services
Cathy M. Pace, registrar, and coordinator, continuing education information service

CORNELL'S ADULT UNIVERSITY
Believing that learning shouldn't end once you’ve earned your degree, Cornell’s Adult University (CAU) offers weeklong noncredit courses on campus in the summer for adults and families. During the fall, winter, and spring, CAU offers weekend seminars and longer domestic programs as well as international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the conviction that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, visit www.cau.cornell.edu, e-mail cauinfo@cornell.edu, call 607 255-6260, or write to Cornell's Adult University, 626 Thurston Avenue, Ithaca, NY 14850-2490.

CONTINUING EDUCATION INFORMATION SERVICE
If you know someone who has been out of school for several years and who wants to resume his or her education, you may want to mention Cornell's Continuing Education Information Service, which provides counseling, referral, and news about short courses, workshops, professional updates, and executive programs offered by the university. For information, e-mail cusc@cornell.edu, call 607 255-4987, or write to Continuing Education, B20 Day Hall, Ithaca, NY 14853-2801.

CORNELL CYBERTOWER: FREE FACULTY LECTURES AND INTERVIEWS ONLINE
Meet Cornell faculty members and explore fascinating topics for free at Cornell CyberTower, which features three online program series:
• Study Rooms contain video-streamed lectures, links to specially selected web sites, reading lists, and discussion boards with Cornell faculty members and fellow CyberTower users.
• Forums are informal video-streamed conversations with leading faculty members. Discussion boards enable you to trade comments and questions with each month's featured guest.
• Views and Reviews are brief, unabashedly opinionated commentaries by faculty members on books, films, articles, and topics in the news.
To explore CyberTower, simply log on to www.cybertower.cornell.edu. It's a great way to see some of what Cornell has to offer! In fact, why not share it with your family and friends?

DISTANCE LEARNING
Need a flexible schedule? Planning to travel or work during winter break or during the summer? Don’t let that stop you from taking a class, earning credits, or learning something new. Wherever you are, whatever your schedule, Cornell distance learning courses are just a keyboard away. Distance learning courses feature web-based components and/or related materials. You’ll interact with the instructor and other students by phone or e-mail. Most assignments and examinations are completed within a scheduled time frame, just as in on-campus courses, but you’ll have the option of getting a head start on readings and lectures. For information, visit www.sce.cornell.edu/dl, e-mail cusc@cornell.edu, call 607 255-4987, or write to Distance Learning, B20 Day Hall, Ithaca, NY 14853-2801.

If you are a faculty member interested in developing credit or noncredit distance learning courses, the school offers a broad range of services, including determining technological needs, resolving copyright issues, creating a marketing plan, and fulfilling administrative duties related to your course. Visit www.sce.cornell.edu/dl to see what's possible.

EXECUTIVE AND PROFESSIONAL PROGRAMS
Once you're out in the work world (or if you know folks who already are), you may be interested in the short, high-level executive education programs that the school presents on campus, online, and in locations worldwide. These courses are taught by Cornell faculty and senior research staff members in many fields. Programs also can be designed to respond to the specific needs and interests of corporations, professional societies, and other groups. For information, visit www.sce.cornell.edu/exec, e-mail cusp@cornell.edu, call 607 255-7259, or write to Executive Education, B20 Day Hall, Ithaca, NY 14853-2801.

EXTRAMURAL/PART-TIME STUDY
If you find your studies interrupted for any reason, you may find it useful to take classes on a part-time basis. The school is also dedicated to offering part-time study to staff and faculty members, area residents, and anyone else interested in taking courses at the university, improving their job skills, continuing their education, or simply having fun learning something new.

Thanks to the school's Extramural Study program, anyone may (with few exceptions) enroll in any course in the university during the fall and spring semesters if space is available. Part-time study at Cornell is a great opportunity to take fascinating course offerings and study with world-renowned faculty members. If you’d like to take advantage of Cornell’s extensive course offerings but don’t need college credit, you
may register through the Visitors Program and receive a 90 percent discount on tuition. For information, visit www.sce.cornell.edu/sp, e-mail cusce@cornell.edu, call 607 255-9697, or write to Extramural Study, B20 Day Hall, Ithaca, NY 14853-2801.

SPECIAL PROGRAMS
If you want to immerse yourself in a particular subject, consider enrolling in a special program. Programs are offered on and off campus, may include an internship, and may be combined with other courses. For information, visit www.sce.cornell.edu/sp, e-mail cusce@cornell.edu, call 607 255-7259, or write to Special Programs, B20 Day Hall, Ithaca, NY 14853-2801.

On-Campus Special Programs Roster
AEM Certificate in Business Management
Architecture
Art in the Modern World
Asian Language Programs: Chinese, Japanese, Nepali, Sinhala, Tibetan
Astronomy for Teachers
Biological Sciences Undergraduate Research Program
CCMR Institute for Chemistry Teachers (CICT)
CNS Institute for Physics Teachers (CIPT)
Cornell Institute for Biology Teachers (CIBT)
Ecological Design in Paris and London Education
Engineering Cooperative Education Program
English for International Students and Scholars
Field Course in Iroquois Archaeology
Freshman Summer Start
Frontiers of American History
Industrial and Labor Relations: Strategic Corporate Research
Intensive Arabic Program
Landscape Architecture: Site Grading Leadership Program for Veterinary Students
Nanobiotechnology Institute for Teachers
Prefreshman Summer Program
Satellite Remote Sensing Applications in Biological Oceanography
Teaching Writing

Off-Campus Special Programs Roster
Art Studio and Creative Writing Workshop in Rome, Italy
Theatre, Film, and Dance in Europe: Dublin/Paris/Rome
High Technology Entrepreneurship Program
Human Ecology: Urban Semester Program—Fieldwork in Diversity, Professional Practice, and Service: The Culture of Medicine/Community and Public Service/Business and Finance
International Business Experience
Investment Management Program
Latin American Studies: Quechua
Marine Science: Shoals Marine Laboratory, Maine
Prelaw Program in New York City
Summer in Washington

Campus to Careers
The job market’s tough. The economy’s tight. You’ve been thinking it’s time to get serious about your future . . .

The School of Continuing Education and Summer Sessions invites you to join us for one of our highly regarded programs linking classrooms and careers. No matter what your major is, you can:
- Expand your career opportunities
- Strengthen your résumé and skills
- Develop professional contacts
- Take focused, intensive classes
- Learn from distinguished professors, alumni, practitioners, and executives
- Study in Washington, D.C., New York City, Silicon Valley, Europe, or on the Cornell campus in Ithaca
- Enrich your personal, academic, and professional life

For more information, visit www.sce.cornell.edu/sp.

Summer in Washington

SUMMER COLLEGE PROGRAMS FOR HIGH SCHOOL STUDENTS
If you know any high school students, be sure to tell them about Summer College. This award-winning program offers three- and six-week courses for talented sophomores, juniors, and seniors from around the world. Participants live on our beautiful campus, take college classes with leading Cornell faculty members, earn an average of 6 credits, and explore careers and academic majors.

The program is a wonderful opportunity for high school students to experience college life and make some great friends. At the end of the program, students often say it’s been the best summer of their life.

For information, visit www.summercollege.cornell.edu, e-mail summer_college@cornell.edu, call 607 255-6203, or write to Summer College, B20 Day Hall, Ithaca, NY 14853-2801.

WINTER SESSION
You can earn up to 4 credits between the fall and spring semesters by enrolling in the winter session. During this quiet time on campus, you’ll enjoy generally smaller classes and be able to concentrate on intensive study with a faculty mentor. Our winter session roster appears below. If a course is also offered through distance learning, the course title will be followed by DL.

For information, visit www.sce.cornell.edu/ws, e-mail cusce@cornell.edu, call 607 255-4987, or write to Winter Session, B20 Day Hall, Ithaca, NY 14853-4987.

Winter Session Course Roster
AEM 2400 Marketing DL
AMST 2020 Popular Culture in the United States, 1950 to Present DL
AMST 3141 Prisons DL
ARCH 3819 Special Topics in the History of Architecture and Urbanism

NBA 5910 Business in Emerging Markets
ORIE 3150 Financial and Managerial Accounting
RELST 2290 Buddhism
VISST 4625 Rastafari, Race, and Resistance DL

CORNELL UNIVERSITY SUMMER SESSION
Summer at Cornell is an excellent time to get a world-class education while enjoying all of the pleasures of summer in the Finger Lakes.
Summer Session features open admissions and outstanding instructors, nearly all of whom are regular Cornell faculty members. Courses are offered on and off campus and via distance learning.

During our three-, six-, or eight-week sessions, you can actually get to know your professors and are sure to be surrounded by intriguing people of all ages from all over the world. And you’ll still have time left over for travel or a summer job!

During Summer Session you can fulfill requirements, accelerate your degree, gain personal satisfaction, grow professionally, and/or ease your fall/spring course load. It’s also the perfect time to take advantage of the area’s stunningly beautiful gorges, waterfalls, lakes, and parks. Hike, swim, sail, picnic, or enjoy a sunset concert on the Arts Quad. However you look at it, spending a summer at Cornell is a great way to enjoy the best of the university and the best of summer!

For information, visit www.summer.cornell.edu, e-mail cusce@cornell.edu, call 607 255-4987, or write to Summer Session, B20 Day Hall, Ithaca, NY 14853-4987.

**Summer Session Course Roster**

The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session office. Courses are posted on the web (www.summer.cornell.edu) in the fall as the roster is developed. If a course also is offered through distance learning, the course title will be followed by **DL**.

**Africana Studies**

ASRC 1100–1101 Elementary Swahili
ASRC 1104–1105 Elementary Arabic
ASRC 1106–2101 Intermediate Arabic
ASRC 1900 Research Strategies
ASRC 2300 African Cultures and Civilizations
ASRC 4505 Black Arts Movement **DL**
ASRC 4606 The Family and Society in Africa

**American Indian Studies**

AIS 2220 Field Course in Iroquois Archaeology

**American Studies**

AMST 1240 Democracy and Its Discontents: Political Traditions in the United States
AMST 2020 Popular Culture in the United States, 1950 to Present **DL**
AMST 2525 Islam in America
AMST 2820 Photography and the American Landscape
AMST 3128 America’s Changing Faces

**INDEPENDENT STUDY**

Have a special interest you’d like to pursue? Want to do research and get credit for it? Need a particular course to graduate on time? Consider independent study.

Independent study encompasses courses of your own design, special topics courses, undergraduate research, or any regular course from the fall and spring semesters not being offered. If you can find a professor willing to supervise your study, all you need to do is pick up the application for independent study (available on the web at www.summer.cornell.edu or from the Summer Session office) and register in B20 Day Hall at least two weeks prior to beginning the independent study course. Also, please let the Summer Session office know if there are courses you would like to see offered next summer (e-mail cusce@cornell.edu or call 607 255-4987).
COLLEGE OF ENGINEERING

ADMINISTRATION
Christopher K. Ober, interim dean
David Gries, associate dean for undergraduate programs
Marjolein van der Meulen, interim associate dean for research and graduate studies
Richard Allmendinger, associate dean for diversity
Betsy East, assistant dean for student services
Cathy Dove, associate dean for administration
James Mazza, interim assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. The School of Applied and Engineering Physics is located in Clark Hall on the College of Arts and Sciences campus, the Department of Biological and Environmental Engineering is in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences, and the Department of Biomedical Engineering is in Weill Hall.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers, institutes, and programs contribute to opportunities for study and research.

Cornell programs and centers of interest in engineering include the following:

Center for Advanced Computing, CAC is a supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Center for Applied Mathematics, This cross-disciplinary center administers a graduate program.

Center for Nanoscale Systems, The mission of this National Science Foundation Nanoscience and Technology Center is to develop innovative nanoscale systems to revolutionize information technology and to further nanoscience technology. The facilities for this center are distributed between Clark Hall and the Engineering Quadrangle, and especially in Duffield Hall.

Center for Radiophysics and Space Research, This interdisciplinary unit facilitates research in astronomy and the space sciences.

Cornell Center for Materials Research, CCMR is an interdisciplinary center that performs state-of-the-art materials research and provides sophisticated scientific measurement and characterization equipment.

Cornell Center for a Sustainable Future, This center promotes and advances collaborations across Cornell and with selected external partners, leveraging Cornell’s resources to help build a sustainable future for the world.

Cornell High Energy Synchrotron Source, CHESS is a high-energy synchrotron radiation laboratory operated in conjunction with the university’s high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanoscale Science and Technology Facility, part of the National Science Foundation-funded National Nanofabrication Users Network, This center provides equipment and services for research in the science, engineering, and technology of nanometer-scale structures for electronic, chemical, physical, and biological applications.

CU-ADVANCE, The NSF ADVANCE program’s goals are to increase the recruitment, retention, and promotion into leadership positions of women in engineering and the sciences, and to institutionalize best practices, policies, and programs across colleges as they pertain to women faculty.

Institute for Biotechnology and Life Sciences Technologies, This institute was established to promote the new discipline of modern biotechnology and the education and training of biologists, engineers, agricultural personnel, and medical scientists.

Institute for the Study of the Continents, This interdisciplinary organization promotes research in deep seismic exploration of the structure and geologic evolution of the continents.

Intelligent Information Systems Institute, IISI seeks to stimulate research in computer- and data-intensive methods for intelligent decision-making systems, to foster collaboration, and to play a leadership role in the research and dissemination results in its core areas.

KAUST-Cornell Center for Energy and Sustainability, This center investigates organic-inorganic hybrid nanomaterials for applications in water desalination, carbon capture and sequestration, oil and gas production, and solar energy.

Kavli Institute at Cornell for Nanoscale Science, KIC addresses challenges and opportunities for the science of very small structures and fosters collaborative multidisciplinary research in this area.

Laboratory of Atomic and Solid State Physics, This is a major center for research in the area of condensed matter physics and other related areas.

Laboratory of Plasma Studies, LPS is a center for research in plasma physics.

MCEER, This facility was established by the National Science Foundation and a group of universities to study the response and design of structures in earthquake environments.

Nanobiotechnology Center, The mission of this National Science Foundation Science and Technology Center is to develop nanoscale technologies and science applied to the life sciences. The facilities of this center are distributed between Clark Hall and Duffield Hall.

National Astronomy and Ionosphere Center, NAIC is the world’s largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico, focusing on radio and radar astronomical studies and investigations of the Earth’s ionosphere.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics, This resource develops novel measurement and optical instrumentation for solving biophysical problems.

National Nanotechnology Infrastructure Network, NINN, a partnership of 13 university-based labs, provides access to infrastructure to enable the national science and engineering community to pursue research, education, and technology development dealing with nanotechnology.

National Science Digital Library, The NSDL project at Cornell, part of the NSF’s national effort in developing resources and tools for digital libraries, hosts the production services for NSF’s NSDL and designs and implements technical infrastructure.

Network for Earthquake Engineering Simulation, A system of nationwide experimental facilities linked by high-performance Internet for laboratory and computational simulation of structures under earthquake loads.

Northeast Regional Climate Center, This center monitors and reports on current climate conditions in the region.

Northeast Sun Grant Institute of Excellence, Partners in this initiative are involved in addressing energy needs and revitalizing rural communities with land-grant university research, education, and extension programs.

Power Systems Engineering Research Center, A National Science Foundation cooperative center between university and industry centered on addressing the challenges faced by the evolving electric power industry.

Program of Computer Graphics, This interdisciplinary research center operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society, This cross-disciplinary unit sponsors courses and promotes research on the interaction of science, technology, and society.

Transportation Infrastructure Research Consortium, Cornell is the lead institution in the consortium of 12 institutions in New York State. It brings together the research expertise in a cross-disciplinary fashion to solve problems in cooperation with the staff of the New York State Department of Transportation, its principal sponsor.

The programs listed above are sponsored by College of Engineering units, and several are industry affiliated.
ENGINEERING - 2009–2010

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of bachelor of science (B.S.), master of engineering (M.Eng.), and doctor of philosophy (Ph.D.). General academic information concerning the B.S. degree is given below under “Undergraduate Study.” The student pursues a program in one of 13 majors. The majors are described under “Engineering Majors.” Many students stay a fifth year in the College of Engineering to pursue a professional degree, the master of engineering (M.Eng.) degree. Joint enrollment in the B.S. and M.Eng. degrees is possible for students in their last semester who lack only 1 to 8 credits for the B.S.

M.Eng. degrees are awarded in most of the major areas. In addition, the following M.Eng. degrees are awarded: aerospace engineering, biomedical engineering, electrical engineering, engineering mechanics, nuclear engineering, operations research and industrial engineering, and systems engineering. For full details on M.Eng. degrees, see “Master of Engineering Degree Programs.”

Programs leading to the M.S. and Ph.D. degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science.

UNDERGRADUATE STUDY
Students in the College of Engineering spend most of their first two years of undergraduate studies in the Common Curriculum, which is administered by the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and Engineering Advising. At the end of their third semester, they affiliate with one of these majors:

- biological engineering (BE)
- chemical engineering (ChemE)
- civil engineering (CE)
- computer science (CS)
- electrical and computer engineering (ECE)
- engineering physics (EP)
- environmental engineering (EnE)
- independent major (IM)
- information science, systems, and technology (ISTT)—with options in information science and management science
- materials science and engineering (MSE)
- mechanical engineering (ME)
- operations research and engineering (ORE)
- science of earth systems (SES)

Criteria for affiliation with the majors are described under “Affiliation with a Major.” The majors are described under “Undergraduate Engineering Majors.”

Most of the majors have a corresponding minor, in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, information science, and business. See the main section, “Engineering Minors.”

The majors biological engineering, chemical engineering, civil engineering, electrical and computer engineering, materials science and engineering, and mechanical engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Students may major in biological engineering through the College of Engineering or the College of Agriculture and Life Sciences (CALS). Students who do so through the College of Agriculture and Life Sciences are jointly enrolled with the College of Engineering for their last two years.

There is no undergraduate major in nuclear science and engineering. Students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within the major (e.g., engineering physics, materials science and engineering, civil engineering, chemical engineering, and the independent major). Contact a faculty member in the graduate field of nuclear science and engineering who is most directly concerned with the curriculum, including K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroum.

Graduation Requirements
To receive the bachelor of science degree, students must meet the requirements of the common curriculum (outlined below) as set forth by the College of Engineering, including the requirements of their chosen major, as established by the school or department that administers the major. (Further explanation of the revised common curriculum and major flow charts are provided in the 2009–2010 edition of the Engineering Undergraduate Handbook.)

</tbody>
</table>

From 124 to 134 credits are required for graduation, depending on the major (see “Engineering Majors”).

*Technical-writing courses may simultaneously fulfill another requirement.

Mathematics
The normal program in mathematics includes MATH 1910, 1920, 2940 or 2940 (depending on the major), and a major-specific math course. At least C– must be attained in these courses; if not, the course must be repeated immediately before the next course in the sequence is taken. Failure to achieve at least C– the second time will result in withdrawal from the College of Engineering. Courses that are taken a second time do not yield additional credit toward a degree.

Physics
The normal program in physics includes PHYS 1112, 2213, and 2214 or the corresponding honors courses (PHYS 1116, 2217, and 2218). Engineering students must attain at least C– in each math prerequisite of a physics course before taking the physics course (e.g., C– in MATH 1910 before taking PHYS 1112 and C– in MATH 1920 before taking PHYS 2213). The following substitutions are allowed for PHYS 2214: CHEME, CE, CS, JIST, and SES majors: CHEM 2080. BE and EnVE majors: CHEM 1570 or 3570.ORE majors: CHEM 2080,CS 2600, or MATH 3040, 3110, or 3360.

Chemistry
CHEM 2090 is required. The content is the same as that of CHEM 2070, but Engineering students are expected to take 2090.

Typically, CHEM 2090 is taken during the freshman year, but students who wish to complete the physics program (PHYS 1112, 2213, and 2214) first may postpone CHEM 2090 until the sophomore year.

Students considering chemical engineering or a health-related career such as medicine must take CHEM 2090 in the fall of their freshman year and CHEM 2080 in the spring semester.

Computing
Students learn about computing using two programming languages by taking one of two sequences: (1) CS 1110 and CS 1132 or (2) CS 1112 (BE majors may take BEE 1510 instead) and CS 1130. The first course is taken in the first year. The second course, a 1-credit S–I course, is taken as soon as possible thereafter but no later than the fourth semester.

First-Year Writing Seminars
Each semester of their freshman year, students choose a first-year writing seminar from over 100 courses offered by over 30 different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also ensure beginning students the benefits of a small class.

Technical Writing
Students can fulfill the upper-level technical-writing requirement using one of the six alternatives below. See www.engineering.cornell.edu/ECP for more information:

1. ENGRC 3500 or 3350
2. The Writing-Intensive Co-op—an opportunity to combine work and academics. Some co-op students do a significant amount of writing on the job; under certain circumstances, this writing will satisfy the technical-writing requirement.
3. An officially designated Writing-Intensive (W-I) engineering course:
   • ENGRD/AEP 2640
   • CHEM E 4520
   • MSE 4030 and 4040 (both)
   • MSE 4050 and 4060 (both)
   • MAE 4272
   • BEE 4530
   • BEE 4730 with co-registration in BEE 4930
   • BEE 4890
4. ENGRD 3020, a 1-credit attachment to an engineering course that is not one of the officially designated W-I courses (see #3 above). An instructor may wish to extend the writing in their course for a given semester so that it will fulfill the technical-writing requirement. With the approval of the CCGB’s Subcommittee on Technical Writing, the instructor may have students co-register in ENGR 3020, which may be taken more than once with different courses by permission of the engineering instructor.
5. COMM 2600, 2630, or 3520, taught by the Department of Communication (in the College of Agriculture and Life Sciences).
6. Petition. Occasionally, a student will be doing a significant amount and variety of technical writing elsewhere in the College of Engineering. It may be appropriate to petition the CCGB’s Subcommittee on Technical Writing for permission to use this forthcoming writing (not past writing) to meet the technical-writing requirement.

Introduction-to-Engineering Course
An introduction-to-engineering course (designated ENGR1) must be taken during the freshman year. This course introduces students to the engineering process and provides a substantive experience in an open-ended problem-solving context. See the Introduction-to-Engineering course listing for current course offerings.

Engineering Distribution
Two engineering distribution (ENGRD) courses (6-8 credits) must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1. Scientific computing
   • ENGRD 2110 Object-Oriented Programming and Data Structures
   • ENGRD 3200 Engineering Computation
   • ENGRD 3510 Numerical Methods in Computational Molecular Biology
   • ENGRD 3220 Introduction to Scientific Computation

2. Materials science
   • ENGRD 2610 Introduction to Mechanical Properties of Materials: From Nanodevices to Superstructures
   • ENGRD 2620 Electronic Materials for the Information Age

3. Mechanics
   • ENGRD 2020 Mechanics of Solids
   • ENGRD 2030 Dynamics

4. Probability and statistics
   • ENGRD 2700 Basic Engineering Probability and Statistics

Majors in Electrical and Computer Engineering may substitute ECE 3100 for ENGRD 2700.

5. Electrical sciences
   • ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
   • ENGRD 2360 Introduction to Digital Logic Design
   • ENGRD 2640 Computer-Instrumentation Design

6. Thermodynamics and energy balances
   • ENGRD 2190 Mass and Energy Balances
   • ENGRD 2210 Thermodynamics

7. Earth and life sciences
   • ENGRD 2510 Engineering for a Sustainable Society
   • ENGRD 2600 Principles of Biological Engineering

8. Biology and chemistry
   • ENGRD 2520/AEP 2520 The Physics of Life
   • BIOG 1101 and 1105 Biological Sciences, Lec and Lab
   • BIOG 1105 Introductory Biology
   • BIOG 1107 General Biology (summer only)
   • CHEM 3890 Physical Chemistry I

Some majors require a specific engineering distribution course as a prerequisite for the upper-class course sequence. These requirements are as follows:

Biological Engineering: ENGRD 2020
Chemical Engineering: ENGRD 2190
Civil Engineering: ENGRD 2020
Computer Science: ENGRD 2110

Electrical and Computer Engineering: ENGRD 2500

Environmental Engineering: ENGRD 2020
Geological Sciences: ENGRD 2010
Information Science, Systems, and Technology: ENGRD 2700

Materials Science and Engineering: ENGRD 2610 or ENGRD 2620

Mechanical Engineering: ENGRD 2020
Operations Research and Engineering: ENGRD 2700

Some majors require additional distribution courses after affiliation.

Liberal Studies Distribution
Global and diverse societies require that engineers have an awareness of historical patterns, an appreciation for different cultures, professional ethics, the ability to work in multifaceted groups, and superior communications skills. Cornell has a rich curriculum in the humanities, arts, and social sciences, enabling every engineering student to obtain a truly liberal education. At least six courses (totaling at least 18 credits) are required, and they should be chosen with as much care and foresight as courses from technical areas.

• The six courses must be chosen from at least three of the following six groups.
• At least two of the six courses must be at the 2000 level or higher.

Utilize the current Courses of Study as the master list of approved Liberal Studies courses. Additional approved courses and unacceptable courses can be viewed at www.engineering.cornell.edu/programs/undergraduate-education/degree-requirements/liberal-studies.cfm.

Group 1. Cultural Analysis (CA)
Courses in this area study human life in particular cultural contexts through interpretive analysis of individual behavior, discourse, and social practice. Topics include belief systems (science, medicine, religion), expressive arts and symbolic behavior (visual arts, performance, poetry, myth, narrative, ritual), identity (nationality, race, ethnicity, gender, sexuality), social groups and institutions (family, market, community), and power and politics (states, colonialism, inequality).

Group 2. Historical Analysis (HA)
Courses in this group interpret continuities and changes—political, social, economic, diplomatic, religious, intellectual, artistic, and scientific—through time. The focus may be on groups of people, dominant or subaltern, a specific country or region, an event, a process, or a time period.

Group 3. Literature and the Arts (LA)
Offerings in this area explore literature and the arts in two different but related ways. Some courses focus on the critical study of artworks and on their history, aesthetics, and theory. These courses develop skills of reading, observing, and hearing and encourage reflection on such experiences; many investigate the interplay among individual achievement, artistic tradition, and historical context. Other courses are devoted to the production and performance of artworks (in creative writing, performing arts, and media such as film and video). These courses emphasize the interaction among technical mastery, cognitive knowledge, and creative imagination.

Offerings in this area investigate the bases of human knowledge in its broadest sense, ranging from cognitive faculties shared by humans and animals such as perception, to abstract reasoning, to the ability to form and justify moral judgments. Courses investigating the sources, structure, and limits of cognition may use the methodologies of science, cognitive psychology, linguistics, or philosophy. Courses focusing on moral reasoning explore ways of reflecting on ethical questions that concern the nature of justice, the good life, or human values in general.
Group 5. Social and Behavioral Analysis (SBA)
Courses in this area examine human life in its social context through the use of social-scientific methods, often including hypothesis testing, scientific sampling techniques, and statistical analysis. Topics studied range from the thoughts, feelings, beliefs, and attitudes of individuals to interpersonal relations between individuals (e.g., in friendship, love, conflict) to larger social organizations (e.g., the family, society, religion, or educational or civic institutions, the economy, government) to the relationships and conflicts among groups or individuals (e.g., discrimination, inequality, prejudice, stigma, conflict resolution).

Group 6. Foreign Languages (not literature courses)
Courses in this area teach language skills, inclusive of reading, writing, listening, and spoken non-English languages, at beginning to advanced levels.

Electives
- Advisor-approved electives: 6 credits required (approved by the academic advisor). Because these courses should help develop and broaden the skills of the engineer, advisors generally accept the following as approved electives:
  1. One introduction-to-engineering course (ENGRD)
  2. Engineering distribution courses
  3. Courses stressing written or oral communication
  4. Upper-level engineering courses
  5. Advanced courses in mathematics
  6. Rigorous courses in the biological and physical sciences
  7. Courses in business, economics, or language (when they serve the student's educational and academic objectives)
  8. Courses that expand the major or another part of the curriculum.
  9. Up to 6 credits of advisor-approved electives may come from ROTC courses at the 3000 level or higher.
- Major-approved electives: 9 credits (approved by the major and faculty advisors in the major). Refer to the major curricula for descriptions of courses in this category.
- Outside-the-major electives: 9 credits of courses outside the major to ensure breadth of engineering studies

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their liberal studies distribution courses and approved electives, students are urged to consider courses listed in the “Science and Technology Studies” undergraduate area of concentration (see Interdisciplinary Centers and Programs’). These courses may provide students with important perspectives on their studies and their future careers.

Engineering Advising
Entering first-year students are assigned a faculty advisor (who may or may not be in their intended major), who remains their advisor until affiliation with a major (normally during the fourth semester). The students are also under the administration of Engineering Advising in 167 Olin Hall, which implements the academic policies of the College Curriculum Governing Board. Engineering Advising serves as the primary resource center for undergraduate students in the college, offering general and academic advising. Other student services offices located in Olin Hall are Engineering Learning Initiatives and Diversity Programs in Engineering (DPE), which are primary resources for academic advising, support, tutoring, and networking opportunities.

First-Year Requirements
During the first year, engineering students are expected to complete (or receive credit for) the following core requirements:
- MATH 1910 and 1920
- Two of: CHEM 2090, 2080, PHYS 1112, 2213, 2214* (or the Honors equivalent)
- One of: CS 111X
- Two first-year writing seminars
- One introduction to engineering (ENGRD) course
- Two physical education courses
*Students interested in chemical engineering, pre-med, or other health-related careers should enroll in the CHEM 2090–2080 sequence during their first year.

Affiliation with a Major
Students must apply for affiliation with a major during the first semester of their sophomore year, although earlier affiliation may be granted at the discretion of the major. This is done by visiting the undergraduate major office and completing the application for major affiliation later than the first semester of their sophomore year.

Major Courses and Minimum Grade Requirements

| Social Issues of Technology | GPA ≥ 2.0
|----------------------------|---------
| Biological Engineering     | GPA ≥ 2.5 and at most one grade below C– in math, science, and engineering courses. Completion of ENGRD 2600 (or 2510) and Intro Biology Sequence by end of the sophomore year. (Also applies to transfer students.) |
| Chemical Engineering       | At most one grade below C– in chemistry, math, physics, and chemical engineering courses. GPA ≥ 2.2 in math, science, and engineering courses. |
| Civil Engineering          | GPA ≥ 2.0 in all engineering and science courses. At least C in ENGRD 2020 (or ENGRD 2510), for students who do not take ENGRD 2020 before affiliation). |
| Computer Science           | At least C in all completed CS and math courses. GPA ≥ 2.5 in CS 2110 and 2800. GPA ≥ 2.5 in MATH 1920 and CS 2800. Visit the CS undergraduate web site for their affiliation criteria. |
| Electrical and Computer Engineering      | At least C+ in MATH 2930, PHYS 2213, and one of ECE/ENGRD 2100, 2200, or ECE/ENGRD 2300. Must have a GPA ≥ 2.5 in (if completed): MATH 1920, 2930, 2940, PHYS 2213, ENGRD 2110, ECE/ENGRD 2300, ECE/ENGRD 2100, ECE 2200. |
| Engineering Physics        | At least B– in all required math and physics courses. |
| Environmental Engineering  | GPA ≥ 2.0 in all engineering and science courses. At least C– in BEE/ENGRD 2510. |
| Independent Major          | GPA ≥ 2.0. |
| Information Science, and Technology | At least C in two of MATH 2940, CS 2110, and ENGRD 2700. |
| Mechanical Engineering     | At least C– in ENGRD 2020, ENGRD 2210*, and all completed required math, science, and engineering courses. GPA ≥ 2.5 in MATH 2930, PHYS 2213, ENGRD 2020, and ENGRD 2210. |
| *If ENGRD 2210 was taken. |
| Operations Research and Engineering | At least C in each of ENGRD 2700 and MATH 2940. GPA ≥ 2.2 in math, science, and engineering courses (both overall and in the term immediately before affiliation). At least C– in all ORIE courses completed that far. Good academic standing in the College of Engineering. |
| Science of Earth Systems   | Good academic standing in the College of Engineering. |

Students must be affiliated in their fourth semester or they will be withdrawn.
from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual-Degree Program
The dual-degree program, intended for superior students, allows both a bachelor of science and either a bachelor of arts (B.A.) or bachelor of fine arts (B.F.A.) degree to be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art, and Planning may apply and, after acceptance of their application, begin the dual-degree program in their second or third year. For information, contact the appropriate coordinators of dual-degree programs at 55 Goldwin Smith Hall (for Arts and Sciences), B-1 West Sibley Hall (for Architecture, Art, and Planning), and Engineering Advising, 167 Olin Hall.

Double Major in Engineering
The double-major option, which makes it possible to develop expertise in two allied engineering majors, generally requires at least one semester beyond the usual four years. Students affiliate with one major following normal procedures and then petition to enter a second major before the end of their junior year. All requirements of both majors must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual major offices.

Independent Major
Students whose educational objectives cannot be met by one of the regular majors may affiliate with the independent major. Often, the desired curriculum is in an interdisciplinary area.

This major consists of a primary area (≥32 credits), which may be any subject area offered by a school or department of the college, and an educationally related secondary area (≥16 credits), which may be in a second engineering subject area or in a logically connected nonengineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. See the discussion of this major in “Undergraduate Engineering Majors.”

Engineering Minors
Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

Most engineering majors have a corresponding minor, requiring six courses (18 credits), in which the student can pursue a secondary interest. In addition, there are minors in applied mathematics, biomedical engineering, civil infrastructure, engineering management, engineering statistics, game design, industrial systems and information technology, information science, and business. See “Engineering Minors.”

Engineering Communications Program
424 Hollister Hall, 255-8558, www.engineering.cornell.edu/ECP
The Engineering Communications Program (ECP) provides instruction in technical writing, oral presentation, and the use of graphics in both. The ECP is a recipient of the Engineering Dean’s Prize in Excellence and Innovation in Teaching.

ECP courses give students experience with the difficult task of explaining technical information to audiences that have various levels of technical expertise. Students improve their writing style, become more comfortable with and effective at oral presentation, use standard forms and formats for presenting technical information, perform library and Internet research on engineering topics, and study real engineering situations in which ethics may have been breached.

Enrollment in ECP courses is typically 20 students per section; like writing seminars elsewhere at Cornell, those taught by the ECP are discussion classes. Students work receives abundant written comments, and conferences are frequent.

ECP members are available to consult with the faculty teaching writing-intensive technical courses and anyone else interested in including writing in their courses. They oversee the communications component of the Writing-Intensive Co-op and occasionally give talks to alumni and student groups.

Diversity Programs in Engineering
146 Olin Hall, 255-6403
The Diversity Programs in Engineering (DPE) office operates programs at the undergraduate, graduate, and faculty levels to facilitate the outreach, recruitment, retention, and overall success of underrepresented minorities, women, and other underrepresented groups in Engineering. DPE serves as a resource center for academic support, career placement, graduate school preparation, and overall student success.

The office participates in a university-wide pre-freshman summer program (Engineering Summer Scholars Program) for admitted students, coordinates two summer program initiatives for high school students, CURIE (www.engineering.cornell.edu/cure) and CATALYST (www.engineering.cornell.edu/catalyst), and also provides specialized instruction, in collaboration with Engineering Advising and Engineering Learning Initiatives, each semester in subjects such as math, computer science, and English composition.

The DPE office sponsors networking events throughout the academic year that allow company representatives from all over the United States to meet students from diverse populations. Summer internships and permanent jobs frequently result from these events.

In addition, the DPE office coordinates various trips, recreational activities, seminars, lectures, and workshops on a wide range of topics that are relevant to academic and extracurricular life in the university setting.

Engineering Learning Initiatives
The office of Engineering Learning Initiatives offers programs designed to enhance the undergraduate academic experience through peer education, collaborative learning, research opportunities, and leadership development.

Academic Excellence Workshops (AEWs) offered through Engineering Learning Initiatives are taken in conjunction with core engineering courses in math, computer science, and chemistry. The 1-credit AEWs are weekly two-hour collaborative learning sessions. Designed to enhance student understanding, they feature peer-facilitated group work on problems at or above the level of course material.

Undergraduate Research Grants offered through Engineering Learning Initiatives provide opportunities for students to obtain hands-on research experience under the mentorship of a faculty member. Students and faculty may apply for funding to cover student stipend and expenses for the fall, spring, and summer terms.

Tutors-on-Call, through Engineering Learning Initiatives, offers one-on-one peer tutoring free of charge for engineering students in any first- and second-year core courses, including math, chemistry, physics, computer science, and distribution courses.

LeaderShape, offered through Engineering Learning Initiatives, provides opportunities for our students to engage in the dynamic process of personal discovery and leadership development at a weeklong retreat held in May of each year.

Engineering Cooperative Education and Career Services
201 Carpenter Hall, 255-5006, www.engineering.cornell.edu/careerservices
This office assists engineering students (freshmen through Ph.D.) on issues related to career development and the job search through individual advising and group seminars. It also administers the Engineering Cooperative Education Program. Each year, more than 200 national and international employers visit the office to recruit technical interns and graduates; additional job opportunities are posted on Cornell’s electronic job posting service. Both undergraduate and graduate students can use these resources to pursue permanent, summer, or co-op employment; however, students seeking co-op opportunities must meet specific requirements.

The Engineering Cooperative Education Program (Co-op) provides an opportunity for students to gain practical experience in engineering-related organizations before they graduate. By supplementing course work with carefully monitored, paid positions, Co-op students can explore their own interests and acquire a better understanding of engineering as a profession—and still graduate in four years.

To be eligible, a student must have been enrolled in the College of Engineering an equivalent of five semesters before starting the first work term. (Exceptions may be made for transfer students and others pursuing an accelerated curriculum.) Students majoring in computer science or biological engineering,
but not registered in the College of Engineering, are also eligible. In most cases, a GPA ≥ 2.7 is required. Applicants interview with participating employers in February of the sophomore year. Those who receive offers and join the program usually complete their fifth-semiter course work on campus during the summer after sophomore year and begin the first Co-op work term the following fall. They complete the sixth semester on campus with their classmates and then return to their Co-op employer (but not necessarily to the same department or location) the following summer to complete a second work term. Students then spend the senior year on campus, graduating on schedule with their class. Students who have flexible course curriculums may prefer to complete one 28-week spring/summer or summer/fall Co-op work term during the junior year.

International Programs
An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important for today’s engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years. Currently, the college has study abroad agreements with École Centrale Paris, France; Cantabria, Spain; and the Hong Kong University of Science and Technology, and is also working with IIT Kanpur, India, and the National University of Singapore. The college is working to facilitate study abroad in Dresden, Germany; and Guadalajara, Mexico. Students who plan to study abroad apply through Cornell Abroad; see the Cornell Abroad program description in the introductory section of Courses of Study. Visit www.engineering.cornell.edu/studyabroad and Engineering Advising, 167 Olin Hall, for the latest information. In addition, the college is working on developing international Co-op and internship work experiences. For information, visit the Engineering Cooperative Education and Career Services Office, 201 Carpenter Hall.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates may be interested in a cooperative program at Cornell that leads to both a bachelor of engineering and master of business administration (M.B.A.) degrees. See “Master of Engineering Degrees” for details.

Lester Knight Scholarship Program
The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. See www.engineering.cornell.edu/Knightscholarships for details.

ACADEMIC PROCEDURES AND POLICIES
Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering first-year students who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:
1. Advanced placement examinations given and scored by the College Entrance Examination Board (CEEB);
2. General Certificate of Education (GCE) Advanced (‘A’) Level Examinations;
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell Advanced Standing Examinations (CASE), given during orientation week before the beginning of fall-semester classes.
Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways. They may:
1. enroll in a more advanced course in the same subject right away;
2. substitute an elective course from a different area;
3. enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or CASE AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 1910, 1920 are required.
First-semester math (MATH 1910). AP credit may be earned by:
- a score of 4 or 5 on the CEEB BC exam, or
- a passing score on the CASE exam for first-semester math.
First-year math (through MATH 1920). AP credit may be earned by:
- a passing score on the CASE exam for first-year math.

Physics: PHYS 1112 and 2213 are required.
PHYS 1112. AP credit may be earned by:
- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam with successful completion of a high school-level calculus course, or
- a passing score on the CASE exam for PHYS 1112.
Note: MATH 2930 is a prerequisite for PHYS 2214.
PHYS 2213. AP credit may be earned by a score of 5 on the Electricity and Magnetism portion of the AP C exam.
PHYS 1116, 2217, and 2218 (honors sequence). This sequence is designed for students with strong experience in physics and calculus, e.g., a 5 on one or both Physics C AP tests and the equivalent of at least one semester of university calculus. Students interested in PHYS 2217 or 2218 are strongly advised to start with PHYS 1116. Even for a student with a 5 on both Physics C AP tests, 1116 will not be boring. Students may not simultaneously receive credit for PHYS 1116 and AP credit for PHYS 1112, or credit for PHYS 2217 and AP credit for PHYS 2213. For advice or more information, contact the departmental representative at 255-6016.

Chemistry: CHEM 2090 is required.
CHEM 2090. AP credits may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the CASE exam for chemistry.

Note: Students who obtain AP credit for CHEM 2090 and who are considering a major in chemical engineering or materials science and engineering should consider enrolling in CHEM 2150. Those who are offered AP credit for CHEM 2090 and then elect to take CHEM 2150 will also receive academic credit for CHEM 2090. Students may want to discuss this option with their faculty advisor.

Computing: CS 1110 or CS 1113 or CS 1112 or CS 1114, together with CS 1132 or CS 1130, are required. AP credit may be earned for CS 1110 by:
- a score of 5 on the CEEB B or a score of 4 or 5 on the AB exam, or
- a passing score on the CASE exam for CS 1110.

Biology: Biology is not required as part of the core curriculum, although it is a popular elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- 8 credits will be offered to students who receive a 5 on the CEEB AP exam;
- 4 credits will be offered to students who receive a 4 on the CEEB AP exam.

Those who want to study more biology should contact the Office of Undergraduate Biology, 200 Stimson Hall, to discuss proper placement.

First-year writing seminar: Two first-year writing seminars are required.
- AP credit for one first-year writing seminar may be earned by a score of 5 on either of the CEEB AP English exams.

Students who earn a score of 4 on the AP English Literature and Composition exam or the AP English Language and Composition exam will be offered 3 credits, which may be applied toward the Literature and Arts (LA) category of the Liberal Studies distribution requirement.

Liberal studies distribution: Six courses beyond two first-year writing seminars are required. Students may earn AP credit toward the liberal studies distribution by taking CEEB AP tests. AP credit earned in the liberal studies distribution cannot be used to fulfill the “upper-level” liberal studies requirements.

Languages: Students may earn AP credit for competence in a foreign language by taking the CEEB AP test or by taking the CASE. Those who score 4 or 5 on the CEEB AP test in French, German, Italian, and Spanish are entitled to 3 credits. To qualify for the CASE exam in any language, the student must score at least 65 on a college placement test (taken either in high school or at Cornell during Orientation Week). A passing score on the CASE entitles the student to 3 credits.

Language credit, earned via AP or CASE, may be used to satisfy part of the foreign language...
Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced (‘A’) Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

**General Certificate of Education Advanced Level Examination (GCE “A”)**

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE “A” Levels.

Mathematics: No credit is given for the IB exam; students are encouraged to take the Engineering Mathematics Advanced Standing exam during orientation.

Note: Advanced placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under “General Information.”

**General Policies for Advanced Placement**

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-semester classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE “A” Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to Engineering Advising, 167 Olin Hall. Those who wish to take CASE examinations should do so during Orientation Week.

A more detailed description of the college’s policies concerning advanced placement credit and its use in developing undergraduate programs is available online at www.engineering.cornell.edu/student-services/academic-advising/academic-information/ap-credit/index.cfm.

**General Policies for Transfer Credit**

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such in writing by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell. Transfer credit will not be awarded for courses taken during a semester in which the student is enrolled at Cornell.

- To apply for transfer credit, submit a transfer credit form (one form for each request), accompanied by a course description. Forms are available from Engineering Advising or the Registrar's office and should be submitted before enrollment in the course to be transferred. An official transcript from the offering institution (bearing the institutional seal and Registrar’s signature) must be sent to the Engineering Registrar’s office before official transfer credit will be awarded.
- Applications for transfer credit to satisfy requirements in math, science, engineering courses, or first-year writing seminars require approval from the department offering an equivalent course at Cornell. The department may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required for transfer credit that satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPC) in Engineering Advising.
- Cornell does not award credit for courses in which a student has earned a grade less than C; schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination (CASE), as described in the "Advanced Credit" section.
- Following matriculation, students may apply up to 18 credits of transfer and/or Cornell extramural credit toward B.S. degree requirements.
- At most 72 total transfer credits (taken both before and after matriculation) may be used to meet graduation requirements.
- Summer session courses taken at Cornell are not considered transfer credit.

A more detailed description of the college’s regulations governing transfer credit is available online at www.engineering.cornell.edu/student-services/academic-advising/index.cfm.

**Transfer Credit for Transfer Students**

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. Transfer credit awards are determined by the majors/departments. Students must complete the transfer credit award process by the end of their first semester at Cornell, or their registration will be blocked for the next semester until the process is completed.

**Academic Standing**

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this means depends on the major.

Engineering students not yet affiliated with a major must meet the following standards at the end of each semester to be considered in good academic standing. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPC), and credit awards may be reviewed, warned, stern warned, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from math, science, and/or engineering (phys. ed. courses and courses below the 1100 level do not count)
2. At least C– in the math course
3. Semester GPA ≥ 2.0
4. No F, U, or INC grades

**Academic Progress**

The total number of credits required for graduation range from 124 to 134, depending on the major. Therefore, an average semester credit load ranges from 15 to 17 credits.

Because math is pivotal to the study and practice of engineering, students must earn at least C– in their four required math courses. If at least C– is not attained, the course must be repeated immediately. Failure to achieve at least C– the second time will generally result in withdrawal from the College of Engineering. Physics and advanced math courses often have math prerequisites, and having to repeat the prerequisite course may...
delay progress in the physics and math curricula. Students are expected to continue the core engineering math courses each semester until completed.

Dean’s List
Dean’s List citations are presented each semester to engineering students who have exemplary academic records. The dean of the college determines the criteria for this honor. For 2009–2010, the requirement is a semester GPA ≥ 3.5 (without rounding); no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not $S–U$). Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean’s List status receive certificates from the Engineering Registrar’s office, and the honor is noted on the transcript.

Graduating with Distinction and Honors
Graduating with Distinction
Meritorious students graduating with a B.S. degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude:
• Cum laude will be awarded to engineering students with a GPA ≥ 3.5. Cum laude will also be awarded to engineering students who received a semester GPA ≥ 3.5 in each of the last four semesters at Cornell, in each of these semesters, at least 12 letter-graded credits must be taken with no failing, unsatisfactory, missing, or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for prorated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.5 in their last semester and meet the conditions above in the prior four semesters.
• Magna cum laude will be awarded to engineering students with a GPA ≥ 3.75 (based on all credits taken at Cornell).
• Summa cum laude will be awarded to engineering students with a GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: All GPA calculations are minimums and are not rounded.

Major Honors Program
To be eligible to enter a major honors program, a student must be on track to graduate with distinction. A student must be in the program for at least two semesters before graduation. If the student’s major has an approved honors program and the requirements for (1) distinction, (2) Bachelor of Science degree, and (3) major honors program are fulfilled, the faculty of the major may recommend that the student graduate with the additional diploma and transcript notation of “With Honors.”

S–U Grades
Many courses may be taken either for a letter grade or for $S–U$ (satisfactory or unsatisfactory) grade designation. Under the $S–U$ option, students earning the letter grade equivalent of at least C– in a course will receive a grade of S; those earning less than C– receive U. A course in which a U grade is received does not count toward graduation requirements.

Engineering students may choose to receive an $S–U$ grade option under the following conditions:
• The course in question must be offered with an $S–U$ option.
• The student must previously have completed at least one full semester of study at Cornell.
• The proposed $S–U$ course must count as either a liberal studies distribution or an advisor-approved elective in the engineering curriculum.
• Students may enroll $S–U$ in only one course each semester in which the choice applies (without letter grade).

The choice of grading option for any course is made initially during the pre-enrollment period and may be changed each semester after the second week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which he or she was previously enrolled in the current semester under a different grading option. (Grading options may be changed online for most courses. A properly completed add/drop form must be used to change a grade option for a permission-only course.)

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell, including at least three semesters affiliated with an engineering major.

Students on a voluntary leave of absence may register for courses extramurally only with the approval of their major (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired through transfer credits (or a combination thereof) after matriculation may be used to satisfy the requirements for the B.S. degree in engineering. Students may not complete their last semester extramurally.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell
It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The Internal Transfer Division office is responsible for assisting students with the transfer process. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with Engineering Advising.

Students who wish to transfer into the College of Engineering can apply at Engineering Advising, 167 Olin Hall. It is preferred that students apply in the semester in which they are completing affiliation criteria for the desired major. Transfer students who would enter the college must be approved by a major as part of the admission process.

Students who wish to transfer into engineering should take courses in math, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Students should discuss their eligibility with an advisor in Engineering Advising, 167 Olin Hall.

Leave of Absence
A leave of absence may be voluntary, health-related, or required. A description of each follows:

Voluntary leave: Students sometimes find it necessary to suspend their studies. To do this, they must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their majors. Unaffiliated students request leave through Engineering Advising; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a major and while not in good standing may be given a “conditional leave.” This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

A leave of absence is granted for at least six months and not more than two years. A leave of absence granted during a semester goes into effect on the day it is requested. If a leave is requested after the 12th week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a “W” will appear on the transcript for each course). Students who owe money to the university are treated as having been dropped (i.e., a “W” will appear on the transcript for each course). Students who owe money to the university are ineligible for a leave of absence. Courses taken during a leave to satisfy Cornell degree requirements must be approved in advance through a formal transfer petition. (See previous section, “Transfer Credit,” for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing at least six weeks before the beginning of the semester in which the student plans to return.

Health leave: Health leaves are granted by the college only upon recommendation by a physician or therapist from Gannett Health Center. Although circumstances may vary, such leaves are generally granted for at least one full academic year with the understanding that the student may return at the beginning
of any semester after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required leave: A required leave of absence is imposed in cases in which the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example of this might be failure in key engineering courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are offered only in the fall or spring semester. Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year). Required leaves take precedence over voluntary leaves.

Rejoining the College
Students wishing to rejoin the college who have not yet affiliated with a major should request permission to rejoin in a letter to Engineering Advising. Affiliated students should contact their major office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities while away from Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College
A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary withdrawal: Students who voluntarily withdraw from the college sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their major office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

A student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The interuniversity transfer process should be followed.

A student who has withdrawn and subsequently wishes to return must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major.

Required withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action withdraws them only from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university. Required withdrawals take precedence over voluntary withdrawals.

ENGINEERING MAJORS
This section describes the majors in the College of Engineering: the programs in which an undergraduate can study to obtain a B.S. degree.

A basic requirement of any major is a GPA ≥ 2.0. Most majors have a higher GPA requirement and may have other requirements.

Honors Program within Majors
Many of the engineering majors supplement the major with an honors program.

Eligibility
The B.S. degree with honors is granted to engineering students who, in addition to having completed the requirements for a B.S. degree in a major, satisfactorily complete the honors program in the major and are recommended for the degree by the honors committee of that major. To enter an honors program, the student must be on track to graduate with distinction, and a student who does not stay on track to graduate with distinction is dropped from the honors program.

Courses taken to satisfy the honors requirement may not be used to satisfy B.S. degree requirements. At least 9 extra credit hours are required, and a student must be in the program for at least two semesters before graduation.

No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Procedures
An applicant to the honors program in a major must have an honors advisor: a faculty member from that major who will supervise the honors program and direct the research or project. The honors advisor need not be the student's advisor in the major.

The application for the honors program should be a letter from the student that describes the proposed honors program in detail and includes the explicit approval of the honors advisor.

Students must complete a written application no later than the beginning of the first semester of their senior year, but they are encouraged to make arrangements with the honors advisor during the second semester of their junior year. Each major may place further constraints on timing.

Major-Specific Information
Each major defines the content of the honors program and may also place other requirements on the program, in terms of timing, content, and procedures. Information is given within the description of the individual majors.

BIOLICAL ENGINEERING
Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Biological and environmental engineering (BEE) programs address three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the earth's natural resources; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The biological engineering (BE) major has a unique interdisciplinary focus on biological systems, including the environment, which is realized through a combination of fundamental engineering sciences, biology, engineering applications and design courses, and liberal arts.

Students interested in the BE major should have a strong aptitude for the sciences and math and an interest in the complex social issues that surround technology.

Students take courses in math, engineering, statistics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), and engineering design. Students select upper-level engineering courses in subjects that include bioprocessing, soil and water management, biotechnology applications, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, sustainable energy, and waste management and disposal. Students may further strengthen their programs by completing a minor or a second engineering major. Students planning for medical school also take additional lab-based courses in chemistry and biology. Throughout the curriculum, emphasis is placed on oral communications and teamwork skills, and all students complete a capstone design project.

Career opportunities cover the spectrum of self-employment, private industry, public agencies, educational institutions, and graduate and professional programs in engineering and science, as well as professional fields like medicine, business, and law. In recent years, graduates have pursued careers in consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management, and international development.

The living world is all around us and within us. The biological revolution continues, and it has given rise to a growing demand for engineers who have studied biology, who have strong math and science skills, who can communicate effectively, and who are sensitive to the needs of people and interested in the challenges facing society. The Biological Engineering major is designed to educate the next generation of engineers to meet these challenges.
The academic requirements* for students majoring in Biological Engineering are outlined below.

Concentration courses (three courses, minimum of 9 credits, chosen from one of the following BE concentrations): Biomedical Engineering, Bioprocess Engineering, or Bio-Environmental Engineering***

Major-approved Engineering Electives***

(Engineering courses at or above 2000 level to bring the number of credits to 46.) One course must be a BEE Capstone course and one must be a BEE lab experience course.

- Liberal studies (two first-year writing seminars and six liberal studies electives) 24
- Advisor-approved electives 6
- Total (minimum) 127

*Basic accredited curriculum. See also the section on minors. Information on preprofessional study for medicine, dentistry, and veterinary medicine is available at www.career.cornell.edu.

** Students must have a competency in calculus equivalent to MATH 1110 before they attempt MATH 1910.

*** See department web page for a current list of approved courses.

Students must satisfy the College of Engineering Technical Writing requirement by including one of the approved courses in their program of study.

---

### Biological Engineering Honors Program

The B.S. degree with honors is granted to biological engineering majors who graduate with distinction from the College of Engineering and satisfy the Honors requirements given at the beginning of the section “Engineering Majors.” The Honors program requires completion of 9 credits beyond the B.S. degree requirements drawn from the following, with at least 6 credits in the first category:

1. A significant research experience or honors project under the supervision of a BEE faculty member using BEE 4991–4992 BE Honors Research completed in their senior year. A written senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department under BEE 4980 Undergraduate Teaching.

3. Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, math, biology, chemistry, and physics at the 4000+ and graduate level.

---

### CHEMICAL ENGINEERING

Offered by the School of Chemical and Biomolecular Engineering

Contact: 120 Olin Hall, 255-8656, www.cheme.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The undergraduate major in chemical engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Students who plan to enter the major take CHEM 2080 during the freshman year. The curriculum is designed to satisfy the ABET requirement given at the beginning of the section “Engineering Majors.”

Students who plan to enter the major take MATH 1910**, 1920, 2930, 2940 before they attempt MATH 1910. Students must have a competency in calculus equivalent to MATH 1110 before they attempt MATH 1910.

---

### Semester 5

- CS 1130 Transition to OO Programming or CS 1132 Transition to MATLAB 1
- CHEM 3570 Organic Chemistry for the Life Sciences 3
- CHEM 2510 Introduction to Experimental Organic Chemistry 2
- CHEME 3330 Chemical Engineering Thermodynamics 3
- CHEME 3240 Heat and Mass Transfer 3
- Liberal Studies Distribution 5

### Semester 6

- Advanced science elective** 3
- CHEME 3010 Nonresident Lectures 1
- CHEME 3320 Analysis of Separation Processes 3
- CHEME 3720 Introduction to Process Dynamics and Control 2
- CHEME 3900 Chemical Kinetics and Reactor Design 3
- Liberal Studies Distribution 3

### Semester 7

- CHEME 4320 Chemical Engineering Laboratory 4
- Electives*** 9
- Liberal Studies Distribution 3

### Semester 8

- CHEME 4620 Chemical Process Design 4
- Liberal Studies Distribution 3
- Electives*** 3
- Approved elective 3

*Every student must complete one of the following options for the biology elective: (1) CHEME 2880 Biomolecular Engineering: Fundamentals and Applications (2) advanced placement: a score of 5 on the CEEB AP exam or a score of 7 on the IB Higher Level exam.

*(3) 4 credits of a pre-med biology sequence: BIOG 1101 Biological Sciences, Lec (fall, 2 credits) and BIOG 1105 Biological Sciences, Lab (fall, 2 credits), BIOG 1102 Biological Sciences, Lec (spring, 2 credits) and BIOG 1104 Biological Sciences, Lab (spring, 2 credits), BIOG 1105 Introductory Biology (fall, 4 credits), BIOG 1106 Introductory Biology (spring, 4 credits), BIOG 1107 General Biology (summer, first half of eight-week session, 4 credits) or BIOG 1108 General Biology (summer, second half of eight-week session, 4 credits). (4) 3 credits of microbiology: BIOM 2900 General Microbiology (fall, spring, or summer six-week session, 3 credits). (5) 4 credits of biochemistry: BIOM 3500 Principles of Biochemistry: Individual Instruction (fall or spring, 4 credits) or BIOM 3510 Principles of Biochemistry: Proteins and Metabolism (fall, 3 credits) and BIOM 3520 Principles of Biochemistry: Molecular Biology (spring, 2 credits).

**Advanced science electives include BIOM 2900 General Microbiology Lectures, BIOM 3500, 3510, 3520, and 3530 Principles of Biochemistry; BME 3010 (CHEME 4010) Molecular Principles of Biomedical
Mechanics of Solids as an engineering major. Students are required to take ENGRD 2020, which is an engineering distribution course. For the second engineering distribution course, one of the following is recommended:

- ENGRD 2610 Introduction to Mechanical Properties of Materials, for students interested in structural engineering and geotechnical engineering.
- ENGRD 2210 Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology.
- ENGRD 2110 Object Oriented Programming and Data Structures, for students interested in transportation.
- ENGRD 2510 Engineering for a Sustainable Society, for students interested in environmental engineering.

**Major Program**

Students may substitute CHEM 2080 or CHEM 1570 for PHYS 2214. The following nine courses are required in addition to those required for the Common Curriculum.

- **Core Courses**
  - ENGRD 2030 Dynamics* or CEE 4780 Structural Dynamics
  - ENGRD 3200 Engineering Computation*
  - CEE 3040 Uncertainty Analysis in Engineering
  - CEE 3230 Engineering Economics and Management
  - CEE 3310 Fluid Mechanics
  - CEE 3410 Introduction to Geotechnical Engineering and Analysis
  - CEE 3510 Environmental Quality Engineering**
  - CEE 3610 Introduction to Transportation Engineering**
  - CEE 3710 Structural Modeling and Behavior

Additional requirements include a set of two major-approved electives and three design electives from a list of approved courses that is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRG or approved communications courses. If the technical communications course also fulfills another requirement (liberal studies major-approved elective, etc.), then an additional advisor-approved elective must be taken.

*CENG 2030 and ENGRD 3200 can be used to satisfy a major requirement. If a student elects to use one of these courses as a second distribution course, the student must take an additional major-approved elective to fulfill the core course requirements.

*ENGRD 2700 may be substituted (by petition) for CEE 5404 in the major, but only if ENGRD 2700 is taken before affiliation, or in some special cases where co-op or study abroad programs necessitate such a substitution.

**Students may substitute CEE 3720 or CEE 4710 for either CEE 3510 or 3610, if they also complete either CEE 4750 or 4740. However, CEE 5720 or CEE 4710 then counts as a core course only and not as a CEE design course or major-approved elective.

**Civil Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section ‘Engineering Majors’ as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., CEE 4101 Undergraduate Teaching in CEE (1–3 credits per semester).

3. Advanced or graduate courses at the 5000 level or above.

**Procedures**

Application to the program shall be a registration form for CEE 4000 and a letter from the student describing the specific proposed honors program and including the explicit approval of the major advisor and the honors advisor. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

**CIVIL ENGINEERING**

Offered by the School of Civil and Environmental Engineering

Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

While it is not necessary to do so, students may concentrate in environmental engineering, environmental fluid mechanics and hydrology, geotechnical engineering, structural engineering, transportation, or water resource systems.

**Admission Requirements**

Students planning to affiliate with this major must complete ENGRD 2020 Mechanics of Solids (or, ENGRD 2510 for students who do not take ENGRD 2020 before affiliation) with at least C. It is strongly recommended that ENGRD 2020 be taken as an engineering distribution during the first semester of the sophomore year.

**Engineering Distribution Courses**

- Majors are required to take ENGRD 2020 Mechanics of Solids as an engineering distribution course.

**Civil Engineering Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section ‘Engineering Majors’ as well as the following requirements.

The 9 credits beyond the B.S. degree requirements shall be drawn from the following components (with no fewer than 2 credits in any selected component):

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 4000 Senior Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component. Letter grades only.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering, i.e., CEE 4101 Undergraduate Teaching in CEE (1–3 credits per semester).

3. Advanced or graduate courses at the 5000 level or above.

**COMPUTER SCIENCE**

Offered by the Department of Computer Science

Contact: 305 Upson Hall, 255-0082, www.cs.cornell.edu

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

Computer science majors take courses covering algorithms, data structures, logic, programming languages, systems, and theory. Electives include artificial intelligence, computer graphics, computer vision, cryptography, databases, networks, and scientific computing. Requirements include:

- MATH 1910, 1920, and 2940
- three courses in introductory computing; either CS 1110, CS 1132, CS 2110 or CS 1112, CS 1130, CS 2110. CS 1114 is an honors-level substitute for CS 1112.
- a five-course computer science core (CS 2800, 3110, 3410 or 3420, 4140, and 4820)
- three 4000-level computer science electives (CS 4999 not allowed; CS 5220 and CS 3810 allowed). If CS 2800 was taken prior to spring 2009, CS 3810 or CS 4810 must be one of these electives or one of the technical electives (see below).
- a computer science project course (CS 4121, 4321, 4411, 4450, 4621, 4701, 5150, 5410, or 6670)
• three 3000+ level courses (only one of ENGRD 2700 or MATH 2930 accepted) that are technical in nature, as determined by the major.
• a three-course “external specialization” in a topic area other than computer science, all numbered at the 3000+ level
• one of BTRY 4080, ECE 3100, ECON 3190, ENGRD 2700, MATH 4710. CS majors in the College of Engineering can use ECE 3100 as a substitute for ENGRD 2700 to satisfy the engineering distribution requirements.
• an elective requirement consisting of a single 3+ credit course or a combination of courses coming to 3+ credits total

Roughly speaking, all academic courses (inside or outside of CS) count. No PE courses, courses numbered 10xx, or ROTC courses below the 3000 level are allowed.

All the major electives described above must be courses of at least 3 credits, with the exception of the CS project course, which is at least 2 credits, or as otherwise specified.

Additionally, students' course selections must satisfy the requirements of at least one “vector” or CS-centric specialization, defined by the department. The set of vectors includes artificial intelligence, computational science and engineering, data-intensive computing, graphics, human-language technologies, network science, programming languages, security and trustworthy systems, software engineering/code warrior, systems, theory, and a broad "Renaissance" vector. See www.cs.cornell.edu/ugrad for the requirements of each vector and updates.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study or employment in any technical area or any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of a liberal education.

**Computer Science Honors Program**

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” with a set of coherent courses and research activities that satisfy the following requirements.

1. at least one CS course (at least 3 credit hours) at or above the 5000 level with a grade of A– or better (no seminars)
2. at least two 3-credit semesters of CS 4999 (independent research), with grades of A– or better each semester

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The student must fulfill the requirements described in the previous section and must receive a grade of B– or better in CS 4999.

Honors determinations are made during the senior year. Students wanting to be considered for the honors program should notify the undergraduate office in the Department of Computer Science at ugrad@cs.cornell.edu. The student must fulfill the requirements described in the previous section and must receive a grade of B– or better in CS 4999.

ELECTRICAL AND COMPUTER ENGINEERING

*Offered by the School of Electrical and Computer Engineering*

**Contact:** Student Services Office, 223 Phillips Hall, 255-4309, www.ece.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

The Electrical and Computer Engineering major (ECE), leading to a B.S. degree, provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer architecture and organization, digital systems and computer vision; power systems control; communications, networks, information theory and coding, signal processing and optimization; electronic circuits, VLSI, solid state physics and devices, MEMs, nanotechnology, lasers and optoelectronics; electrodynamics, radiophysics, space sciences, and plasmas.

ECE majors must take ECE/ENGRD 2300 as an engineering distribution course and are encouraged, but not required, to take ENGRD 2110 as the other engineering distribution course. The major normally begins in the spring of the sophomore year. Of the courses listed below, only ENGRD/ECE 2100 and ECE/ENGRD 2300 are currently taught in both the fall and spring semesters.

**Course**

**Credits**

**Major-required courses**

- ECE/ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
- ECE 2200 Signals and Information
- ECE 2400 Practice and Design
- ECE 3030 Electromagnetic Fields and Waves
- ECE/ENGRD 3100 Introduction to Probability and Random Signals
- ECE 3140/CS 3420 or 3410 Computer Organization
- ECE 3150 Introduction to Microelectronics

**Major-approved electives**

(29-credit minimum in the following categories)

- Advanced ECE electives† (six lecture courses) Outside ECE electives‡ 9 minimum credits
- Total minimum major credits 53
- ECE 3100 satisfies the major requirement of probability and statistics.

†These electives must include two 4000-level Electrical and Computer Engineering culminating design experience (CDE) courses and at least two additional courses at the 4000 level or above. The remaining electives may not include independent project courses, such as ECE 3910, 3920, 4910, or 4920, and must be at the 3000 level or above in Electrical and Computer Engineering. Courses that meet the CDE requirement are described in the Engineering Undergraduate Handbook. The list changes frequently. An updated list of courses that meet the CDE requirements will be posted each semester on the bulletin board outside 222 Phillips Hall. All courses must have a college-level prerequisite.

‡Must include one course at the 3000 level or above (see the online Electrical and Computer Engineering Undergraduate Handbook for details).

Undergraduate concentration is achieved through the various Electrical and Computer Engineering elective courses, as well as other courses in related technical fields within engineering, math, the physical sciences, and the analytical biological sciences. The School of Electrical and Computer Engineering offers more than 30 courses that are commonly taken as electives by undergraduates.

**Academic Standards**

Majors in Electrical and Computer Engineering are expected to meet the following academic standards:

1. GPA ≥ 2.5 every semester.
2. At least C– in all courses used to satisfy degree requirements in the major or that serve as a prerequisite for a subsequent Electrical and Computer Engineering course.
3. Satisfactory completion of MATH 2940, PHYS 2214, and at least two of ENGRD/ECE 2100, ECE 2200, and ENGRD/ECE 2300 by the end of the sophomore year and adequate progress toward the degree in subsequent semesters.

**ENGINEERING PHYSICS**

*Offered by the School of Applied and Engineering Physics*

**Contact:** 212 Clark Hall, 255-5198, www.aep.cornell.edu

The engineering physics (EP) major is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and math fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration within this major, students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for EP B.S. graduates is high, and many students go directly to industrial positions where they work in a variety of engineering or developmental areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of EP graduates go on for advanced study in all areas of basic and applied physics as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computational science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering.
mathematics, mechanical engineering, medical physics, medicine, nuclear engineering, plasma physics, oceanography, and physics. The major can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The EP major fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for individualized design is provided. Examples are ENGR/AEP 1110 Lasers and Photonics, ENGR/AEP 1200 Introduction to Nanoscience and Nanoengineering; ENGRD/AEP 2640 Computer-Instrumentation Design (a recommended sophomore engineering distribution course); AEP 3330 Modern Experimental Optics (a junior/senior course); AEP 3630 Electronic Circuits (a sophomore/junior course); PHYS 4410 Advanced Experimental Physics; and AEP 4380 Computational Engineering Physics (a senior computer laboratory).

Students who plan to affiliate with the EP major are advised to arrange their common curriculum with their developing career goals in mind. They are encouraged to take PHYS 1110 or 1120 during their first semester (if AP credits permit) and to satisfy the technical writing requirement with the engineering distribution course ENGRD 2640. EP students need to take only one engineering distribution course, since AEP 3330, taken in the junior year, counts as the second one. EP students are advised to take AEP 3630 (taking ECE 2100 and 2300, 4 credits each, can satisfy AEP 3630) as an approved elective and ECE 2500 as AEP 3630 in the spring semester of the sophomore year. Students with one semester of advanced placement in math and who have received at least a C– in MATH 1920 may wish to explore accelerating their math requirements so as to enroll in AEP 3210 and 3220 in the sophomore year. For advice on this option, consult with the AEP associate director.

In addition to the requirements of the Engineering Common Curriculum,* the major requirements are as follows:

**Course Credits**

- AEP 3330 Mechanics of Particles and Solid Bodies 4
- AEP 3550 Intermediate Electromagnetism 2
- AEP 3560 Intermediate Electrodynamics 4
- AEP 3610 Introductory Quantum Mechanics 2
- AEP 3620 Intermediate Quantum Mechanics 4
- AEP 3630 Electronic Circuits 4
- AEP 4230 Statistical Thermodynamics 4
- AEP 4540 Continuum Physics 4
- PHYS 4410 Advanced Experimental Physics 4
- AEP 3210 Mathematical Physics I 4
- AEP 3220 Mathematical Physics II 4

Six major-approved electives (18–23 credits), of which five must be technical upper-level courses (3000 or above).

Total major credits=58 credit hours minimum

*The Engineering Common Curriculum suggests that freshmen take only four courses each semester. This course load is fully consistent with the requirements of the EP major, but freshmen with strong preparation are encouraged to consider taking an additional course during one or both semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years and for allowing options such as a semester or year abroad or early graduation. Two of the 4 credits of PHYS 4410 required for the B.S. degree in EP can be satisfied by completing AEP/PHYS 3330 or ASTRO 4410. The remaining 2 credits of PHYS 4410 can then be satisfied with PHYS 4400 for 2 credits, provided that the experiments completed in PHYS 4400 do not overlap with those in AEP/PHYS 3330 or ASTRO 4410. (A list of experiments that are not appropriate will be prepared by AEP faculty and made available in the AEP office.) If a student chooses this option, AEP/PHYS 3330 or ASTRO 4410 may also count as a technical elective, provided the remaining three technical electives include at least seven electives in the sophomore, junior, and senior years. EP majors are encouraged to work closely with their advisor to develop a coherent academic program that is consistent with those goals. For students who look toward an industrial position after graduation, the electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses and to prepare for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Engineering (EP). Students are advised to consult with their EP advisor, a professor active in their area of interest, or the associate director of the school. Electives need not be all formal course work; qualified students are encouraged to undertake independent study under the direction of a member of the faculty (AEP 4900). This may include research or design projects in areas in which faculty members are active. Up to three “4900” courses may be used as a major approved electives. These courses must be taken during the student’s last four semesters as an undergraduate. Any additional “4900” credits may be used as advisor-approved electives.

The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

**Academic Standing**

Students are expected to pass every course in which they are registered, to earn at least C– in specifically required courses, and to attain a semester GPA of 2.3. A student is required to take a minimum of 12 credit hours per semester.

---

**Engineering Physics Honors Program Requirements**

**Eligibility**

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the School of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.5 or must be eligible for one of the cum laude distinctions at the time of graduation.

**Content**

The student must

1. Complete at least 8 credits of field-approved electives at the 4000 level or higher and receive a minimum grade of an A– in each of the courses taken to fulfill this 8-credit requirement. These 8 credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in AEP 4900 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. For a 4900 project to satisfy the research component of an honors project, it must have substantial physical science content. The minimum enrollment is to be 2 credits in the first semester and 4 credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation. Most often, these 4900 courses are taken during the student's senior year, after completion of the EP junior-year curriculum. Students may apply for honors after early completion of AEP 3210 and AEP 3220. However, for the project to be considered for honors, the proposal must be approved within three weeks of the start of the semester.

**Procedures**

Before enrolling in AEP 4900, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the AEP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. This proposal must clearly describe a self-contained, independent project that can be
completed within two semesters. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the AEP Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the honors committee. A minimum grade of A– is required for successful completion of the honors requirements.

ENVIRONMENTAL ENGINEERING

Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering. Contact: 207 Riley-Robb Hall, 607 255-2173, or 221 Hollister Hall, 607 255-3412, or cee.cornell.edu. Environmental Engineering is the study and practice of analyzing, designing, and managing natural and engineered systems in ways consistent with the maintenance or enhancement of environmental quality and sustainability. It requires the ability to predict multiple interactions and impacts among natural and engineering-system components at various spatial and temporal scales in response to alternative design and management policies. It requires a thorough understanding of the interactions among the natural environment, the constructed environment, and human activities.

Students matriculating in the College of Engineering (CoE) may affiliate with this major in their second year. Students matriculating in the College of Agriculture and Life Sciences (CALS) may enroll in this major in their first semester. Students planning to graduate with this major will be taking the following courses:

Mathematics-science core requirements

Electives

Technical communications course (ENGRC 3350 or 3500 in liberal studies category; COMM 2600, 2650, or 3520; or BEE 4730, or BEE 4890)

Three environmental design electives: at least one from list of capstone design courses and the remainder from list of design courses 9-credit minimum

Two major-approved engineering electives to complete total credit requirement 6

First-year writing seminar 6

Two approved electives 6

Liberal studies 18

Total credits (minimum) 126

a. BEE 1510 and 1200 together (5 credits) satisfy the ENGR requirement for CALS–matriculated first-year students. Students using BEE 1200 and BEE 1510 to satisfy the ENGRI requirement must make up the 2-credit difference with engineering course work.

b. COE matriculated students must complete one ENGRI XXX course their first year. CALS matriculated students may complete BEE 1510 and BEE 1200 to meet the requirement.

c. Students must complete two ENGRD courses.

d. Students using this course as a second engineering distribution must take an additional major-approved elective. Note: Some Intro to Biology courses do not count as an engineering distribution course.

e. ENGRD 2700 (f,s,3) may be accepted (by petition) to substitute for CEE 3040 if taken prior to affiliation with the Environmental Engineering major or if necessary because of scheduling conflicts caused by co-op or study abroad.

f. Students may take BIOMI 2900 Introduction to Microbiology in place of CEE 4510.

g. If the course fulfilling the technical writing requirement also fulfills another requirement (e.g., liberal studies, major-approved elective), then it may be used to satisfy both requirements.

h. To be chosen from a list of design courses. Students are encouraged to take CEE 4520, CEE 4540, or BEE 4730.

i. The list of suggested courses covers the areas of environmental engineering, hydraulics/hydrology, environmental systems engineering, geotechnical engineering, remote sensing, air pollution, and renewable energy systems. The respective lists are available at the departmental offices.

Environmental Engineering Honors Program

Students interested in pursuing an honors program should contact the undergraduate program director of Biological and Environmental Engineering or the associate director of Civil and Environmental Engineering for information on the program requirements.

INDEPENDENT MAJOR

Offered by the Independent Major Committee
Contact: Associate Dean for Undergraduate Programs, 167 Olin Hall, 255-8240

The independent major is designed for students whose educational objectives cannot be met by one of the regular majors. This major consists of an engineering primary area (32 credits) and an educationally related secondary area (16 credits). The primary area may be in any subject area offered by schools or departments of the college; the secondary area may be in a second engineering subject area or in a logically connected non-engineering area. The combination must form an engineering education in scope and substance and should include engineering design and synthesis as well as engineering sciences. Each program includes the normally required common-
curriculum requirements and approved electives. Students should apply to the independent major during the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed primary and secondary areas (an advisor in each area is required). The program must also be approved by the Independent Major Committee. If approved, the program is the curricular contract to which the student must adhere.

Because no single standardized curriculum exists, the independent major is not accredited by ABET. Independent major students who intend to seek legal licensing as a Professional Engineer should be aware that this nonaccredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination and may affect acceptance into engineering graduate programs.

INFORMATION SCIENCE, SYSTEMS, AND TECHNOLOGY
Offered jointly by the Department of Computer Science and the School of Operations Research and Information Engineering

Digital information technologies have become pervasive in science, engineering, manufacturing, business, finance, culture, law, and government, dramatically changing the way people work and live. The proliferation and significance of these new technologies demands a new focus in engineering education—one that remains rigorous and technically oriented but is simultaneously devoted to integrating engineering design, theory, and practice within the social and organizational contexts in which these complex digital information systems are employed.

The information science, systems, and technology (ISTS) major studies the design and management of complex information systems. Just as structural engineers and nanofabricators use physics at radically different scales, so also there is a scale difference between the focus of the ISTS major and the more traditional, look-under-the-hood majors in computer science and operations research and industrial engineering. Rather than focusing on the computing and communication technologies that underlie digital information systems, the ISTS major emphasizes information systems engineering in broad application contexts, where issues at the confluence of information science, technology, and management are the primary concerns.

The ISTS major has two options. The management science option educates students in methods for quantitative decision making and their application to information technology as well as the broader role that information technology plays in making these methods effective. Students in the information science option will obtain advanced training in methods for the creation, representation, organization, access, and analysis of information in digital form.

Note: Students may not double major in both CS and IST or ORIE and ISTT.

**Engineering distribution courses**
Majors are required to take ENGRD 2700 Basic Engineering Probability and Statistics as an engineering distribution course. ENGRD 2110 Object-Oriented Programming and Data Structures is required for the major and is recommended as the second engineering distribution course.

MATERIALS SCIENCE AND ENGINEERING

Offered by the Department of Materials Science and Engineering

Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Prospective majors are required to take ENGRD 2610 or 2620 before affiliating with the major. It is highly recommended that the course be taken as an engineering distribution during the sophomore year.

The major program develops a comprehensive understanding of the physics and chemistry underlying the unique properties of modern engineering materials and processes.

Students complete a series of electives to develop knowledge of materials, such as biomaterials, ceramics, polymers, and semiconductors. Application-related courses include areas of biotechnology and life science, energy and environment, materials for information science, nanotechnology, and technology management and ethics. These requirements are satisfied through a series of technical electives taken mainly in the senior year, which are selected from various engineering and science departments.

Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The major requirements for a B.S. degree in materials science and engineering are:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures or
   ENGRD 2620 Electronic Materials for the Information Age
2. 13 required major courses:
   MSE 2600 Atomic and Molecular Structure of Matter
   MSE 2610 or MSE 2620 (whichever was not taken as a distribution course)
   MSE 3010 Materials Chemistry
   MSE 3030 Thermodynamics of Condensed Systems
   MSE 3040 Kinetics, Diffusion, and Phase Transformations
   MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials
   MSE 3070 Materials Design Concepts I
   MSE 3110 Junior Lab I
   MSE 3120 Junior Lab II
   MSE 4020 Mechanical Properties of Materials, Processing, and Design
   MSE 4050/4050 Senior Materials Lab I or Senior Thesis I
   MSE 4040/4060 Senior Materials Lab II or Senior Thesis II
   MSE 4070 Materials Design Concepts II
3. Two materials-related electives covering two groups of different materials
4. Three application-related electives in at least two different types of applications
5. Two of the application-related electives must be taken from outside MSE
6. One additional technical elective outside MSE

Materials Science and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

1. The 9 credits (giving a total of 141) of additional courses must be technical in nature, i.e., in engineering, math, chemistry, and physics at the 4000 and graduate level, with selected courses at the 3000 level. The courses must be approved by the major advisor.
2. Senior honors thesis (MSE 4050/4060) with a grade of at least A.

MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, maengmailbox@cornell.edu, www.mae.cornell.edu

This major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

This major is designed to provide a broad background in the fundamentals of the discipline as well as to offer an introduction to the many professional and technical areas in which mechanical engineers work. The program covers both major streams of mechanical engineering.

1. Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Other topics covered are computer-aided design, vibrations, control systems, and dynamics. Particular areas of concentration are mechanical systems and design, vehicle engineering, biomechanics, and engineering materials.

2. Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy, aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, energy and the environment, and thermo-fluids engineering.

During the fall semester, sophomores who plan to affiliate with the mechanical engineering major take ENGRD 2020 (also TAM 2020) as an engineering distribution course. ENGRD 2210/MAE 2210 is required for the major and is recommended as the second engineering distribution course. The Sibley School supports students who have unusual requirements, but delays or substitutions must be discussed with and receive approval from their major advisor.

The major requires 13 courses (beyond ENGRD 2020 already mentioned) and five major-approved elective courses.
Required courses
MAE 2120 Mechanical Properties and Selection of Engineering Materials
ENGRD 2210 Thermodynamics
MAE 2250 Mechanical Synthesis
ENGRD 2260 Dynamics
MAE 3780 Mechatronics or ENGRD 2100 Introduction to Electrical Circuits, Electrical and Computer Engineering, or PHYS 3560 Electronic Circuits
MAE 3230 Introductory Fluid Mechanics
MAE 3240 Heat Transfer
MAE 3250 Analysis of Mechanical and Aerospace Structures
MAE 3260 System Dynamics
MAE 3272 Mechanical Property and Performance Laboratory
MAE 4272 Fluids/Heat Transfer Laboratory
MAE 4280 Engineering Design
MAE 4291 Supervised Senior Design Experience

Electives
Students should use the flexibility provided by the major-approved electives, advisor-approved electives, and humanities, arts, and social sciences electives to develop a program to meet their specific goals.

Major-approved electives
The major includes five major-approved electives. At least three of these courses must be upper-level (3000+) MAE courses. Two of these must be a concentration of MAE’s upper-level courses providing depth in a specific subject area. Standard concentrations are shown below, but students may petition for approval of two other related courses to form a custom concentration.

The standard concentrations are:
- Aerospace engineering, MAE 3050, 3060, 4150, 4250, 5060, 5070
- Biomechanics, MAE 4640, 4660, 5080, 5690
- Energy and the Environment, MAE 4020, 4230, 4490, 4580, 4590, 5010, 5430
- Engineering Materials, MAE 3120, 3130, 4040, 4140, 4450, 4560, 4700, 5130
- Mechanical Systems and Design, MAE 3780*, 4150, 4170, 4700, 4770, 4780, 5200**

Thermo-Fluids Engineering, MAE 4230, 4490, 4530, 5010, 5430
Vehicle Engineering, MAE 3050, 3060, 4140, 4250, 4490, 4860, 5060, 5070

*Students who took MAE 3780 as a required course (see above) may not use it again as a major-approved elective.

** MAE 5200 is a 2-credit course. If it is used in a concentration, another course or courses in the concentration must be selected so that the total number of credits in the concentration is 6 or greater.

One major-approved elective must be a senior design elective involving MAE 4291

“Supervised Senior Design Experience.” One way to satisfy this requirement is to take a 3+ credit section of MAE 4291, directed by a faculty member as an individual or team exercise. The other option is to take a senior design elective course (MAE 4000, 4020, 4040, 4140, 4250, 4700, or 4860) along with the corresponding 1-credit section of MAE 4291.

One of the major-approved electives must be an approved upper-level math course taken after MATH 2940. The course must include some statistics. Currently, the approved courses are TAM 3100, ENGRD 2700, CEE 3040, and ENGRD 3200.

One of the major-approved electives, the “technical elective,” may be any course at an appropriate level, chosen from engineering, math, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Courses in economics, business, and organizational behavior are not accepted; advisors may approve such courses as advisor-approved electives.

MAE 4980 may not be used as a major-approved elective.

Advisor-approved electives
To maximize flexibility (i.e., the option for study abroad, Co-op, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of advisor-approved (AA) electives until after the third semester. Students must seek advisor approval before taking an AA elective. Advanced placement credit may not count as an AA elective. Up to 6 credits of Reserve Officer Training Corps (ROTC) courses numbered 3000 or above or co-listed in an academic department are allowed as AA electives. Students must document AA electives approved before MAE affiliation within a month of registration as an MAE student. The faculty encourages students to consider the following as possible AA electives:

- an engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in information science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (e.g., economics, financial, legal)
- courses in organizational behavior
- courses in cognitive sciences

Other considerations
It is recommended that humanities, arts, and social sciences electives include studies in history of technology, societal impacts of technology, history, foreign languages, ethics, communications, political science, aesthetics, economics, and/or architecture.

The Sibley School encourages its students to spend a semester or year abroad at foreign universities with which the college has an exchange agreement, such as the Ecole Centrale de Paris.

The technical-writing requirement of the common curriculum is satisfied by MAE 4272.

A limited set of second- and third-year courses is offered each summer under the auspices of the School of Continuing Education and Summer Sessions and the Engineering Cooperative Education Program.

Preparation in Aerospace Engineering
There is no separate undergraduate major in aerospace engineering, but students may prepare for a career or graduate program in this area by majoring in mechanical engineering and taking courses from the aerospace engineering minor or concentration, for example spacecraft engineering, introduction to aeronautics, and aerospace propulsion systems. It is also possible to prepare for a career or graduate program in aerospace engineering through appropriate course selection in other majors, for example: electrical and computer engineering, engineering physics, or the physical sciences. Subjects recommended as preparation for aerospace engineering endeavors include thermodynamics, fluid mechanics, structures, vibrations, feedback controls, applied mathematics, chemistry, and physics.

OPERATIONS RESEARCH AND ENGINEERING

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

This major provides a broad education in the techniques and modeling concepts needed to design, analyze, and operate complex systems. The major prepares students for a wide range of careers including operations research, information engineering, entrepreneurship, operations management, consulting, financial engineering, financial services, and engineering management.

The foundation of the major is the development of basic skills in statistics, probability, mathematical optimization, and computer science. Required courses in manufacturing systems, cost accounting, and simulation build on these skills and provide engineering design experiences. In the senior year the curriculum is quite flexible. Students take ORIE electives to broaden and deepen their expertise in applied probability and statistics, industrial systems, optimization, information technology, financial engineering, and their applications.

Because of the wide range of career goals among OR&E students, and the large number of electives, students should consult with their major advisors to select electives that best meet their future goals.

Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to affiliate with the major in operations research and engineering should take ENGRD 2700 Basic Engineering Probability and Statistics after completing MATH 1920; MATH 2940 should be completed before or concurrently with ENGRD 2700. OR&E affiliates are required to complete
MATH 1910, 1920, and 2940 (or their subject matter equivalents). Either MATH 2930, CS 2800, or MATH 3040 may be used to satisfy the fourth-semester mathematics requirement. Students should discuss with their advisors which of these three courses is most appropriate to their future program of study in ORIE. The following should be considered:

1. MATH 2930 (differential equations) is essential for advanced study in financial engineering. Also, MATH 2930 is a prerequisite for PHYS 2214, thus students who do not take MATH 2930 must plan to take CHEM 2080.

2. CS 2800 provides an introduction to discrete structures and algorithms of broad applicability in the field of operations research, particularly for fundamental models in the areas of optimization, production scheduling, inventory management, and information technology; it is also a prerequisite for certain upper-class Computer Science courses in the areas of information technology and algorithmic analysis.

3. MATH 3040 covers fundamentals of formal proof techniques.

Early consultation with a faculty member or the associate director for undergraduate studies may be helpful in making appropriate choices. Students considering Ph.D.-level study in operations research are encouraged to see the Associate Director for advice regarding the fourth MATH course.

The required courses for the ORIE major and the typical terms in which they are taken are as follows:

**Semester 2 or 3** Credits
ENGRD 2110 Computers and Programming 3
ENGRD 2700 Basic Engineering Probability and Statistics 3

**Semester 4**
ORIE 3120 Industrial Data and Systems Analysis* 4
ORIE 3300 Optimization I 4
ORIE 3500 Engineering Probability and Statistics II 4
Behavioral Science (Organizational Behavior)† 3
Liberal elective 3
Advisor-approved elective 3

**Semester 5**
ORIE 3150 Financial and Managerial Accounting (may be taken in semester 4)** 4
ORIE 3310 Optimization II 4
ORIE 3510 Introductory Engineering Stochastic Processes 4
Major-approved elective 3
Liberal elective 3

*It is highly recommended that ORIE 3120 be taken in semester 4. If the student’s schedule does not permit this, the course may be taken in semester 6 or 8.

**ORIE 3150 may be taken in semester 4, 5, or 6.

†The behavioral science requirement can be satisfied by any of several courses, including the Johnson Graduate School of Management (JGSM) course NCC 5540 (offered only in the fall), which is recommended for those considering a graduate business degree, ILROB 1220, and 1750, HADM 1115, ENGRGC 3550 (which also satisfies the technical writing requirement), and others.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

- ORIE 4580 Simulation Modeling and Analysis 4
- Three upper-level ORIE electives as described below 9
- Two major-approved electives (at least 3 credits must be outside ORIE) 6
- Liberal electives 6
- One advisor-approved elective 3

Available ORIE electives are as follows:
- Manufacturing and distribution systems: ORIE 4150, 4800, 4810, 4850, 5100, 5120, 5122, 5126 and JGSM MBA 6410
- Optimization methods: ORIE 4154, 4300, 4320, 4350, 4350, and 4370
- Applied probability and statistics: ORIE 4520, 4540, 4710 (2 credits), 4740, 4711 (2 credits), 4712 (2 credits), 5550, 5560, and 5770
- Financial engineering: ORIE 4600, 4630, 5600, 5610, 5620, and 5640

### Academic Standing

Each student in the ORIE major should obtain a passing grade in every course; at least C– in ENGRD 2110 and 2700, and all ORIE courses; a GPA of 2.0 each semester; a GPA of 2.0 for ORIE major courses; a grade of C– or better in ENGRD 2110 by the end of the sixth semester; and satisfactory progress toward completion of the degree requirements. Each student’s performance is reviewed at the conclusion of each semester.

If at least C– is not earned in a required course, the course must be repeated within one year. The next course in a sequence (ORIE 3510 and 3510, in particular) may not be taken until at least a C– is achieved in the prerequisite course. Failure to achieve at least C– in the second attempt will generally result in withdrawal from the major.

### Operations Research and Engineering Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section “Engineering Majors” as well as the following requirements.

The 9 additional credits of course work shall be from one or more of the following, with at least 4 credits in the first category:

1. Advanced courses in ORIE at the 5000 level or above.
2. A significant research experience or honors project under the direct supervision of an ORIE faculty member. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in ORIE using ORIE 4950 Teaching in ORIE.

### Procedures

Each program must be approved by the associate director of undergraduate studies, and any changes to a program must be approved by the associate director.

### SCIENCE OF EARTH SYSTEMS (SES)

**Offered by the Department of Earth and Atmospheric Sciences**

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

The Earth Sciences have never been more critical to society than they are today. Global warming, dwindling energy resources, inadequate water supplies, political strife over strategic minerals, and megadisasters threatened by volcanic eruptions, earthquakes, tsunami, and hurricanes: these are but a few of the headlines that appear with increasing frequency. The Department of Earth and Atmospheric Sciences at Cornell provides a global leader in research directed toward understanding the fundamental processes that have shaped our planet, and is committed to providing Cornell students with the earth literacy needed to serve as informed citizens and wise stewards of the Earth. EAS faculty members and graduate students carry out frontier research on both basic and applied aspects of subjects as diverse as satellite monitoring of volcanic activity, the deep structure of the Andes Mountains and Tibetan Plateau, the nature of the earth’s ionosphere, and the impact of aerosols on global climate.

The Science of Earth Systems (SES) major is the undergraduate program offered by EAS to Cornell students in Engineering, Arts and Sciences and the College of Agriculture and Life Sciences. Students in this program can pursue education and research that prepares them to compete for careers or graduate study at leading institutions in this country and abroad. Students may choose to focus on one of a number of disciplinary specialties, such as geophysics or tectonics, or develop the broad expertise needed to understand the interactions between the diverse elements of earth and life in the past, present, and future.

By analyzing the complex relations among the ocean, solid earth, atmosphere, and biosphere, students can help meet society’s growing demand for energy, minerals, and clean water as well as contribute to mitigating the negative impacts related to global warming, rising sea level, natural hazards, and decreasing biodiversity.

The SES program is intrinsically interdisciplinary, involving many branches of science and engineering. Examples of the latter include civil and environmental engineering, biological and environmental engineering, mechanical and aerospace engineering, and electrical and computer engineering. The SES program is unique in that it incorporates the fundamentals of Earth Science with the emergence of a new and more complete approach that encompasses all components of the earth system—air, land, rock, and water—to gain a new and more comprehensive understanding of the world as we know it.

To achieve a complete understanding of these important issues, students must have a desire to take a very hands-on approach. An abundance of opportunities exists for
geological, oceanographic, and meteorological research in the field and for nationwide and international travel as well as paid research experience. Students have worked with faculty members in the Andes, the Aleutians, the Rocky Mountains, the Atacama Desert, the Caribbean, Tibet, and Hawaii, and have spent a semester at sea in the Woods Hole Ocean Studies Program. Students are also able to probe the ionosphere of Earth and the surface of Mars by utilizing techniques in remote sensing.

The SES major provides a strong preparation for graduate school in any one of the earth sciences, such as atmospheric sciences, geological sciences, geophysics, geochemistry, oceanography, hydrology, and biogeochemistry. Students seeking employment with the B.S. degree will have many options in a wide variety of careers related to energy, the environment, and critical resources in both the private sector and government. Students with the strong science background provided by the SES major are also highly valued by graduate programs in environmental law, public affairs, economics, and public policy.

Requirements for the Major

1. Basic Math and Sciences

This part of the SES curriculum builds a strong and diverse knowledge of fundamental science and mathematics, providing the student with the basic tools needed in upper-level science classes.

a. MATH 1910–1920 (or MATH 2930–2940)

b. PHYS 1112–2213

c. CHEM 2090–2080 or 1570

d. BIOL—three options:
   1. one year of biology, choosing from the introductory biology sequences of courses: BIOG 1101/1103–1102/1104, or 1105/1106, or BIOG 1109/1110
   2. one semester from the introductory biology sequences of courses (listed in option 1) and EAS/BIOEE 1540 or EAS 1700
   3. students may substitute (with written permission of their advisor) one semester of biology with an additional semester of chemistry, math, or physics.

2. A required introductory course in earth science is satisfied by EAS 2200

3. SES Core Courses

The core courses emphasize the interconnectedness of the Earth system and are founded on the most modern views of the planet as an interactive and ever-changing system. Each crosses the traditional boundaries of disciplinary science. The major requires three of the following four core courses.

EAS 3010 Evolution of the Earth System

EAS 3030 Biogeochemistry

EAS 3040 Interior of the Earth

EAS 3050 Climate Dynamics

4. Concentration Courses

The concentration is achieved by completion of four intermediate to advanced-level courses (3000 level and up) that build on the core courses and have prerequisites in the required basic sciences and mathematics courses. Note that additional basic math and science courses may be required to complete the concentration courses, depending upon the student's choice of concentration. The concentration courses build depth and provide the student with a specific expertise in some facet of Earth system science. Four defined areas of specialization include geological sciences, biogeochemistry, atmospheric sciences, and ocean sciences. Students may also design other concentrations. Examples include planetary science, ecological systems, geohydrology, and soil science. The concentration should be chosen during the junior year or before in consultation with the student's advisor and with approval of the director of undergraduate studies. For concentrations beyond the four first named, approval by the SES Curriculum Committee is needed.

5. Field/Observational/Laboratory Experience

Exposure to the basic observations of earth science, whether directly in the out-of-doors, or indirectly by the many advanced techniques of remote sensing of our planet, or in the laboratory, is necessary to understand fully the chosen area of concentration in the major. Three credit courses of appropriate coursework are required. Possibilities include the following:

Courses in the Hawaii Environmental Semester Program; or

Courses given by the Shoals Marine Laboratory, or

EAS 2500 Meteorological Observations and Instruments; or

EAS 3520 Synoptic Meteorology I; or

EAS 4170 Field Mapping in Argentina

EAS 4370 Geophysical Field Methods; or

EAS 4910 and/or EAS 4920 Undergraduate Research with appropriate choice of project; or

Field course or courses taught by another college or university (e.g. Semester at Sea).

Students should discuss with their faculty advisor whether the fourth core course listed above or the course used to fulfill the observation/field requirement may also be used to satisfy the concentration.

For more information contact Professor John Cisne, Department of Earth and Atmospheric Sciences, john.cisne@cornell.edu, or visit www.eas.cornell.edu.

Field Study in Hawaii

Field study is a fundamental aspect of earth system science. Students wishing to increase their field experience may fulfill some of the requirements for the Science of Earth Systems major by off-campus study through the Cornell Earth and Environmental Semester program (EES). The EES program, offered during the spring semester, emphasizes field-based education and research. It is based on the island of Hawaii, an outstanding natural laboratory for earth and environmental sciences. Courses that may be applied to the Science of Earth Systems major include EAS 3400, 3220, and 3510. The EES program also offers opportunities for internships with various academic, nonprofit, and government organizations. Typically, students participate in the EES program during their junior year, although exceptions are possible. For further information, see www.geo.cornell.edu/geology/classes/hawaii.

Science of Earth Systems Honors Program

The B.S. degree with honors is granted to engineering students who satisfy the requirements given at the beginning of the section "Engineering Majors" as well as the requirements of an honors thesis involving research (EAS 4910–4920 or 4990, 2 or more credits each) of breadth, depth, and quality. A written proposal of the honors project must be accepted by the student's advisor and the director of undergraduate studies early in the first semester of the student's senior year.

ENGINEERING MINORS

Students may pursue minors in any department in any college that offers them, subject to limitations placed by the department offering the minor or by the students’ major. Completed minors will appear on the student’s transcript. Not all departments offer minors. Consult the appropriate section in Courses of Study or contact the appropriate department for information on minors offered and how to pursue a minor.

An engineering minor recognizes formal study of a particular subject area in engineering normally outside the major. Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate study at Cornell. Completing the requirements for an engineering minor (along with a major) may require more than the traditional eight semesters at Cornell. However, courses that fulfill minor requirements may also satisfy other degree requirements (e.g., distribution courses, advisor-approved, or major-approved electives), and completion within eight semesters is possible.

An engineering minor requires:

- successful completion of all requirements for an undergraduate degree.
- enrollment in a major that approves participation in the minor.
- satisfactory completion of six courses (at least 18 credits) in a college-approved minor.

Students may apply for certification of a minor at any time after the required course work has been completed in accordance with published standards. An official notation of certification of a minor appears on the Cornell transcript following graduation.

The College of Engineering offers minors in the following areas (offering units are indicated in parentheses):

- Aerospace Engineering (MAE)
- Applied Mathematics (TAM)
- Biological Engineering (BEE)
- Biomedical Engineering (BME)
- Civil Infrastructure (CEE)
- Computer Science (CS)
- Electrical and Computer Engineering (ECE)
- Engineering Management (CEE)
MINOR: AEROSPACE ENGINEERING

Offered by: Sibley School of Mechanical and Aerospace Engineering
Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in Mechanical Engineering before taking courses toward the minor.

The aerospace engineering minor develops the engineering analysis and design skills necessary for creating and understanding aerospace vehicles and their subsystems. The minor includes diverse topics relevant to applications both in the earth’s atmosphere (e.g., aerodynamics) and in space (e.g., spacecraft thermal systems or orbital mechanics). Students in this minor will take at least four core aerospace courses, along with up to two supporting courses in engineering fundamentals or courses with applicability to aeronautics and spacecraft.

Academic Standards: A grade of at least C– in each course. If a course is offered only S–U, a grade of S is acceptable.

Requirements:
Six courses from the lists below, each worth at least 3 credits, must be completed. No substitutions will be accepted from other departments at Cornell or elsewhere.

Rules for selecting courses:
1. Rules for ME majors:
   a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   b. Select at most two courses from group B.
   c. Use at most four courses to satisfy both the Aerospace Minor requirements and the BSME degree requirements. The major concentration courses may not be among these overlapped courses.
2. Rules for other majors:
   a. Select at least four courses from group A, of which you must choose MAE 3050 or MAE 3060 (or both).
   b. Select a total of at most two courses from group B and group C.
   c. Do not use any courses to satisfy requirements of both the Mechanical Engineering Minor and the Aerospace Engineering Minor.

Group A: Core Aerospace Engineering
MAE 3050 Intro to Aeronautics
MAE 3060 Spacecraft Engineering
MAE/ECE 4150 GPS: Theory and Design
*MAE 4291 Supervised Senior Design Experience, with Aerospace Focus or MAE 4900 Special Investigations in Mechanical and Aerospace Engineering, with Aerospace Focus
MAE 4230/5230 Intermediate Fluid Dynamics
MAE 5060 Aerospace Propulsion Systems
MAE 5070 Dynamics of Flight Vehicles
*MAE 4291 and 4900 require a form signed by the project advisor, stating that the project focuses on aerospace and is suitable as a core aerospace course for the minor. MAE 4291 or 4900 must be worth 3 credits or more. Students are restricted to at most one MAE 4291 OR one MAE 4900 counting toward the minor (may not count both MAE 4291 and MAE 4900 toward the minor).

Group B: Courses Applicable to Aerospace Engineering
MAE 4170/5170 Introduction to Robotics: Dynamics, Control, Design
MAE 4550/CEE 4770/MSE 5550/TAM 4550 Introduction to Composite Materials
MAE 4700/5700 Finite Element Analysis for Mechanical and Aerospace Design or CEE 4720 Introduction to the Finite Element Method
MAE 4770/5770 Engineering Vibrations
MAE 4780/5780/CHEME 4720/ECE 4720 Feedback Control Systems
MAE 5430 Combustion Processes
MAE 5710 Applied Dynamics or TAM 5700 Intermediate Dynamics

Group C: Fundamentals
ENGRD 2020
ENGRD 2030
MAE 2120
ENGRD/MAE 2210
MAE 3230
MAE 3240
MAE 3250
MAE 3260
MAE 3780 or ECE 2100/ENGRD 2100 or PHYS 3560

MINOR: APPLIED MATHEMATICS

Offered jointly by the Department of Theoretical and Applied Mathematics and Department of Mathematics
Contact: Richard Rand, 207 Kimball Hall, 255-7145, rhr2@cornell.edu, www.tam.cornell.edu/undergraduate

All Engineering undergraduates affiliated with all Engineering majors are eligible to participate in this minor.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses beyond MATH 2940, to be chosen as follows:

1. Analysis
   AEP 3210 Mathematical Physics I
   MATH 3250 Introduction to Differential Equations
   MATH 4200 Differential Equations and Dynamical Systems
   TAM 3100 Introduction to Applied Mathematics I

2. Computational Methods
   CS 4210 Numerical Analysis and Differential Equations
   ENGRD 3220 Introduction to Scientific Computation
   ORIE 3500 Optimization I

3. Probability and Statistics
   CEE 3040 Uncertainty Analysis in Engineering
   ECE 3100 Introduction to Probability and Random Signals
   ENGRD 2700 Basic Engineering Probability and Statistics
   MATH 4710 Basic Probability
   ORIE 3500 Engineering Probability and Statistics II

4. Applications
   AEP 3330 Mechanics of Particles and Solid Bodies
   CEE 3310 Fluid Mechanics
   CEE 3710 Structural Modeling and Behavior
   CHEM 3250 Fluid Mechanics
   CS 2600 Discrete Structures
   CS 2650 Networks
   ECE 3200 Networks and Systems
   ECE 4250 Digital Signal Processing
   MAE 3230 Introductory Fluid Mechanics
   MSE 3030 Thermodynamics of Condensed Systems

5. Advanced courses
   Only one of these three may be chosen:
   AEP 3220 Mathematical Physics II
   MATH 4220 Applied Complex Analysis
   TAM 3110 Introduction to Applied Mathematics II
Only one of the following two may be chosen:  
ECE 4110 Random Signals in Communications and Signal Processing  
ORIE 3510 Introductory Engineering Stochastic Processes I  

Only one of the following two may be chosen:  
MAE 5710 Applied Dynamics  
TAM 5700 Intermediate Dynamics  

Also, you may choose from:  
CS 3810 Introduction to Theory of Computing  
CS 4820 Introduction to the Analysis of Algorithms  
ORIE 3510 Optimization II  
ORIE 4330 Discrete Models  
ORIE 4550 Introduction to Game Theory  
ORIE 4520 Introductory Engineering Stochastic Processes II  
ORIE 5600 Financial Engineering with Stochastic Calculus I  
ORIE 5610 Financial Engineering with Stochastic Calculus II  
TAM 5780 Nonlinear Dynamics and Chaos  
TAM 6100 Methods of Applied Mathematics I  
TAM 6110 Methods of Applied Mathematics II

6. Mathematics courses  
Any 3000+ level course offered by the Mathematics Department in algebra, analysis, probability/statistics, geometry, or logic, with the following exceptions:  
a. MATH 3260 or 4200, if any course from group 1 is chosen  
b. MATH 4710, if any course from group 3 is chosen  
c. MATH 4220, if TAM 3110 or AEP 3220 is chosen from group 5  
d. Only one of the following may be chosen:  
MATH 3320 Algebra and Number Theory  
MATH 3360 Applicable Algebra

MINOR: BIOLOGICAL ENGINEERING  
Offered by the Department of Biological and Environmental Engineering  

Contact: 207 Riley-Robb Hall, 255-2173, www.bee.cornell.edu  

Students in all majors except biological engineering may participate. Students should meet with the BE coordinator as soon as they decide to pursue the minor and before their senior year. They will work with a BEE faculty advisor, who will assist them in completing their minor.  

Educational objectives of the minor:  
Biological engineering is the application of engineering to living systems. Examples of engineering efforts in this field include the development of new biosensor technologies, study and control of biologically based matter transformation systems, and development of engineered devices to study and regulate fundamental biological processes. The biological engineering minor is an opportunity for students to further their understanding of living systems and to increase their knowledge of the basic transport processes that occur within these systems. Courses in the minor provide opportunities to analyze and manipulate living systems at the molecular, cellular, and system levels.  

Academic standards: At least C– in each course in the minor and a GPA ≥ 2.0 in all courses in the minor  

Requirements  
At least six courses (≥ 18 credits), with at least three courses and 9 credits taught in BEE as follows:  

I. Biology Foundation (at least one but no more than two courses)  
BIOBM 3300 or 3310–3320 Biochemistry  
BIOM 2900 Microbiology  
BIONB 2220 Neurobiology  

II. Biological Engineering Core (at least one but no more than two courses)  
BEE 2600 Principles of Biological Engineering  
BEE 3500 Biological and Environmental Transport Processes  
BEE 3600 Molecular and Cellular Bioengineering  
BEE 3510 Bio-fluid Mechanics  

III. Biological Engineering Concentration Electives (minimum of 3 courses)  
Choose any three courses from the concentration lists below. Courses appearing in more than one concentration do not double count. BEE 3600 may be taken as either a concentration elective or a core course.  

Biomedical Engineering Concentration  
AEP 4700 Biophysical Methods (also BIONB 4700)  
BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)  
BEE 3650 Properties of Biological Materials  
BEE 4500 Bioinstrumentation  
BEE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also MAE 4530)  
BEE 4540 Physiological Engineering  
BEE 4590 Biosensors and Bioanalytical Techniques  

Bioprocess Engineering Concentration  
BEE 3600 Molecular and Cellular Bioengineering (also BME 3600)  
BEE 4500 Bioinstrumentation  
BEE 4530 Computer Aided Engineering: Applications to Biomedical Processes (also MAE 4530)  
BEE 4590 Biosensors and Bioanalytical Techniques  

Bioenvironmental Engineering Concentration  
BEE 3710 Physical Hydrology for Ecosystems  
BEE 4010 Renewable Energy Systems  
BEE 4350 Principles of Aquaculture  
BEE 4710 Introduction to Groundwater (also EAS 4710)  
BEE 4730 Watershed Engineering  
BEE 4870 Sustainable Energy Systems  
BEE 6510 Bioremediation Engineering  
CEE 4510 Microbiology for Environmental Engineering  
CEE 4520 Water Supply Engineering  

MINOR: BIOMEDICAL ENGINEERING  
Offered by the Department of Biomedical Engineering (BME)  

Contact: Carol Casler, 120 Olin Hall, 255-1489, www.bme.cornell.edu/academics/undergraduate/biomedminor.cfm  

All undergraduates are eligible to participate in this minor, but they may participate in only one of the biological engineering and the biomedical engineering minors.  

Educational Objectives: Biomedical engineering is the application of engineering principles and methods to a wide array of problems associated with human health. The discipline includes the design of biocompatible materials, prostheses, surgical implants, artificial organs, controlled drug-delivery systems, and wound closure devices. Diagnosing diseases and determining their biological origins depend upon increasingly sophisticated instrumentation and the use of mathematical models. This minor allows students to gain exposure to the breadth and depth of biomedical engineering offerings at Cornell, to prepare for advanced studies in biomedical engineering, and to obtain transcript recognition for their interest and capability in this rapidly growing area.
Students are asked to complete a form declaring their interest in the minor with the biomedical engineering undergraduate minor coordinator in 120 Olin Hall. On the form you will be asked to choose a BME faculty advisor that you can consult about the BME minor plan.

Academic standards: At least C– in each course in the minor. A cumulative GPA ≥ 2.0 for all courses in the minor.

Requirements

The 1-credit bioengineering seminar as well as at least six courses (≥ 18 credits) from the five categories listed below; two course groups need to be in categories 1. Introductory biology and/or 2. Advanced biology with no more than one course from category 1. Four courses must come from the following categories: 3. Molecular and cellular biological engineering, 4. Biomedical engineering analysis of physiological systems, and 5. Biomedical engineering applications with courses from at least two of these categories represented. At least four of the six courses must not be specifically required major degree course or cross-listings.

Required course: BEE/BME 5010 Bioengineering Seminar (1 credit, 1 semester)

Category 1. Introductory biology (maximum of 4 credits and one course grouping toward the BME minor)

A score of 5 on (CEEB) Advanced Placement Biology
A score of 4 on (CEEB) Advanced Placement Biology and ENGRD 1310: Introduction to Biomedical Engineering
A score of 4 on (CEEB) Advanced Placement Biology and BIOG 1103 or BIOG 1104 Biological Sciences, Laboratory
BIOG 1101, 1102, 1103, and 1104 Biological Sciences
BIOG 1105 and 1106 Introductory Biology
BIOG 1107 and 1108 General Biology
BIOG 1110 Biological Principles and ENGRD 1310 Introduction to Biomedical Engineering

Category 2. Advanced biology

BIOAP 3110/VTBMS 3460 Introductory Animal Physiology Lectures
BIOBM 3300 Principles of Biochemistry, Individualized Instruction
BIOBM 3310 Principles of Biochemistry, Proteins and Metabolism
BIOBM 3320 Principles of Biochemistry, Molecular Biology
BIOBM 3330 Principles of Biochemistry, Proteins, Metabolism, and Molecular Biology
BIOGD 2810 Genetics
BIOMB 2220 Neurobiology and Behavior II: Introduction to Neurobiology
BIOML 2900 General Microbiology Lectures

Category 3. Molecular and cellular biomedical engineering

AEP 2520/ENGRD 2520 The Physics of Life
BEE 3600/BME 3600 Molecular and Cellular Bioengineering

Category 4. BME analysis of physiological systems

BEE 4540 Physiological Engineering
BIONB 3300/BME 3300/COGST 3300/PSYCH 3300 Introduction to Computational Neuroscience
BIONB 4910/BME 4910 Principles of Neurophysiology
BME 4010/MAE 4660 Biomedical Engineering of Metabolic and Structural Systems
BME 4020 Electrical and Chemical Physiology
CHEME 4810/BME 4810 Biomedical Engineering
MAE 4640/BME 4640 Orthopaedic Tissue Mechanics

Category 5. Biomedical engineering applications

AEP 4700/BIONB 4700/BME 5700 Biophysical Methods
BEE 3650 Properties of Biological Materials
BEE 4500 Bioinstrumentation
BEE 4530/MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes
BEE 5400 Biomedical Computation
BEE 4590 Biosensors and Bioanalytical Techniques
BEE 5830 Cell-Biomaterials Interactions
BME 4110 Science and Technology Approaches to Problems in Human Health
BEE 5600 Biotransport and Drug Delivery
BME 5810/MAE 5680 Soft Tissue Biomechanics
CS 3510/BIOBM 3510/ENGRD 3510 Numerical Methods in Computational Molecular Biology
ECE 5020/BME 5020 Biomedical System Design
ECE 5780/BME 5780 Computer Analysis of Biomedical Images
MSE 4610 Biological Materials and Their Applications
MSE 5620/BME 5620 Biominalization: The Formation and Properties of Inorganic Biomaterials
FSAD 4390/BME 5390 Biomedical Materials and Devices for Human Body Repair

*Students interested in professional practice as biomedical engineers should consider an M.Eng. degree in BME. The recommended sequence for admission is as follows: two courses from categories 1 and 2, BME 3010, 3020, 4010, and 4020. The program requires students to have a knowledge of molecular and cellular biomedical engineering, and of biomedical engineering analysis of physiological systems.

MINOR: COMPUTER SCIENCE

Offered by the Department of Computer Science
Contact: 503 Upson Hall, 255-0982, www.cs.cornell.edu

Students affiliated with all majors except Computer Science are eligible to participate in this minor. This minor is for students who anticipate that computer science will play a prominent role in their academic and professional career.

Academic standards: At least C in each course in the minor.
MINOR: ELECTRICAL AND COMPUTER ENGINEERING
Offered by the School of Electrical and Computer Engineering
Contact: 223 Phillips Hall, 255-4309, www.ece.cornell.edu
Students affiliated with all majors except Electrical and Computer Engineering are eligible to participate in this minor.
This minor offers the opportunity to study analog and digital circuits, signals and systems, and electromagnetics and to concentrate at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, and space engineering.
Academic standards: At least C– in each course in the minor. GPA ≥ 2.3 for all courses in the minor.
Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Two of the following:
   - ECE/ENGRD 2100 Introduction to Circuits for Electrical and Computer Engineers
   - ECE 2200 Signals and Information
   - ECE/ENGRD 2300 Introduction to Digital Logic Design
2. Two of the following:
   - ECE 3050 Electromagnetic Fields and Waves
   - ECE/ENGRD 3100 Introduction to Probability and Random Signals
   - ECE 3140/CS 3420 Computer Organization or CS 3410 Systems Programming
   - ECE 3150 Introduction to Microelectronics
3. One other non-project ECE course at the 3000 level or above (3-credit minimum)
4. One other non-project ECE course at the 4000 level or above (3-credit minimum)
Cross-listed courses cannot be applied to the minor unless taken under the CS rubric, with the sole exception of ECE 3140 and CS 3410. All qualifying courses must be taken at Cornell for a letter grade. No substitutions allowed.

MINOR: ENVIRONMENTAL ENGINEERING
Offered by the School of Civil and Environmental Engineering
Contact: 221 Hollister Hall, 255-3412, www.cee.cornell.edu
Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.
The goal of the minor is to provide the student with a firm understanding of statistical principles and engineering applications and the ability to apply this knowledge in real-world situations.
Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.
Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Required courses:
   - CEE 2200 Signals and Information
   - CEE 3040 Uncertainty Analysis in Engineering
   - CEE 4920 Engineers for a Sustainable World: Engineering in International Development
   - ORIE 5770 Quality Control
   - Students must substitute NCC 5560 or NBA 5000 for ORIE 5500
2. Additional courses—choose any one:
   - ECE 4000 Civil Infrastructure Systems
   - CEE 4920 Engineers for a Sustainable World: Engineering in International Development
   - CEE 5930 Engineering Management Methods
   - CEE 5950 Construction Planning and Operations
   - CEE 5970 Risk Analysis and Management
   - NBA 5070 Entrepreneurship for Scientists and Engineers
   - or MAE/ENGRG 4610/ORIE 4152 Entrepreneurship for Engineers
   - or BEE 4890 Engineering Entrepreneurship: Management and Ethics
3. Other courses approved by petition in advance.
   *Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING STATISTICS
Offered by the School of Operations Research and Information Engineering
Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu
Students affiliated with all majors except Operations Research and Engineering are eligible to participate in this minor.
Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.
Requirements
At least six courses (≥ 18 credits), chosen as follows:
1. Required courses:
   - ORIE 2430 Basic Probability
   - ORIE 4150 Economic Analysis of Engineering Systems
   - ORIE 5500 Basic Engineering Probability and Statistics
   - ENGRD 3100 Introduction to Probability and Random Signals
   - ORIE 3150 Introductory Engineering
   - ORIE 4580 Simulation Modeling and Analysis
   - ORIE 4710 Applied Linear Statistical Models
   - ORIE 4711 Experimental Design
   - ILRST 3100 Statistical Analysis
   - ILRST 4100 Techniques of Multivariate Analysis
   - ORIE 5200 Basic Engineering Probability
   - ORIE 5500 Basic Engineering Probability and Statistics
   - ORIE 5770 Quality Control
   - MATH 4720 Basic Probability
   - ORIE 4712 Regression
   - BTRY 4090 Theory of Statistics
   - BTRY 6020 Statistical Methods II
   - BTRY 6030 Statistical Methods III or ILRST 4110 Statistical Analysis of Qualitative Data
2. Other courses approved by petition in advance.
   *Other course options approved by petition in advance. Some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

MINOR: ENVIRONMENTAL ENGINEERING
Offered jointly by the Department of Biological and Environmental Engineering and the School of Civil and Environmental Engineering
Students affiliated with all majors except environmental engineering are eligible to participate in this minor. Civil engineering
majors may not use courses simultaneously to satisfy a requirement for the minor and as a major-approved elective or design elective.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and water in our aquifers, streams, estuaries, and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen from the following groups, with at least one course from each group.

**Group A. Environmental engineering processes:**

- BEE/ENGRD 2510 Engineering for a Sustainable Society
- CEE 3510 Environmental Quality Engineering
- CEE 4510 Microbiology for Environmental Engineering
- CEE 4520 Water Supply Engineering
- CEE 4530 Laboratory Research in Environmental Engineering
- CEE 4540 Sustainable Small-Scale Water Supplies
- CEE 4550 Aquaculture: Sustainable Water Supply Project
- BEE 4760 Solid Waste Engineering
- CEE 4440 Environmental Site and Remediation Engineering
- BEE/ENGRD 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry
- CEE 4920 Engineers for a Sustainable World
- BEE 6510 Bioremediation
- CEE 6530 Water Chemistry for Environmental Engineering
- CEE 6560 Physical/Chemical Process
- CEE 6570 Biological Processes
- CEE 6580 Biodegradation and Biocatalysis

**Group B. Environmental systems**

- ENGR/CEE 1130 Sustainable Design for Appleford Island (may count only if taken before the junior year)
- BEE 4570 Environmental Systems Analysis
- CEE 3970 Risk Analysis and Management
- CEE 6290 Environmental Quality Systems Engineering

**Group C. Hydraulics, hydrology, and environmental fluid mechanics**

- CEE 3310 Fluid Mechanics (CHME 3230 or MAE 3230 may be substituted for CEE 3310)
- CEE 3320 Hydraulic Engineering
- BEE 3710 Physical Hydrology for Ecosystems
- BEE/EAS 4710 Introduction to Groundwater
- CEE 4320 Hydrology
- CEE 4560 Case Studies in Environmental Fluid Mechanics
- CEE 4570 Experimental Methods in Fluid Dynamics
- BEE 4730 Watershed Engineering
- BEE 4740 Water and Landscape Engineering Applications
- CEE 6310 Computational Simulation of Transport in the Environment
- CEE 6330 Flow in Porous Media and Groundwater
- BEE 6550 Transport, Mixing, and Transformation in the Environment
- BEE 6710 Analysis of the Flow of Water and Chemicals in Soils
- BEE 6720 Drainage

**MINOR: GAME DESIGN**

Offered by the Department of Computer Science

See: gdiac.cis.cornell.edu/courses.php

**Requirements:**

At least six courses (18-credit minimum) chosen as follows:

- Required courses: Complete the following two courses:
  - CIS 3000 Introduction to Computer Game Design
  - CIS 4002 Advanced Projects in Game Design

- Additional Courses: Choose four of the following 12 courses:

**CS-focused courses:**

- CS/ENGRD 2110 Object-Oriented Programming and Data Structures
- CS 4450 Computer Networks
- ARCH 3704/CS 4620 Introduction to Computer Graphics
- CS 4700 Foundations of Artificial Intelligence
- CS 5620 Interactive Computer Graphics
- CS 5643 Physically Based Animation for Computer Graphics

- Other courses:
  - ART 2750/CIS 5640 (CS 5640 not allowed) Advanced Animation
  - COMM 4420 Psychology of Entertainment Media
  - ECE 4760 Designing with Microcontrollers
  - COMM/INFO 3450 Human-Computer Interaction
  - COMM/INFO 4400 Advanced Human-Computer Interaction Design

**Academic standards:** At least a letter grade of C is required for each course in the minor.

**Note:** CS majors cannot take courses from the CS-focused list for the Game Design minor.

**MINOR: INDUSTRIAL SYSTEMS AND INFORMATION TECHNOLOGY**

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except Operations Research and Engineering and Information Science, Systems, and Technology are eligible to participate in this minor.

The aim of this minor is to provide an in-depth education in issues central to the design and analysis of operational systems, and the tools from information technology that have become an integral part of the manufacturing, finance, service, and public health industries. Students will become familiar with the problems, perspectives, and methods found in these fields and be prepared to work with professionals in designing and managing them. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in application areas closely associated with these techniques.

**Academic standards:** At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

**Requirements**

At least six courses (≥ 18 credits), chosen as follows:

1. Required courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3120 Industrial Data and Systems Analysis
   - ORIE 4800 Information Technology

2. The remaining courses chosen from:
   - ORIE 3150 Financial and Managerial Accounting
   - ORIE 3500 Optimization I
   - ORIE 4150 Economic Analysis of Engineering Systems
   - ORIE 4580 Simulation Modeling and Analysis
   - ORIE 4810 Delivering OR Solutions with Information Technology
   - ORIE 4850 Applications of Operations Research and Game Theory to Information Technology
   - ORIE 5100 Design of Manufacturing Systems
   - ORIE 5120 Production Planning and Scheduling Theory and Practice
   - ORIE 5770 Quality Control
MINOR: INFORMATION SCIENCE
Offered by the Department of Computer Science
Contact: Undergraduate Programs Office, 303 Upson Hall, 255-9837, www.infosci.cornell.edu
Students affiliated with any major except Information Science, Systems, and Technology are eligible to participate in this minor.

The interdisciplinary field of information science covers all aspects of digital information. The program has three main areas: information systems, human-centered systems, and social systems. Information systems studies the computer science problems of representing, storing, manipulating, and using digital information. Human-centered systems studies the relationship between humans and information, drawing from human-computer interaction and cognitive science. Social systems examines information in its economic, legal, political, cultural, and social contexts.

The minor has been designed to ensure that students have substantial grounding in all three areas in addition to having a working knowledge of basic probability and statistics necessary for analyzing real-world data.

Academic standards: At least C in all courses for the minor; S-U courses are not allowed. All courses must be taken at Cornell.

Requirements
Note: These requirements apply to students in the College of Engineering. Students who are not in the College of Engineering should refer to the IS minor requirements listed in the CIS section of this publication.

At least six courses (18 credits) chosen as follows:

- Statistics: one course (must be ENGRD 2700 or CEE 3040)
- Information Systems: two courses
- Human-Centered Systems: one course
- Social Systems: one course
- Elective: one additional course from either Human-Centered Systems or Social Systems

Statistics
An introductory course that provides a working knowledge of basic probability and statistics and their application to analyzing real-world data.

ENG RD 2700 Basic Engineering Probability and Statistics
CEE 3040 Uncertainty Analysis in Engineering

Information Systems

CS 2110 Object-Oriented Programming and Data Structures*

MINOR: MATERIALS SCIENCE AND ENGINEERING
Offered by the Department of Materials Science and Engineering
Contact: 214 Bard Hall, 255-9159, www.mse.cornell.edu
Students affiliated with all majors except materials science and engineering are eligible to participate in this minor.

Materials properties are the foundation of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides students with a fundamental understanding of mechanisms that determine the ultimate performance, properties, and processing characteristics of modern materials.

Academic standards: At least C in each course in the minor.

Requirements
At least six courses (≥18 credits), chosen as follows:

1. ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures, or ENGRD 2620 Electronic Materials for the Information Age
MINOR: MECHANICAL ENGINEERING

Offered by the Sibley School of Mechanical and Aerospace Engineering

Contact: 108 Upson Hall, 255-3573, www.mae.cornell.edu

Students affiliated with all majors except MAE are eligible to participate in this minor. Students intending to earn this minor should seek advice and pre-approval of their minor academic program from the associate director for undergraduate affairs in mechanical engineering before taking courses toward the minor.

Academic standards: At least C– in each course in the minor.

Requirements

At least six courses (≥ 18 credits) from among the following: MAE courses at the 2000 level or above; ENGRD 2020 Mechanics of Solids; ENGRD 2030 Dynamics.

Rules for selecting courses:

1. The selection of courses must satisfy the following three requirements.
   a. At least two courses must be numbered above 3000.
   b. At least one course must be either (i) numbered above 5000 or (ii) numbered above 3200 and have as a prerequisite ENGRD 2020, 2030, or a MAE course.
   c. Each course must be worth at least 3 credits.

2. All courses used to satisfy the MAE minor must be MAE courses, ENGRD 2020 or 2030. No substitutions will be accepted from other departments at Cornell or elsewhere. Transfer credit may not be used to satisfy the MAE minor. MAE 1110 Naval Ship Systems, or MAE 4980 Teaching Experience in Mechanical Engineering, may not be used toward satisfying the M.E. minor.

MINOR: OPERATIONS RESEARCH AND MANAGEMENT SCIENCE

Offered by the School of Operations Research and Information Engineering

Contact: 203 Rhodes Hall, 255-5088, www.orie.cornell.edu

Students affiliated with all majors except ORIE are eligible to participate in this minor.

Operations research and management science supports decision making through modeling and analysis of complex systems. This understanding is used to predict system behavior and improve system performance.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. At least three of these courses:
   - ENGRD 2700 Basic Engineering Probability and Statistics
   - ORIE 3300 Optimization I
   - ORIE 3310 Optimization II
   - ORIE 3500 Engineering Probability and Statistics II
   - ORIE 3510 Introduction to Engineering Stochastic Processes I
   - ORIE 4580 Simulation Modeling and Analysis

2. Any ORIE courses at the 3000 level or higher (including those in 1).

MINOR: SCIENCE OF EARTH SYSTEMS

Offered by the Department of Earth and Atmospheric Sciences

Contact: 2124 Snee Hall, 255-5466, www.eas.cornell.edu

Students affiliated with all majors except EAS are eligible to participate.

Some of the major problems facing mankind in this century involve earth science, especially the generation of new energy sources for a growing world population, and engineers will be challenged to solve these problems. This minor will prepare engineering students to understand the natural operating systems of Earth and the tools and techniques used by earth scientists to understand and monitor these solid and fluid systems.

Academic standards: At least C– in each course in the minor. GPA ≥ 2.0 for all courses in the minor.

Requirements

At least six courses (≥ 18 credits), chosen as follows:

1. EAS 2200 The Earth System
2. At least two of these courses:
   - EAS 3010 Evolution of the Earth System
   - EAS 3040 Interior of the Earth
   - EAS 3050 Climate Dynamics
3. Additional EAS courses at the 3000 level or higher to make up the balance of 18 credits. These may include, e.g., additional courses from the above lists, undergraduate research courses, and outdoor field courses.

MASTER OF ENGINEERING DEGREES

The M.Eng. is a professional degree usually completed in two semesters. The curriculum offers advanced training, is practice-oriented, and is designed to assist engineers in development of their professional careers. Completion of the M.Eng. degree requires a design project rather than thesis research. The M.Eng. provides the technical expertise and leadership skills needed in business, government, and industry.

The following one-year (30-credit) professional master of engineering (M.Eng.) degrees are offered (giving also the administering unit)

M.Eng. (Aerospace Engineering): mechanical and aerospace engineering
M.Eng. (Biomedical Engineering): biomedical engineering
M.Eng. (Biological and Environmental Engineering): environmental engineering
M.Eng. (Chemical Engineering): chemical engineering
M.Eng. (Civil Engineering): civil and environmental engineering
M.Eng. (Computer Science): computer science
M.Eng. (Electrical and Computer Engineering): electrical and computer engineering
M.Eng. (Engineering Management): civil and environmental engineering
M.Eng. (Engineering Mechanics): theoretical and applied mechanics
M.Eng. (Engineering Physics): applied and engineering physics
M.Eng. (Geological Sciences): earth and atmospheric sciences
M.Eng. (Materials Science and Engineering): materials science and engineering
M.Eng. (Mechanical Engineering): mechanical and aerospace engineering
M.Eng. (Operations Research and Information Engineering): operations research and information engineering
M.Eng. (Systems Engineering): systems engineering

Many Cornell baccalaureate engineering graduates spend a fifth year at Cornell, earning an M.Eng. degree, although the program is also open to qualified graduates of other schools.

Requirements for admission vary by program. In general, the standard M.Eng. application requirements include:
- Statement of purpose
- Complete transcripts from each college or university attended
- At least two letters of recommendation
- Graduate Record Examination (GRE) scores—may not be required by all M.Eng. programs

Many M.Eng. programs waive the GRE requirement and one of the letters of recommendation for students with Cornell Engineering B.S. degrees. Check with the appropriate office for specific program requirements. A list of links and general admission information is posted on http://meng.engineering.cornell.edu.

Superior Cornell students who will have between 1 and 8 credits remaining in their last undergraduate semester may petition for early admission to the M.Eng. program. They spend the last semester finishing up their B.S. degree and taking courses that count toward their M.Eng. degree.

Master of Engineering Minors and Concentrations

The following M.Eng. minors and concentrations are offered:

Minors
- bioengineering
- engineering management
- manufacturing
- systems engineering

Concentrations
- applied operations research
- astronautics
- bioinstrumentation/diagnostics
- biomedical materials and mechanics
- complex system development
- data mining and analytical marketing
- drug delivery and cellular/tissue engineering
- dynamics, controls and robotics
- energy and sustainable development
- energy economics and engineering
- engineering mathematics and modeling
- environmental and water resources systems engineering
- environmental fluid mechanics and hydraulics
- environmental geophysics
- environmental processes
- financial engineering
- geohydrology
- geotechnical engineering
- information technology
- mechanics of materials
- micro and nanoscale engineering
- nanosystems
- semester in strategic operations
- structural engineering
- technology management for ECE
- thermal-fluidic sciences
- transportation systems engineering

For further information: http://meng.engineering.cornell.edu.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates may be interested in a cooperative program at Cornell that leads to both master of engineering and master of business administration (M.B.A.) degrees. With appropriate curriculum planning, such a combined B.S./M.Eng./M.B.A. program can be completed in six years at Cornell, with time out for work experience. For undergraduates from other schools, it may be feasible to complete the M.Eng./M.B.A. program in two years, possibly with an intervening summer or time out for work experience if they do not already have it on coming to Cornell. This accelerated program often incorporates the 12-month M.B.A. program of the Johnson Graduate School of Management (JGSM). Because 95 percent of the students in the JGSM have work experience, there will typically be a gap for work experience between the M.Eng. and M.B.A. portions of the program for students who do not already have it when beginning the M.Eng. portion.

For further details, visit Engineering Advising (167 Olin Hall), the RGS office (222 Carpenter Hall), the JGSM office in Sage Hall, or the office of your intended undergraduate major.

Lester Knight Scholarship Program

The Lester Knight Scholarship Program is designed to assist and encourage Cornell Engineering students and alumni interested in combining their engineering education with a business degree. The program offers two options or categories of financial support:
- Undergraduate Knight Scholarship
- Alumni Knight Scholarship

Each program has different qualifications and is open to Cornell engineering students and alumni at different stages of their educational or professional career. Participation in the program requires admission by each respective academic program (M.Eng. or M.B.A.) as well as an application to participate in the Knight Scholarship Program.

Contact RGS or refer to the Knight Scholarship web site (www.egr.cornell.edu/knightsholarships) for program specifics.

MASTER OF ENGINEERING DEGREES

MASTER OF ENGINEERING (AEROSPACE ENGINEERING)

Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu

The M.Eng. (Aerospace Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, turbulent flows, nonequilibrium flows, combustion, dynamics and control, computational fluid dynamics, and spacecraft.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering program. An individual student's curriculum includes a 4- to 8-credit design/research course, a minimum of 12 credits in aerospace engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

Design projects must have an aerospace engineering design or research focus and have the close supervision of a faculty member. The projects may arise from individual faculty and student interests or from collaboration with industry.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the approval of the Director of the Master of Engineering program.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Aerospace Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, or systems engineering minors.

MASTER OF ENGINEERING (BIOLOGICAL AND ENVIRONMENTAL ENGINEERING)

Offered by the Department of Biological and Environmental Engineering
Contact: 207 Riley-Robb hall, 255-2173, www.bee.cornell.edu

Educational Goals

The Master of Engineering (M.Eng.) program prepares graduates for professional positions in biological and environmental engineering. The program is flexible, allowing candidates to select their courses and project area to meet their individual goals. In addition to advanced courses in the Department of
Biological and Environmental Engineering, students have access to courses in all fields and programs in the College of Engineering. The M.Eng. program is designed to foster a close student-faculty mentoring relationship. While many students view the M.Eng. as a "fifth and final year" of formal engineering study, it is definitely appropriate and feasible to pursue advanced graduate study following the M.Eng. program if this is desired.

**Curriculum Requirements**

A total of 30 credits* is required for the master of engineering degree, and the program is usually completed in two semesters. Cornell Engineering undergraduates may apply early and be accepted into the program in their last undergraduate semester if they have 8 or fewer credits remaining in their bachelor's program. All M.Eng. students must complete the following:

* Detailed requirements are shown on the department web site.

- Bioenergetics and Stress Factors
- Biomechanics
- Controlled-Environment Agriculture
- Energy Systems Engineering
- Engineering to Solve Global Challenges
- Food Process Engineering
- Metabolic Engineering
- Microbial Fuel cells
- Micro-bioreactors
- Molecular Bioengineering
- Nucleic Acid Engineering
- Physiological Engineering
- Soil and Water Engineering

Students choose their design project and complete appropriate courses in one of the following areas:

- Bioenergetics and Stress Factors
- Biomechanics
- Controlled-Environment Agriculture
- Energy Systems Engineering
- Engineering to Solve Global Challenges
- Food Process Engineering
- Metabolic Engineering
- Microbial Fuel cells
- Micro-bioreactors
- Molecular Bioengineering
- Nucleic Acid Engineering
- Physiological Engineering
- Soil and Water Engineering

Students acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 3010, 3020, 4010, and 4020 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

**MASTER OF ENGINEERING (COMPUTER SCIENCE)**

Offered by the Department of Computer Science

Contact: 322 Upson Hall, 255-8720, www.cs.cornell.edu/grad/meng

The Master of Engineering degree in computer science can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science, including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high-performance computer architecture, databases and data mining.

The program includes the option to acquire supervisory training and practice.

Specific requirements include:

1. 12 credits in CHEM courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEM 7110, 7310, and 7510 and the remainder in chemical and biomolecular engineering applications (partial list: CHEM 4800, 4810, 4840, 5200, 5209, 5430, 5720, 6310, 6400, 6610, 6640, and 6650).

2. A minimum of 3 credits of an individual or group project, CHEM 5650.

3. At least 3 credits to demonstrate a knowledge of business practices and techniques for pollution abatement and control. If this knowledge has already been acquired by students as undergraduates, they may exempt from this requirement. If not, a CHEM course (e.g., CHEM 5720 and 6610) or another non-CHEM course covering these topics is required.

**MASTER OF ENGINEERING (CIVIL AND ENVIRONMENTAL ENGINEERING)**

Offered by the School of Civil and Environmental Engineering

Contact: 219 Hollister Hall, 255-7560, www.cee.cornell.edu

The Master of Engineering degree is a course work and project-oriented program. It is normally completed in two semesters of intensive study. Thirty credit hours are required, consisting of course work in a major concentration and a supporting area, as well as a design project.

Students must focus their studies in one of six major subject areas: environmental and water resource systems engineering, environmental fluid mechanics and hydrology, environmental processes, geotechnical engineering, structural engineering, and transportation systems engineering. Courses in supporting areas come from many disciplines, including architecture, computer science, economics, engineering management, historic preservation, materials science, microbiology and operations research to name just a few.

**MASTER OF ENGINEERING (BIOMEDICAL ENGINEERING)**

Offered by the Department of Biomedical Engineering

Contact: 109 Weill Hall, 255-2573, www.bme.cornell.edu

Our mechanistic understanding of biology has increased rapidly over the past 20 years, and many expect biology to drive engineering and technology in the next 50 years in much the same way that physics drove them in the 20th century. As biology has become more mechanistic, the opportunities to apply engineering approaches have increased enormously. Simultaneously, humanitarian needs and economic opportunities for the application of engineering to improve health care have increased significantly. Engineers who understand biology and can apply their knowledge and skills to improve human health are increasingly in demand. A professional degree in biomedical engineering will prepare students to fill this increasing critical need.

The breadth and depth of knowledge needed in biomedical engineering makes a four-year B.S. degree program impractical. By combining the M.Eng. (Biomedical Engineering) with a strong B.S. program, a student can obtain the knowledge and skills necessary to be an effective professional biomedical engineer.

Students will acquire an in-depth knowledge of an essential area of biomedical engineering as well as a broad perspective of the biomedical engineering discipline that complements their undergraduate education in engineering or science. Graduates will be equipped to design biomedical devices and develop therapeutic strategies within the bounds of health care economics, the needs of patients and physicians, the regulatory environment for medical devices and pharmaceuticals, and stringent ethical standards.

Students will acquire depth by extending undergraduate concentrations, by selecting one of three areas for concentrated study, and by completing a design project in their area of concentration. The areas are biomedical mechanics and materials; bioinstrumentation/diagnostics; and drug delivery and cellular/tissue engineering. Design projects will be carried out in teams to take advantage of the diversity of student backgrounds and, when possible, projects will be done in collaboration with industrial or clinical partners.

Students from a wide variety of backgrounds in engineering and science are encouraged to apply. They are expected to have completed two semesters of calculus-based physics, at least three semesters of math, starting with calculus, and introductory computer science.

A knowledge of molecular- and cellular-base biomedical engineering and engineering analysis of physiological systems at the level of BME 3010, 3020, 4010, and 4020 is highly recommended. This knowledge can be demonstrated through appropriate undergraduate course work (at least C in each class). Students lacking the appropriate background may need to complete additional courses (beyond the normal 30 credits) to demonstrate appropriate knowledge in these two subject areas.

**MASTER OF ENGINEERING (CHEMICAL ENGINEERING)**

Offered by the School of Chemical and Biomolecular Engineering

Contact: 358 Olin Hall, 255-4550, www.cheme.cornell.edu

The Master of Engineering (Chemical) is a 30-credit, typically one year, professional program designed to provide the flexibility to increase depth of knowledge in a specialty area, or to broaden students' breadth of knowledge, or to enhance their competitiveness for graduate programs. New "umbrella" program concentrations in "energy economics and engineering" and in "molecular biotechnology" provide a unique opportunity for a focused interdisciplinary approach in these important career choices. The program includes the option to acquire supervisory training and practice.

Specific requirements include:

1. 12 credits in CHEM courses distributed among chemical and biomolecular engineering fundamentals. One required from among CHEM 7110, 7310, and 7510 and the remainder in chemical and biomolecular engineering applications (partial list: CHEM 4800, 4810, 4840, 5200, 5209, 5430, 5720, 6310, 6400, 6610, 6640, and 6650).

2. A minimum of 3 credits of an individual or group project, CHEM 5650.

3. At least 3 credits to demonstrate a knowledge of business practices and techniques for pollution abatement and control. If this knowledge has already been acquired by students as undergraduates, they may exempt from this requirement. If not, a CHEM course (e.g., CHEM 5720 and 6610) or another non-CHEM course covering these topics is required.

- Detailed requirements are shown on the department web site.

Applicants to the program need to apply directly to the Cornell Grad School at www.gradschool.cornell.edu.
multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments, and artificial intelligence.

A typical program includes several upper-division and graduate courses and a faculty-supervised project. The flexible requirements allow students to build up a program that closely matches their interests. Project work, which may be done individually or in a small group, is often associated with ongoing research in the Department of Computer Science in one of the areas listed above, but it can also be done in collaboration with many fields throughout the university.

Cornell seniors may use the early admission option, which allows them to take courses toward their M.Eng. degree while completing their undergraduate degree. The Early Admit option can be started in either the fall or spring semester. It applies only to students who have 1 to 8 credits remaining to complete their undergraduate program. All remaining undergraduate degree requirements must be satisfied by the end of the first semester the student is enrolled in the M.Eng. “early admit” program.

For students with a non-CS background, there is an “extended” program option of four semesters where students use the first two semesters to complete prerequisite courses needed for the more advanced master’s-level courses.

MASTER OF ENGINEERING
(ELECTRICAL AND COMPUTER ENGINEERING)

Offered by the School of Electrical and Computer Engineering

Contact: Student Services Office, 223 Phillips Hall, 255-9414, www.ece.cornell.edu/acm-eng,dm

The M.Eng. (Electrical) degree program prepares students either for professional work in Electrical and Computer Engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the master of science degree mainly in its emphasis on professional skills, engineering design, and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including at least four graduate-level courses in Electrical and Computer Engineering. The required Electrical and Computer Engineering design project may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may petition to increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 9 credits of approved courses that have significant technical content but are taught in disciplines other than engineering, math, or the physical sciences.

Although admission to the M.Eng. (Electrical and Computer Engineering) program is highly competitive, all well-qualified students are urged to apply. Further information is available at the web site listed above.

MASTER OF ENGINEERING
(ENGINEERING MANAGEMENT)

The M.Eng. (Engineering Management) program is designed for engineers who want to stay in a technical environment but advance to managerial roles. Students learn to identify problems, formulate and analyze models to understand these problems, and interpret the results of analyses for managerial action.

A student’s program of study is designed individually in consultation with an academic advisor and then submitted to the school’s Professional Degree Committee for approval.

For the M.Eng. (Engineering Management) program, the requirements are at least 30 credits of Approved Courses, including:

1. Four core courses: These include CEE 5900 Project Management, CEE 5910 Engineering Management Methods, and CEE 5970 Risk Analysis and Management.
2. Two managerial breadth courses, including one in finance/accounting and one focused on behavior.
3. Three electives.

The School of Civil and Environmental Engineering cooperates with the Johnson Graduate School of Management in a joint program leading to both Master of Engineering and Master of Business Administration degrees. See the beginning of the section “Master of Engineering Degrees.”

MASTER OF ENGINEERING
(ENGINEERING MECHANICS)

Offered by the Department of Theoretical and Applied Mechanics

Contact: Marcia Sawyer, 107 Upson Hall, 255-5250, www.tam.cornell.edu

This two-semester professional degree program stresses applications of Engineering Mechanics and Applied Mathematics and Modeling. The centerpiece of the program is a project, either single or team-based, on important real-world problems.

Engineering Mechanics: Students in this program will deepen and broaden their knowledge of mechanics as applied to different material systems. The course work centers on additional study of solid mechanics, fracture mechanics, materials and computational methods widely used in industries (e.g., the finite element method). Potential employers are companies interested in computer modeling of mechanical systems and failure and reliability analysis.

Applied Mathematics and Modeling: Students in this program do course work in mathematical modeling and computational methods. They will have great flexibility in their choice of studies. Students who graduate from this program are in a good position to pursue higher degrees or work for financial or informational organizations.

Laboratories: TAM has many laboratories related to research areas and courses of study for the M.Eng. program:

- Ultrasonic and Materials Characterization Laboratory—Wolfgang Sachse
- Bio-robotics and Locomotion Laboratory—Andy Ruiz
- Granular Flow Research Laboratory—Jim Jenkins
- Composites Laboratory—Leigh Phoenix and Petru Petrini
- Fracture Mechanics Laboratory—Alan Zebunder
- Dynamics Laboratory—Dan Mittler
- Mechanics of Solids Laboratory—Dan Mittler
- Biological Fluid Dynamics Laboratory—Jane Weng

Course Work:

(project 10–12 credit hours)

Current Interesting Projects

1. Animal, Human and Robotic Locomotion—Andy Ruiz
2. Dynamical Systems—Richard Rand
3. Stress Rupture Testing of High-Performance Fibers and Yarns—Leigh Phoenix
4. Mathematics of Finance (capital budgeting, economic analysis Scholes—Black Diffusion Theory)—K. Bingham Cadby
5. Fracture and Reliability—Hui Phoenix, Zebunder
6. Response Theory—K. Bingham Cadby
7. Nuclear Reactor Theory—K. Bingham Cadby

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory project is required. The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. Its purpose is to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (e.g., courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level (4000) are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but may not be credited toward the degree.

The project topic can be drawn from a student's nonacademic work experience but carried out or further developed with advice from a Cornell faculty member with expertise in the project area selected by the student. A design project in geophysics would normally involve groundwater flow or mass transport. A design project in environmental geophysics might involve implementation of a field survey using seismological, geotechnical, or ground-penetrating radar methods to map subsurface stratigraphic or structural features that control groundwater flow or contamination at a site. Projects are presented both in written form and orally in a design seminar at the end of the year.

MASTER OF ENGINEERING (ENGINEERING PHYSICS)
Offered by the School of Applied and Engineering Physics
Contact: 212 Clark Hall, 255-5198, www.aep.cornell.edu
The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanotechnology, science and technology, device physics, materials characterization, or software engineering. Wide latitude is allowed in the choice of the required design project. Students plan their program in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering, whereas those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. Students granted the degree will have demonstrated competence in an appropriate core of basic physics. If this has not been accomplished before entering the M.Eng program, undergraduate classes in electricity and magnetism, classical mechanics, and quantum mechanics may be required in addition to the classes taken to satisfy the M.Eng requirements.

The degree requires 30 credits of graduate-level courses or their equivalent, with at least C- in each course, and distributed as follows:
1. a design project in applied science or engineering with a written final report (6 to 12 credits)
2. an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3. a required special-topics seminar course (1 credit)

Prerequisites: Students may enter with an undergraduate background in physics and introductory study in a specific field of applied physics. If this is not the case, undergraduate classes in an appropriate core of basic physics will be required. Those who have majored in an engineering discipline generally have a strong interest and needs. Alternatives to numerical models involve geological variables and concepts. Individual programs are developed within two established options: geohydrology and environmental geophysics. Incoming students are expected to have a strong background in mathematics, the physical sciences, and chemistry and have a strong interest and substantial background in the geological sciences. The 30-hour M.Eng. program is intended to extend and broaden this background to develop competence in four subject categories. Typical categories for the hydrogeology option are porous media flow, geology, geochemistry, and numerical modeling. Typical categories for the environmental geophysics option are geophysics, geology, porous media fluid flow, and computer methods. The courses a student selects in a category will vary depending on the student's background. No courses may be required in some categories, and the categories can be adjusted to the student's interest and needs. Alternatives to numerical modeling in the hydrogeology option could be economics or biochemistry, for example. To count toward the 30-credit degree requirement, courses must be at a graduate or advanced undergraduate level. At least 10 of the 30 hours in the program must involve engineering design. Much of this requirement is normally met through a design project, which can account for over one-third of the program (12 of 30 credits) and must constitute at least 5 credits. The design project must involve a significant component and lead to concrete conclusions or recommendations of an engineering nature.

Prerequisites: Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. program (Materials Science and Engineering) program. This 30-credit program includes course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible. Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MSE. One 3-credit technical elective must include advanced math (modeling, computer application, or computer modeling) beyond the MSE undergraduate requirements.

MASTER OF ENGINEERING (MECHANICAL ENGINEERING)
Offered by the Sibley School of Mechanical and Aerospace Engineering
Contact: 107 Upson Hall, 255-5250, www.mae.cornell.edu
The M.Eng. (Mechanical Engineering) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design. Candidates may concentrate on any of a variety of specialty areas, including biomechanical engineering, energy systems, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, and mechanical systems and design. A coordinated program of courses for the academic year is agreed upon by the student and the faculty advisor. This program and any subsequent changes must also be approved by the Director of the Master of Engineering
program. An individual student's curriculum includes a 4- to 8-credit design/research course; a minimum of 12 credits in mechanical engineering or a closely related field with some technical focus, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design/research focus and have the close supervision of a faculty member.

All courses must be of true graduate nature. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have special approval of the Director of the Master of Engineering program.

The technical electives may be courses of appropriate level in engineering, math, physics, chemistry, or biology; a maximum of two courses may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives.

Check with the MAE graduate field office (107 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical Engineering) degree program may take courses that also satisfy the requirements of the bioengineering, engineering management, systems engineering, or manufacturing minors.

differential equations, linear algebra, and multivariate calculus. For the financial engineering concentration, the entering student must also have completed an intermediate-level probability course and a basic finance course.

Program requirements include a core of ORIE courses plus technical electives chosen from a broad array of offerings. There are several concentrations, each requiring a particular set of electives plus a specific project course. The concentrations include Applied Operations Research, Financial Engineering, Information Technology, Strategic Operations (which incorporates the Strategic Operations Immersion at the Johnson Graduate School of Management), Data Analytics, and Manufacturing and Industrial Engineering. Students may also minor in systems engineering. Several of these options are offered jointly with other Cornell departments and schools and provide the opportunity to interact with students and specialists in business and other engineering fields. For information about the manufacturing and industrial engineering concentration, contact the Center for Manufacturing Enterprise, 251 Grumman Hall, 255-5545, or the Strategic Operations Immersion, 304 Sage Hall, 255-4691; about systems engineering, 280 Rhodes Hall, 254-8998, and for all others, 201 Rhodes Hall, 255-9128.

The applied operations research concentration is designed to be completed in two semesters. The financial engineering concentration is highly specialized and typically requires three semesters to complete. This permits an industry internship in the summer between semesters as well as a third semester of study in New York City. For scheduling reasons, and depending on the student's preparation, the other concentrations may entail an additional summer or semester.

The manner in which the M.Eng. project requirement is met depends on the chosen concentration. Common elements in all project experiences include working as part of a team of three to five students on an engineering design problem, meeting with a faculty advisor on a regular basis, and presenting the final results to the project sponsor. Most projects have industrial client sponsors and address problems that actually exist in practice.

Applicants who already hold graduate degrees in other fields may be interested in the possibility of completing both an M.Eng. and an M.B.A. program within a period of two years, possibly with intervening work experience. This possibility incorporates the Johnson Graduate School of Management Accelerated M.B.A. Program, which is completed in 12 months.

Additional program requirements are described in the Master of Engineering Handbook and on the web. For further details, see the contact information at the beginning of this section.

### ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a four-digit number.

### ENGINEERING COMMON COURSES

#### Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program (ECP), develop writing and oral-presentation skills needed by engineers.

<table>
<thead>
<tr>
<th>Course</th>
<th>Abbreviation</th>
</tr>
</thead>
<tbody>
<tr>

#### ENGR 3020 Writing-intensive Opportunity: Practicum in Technical Writing

Fall, spring. 1 credit.

One-credit attachment to an existing engineering course that is not one of the officially designated W-I courses. It may be taken more than once, with different courses by permission of a particular engineering faculty member.

<table>
<thead>
<tr>

#### ENGR 3340 Independent Study in Engineering Communications

1–3 credits, variable. Letter grades. TBA with instructor. Members of the ECP occasionally give independent (also called "directed") studies in engineering communications, typically with students who are ready for advanced work in technical writing. A student doing a directed study works one-on-one with an ECP instructor to pursue an aspect of professional communications in more depth than is possible in the ECP’s regular courses. Various types of projects are possible, e.g., studying forms of technical documentation, creating user manuals, analyzing and producing technical graphics, reading and writing about problems in engineering practice, and writing about technical topics for the public.

Laboratory experiments demonstrate basic principles of solids, stress, strain, statically indeterminate structures. Courses are intended to introduce students to the technical and managerial aspects of engineering graduates. Topics may include internal and external communications, balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

ENGRD 2520 The Physics of Life (also BEE 2510)
Fall, spring. 3 credits. Corequisites: MATH 2930 and PHYS 2213. All students must take a lab and a section. First course in electrical circuits and electronics. Establishes the fundamental properties of circuits with application to modern electronics. Topics include circuit analysis methods, operational amplifiers, basic filter circuits, and elementary transistor principles. The laboratory experiments are coupled closely with the lectures.

ENGRD 2190 Mass and Energy Balances (also CHEM 2190)
Fall. 3 credits. Corequisite: physical chemistry course or permission of instructor. Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Examples drawn from a variety of chemical and biomolecular processes.

ENGRD 2210 Thermodynamics (also MAE 2210)
Fall, spring. 3 credits. Prerequisite: PHYS 1112. Co-registration in MATH 2930, or permission of instructor. This course introduces the laws of thermodynamics and their applications. Topics include the first and second laws of thermodynamics, thermodynamic properties, and the application of the laws to real systems. The course covers thermodynamic cycles, thermodynamic properties of pure substances, and the behavior of real gases.

ENGRD 2350 Communications for Engineering Managers (LA)
Fall, spring. 3 credits. Fullfills college technical-writing requirement. May be used as free or approved elective in expressive arts. Limited to 20 students per section. Prerequisite: two first-year writing seminars and major affiliation. This seminar focuses on communications in organizational contexts common to engineering graduates. Topics may include internal and external communications; balancing visual and verbal elements in documents and oral presentations; teamwork and leadership; running and attending meetings; management strategies; and communicating with colleagues, superiors, subordinates, and clients. Students develop writing and management strategies that they apply in individual and team assignments. They learn how to organize technical and managerial information, articulate and support ideas, and communicate with technical and nontechnical audiences.

ENGRD 2300 Introduction to Digital Logic Design (also ECE 2200)
Fall, spring. 4 credits. Prerequisite: CS 1110 or CS 1112. Introduction to the design and implementation of practical digital circuits. Topics include transistor network design, Boolean algebra, combinational circuits, sequential circuits, finite state machine design, and analog and digital converters. Design methodology using both discrete components and hardware description languages is covered in the weekly laboratory portion of the course.

ENGRD 2510 Engineering for a Sustainable Society (also BEE 2510)
Fall. 3 credits. Pre or corequisite: MATH 2930. B. Ahner. Case studies of current environmental issues and environmental legislation relevant to the environment, air quality, hazardous waste management, and sustainable development. Emphasis is on the application of mathematics, physics, and engineering sciences to solve energy and mass balances in environmental science. Students are introduced to the basic chemistry, ecology, biology, ethics, and environmental legislation relevant to the particular environmental problem. BEE students must complete either BEE 2510 or BEE 2600 according to their academic plan. BEE students who complete both BEE 2510 and BEE 2600 receive engineering credit for only one of these courses.

ENGRD 2520 The Physics of Life (also AEP 2520/5520)
Spring. 3 credits. Prerequisites: MATH 1920, CHEM 2070 or 2970, and co-registration in or completion of PHYS 2213. L. Pollack. Introduces the physical principles of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering who have little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research, are discussed.

ENGRD 2600 Principles of Biological Engineering (also BEE 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930, B. A. Ahner.

ENGRD 2610 Mechanical Properties of Materials: From Nanodevices to Superstructures (also MSE 2610)
Fall. 3 credits. Prerequisite: MATH 1910. Corequisite: PHYS 1112 or permission of instructor. S. B. Baker. Examines the mechanical properties of materials (e.g., strength, stiffness, toughness, ductility) and their physical origins. Topics include the relationship of elastic, plastic, and...
fracture behavior to microscopic structure in metals, ceramics, polymers, and composite materials. Effects of time and temperature on materials properties, and considerations for design and optimal performance of materials in engineered objects and biological tissues.

ENGRD 2620 Electronic Materials for the Information Age (also MSEE 2620) Spring. 3 credits. Prerequisite: MATH 1920. Corequisite: PHYS 2213 or permission of instructor G. Malliaras.
Examines the electrical and optical properties of materials. Topics include the mechanism of electrical conduction in metals, semiconductors and insulators, the tuning of electrical properties in semiconductors, the transport of charge across metal/semiconductor and semiconductor/semiconductor junctions, and the interaction of materials with light. Applications in electrophotography, solar cells, electronics, and display technologies are discussed.

ENGRD 2640 Computer-Instrumentation Design (also AEP 2640) Fall. 3 credits. Prerequisite: CS 1110; permission of instructor for seniors. 1 lec, 1 lab. T. Cool.
Covers the use of a small computer in an engineering or scientific research lab. The experiments investigated include analog to digital converters (ADC), digital to analog converters (DAC), digital input/output (I/O), counter/timers, serial port communications, digital temperature control, error analysis, nonlinear least squares fitting of experimental data, viscosity of fluids, a robot arm, and thermal diffusion. C++ programming and graphical programming with LabVIEW™ are used for computer interfacing to hardware. Students develop effective written communication skills in the context of science and engineering. They prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 2700 Basic Engineering Probability and Statistics Fall, spring. 3 credits. Prerequisites: MATH 1910 and 1920. MATH 2940 should be completed before or concurrently with ENGRD 2700.
Gives students a working knowledge of basic probability and devices and their application to engineering. Includes computer analysis of data and simulation. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

ENGRD 3100 Introduction to Probability and Random Signals (also ECE 3100) Fall, summer. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents. For description, see ECE 3100.

ENGRD 3200 Engineering Computation Spring. 3 credits. Prerequisites: CS 1112 and MATH 2940. Corequisite: MATH 2940. Recommended: completion of MATH 2940. P.J. Dimassis.
Introduction to numerical methods, computational mathematics, and probability and statistics. Development of programming and graphics proficiency with MATLAB and spreadsheets. Topics include Taylor-series approximations, numerical errors, condition numbers, operation counts, convergence, and stability, probability distributions, hypothesis testing. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, statistics, regression, interpolation, numerical differentiation and integration, and solution of ordinary and partial differential equations, including an introduction to finite difference methods. Applications are drawn from different areas of engineering. A group project uses these methods on a realistic engineering problem.

ENGRD 3220 Introduction to Scientific Computation (also CS 3220) Spring, summer. 3 credits. Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2340.
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. Uses the MATLAB computing environment. Stresses vectorization, efficiency, reliability, and stability. Special lectures cover computational statistics.

Courses of General Interest Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGR 1099 Cooperative Workshop for CHEM 2090 Fall, spring. 1 credit. Corequisite: CHEM 2000. S–U grades only.
Academic Excellence Workshop for CHEM 2090. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CHEM 2090.

ENGR 1010 Cooperative Workshop for CS 2110 Fall, spring. 1 credit. Corequisite: CS 2110. S–U grades only.
Academic Excellence Workshop for CS 2110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 2110.

ENGR 1050 Engineering Seminar Fall. 1 credit. Prerequisite: freshman standing. S–U grades only.
First-year engineering students meet in groups of 18 to 20 students weekly with their faculty advisors. Discussions may include the engineering curriculum and student programs, what engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGR 1060 Exploration in Engineering Seminar Summer. 1 credit. Designed for junior and senior high-school students. Introduction to several engineering fields, such as bioengineering, chemical engineering, civil engineering, computer science, earth sciences, electrical and computer engineering, engineering physics, materials science, mechanical engineering, and operations research. Hands-on experience in weekly labs, as well as design projects to introduce concepts of the engineering design process.

ENGRG 1091 Cooperative Workshop for MATH 1910 Fall. 1 credit. Corequisite: MATH 1910. S–U grades only.
Academic Excellence Workshop for MATH 1910. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1910.

ENGRG 1092 Cooperative Workshop for MATH 1920 Fall, spring. 1 credit. Corequisite: MATH 1920. S–U grades only.
Academic Excellence Workshop for MATH 1920. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 1920.

ENGRG 1093 Cooperative Workshop for MATH 2930 Fall, spring. 1 credit. Corequisite: MATH 2930. S–U grades only.
Academic Excellence Workshop for MATH 2930. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2930.

ENGRG 1094 Cooperative Workshop for MATH 2940 Fall, spring. 1 credit. Corequisite: MATH 2940. S–U grades only.
Academic Excellence Workshop for MATH 2940. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in MATH 2940.

ENGRG 1095 Cooperative Workshop for CS 1110 Fall, spring. 1 credit. Corequisite: CS 1110. S–U grades only.
Academic Excellence Workshop for CS 1110. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1110.

ENGRG 1096 Cooperative Workshop for CS 1112 Fall, spring. 1 credit. Corequisite: CS 1112. S–U grades only.
Academic Excellence Workshop for CS 1112. Weekly two-hour collaborative learning sessions. Peer-facilitated group works on problems at or above the level of course material, designed to enhance understanding of core concepts in CS 1112.

ENGRG 2350 Career Development for Engineering (also ECE/HIST 2350) Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing. Introduces concepts and techniques that can be used now and in the future to set appropriate personal and professional career goals.

ENGRG 2500 Technology in Society (also ECE/HIST 2500, STS 2501) Fall. 3 credits. Approved for humanities distribution.
Investigates the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of
ENGRG 2980 Inventing an Information Society (also AMST/2980, HIST 2920, STS/INFO 2921)
Spring. 3 credits. Approved for humanities distribution.
Explores the history of information technology from the 1850s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers, and the internet. Emphasis is on the changing relationship between science and technology, the economic aspects of innovation, gender and technology, and other social relations of this technology.

ENGRG 3230 Engineering Economics and Management (also CEE 3230)
Spring, sometimes offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. Students must register under CEE 3230. F. Vanek.
Introduction to engineering and business economics investment alternatives and to project financing. This course is intended to give students a working knowledge of money management and how to make economic comparisons of alternatives involving future benefits and cost. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and planning and project-management problems.

ENGRG 3600 Ethical Issues in Engineering Practice (also ECE 3600, STS 3601) (KCM)
Spring. 3 credits. Open to sophomores. Studies major ethical and social issues involved in engineering practice. The issues include responsibility for designing products that do not harm public health, safety, and welfare; rights of engineers in large corporations; risk analysis and the principle of informed consent; conflict of interest; whistle blowing; trade secrets; and broader concerns such as environmental degradation, cost of health care, computer ethics, and working in multinational corporations. Codes of ethics of the professional engineering societies, ethical theory, and the history and sociology of engineering are introduced to analyze these issues.

ENGRG 4610 Entrepreneurship for Engineers (also MAE 4610, ORIE 4152)
Fall. 3 credits. Prerequisite: upper-level engineers or permission of instructor. For description, see MAE 4610.

ENGRG 6780 Teaching Seminar
Fall, spring. 1 credit. S–U grades only. Staff. Independent study promoting reflection on teaching styles and experiences for teaching assistants in the College of Engineering. Participation is strongly encouraged and fulfilling a TA assignment. Requirements include participation in the College of Engineering's TA Development Program, consisting of an initial one and one-half day training session, followed by one evening microteaching session early in the semester; participation in the TA midterm evaluation process, followed by a formal feedback session with program staff; and completion of a reflective journal on teaching experiences. Designed to provide TAs with the opportunity to process their understanding of teaching and learning through the formulation of questions, concepts, and theories related to their experiences.

Introduction to Engineering Courses
Courses in this category are first-year level courses intended to introduce students to various aspects of engineering. They have no prerequisites and most are cross-listed with a department.

ENGR 1100 Lasers and Photonics (also AEP 1100)
Fall. 3 credits.
Lasers have had an enormous impact on communications, medicine, remote sensing, and material processing. This course reviews the properties of light that are essential to understanding the underlying principles of lasers and these photonic technologies. There also is a strong, hands-on laboratory component in which the students build and operate a number of lasers and participate in several demonstration experiments such as holography, laser processing of materials, optical tweezers, and fiber optics.

ENGR 1101 Engineering Applications of Operations Research
Fall, spring. 3 credits. Not open to ORIE upper-level majors.
Introduction to the problems and methods of operations research and industrial engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems arise, and several standard solution techniques. In the computational laboratory, students encounter problem simulations and use some standard commercial software packages.

ENGR 1110 Nanotechnology (also MSE 1110)
Fall. 3 credits. C. Umbach.
Nanotechnology has been enabling the Information Revolution with the development of even faster and more powerful devices for manipulation, storing, and transmitting information. In this hands-on course students learn how to design and manipulate materials to build devices and structures in applications ranging from computers to telecommunications to biotechnology.

ENGR 1120 Introduction to Chemical Engineering (also CHEM 1120)
Fall. 3 credits. Prerequisite: first-year standing. T. M. Duncan.
Design and analysis of processes involving chemical change. Students learn strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical and biomolecular engineering. Includes methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 1130 Sustainable Design for Appleford Island (also CEE 1130)
Spring. 3 credits. J. J. Bisogni.
The course utilizes a unique environment, Appleford Island, as an example of how sustainability is addressed in the design of basic components of the built environment; energy, water supply, and waste treatment. Students will present preliminary designs of sustainable systems to the engineering staff of Appleford Island.

ENGR 1160 Modern Structures (also CEE 1160)
Fall. 3 credits. A. Ingraffea.
Introduction to structural engineering in the 21st century—the challenges structural engineers face and the innovative approaches they are using to address them. Using case studies of famous structures, students learn to identify different structural forms and understand how various forms carry load—using principles of statics, mechanics, and material behavior. The historical, economic, social, and political context for each structure is discussed. Case studies of failures are used to explain how structure failures and other extreme events, and students are introduced to analytical and experimental approaches (shake table and wind tunnel testing) to quantifying loads on structures subjected to extreme events. Types of structures considered include skyscrapers, bridges, aircraft, and underground structures.

ENGR 1170 Introduction to Mechanical Engineering (also MAE 1170)
Fall. 3 credits.
Introduction to fundamentals of mechanical and aerospace engineering. Students learn and understand materials characteristics, the behavior of materials, and material selection for performing engineering function. They also learn fundamentals of fluid mechanics, heat transfer, automotive engineering, engineering design and product development, patents and intellectual property, and engineering ethics. In the final project, students use the information learned to design and manufacture a product.

ENGR 1190 Biomaterials for the Skeletal System (also MSE 1190)
Fall. 3 credits. D. Grubb.
Biomaterials are at the intersection of biology and engineering. This course explores natural structural materials in the human body, their properties and microstructure, and synthetic and semi-synthetic replacements. Bones, joints, teeth, tendons, and ligaments are used as examples, with their metal, plastic, and ceramic replacements. Topics include strength, corrosion, toxicity, wear, and bio-compatibility. Case studies of design lead to consideration of regulatory approval requirements and legal liability issues.

ENGR 1200 Introduction to Nanoscience and Nanoeengineering (also AEP 1200)
Spring. 3 credits.
Lecture/laboratory course designed to introduce first-year students to some of the ideas and concepts of nanoscience and nanotechnology. Topics include nanoscience and nanotechnology—why they are and why they are of interest; atoms and molecules; the solid state; surfaces; behavior of light and material particles when confined to nanoscale dimensions; scanning tunneling microscopy (STM), atomic force microscopy (AFM), microelectromechanical systems (MEMS) design; basic micromachining and chemical synthesis methods, i.e., “top-down” and “bottom-up” approaches to nanofabrication;
how to manipulate structures on the nanoscale; physical laws and limits they place on the nanoworld; some far-out ideas. In the laboratory, students use an AFM to record atomic resolution images, use a MEMS computer-aided design software package to model the fabrication sequence of a simple MEMS device, examine the simulated behavior of the device and compare it with real behavior, construct a simple STM and learn through hands on experience the basic workings of the device.

ENGRI 1220 Earthquake! (also EAS 1220)
Spring. 3 credits. L. Brown.
Explores the science of natural hazards, their societal impacts and means of mitigation. The focus is on earthquakes, volcanoes, and tsunamis, but hurricanes, severe weather, climate change, landslides, wildfires, and the threat of extinction from a future impact by an extraterrestrial body are also considered.

ENGRI 1260 Introduction to Signals and Telecommunications (also ECE 1260)
Spring. 3 credits.
Introduces the concepts that underlie wired and wireless communication systems. Students achieve a rudimentary understanding of basic ideas such as coding and data compression; frequency content, bandwidth, and filtering; sampling and reconstruction; and time- and frequency-division multiplexing. Discussions of practical applications focus on areas such as the public switched telephone network, ISDN, ATM, and TCP/IP. Students also develop an appreciation for the historical development of the field. The course includes both lectures and laboratory demonstrations.

ENGRI 1270 Introduction to Entrepreneurship and Enterprise Engineering (also MAE 1270)
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisite: none.
A solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills the student will need in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources are covered. Technical topics such as the engineering design process, product realization, and technology forecasting are discussed.

ENGRI 1310 Introduction to Biomedical Engineering (also BME 1310)
Spring. 3 credits. Prerequisite: freshman or sophomore standing. C. B. Schaffer and S. D. Archer.
Modern biology and medicine are undergoing a revolution as quantitative principles of biology are discussed.

ENGR 1610 Computing in the Arts (also CIS/CS 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. Complements ART 1701+ and MUSIC 1421+. S–U or letter grades. For description, see CS 1610 in the CIS section.

ENGR 1620 Visual Imaging in the Electronic Age (also ART 1700, CIS/CS 1620)
Fall. 3 credits. S–U or letter grades. Staff. For description, see ART 1700.

APPLIED AND ENGINEERING PHYSICS
Lecturer: L. Wickham

AEP 1100 Lasers and Photonics (also ENGR 1100)
Fall. 3 credits.
Course in Introduction to Engineering series. For description, see ENGR 1100.

AEP 1200 Introduction to Nanoscience and Nanoeengineering (also ENGR 1200)
Spring. 3 credits.
Course in Introduction to Engineering series. For description, see ENGR 1200.

AEP 2170 Electricity and Magnetism (also PHYS 2217)
Fall, spring. 4 credits. Prerequisites: permission of advisor and instructor; co-registration in PHYS 2216 or knowledge of special relativity at level of PHYS 1116; MATH 1920 or equivalent and co-registration in MATH 2930 or equivalent. Staff. Intended for students who have done well in PHYS 1112 or 1116 (or equivalent) and mathematics and who desire a more analytic treatment than that of PHYS 2213. At the level of Electricity and Magnetism by Purcell. Recommended for prospective engineering physics majors. Placement quiz may be given early in semester, permitting students who find material too abstract or analytical to transfer into PHYS 2215 without difficulty.

AEP 2520 The Physics of Life (also AEP 5520, ENGRD 2520)
Spring. Prerequisites: MATH 1920, CHEM 2070 or 2090, and co-registration in or completion of PHYS 2213, L. Pollack. For description, see ENGRD 2520.

AEP 2640 Computer-Instrumentation Design (also ENGRD 2640)
Fall, spring. 3 credits. Prerequisites: seniors by permission of instructor; CS 1110. 1 lab. Staff. For description, see ENGRD 2640.

AEP 3210 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 2930. Intended for upper-level undergraduates in physical sciences. (Prior completion of common course curriculum mathematics and physics courses strongly recommended.) B. Kusse.

Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists by Arfken and Mathematical Physics by Butkov.

AEP 3220 Mathematical Physics II
Spring. 4 credits. Prerequisite: AEP 3210. Second of two-course sequence in mathematical physics intended for upper-level undergraduates in physical sciences.

B. Kusse:
Topics include partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz, and Poisson’s Equations, transform techniques, Green’s functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant, and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists by Arfken and Mathematical Physics by Butkov.

AEP 3240 Maple Supplement to Mathematical Physics 321 and 322
Spring. 1 credit. R. V. E. Lovelace.
A broad introduction to Maple in applications to problems of mathematical physics similar to those covered in AEP 3210 and 3220. Uses Maple to solve differential equations—both linear and nonlinear. Makes extensive use of plotting capabilities of Maple. Also covers matrices, complex functions, Laplace and Fourier transforms (and FFTs), and group theory. Gives an introduction to LiTex.

AEP 3300 Modern Experimental Optics (also PHYS 3300)
Fall. 3 credits. Limited enrollment. Prerequisite: PHYS 2214 or equivalent. E. Bodenschutz.
Practical laboratory course in basic and modern optics. The work covers a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and optical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. Students are also introduced to digital imaging and image processing techniques.

AEP 3330 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 1112 or 1116 and co-registration in AEP 3210 or equivalent or permission of instructor. Staff. Covers Newton’s mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial coordinates; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; and basic introduction to relativistic mechanics. Emphasis is on mathematical treatments, physical concepts, and applications. (At the level of Classical Dynamics by Marion and Thorton.)
AEP 3550 Intermediate Electromagnetism
Fall, beginning third week of Oct.;
summer, second half of semester. 2 credits.
Prerequisite: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.
Intermediate-level course on electromagnetic theory with a focus on statics; Vector calculus, electrostatics, conductors, dielectric materials, boundary conditions, applications to Laplace's equation, and magnetostatics. Emphasis is on developing proficiency with analytical techniques and intuitive understanding of fundamental electromagnetism.

AEP 3560 Intermediate Electro dynamics
Spring, 4 credits. Prerequisite: AEP 3550 and co-registration with AEP 3220, or permission of instructor.

AEP 3610 Introductory Quantum Mechanics
Fall, through second week of Oct.;
summer, first half of semester. 2 credits.
Prerequisites: PHYS 2213 or 2217 and co-registration with AEP 3210, or permission of instructor.
Introductory course on the theory of quantum mechanics. Topics include waves, Schrödinger's equation and the concept of the wavefunction, simple potentials, and the harmonic oscillator model. Emphasis is on developing an intuitive understanding of quantum mechanics.

AEP 3620 Intermediate Quantum Mechanics
Spring, 4 credits. Prerequisite: AEP 3610 or PHYS 3310 and co-registration with AEP 3220 or permission of instructor.
Continuation of AEP 3610 covering more advanced material in quantum mechanics. Topics include operator formalism and matrix representation, angular momentum and spin, the hydrogen atom, techniques for solving Schrödinger's equations including perturbation theory, two- and three-level systems, interaction with radiation, and identical particles.

AEP 3630 Electronic Circuits (also PHYS 3360)
Fall, spring. 4 credits. Prerequisites: PHYS 2208 or 2213 or permission of instructor.
No previous experience with electronics assumed; however, course moves quickly through introductory topics such as basic DC circuits. Fall semester usually less crowded. 1 lab, 2 labs. Fall: E. Kirkland; spring: Staff.
Students analyze, design, build, and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and/or integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes, and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

AEP 4230 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester physics sequence, familiarity with quantum mechanics (AEP 3620) and one year junior-level mathematics.
Staff. Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetism, simple-state systems, Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Introductory Statistical Mechanics by Bowley and Sanchez.

AEP 4340 Continuum Physics
Spring. 4 credits. Prerequisites: AEP 3330 and 3560 or equivalent. Staff.

AEP 4380 Computational Engineering Physics
Spring. 3 credits. Prerequisites: CS 1100 or PHYS 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students; co-registration with AEP 3210, or equivalent. Staff.
Numerical computation (e.g., derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods) is introduced and applied to engineering physics problems that cannot be solved analytically (e.g., three-body problem, electrostatic fields, quantum energy levels). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

AEP 4440 Quantum and Nonlinear Optics
Spring. 4 credits. Prerequisites: AEP 3560, 3620, or equivalent. Staff.
Introduction to the fundamentals of the interaction of laser light with matter and to optical devices based on these processes. Topics include the propagation of laser beams in bulk media and guided-wave structures, the origins of optical nonlinearities, harmonic generation, parametric amplification, self-focusing, optical switching, propagation of ultrashort pulses, solitons, four-wave mixing, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, and ultra-intense laser-matter interactions.

AEP 4500 Introductory Solid State Physics (also PHYS 4454)
Fall. 4 credits. Highly recommended: some exposure to quantum mechanics at level of PHYS 4445, AEP 3620, or CHEM 7930.
Staff.
Introduction the physics of crystalline solids. Covers crystal structures; electronic states; lattice vibrations; and metals, insulators, and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Covers optical properties, magnetism, and superconductivity as time allows. The majority of the course addresses the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel or Solid State Physics by Ashcroft and Mermin.

AEP 4700 Biophysical Methods (also BIONB 4700)
Fall. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. Overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics include methods that examine both structure and function of biological systems, with examples of the applications of these methods to biological membranes. The course format includes assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

AEP 4840 Introduction to Controlled Fusion: Principles and Technology (also ECE/NSE 4840, MAE 4590)
Spring. 3 credits. On demand. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students; for description, see NSE 4840.

AEP 4900–4910 Independent Study in Engineering Physics
Fall, spring. Credit TBA. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details TBA with respective faculty member.

AEP 5500 Applied Solid State Physics
Spring. 3 credits. Prerequisites: AEP 3560, 3620, 4230, 4500 or equivalent. Directed at students who have had an introductory course in solid state physics at the level of Kittel. Concentrates on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices, and mesoscopic quantum mechanical effects. The course stresses the fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.
AEP 5520 Physics of Life
Spring. 3 credits.
Introduces the physics of biological macromolecules (e.g., proteins, DNA, RNA) to students of the physical sciences or engineering with little or no background in biology. The macromolecules are studied from three perspectives. First, the biological role or function of each class of macromolecules is considered. Second, a quantitative description of the physical interactions that determine the behavior of these systems is provided. Finally, techniques that are commonly used to probe these systems, with an emphasis on current research areas, are described and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

AEP 6620 Micro/Nano-fabrication and Processing
Spring. 3 credits.
Introduction to the fundamentals of micro- and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic and optical materials, micro-mechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Murray.

AEP 5710 Biophysical Methods Advanced Laboratory
Spring, first three weeks of Jan. or TBA during spring semester. 3 credits.
Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S/U grades. M. Lindau.
Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The lab is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)
Spring. On demand. 4 credits.
Prerequisites: ECE 5810 and AEP 6060. For description, see ECE 5820.

AEP 6300 Nuclear Reactor Engineering (also MSE 6330)
Fall. 4 credits. Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S/U grades. M. Lindau.
Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The lab is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6610 Nanocharacterization
Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling. Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

AEP 7510 M.Eng. Project
Fall, spring. 6–12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a faculty member of the university. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

AEP 7530 Special Topics Seminar in Applied Physics
Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

BIOLICAL AND ENVIRONMENTAL ENGINEERING

AEC 5710 Biophysical Methods Advanced Laboratory
Spring, first three weeks of Jan. or TBA during spring semester. 3 credits.
Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S/U grades. M. Lindau.
Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The lab is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6070 Advanced Plasma Physics (also ECE 5820)
Spring. On demand. 4 credits.
Prerequisites: ECE 5810 and AEP 6060. For description, see ECE 5820.

AEP 6300 Nuclear Reactor Engineering (also MSE 6330)
Fall. 4 credits. Prerequisite: AEP 4700 highly recommended but qualified students who have not taken AEP 4700 also accepted. Letter or S/U grades. M. Lindau.
Offered to students in the engineering, physics, chemistry, and biological disciplines who are interested in research at the interface between physical sciences/engineering and life sciences. In groups of two, participants perform five experiments in research laboratories on state-of-the-art equipment. Lab training sessions are arranged individually in January and throughout the spring semester. Typically each experiment is two days in the lab plus one day for analysis and report writing. The lab is intended for students who seek hands-on introduction to modern biophysical experimental methods.

AEP 6610 Nanocharacterization
Fall. 3 credits. Prerequisites: Fourier transforms, basic electromagnetism, and undergraduate quantum mechanics or chemistry. Undergraduates should consult with instructor before enrolling. Graduate-level introduction to the tools used to image and probe optical, electronic, chemical, and mechanical properties at the nanoscale and below. Discussion centers on the physics of the interaction processes used for characterization, quantification, and interpretation of the collected signals, common artifacts, the engineering trade-offs made in constructing the actual instruments, and the fundamental detection limits for each method. Topics include the interaction of electrons, ions, and photons with materials; scanned probe and force microscopy; scanning and transmission electron microscopy; x-ray microanalysis; electron energy loss spectroscopy; and a brief survey of non-imaging methods such as RBS, XPS, and SIMS.

AEP 7510 M.Eng. Project
Fall, spring. 6–12 credits TBA. Requirement for M.Eng. (engineering physics) students. Independent study under the direction of a faculty member of the university. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

AEP 7530 Special Topics Seminar in Applied Physics
Fall. 1 credit. Requirement for M.Eng. (engineering physics) students; recommended for seniors in engineering physics. Prerequisite: undergraduate physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

BE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1090. Prerequisite: BEE majors or permission of instructor.

BE 1510 Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per course completed or concurrent.

BE 2220 Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 1920, BIOL 1101, PHYS 2213, and chemistry course completed or concurrent.

BE 2510 Engineering for a Sustainable Society (also ENGRG 2510)
Fall. 3 credits. Pre- or corequisite: MATH 2930.

BE 2600 Principles of Biological Engineering (also ENGRG 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930, BIOG 1101–1104 or 1105–1106.

BE 3050 Principles of Navigation (also NAVS 3050)
Spring. 4 credits. Three classes each week (lec-rec-project work).

BEE 1200 The BEE Experience
Spring. 1 credit. Requirement for CALS BEE freshmen. Not required for students who have completed ENGRG 1090. Prerequisite: BEE majors or permission of instructor.

BEE 1510 Introduction to Computer Programming
Fall. 4 credits. Limited to 18 students per lab and rec. Pre- or corequisite: MATH 1910 or equivalent. No previous programming experience assumed.

BEE 2220 Bioengineering Thermodynamics and Kinetics
Spring. 3 credits. Prerequisites: MATH 1920, BIOL 1101, PHYS 2213, and chemistry course completed or concurrent.

BEE 2510 Engineering for a Sustainable Society (also ENGRG 2510)
Fall. 3 credits. Pre- or corequisite: MATH 2930.

BEE 2600 Principles of Biological Engineering (also ENGRG 2600)
Fall. 3 credits. Pre- or corequisite: MATH 2930, BIOG 1101–1104 or 1105–1106.

BEE 3050 Principles of Navigation (also NAVS 3050)
Spring. 4 credits. Three classes each week (lec-rec-project work).

<tr>
<td>BEE 6430</td>
<td>Veterinary Perspectives on Pathogen Control in Animal Manure (also VTMED/BIOMI 6430)</td>
<td>2 credits</td>
<td>Spring. Prerequisites: limited to third- and fourth-year veterinary students, graduate students, and advanced undergraduate students interested in agricultural engineering as related to animal manure management.</td>
</tr>
<tr>
<td>BEE 6470</td>
<td>Water Transport in Plants (also BIOL 6510)</td>
<td>2</td>
<td>Fall. 2 credits. Offered alternate years.</td>
</tr>
<tr>
<td>BEE 6490</td>
<td>Solute Transport in Plants (also BIOL 6490)</td>
<td>3</td>
<td>Fall. 3 credits. Offered alternate years; next offered 2010–2011.</td>
</tr>
<tr>
<td>BEE 6510</td>
<td>Bioremediation: Engineering Organisms to Clean Up the Environment</td>
<td>3</td>
<td>Spring. Prerequisites: BIOMI 2900 or BIOMI 3510 or permission of instructor. Next offered 2010–2011.</td>
</tr>
</tbody>
</table>
BIOMEDICAL ENGINEERING

BEE 6550 Thermodynamics and Its Applications
Fall. 3 credits. Prerequisite: MATH 2930 or equivalent; for undergraduates, permission of instructor. Offered alternate years.

BEE 6590 Biosensors and Bioanalytical Techniques
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Offered alternate years; next offered 2010-2011.

BEE 6710 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics course; for undergraduates, permission of instructor. Offered alternate years.

BEE 6720 Drainage
Spring. 4 credits. Prerequisite: BEE 4710 or 4730. Offered alternate years.

BEE 6740 Ecodynamics
Spring. 3 credits. Prerequisite: ecodynamics course. Offered alternate years.

BEE 6870 The Science and Engineering Challenges to the Development of Sustainable Bio-Based Industries
Fall. 3 credits. Prerequisite: graduate standing. S–U grades only.

BEE 6970 Graduate Individual Study in Biological and Environmental Engineering
Fall, spring. 1–6 credits. Prerequisite: permission of instructor. S–U or letter grades.

BEE 7000 Orientation to Graduate Study
Fall. 1 credit. Prerequisite: newly joining graduate students in BEE. S–U grades only.

BEE 7010 BEE Seminar Series
Spring. 1 credit. S–U or letter grades.

BEE 7540 Water and Culture in the Mediterranean: A Crisis
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 7600 Nucleic Acid Engineering (also BME 7600)
Spring. 2 credits. Prerequisite: graduate standing; seniors by permission of instructor. S–U or letter grades.

BEE 7710 Soil and Water Engineering Seminar
Fall, spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S–U or letter grades.

BEE 8900 Master’s-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BEE 9000 Doctoral-Level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S–U grades only.

BIOLOGICAL AND ENVIRONMENTAL ENGINEERING

BME 1310 Introduction to Biomedical Engineering (also ENGR 1310)
Spring. 3 credits. Prerequisite: freshman or sophomore standing. C. B. Schaffer and S. D. Archer.

For description, see ENGR 1310.

BME 3010 Molecular Principles of Biomedical Engineering (also CHEM 4010)
Fall. 3 credits. Prerequisite: basic biology such as BIOG 1110, BIOBM 3300, or BIOM 2900. Lec and lab. M. Jin and S. D. Archer.

Introduction to genomics, proteomics, bioinformatics, and computational biology with an emphasis on the engineering challenges for these areas. Covers cytoskeletal and motor proteins and their relationship to nano- and micro-machines and nanobiotechnology. Existing and emerging technologies and instrumentation critical to molecular-level analysis in biomedical engineering.

BME 3020 Cellular Principles of Biomedical Engineering (also CHEM 4020)
Spring. 3 credits. Prerequisite: basic biology such as BIOG 1110, BIOBM 3300, or BIOM 2900. Lec and lab. M. Jin and S. D. Archer.

Integration of mammalian cell biology with engineering modeling principles, put into the context of medical pathology and disease states. Consists of three modules: (1) cell culture techniques/receptor ligand interactions, (2) cellular trafficking, and (3) signal transduction.

BME 3300 Introduction to Computational Neuroscience (also BION/BPSYCH/COGST 3300)
Fall. 3 or 4 credits; 4 credits includes lab providing additional computer simulation exercises. Limited to 25 students. Prerequisites: BION 2220 or permission of instructor. S–U or letter grades. Offered alternate years. C. Linster.

For description, see BION 3300.

BME 3600 Molecular and Cellular Bioengineering (also BEE 3600)
Spring. 3 credits. Prerequisite: BEE 2600, biochemistry course; linear algebra, ordinary differential equations, or permission of instructor.

For description, see BEE 3600.

BME 4010 Biomedical Engineering Analysis of Metabolic and Structural Systems (also MAE 4660)
Fall. 3 credits. Prerequisite: basic biology course work. Highly recommended: solid mechanics and fluid mechanics courses. Lec and lab. L. J. Bonassar and S. D. Archer.

Presents the quantitative biology of the renal, respiratory, cardiovascular, and musculoskeletal systems. Includes mathematical modeling of physiological processes involving mechanics and transport in solid and fluid organs.

BME 4020 Electrical and Chemical Physiology
Spring. 3 credits. Prerequisite: BME 3010, 3020, or 4010 or biology background or permission of instructor. Lec and lab. D. Lipson and S. D. Archer.

Focuses on understanding how circulating agents and biologic activity comprises interorgan and central nervous system communication, and control of the human body. Additional emphasis includes examining medical devices involved in the treatment of human disease.

BME 4110 Science and Technology Approaches to Problems in Human Health
Fall. 3 credits. Prerequisites: junior, senior, or graduate standing; sophomores by permission of instructor. C. B. Schaffer and M. G. Kaplitt.

Provides an in-depth look at diseases that impact human health along with current scientific research and engineering that is aimed at addressing these problems. Faculty from the Weill Cornell Medical College will discuss health problems they are unable to treat as well as they would like, then Cornell University and Weill faculty will discuss current research aimed at better understanding disease process, developing new treatment strategies, and improving patient outcomes. The course is particularly appropriate for students considering medical school or careers in biomedical science and engineering.

BME 4640 Orthopaedic Tissue Mechanics (also CHEM 4840)
Spring. 3 credits. Prerequisites: ENGRD 2020 and MAE 3250 or permission of instructor. Offered alternate years.

For description, see MAE 4640.

BME 4810 Biomedical Engineering (also CHEM 4810)
Spring. 3 credits. Prerequisite: CHEM 3240 or equivalent or permission of instructor. W. L. Olbricht.

For description, see CHEM 4810.

BME 4900 Independent Undergraduate Project in Biomedical Engineering
Fall, spring. Variable credit. Staff. Research or projects by an individual or a small group of undergraduates.

BME 4910 Principles of Neuropsychology (also BION 4910)
Spring. 4 credits. Limited to 20 students. Prerequisite: BION 2220 or written permission of instructor. S–U or letter grades for graduate students by permission of instructor. B. R. Johnson.

For description, see BION 4910.

BME 5010 Bioengineering Seminar (also BEE 5010)
Fall, spring. 1 credit. Prerequisite: junior, senior, or graduate standing. Staff.

Gives the engineer-in-training a BROAD overview of different aspects of biological and biomedical engineering including business, legal, and clinical issues. To give students a working knowledge of how abstracts are written and revised. Sessions may occasionally be held outside of scheduled times.
BME 5020 Biomedical System Design (also ECE 5020)  
Spring. 1–4 credits. Prereqs: Introductory Biology, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250, respectively. M.Eng. students only. Permission of instructor required. B. R. Land. For description, see ECE 5020.

BME 5030 Electronic Bioinstrumentation (also ECE 5650)  
Fall. 4 credits. Prereqs: Introductory Biology, analog design, signal processing, at the level of BIOL 1010, ECE 3150, and ECE 4250, respectively. M.Eng. students only. Permission of instructor required. B. R. Land. For description, see ECE 5030.

BME 5390 Biomedical Materials and Devices for Human Body Repair (also FSAD 4390)  
Spring. 2–3 credits. Prereqs: junior or senior standing, college natural science requirement (chemistry or biology). C. C. Chu. For description, see FSAD 4390.

BME 5400 Biomedical Computation  
Fall. 3 credits. Prereqs: MATH 293 and 294 (or equivalent), and introductory computer programming course. M. R. King. The application of numerical and statistical methods to model biological systems and interpret biological data, using the MATLAB programming language.

BME 5500 Product Engineering and Design in Biomedical Engineering  
Fall. 3 credits. Prereqs: graduate standing, requirement for M.Eng. students majoring in BME. D. Lipson and R. W. Newman. A beginning to a cornerstone understanding of engineering, regulatory business, and individual issues for new medical product development. Student background and interests may be highly varied. To accommodate these varied perspectives, the initial focus of the class is on the engineering perspectives of design and development, enabling those undertaking projects (BME 5910) to have timely exposure to key enabling concepts.

BME 5600 Biotransport and Drug Delivery  
Spring. 3 credits. Prereqs: CHEME 324 and MATH 293, or equivalent. M. R. King. This course focuses on engineering analysis of drug delivery applications and basic transport processes in physiological systems. Specific topics include targeted drug delivery, controlled drug release, biotechnology, capillary mass transport, and pharmacokinetic compartmental models.

BME 5620 Biomimeralization (also MSE 5620)  
Spring. 3 credits. L. Estroff. For description, see MSE 5620.

BME 5650 Biomechanical Systems—Analysis and Design (also MAE 5650)  

BME 5690 Clinical Biomechanics of Musculoskeletal Tissues (also MAE 5690)  
Fall. 3 credits. Offered alternate years; next offered 2010–2011. Y. Gao. For description, see MAE 5690.

BME 5700 Biophysical Methods (also BION/AEP 4700)  
Fall. 3 credits. Prereqs: solid knowledge of basic physics and mathematics through sophomore level. Recommended: some knowledge of cellular biology. Letter grades only. M. Lindau. For description, see AEP 4700.

BME 5710 Analytical Techniques for Material Science (also MSE 5710)  
Spring. 3 credits. D. Grubb. For description, see MSE 5710.

BME 5780 Computer Analysis of Biomed Images (also ECE 5780)  
Spring. 4 credits. Prereq: permission of instructor. A. P. Reeves. For description, see ECE 5780.

BME 5810 Soft Tissue Biomechanics (also MAE 5680)  
Fall. 3 credits. Prereqs: graduate standing; seniors by permission of instructor. J. T. Butcher. Introduces concepts of biomechanics applied to understanding the material behavior of soft tissues. Topics include finite strain, nonlinearities, constitutive frameworks, and experimental methodologies. Tissues to be modeled include tendons, blood vessels, heart valves, cartilage, and engineered tissues.

BME 5830 Cell-Biomaterials Interactions  
Fall. 3 credits. Coreqs: BME 3010, concurrent with 3020, or permission of instructor. C. Reinhart-King. Biological principles underlying biomaterial design and cell adhesive behavior, incorporating biomechanical analysis across the molecular, cellular, and tissue length scales.

BME 5850 Current Practice in Tissue Engineering  
Fall. 3 credits. Coreqs: BME 3010 or 4010 (or BME 3020 as corequisite). C. Fischbach-Teschl. Covers fundamental biological principles and engineering concepts underlying the field of tissue engineering and describes specific strategies to engineer tissues for clinical use along with examples.

BME 5910 Design Project  
Fall, spring. 3–6 credits. Requirement for M.Eng. students majoring in BME. Students encouraged to register for two semesters as continuing course. D. Lipson and staff. Design and execution of a biomaterial research project for undergraduate or therapeutic strategy. Team projects are encouraged.

BME 5930 Independent Design Project  
Fall and spring. Variable credit. Prereq: graduate standing. D. Lipson and staff. Graduate-level nontechnical research or studies on special projects in biomedical engineering.

BME 6180 Principles of Medical Imaging (also VTMED 6180)  
Fall. 1–3 credits. Prereqs: Introductory Physics, calculus, Fourier transforms, and calculus-based physics. Y. Wang and N. Dykes. One-credit version requires attendance the first five weeks of lectures on nonmathematical description of imaging principles and field trips to Cornell University Hospital for Animals (CUHA) to see imaging in clinical practice. Three-credit version requires attendance for the entire semester. The latter part of the lectures focus on mathematical description of imaging principles. The fundamental principles of spatial encoding and image contrast are presented for all major medical imaging modalities: x-ray, CT, MR, SPECT/PET, US. The inverse problem between detected signal and image source will be discussed and the concepts of image resolution, SNR, and scan time will be illustrated analytically and quantitatively for all modalities.

BME 6260 Biomedical Optics, Imaging, and Spectroscopy  
Spring. 3 credits. Prereqs: introductory physics, calculus, and biology. W. R. Zipfel. Fundamentals of optical systems design, application, and analysis of concepts used in biological imaging and biomedical optics. The course covers the theory and application of light sources, lenses, mirrors, fiber optics, detectors, and tissue optics; optical systems analysis concepts such as resolution, optical transfer functions, detection, and interference; all in relation to biomedical microscopy, spectroscopy, and bioanalytical techniques.

BME 6310 Engineering Principles for Drug Delivery (also CHEM 6310)  
Fall. 3 credits. Prereqs: graduate standing and background in organic and polymer chemistry or permission of instructor. D. A. Putnam. Application of engineering design principles to problems in drug formulation and delivery. Specific topics include traditional drug formulation, mechanisms and kinetics of pharmaceutical stability. Stimuli-sensitive systems, controlled-release devices, prodrugs, targeted drug delivery, biomaterials, gene therapy, and governmental regulatory issues.

BME 6410 Biomedical Engineering Analysis of Proteins for Medicine  
Spring. 3 credits. Prereqs: graduate standing and background in biology and chemistry. M. Jin. Protein engineering principles applied to developing molecules for biotechnologies and biophysical studies. Course topics include general overview on biochemistry, molecular understanding of proteins in cell signaling, physiology, and pathophysiology, and reviews on modern instrumentalations for biophysical studies of proteins. Includes hands-on experience with computers and algorithms for structure inspection and rational design of proteins for medicine.

BME 6501 Natural Engineering: Developmental Biology Paradigms for Regenerative Medicine  
Spring. 1–3 credits. Prereq: graduate student standing. J. T. Butcher. The course will be in two modules. The first module, a 1-credit course, will cover the embryonic development and fetal maturation of several major organ systems, including lung, heart, vascular, and bone from an engineer’s perspective (evolutionary conservation, major signaling pathways involved, etc). The second module, a 2-credit course, will build upon the first module by highlighting engineering approaches to study developmental biology (systems biology, mechanical testing, micro-environmental control, genetic manipulation, tissue engineering, etc.). We will identify relationships between developmental biology and postnatal disease, as well as explore developmental biology-based approaches for regenerative medicine (directed stem cell differentiation, mechanical conditioning, matrix based differentiation, etc.). Material will be drawn largely from primary literature. Students will have regular manuscript reviews,
two midterms, and a final project analyzing the natural engineering of a different organ system.

**BME 6640 Mechanics of Bone (also MAE 6640)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years. For description, see MAE 6640.

**BME 6650 Principles of Tissue Engineering (also MAE/MSOE 6650)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Offered alternate years; next offered 2010–2011. L. Bonassar.
Covers introductory concepts in tissue engineering, including polymeric materials used for scaffolds, mechanisms of cell-biomaterial interaction, biocompatibility and foreign body response, cell engineering, and tissue biomechanics. This knowledge is applied to engineering of several body systems, including the musculoskeletal system, cardiovascular tissues, the nervous system, and artificial organs. These topics are discussed in the context of scale-up, manufacturing, and regulatory issues.

**BME 6670 Nanobiotechnology (also AEP/ BIOG 6630, MSE 5630)**
Spring. 3 credits. Letter grades only. M. L. Shuler.
Upper-level undergraduate and graduate-level course that covers the basics of biology and the principles and practice of microfabrication techniques. Course lectures are largely from guest faculty with expertise in the presented topic areas. The course focuses on applications in biomedical and biological research. A team design project that stresses interdisciplinary communication and problem solving is one of the course requirements. The course meets twice weekly with 75-minute classes. All lectures may be teleconferenced to NBTC associate institutes.

**BME 7030 Graduate Student Teaching Experience**
Fall, spring. Variable credit. S–U or letter grades. Staff.
Guided individual experience in laboratory instruction and/or lectures/recitation instruction. Provides a preparatory teaching experience for graduate students considering an academic career.

**BME 7110 Fundamentals of Biomedical Engineering Research I**
Fall. 3 credits. Prerequisite: BME M.S./Ph.D. graduate students. W. R. Zipfel and staff.
First part of a two-semester sequence that introduces students to a variety of subjects in biomedical engineering including nanobiotechnology, biomechanics, systems and computational biology, biomaterials, tissue engineering, statistics, and experimental design. The course also covers associated subjects including professional development, ethics, writing a scientific paper, authorship issues, patents, technology transfer, conflicts of interest, and preparing a research proposal. The course is a combination of lectures and discussions, with students taking an active role in the instruction.

**BME 7120 Fundamentals of Biomedical Engineering Research II**
Spring. 3 credits. Prerequisite: BME 7110 or permission of instructor. W. L. Olbricht and staff.
Continuation of BME 7110.

**BME 7160 Immersion Experience in Medical Research and Clinical Practice**
Fall. 6 credits. Prerequisite: Ph.D. students in BME. L. J. Bonassar and Y. Wang. Seven-week immersion at Weill Medical College. Students participate in lectures, rounds, and seminars; observe surgeries; and solve medical problems presented by the staff.

**BME 7310 Advanced Biomedical Engineering Analysis of Biological Systems**
Fall. 3 credits. Prerequisite: graduate standing; priority given to M.S./Ph.D. and M.Eng. students majoring in BME. P. C. Doerschuk.
Covers the fundamentals of quantitative analysis of biological systems. Illustrates analytical methods applicable to a variety of biological systems, ranging from molecular to cellular to organ to application of whole-body systems.

**BME 7600 Nucleic Acid Engineering (also BEE 7600)**
Spring. 2 credits. Prerequisite: graduate standing. BEE 3600 or permission of instructor. D. Luo.
For description, see BEE 7600.

**BME 7900 Biomedical Engineering Seminar**
Fall, spring. 1 credit. Prerequisite: graduate standing. M. L. Shuler.
Research-based seminars. May meet with other seminar series as appropriate.

**BME 8600 Doctoral Research Rotations in Biomedical Engineering**
Fall. 1 credit. Restricted to first-year Ph.D. students. Staff.
This course provides a mechanism for granting course credit for optional research rotations of four to eight weeks in duration self-arranged by first-year Ph.D. students.

**BME 8999 M.S. Thesis Research**
Fall. 3 credits. Variable credit. Staff.
Thesis research for the M.S. degree in BME.

**BME 9999 Ph.D. Thesis Research**
Fall. 3 credits. Variable credit. Staff.
Thesis research for the Ph.D. degree in BME.

**CHEMICAL AND BIOMOLECULAR ENGINEERING**

**CHEM 2880 Biomolecular Engineering: Fundamentals and Applications**
Fall. 3 credits. Prerequisite: physical chemistry II. T. Hanrath.
An introduction to modern biology including aspects of biotechnology and molecular and cellular biology intended for students with no significant background in this area. An emphasis on practical applications of this knowledge in a variety of settings including the production of industrial enzymes, pharmaceuticals, and biologics.

**CHEM 3230 Fluid Mechanics**
Spring. 3 credits. Prerequisites: CHEM 2190 and MATH 2930. L. A. Archer.

**CHEM 3240 Heat and Mass Transfer**
Fall. 3 credits. Prerequisite: CHEM 3230. Staff.

**CHEM 3320 Analysis of Separation Processes**
Spring. 3 credits. Prerequisites: CHEM 3130 and 3240. A. B. Anton.
Covers the analysis of separation processes involving phase equilibria and mass transfer. Topics include phase equilibria; equilibrium-based separations; rate-based separation processes (membrane separations, sorption operations); introduction to bioseparations and process simulators; choosing a separation option; and the design and synthesis of separation processes.

**CHEM 3720 Introduction to Process Dynamics and Control**
Spring. 2 credits. Prerequisites: CHEM 3130 and 3240. J. T. Hanrath.
Modeling and analysis of the dynamics of chemical processes, Laplace transforms, block diagrams, feedback control systems, and stability analysis.

**CHEM 3900 Chemical Kinetics and Reactor Design**
Spring. 3 credits. Prerequisites: CHEM 3130 and 3240. T. M. Duncan.
Study of chemical reaction kinetics and principles of reactor design for chemical processes.
CHEME 4010 Molecular Principles of Biomedical Engineering (also BME 3010)
Fall. 3 credits. Prerequisite: BLOG 1110 or BIOMB 3300. M. Jin.
For description, see BME 3010.

CHEME 4020 Cellular Principles of Biomedical Engineering (also BME 3020)
Spring. 3 credits. Staff.
For description, see BME 3020.

CHEME 4130 Introduction to Nuclear Science and Engineering (also AEP/ ECE/MAE/NSSE/TAM 4130)
Spring. 3 credits. B. Eady.
For description, see TAM 4130.

CHEME 4320 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEME 3230, 3240, and 3900. A. M. Center and staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, separations, other operations. Correlation and interpretation of data. Technical report writing.

CHEME 4620 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEME 4520. A. M. Center and staff.
Students prepare a full-scale feasibility study of a chemical process including product supply and demand forecasts, process design including reaction system design, separations scheme development, heat integration via application of pinch technology, and economic analysis of the process. Students develop presentation and teamwork skills through weekly presentations.

CHEME 4700 Process Control Strategies
Spring. 3 credits. A. M. Center.
Introduction to how control concepts are represented, control valve sizing and selection, process control strategies, dynamic response of process systems as it relates to control loop tuning, statistical process control, advanced process control methods both for chemical and biological processes and programmable logic controllers and distributed control systems.

CHEME 4720 Feedback Control Systems (also ECE 4720, MAE 4780)
Fall. 4 credits. Prerequisites: CHEME 3720, ECE 2200, MAE 3260, or permission of instructor. M. Campbell.
For description, see MAE 4780.

CHEME 4800 Chemical Processing of Electronic Materials
CHEME 4810 Biomedical Engineering (also BME 4810)
Spring. 3 credits. Prerequisite: CHEME 3240 or equivalent or permission of instructor. W. L. Olbricht.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices and artificial organs, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, tissue engineering, and analysis of physiological processes such as adhesion, mobility, secretion, signaling, and growth.

CHEME 4840 Microchemical and Microfluidic Systems
Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. J. R. Engstrom.
Principles of chemical kinetics, thermodynamics, and transport phenomena applied to microchemical and microfluidic systems. Applications in distributed chemical production, portable power, micromixing, separations, and chemical and biological sensing and analysis. Fabrication approaches (contrasted with microelectronics), transport phenomena at small dimensions, modeling challenges, system integration, case studies.

CHEME 4900 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or study on special problems in chemical engineering.

CHEME 4980 Design and Testing of the Chemical Engineering Car
Fall, spring. 3–4 variable credits; 3 credits for team members or 4 for officers. Prerequisites: ENGRD 2190 and CHEM 2090. J. D. Varner.
Research, design, and construct a small chemical-powered model car. Participate in team-oriented hands-on construction of a car powered with a chemical energy source that will carry a specified load over a given distance and stop. The AiChem Student Chapter enters it in the AIChE Regional Conference to qualify and compete in the organization's national conference competition.

CHEME 4990 Senior Seminar
Fall, spring. 1 credit. Prerequisite: CHEME seniors. Staff.
Students attend seminars of their selection and write one-page summaries. Eligible seminars include all listings at "Colloquia and Seminars in Physics and Related Fields," which includes the weekly seminars in, for example, Chemical and Biomedical Engineering, Chemistry and Biological Chemistry, Earth and Atmospheric Sciences, History and Ethics of Engineering, and Materials Science and Engineering.

CHEME 5200 An Overview of Chemical Processing (module)
Fall, spring. 1–6 credits; 1 credit per sec. Fall, first third of semester. 1 credit. Prerequisite: Chemical Engineering seniors and M.Eng. A. M. Center and Staff.
Introduces the hardware used in chemical engineering processes and a discussion of how these mechanical devices are configured to meet their process objectives. Also includes an introduction to the evaluation techniques and trouble-shooting methods frequently used by chemical engineers.

CHEME 5207 Introduction to Petroleum Refining (module)
Fall, second third of semester. 1 credit. A. M. Center.
Covers the petroleum refining industry including crude oil evaluation, fuel quality, refining processes, refinery configurations, and refinery economics.

CHEME 5208 Renewable Resources from Agriculture-Sugarcane as a Feedstock (module)
Spring, last third of semester. 1 credit. Next offered 2010–2011.
Maximizing the value of a renewable resource by control of inputs and final product use.

CHEME 5430 Biomedical Engineering of Bioprocesses
Fall. 3 credits. Prerequisite: CHEME 3900 or permission of instructor. No prior background in biological sciences required.
M. P. DeLisa.
Discusses principles involved in using biomolecules (e.g., antibodies, enzymes, DNA) and living organisms (e.g., bacteria, yeast, tissue cultures) for engineering biological processes. Primary emphasis is on development and production of biopharmaceuticals, but biological waste treatment and medical systems are also considered.

CHEME 5640 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEME 3900 or equivalent. D. L. Koch.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and non-ideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 5650 Design Project
Fall, spring. 3 or 6 credits. Requirement for Chemical Engineering M.Eng. students. Staff.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 5720 Managing New Business Development
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. Staff.
Case study approach introducing the typical fundamental factors driving a business venture, examines how to develop implementation strategies for the venture, and teaches the project management skills necessary to successfully implement the venture.

CHEME 5870 Energy Seminar I (also MAE 5450, ECE 5870)
Fall. 1 credit. D. Hammer and A. J. Hunter.
For description, see ECE 5870.
CHEME 5880 Energy Seminar II (also MAE 5460, ECE 5880)
Fall. 1 credit. D. Hammer and A. J. Hunter. For description, see ECE 5880.

CHEME 5999 Special Projects in Chemical Engineering
Fall. spring. Variable credit. Prerequisite: graduate standing or permission of instructor. Nonthesis research or studies on special problems in chemical engineering.

CHEME 6240 Physics of Micro- and Nanoscale Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: undergraduate fluid or continuum mechanics (e.g., MAE 3230, CHEME 3230, AEP 4340) or permission of instructor. B. L. Kirby. For description, see MAE 5240.

CHEME 6310 Engineering Principles for Drug Delivery (also BME 6310)
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. D. A. Putnam. For description, see BME 6310.

CHEME 6400 Polymeric Materials
Fall. 3 credits. C. Cohen. Covers chemistry and physics of the formation and characterization of polymers; principles of fabrication.

CHEME 6440 Aerosols and Colloids
Fall. 3 credits. D. L. Koch. Dynamics of macro- and nano-particles, which contain many molecules but are small enough that molecular effects are important. Topics include the formation and growth of particles; their transport, theological and phase behaviors, and their role in technologies including paints, foods, health-care products, drug delivery, composite materials, and air pollution control.

CHEME 6610 Air Pollution Control

CHEME 6640 Energy Economics
Fall. 3 credits. A. J. Hunter. Supply and demand for energy by sectors and regions. Operating systems and costs. Economic drivers used in simulating energy systems and consumption factors. Supply/demand projections. Interplay between energy, environment, politics, economics, and sustainability.

CHEME 6650 Energy Engineering
Spring. 3 credits. A. J. Hunter. Applying thermodynamic concepts to large energy systems. Future energy scenarios. Project teams tasked with simulating complex energy systems and cost-benefit analysis.

CHEME 7110 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 3900–3900 or CHEMEN 3310 or equivalent. F. A. Escobedo. Molecular thermodynamics of gases, lattices, and liquids, including special applications to problems in chemical engineering.

CHEME 7130 Chemical Kinetics and Transport
Spring. 5 credits. Prerequisite: CHEME 3900 or equivalent. S. Daniel and staff. Topics include microscopic and macroscopic viewpoints; connections between phenomenological chemical kinetics and molecular reaction dynamics; reaction cross sections, potential energy surfaces, and dynamics of biomolecular collisions; molecular beam scattering; transition state theory. Unimolecular reaction dynamics; complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcations; reactions in heterogeneous media; and free-radical mechanisms in combustion and pyrolysis.

CHEME 7310 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 3200–3240 or equivalent. D. L. Koch. Topics include derivation of conservation equations; conductive heat transfer; low Reynolds number fluid dynamics; lubrication theory; inviscid fluid dynamics; boundary layer theory; forced convection; and introduction to non-Newtonian fluid mechanics (polymeric liquids and suspensions), microfluidics, stability analysis, and turbulent flow.

CHEME 7410 Selected Topics in Biochemical Engineering
Fall. spring. 1 credit; may be repeated for credit. Prerequisite: permission of instructor. D. A. Putnam and M. P. DeLisa. Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 7450 Physical Polymer Science I
Fall. 3 credits. Corequisite: CHEME 7110 or equivalent. Offered alternate years. L. A. Archer. Thermodynamic properties of solutions from both classical and scaling approaches; characterization techniques of dilute solutions. Rubber elasticity; mechanical and thermodynamic properties of gels, polymer melts.

CHEME 7510 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. Y. L. Joo. Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations; multiple scales; asymptotic analysis; linear and nonlinear ordinary and partial differential equations, statistics, data analysis, and curve fitting.

CHEME 7530 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEME 7510 or equivalent. Offered alternate years; next offered 2010–2011. P. H. Steen. Topics include elements of stability and bifurcation theory; branch-following techniques; stability of discrete and continuous systems; and application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems (AUTO).

CEE 1130 Sustainable Design for Appledore Island (also ENGR 1130)
Spring. 3 credits. Students must register under ENGR 1130. J. J. Bisogni.
Course in Introduction to Engineering series. For description, see ENGR 1130.

CEE 1160 Modern Structures (also ENGR 1160)
Fall. 3 credits. Students must register under ENGR 1160. A. Ingraffea.
Course in Introduction to Engineering series. For description, see ENGR 1160.

CEE 2550 AguaClara: Sustainable Water Supply Project
For description, see CEE 4550.

CEE 3040 Uncertainty Analysis in Engineering
Fall. 4 credits. Prerequisite: first-year calculus. J. R. Stedinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, biological, and related disciplines. Covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, pollutant emissions, and waste containment systems.

CEE 3200 Transportation, Energy, and the Environment System for Sustainable Development (f, s, 3)
CEE 3220 Engineering Economics and Management (also ENGRG 3220)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. F. Vanek.
For description, see ENGRG 3220.

CEE 3310 Fluid Mechanics
Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite or corequisite: ENGRG 3220. E. A. Cowen.
Covers hydrostatics, the basic equations of incompressible fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, laminar and turbulence boundary layer, flows around obstacles, and open-channel flow. Includes small-group laboratory assignments.

CCE 3320 Hydraulic Engineering
Spring. 4 credits. Prerequisite: CEE 3310.
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, open-channels, and river engineering. Lectures supplemented by laboratory work and a design project.

CEE 3410 Introduction to Geotechnical Engineering
Fall. 4 credits. Prerequisites: ENGRD 2020 or permission of instructor. Letter grades only. H. E. Stewart.
Primarily for juniors and seniors. F. Vanek.
Fundamentals of geotechnical engineering. Topics include soils, conventional soil mechanics, soil mechanics for geotechnical engineering, soil mechanics for geotechnical engineering, and soil mechanics for geotechnical engineering.

CEE 3510 Environmental Quality Engineering
Spring. 3 credits. Staff.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to the design of unit processes for wastewater treatment.

CEE 3610 Introduction to Transportation Engineering
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. M. A. Turnquist.
Introduces the fundamental principles of transportation engineering. Emphasizes design and functioning of transportation systems and...
their components. Covers supply-demand interactions; system planning, design, and management; traffic flow, intersection control and network analysis; institutional and energy issues; and environmental impacts.

CEE 3710 Structural Modeling and Behavior
Spring. 4 credits. Prerequisite: ENGRD 2020. Corequisite: MATH 2940. A. Ingraffea. Introduction to the structural engineering enterprise including aspects of design, loads, behavior, form, modeling, mechanics, materials, analysis, and construction/manufacturing. Case studies involve different scales and various materials. Topics include analytical and finite-element computational modeling of structural systems, including cables, arches, trusses, beams, frames, and 2-D continua; deflections, strains, and stresses of structural members, systems, and 2-D continua by analytical and work/energy methods, with a focus on linear elastic behavior; the foundations of matrix structural analysis; and the application of finite-element software.

CEE 3720 Intermediate Solid Mechanics
Fall. 4 credits. Prerequisites: MATH 2940, CEE 3710. D. Warner. The course presents concepts related to inelastic and nonlinear behavior of engineering materials and structures, the concept of continuum, limit and plastic analysis, and fracture. The course will be a synergy of mathematical modeling, computer simulations, and physical experimentation.

CEE 4000 Senior Honors Thesis
Fall, spring. 1–6 credits. For students admitted to CEE Honors Program. D. Warner. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 4010 Undergraduate Engineering Teaching in CEE
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 4060 Civil Infrastructure Systems
Spring. 3 credits. Prerequisites: probability and statistics (CEE 3040 or equivalent) or permission of instructor. Recommended: engineering economics (CEE 3230 or equivalent) course. S–U or letter grades. T. D. O’Rourke. Introduction to the framing and solution of civil infrastructure problems using a systems approach. Systems tools, such as optimization, life-cycle cost analysis, decision analysis, simulation, and risk analysis are examined through case studies related to civil infrastructure.

CEE 4110 Environmental Information Science (also CSS 4110)
Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria and S. B. Hoskins. For description, see CSS 4110.

CEE 4320 Hydrology
Spring. 3 credits. Prerequisite: CEE 3310. Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 6320.

CEE 4350 Coastal Engineering
Spring. 4 credits. Prerequisite: CEE 3310. Taught based on demand; contact professor if interested in course. P. L.-F. Liu. Covers the following topics: review of hydrodynamics; small-amplitude wave theory; wave statistics and pre-structure interactions; coastal processes.

CEE 4360 Case Studies in Environmental Fluid Mechanics
Spring. 4 credits. Prerequisite: CEE 3310 or equivalent. Next offered 2010–2011. E. A. Cowen. An introduction to fundamental fluid mechanics and transport processes of the environment through laboratory—and field—based studies (Cayuga Lake and Fall, Six-Mile, and Cascadilla Creeks) and case studies. Topics include surface and internal wave dynamics, sediment and nutrient/contaminant transport, and interfacial transfer. Lectures are based on a laboratory/field project. Course includes a design project.

CEE 4370 Experimental Methods in Fluid Dynamics
Spring. 3 credits. Pre- or corequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen. Same as CEE 6370 but no project required. For description, see CEE 6370.

CEE 4400 Foundation Engineering
Spring. 3 credits. Prerequisite: CEE 3410. F. H. Kulhawy. Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

CEE 4410 Retaining Structures and Slopes
Fall. 3 credits. Prerequisite: CEE 3410. T. D. O’Rourke. Covers earth pressure theories; design of rigid, flexible, braced, tied-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of course material under field conditions of engineering practice.

CEE 4440 Environmental Site and Remediation Engineering
Spring. 3 credits. Prerequisite: CEE 3410. Next offered 2011–2012. T. D. O’Rourke. Covers the principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 4510 Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisites: two semesters of college chemistry; organic chemistry or permission of instructor. Next offered 2010–2011. B. E. Richardson. Introduction to the fundamental aspects of microbiology and biochemistry that are pertinent to environmental engineering and science. Provides an overview of the characteristics of Bacteria, Archaea, unicellular Eukaryotes (protozoa, algae, fungi), and viruses. Includes discussions of cell structure, bioenergetics and metabolism, and microbial genetics. Focus is then applied to topics pertinent to environmental engineering: pathogens; disease and immunity; environmental influences on microorganisms; roles of microbes in the carbon, nitrogen, and sulfur cycles; enzymes; bioremediation, bioenergy, molecular microbiology; and microbial ecology. This is an introductory course and is inappropriate for those who have taken BIOMI 2000 or equivalent.]

CEE 4520 Water Supply Engineering

CEE 4530 Laboratory Research in Environmental Engineering
Fall. 3 credits. Prerequisites: CEE 3510 or permission of instructor. Staff. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment and remediation; and wastewater treatment. Design of laboratory experiments, data analysis, computerized process control, and model development are emphasized.

CEE 4540 Sustainable Small-Scale Water Supplies
Fall. 3 credits. M. L. Weber-Shirk. This course covers the design and analysis of small-scale drinking water supply systems. We explore the technical, economic, and social constraints that form the sustainable space—i.e., the set of viable technologies that could be adopted progressively to improve the availability and quality of water. Students work in teams to design water supply and treatment systems.

CEE 4550 AguaClara: Sustainable Water Supply Project
Fall, spring. 3 credits. Pre- or corequisite: CEE 4540 or CEE 3310 or permission of instructor. Meets with CEE 2550. M. L. Weber-Shirk. Student teams conduct research, build working models, design full-scale prototypes, create design algorithms, and create educational materials for technology transfer to improve drinking water quality in Honduras. For more information see aguaclara.cee.cornell.edu.

CEE 4610 Urban Transportation Planning and Modeling
CEE 4630 Future Transportation Technologies and Systems
Fall. 3 credits. F. Vanek. Improving the use of existing facilities and transportation infrastructure has become an important objective in transportation engineering and planning. Examines the role of information technologies for effective infrastructure utilization and planning. Focuses specific attention on analytical paradigms to evaluate the benefits of information technologies in transportation systems.

CEE 4640 Transportation Systems Design
Spring. 3 credits. Prerequisites: CEE 3610 and CEE 4000 or permission of instructor. M. A. Turnquist.
Analysis of capacity and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including congestion pricing. Facility location decisions, networks, and investment strategies.

CEE 4650 Transportation, Energy, and Environment Systems for Sustainable Development  
Spring. 3 credits. Prerequisites: CEE 4160 or permission of instructor. H. O. Gao.  
For description, see CEE 6650.

CEE 4710 Fundamentals of Structural Mechanics  
Fall. 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.  
Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 4720 Introduction to the Finite Element Method  
Fall. 3 credits. Prerequisites: CEE 3710, 3770, and 4710. P. Koutsourelakis.  
Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and programming aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 4730 Design of Concrete Structures  
Fall. 4 credits. K. C. Hover.  
Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast prestressed concrete floors. The masonry walls are then replaced with steel beams and columns. In the next phase the precast concrete is replaced with cast-in-place reinforced concrete. Finally, the structural steel elements will be replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads, and the behavior of individual members and the structure as a whole.

CEE 4740 Introduction to the Behavior of Metal Structures  
Spring. 4 credits. Prerequisite ENGRD 2020 or permission of instructor. C. Earls.  
An introductory course focused on the use of solid and structural mechanics to quantify elementary behavior of metal structures in order to enable design. The course is project focused, with the students preparing a complete and detailed design deliverable. The course will consider applications from civil structures, naval architecture, and aerospace engineering.

CEE 4750 Concrete Materials and Construction  
Spring. 3 credits. K. C. Hover.  
Cover the material science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 4760 Evaluation and Failure of Structures  
Spring. 3 credits. Prerequisites: ENGRD 2020, 2610, and 3790. CEE 3710 and 4730. Next offered 2011–2012 Staff.  
This course teaches material and structural evaluation through the lens of failure. The course builds upon and integrates what students have learned in courses in physics, mechanics, dynamics, materials science, structural modeling/analysis, and design. In addition, the course teaches the physics of methods used for condition assessment of structures (e.g., strain wave propagation, electromagnetic wave propagation, heat flow), introduces students to structural damage and assessment of damage caused by earthquake/ wind loads on structures, and introduces students to blast/impact loadings on structures and the concept of progressive collapse.

CEE 4770 Introduction to Composite Materials (also MAE/TAM 4550, MSE 5550)  
Fall. 3 credits. P. Petrina.  
For description, see TAM 4550.

CEE 4780 Structural Dynamics and Earthquake Engineering  
Spring. 3 credits. Enrollment limited to juniors and seniors. M. D. Grigoriu.  
Covers modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 4810 LRFD-Based Engineering of Wood Structures (also BEE 4791)  
Spring. 3 credits. Prerequisite: ENGRD 2020. K. Gebremedhin.  
For description, see BEE 4810 under “College of Agriculture and Life Sciences.”

CEE 4920 Engineers for a Sustainable World: Engineering in International Development  
Fall. 5 credits. Prerequisite: senior or graduate standing; juniors need permission of instructor. F. Vanek and P. Doing.  
Engineering-based group service projects offer real-life engineering research and design experience, from problem formulation through implementation. They may be international or local and may relate to any kind of engineering. Students work on interdisciplinary teams with a project supervisor and a partner community organization. Course readings and a writing assignment cover the relationship between engineering and international development, the philosophy and politics of technology, and ethics in engineering practice.

CEE 5021–5022 Design Project  
Fall, spring. 4 credits each semester. Requirement for students in M.Eng. (civil and environmental) program. Staff.  
CEE design projects present students with an exemplary design experience that reflects those carried out in the course of professional practice. Projects are typically performed by student design groups, and the topics reflect the diverse specialty areas of the civil and environmental engineering field as described below.

CEE 5041–5042 Project in Geotechnical Engineering  
F. H. Kulhawy.  
Design of major geotechnical engineering projects. Planning and preliminary design during fall semester; final design completed in January intersession.

CEE 5051–5052 Agua Clara: Sustainable Water Supply Project  
M. Weber-Shirk.  
For more information, see aguaclara.cee.cornell.edu.

CEE 5061–5062 Project in Transportation Engineering  
Systems analysis of a substantial transportation service.

CEE 5071–5072 Project in Structural Engineering  
C. Earls.  
A project-centered course focusing on the design of a major engineering structure. Planning and a preliminary design are completed during the fall semester; the comprehensive final design is completed in the January intersession.

CEE 5073–5074 Project in Civil Engineering Materials  
Staff.

CEE 5081–5082 Project in Civil Infrastructure Systems  
Staff.  
Analysis of a problem in civil infrastructure.

CEE 5240 Applied Systems Engineering (also CIS 5040, ECE/ORIE 5120, MAE 5910, SYSEN 5200)  
Fall. 3 credits. Prerequisite: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor. A. R. George and R. Roundy.  
For description, see SYSEN 5100.

CEE 5252 System Architecture, Behavior, and Optimization (also CIS 5050, ECE 5130, ORIE 5142, MAE 5920, SYSEN 5200)  
Spring. 3 credits. Prerequisite: CEE 5240/CS 5040, ECE/ORIE 5120, MAE 5910, or SYSEN 5200. Staff.  
For description, see SYSEN 5200.

CEE 5290 Heuristic Methods for Optimization (also CS 5722, ORIE 5340)  
Fall. 3 or 4 credits. Prerequisites: graduate standing or CS, ENGRD 2110 or 3510; ENGRD 3200 or permission of instructor. C. A. Shoemaker.  
Teaches heuristic search methods including simulated annealing, tabu search, genetic algorithms, derandomized evolution strategy, and random walk developed for optimization of combinatorial- and continuous-variable problems. Application project options include wireless networks, protein folding, job shop scheduling, partial differential equations, satisfiability, or independent projects. Statistical methods are presented for comparing algorithm results. Advantages and disadvantages of heuristic search methods for...
both serial and parallel computation are discussed in comparison with other optimization algorithms.

**CxEE 5900 Project Management**  
Fall, spring. 4 credits. Prerequisite: permission of instructor. F. J. Wayno.  
Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the “technical” tools of project management (e.g., methods for planning, scheduling, and control) and the “human” side (e.g., forming a project team, managing performance, resolving costs), with somewhat greater emphasis on the latter.

**CxEE 5910 Engineering Management Project**  
Fall. 4 credits. Prerequisite: permission of instructor. Staff.  
Intensive evaluation of the management aspects of a major engineering project or system. Most students work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

**CxEE 5920 Engineering Management Project**  
Spring. 4 credits. Prerequisite: permission of instructor. Staff.  
Continuation of CxEE 5910.

**CxEE 5930 Engineering Management Methods**  
Spring. 4 credits. Prerequisites: CxEE 3230 and 3040 or equivalent. M. A. Tumerst. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in operations, forecasting, and resource allocation.

**CxEE 5940 Economic Methods for Engineering and Management (also ECON 4940)**

**CxEE 5950 Construction Planning and Operations**  
Fall. 5 credits. P. G. Carr.  
The course prepares students for responsibilities in overseeing the engineering and management of construction; on time—on budget. Emphasis is placed on the management processes for organizing, planning, and controlling the activities of complex development and construction programs. Students study the contracts for engineering, architecture, and construction; focusing on cost, time, estimation and schedule control, responsibilities and risks, and the relationships among owners, designers, contractors, and suppliers. The potential for project disruption is discussed with special emphasis on dispute resolution methods.

**CxEE 5960 Management Issues in Forensic Engineering**  
Introduction to management issues in forensic engineering, contract administration, and dispute resolution, with particular emphasis on contract formation, performance, breach, and remedies. Through case studies in forensics, the engineer’s standard of care and design obligations are explored. The engineer’s technical and ethical duties to the client, the contractors, and the public are examined.

**CxEE 5970 Risk Analysis and Management (also TOX 5970)**  
Spring. 3 credits. Prerequisite: introduction to probability and statistics (e.g., CxEE 3040, ENGRD 2700, IRST 2100, BTRY 3010, or AEM 2100); two semesters of calculus; senior or graduate standing or permission of instructor. J. R. Stedinger.  
Develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze safety, environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the United States historical accidents, natural hazards, threat assessment, transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

**CxEE 5980 Intro to Decision Analysis**  
Fall. 3 credits. Prerequisite: introduction to probability and statistics course such as CxEE 3040, ENGRD 2700, IRST 2100, BTRY 3010, or AEM 2100; seniors and graduate students or permission of instructor. Next offered 2011–2012. L. K. Nozick.  
Framework to structure the way we think about decision situations that are complicated by uncertainty, complexity, and competing objectives. Specific decision-analysis concepts and tools, such as decision trees, sensitivity analysis, value of information, and utility theory. Applications to all areas of engineering and life. Includes a group project to analyze a real-world decision.

**CxEE 6000 Numerical Methods for Engineers**

**CxEE 6015 Special Topics—Remote Sensing**  
On demand. 1–6 credits. W. D. Philpot.  
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

**CxEE 6020 Environmental Seminar**  
Fall. 1 credit. Staff.  
Presents topics of current interest.

**CxEE 6021 Seminar—Environmental and Water Resources Systems Analysis**  
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Schenkar and J. R. Stedinger.  
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

**CxEE 6025 Special Topics in Environmental and Water Resources Systems Analysis**  
Offered on demand. 1–6 credits. Staff.  
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

**CxEE 6030 Seminar—Environmental Fluid Mechanics/Hydraulics**  
Spring. 1 credit. For graduate students majoring in hydraulics or hydraulic engineering. Open to undergraduates and graduates. P. J. Diemass.  
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

**CxEE 6035 Special Topics in Hydraulics**  
On demand. 1–6 credits. Staff.  
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

**CxEE 6045 Special Topics in Geotechnical Engineering**  
On demand. 1–6 credits. Staff.  
Supervised study of special topics not covered in the formal courses.

**CxEE 6051 Seminar—Environmental Quality Engineering**  
Spring. 1 credit. Prerequisite: graduate students in environmental engineering. J. M. Gossett.  
Presentation and discussion of current research in environmental engineering.

**CxEE 6055 Special Topics in Environmental Engineering**  
On demand. 1–6 credits. Staff.  
Supervised study in special topics not covered in formal courses.

**CxEE 6060 Seminar—Transportation System Engineering**  
Fall, spring. 1 credit. Staff.  
Presents topics of current interest.

**CxEE 6065 Special Topics in Transportation**  
On demand. 1–6 credits. Staff.  
Advanced subject matter not covered in depth in other regular courses.

**CxEE 6070 Seminar—Civil Infrastructure**  
Fall, spring. 1 credit. Requirement for first-year graduate students. P. Koutsourelakis.  
Presents topics of current interest.

**CxEE 6075 Special Topics in Structural Engineering**  
On demand. 1–6 credits. Staff.  
Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

**CxEE 6090 Seminar—Engineering Systems and Management**  
Fall, spring. 1 credit. Staff.  
Presents topics of current interest.

**CxEE 6095 Special Topics in Engineering Management**  
On demand. 1–6 credits. Staff.  
Individually supervised study of one or more specialized topics not covered in regular courses.

**CxEE 6100 Remote Sensing Fundamentals**  
(also CSS 6100)  
Fall. 3 credits. W. D. Philpot.  
Introduction to the principles, equipment, and methods used in obtaining information about earth resources and the environment from aircraft or satellite sensors. Topics include basic interactions of electromagnetic radiation with the earth, sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design in the form of a proposal to use remote sensing for a specific application.

**CxEE 6150 Digital Image Processing**  
Spring. 3 credits. W. D. Philpot.  
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification, with an introduction to
hyperspectral data analysis. Assignments require the use of image-processing software and graphics.

Development and application of deterministic and stochastic optimization and simulation models for aiding in water-resources planning and management. Covers river-basin modeling, including water allocation to multiple purposes, reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, ecological habitat restoration, and water-quality prediction and control.

[CIVE 6210 Stochastic Hydrology] Spring. 3 credits. Prerequisites: CEE 3040 or permission of instructor. Offered on demand. J. R. Steinger.

Course examines statistical, time series, and stochastic optimization methods used to address water resources and management problems involving uncertainty objectives and hydrologic inputs. Statistical issues include maximum likelihood and moments estimators; censored data sets and historical information; probability plotting; Bayesian inference; regionalization methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and stochastic reservoir-operator optimization models.

[CIVE 6230 Environmental Quality Systems Engineering] Fall. 3 credits. Prerequisites: MATH 2940, optimization, and graduate standing or permission of instructor. Next offered 2012–2013. C. A. Shoemaker.

Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include regional waste and wastewater treatment, remediation of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

[CIVE 6300 Spectral Methods for Incompressible Fluid Flows] Fall. 4 credits. P. J. Diakessis

An introduction to the fundamental building blocks of flow solvers for the simulation of incompressible flow processes in the natural environment. The course will focus on higher-order element-based discretization schemes (Fourier, spectral element, spectral collocation, discontinuous Galerkin, and penalty methods). Course themes are centered around linear advection-diffusion, nonlinearity effects, pressure projection methods, the role of stratification, and the design of robust boundary and initial conditions. All these elements are blended together to build a two-dimensional incompressible Navier-Stokes solver.

[CIVE 6310 Computational Simulation of Flow and Transport in the Environment] Spring. 3 credits. Prerequisites: MATH 2940 or equivalent, ENGRD 3200 or experience in numerical methods and programming, and elementary fluid mechanics. Staff.

Covers fundamental equations of saturated and unsaturated flow in porous media; flow in fractured media; numerical modeling of transport in porous media; diffusion and advective-diffusion in one, two, and three dimensions, anisotropy, and additional terms for reactive transport; and the selection of numerical methods including finite difference, finite elements, and boundary elements.

[CIVE 6320 Hydrology] Spring. 3 credits. Prerequisite: CEE 3310. W. H. Brutsaert.

Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers and scientists. Covers physical and statistical prediction methods for design related to hydrologic processes, hydrometeorology and evaporation; infiltration and base flow; surface runoff and channel routing; linear and nonlinear hydrologic systems; and storage routing and unit hydrograph methods.

[CIVE 6330 Flow in Porous Media and Groundwater] Fall. 3 credits. Prerequisite: CEE 3310. Offered on demand; please contact professor if interested. W. H. Brutsaert.

Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; and transient seepage in unsaturated materials.

[CIVE 6340 Boundary Layer Meteorology] Fall. 3 credits. Prerequisite: CEE 3310 or permission of instructor. Offered on demand; please contact professor if interested. W. H. Brutsaert.

Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

Reviews linear and nonlinear theories of ocean waves. Discusses the applicability of different wave theories to engineering problems.

[CIVE 6360 Environmental Fluid Mechanics] Spring. 3 credits. Offered on demand; please contact professor if interested. E. A. Cowen.

Covers analytic and modeling perspectives of environmental flows; mechanics of layered and continuously stratified fluids: internal waves, density currents, baroclinic motions, and turbulence; jets and plumes and their behavior in the environment; turbulent diffusion, shear flow dispersion, and wave-induced mixing processes; and applications to mixing processes in rivers, lakes, estuaries, and the coastal ocean.

[CIVE 6370 Experimental Methods in Fluid Dynamics (also MAE 6270)] Spring. 4 credits. Prerequisites: CEE 3310 or equivalent and CEE 3040 or equivalent. E. A. Cowen.

Introduction to experimental data collection and analysis, in particular as they pertain to fluid flows. Covers computer-based experimental control, analog and digital data acquisition, discrete sampling theory, digital signal processing, uncertainty analysis. Also covers analog transducers, acoustic and laser Doppler velocimetry, full-field (2-D) quantitative imaging techniques. Includes laboratory experiments and a project.

[CIVE 6400 Foundation Engineering] Spring. 3 credits. Prerequisite: CEE 3410. F. H. Kullaway.

Covers soil exploration, sampling, and in-situ testing techniques; bearing capacity, stress distribution, and settlement; design of shallow and deep foundations; compaction and site preparation; and seepage and dewatering of foundation excavations.

[CIVE 6410 Retaining Structures and Slopes] Fall. 3 credits. Prerequisite: CEE 3410. T. D. O'Rourke.

Covers Earth pressure theories; design of rigid, flexible, braced, tie-back, slurry wall, soil nailing, and reinforced soil structures; stability of excavation, cut, and natural slopes; and design problems stressing application of core material under field conditions of engineering practice.

[CIVE 6440 Environmental Site and Remediation Engineering] Spring. 3 credits. Prerequisite: CEE 3410 or equivalent or permission of instructor. Next offered 2011–2012. T. D. O'Rourke.

Covers principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasizes environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

[CIVE 6530 Water Chemistry for Environmental Engineering] Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. J. M. Gossett.

Covers principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. Focuses on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these prettations.

Applies concepts of chemical equilibria to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 6530.

[CIVE 6550 Transport, Mixing, and Transformation in the Environment] Fall. 3 credits. Prerequisite: CEE 3310. Staff.
Application of fluid mechanics to problems of transport, mixing, and transformation in the water environment. Introduction to advective, diffusive, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 6560 Physical/Chemical Process
Fall 3 credits. Pre- or corequisite: CEE 6550 or permission of instructor. J. J. Bisogni.

Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

CEE 6570 Biological Processes
Spring 3 credits. Prerequisites: introductory microbiology and CEE 6560, or permission of instructor. J. M. Gossett.

Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Bioinformatics analysis, stoichiometry, biokinetic, and design of biological treatment process.

CEE 6580 Biodegradation and Biocatalysis
Spring 3 credits. Prerequisites: CEE 4510 or BIOMI 2900 or equivalent; CEE 3510 or CHEM 3900 or permission of instructor. Next offered 2010–2011. R. E. Richardson.

Students explore the use of microbes in biodegradation and biocatalysis as well as the molecular techniques (i.e., analysis of DNA, RNA, and proteins) commonly used in these applications. Lectures cover enzyme classes and kinetics, selective isolation of organisms with desired bioconversion capabilities, effects of environmental parameters and cell-to-cell communication on gene expression, methods in microbial molecular biology, and contemporary case studies in biodegradation and biocatalysis. Laboratory sessions give students hands-on experience in molecular and analytical methods. Students teams design and then construct a bioreactor employing their own environmental isolates that degrade a selected contaminant or produce a desired compound.

CEE 6610 Urban Transportation Planning and Modeling
Fall 3 credits. Prerequisite: CEE 3010 or permission of instructor. L. K. Nozick.

Covers the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures for deterministic user equilibrium and stochastic user equilibrium. Students apply these tools to a substantive real-world case study and estimation of origin-destination tables.

CEE 6620 Urban Transportation Network Design and Analysis
Fall 3 credits. Prerequisite: CEE 3610 or permission of instructor. K. C. Hover.

Discusses the development and use of mathematical models for the design and analysis of urban transportation networks, including formulations and solution procedures for deterministic user equilibrium and stochastic user equilibrium. Students will develop mathematical models and solve them using computer programs.

CEE 6630 Network Flows and Algorithms
Spring 3 credits. Prerequisite: CEE 6620 or permission of instructor. Offered alternate years; next offered 2010–2011. M. A. Tinteri.

Algorithms for network flow problems encountered in transportation systems modeling, including shortest path, multi-objective shortest path, minimum cost flows, multi-commodity flows, and generalized flows. Applications to vehicle routing, dynamic vehicle allocation, and network design.

CEE 6650 Transportation, Energy, and Environment Systems for Sustainable Development
Spring 3 credits. Prerequisites: CEE 3610 or permission of instructor. H. O. Gao.

The course focuses on the nexus of transportation and environment, energy, and climate-change concerns. It is interdisciplinary, drawing upon transportation, environment, urban planning, statistics, economics, and policy. The course covers both the theoretical and practical aspects of relevant topics including mobile emissions inventory determination, renewable fuels, air quality impact and life cycle benefit assessment of alternative fuels/vehicles, Intelligent Transportation Systems (ITS) and urban sprawl, and congestion mitigation and air quality (CMAQ). Students will apply course materials to real-world cases and projects.

CEE 6710 Fundamentals of Structural Mechanics
Fall 3 credits. Prerequisites: ENGRD 2020, MATH 2940. M. D. Grigoriu.

Topics include beam bending; beams on elastic foundations; stability analysis for columns and beam-columns; linear elasticity; numerical solutions for linear elasticity problems; and applications including stress concentration, torsion, and plates.

CEE 6720 Introduction to the Finite Element Method
Fall 3 credits. Prerequisites: CEE 3710, 3720, and 4710. P. Koutsourelakis.

Covers the formulation of the finite element method in 2-D and 3-D continuum, basic 2-D and 3-D continuum isoparametric elements, modeling and properties aspects of the finite element method, and static and transient problems. A large part of the course is devoted to understanding element formulations, testing elements (patch test), and addressing problems such as shear and volumetric locking, among others. Emphasis is placed on understanding fundamental aspects of the method for making intelligent use of commercial software and obtaining a strong background for moving to further study and research.

CEE 6730 Design of Concrete Structures
Fall 4 credits. Prerequisite: CEE 3710 or permission of instructor. K. C. Hover.

Centered on the design of a multi-story building that is initially planned with masonry bearing walls and precast-prestressed concrete floors. The masonry walls are then replaced with cast-in-place reinforced concrete. Finally, the structural steel elements are replaced with a reinforced concrete framing system. The course explores gravity loads, wind loads, and earthquake loads and the behavior of individual members and the structure as a whole.

CEE 6750 Concrete Materials and Construction
Spring 3 credits. K. C. Hover.

Covers the materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Topics include cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 6760 Advanced Composite Materials (also TAM 6650, MME/ENG 6550)
Spring 4 credits. CEE 4770/MAE 4550/5550/TAM 4550 not a prerequisite but excellent background.

For description, see TAM 6550.

CEE 6770 Engineering Analysis

CEE 6780 Structural Dynamics and Earthquake Engineering
Spring 3 credits. M. D. Grigoriu.

Covers basic modal analysis, numerical methods, and frequency-domain analysis. Introduces earthquake-resistant design.

CEE 6860 Civil Infrastructure Systems
Spring 3 credits. Prerequisites: probability and statistics course (CEE 3040 or equivalent), or permission of instructor. Recommended: engineering economics course (CEE 3250 or equivalent). S–U or letter grades. T. D. O'Rourke.

Introduction to the framing and solution of civil infrastructure problems using a systems engineering approach. Systems tools, such as optimization, life cycle cost analysis, decision analysis, simulation, Markov modeling, and risk analysis, are examined through case studies related to civil infrastructure.

CEE 6900 Creativity, Innovation, and Leadership
Spring 3 credits. Pre- or corequisite: CEE 5800 or permission of instructor. F. J. Wayno.

Graduate course designed to help aspiring engineering managers to better understand individual creativity and organizational innovation and to develop the required skills to play a productive role in fostering both. Not incidentally, the course will also help students who take it to become more creative themselves. The course is highly participative and has a flow that moves from the individual to the group—to the organization, with theory, research results, and practical skills-development woven seamlessly together.

CEE 6910 Principles of Project Leadership (also SYSSEN 6910)
Spring 3 credits. Prerequisite: permission of instructor. F. J. Wayno.
Core graduate course in project management for people who will manage technical or engineering projects. Focuses both on the "technical" tools of project management (e.g., methods for planning, scheduling, and control) and the "human" side (e.g., forming a project team, managing performance, resolving conflicts), with somewhat greater emphasis on the latter. Offered as a distance learning course only.

**CEE 6930 Public Systems Modeling**  
Fall. 4 credits. D. P. Loucks.  
An introduction to the art of model building and the methods, especially related to public sector planning and management issues. The course will focus on the quantitative systems approach for identifying and evaluating alternative possible decisions and their physical, economic, environmental, and social impacts. Modeling methods include various deterministic and probabilistic optimization and simulation models, decision analysis, evolutionary search algorithms, and statistical models applied to a variety of public sector issues. The aim of all of this "modeling technology" is to help us generate and communicate information that can assist and better inform public decision-making.

**CEE 6940 Research in Engineering Management**  
On demand. 1–6 credits. Staff.  
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

**CEE 7010 Research—Remote Sensing**  
On demand. 1–6 credits. W. D. Philpot.  
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

**CEE 7020 Environmental and Water Resources Systems Analysis Research**  
On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to investigation to be undertaken. Staff.  
Investigations of particular environmental or water resources systems problems.

**CEE 7030 Research in Environmental Fluids Mechanics and Hydrology**  
On demand. 1–6 credits. Staff.  
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

**CEE 7040 Research in Geotechnical Engineering**  
On demand. 1–6 credits. Staff.  
For students who want to pursue a particular geotechnical topic in considerable depth.

**CEE 7050 Research in Environmental Engineering**  
On demand. 1–6 credits. Staff.  
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

**CEE 7070 Research in Structural Engineering**  
On demand. 1–6 credits. Staff.  
Pursues a branch of structural engineering beyond what is covered in regular courses.

Theoretical or experimental investigation of suitable problems.

**CEE 7073 Civil and Environmental Engineering Materials Project**  
On demand. 1–3 credits. Staff.  
Individual projects or reading and study assignments involving engineering materials.

**CEE 7360 Turbulence and Turbulent Mixing in Environmental Stratified Flows**  
Spring. 3 credits. Prerequisite: CEE 6550 or second course in fluid mechanics or with instructor's permission. Offered on demand; please contact professor if interested. P. J. Diamessis.  
Fundamentals of stably stratified flows, stratified homogeneous turbulence (spectra, length scales, and timescales), kinematics of diapycnal mixing, basic turbulent flow processes in homogeneous and stratified fluids (shear layers, wakes, boundary layers, etc.), energy budget analysis, and parameterizations of geophysical turbulence. Additional topics may include fossil turbulence theory and vortex-internal wave decomposition in strongly stratified turbulence.

**CEE 7400 Engineering Behavior of Soils**  
Fall. 3 credits. Prerequisite: CEE 3410.  
H. E. Stewart.  

**CEE 7410 Rock Engineering**  
Fall. 3 credits. Prerequisite: CEE 3410 or permission of instructor. Recommended: introductory geology. T. D. O’Rourke.  
Geological and engineering classifications of intact rock, discontinuities, and rock masses. Includes laboratory and field evaluation of properties. Covers stress states and stress analysis; design of foundations on, and openings in, rock masses; analysis of the stability of rock slopes; and rock blasting.

**CEE 7440 Advanced Foundation Engineering**  
Spring. 3 credits. Prerequisite: permission of instructor, H. E. Stewart.  
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

**CEE 7450 Soil Dynamics**  
Spring. 3 credits. Prerequisite: permission of instructor, H. E. Stewart.  
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Covers design of embankments and retaining structures under dynamic loading conditions.

**CEE 7460 Embankment Dam Engineering**  
Spring. 2 credits. Prerequisites: CEE 6410 and 7410 or permission of instructor. Next offered 2011–2012. F. H. Kulhawy.  
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

**CEE 7620 Practicum in Modeling Transportation Systems**  
Fall. 3 credits. Prerequisites: CEE 6610, 6620, and 6630. L. K. Nozick.  
Preparation must be submitted to the instructor in charge in the form of a research report.

**CEE 7700 Engineering Fracture Mechanics**  
Spring. 3 credits. Prerequisite: CEE 6720 or equivalent and TAM 7530, or permission of instructor. A. Ingraffea.  
Computational and physical modeling of crack growth processes. Finite and boundary element-based simulation of brittle fracture initiation and propagation, fatigue crack growth, and elasto-plastic and cohesive approaches to inelastic crack growth. Element formulation, meshing and remeshing, interactive steering. Case studies across scales from geomechanics to micromechanics, and including metals, ceramics, and polymers. Laboratory techniques for fracture toughness, crack growth rate, and trajectory testing.

**CEE 7710 Stochastic Mechanics in Science and Engineering**  
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012. D. Grigoriu.  
Review of probability theory, stochastic processes, and Ito formula with illustrations by Monte Carlo Simulation. Analytical and numerical methods for solving stochastic problems defined by algebraic, differential, and integral equations and deterministic coefficients and random/deterministic input. Applications include solution of Laplace, transport, Schroedinger, and other deterministic and differential equations; dynamic systems subjected to Gaussian and non-Gaussian noise; random eigenvalue problems; and homogenization, structure evolution, and pattern formation for random heterogeneous materials.

**CEE 7720 Random Vibration**  
Fall. 3 credits. Prerequisites: MAE 3260 and ENGRD 2700, or equivalent, and permission of instructor. Next offered 2011–2012. M. D. Grigoriu.  
Reviews random-process theory, simulation, and first-passage time. Linear random vibration; second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration; equivalent linearization, perturbation techniques, Fokker-Planck and Kolomogorov equations, Itô calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

**CEE 7730 Structural Reliability**  
Fall. 3 credits. Prerequisite: permission of instructor. Next offered 2011–2012. M. D. Grigoriu.  
Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probabilistic design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, and elementary concepts of probabilistic fracture mechanics.

**CEE 7740 Advanced Structural Concrete**  
Fall. 3 credits. K. C. Hover.  
Covers the fundamental aspects of the mechanical behavior of concrete subjected to axial and multiaxial states of stress, rate effects, time-dependent deformations, and multiscale modeling. Includes the behavior of reinforced concrete membrane elements subjected to plane states of stress, torsion, limit analysis, and gives an introduction to finite element modeling of reinforced concrete structures.
[CEE 7750] Nonlinear Finite Element Analysis
Covers fundamental aspects of nonlinear finite element analysis, including geometric and material nonlinearity. Also covers total and updated Lagrangian formulations, implementation of constitutive models, numerical solutions of global nonlinear systems of equations, and regularization techniques for softening materials.

[CEE 7760] Advanced Topics in Stability
Spring. 3 credits. Prerequisite: CEE 3740 or equivalent. Next offered 2011–2012. C. Earls.

[CEE 7770] Advanced Concepts in Finite Element Methods
Spring. 3 credits. W. Aquino.
The main objective of this course is to introduce the student to modern techniques used for solving partial differential equations using finite element methods. In addition, half of the course will be devoted to advanced programming techniques to produce fast and robust finite element computer codes. The course will cover formal mathematical formulations of the finite element method using function spaces, extensions of the finite element method, optimization of continuous systems, object-oriented implementations, and an introduction to multilevel techniques such as multigrid and domain decomposition.

[CEE 7790] Nonlinear Finite Element Analysis II
Fall. 4 credits. Prerequisite CEE 6720 (or equivalent). C. Earls.
An advanced course in finite element analysis emphasizing the nonlinear solution of problems involving solids and structures (with a special emphasis on the latter). The formulation of nonlinear structural elements, the development of efficient and robust means for treating material nonlinearity, and the nonlinear solution of finite element systems are fundamentals topics treated in this course. Topics from structural stability, problems involving coupled physics, and those involving transient dynamical response, will also be treated. The primary out-of-class effort centers on a significant project, and all students will be required to write their own nonlinear finite element code in support of this. As a result, some experience with programming is required.

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. W. D. Philpot.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

[CEE 8400] Thesis—Geotechnical Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

[CEE 8500] Thesis—Environmental Engineering
Fall, spring. 1–12 credits.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

[CEE 8600] Thesis—Transportation Systems Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

[CEE 8700] Thesis—Structural Engineering
Fall, spring. 1–12 credits.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

[CEE 8800] Thesis—Civil Infrastructure Systems Engineering
Fall, spring. 1–12 credits. Students must register for credit with professor at start of each semester. Staff.
The student selects a thesis research topic with the advice of the faculty member in charge and pursues it either independently or in conjunction with others working on the same topic.

COMPUTER SCIENCE

The Department of Computer Science is part of the College of Arts and Sciences, Computing and Information Science (CIS), and the College of Engineering. For complete course descriptions, see the Computer Science listing in the CIS section.

CS 1109 Fundamental Programming Concepts
Summer. 2 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

CS 1110 Introduction to Computing Using Java
Fall, spring. 4 credits. Prerequisite: pre-freshman standing or permission of instructor. Credit may not be applied toward engineering degree. S–U grades only.

CS 1112 Introduction to Computing Using MATLAB and Robotics
Spring. 4 credits. Prerequisite: some programming experience.

CS 1130 Transition to Object-Oriented Programming
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1132 Transition to MATLAB
Fall, spring. 1 credit. Prerequisite: one course in programming. S–U grades only.

CS 1300 Introductory Design and Programming for the Web (also INFO 1300)
Fall. 4 credits.
For description, see INFO 1300 in CIS section.

CS 1610 Computing in the Arts (also CIS/ENGRI 1610, DANCE 1540, FILM 1750, MUSIC 1465, PSYCH 1650)
Fall. 3 credits. Recommended: good comfort level with computers and some of the arts.

CS 1620 Visual Imaging in the Electronic Age (also ARCH 3702, ART 1700, CIS 1620, ENGR 1620)
Fall. 3 credits.
For description, see ART 1700.

CS 1710 Introduction to Cognitive Science (also COGST 1101, LING 1170, PHIL 1910, PSYCH 1102)
Fall, summer. 3 credits.
For description, see COGST 1101.

CS 2022 Introduction to C
Fall, spring, usually weeks 1–4. 1 credit.
Prerequisite: one programming course or equivalent programming experience. Credit granted for both CS 2022 and 2024 only if 2022 is taken first. S–U grades only.

CS 2024 C++ Programming
Fall. 2 credits. Prerequisite: one programming course or equivalent programming experience. Students who plan to take CS 2022 and 2024 must take 2022 first. S–U grades only.

CS 2026 Introduction to C#
Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS/ENGRD 2110 or equivalent experience. S–U grades only.
CS 2042 Unix Tools
Fall, usually weeks 5–8. 1 credit.
Prerequisite: one programming course or equivalent programming experience. S–U grades only.

CS 2044 Advanced UNIX Programming and Tools
Spring, usually weeks 5–8. 1 credit.
Prerequisite: CS 2042 or equivalent. S–U grades only.

CS 2110 Object-Oriented Programming and Data Structures (also ENGRD 2110)
Fall, spring, summer. 3 credits.
Prerequisite: CS 1110, CS 1130, or CS 1113 or (CS 1112 if completed before fall 2007) or equivalent course in Java or C++.
For description, see INFO 2300 in CIS section.

CS 2200 Discrete Structures
Fall, spring. 3 credits.
Pre- or corequisite: one course in programming or permission of instructor.

CS 2300 Intermediate Design and Programming for the Web (also INFO 2300)
Spring. 3 credits.
Prerequisite: CS 1300 strongly recommended. Must be taken before CS 3300.
For description, see INFO 2300 in CIS section.

CS 2800 Data-Driven Web Applications (also ENGRD 3220)
Fall, spring. 4 credits.
Prerequisites: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800.
Should not be taken concurrently with CS 3410 or 3420.

CS 3110 Data Structures and Functional Programming
Fall, spring. 4 credits.
Prerequisite: CS 2110 and 2111 or equivalent programming experience. Pre- or corequisite: CS 2800.
Should not be taken concurrently with CS 3410 or 3420.

CS 3220 Introduction to Scientific Computation (also ENGRD 3220)
Spring, summer. 3 credits.
Prerequisites: CS 1112 or 1132 and MATH 2220, 2230, or 2940.

CS 3300 Data-Driven Web Applications (also INFO 3300)
Spring. 3 credits.
Prerequisite: CS/ENGRD 2110 and (CS 2300 or permission of instructor). CS majors may use only one of the following toward their degree: CS/INFO 3300 or CS 4321.
For description, see INFO 3300 in CIS section.

CS 3410 Systems Programming
Spring. 4 credits.
Prerequisites: CS 2110 or equivalent programming experience. Should not be taken concurrently with CS 3110.

CS 3420 Computer Organization (also ECE 3140)
Spring. 4 credits.
Prerequisite: CS 2110 or ENGRD 2300. Should not be taken concurrently with CS 3110.
For description, see ECE 3140.

CS 3740 Computational Linguistics (also COGST 4240, LING 4424)
Fall. 4 credits.
Recommended: CS 2042.
For description, see LING 4424.

CS 3810 Introduction to Theory of Computing
Fall, summer. 3 credits.
Prerequisite: CS 2800 or permission of instructor.

CS 4120 Introduction to Compilers
Fall. 3 credits.
Prerequisites: CS 3110 or permission of instructor and CS 3420 or 3410. Corequisite: CS 4121.

CS 4121 Practicum in Compilers
Fall. 2 credits.
Corequisite: CS 4120.

CS 4210 Numerical Analysis and Differential Equations (also MATH 4250)
Fall. 4 credits.
Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.
For description, see MATH 4250.

CS 4220 Numerical Analysis: Linear and Nonlinear Equations (also MATH 4260)
Spring. 4 credits.
Prerequisites: MATH 2210 or 2940 or equivalent, one additional mathematics course numbered 3000 or above, and knowledge of programming.

CS 4300 Information Retrieval (also INFO 4300)
Fall. 3 credits.
Prerequisite: CS 2110 or equivalent.
For description, see INFO 4300 in CIS section.

CS 4302 Web Information Systems (also INFO 4302)
Spring. 3 credits.
Prerequisites: CS 2110 and some familiarity with web site technology.
For description, see INFO 4302 in CIS section.

CS 4320 Introduction to Database Systems
Fall. 3 credits.
Prerequisites: CS 3110 (or CS 2110, 2111 and permission of instructor).

CS 4321 Practicum in Database Systems
Fall. 2 credits.
Pre- or corequisite: CS 4320.
CS majors may use only one of the following toward their degree: CS/INFO 3500 or CS 4321.

CS 4410 Operating Systems
Fall. 3 credits.
Prerequisite: CS 3410 or 3420.

CS 4411 Practicum in Operating Systems
Fall. 2 credits.
Corequisite: CS 4410.

CS 4420 Computer Architecture (also ECE 4750)
Fall. 4 credits.
Prerequisites: ENGRD 2300 and CS 3420/ECE 3140.
For description, see ECE 4750.

CS 4620 Introduction to Computer Graphics (also ARCH 3704)
Fall. 3 credits.
Prerequisite: CS/ENGRD 2110.

CS 4621 Computer Graphics Practicum
Fall. 2 credits.
Pre- or corequisite: CS 4620.

CS 4700 Foundations of Artificial Intelligence
Fall. 3 credits.
Prerequisites: CS/ENGRD 2110 and CS 2800 or equivalent.

CS 4701 Practicum in Artificial Intelligence
Fall. 2 credits.
Pre- or corequisite: CS 4700.

CS 4740 Introduction to Natural Language Processing (also COGST 4740, LING 4474)
Spring. 4 credits.
Prerequisite: CS 2110.

CS 4780 Machine Learning
Spring. 4 credits.
Prerequisites: CS 2111, CS 2800, or basic probability theory, and basic knowledge of linear algebra.

CS 4782 Probabilistic Graphical Models (also BTRY 4790)
Fall. 4 credits.
Prerequisites: probability theory (BTRY 4800 or equivalent), programming and data structures (CS 2110 or equivalent); course in statistical methods recommended but not required (BTRY 4900 or equivalent). Next offered 2010–2011.
For description, see BTRY 4790.

CS 4812 Quantum Computation (also PHYS 4481/7681)
Spring. 2 credits.
Prerequisite: familiarity with theory of vector spaces over complex numbers.
For description, see PHYS 4481.

CS 4820 Introduction to Analysis of Algorithms
Spring, summer. 4 credits.
Prerequisites: CS 2800 and 3110.

CS 4830 Introduction to Cryptography
Fall. 4 credits.
Prerequisites: CS 2800 (or equivalent), or permission of instructor.

CS 4850 Mathematical Foundations for the Information Age
Spring. 4 credits.
Prerequisite: Mathematical maturity.

CS 4860 Applied Logic (also MATH 4860)
Fall. 4 credits.
Prerequisites: MATH 2220 or 2940, CS 2800 or equivalent (e.g., MATH 3320, 4320, 4340, 4810), and some additional course in mathematics or theoretical computer science.

CS 4999 Independent Reading and Research
Fall, spring. 1–4 credits.

CS 5150 Software Engineering
Fall. 4 credits.
Prerequisite: CS 2110 or equivalent experience programming in Java or C++.

CS 5220 Applications of Parallel Computers
Spring. 4 credits.
Prerequisites: A course in numerical methods at the level of CS 3220 or higher.

CS 5300 The Architecture of Large-Scale Information Systems (also INFO 5300)
Spring. 4 credits.
Prerequisite: CS/INFO 3500 or 4320.
For description, see INFO 5300 in CIS section.

CS 5410 Intermediate Computer Systems
Fall or spring. 4 credits.
Prerequisite: CS 4410 or permission of instructor. Next offered fall 2009.

CS 5420 Parallel Computer Architecture (also ECE 5720)
Fall. 4 credits.
Prerequisite: ECE 4750.
For description, see ECE 5720.

CS 5430 System Security
Fall or spring. 4 credits.
Prerequisites: CS 4410 or 4450 and familiarity with Java, C, or C# programming languages. Next offered spring 2010.

CS 5620 Interactive Computer Graphics
Fall. 4 credits.
Prerequisite: CS 4620.
CS 5643 Physicaly Based Animation for Computer Graphics
Spring. 4 credits. Prerequisites: CS/ENGRD 3220 and/or CS 4620 or permission of instructor.

CS 5722 Heuristic Methods for Optimization (also CEE 5090, ORIE 5340)
Fall. 3 or 4 credits. Prerequisites: CS/ENGRD 2110 or 3220 and/or CEE/ENGRD 3200, or graduate standing, or permission of instructor.
For description, see CEE 5290.

CS 5846 Decision Theory I (also ECON 4760/6760)

CS 6110 Advanced Programming Languages
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

CS 6210 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 4110 and 4310 or permission of instructor. Offered alternate years.

CS 6240 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisites: exposure to numerical analysis (e.g., CS 4210 or 6210), differential equations, and knowledge of MATLAB.

CS 6320 Database Systems
Spring. 4 credits. Prerequisite: CS 4320 or permission of instructor.

CS 6322 Advanced Database Systems
Fall. 4 credits.

CS 6410 Advanced Systems
Fall or spring. 4 credits. Prerequisite: CS 4410 or permission of instructor. Offered fall 2009.

CS 6460 Peer-to-Peer Systems
Spring. 4 credits. Recommended: CS 6410.

CS 6464 Advanced Distributed Storage Systems
Spring. 4 credits. Prerequisites: CS 4410 or permission of instructor.

CS 6620 Advanced Interactive Graphics
Fall or spring. 4 credits. Prerequisite: CS 4620 and/or 4621 or 6220 or permission of instructor. Next offered 2010–2011.

CS 6630 Realistic Image Synthesis
Fall or spring. 4 credits. Prerequisites: CS 4620 or equivalent and undergraduate-level understanding of algorithms, programming, and vector calculus. Offered fall 2009.

CS 6650 Computational Motion
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms, and some scientific computing. Offered 2010–2011.

CS 6670 Computer Vision
Fall or spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and MATH 2210 or equivalent. Offered fall 2009.

CS 6700 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisite: CS 4700 or permission of instructor.

CS 6740 Advanced Language Technologies (also INFO 6300)
Fall, spring. 3 credits. Prerequisites: permission of instructor. Neither CS 4300 nor CS 4740 are prerequisites.

CS 6760 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and acquaintance with propositional logic. Next offered 2010–2011.

CS 6780 Advanced Topics in Machine Learning
Fall or spring. 4 credits. Prerequisites: CS 4780 or equivalent, or CS 5780 or equivalent, or permission of instructor. Offered fall 2009.

CS 6782 Probabilistic Graphical Models (also BTRY 6790)
Fall. 4 credits. Prerequisites: probability theory (BTRY 4080 or equivalent), programming and data structures (CS 2110 or equivalent); a course in statistical methods is recommended but not required (BTRY 4090 or equivalent). Next offered 2010–2011. For description, see BTRY 6790.

CS 6810 Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 3810 and CS 4820 or 6820 or permission of instructor. Next offered 2010–2011.

CS 6820 Analysis of Algorithms
Fall. 4 credits. Prerequisite: CS 4820 or graduate standing.

CS 6822 Advanced Topics in Theory of Computing
Fall or spring. 4 credits. Prerequisite: CS 6820 or permission of instructor. Next offered 2010–2011.

CS 6830 Cryptography
Fall. 4 credits. Prerequisites: general ease with algorithms and elementary probability theory; maturity with mathematical proofs (ability to read and write mathematical proofs).

CS 6840 Algorithmic Game Theory
Fall or spring. 4 credits. Prerequisite: background in algorithms and graphs at level of CS 4820. No prior knowledge of game theory or economics assumed. Offered fall 2009.

CS 6850 The Structure of Information Networks (also INFO 6850)

CS 6860 Logic of Programs
Spring. 4 credits. Prerequisites: CS 4810, 6810, and/or (CS/MATH 4600 or MATH 4810).

CS 7090 Computer Science Colloquium
Fall, spring. 1 credit. For staff, visitors, and graduate students interested in computer science. S–U grades only.

CS 7100 Seminar in Programming Languages
Fall, spring. 1 credit. Prerequisite: CS 6110 or permission of instructor. S–U grades only.

CS 7190 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.

CS 7320 Topics in Database Systems
Fall, spring. 4 credits. S–U grades only.

CS 7390 Database Seminar
Spring. 1 credit. S–U grades only.

CS 7490 Systems Research Seminar
Fall, spring. 1 credit. S–U grades only.

CS 7590 Computer Graphics Seminar
Fall, spring. 3 credits.

CS 7726 Evolutionary Computation and Design Automation (also MAE 6500)
Spring. 4 credits. Prerequisite: programming experience or permission of instructor. Next offered 2010–2011.

CS 7770 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7774 Seminar in Natural Language Understanding
Fall, spring. 2 credits.

CS 7800 Introduction to Kleene Algebra
Spring. 4 credits. Prerequisites: CS 4810 and/or (CS 4680 or MATH 4810).

CS 7890 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S–U grades only.

CS 7893 Cryptography Seminar
Fall, spring. 1 credit.

CS 7999 Independent Research
Fall, spring. Prerequisite: permission of computer science advisor. Independent research or master of engineering project.

CS 9999 Thesis Research
Fall, spring. Prerequisite: permission of computer science advisor. S–U grades only. Doctoral research.

EARTH AND ATMOSPHERIC SCIENCES

For complete course descriptions, see the Earth and Atmospheric Sciences listing in the College of Arts and Sciences or College of Agriculture and Life Sciences section.

EAS 1101 Introductory Geological Sciences (To Know Earth)
Fall. 3 credits. C. Andronicos and R. Allmendinger.

EAS 1108 Earth in the News
Summer. 3 credits. S. L. Losh.

EAS 1109 Dinosaurs
Fall. 1 credit. J. L. Gisne.

EAS 1150 Severe Weather Phenomena
Summer. 3 credits. M. W. Wysocki.

EAS 1190 Fossil Preparation
Fall. 1 credit. Prerequisite: EAS 1109 or related EAS course. W. Allmon and J. Gisne.

EAS 1220 Earthquakes (also ENGR 1220)
Spring. 3 credits. L. Brown.
Course in Introduction to Engineering series. For description, see ENGR 1220.
EAS 1310 Basic Principles of Meteorology  
Fall. 3 credits. I-credit lab is EAS 1330.  
M. W. Wysocki.

EAS 1330 Basic Meteorology Lab  
Fall. 1 credit. Corequisite: EAS 1310.  
M. W. Wysocki.  
Covers topics presented in EAS 1310.

EAS 1340 Weather Analysis and Forecasting  
Spring. 1 credit. Prerequisites: EAS 1310 and EAS 1350. S–U grades only.  
M. W. Wysocki and staff.  
This course will serve as an extension of the EAS 1330 first-year majors lab. It will provide opportunity for formal weather briefings, explore specific atmospheric storms (synoptic and mesoscale, including the climatology of each storm type), through assigned readings, map analysis, and weather discussions.

EAS 1400 Freshman Writing Seminar  
“Writing in the Sciences: Environmental Perspectives”  
Spring. 3 credits. S. Jessup.

EAS 1540 Introductory Oceanography (also BIOEE 1540)  
Fall, summer. 3 credits. Lec. Optional 1-credit lab is EAS/BIOEE 1550. Fall: C. Greene and B. Monger; Summer: B. Monger.

EAS 1550 Introductory Oceanography Lab (also BIOEE 1550)  
Fall. 1 credit. Lab. Corequisite: EAS/BIOEE 1540. C. Greene and B. Monger.  
Laboratory course covering topics presented in EAS/BIOEE 1540.

EAS 1551 Introduction to Oceanography Lab (also BIOSM 1551)  
Summer. 1 credit. Prerequisites: college-level science course, or EAS 1540, or marine science course or permission of instructor. B. Monger and C. Greene

EAS 1700 Evolution of the Earth and Life  
Spring. 3 credits. J. L. Cisne.

EAS 2130 Marine and Coastal Geology  
Summer. 4 credits. Prerequisites: introductory geology or ecology or permission of instructor. Staff.

EAS 2200 The Earth System  
Fall, spring. 4 credits. Prerequisites: MATH 1110/1110. Letter grades only. W. M. White.

EAS 2220 Seminar—Hawaii’s Environment  

EAS 2500 Meteorological Observations and Instruments  
Fall. 4 credits. Prerequisite: EAS 1310.  
M. W. Wysocki.

EAS 2680 Climate and Global Warming  
Spring. 3 credits. Prerequisite: basic college math. S–U or letter grades. A. T. DeGaetano.

EAS 2900 Computer Programming and Meteorology Software  
Spring. 3 credits. Prerequisites: EAS 1310; MATH 1110 or equivalent. N. Mahowald and B. Belcher.

EAS 2960 Forecast Competition  
Fall and spring. 1 credit; students enroll for two consecutive semesters; credit awarded for second semester; may be repeated for credit. Prerequisite: undergraduate standing in atmospheric science or permission of instructor. S–U grades only. D. S. Wilks.

EAS 3010 Evolution of the Earth System  
Fall. 4 credits. Prerequisites: EAS 2200, MATH 1110 or 1910, and one chemistry course (college or high school). T. Jordan, S. Riha, and W. D. Allmon. Two Saturday field trips.

EAS 3030 Introduction to Biogeochemistry (also NTRES 3030)  
Fall. 4 credits. Prerequisites: CHEM 2070 or equivalent, MATH 1120, plus a biology and/or geology course. J. Yavit.

EAS 3040 Interior of the Earth  
Spring. 3 credits. Prerequisite: EAS 2200 or permission of instructor. C. Andronico.

EAS 3050 Climate Dynamics  
Fall. 3 credits. Prerequisite: two semesters of calculus and one semester of physics. N. Mahowald.

EAS 3060 Evolution of Ancient and Modern Oceans (also BIOSM 3060)  
Summer. 6 credits. Prerequisites: introductory biology (two semesters) and college-level course in Earth science, or permission of instructor. W. Allmon.

EAS 3220 Biogeochemistry of the Hawaiian Islands  
Spring. 4 credits. Prerequisite: enrollment in EES semester in Hawaii, EAS 2200, EAS 3030, or permission of instructor. L. A. Derry.

EAS 3340 Microclimatology  
Spring. 3 credits. Prerequisite: physics course. D. S. Wilks.

EAS 3400 Field Study of the Earth System  
Spring. 6 credits. Prerequisites: enrollment in Earth and Environmental Sciences Semester in Hawaii; one semester of calculus (MATH 1910/1920 or 1110/1120) and two semesters of any of the following: PHYS 2207/2208 or 1112/2213; CHEM 2070/2080 or 2090/2090; BIOG 1101/1102–1103/1104 or 1105/1106 or 1109/1108; or equivalent course work. A. Moore.

EAS 3410 Atmospheric Thermodynamics and Hydrostatics  
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M. W. Wysocki.

EAS 3420 Atmospheric Dynamics (also ASTRO 3342)  
Spring. 3 credits. Prerequisites: MATH 2930, 2130 or equivalent; one semester of physics. Staff.

EAS 3500 Dynamics of Marine Ecosystems (also BIOEE 3500)  
Fall. 3 credits. Prerequisites: one year of calculus and a semester of oceanography (e.g., EAS 1540), or permission of instructor. Offered alternate years. C. H. Greene and R. W. Howarth.

EAS 3510 Conservation Oceanography (BIOEE 3510)  

EAS 3520 Synoptic Meteorology I  

EAS 3530 Physical Oceanography  
Fall. 3 credits. Prerequisites: MATH 1120 or 1920, or one year of physics, or permission of instructor. Offered alternate years; next offered 2010–2011. B. C. Monger.

EAS 4010 Fundamentals of Energy and Mineral Resources  
Fall. 3 credits. Prerequisites: Previous course in geology helpful but not necessary. L. Cathie.

EAS 4040 Geodynamics  
Spring. 3 credits. Prerequisites: calculus and calculus-based physics course or permission of instructor. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.

EAS 4050 Active Tectonics  
Spring. 3 credits. Recommended: mechanical background equivalent to EAS 4260/4880. S–U or letter grades. Offered alternate years. R. Lohman.

EAS 4060 Marine Geology and Geophysics  
Spring. 4 credits. Prerequisites: EAS 2200 or comparable course; completion of some EAS classes helpful, not required. Next offered 2010–2011. J. Phipps Morgan.

EAS 4170 Field Mapping in Argentina  
Summer. 4 credits. Prerequisites: introductory EAS course and EAS 4260 or EAS 3040. Offered alternate years. S. Mahlburg Kay.

EAS 4250 European Discovery of Impacts and Explosive Volcanism  
Spring. 2 credits. Prerequisite: junior, senior, or graduate students with background in geology and permission of instructor. One two-hour meeting per week plus field trip during spring break. Offered alternate years; next offered 2010–2011. J. Phipps Morgan.

EAS 4260 Structural Geology  
Spring. 4 credits. Prerequisite: one semester of calculus plus an introductory geology course or permission of instructor. One weekend field trip. C. Andronico.

EAS 4340 Exploration Geophysics  
Fall. 3 credits. Prerequisites: MATH 1920 and PHYS 2208, 2213, or equivalent. Offered alternate years; next offered 2010–2011. L. D. Brown.

EAS 4350 Statistical Methods in Meteorology and Climatology  
Fall. 3 credits. Prerequisites: one introductory course each in statistics (e.g., AEM 2100) and calculus. D. S. Wilks.

EAS 4370 Geophysical Field Methods (also ARKEO 4370)  
Fall. 3 credits. Prerequisite: PHYS 2208 or 2213 or permission of instructor. Offered alternate years. L. D. Brown.

EAS 4400 Seminar: Climate Science, Impacts and Mitigation  
Fall. 2 credits. Prerequisites: junior or higher standing. Offered alternate years; next offered 2010–2011. M. W. Wysocki.

EAS 4470 Physical Meteorology  
Fall. 3 credits. Prerequisites: one year each of calculus and physics. Offered alternate years. A. T. DeGaetano.
EAS 4510 Synoptic Meteorology II  
Fall. 3 credits. Prerequisites: EAS 3410 and 3420. S. J. Colucci.

EAS 4530 Mineralogy  
Fall. 4 credits. Prerequisites: CHEM 2070 or 2090 or permission of instructor. S. Mahlburg Kay.

[EAS 4540 Petrology and Geochemistry  

EAS 4550 Geochemistry  
Fall. 4 credits. Prerequisites: CHEM 2070 or CHEM 2090 and MATH 1920 or equivalent. Recommended: EAS 3540. Offered alternate years. W. M. White.

EAS 4560 Mesoscale Meteorology  
Spring. 3 credits. Prerequisites: EAS 3410 and 3420 or permission of instructor. S. J. Colucci.

[EAS 4570 Atmospheric Air Pollution  
Fall. 3 credits. Prerequisites: EAS 3410 or one course in thermodynamics, and one semester of chemistry, or permission of instructor. Offered alternate years; next offered 2010–2011. M. Wysocki.]

[EAS 4580 Volcanology  
Fall. 3 credits. Prerequisite: EAS 3040 or equivalent. Offered alternate years; next offered 2010–2011. R. W. Kay.]

[EAS 4600 Late Quaternary Paleoclimatology  
Fall. 4 credits. Offered alternate years; next offered 2010–2011. M. Goman.]

EAS 4610 Paleoclimate: Since the Last Ice Age  
Fall. 3 credits. Prerequisite: EAS 2200 or permission of instructor. Offered alternate years. M. Goman.

[EAS 4620 Marine Ecology (also BIOEE 4620)  
Fall. 3 credits. Limited to 75 students. Prerequisite: BIOEE 2610. Offered alternate years; next offered 2010–2011. C. D. Harvill and C. H. Greene. For description, see BIOEE 4620.]

EAS 4700 Weather Forecasting and Analysis  
Spring. 3 credits. Prerequisites: EAS 3520 and 4510. M. W. Wysocki.

[EAS 4710 Introduction to Groundwater Hydrology (also BEE 4710)  
Spring. 3 credits. Prerequisites: MATH 2940 and ENGRD 2020. Offered alternate years; next offered 2010–2011. L. M. Cathles and T. S. Steenhsuijsen.]

EAS 4750 Special Topics in Oceanography  
Fall, spring, summer. 2–6 credits, variable. Prerequisites: one semester of oceanography and permission of instructor. Fall, spring: C. H. Greene; summer: B. C. Monger.

EAS 4760 Sedimentary Basins  
Spring. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years. T. E. Jordan.

[EAS 4780 Advanced Stratigraphy  
Fall. 3 credits. Prerequisite: EAS 3010 or permission of instructor. Offered alternate years; next offered 2010–2011. T. E. Jordan.]

EAS 4790 Paleobiology (also BIOEE 4790)  
Spring. 4 credits. Prerequisites: one year introductory biology and either BIOEE 2740 or 3750 or EAS 3010, or permission of instructor. W. D. Allmon.

EAS 4800 Our Changing Atmosphere: Global Change and Atmospheric Chemistry (also BEE 4800)  
Fall. 3 credits. Prerequisites: CHEM 2090, MATH 1920, PHYS 1112, or equivalent, or permission of instructor. S–U or letter grade: P. G. Hess.

EAS 4820 Atmospheric Modeling  
Spring. 3 credits. Prerequisite: differential equations, introductory computer background, junior standing or above or permission of instructor. S–U or letter grades. N. Mahowald.

[EAS 4830 Land, Water, Agriculture, and Environment (also CSS 4830)  
Fall. 4 credits. Prerequisite: CSS 2600 or equivalent calculus. Next offered 2010–2011. H. Van Es and S. J. Riha.]

[EAS 4840 Inverse Methods in the Natural Sciences  
Fall. 3 credits. Prerequisite: MATH 2940. Next offered 2010–2011. D. L. Hyssel.]

EAS 4870 Introduction to Radar and Remote Sensing (also ECE 4870)  
Spring. 3 credits. Prerequisites: PHYS 2208 or 2213 or equivalent, or permission of instructor. D. L. Hyssel.

EAS 4880 Global Geophysics  
Spring. 3 credits. Prerequisites: MATH 1920 (or 1120) and PHYS 2208 or 2213. Offered alternate years. M. Pritchard and R. Lohman.

EAS 4910–4920 Undergraduate Research  
Fall, spring. 1–4 credits. Students must complete form at 2124 Snee Hall. Staff

EAS 4940 Special Topics in Atmospheric Science (undergraduate level)  
Fall or spring. 8 credits max. S–U or letter grades. Staff.

EAS 4960 Internship Experience  
Fall, spring. 1–2 credits. Prerequisite: enrollment in EES semester in Hawaii and EAS 3400. S–U grades only. See department for more information. A. Moore.

EAS 4970 Individual Study in Atmospheric Science  
Fall or spring. 1–6 credits. Students must register using independent study form. S–U grades only. Staff.

EAS 4980 Teaching Experience in Earth and Atmospheric Sciences  
Fall or spring. 1–4 credits. Students must register using independent study form. S–U grades only. Staff.

EAS 4990 Undergraduate Research in Atmospheric Science  
Fall, spring. Credit TBA. Students must register using independent study form. S–U grades only. Staff.

EAS 5000 Design Project in Geohydrology  
Fall, spring. 3–12 credits. Alternative to industrial project for M.Eng. students choosing geohydrology option. May continue over two or more semesters. L. M. Cathles.

EAS 5020 Case Histories in Groundwater Analysis  
Spring. 4 credits. L. M. Cathles.

EAS 5050 Fluid Dynamics in the Earth Sciences  
Spring. 3 credits. Prerequisites: MATH through 2940, PHYS through 2208 or 2214, or permission of instructor. Offered alternate years. L. Cathles and M. Wysocki.

EAS 5110 Earth System Interactions  
Fall. 1 credit (S–U) or 2 credits (with paper, letter grades). Prerequisite: permission of instructor. J. L. Csine.

EAS 5220 Advanced Structural Geology I  
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger and C. Andronicos.

EAS 5240 Advanced Structural Geology II  
Fall. 3 credits. Prerequisites: EAS 4260 and permission of instructor. Offered alternate years. R. W. Allmendinger. Geometry, kinematics, and mechanics of structural provinces.

EAS 5530 Advanced Petrology  
Fall. 3 credits. Prerequisite: EAS 4540. Offered alternate years; next offered 2010–2011. P. Gierasch.

EAS 5570 Planetary Surface Processes (also ASTRO 6577)  
Spring. 3 or 4 credits. Offered alternate years. J. Bell.

[EAS 5780 Planetary Formation and Evolution (also ASTRO 6578)  
Fall. 4 credits. Prerequisites: familiarity with elementary physics and math or permission of instructor. Offered alternate years; next offered 2010–2011. J-L. Margot and M. Pritchard. For description, see ASTRO 6578.]

[EAS 5840 Inverse Methods in the Natural Sciences  
Fall. 3 credits. Prerequisite: MATH 2940. Next offered 2010–2011. D. L. Hysell.]

EAS 5880 Advanced Methods in Radar (also ECE 5890)  
Fall. 3 credits. Prerequisite: EAS 4870 or permission of instructor. D. Hysell.

EAS 6280 Geology of Orogenic Belts  
Spring. 3 credits. Prerequisite: permission of instructor. S. M. Kay.

[EAS 6410 Analysis of Biogeochemical Systems  
Spring. 2 credits. Prerequisite: MATH 2950 or permission of instructor. Offered alternate years; next offered 2010–2011. L. A. Deny.]
EAS 6840 Air Quality and Atmospheric Chemistry (also MAE 6480)
Fall. 3 credits. Prerequisites: freshman chemistry and thermodynamics (or equivalent) and fluid mechanics (or equivalent), graduate standing or permission of instructor. S–U or letter grades. K. M. Zhang.
For description, see MAE 6480.

EAS 6520 Advanced Atmospheric Dynamics (also ASTRO 7652)
Spring. 3 credits. Prerequisites: EAS 3410 and 5420 or equivalent. S. J. Colucci.

EAS 6550 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisite: EAS 4550 or permission of instructor. Offered alternate years; next offered 2010–2011. W. M. White.

EAS 6560 Applied Multivariate Statistics
Spring. 3 credits. Prerequisites: multivariate calculus, matrix algebra, and two statistics courses. Offered alternate years; next offered 2010–2011. D. S. Wilks.

EAS 6750 Modeling the Soil-Plant-Air System (also CSS 6750)
Spring. 3 credits. Prerequisite: EAS/CSS 4830 or equivalent. S. J. Riha.

EAS 6820 Special Topics in Atmospheric Science
Fall, spring. 1–6 credits. S–U or letter grades. Staff.

EAS 6920 Special Topics in Geophysical Sciences
Fall or spring. 1–3 credits, variable. S–U or letter grades. Staff.

EAS 7060–7990 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.

EAS 7010–7920 Thesis Research
Fall, 7010; spring, 7020. 1–15 credits, variable. S–U or letter grades. Staff.

EAS 7110 Upper Atmospheric and Space Physics
Fall or spring. 1–6 credits. D. L. Hysell.

EAS 7220 Advanced Topics in Structural Geology
R. W. Allmendinger.

EAS 7310 Advanced Topics in Remote Sensitive and Geophysics (also ASTRO 7671)
M. Pritchard and J. Bell.

EAS 7330 Advanced Topics in Geodynamics
Spring. J. Phipps Morgan.

EAS 7500 Satellite Remote Sensing in Biological Oceanography
Summer. 3 credits. B. C. Monger.

EAS 7510 Petrology and Geochemistry
R. W. Kay.

EAS 7550 Advanced Topics in Tectonics and Geochemistry
Fall. 3 credits. J. Phipps Morgan.

EAS 7570 Current Research in Petrology and Geochemistry
S. Mahlburg Kay.

EAS 7620 Advanced Topics in Paleobiology
W. D. Allmon.

EAS 7750 Topics in Paleoclimatology
Fall. 1 credit. S–U grade only. G. Dietl.

EAS 7770 Advanced Topics in Sedimentology and Stratigraphy
T. E. Jordan.

EAS 7780 Advanced Topics in Oceanography
C. H. Greene.

EAS 7800 Earthquakes Record Reading
Fall. R. Lohman and M. Barazangi.

EAS 7810 Advanced Topics in Exploration Geophysics
L. D. Brown.

EAS 7920 Andes-Himalaya Seminar

EAS 7950 Low-Temperature Geochemistry
1–3 credits. S–U grades only. L. A. Derry.

EAS 7960 Geochemistry of the Solid Earth
W. M. White.

EAS 7970 Fluid-Rock Interactions
L. M. Cathles.

EAS 7990 Soil, Water, and Geology Seminar
Spring. L. M. Cathles and T. S. Steenhuis.

EAS 8500 Master’s-Level Thesis Research in Atmospheric Science
Fall, spring. Credit TBA. S–U grades only. Graduate faculty.

EAS 8700 Graduate-Level Dissertation Research in Atmospheric Science
Fall, spring. Credit TBA. S–U grades only. Graduate faculty.

ECE 1260 Introduction to Signals and Telecommunications (also ENGRD 1260)
Spring. 3 credits. For description, see ENGRD 1260.

ECE 2100 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 2100)
Fall, spring. 4 credits. Corequisites: MATH 2930 and PHYS 2213. All students must enroll in a lab and a sec.

ECE 2200 Signals and Systems
Spring. 4 credits. Prerequisites: MATH 2980 and CS 1112 or 1132. Corequisite: MATH 2940.

ECE 2300 Introduction to Digital Logic Design (also ENGRG 2300)
Fall, spring. 4 credits. Prerequisite: CS 1110 or 1112.

ECE 2350 Career Development for Engineering (also ENGRG 2350)
Spring. 2 credits. Prerequisite: second-semester freshman or sophomore standing. For description, see ENGRG 2350.

ECE 2500 Technology in Society (also ENGRG/HIST 2500, STS 2501)
Fall. 3 credits. Humanities elective for engineering students.

ECE 2910–2920 Sophomore Electrical and Computer Engineering Independent Projects
2910, fall; 2920, spring. 1–8 credits.

ECE 2930–2939; 2940–2949 Sophomore Electrical and Computer Engineering Group Projects
2930–2939, fall; 2940–2949, spring. 1–8 credits.

ECE 2980 Inventing an Information Society (also AMST/ENGRI 2980, HIST 2920, INFO 2921, STS 2921)
Spring. 3 credits. Approved for humanities distribution.

For description, see ENGRG 2980.

ELECTRICAL AND COMPUTER ENGINEERING 277
ECE 3030 Electromagnetic Fields and Waves
Fall. 4 credits. Prerequisites: grade of C or better in PHYS 2213, PHYS 2214, MATH 2930, MATH 2940, and ECE/ENGRD 2100.
Covers static, quasi-static, and dynamic electromagnetic fields and waves. Topics include Maxwell's equations (integral and differential forms), fields of charge and current distributions, boundary conditions, fields near conductors, method of images, material polarization and dielectrics; energy, work, and power in electromagnetic systems; wave propagation and polarization, waves in media (dielectrics, conductors, and anisotropic materials); reflection, transmission, and refraction at media interfaces; guided waves in transmission lines, Smith charts, transients; metallic and dielectric waveguides; radiation and antennas, antenna arrays, electric circuits for transmission and reception, aperture antennas and diffraction.

ECE 3100 Introduction to Probability and Inference for Random Signals and Systems (also ENGRD 3100)
Fall. 4 credits. Prerequisites: MATH 2940, PHYS 2213, or equivalents. Introduction to probabilistic techniques for modeling random phenomena and making estimates, inferences, predictions, and engineering decisions in the presence of chance and uncertainty. Probability measures, classical probability and combinatorics, countable and uncountable sample spaces, random variables, probability mass functions, probability density functions, cumulative distribution functions, important and continuous distributed functions, functions of random variables including moments, independence and correlation, conditional probability, Total Probability and Bayes' rule with application to random system response to random signals, characteristic functions and sums of random variables, the multivariate Normal distribution, maximum likelihood and maximum a posteriori estimation, Pearson- and Bayesian statistical hypothesis testing, Monte Carlo simulation. Applications in communications, networking, circuit design, device modeling, and computer engineering.

ECE 3130 Computerized Instrumentation Interface Design
Summer. 3 credits. Prerequisites: ECE 2100, and/or ECE/ENGRD 2300, and/or programming at level of CS 2110. Can be used for ECE students as an Outside ECE Technical Elective or College Approved Elective (with advisor approval). This course will explore the technologies for performing both speech recognition and computer-activated control through custom interface circuitry. Use will be made of commercial as well as custom software and hardware. Students will be expected to implement several methods in the programming languages C or JAVA. This is a team-oriented product development experience. Students will define the requirements of a product (a speech-controlled CD player) and organize into a development team according to their specialty knowledge. They will be asked to develop a computerized instrument interface design, implementation of PC interaction, and a working prototype. The course aims to teach students the working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include foundational material about sets and functions; linear algebra; inner products and orthogonal representations; basic ideas from multivariable calculus, and elementary convex analysis.

ECE 3200 Networks and Systems
Spring. 4 credits. Prerequisites: ECE 2200 and MATH 2940. Students develop a working understanding of the analytical and computational tools used in the design and representation of complex networks and systems. Topics include state-space techniques, finite state machines, graph-theoretic approaches to network design and analysis, complexity, phase transitions in complex systems, and scalability.

ECE 3250 Mathematics of Signal and System Analysis
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 2200 or permission of instructor. Course aims to deepen students' working knowledge of mathematical tools relevant to ECE applications. While the course emphasizes fundamentals, it also provides an ECE context for the topics it covers, which include: foundational material about sets and functions, linear algebra, inner products and orthogonal representations, basic ideas from multivariable calculus, and elementary convex analysis.

ECE 3600 Ethical Issues in Engineering Practice (also ENGRG 3600, STS 3601)
Spring. 3 credits. Open to sophomores. For description, see ENGRG 3600.

ECE 3910-3920 Junior Electrical and Computer Engineering Independent Project
3910, fall 2020, spring, 1–8 credits. For description, see ECE 3910-2920.

ECE 3920-3929; 3940-3949 Junior Electrical and Computer Engineering Group Project
3920–3929, fall; 3940–3949, spring, 1–8 credits. For description, see ECE 3920-3929; 3940-3949.

ECE 4060 Introduction to Quantum and Statistical Physics
Fall. 4 credits. Prerequisites: PHYS 2214, MATH 2940, and ECE 3150 or co-registration.
Introductory quantum, statistical, and solid-state physics concepts necessary for understanding modern solid-state electronic and optical devices. Topics include the formalism and methods of quantum mechanics, structures of atoms, molecules, and solids and their interactions with electromagnetic waves, statistical physics, and the basic physics of semiconductor.

ECE 4070 Physics of Semiconductors and Nanostructures
Spring. 4 credits. Prerequisites: ECE 3060 or AEP 4150 and AEP 4290.
This course covers basic solid state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equations, semiconductor phonon and hetero-junctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high-frequency response of electrons in solids and plasmons.

ECE 4110 Random Signals in Communications and Signal Processing
Fall. 4 credits. Prerequisite: ECE 2200 and ECE 3100 or equivalent. Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process, Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ECE 4120 Introduction to Nuclear Science and Engineering (also MAE 4580, TAM 4130)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940. For description, see TAM 4130.

ECE 4150 GPS: Theory and Design (also MAE 4150)
Fall. 4 credits. Prerequisites: ECE 2200 and ECE 2940 or equivalent. An introduction to GPS theory and navigation. Topics include: GPS operation, geometry, signal processing, signal acquisition and tracking, and signal integrity. The course covers basic solid state and semiconductor physics relevant for understanding electronic and optical devices. Topics include crystalline structures, bonding in atoms and solids, energy bands in solids, electron statistics and dynamics in energy bands, effective mass equation, carrier transport in solids, Boltzmann transport equations, semiconductor phonon and hetero-junctions, optical processes in semiconductors, electronic and optical properties of semiconductor nanostructures, semiconductor quantum wells, wires, and dots, electron transport in reduced dimensions, semiconductor lasers and optoelectronics, high-frequency response of electrons in solids and plasmons.

ECE 4210 Signal Processing Algorithms in Support of Painting Analysis
Fall. 3 credits. Prerequisites: ECE 2200 and MATH 2940. Recommended. ECE 3250. The analysis of fine art paintings by art historians and conservation specialists involves the close examination of various images (e.g., visible light, x-ray) of the painting. This course will focus on the paintings of Vincent Van Gogh and highlight case studies of recent technical examinations. The signal processing tasks encountered will be extracted and rudimentary solutions proposed based on...
fundamental signal processing techniques. Students will assess and improve these "starter" schemes, performing (a) periodicity extraction (e.g., for canvas thread counting), (b) set membership discrimination (e.g., for artist identification), and (c) multiple image alignment (e.g., for X-ray stitching). In this emerging application for signal processing, several of these tasks have no widely adopted computer-assisted schemes. MATLAB will be used for implementation of the algorithms on high resolution image data provided by the Van Gogh Museum (Amsterdam, the Netherlands).

**ECE 4250 Digital Signal Processing**
Fall. 4 credits. Prerequisites: ECE 2200 and 3100.
Introduces statistical signal processing. Signal representation and manipulation are covered via correlation and using the DFT/FFT to estimate other transforms; applications of these topics are then covered, including quantization, quantization effects in digital filters, multirate DSP, filter banks, delta-sigma modulation, power spectrum estimation, and introductions to Wiener and Kalman filtering and image processing.

**ECE 4260 Applications of Signal Processing**
Spring. 4 credits. Crediting Design Experience (CDE) course. Prerequisite: ECE 4250 or permission of instructor. Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, spectrum estimation, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ECE 4271 Evolutionary Processes. Evolutionary Algorithms, Evolutionary Games**
Fall. 3 credits. Prerequisites: MATH 2930, MATH 2940, and ECE 3100 or instructor's permission. Offered alternate years. The course covers a collection of topics relevant to the modeling, analysis, simulation, and optimization of large complex multi-agent systems. Topics include Markov chains, theoretical issues in evolutionary algorithms and their historical antecedents, and an introduction to evolutionary game theory. The course assumes no prior background in evolutionary algorithms or game theory.

**ECE 4300 Lasers and Optoelectronics**
Fall. 4 credits. Prerequisite: ECE 3030 or equivalent.
Introduction to the operation and application of lasers, Cover diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, and laser design. Discusses applications of coherent radiation to nonlinear optics, communication, and research.

**ECE 4320 MicroElectro Mechanical Systems (MEMS) (also MAE 4320)**
Fall. 4 credits. Prerequisite: ECE 3150 or permission of instructor.
Introduction to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS, including materials, microstructures, devices and simple microelectro-mechanical systems, scaling electronic and mechanical systems to the micrometer/mm-scale, material issues, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structural, electronic systems, and the disciplines of physics and chemistry.

**ECE 4330 Microwave Theory, Devices, and Applications**
Fall. 4 credits. Prerequisite: ECE 3030. Introduction to the properties of microwave devices and their applications in circuits, waveguides, resonators, and antennas. The course will cover the considerations that must be appreciated for frequency at or below 1GHz. Topics include microwave devices, microwave measurement techniques, S-parameters, signal flow diagrams, matching networks, basic circuit design considerations, and computer-aided device and circuit analysis. The course emphasizes physical understanding and intuitive design methods. Labs cover basic measurement techniques for native and passive elements as well as low noise amplifier design.

**ECE 4370 Fiber and Integrated Optics**
Spring. 4 credits. Crediting Design Experience (CDE) course. Prerequisite: ECE 3100 or equivalent. Physical principles of optical waveguides. Wave equation solutions to the mode structure in waveguides, numerical analysis, mode coupling, dispersion and bandwidth limitations, optical materials, photonic band gap structures. Project design of planar optical components.

**ECE 4450 Computer Networks and Telecommunications**
Fall. 4 credits. Prerequisites: ECE 3140 or CS 3420 and course in probability. Design, analysis, and implementation of computer and communication networks and systems. This is a basic course in networking. Examples of topics include data transmission and data encoding, data link control, circuit vs. packet switching, Asynchronous Transfer Mode, local area network technology, network interconnections, protocol design (OSI and IP), network security, and multimedia. Emphasis is placed on performance evaluation.

**ECE 4450 Electric Power Systems I**
Fall. 4 credits. Prerequisite: ECE 3200 or equivalent.
Acquaints students with modern electric power system analysis and control. Stresses analysis techniques appropriate for the restructuring industry and advanced protection and control systems. Topics include transmission line models, transformers and per unit system, generator models, network matrices, power flow, system protection, computer relaying, and GPS-based measurement and control systems.

**ECE 4520 Electric Power Systems II**
Spring. 4 credits. Prerequisite: ECE 3200 or permission of instructor. Next offered 2010–2011. Acquaints students with modern electric power system operation and control. Explores aspects of the restructuring of the industry and its implications for planning and operation objectives and methods. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics, and system protection.

**ECE 4530 Analog Integrated Circuit Design**
Fall. 4 credits. Crediting Design Experience (CDE) course. Prerequisite: ECE 3150 or equivalent. Overview of devices available to analog integrated-circuit designers in modern CMOS and BiCMOS processes: resistors, capacitors, MOS transistors, and bipolar transistors. Basic building blocks for linear analog integrated circuits: single-stage amplifiers, current mirrors, and differential pairs. Transistor-level design of linear analog integrated circuits, such as operational amplifiers and operational transconductance amplifiers. Layout techniques for analog integrated circuits. Throughout the course, emphasis is placed on design-oriented analysis techniques.

**ECE 4570 Silicon Device Fundamentals**
Spring. 4 credits. Prerequisites: ECE 3150 and 3060 or MSE 2620 or AEP 4500. The course teaches fundamental principles on semiconductor carrier statistics, band diagrams, pn-junction diodes, heterojunctions, Schottky diodes, BJTs, MOS capacitor and MOSFET. Emphasis is put on the MOSFET designs for advanced VLSI technology from its physical structure, accurate modeling, manufacturability and applications. Device designs will include short channel effects, gate-stack alternatives, band engineering, and strain engineering. By using computer simulation and experimental data, the course will culminate in a design project dealing with technical concerns in current VLSI industry. The goal for this course is to train circuit, device, and process engineers for semiconductor technology research and development.

**ECE 4720 Feedback Control Systems**
(also CHEM 4720, MAE 4780)
Fall. 4 credits. Prerequisites: CHEM 3720, ECE 2200, MAE 3260, or permission of instructor. For description, see MAE 4780.

**ECE 4740 Digital VLSI Design**
Spring. 4 credits. Prerequisite: ECE 3150. Introduction to digital VLSI design. Topics include basic transistor physics, switching networks and transistors, combinational and sequential logic, latches, clocking strategies, domino logic, PLAs, memories, physical design, floor planning, CMOS scaling, and performance and power considerations, etc. Lecture and homework topics emphasize disciplined design, and include CMOS logic layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations.

**ECE 4750 Computer Architecture**
(also CS 4420)
Fall. 4 credits. Crediting Design Experience (CDE) course. Prerequisites: ENGRD 2300 and ECE 3140/CS 3420. Topics include instruction set principles, advanced pipelining, data and control hazards, multi-cycle instructions, dynamic scheduling, out-of-order execution, speculation branch prediction, instruction-level parallelism, and high-performance microarchitectures. Students learn the issues and trade-offs involved in the design of modern microprocessors. Labs involve the design of a processor and cache subsystem at the RTL level.
ECE 4910–4920 Senior Electrical and Computer Engineering Project
4910, fall; 4920, spring, 1–8 credits.
For description, see ECE 2910–2920.

ECE 4930–4939; 4940–4949 Senior Electrical and Computer Engineering Group Project
4930–4939, fall; 4940–4949, spring, 1–8 credits.
For description, see ECE 2930–2939, 2940–2949.

ECE 5100 Professional Seminar for M.Eng. Students
Fall. 2 credits. Prerequisites: Must be an M.Eng. student.
This seminar introduces students to professional issues that are important as they begin their professional career. Topics include M.Eng. project options; professional expectations; project planning and management; effective teamwork; technical writing and communications; impact of environmental, economic, and societal constraints in design; entrepreneurship possibilities; and career planning issues.

ECE 5310 Quantum Optics for Photonics and Optoelectronics
Fall. 4 credits. Prerequisites: ECE 3060 and 4070, or PHYS 4443.
Introduces the basic concepts of quantum optics and quantum electronics necessary for understanding the behavior of optical fields in photonic and optoelectronic devices and systems. Topics include quantization of the electromagnetic field, quantum mechanical properties of photon states, vacuum fluctuations, noise and quantum Langevin equations, matter-photon interactions, phase-sensitive and phase-insensitive optical amplifiers, direct and coherent photon detection, lasers, parametric oscillators, and photonic devices for quantum information processing.

ECE 5320 Applied Systems Engineering
(also CEE 5240, CIS 5340, MAE 5910, ORIE 5120, SYSEN 5100)
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in group-based project with strong system design component approved by course instructor.
For description, see SYSEN 5100.

ECE 5330 Semiconductor Optoelectronics
Fall. 4 credits. Prerequisites: ECE 4300, ECE 4570, or permission of instructor. Next offered 2010–2011.
Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper are required.

ECE 5340 Power Semiconductor Devices
Spring. 3 credits. Prerequisites: ECE 4570.
It is estimated that at least 50 percent of the electricity used in the world is controlled by power electronics. The efficiency of power electronics circuits has a direct connection with energy conservation. This course seeks to introduce the student to basic power electronic devices, basic power electronic circuits, and their suitability for power applications spanning a large range of currents and voltages. Device operation, design, fabrication, and power electronic circuit issues will be discussed. Emphasis will
be on the device aspects. Examples will be drawn from current Si device technology as well as emerging power devices technologies developed from wide bandgap semiconductors.

**ECE 5350 Semiconductor Physics**

Fall. 4 credits. Prerequisites: ECE 4070 and 4570, or permission of instructor. Offered alternate years from ECE 5370; next offered 2010–2011.

Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, impurities, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, and surface and interface effects.

**ECE 5360 Nanofabrication of Semiconductor Devices (also MSE 5410)**

Fall. 4 credits. Prerequisites: ECE 3150 and ECE 4570 or equivalent.

Introduction to modern nanofabrication technologies used to produce integrated circuits. Students perform a series of fabrication steps including lithography, metallization, plasma etching and annealing to realize working semiconductor devices (Schottky diodes, pn junction diodes, MOS capacitors, and MOSFETs) in the lab. Prior knowledge of the operation of these devices is essential as each will be tested to verify the success (or failure) of the fabrication process.

**ECE 5370 Nanoscale Devices, Circuits, and Physics**

Fall. 4 credits. Prerequisites: ECE 4570 or permission of instructor. Offered alternate years from ECE 5350.

An integrated study connecting semiconductor physics with properties of electronic and optic devices at the nanoscale and the use of electronic devices in circuits. Topics include electronic and optic phenomena in confined structures and in nanoscale limits—single-electron, nanoscale quantum and size effects such as in tunneling and optical transitions, transistor operation in limited scattering limits, plasmonics, molecular transport, interface effects, and the unification of device attributes with implementation in circuits.

**ECE 5470 Computer Vision**

Fall. 4 credits. Prerequisites: ECE 2200 (or CS 2800 or 3420) or permission of instructor.

Covers computer acquisition and analysis of image data with emphasis on techniques for robot vision. Concentrates on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms is required.

**ECE 5540 Advanced Analog VLSI Circuit Design**

Spring. 4 credits. Prerequisite: ECE 4530.

Advanced analog integrated circuit and system design. Topics include integrated continuous-time filter design, translinear circuits and systems, dynamic analog techniques, integrated discrete-time filter design, and Nyquist-rate data converter design.

**ECE 5580 Compound Semiconductor Electronics**

Spring. 3 or 4 credits; 4 with a project. Prerequisite: ECE 4570 or equivalent. Next offered 2010–2011.

Electronic properties of advanced semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductors, metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

**ECE 5560 Fundamentals of Networks**

Fall. 4 credits. Prerequisite: ECE 3100 or 4110, or permission of instructor.

Introduction to the theory and practice of error control codes. Topics include algebraic codes, convolutional codes, concatenated codes, and codes on graphs. Considers the construction and decoding of Reed-Solomon (RS) codes in some detail as well as the iterative decoding and codes and codes on graphs. The use of error control in wireless systems is discussed throughout the course.

**ECE 5590 Error Control Codes**

Fall. 4 credits. Prerequisite: ECE 3200 or 5210 or equivalent; strong familiarity with linear algebra.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 5560 Detection and Estimation**

Fall. 4 credits. Prerequisite: ECE 3100, 4110, or permission of instructor.

**ECE 5610 Error Control Codes**

Fall. 4 credits. Prerequisite: ECE 3200 or 5210 or equivalent; strong familiarity with linear algebra.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 5620 Fundamental Information Theory**

Spring. 4 credits. Prerequisite: ECE 4110 or equivalent.

Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

**ECE 5630 Compound Semiconductor Electronics**

Spring. 3 or 4 credits; 4 with a project. Prerequisite: ECE 4570 or equivalent. Next offered 2010–2011.

Digital properties of advanced semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductors, metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Includes six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

**ECE 5640 Detection and Estimation**

Fall. 4 credits. Prerequisite: ECE 3100, 4110, or permission of instructor.

**ECE 5650 Detection and Estimation**

Fall. 4 credits. Prerequisite: ECE 3100 or equivalent course in probability.

Introductory course on tools and techniques for modeling communication networks, synthesis of network protocols, analysis of network protocols’ operation, and performance evaluation of network protocols when deployed in a particular communication network. Analytical tools include advanced probability theory, discrete and continuous-time Markov chains, queuing theory, and graph theory. Simulation methods and statistical tools for analysis of data obtained from simulation models are studied. The basic mechanisms used in designing communication protocols in wireless and wired networks are illustrated by examples from numerous practical systems. Discussions of some classical papers help students learn about best practices as well as common mistakes occurring in studies of communication networks.

**ECE 5670 Digital Communications**

Fall. 4 credits. Prerequisites: ECE 3100, 4110, or permission of instructor.

Graduate-level introduction to fundamentals of digital communications. Complex random signals. Digital modulations and optimal receiver principles. Baseband and passband transmission and processing. Interference channels and equalization techniques. Performance analysis including bit error rate calculation and bounds, cutoff rate and channel capacity. Applications in wireless and digital subscriber loops (DSL).

**ECE 5680 Mobile Communication Systems**

Spring. 4 credits. Prerequisites: ECE 4110 and 4670.

Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

**ECE 5710 Arithmetic Circuits**

Fall. 3 or 4 credits. Prerequisites: ECE 4740, CS 2110. Offered alternate years from ECE 5740. Next offered 2010–2011.

Designing arithmetic circuits. Topics include number representation, high-performance arithmetic including addition, multiplication, division, and other common operations found in modern computer systems.

**ECE 5715 Computer Hardware Design Practicum**

Fall. 4 credits. Prerequisite: ECE 4750 or permission of instructor.

This course will examine the hardware, and to some degree the software, necessary to build a complete computer system, including the CPU, memory, mass storage, input and output devices, and basic operating system functions. In a series of labs over the course of the semester, students will design and implement a working computer system using an FPGA development board.

**ECE 5720 Parallel Computer Architecture (also CS 5420)**

Fall. 4 credits. Prerequisite: ECE 4750. Principles and trade-offs in the design of parallel architectures. Emphasis is on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

**ECE 5730 Memory Systems**

Fall. 4 credits. Prerequisites: ECE 4750, ECE 5720 (co-requisite). Next offered 2010–2011.

Principles and current practices of memory system design. Topics include cache hierarchy optimization, high performance memory...
controllers and technologies, approaches to power and reliability issues, exploiting memory level parallelism, memory systems for parallel computer architectures, and case studies.]

**ECE 5740 Advanced Digital VLSI**
Fall. 4 credits. Prerequisites: ECE 3140 and ECE 4740.
Top-down approach to asynchronous design and the relation between computer architecture and VLSI design. For the asynchronous design component: high-level synthesis, design by program transformations, and correctness by construction. Topics include delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, and electrical optimizations. Students will complete a group project of the design of a microprocessor.

**ECE 5750 Advanced Microprocessor Architecture**
Spring. 4 credits. Prerequisite: ECE 4750 or CS 4420.
This course is a revised version of the former ECE 575 High-Performance Microprocessor Architecture. In addition to performance enhancement techniques of modern single-core microprocessors such as branch prediction and speculation methods, which have been the focus of ECE 5750, this course will also discuss reconfigurable architecture, on-chip interconnect, and non-performance issues such as security and verification.

**ECE 5760 Advanced Microcontroller Design**
Fall. 4 credits. Prerequisites: ECE 4750 and ECE 4760 or equivalent.
Design of system-on-chip applications. Students working in pairs design, debug, and construct several systems that illustrate the design of embedded processors with custom peripherals running a real-time operating system. The content focuses on laboratory work. The lectures are used primarily for the introduction of examples, description of specific modules to be designed, and instruction on the hardware and high-level design tools to be employed.

**ECE 5770 Resilient Computer Systems**
Spring. 4 credits. Prerequisite: ECE 4750.
Principles in designing resilient computer architectures. Topics include sources of faults and their manifestation, information redundancy, fault-tolerant hardware and software approaches, resilient parallel architectures and networks, security, modeling and evaluation, and case studies.

**ECE 5780 Computer Analysis of Biomed Images (also BME 5780)**
Spring. 4 credits. Prerequisite: permission of instructor; engineering, biomedical, or biology background.
Powerful imaging modalities with attending computer image processing methods are evolving for the evaluation of health and the detection of disease. This course focuses on the qualitative and quantitative analysis of such images and Computer Aided Diagnosis (CAD), i.e., the automatic identification and classification of abnormalities by the computer.

**ECE 5790 Advanced High-Speed and RF Integrated Circuits**
Spring. 4 credits. Prerequisites: ECE 4330 and ECE 4550.
Principles of analog integrated circuit design in the Giga-Hertz frequency range. This course covers the fundamental understanding of high-frequency circuit building blocks such as low noise amplifiers, mixers, oscillators, phase locked loops, frequency synthesizers, clock and data recoveries, and power amplifiers. Additionally, because some of the traditional microwave building blocks such as transmission lines and integrated circuit elements are essential parts of today’s high speed integrated circuits, the course will briefly cover them. Throughout the course, a systematic review of advanced wireless and wireline applications would be covered. The course emphasizes physical understanding and intuitive design methods as well as qualitative techniques and computer simulations. The course has collaborative class projects, based on real-world problems.

**ECE 5800 Control and Optimization of Information Networks**
Spring. 4 credits. Prerequisites: ECE 4110 and ECE 4450. The focus may vary from year to year.
Introduction to current research directions in networking featuring the Internet. Assumes basic knowledge of signals and systems as well as random processes. Necessary tools from optimization, dynamical systems, and related economic theory will be introduced. Research topics may include layering, routing, medium access control, flow control, and peer-to-peer networks. Students are expected to hand in homework assignments, discuss one set of papers in class, and participate in a course project.

**ECE 5810 Introduction to Plasma Physics (also AEP 6060)**
Fall. 4 credits. Prerequisite: ECE 3030 or equivalent. First-year graduate-level course; open to exceptional seniors.
Topics include plasma state; motion of charged particles in fields; drift-orbit theory; Coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; and elementary applications to space physics, plasma technology, and controlled fusion.

**ECE 5820 Advanced Plasma Physics**
Fall. 4 credits. Prerequisite: ECE 5810. Next offered 2010–2011.
Boltzmann and Vlasov equations; waves in hot magnetized plasma; Landau and cyclotron damping; micro-instabilities; low-frequency waves and instabilities; nonlinear phenomena: solitons, nonlinear waves, tearing, and reconnection.

**ECE 5830 Introduction to Technical Management**
Fall. 3 credits. Prerequisite: industrial experience or equivalent (summer work or schoolwork).
This course is taught from the perspective of a chief technology officer and is targeted at M. Eng. and management students interested in “real world” problems. It provides an introduction via case examples to the technical, management, and organizational issues of developing and marketing products in high-tech businesses. The focus is on the unique nature of this type of business, including managing with high risk/uncertainty levels, learning to manage very diverse project teams, and recognizing technical versus market success in order to make good business decisions.

**ECE 5840 Advanced GPS Receiver Design**
Spring. 4 credits. Prerequisite: ECE 4150 or MAE 4150. Next offered 2010–2011.
GPS receiver design from the RF section to the observables is investigated and implemented in MATLAB software. Creation of C/A code, upsampling, down conversion, code correlation, acquisition, tracking, and interpreting the navigation message. Students start with the digitized GPS bandwidth and build a software receiver to create the navigation solution as the final project.

**ECE 5850 Upper Atmospheric and Ionospheric Physics I**
Fall. 4 credits. Prerequisites: PHYS through 2214 or equivalent, introductory chemistry, ECE 4860 or equivalent.
The structure and dynamics of the ionosphere and upper atmosphere. Charged particle production, loss and transport. Coupling to the neutral atmosphere, ionospheric instabilities. High-latitude currents and plasma convection and its implications for the ionosphere and upper atmosphere.

**ECE 5860 Upper Atmospheric and Ionospheric Physics II**
Spring. 4 credits. Prerequisites: ECE 5810 and ECE 5850.
Topics include solar phenomena, solar wind, and space weather; magnetospheric structure and physical processes; plasma instabilities in the ionosphere and magnetosphere; and magnetic reconnection and the relation to high-latitude phenomena.

**ECE 5870 Energy Seminar I (also CHEM 5870, MAE 5459)**
Fall. 1 credit.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle are discussed by faculty members from several departments in the university and by outside experts. Topics include energy resources and economics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and air pollution control.

**ECE 5880 Energy Seminar II (also CHEM 5880, MAE 5469)**
Spring. 1 credit.
For description, see ECE 5870; however, different speakers and/or topics are discussed in ECE 5880.

**ECE 5890 Advanced Methods in Radar (also EAS 5880)**
Fall, 5950; fall, 5960; spring, 3 credits. Prerequisites: EAS/ECE 4870 or permission of instructor.
For description, see EAS 5880.

**ECE 5950–5960 Special Topics in Electrical and Computer Engineering**
Fall, 5950; fall, 5960; spring, 3 credits. Prerequisite: ECE 4870 or permission of instructor. Seminar, special interest, or temporary course.

**ECE 6830 Seminar in GPS and GNSS**
Fall. 3 credits. Prerequisite: ECE/MAE 4150 or equivalent. Next offered 2010–2011.
Seminar in GPS (Global Positioning System) and GNSS (Global Navigation Satellite Systems) science and engineering. Current topics in receiver design such as low signal acquisition, ambiguity resolution, and software receivers and topics in GPS science such as space weather effects on GPS and the use of...
GPS for remote sensing. Students typically make one presentation during the semester.

**ECE 6930–6931 Master of Engineering Design I & II**
6930, fall; 6931, spring. 3-8 credits. Two-semester course: must enroll both semesters; will receive R grade for first semester. For students enrolled in M.Eng. (Electrical and Computer Engineering) degree program.

Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a class number. To enroll, students must complete a “Course Enrollment Petition” and submit it to the Graduate School. (See roster for appropriate class number.)

**ECE 6950–6960 Special Topics in Electrical and Computer Engineering**
6950, fall; 6960, spring. 1-9 credits. Seminar, special interest, or temporary course.

**ECE 6970–6980 Master of Engineering Research**
6970, fall; 6980, spring. 7 credits. Prerequisite: For students enrolled in M. Eng. (Electrical) degree Research Track program. Must enroll both semesters. Project designed for the M.Eng. student in the Research Track program and more resembles a research thesis. Students will work closely with an ECE Graduate Field Faculty member on a common area of interest. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

**ECE 7910–7920 Thesis Research**
7910, fall; 7920, spring. 1-15 credits. For students enrolled in master’s or doctoral program. Each professor is assigned a section number. To register, see roster for appropriate six-digit course ID numbers.

**Information Science, Systems, and Technology**

For complete descriptions, see the INFO listing in the CIS section.

**INFO 1300 Introductory Design and Programming for the Web (also CS 1300)**
Fall. 3 credits.
For description, see INFO 1300 in CIS section.

**INFO 2040 Networks (also ECON 2040, SOC 2090) (SBA)**
Spring. 4 credits.
For description, see ECON 2040.

**INFO 2140 Cognitive Psychology (also COGST/PSYCH 2140) (KCM)**
Spring. 4 credits. Limited to 175 students. Prerequisite: sophomores standing.
Graduate students, see INFO 6140.
For description, see PSYCH 2140.

**INFO 2300 Intermediate Design and Programming for the Web (also CS 2300)**
Spring. 3 credits. Prerequisite: INFO 1300 strongly recommended. Must be taken before INFO 3450.
For description, see INFO 2300 in CIS section.

**INFO 2310 Topics in Web Programming and Design**

**INFO 2450 Communication and Technology (also COMM 2450) (SBA)**
Fall, summer. 3 credits.
For description, see COMM 2450.

**INFO 2921 Inventng an Information Society (also AMST/ECE/ENGRG 2960, HIST 2920, STS 2921)**
Spring. 3 credits.
For description, see ENGRG 2980.

**INFO 2950 Mathematical Methods for Information Science**
Spring. 4 credits. Corequisite: MATH 2301 or equivalent.
For description, see INFO 2950 in CIS section.

**INFO 3200 New Media and Society (also COMM 3200)**
Spring. 3 credits.
For description, see COMM 3200.

**INFO 3300 Data-Driven Web Applications (also CS 3300)**
Spring. 3 credits. Prerequisite: CS 2110 and (INFO 2300 or permission of instructor).
For description, see INFO 3300 in CIS section.

**INFO 3400 Psychology of Social Computing (also COMM 3400)**
Fall. 3 credits. Prerequisite: INFO 2450. Next offered 2010–2011.
For description, see COMM 3400.

**INFO 3450 Human-Computer Interaction Design (also COMM 3450) (SBA)**
Fall. 3 credits. Prerequisite: INFO 2450 or permission of instructor. May be taken simultaneously with INFO 2450.
For description, see COMM 3450.

**INFO 3490 Media Technologies (also COMM 3490, STS 3491) (CA)**
Spring. 3 credits. Offered odd-numbered years; next offered 2010–2011.
For description, see COMM 3491.

**INFO 3551 Computers: From the 17th Century to the Dotcom Boom (also STS 3551) (HAI)**

**INFO 3561 Computing Cultures (also STS 3561)**
Spring. 4 credits. No technical knowledge of computer use presumed or required.
INFO 3551 and 3561 may be taken separately or in any order.
For description, see STS 3561.

**INFO 3650 Technology and Collaboration (also COMM 3650)**
Spring. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 3650.

**INFO 3660 History and Theory of Digital Art (also ARTH 3650) (CA)**
Fall. 4 credits. Next offered 2010–2011.
For description, see ARTH 3650.

**INFO 4290 Copyright in the Digital Age (also COMM 4290)**
Fall. 3 credits. Offered odd-numbered years.
For description, see COMM 4290.

**INFO 4300 Information Retrieval (also CS 4300)**
Fall. 3 credits. Prerequisite: CS/ENGRD 2110 or equivalent.
For description, see INFO 4300 in CIS section.

**INFO 4302 Web Information Systems (also CS 4302)**
Spring. 3 credits. Prerequisites: CS 2110 and some familiarity with web site technology.
For description, see INFO 4302 in CIS section.

**INFO 4350 Seminar on Applications of Information Science (also INFO 6350)**

**INFO 4400 Advanced Human-Computer Interaction Design (also COMM 4400) (SBA)**
Spring. 3 credits. Prerequisite: INFO 3450.
For description, see COMM 4400.

**INFO 4450 Seminar in Computer-Mediated Communication (also COMM 4450)**
Fall. 3 credits. Prerequisite: INFO 2450.
For description, see COMM 4450.

**INFO 4470 Social and Economic Data (also ILRLE 4470)**
Fall. 4 credits. Prerequisites: one semester of calculus, IS statistics requirement, one upper-level social science course, or permission of instructor.
For description, see INFO 4470 in CIS section.

**INFO 4500 Language and Technology (also COMM 4500) (SBA)**
Spring. 3 credits. Prerequisite: INFO 2450 or permission of instructor.
For description, see COMM 4500.

**INFO 4900 Independent Reading and Research**
Fall, spring. 1-4 credits.

**INFO 4910 Teaching in Information Science, Systems, and Technology**
Fall, spring. Variable credit.

For description, see COMM 5150 of the Internet.

**INFO 5300 The Architecture of Large-Scale Information Systems (also CS 5300)**
Spring. 4 credits. Prerequisite: INFO 3300 or CS 4320.
For description, see INFO 5300 in CIS section.

**INFO 6140 Cognitive Psychology (also COGST/PSYCH 6140)**
Spring. 4 credits.
For description, see PSYCH 6140.

**INFO 6300 Advanced Language Technologies (also CS 6740)**
Fall, spring. 3 credits. Prerequisite: permission of instructor. Neither INFO/CSE 4300 nor CS 4740 are prerequisites.
For description, see CS 6740 in CIS section.

**INFO 6341 Information Technology in Sociocultural Context (also STS 6341)**
Spring. 4 credits.
For description, see INFO 6341 in CIS section.

**INFO 6350 Seminar on Applications of Information Science (also INFO 4350)**
This experiential learning course will explore materials science and engineering to students considering MSE as their major. Lectures by MSE professors, alumni, and industrial researchers. Topics covered include MSE major requirements as preparation for real-world engineering. Curricula and MSE research involving undergraduates. Industrial R&D Tours of Cornell centers and MSE facilities. May be continued or a one-semester affiliation with a research group.

MSE 2620 Electronic Materials for the Information Age (also ENGRD 2620)
Spring. 3 credits. Prerequisite: MATH 1920 Corequisite: PHYS 2213 or permission of instructor. R. Thompson. For description, see ENGRD 2620.

MSE 2910-2920 Research Involvement Ia and Ib
Fall. 1 credit. S–U or letter grades; grade based on class participation and course project. C. Umbach. Introduces materials science and engineering to students considering MSE as their major. Lectures by MSE professors, alumni, and industrial researchers. Topics covered include MSE major requirements as preparation for real-world engineering. Curricula and MSE research involving undergraduates. Industrial R&D Tours of Cornell centers and MSE facilities. May be continued or a one-semester affiliation with a research group.

MSE 3010 Materials Chemistry (also MSE 5810)
Fall. 3 credits. U. Wiesner. Provides a molecular understanding of materials properties: quantum chemistry, symmetry aspects of chemical bonding, solid state reactions, and electrochemistry. Materials include polymers, organic semiconductors, organic-inorganic hybrids, and biomaterials.

MSE 3030 Thermodynamics of Condensed Systems (also MSE 5830)
Fall. 4 credits. Prerequisites: PHYS 2214 and MATH 2940. M. O. Thompson. Introduces the three laws of thermodynamics as the fundamental basis for thermal and chemical equilibria, coupled with statistical mechanical interpretations for entropy and specific heat capacities. Applies these principles to understanding phase equilibria and phase diagrams, heterogeneous reactions, solutions, surfaces, and defects. Introduces electrochemistry and fuel/power cells.

MSE 3040 Kinetics, Diffusion, and Phase Transformations (also MSE 5840)
Spring. 4 credits. Prerequisite: MSE 3030 or permission of instructor. R. Hennig. Topics include phenomenological and atomistic theories of diffusion; diffusion in metals, alloys, and nonmetals, including polymers; diffusion in the presence of driving forces; fast diffusion paths; thermo- and electrotransport; interfaces and microstructure; nucleation and growth; growth of product layers (parabolic and linear kinetics); solidification of alloys; diffusion and diffusionless transformations in solids; glass transition.

MSE 3050 Electronic, Magnetic, and Dielectric Properties of Materials (also MSE 5850)
Spring. 3 credits. Prerequisite: MSE 2060 and MSE 2620 or permission of instructor. D. Schlom. Discusses the basic elements of structure: order and disorder; ideal gas; crystals; liquids; amorphous materials; polymers; liquid crystals; composites; crystal structure; x-ray diffraction. Electronic structure of materials and connection to transport, magnetic, and dielectric properties. Wave and particle nature of electrons, wave packets, potential wells, barriers, tunneling. Valence electron behavior in crystals, density of states for metals, Fermi level, field and thermionic emission, Schottky barriers. Periodic potentials and band structure of crystals. Intrinsic and doped semiconductors, junction electronic and optical devices. Physical origin of magnetic behavior, ferromagnetic domains, magnetoresistance. Materials for data storage and manipulation. Polarization in dielectric materials; frequency dependence of dielectric constants and refractive indices. Ferroelectric domains. Dielectric components in devices. The close connection between fundamental concepts and current technology is emphasized.

MSE 3070 Materials Design Concepts I
Fall. 2 credits. C. Liddell. For description, see MSE 4070.

MSE 3110 Junior Laboratory I
Fall. 1 credit. Staff. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on materials from courses in chemistry of materials and thermodynamics of condensed systems.

MSE 3120 Junior Laboratory II
Spring. 1 credit. Staff. Practical laboratory covering the analysis and characterization of materials and processing. Labs are based on course material in kinetics, diffusion, and phase transformation and electronic, magnetic, and dielectric properties of materials.
MSE 3910–3920 Research Involvement  
Ilia and Ilia  
3910, fall; 3920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.  
For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4020 Mechanical Properties of Materials, Processing, and Design  
(also MAE 3120, MSE 5820)  
Fall. 3 credits. Prerequisite: MSE 2060. Corequisite: MSE 4040 or permission of instructor. D. Ast.  
Relationship between microscopic mechanisms and macroscopic mechanical behavior of engineering materials, how mechanical properties can be modified, and criteria for selection and use of materials in design. Stress, strain and elastic constants as tensor quantities, viscoelasticity and damping, plastic deformation, creep deformation, fracture, and fatigue.

MSE 4030–4040 Senior Materials Laboratory I and II  
4030, fall; 4040, spring. 3 credits each semester. D. Grubb.  
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials’ properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

MSE 4050–4060 Senior Thesis I and II  
4050, fall; 4060, spring. 4 credits each semester. Requirement for graduation with honors. Open to advanced undergraduates in lieu of senior materials laboratory. M. Thompson.  
Proposals for thesis topics should be approved by the supervising faculty member before beginning the senior year. Approved thesis topics normally include original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. Students must take both semesters to complete the laboratory requirement.

MSE 4070 Materials Design Concepts II  
Fall. 2 credits. C. Liddell.  
Introduces materials design in the context of real-world materials design projects carried out in industry. In the first portion of the course, the process of engineering design is studied in light of economic, environmental, regulatory, and safety issues. Patent searching and communication skills are addressed. In the second portion, speakers from industry lecture on case studies of materials design problems. Students give oral presentations and write technical reports based on case studies.

MSE 4100 Physical Metallurgy and Applications (also MSE 6100)  
Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor. S. Bader.  
Microstructure and properties of metals and alloys: processing, structure, defects, phase stability, diffusion, deformation, fracture, corrosion, conductivity, optical properties. Applications of metallurgical principles to high performance metallic materials include thin films and patterned structures for use in microelectromechanical systems, superalloys for high-temperature engine applications, shape memory alloys for biomedical applications, and others.

MSE 4330 Materials for Energy Production, Storage, and Conversion  
(also MSE 5345)  
Fall. 3 credits. R. Dieckmann.  
Concerned with materials and technologies related to energy production, storage, and conversion as well as to sensors used for monitoring toxic pollutants. The devices discussed include solar cells, fuel cells, batteries, and electrochemical sensors. Thermodynamic, kinetic, and electrochemical concepts and materials properties critical for such devices are the central part of this course.

MSE 4610 Biomedical Materials and Their Applications  
Spring. 3 credits. L. Estoff.  
Many types of materials are used in biomedical engineering to replace or supplement natural biological systems. Interaction with blood and tissues is always of primary importance, but depending on the use of the biomedical material, mechanical, optical, and transport properties may also be vital. After a general introduction to biomedical materials, case studies involving physiological systems are considered, and design of artificial parts and materials is investigated. Constraints such as methods of production, economics, regulatory approval, and legal liabilities are included. Examples may include dialysis, contact and intra-ocular lenses, heart valves, and the artificial pancreas. Every student is involved in a presentation about a case study.

MSE 4810 Technology Management  
(also MSE 5870)  
Designed to provide students in engineering and the sciences with the knowledge and analytical skills needed for a strategic competitive advantage. Most organizations recognize the critical importance of RD management in becoming and remaining world-class competitors. The course uses a combination of readings, class discussions, and outside lectures. Topics include technology evaluation, RD portfolio, intellectual property portfolio and management, technology transfer, and technology policy, and society.

MSE 4820 Plasma Processing of Electronic Materials (also ECE 4820)  
Spring. 3 credits. Prerequisites: PHYS 2213 and 2214 or equivalents. Offered if sufficient demand.  
For description, see ECE 4820.

MSE 4870 Ethics and Technology  
Ethics influences all decisions made by a technologist. This course discusses those factors that must be considered in reaching a decision involving technology, ranging from legal impact to consideration of community expectations.

MSE 4890 Colloids and Colloid Assemblies for Advanced Materials Applications (also MSE 5890)  
Recent global developments in the synthesis, modification, organization, and utilization of fine particles in nanotechnology and biotechnology fields. Underlying principles for control of particle characteristics such as mean size, shape, composition, internal homogeneity, structure of layered, hollow, porous, and heterostructures. Methods for the formation of ordered and patterned particle arrays employed in advanced materials based on latex, ceramic colloids, metal nanoparticles, semiconductor quantum dots, nanocapsules, and miniemulsions. Applications in photonics, biolabeling, biological screening, drug delivery, catalysis, and magnetic recording.

MSE 4910–4920 Research Involvement IVs and IVb  
4910, fall; 4920, spring. 3 credits each semester. Prerequisite: departmental approval. Staff.  
For description, see MSE 2910. May be continuation or a one-semester affiliation with a research group.

MSE 4950 Undergraduate Teaching Involvement  
Fall, spring. Variable credit. Staff.  
Gives credit to students who help in the laboratory portions of select MSE courses. The number of credits earned is determined by the teaching load and is typically 1–3.

MSE 5010–5020 Special Project  
Fall. spring. 6 credits. Staff. Master of Engineering research project.

MSE 5120 Mechanical Properties of Thin Films (also MAE 5130)  
Spring. 3 credits. Prerequisite: A course similar to ENGRD 2610 or permission of instructor. S. P. Baker. Next offered 2010–2011.  
Stresses, elastic and plastic deformation, creep and anelasticity, and fracture and delamination of thin films and patterned structures. How mechanical behavior at the nanoscale deviates from the predictions of scaling laws derived for bulk materials. Applications in microelectronics, optics, microelectromechanical systems, coatings, etc.

MSE 5210 Properties of Solid Polymers  
Spring. 3 credits. Prerequisite: ENGRD 2610. Corequisite: MSE 5030 or permission of instructor. C. Oh.  

MSE 5230 Physics of Soft Materials  
The course covers general aspects of structure, order, and dynamics of soft materials. Typical representatives of this class of materials are polymers, liquid crystals, gels, and surfactant solutions. A general formalism for the description of order in terms of orientation distribution functions is introduced. Examples are given for the measurement of order parameters for partially ordered materials. Finally, the dynamics of soft materials is
discussed. Besides transport and flow behavior aspects of the local dynamics of soft materials are presented. Emphasis is put on the discussion of various techniques frequently used (and available at Cornell) for the characterization of structure, order and dynamics of soft materials such as NMR or various scattering techniques. Using examples of modern multidimensional spectroscopic methods the issue of heterogeneous dynamics at the glass transition of amorphous liquids is presented at the end of the class.]
3-dimensional interacting systems. Also covers statistical thermodynamics of alloys, free-energy and phase diagrams, order–disorder phenomena, point defects in crystals, and statistical thermodynamics of interfaces.

**MSE 6040 Kinetics of Reactions in Condensed Matter**
Spring. 3 credits. R. Dieckmann. Phenomenological and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic, ionic, semiconductor, and polymeric solids. Cartesian tensors are utilized for fields and properties. Covers phase stability and transformations; nucleation and growth, solidification and melt; displaceable transformations; phase coarsening processes, recrystallization, and grain growth; diffusion-controlled growth, interfacial reactions, moving boundary problems; grain-boundary migration controlled kinetics; viscosity, anelasticity, and diffusion creep.

**MSE 6050 Electronic Properties of Materials**
Spring. 3 credits. D. Schlom. Next offered 2010–2011. Develops concepts of band structure in crystalline and non-crystalline materials from a real-space as well as reciprocal space perspective, and reconciles the two approaches. Mathematical complexity is kept to a minimum. Specific topics include electronic properties of low-dimensional materials (surfaces, quantum wires, quantum dots), optical properties of metals and insulators, and electronic properties of exotic materials such as oxide and organic semiconductors. Technological applications to be addressed include switching devices, magnetism, superconductivity, and photonics, depending on student interests.

**MSE 6060 Condensed Matter Structure**
Fall. 3 credits. Prerequisite: course at level of MSE 2060. R. Robinson. Focuses on ways to characterize structure. Includes lectures by several faculty on structural determination on a wide range of materials. Elements of structure at length scales ranging from sub-nanometer to millimeter. Descriptions of structure in crystals, liquids, amorphous solids/glasses. Short- and long-range order, microstructures, cellular structure, do, domains, domain boundaries, 2-phase and composite structures. Techniques to probe structure: "direct" microscopy, real space imaging, including probe microscopies, optical, electron and X-ray methods. Indirect methods based on analysis of diffraction fields. Fourier/reciprocal space. Examples of application may include polymer structure, metal grain textures, dislocation arrays, cellular structure, structure of biological membranes, nano-composite structures, surfaces, interfaces and grain boundaries in semiconductors, structure of photonic materials, domain structures in ferroelectrics and ferromagnetics, biological materials.

**Related Course in Another Department**
Introductory Solid-State Physics (PHYS 4454, AEP 4500)

**Further Graduate Courses**

**MSE 6100 Physical Metallurgy and Applications (also MSE 4100)**
Spring. 3 credits. Prerequisites: MSE 2060, 3030, 3040 or permission of instructor. S. Baker. For description, see MSE 4100.

**MSE 6210 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 6070)**
Spring. 4 credits. Prerequisite: CHEM 6050 or permission of instructor. S. Lee. For description, see CHEM 6070.

**MSE 6550 Composite Materials (also MAE/TAM 6550)**
Spring. 4 credits. Staff. For description, see TAM 6550.

**MSE 6650 Principles of Tissue Engineering (also MAE/BME 6650)**
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. For description, see BME 6650.

**MSE 6710 Principles of Diffraction (also AEP 7110)**
Spring. 3 credits. Letter grades only. Assumes some knowledge of statistical thermodynamics, crystallography, elementary quantum mechanics, and theory of rate processes. J. D. Brock. For description, see AEP 7110.

**Specialty Courses**

**MSE 8000 Research in Materials Science**
Fall, spring. Credit TBA. Staff. Independent research in materials science under the guidance of a member of the staff.

**MSE 8010 Materials Science and Engineering Colloquium**
Fall and spring. 1 credit each semester. Enrollment limited to MSE Ph.D. students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MSE 8020 Materials Science Research Seminars**
Fall, spring. 2 credits each semester. Prerequisite: graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

**MECHANICAL AND AEROSPACE ENGINEERING**

**MSE 6110 Naval Ship Systems (also NAVS 2202)**
Fall. 3 credits. For description, see NAVS 2202.

**MAE 1130 Introduction to Computer-Aided Manufacture (CAM)**
Fall, approx. ten weeks (total 20 hrs. of instruction and 20 hrs. of lab). 1 credit. Limited enrollment. Prerequisites: MAE 2250 or equivalent experience or permission of instructor. Introduction to the fundamentals of computer-aided manufacture (CAM) and computer numerical control (CNC) programming. The course is a hands-on spring on CAM. Provides practical applications of the use of G codes and solid modeling software, CNC mill and/or lathe setup, tool selection, and operation. The course is required for students wishing to use the CNC equipment in the Emerson Labs Product Realization Facility for team or research projects. It is also required for advanced CAM/CNC work offered on an individual basis in the spring. May not be used to fulfill any MAE requirement.

**MAE 1170 Introduction to Mechanical Engineering (also ENGR 1170)**
Fall. 3 credits. 2 lec and 1 lab per week. Course in Introduction to Engineering series. For description, see ENGR 1170.

**MAE 1270 Introduction to Entrepreneurship and Enterprise Engineering (also ENGR 1270)**
Spring. 3 credits. Open to all Cornell students regardless of major. Prerequisites: none.
For description, see ENGR 1270.

**MAE 2120 Mechanical Properties and Selection of Engineering Materials**
Spring; may be offered in summer. 3 credits. Prerequisites: ENGRD/TAM 2020 (Statics) with minimum of C– (strictly enforced); MATLAB programming at level of CS 1112 or CS 1132. Mechanics of deformable bodies and a reinforcement of the concept of "simple engineering elements" for mechanical analysis associated with design. Introduction to the broad range of properties and behaviors of engineering materials as they relate to mechanical performance. Emphasis is placed on general states of stress and strain, on elasticity and combined loading effects. Failure criteria including yielding, buckling, fracture, fatigue, and environmental effects are developed. A general introduction to the function/constraints/objectives approach to material selection associated with mechanical design is provided with candidate material systems coming from metals, polymers, ceramics, and composites. A general overview of material structure and processing is presented within this context of material selection.

**MAE 2210 Thermodynamics (also ENGRD 2210)**
Fall, spring, may be offered in summer. 3 credits. Prerequisites: ENGRD 1920 Calculus for Engineers and PHYS 1112 Physics 1, Mechanics, or permission of instructor. For description, see ENGRD 2210.

**MAE 2250 Mechanical Synthesis**
Spring. 4 credits. Prerequisite: ENGRD 2020. Pre- or corequisites: ENGRD 2030 and 2210. Lab fee.
Hands-on introduction on the product design process, from conceptualization through prototype construction and testing. Design projects provide experience in basic prototyping skills using machine tools. Mechanical design used to demonstrate successful product design and function. Basic instruction in CAD and technical sketching.
MAE 3050 Introduction to Aeronautics
Fall, 3 credits. Prerequisite: TAM/ENGRD 2030. Pre- or corequisites: one of the following thermodynamics classes: ENGRD 2210 or BEE 2220 and one of the following fluid mechanics classes: MAE 3280 or CHEM 3230 or BEE 3310 or CEE 3310; upper-level engineers or permission of instructor.

MAE 3060 Spacecraft Engineering
Spring, 3 credits. Prerequisite: ENGRD 2030 or junior or senior MAE or ECE students or permission of instructor.
Introduction to spacecraft engineering from satellite design through launch to orbital operation. Topics include space missions, space environment, orbital mechanics, systems engineering, and satellite design. Most spacecraft subsystems are introduced including rocket theory, attitude determination and control, thermal design, and communications. Earth-orbiting and interplanetary satellites are considered. Discussions of current problems and trends in spacecraft operation and development.

MAE 3120 Mechanical Properties of Materials, Processing, and Design (also MSE 4020, 5820)
Fall, 4 credits.
For description, see MSE 4020.

MAE 3130 Atomic and Molecular Structure of Matter (also MSE 2060, 5810)
Spring, 4 credits.
For description, see MSE 2060.

MAE 3230 Introductory Fluid Mechanics
Fall; usually offered in summer through Engineering Cooperative Program. 4 credits. Limited to ME majors and those officially registered for AE or ME minor. Prerequisite: ENGRD 2020 and ENGRD 2030 and pre- or co-registration in ENGRD 2210, or permission of instructor.
Topics include physical properties of fluids, hydrostatics, conservation laws using control volume analysis and using differential analysis, Bernoulli’s equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers. Introduction to compressible flow.

MAE 3240 Heat Transfer
Spring; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: MAE 3230 or permission of instructor.
Topics include discussion of steady and unsteady heat conduction; forced and free convection; external and internal flows; radiation heat exchange; and heat exchangers and boiling.

MAE 3250 Analysis of Mechanical and Aerospace Structures
Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisite: ENGRD 2020 and MAE 2120.
Topics include mechanics of materials applied to analysis and design of structural components encountered in mechanical and aerospace systems, including multiaxial stress states, statically indeterminate structures, torsion and bending of nonsymmetric or curved members, stability, and stress concentrations. Solution strategies include both analytical and finite element methods.

MAE 3260 System Dynamics
Spring; usually offered in summer through Engineering Cooperative Program. 4 credits. Prerequisite: MATH 2930, MATH 2940, ENGRD 2030; junior standing.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems. Computer simulation and experimental studies of vibration and control systems.

MAE 3272 Mechanical Property and Performance Laboratory
Spring, 2 credits. Prerequisites: MAE 2120, 3250.
This course provides an introduction to the experimental methods, instrumentation, and data analyses associated with material property determination and mechanical performance of materials. Emphasis is placed on integration of theory and analysis with experimental methods.

MAE 3780 Mechatronics
Fall, 3 credits. Prerequisite: MATH 2930, PHYS 2213, or permission of instructor.
At the intersection of mechanical and electrical engineering, Mechatronics involves technologies necessary to create automated systems. This course introduces students to the functional elements of modern controlled dynamic systems. Topics include analog circuits (both passive and active components); filter design; diodes; transistors, MOSFETs and power amplification; pulse width modulation; transduction; mechanical and electro-mechanical devices such as electromagnetic systems; piezoelectric and shape memory material transduction; gear trains; optical encoders; discretization; aliasing; and microprocessors and programming. Lab experiments culminate in the design, fabrication, and programming of a microprocessor-controlled robotic vehicle, which laboratory groups enter into a class-wide competition.

MAE 4000 Components and Systems: Engineering in a Social Context (also STS 4001)
Fall, 3 credits. Prerequisites: upper-class standing, two years of college physics. Counts as “Senior Design Elective” if students sign up for corresponding section of MAE 4291. Co-meets with MAE 4291.
Offered alternate years.
Addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Missile Defense, supersonic transport, and the automobile and its effect on the environment, the course investigates the interactions between the scientific, technical, political, economic, and social forces that are at work. Co-meets with MAE 4040.

MAE 4140 Mechanics of Lightweight Vehicles
Fall; usually offered in summer through Engineering Cooperative Program. 3 credits. Prerequisites: MAE 2120, 3250, and 3272 or equivalent; senior standing in MAE. “Senior Design Elective” for M.E. students who enroll in corresponding section of MAE 4291.
Offered alternate years.
Covers fundamentals of vehicle mechanics for several classes of vehicles (bicycles, light cars, airplanes). Topics include types of vehicle structures; pertinent aspects of mechanical behavior including elastic and inelastic responses; static and dynamic behavior of vehicles under elastic loading; and mechanics of crashworthiness. Lectures cover essential background material for understanding of vehicle mechanics. Labs provide hands-on experiences in the major components of the course.

MAE 4150 GPS: Theory and Design (also ECE 4150)
Fall, 4 credits. Prerequisites: 3000-level engineering course with advanced math content (e.g., ECE 3050 or MAE 3260). For description, see ECE 4150.

MAE 4170 Introduction to Robotics: Dynamics, Control, Design
Spring, 3 credits. Prerequisites: engineering math at level of MATH 2930 and MATH 2940 (Engineering Mathematics); some course in dynamics at level of TAM/ENGRD 2030 (Dynamics); familiarity with control concepts typical of MAE 3260 (System Dynamics).
Introductory course in the analysis and control of mechanical manipulators and related robotic machines. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics. Design of end effectors, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators. Design of PID controllers, trajectory control, and compliant motion control. Simulation and design using MATLAB and multi-body codes are used. Co-meets with MAE 5170.
MAE 4230 Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: MAE 3230 (Introductory Fluid Mechanics) or CEE 3310/BME 3510, CHEM 3280 or permission of instructor. Counts as “Senior Design Elective” if M.E. seniors enroll in the corresponding section of MAE 4291. Co-meets with MAE 5230.

This course builds on the foundation of MAE 3230. Emphasis is placed on both the fundamental principles and numerical calculation of real flows (both engineering and environmental) using a computational fluid dynamics package. Topics include compressible flow, exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, fluid instabilities, and turbulence.

MAE 4250 FSAE Automotive Design Project
Fall, spring. Usually 3 credits: 3 for team members or 4 for team leaders. Prerequisite: Engineering juniors and seniors or permission of instructor. Counts as “Senior Design Elective” if M.E. seniors enroll in corresponding section of MAE 4291.

Project course to research, design, build, develop, and compete with a Formula SAE car for intercollegiate competition. Students work in interdisciplinary teams using concurrent engineering and systems engineering principles applied to complex mechanical, electromechanical, and electronic systems.

MAE 4272 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Fulfills technical-writing requirement. Prerequisites: MAE 3230, 3240. Laboratory exercises in fluid mechanics and the thermal sciences. Measurements of flame, temperature, pressure, heat transfer, viscosity, lift and drag, fluid-flow rate, effects of turbulence, airfoil stall, flow visualization, and spark ignition engine performance. Instrumentation, techniques and analysis, and interpretation of results. Biweekly written assignments with extensive feedback.

MAE 4291 Supervised Senior Design Experience
Fall, spring. Minimum of 1 or 3 credits depending on section chosen. Prerequisite: senior standing, permission of instructor, taken concurrently or after MAE 4280. Letter grades only.

Substantial design experience based on the knowledge and skills acquired in earlier coursework and incorporating engineering standards and realistic constraints. Sections of this course satisfy the BS ME senior design requirement. They are offered in conjunction with a course designated as “Senior Design Elective” (MAE 4272, 4273, 4274, 4275, 4277, 4278, 4279, 4700, 4860) or are directed by a faculty member as an individual or a team design exercise. Consult www.mae.cornell.edu for enrollment details.

MAE 4300 Professional Practice in Mechanical Engineering
Fall. 2 credits. Prerequisite: senior standing in MAE or permission of instructor. This course is required for M.E. seniors, replacing MAE 4280. Professional practice and broader impacts of the mechanical engineering profession are presented through a series of lectures and invited talks, supplemented by assignments and projects. Topics include professional ethics, product liability, intellectual property, career/educational paths, contemporary issues facing mechanical engineers, and engineering successes and failures, along with the global, societal, environmental and/or economic aspects and impact of engineering.

MAE 4320 MicroElectro Mechanical Systems (MEMS) (also ECE 4320)
Fall. 4 credits. Prerequisites: ECE 3410, AEP 3630, or MAE 3780 or permission of instructor. For description, see ECE 4320.

MAE 4490 Combustion Engines and Fuel Cells
Spring. 3 credits. Prerequisites: ENGRD 2210 and MAE 3240. Offered alternate years; next offered 2010–2011.

Introduction to reciprocating combustion engines and fuel cells, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, electrochemistry, thermodynamic limits on performance, deviations from ideal processes, engine breathing, combustion knock. Formation and control of undesirable exhaust emissions.

MAE 4530 Computer-Aided Engineering: Applications to Biomedical Processes (also BEE 4530)
Spring. 3 credits. Fulfills technical elective requirement for MAE students. Prerequisite: Heat and Mass Transfer (BEE 3560), Biological and Environmental Transport Processes, or CHEM 3240 Heat and Mass Transfer, or MAE 3240 Heat Transfer) or equivalent.

For description, see BEE 4530.

MAE 4550 Introduction to Composite Materials (also CEE 4770, MSE 5550, TAM 4550)
Fall. 4 credits.

For description, see TAM 4550.

MAE 4570 Space Systems and National Security
Fall. 3 credits. Prerequisite: upper-level standing and MAT 2940 and ENGRD 2030 or permission of instructor.

This course is intended to provide an overview of the implications of space for national security and vice versa. It will consider subtopics such as an overview of United States space usage, how the United States monitors what is in space, specific national security applications of space systems, vulnerabilities of space systems, anti-satellite and space weapons, the relationship between missile defenses and space weapons, and the current debate over how the United States can best preserve the benefits it receives from the use of space.

MAE 4580 Introduction to Nuclear Science and Engineering (also ECE/ TAM 4580)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.

For description, see TAM 4580.

MAE 4590 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE/NSE 4680)
Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics. Intended for seniors and graduate students in engineering and the physical sciences, biology, and physical sciences. Offered alternate years. For description, see ECE 4840.

MAE 4610 Entrepreneurship for Engineers (also ENGRG 4610, ORIE 4152)
Fall. 3 credits. Limited enrollment. Prerequisite: upper-level engineers or permission of instructor. Develops skills necessary to identify, evaluate, and begin new business ventures. Topics include intellectual property, competition, strategy, business planning, forecasting, finance and accounting, and sources of capital. A rigorous, quantitative approach is stressed throughout, and students create financial documents and plans, analyze human resource models, and work with sophisticated valuation methods, complicated equity structures, and legal and business documents. As such, this course represents the “red meat” of entrepreneurship, and the soft skills are left for other courses. Course work consists of discussions, assignments, and the preparation and presentation of a complete business plan.

MAE 4640 Orthopaedic Tissue Mechanics (also BME 4640)
Spring. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and MAE 3250. Mechanical Design and Analysis or permission of instructor. Co-meets with MAE 5640. Offered alternate years; next offered 2010–2011.

Applications of mechanics and materials principles to orthopaedic tissues. Physiology of bone, cartilage, ligament, and tendon and how these properties relate to mechanical function. Mechanical behavior of skeletal tissues in the laboratory. Functional adaptation of these tissues to their mechanical environment. Tissue engineering of replacement structures.

MAE 4660 Biomedical Engineering Analysis of Metabolic and Structural Systems (also BME 4010)
Fall. 3 credits. Prerequisites: ENGRD 2020 Mechanics of Solids and previous coursework in biology or permission of instructor.

For description, see BME 4010.

MAE 4700 Finite Element Analysis for Mechanical and Aerospace Design
Fall. 3 credits. Full-time, 4 credits or permission of instructor. Evening exams. Term project: “Counts as Senior Design Elective” if M.E. seniors enroll in corresponding section of MAE 4291. Co-meets with MAE 5700.

Introduction to linear finite element static and dynamic analysis for discrete and distributed mechanical and aerospace systems. Off-axis, tensegrity, beams, frames, heat transfer (steady state and transient), and elastodynamics (static and dynamic).

MAE 4770 Engineering Vibrations
Spring. 3 credits. Prerequisite: MAE 3260 or permission of instructor. Co-meets with MAE 5770.

Lumped element, distributed parameter, and mixed structural vibratory systems are examined. Equations of motion are derived.
from Newton’s law and Lagrange’s equations. Eigenanalysis, free and forced responses, and frequency/time domain solutions are considered. Vibration absorbers, isolators, and vibration suppression control systems using feedback approaches also are investigated.

MAE 4780 Feedback Control Systems (also CHEM/ECE 4720) Fall. 4 credits. Prerequisites: CHEM 3720 or MAE 3260 or permission of instructor. Co-meets with MAE 5780. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the principal mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes.

MAE 4860 Automotive Engineering Spring. 3 credits. Prerequisites: ENGRD 2020 or permission of instructor. Counts as “Senior Design Elective” if M.E. seniors enroll in corresponding section of MAE 4291. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles. Engines, transmissions, suspensions, brakes, and aerodynamics will be discussed. The course uses first principles and applies them to specific systems. The course is highly quantitative, using empirical and analytical approaches.

MAE 4900 Special Investigations in Mechanical and Aerospace Engineering Fall, spring. 4 variable credits. Prerequisite: undergraduate standing and permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

MAE 4900 Teaching Experience in Mechanical Engineering Fall, spring. 3 variable credits. Prerequisite: permission of instructor. Cannot be used to fulfill M.E. technical elective or M.E. major elective requirements but may be approved as advisor-approved elective. May not be used toward satisfying M.E. minor. Students serve as teaching assistants in Cornell mechanical engineering classes or in local middle school technology classes.

MAE 5000 Components and Systems: Engineering in a Social Context Fall. 3 credits. Prerequisites: graduate standing or permission of instructor, two years of college physics. Co-meets with MAE 4000. Offered alternate years. For description, see MAE 4000.

MAE 5010 Future Energy Systems Spring. 3 credits. Prerequisites: ENGRD 2210 Thermodynamics or equivalent. Also ENGRD 2250 Thermodynamics of Matter or equivalent. Recommended: MAE 3240 Introductory Fluid Mechanics, MAE 3240 Heat Transfer, or equivalents; graduate or senior standing or permission of instructor. Critically examines the technology of energy systems that will be acceptable in a world faced with global climate change, local pollution, and declining supplies of oil. The focus is on renewable energy sources (wind, solar, biomass), but other non-carbon-emitting sources (nuclear) and lowered-carbon sources (co-generative gas turbine plants, fuel cells) also are studied. Both the devices and the overall systems are analyzed.

MAE 5060 Aerospace Propulsion Systems Spring. 3 credits. Prerequisite: MAE 3050 Introduction to Aeronautics or permission of instructor. Offered alternate years. Application of thermodynamic and fluid-mechanical principles to design and performance analysis of aerospace propulsion systems. Jet propulsion principles, including gas turbine engines and rockets. Electric propulsion. Future possibilities for improved performance of aerospace propulsion systems.

MAE 5170 Introduction to Robotics: Dynamics, Control, Design Spring. 3 credits. Graduate version of MAE 4170. Co-meets with MAE 4170. For description, see MAE 4170.

MAE 5200 Dimensional Tolerancing in Mechanical Design Fall, seven-week half term. 2 credits. Prerequisites: MAE 4250 or equivalent CAD-based design course, plus 2.5 years of engineering mathematics through probability and statistics. Designers use dimensional tolerances to limit spatial variations of mechanical parts and assemblies; the primary goals are interchangeability in assembly, performance, and cost. This course covers traditional limit tolerances briefly but focuses mainly on modern geometric tolerances and their role in assembly control. Students learn how to represent assemblies in terms of mating and relational constraints, and how to design tolerances and inspection procedures from part and assembly specifications.

MAE 5210 Theory of Linear Systems (also ECE 5210) Fall. 3 credits. Prerequisite: ECE 3200, MAE 3260, or permission of instructor. Recommended: good background in linear algebra and linear differential equations. State-space and multi-input–multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems by Khalil.

MAE 5230 Intermediate Fluid Dynamics Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Co-meets with MAE 4230. Intended for M.Eng. students who wish to take a fluid dynamics course including implementation of commercial computational fluid dynamics packages. Complements material in MAE 6010 and 6020. For description of topics covered, see MAE 4230. Includes a 1-credit CFD design project due at the end of the semester. Students desiring to write their own computational fluid dynamics software should consider one or more of MAE 6560, 7560, and 7570.

MAE 5240 Physics of Micro- and Nanoscale Fluid Mechanics (also CHEM 6240) Fall. 3 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 3230) or permission of instructor. Co-meets with MAE 6240. Introduction to fluid mechanics in micro- and nanofabricated devices. Physicochemical hydrodynamics, electrokinetic effects, capillarity, continuum breakdown, micro- and nanohydric applications in chemistry and life sciences.

MAE 5430 Combustion Processes Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Topics include thermochemistry, kinetics, vessel explosions, laminar premixed and diffusion flames, and droplet combustion. Optional topics may include complex combustion systems, turbulent flames, fuel cells, or combustion of solids.

MAE 5459 Energy Seminar I (also ECE 5870) Fall. 1 credit. For description, see ECE 5870.

MAE 5469 Energy Seminar II (also ECE 5880) Spring. 1 credit. For description, see ECE 5880.

MAE 5540 Orthopaedic Tissue Mechanics Spring. 3 credits. Graduate version of MAE 4640. Offered alternate years; next offered 2010–2011. For description see MAE 4640.

MAE 5580 Soft Tissue Biomechanics Fall. 3 credits. For description, see BME 5810.

MAE 5590 Clinical Biomechanics of Musculoskeletal Tissues (also BME 5590) Fall or spring. 3 credits. Prerequisites: ENGRD 2020, MAE 2120, and MAE 3250, or permission of instructor. Offered alternate years; next offered 2010–2011. Review physiology and biomechanics of musculoskeletal tissues, focusing on skeletal muscle, ligament, and tendon and the relationship between the structure and mechanical function. Apply mechanics of materials to evaluate and solve clinical problems of musculoskeletal tissue. Determine how the tissues adapt to injury and degenerative changes.
MAE 5700 Finite Element Analysis for Mechanical and Aerospace Design
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening exams. Term project. Graduate version of MAE 4700 requires additional programming assignment. Co-meets with MAE 4700. For description, see MAE 4700.

[MATE 5710 Applied Dynamics]

MAE 5770 Engineering Vibrations
Spring. 3 credits. Prerequisite: graduate standing or permission of instructor. Graduate version of MAE 4770. Co-meets with MAE 4770. For description, see MAE 4770.

MAE 5785 Feedback Control Systems
Fall. 4 credits. Graduate version of MAE 4780. Co-meets with MAE 4780. For description, see MAE 4780.

MAE 5900 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Variable credit. FSAE or Automotive XPrize team. For non-engineering graduate students.

MAE 5910 Applied Systems Engineering
(also CEE 5240, CIS 5040, CEE 5120, ORIE 5140, SYSEN 5100)
Fall. 3 credits. Prerequisites: senior or graduate standing in engineering field; concurrent or recent (past two years) enrollment in a group-based project with a strong system design component that is approved by course instructor. For description, see SYSEN 5100.

MAE 5920 System Architecture, Behavior, and Optimization
(also CEE/CS 5050, CEE 5130, ORIE 5142, SYSEN 5200)
Spring. 3 credits. Prerequisites: senior or graduate standing and completion of Applied Systems Engineering 1 (CEE 5240, CS 5040, ECE 5120, ORIE 5140, MAE 5910, or SYSEN 5100) or permission of instructor. For description, see SYSEN 5200.

MAE 5930 Systems Engineering for the Design and Operation of Reliable Systems (also SYSEN 5300)
Fall. 3 credits. Prerequisites: MAE 5910 and either ENGRD 2700 or CIS 3040. For description, see SYSEN 5300.

MAE 5949 Enterprise Engineering Colloquium (also ORIE 9100–9101)
Fail, spring. 1 credit each semester. Usually S–U grades. For description, see ORIE 9100–9101.

MAE 6010 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics, surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids; and sound waves, viscous flows, boundary layers, and potential flows.

[MATE 6020 Fluid Dynamics at High Reynolds Numbers]

MAE 6060 Spacecraft Dynamics and Mission Design
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor; background in linear algebra at level of MATH 2940; or some experience with MATLAB is expected. Offered alternate years. Next offered 2010–2011. The focus is on spacecraft attitude dynamics and its application in core space-systems areas: mission design, operations, and autonomy. Also introduces the problem of attitude estimation and treats aspects of guidance, navigation, and control unique to the context of space mission design. Readings and lectures include examples based on flight data.

[MATE 6080 Physics of Fluids]

MAE 6130 Finite Element Methods for Inelastic Design and Process Modeling
Spring. 4 credits. Prerequisites: introductory finite element course, equivalent experience or permission of instructor. Offered alternate years. Finite element methods provide powerful computations tools for analyzing the deformations of mechanical systems over a broad range of behaviors, both elastic and inelastic. Analyses of inelastic behaviors arise in the designs for aerospace, automotive, and power generation applications and in the simulation of a wide array of forming and joining processes. This course covers several aspects of inelastic finite element analyses, including: yield criteria and strain hardening laws for plasticity and creep, large deformation kinematics, strategies for solving nonlinear systems, and time integration methods. Applications are drawn from crashworthiness, thermomechanical ratcheting, and metal forming.

MAE 6150 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: graduate standing. In this lab-centered course, a general introduction to engineering instrumentation fundamentals is presented focusing primarily on experimental solid mechanics. Transducer design for the measurement of force, displacement, strain, and temperature is introduced along with the fundamentals of calibration, sensitivity, resolution, and error estimation. Techniques for determination of the mechanical response of engineering materials are developed. Applications include elastic plastic deformation, fracture, and fatigue.

MAE 6240 Physics of Micro- and Nanoscale Fluid Mechanics
Fall. 4 credits. Prerequisite: undergraduate fluid or continuum mechanics (e.g., MAE 5230) or permission of instructor. Co-meets with MAE 5240; includes additional 1-credit design project. For description, see MAE 5240.

MAE 6270 Experimental Methods in Fluid Dynamics (also CEE 6370)
Spring. 4 credits. E. A. Cowen. For description, see CEE 6370.
robustness of multivariable systems, model-based compensators, performance and uncertainty management in robust control systems. Additional topics at the discretion of the instructor include high-performance multivariable feedback control and Kalman filtering for control. Topics include uncertainty management and robust control, discrete time control, optimal control, and model predictive control.

**MAE 6950 Special Investigations in Mechanical and Aerospace Engineering**

Fall, spring. Variable credit. Prerequisite: M.Eng. degree in mechanical or aerospace engineering or approval of faculty member offering project. Project-based course in the area of mechanical or aerospace engineering under the guidance of a faculty member.

**MAE 6950 Special Topics in Mechanical and Aerospace Engineering**

Fall, spring. Credit TBA. Prerequisites: graduate standing or permission of instructor. Special lectures by faculty members on topics of current research.

**MAE 7110 X-Ray Diffraction Methods for Engineering Materials**

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Next offered 2010–2011. We develop a general understanding of diffraction methods employed for understanding the state of crystalline materials. The focus will be on x-ray diffraction and the determination of crystal orientation and lattice strains. We conduct experiments with x-ray facility and synchrotron x-ray data. We develop MATLAB-based methods for reducing diffraction data and extracting distributions of orientation and lattice strain.

**MAE 7120 Mechanics of Materials with Oriented Microstructures**

Spring. 4 credits. Prerequisite: TAM 6630 or equivalent. Offered alternate years, next offered 2010–2011. The focus of this course is the evaluation of mechanical properties of materials from knowledge of the material microstructure, with attention to anisotropic elastic and plastic behaviors. Topics include mathematical and mechanics preliminaries, mathematical foundations of orientations, including parameterizations, symmetries, and fibers; construction and sampling of orientation distributions; hypotheses used to link macro and micro length scales; methods for evaluation of effective elastic and plastic moduli; evolution of orientations and orientation distributions with deformation. Applications to polycrystalline solids (metal alloys and minerals), composite materials, biomaterials (soft tissues), and polymers.

**MAE 7140 Computational Sensors: Information Technologies for Complex Continuum Systems**

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Intended for graduate students in engineering, physics, and chemistry with interests in the simulation of materials at the atomic scale using academic and commercial software. Emphasis is given to models of interatomic forces from Lennard-Jones models to self-consistent all-electron solution of the quantum mechanical problem. Specific topics include energy models, density functional theory and the total-energy pseudopotential method, Monte Carlo and molecular dynamics simulations, free energy and phase transitions, fluctuations and transport properties, first-principles MD, Ab-initio thermodynamics and structure prediction, coarse-graining methods and mesoscale models. The course includes advanced applications of materials to nanotechnology. The material covered is self-contained, but an earlier exposure to quantum mechanics and solid state physics is desirable.

**MAE 7340 Analysis of Turbulent Flows**

**MAE 7370 Computational Fluid Mechanics and Heat Transfer**

Fall. 4 credits. Prerequisite: graduate standing, advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some MATLAB, C++, or other programming experience. Next offered 2010–2011. Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

**MAE 7910 Mechanical and Aerospace Research Conference**

Fall, spring. 1 credit each semester. For graduate students involved in research projects. S–U grades only. Presentations on research in progress by faculty and students.

**MAE 7999 Mechanical and Aerospace Engineering Colloquium**

Fall, spring. 1 credit each semester; credit limited to graduate students. All students and staff are invited to attend. Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

**MAE 8900 Research in Mechanical and Aerospace Engineering**

Credit TBA. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.
MAE 9900 Research in Mechanical and Aerospace Engineering
Credit TBA. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval from director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING
Faculty members in the graduate field of nuclear science and engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, and V. O. Kostroun.

NSE 4130 Introduction to Nuclear Science and Engineering (also AEP/CHEME/ECE/TAM 4130, MAE 4590)
Fall. 3 credits. Prerequisites: PHYS 2214 and MATH 2940.
For description, see TAM 4130.

NSE 4140 Nuclear Reactor Physics (also TAM 4140)
For description, see TAM 4140.

NSE 4840 Introduction to Controlled Fusion: Principles and Technology (also AEP/ECE 4840, MAE 4590)
Spring. 3 credits. Prerequisites: PHYS 1112, 2213, and 2214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students.
D. A. Hammer.
For description, see ECE 4840.

NSE 5450 Energy Seminar (also ECE 5870, MAE 5450)
Fall, spring. 1 credit; may be taken for credit both semesters. D. A. Hammer.
For description, see ECE 5870.

NSE 5900 Independent Study
Fall, spring. 1–4 credits. S–U or letter grade. Staff.
Independent study or project under guidance of a faculty member.

NSE 5910 Project
Fall, spring. 1–6 credits. Staff.
Master of engineering or other project under guidance of a faculty member.

NSE 6330 Nuclear Reactor Engineering (also AEP 6330)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering, Offered on demand. K. B. Cady.
The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

OPERATIONS RESEARCH AND INFORMATION ENGINEERING

ORIE 3120 Industrial Data and Systems Analysis
